TAKE UP PELMANISM

For Successful Living

PELMANISM is beneficial in all the affairs of life. That is its outstanding recommendation to those who wish to make the best of them-

What Pelmanism Does
Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia
Timidity
Indecision
Depression
Weakness of Will

Pessimism
Forgetfulness
Indefiniteness
Procrastination
Mind-Wandering

social
their r
Eve
Course
aspect
intent
to ma
means
power
can l
succe
they
profit
hand,
condi
self-r

Pe
appli
ence
staff

to apply the principles
to their own circumstances and aspira-
tions. Thus every Pelman Course is
an individual Course.

Half an hour a day of spare time for a few weeks is enough. Everything is simply set out and described and no rudgerdy is entailed. The books are printed in a handy "pocket size," so that you can study them in odd moments during the day. Even the busiest man or woman can spare a few minutes daily for Pelmanism, especially when minutes so spent bring in such rich rewards.

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian without translation. Write for particulars and specimen lesson of the language that interests you, which will be sent gratis and post free.

Pelman Languages Institute

HAIG'S FUND

We would like to remind you that upon the regular replenishment of Haig's Fund depends the existence of the largest welfare organisation in the world—the British Legion. The Legion's responsibilities towards the ex-service community have steadily increased over the years and today commitments are heavier than ever before.

More money is most urgently needed to carry on such vital work as the Legion's Rehabilitation Scheme for disabled ex-servicemen, the maintenance of Country Homes, provision for war orphans, pensions and grants for ex-service people in distress.

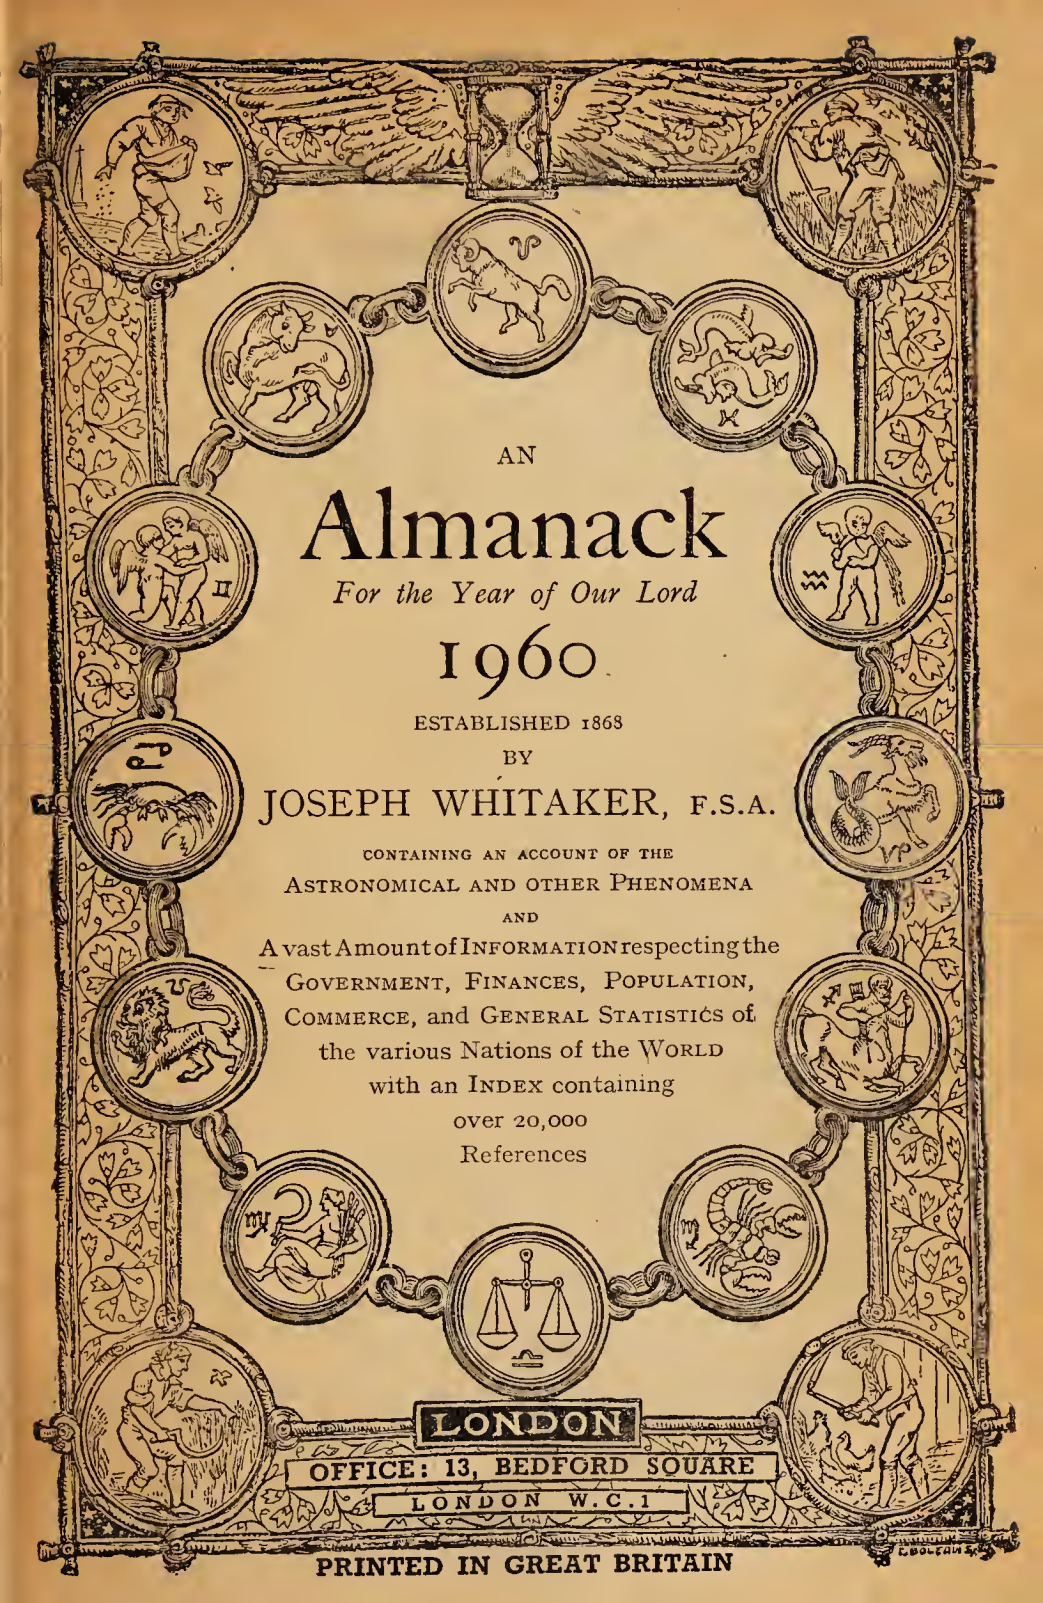

Will you therefore please remember that legacies and bequests in favour of Haig's Fund are urgently needed.

Note—"WHITAKER" for 1960 is published in three editions:—

Library Edition, Leather Binding with 16 Coloured Maps,
1,188 pages — 37s. 6d. net

Complete Edition, Red and Green Cloth Cover,
1,188 pages — 21s. net

Shorter Edition, Orange Paper Cover, 692 pages — 11s. 6d. net

PREFACE TO THE 92ND ANNUAL VOLUME

(1960)

The 92nd annual edition of "WHITAKER" contains full details of the General Election held in October, 1959, including the usual alphabetical list of the newly-elected Members of Parliament, and the results by constituencies, as well as other miscellaneous information about the Election. Complete particulars of Mr. Macmillan's Cabinet, as reconstructed later in October, are also given and an explanation of the new arrangement of Ministries will be found under "Occurrences during Printing".

In addition to the other regular and traditional features of the Almanack, a number of new articles will be found in this edition.

For the first time a list of all Public Acts of Parliament passed during the last session has been supplied, with notes on the more important provisions contained in them.

A new article, giving particulars of all the leading Universities of the Commonwealth, has been added to the Education section.

Many new statistical tables have, as usual, been provided. Particular attention has been paid this year, because of their topical significance, to criminal statistics, including prison populations and juvenile crime, and the space allotted to them has been doubled. Other new tables deal with United Kingdom overseas investments, the progress of the New Towns, aliens and naturalization and the finance of the nationalized gas and electricity authorities.

Those Building Societies which have been officially designated under the important new House Purchase Act have been listed.

The remarkable progress during the year of scientific development, particularly in the conquest of space, is reflected both in the illustrations and elsewhere in the book. The Russian moon-rocket is fully dealt with, and a table printed of all American ballistic missiles in use or under development.

In the Commonwealth pages special attention has been paid to the Federation of Malaya and to the State of Singapore, whose new constitution, establishing self-government, came into force during the year. Similarly, under Foreign Countries, the considerable developments among French overseas territories, in Africa and elsewhere, are noted.

The Sports section has been enlarged by a special article on the chief homes and centres of British sport, and a list of the leading mountaineering clubs in the British Isles, with the addresses of their Secretaries, has been added, in consequence of the increasing popularity and importance of mountaineering.

The Editor would once more express his thanks to all those who have corresponded with him during the year and who by their suggestions, large and small, have again contributed materially to the value of the Almanack.

THOUSANDS of war-blinded Service-men and women have become skilled in a craft or profession thanks to the untiring efforts of St. Dunstan's. More important still, they have learnt the feeling of independence. But St. Dunstan's itself must always be

dependent on the support of others, for the cost of their special training and welfare relies entirely on voluntary aid. Will you please remember St. Dunstan's in your will? And if you are in a position of trust, think of St. Dunstan's when discussing legacies?

ALL INFORMATION FROM
THE LORD FRASER OF
LONSDALE (CHAIRMAN)

ST. DUNSTAN'S

1 SOUTH AUDLEY STREET, LONDON, W.1

(Registered in accordance with the National Assistance Act, 1948)

THE ASSOCIATION OF PRACTISING AND COMMERCIAL ACCOUNTANTS LIMITED (BY GUARANTEE)

Fellows and Associates are entitled to describe themselves as Associated Public Accountants and to use the designatory letters—F.P.C.A. and A.P.C.A. Examinations are held in June and December.

For a Syllabus of Examinations and Conditions of Membership write to

The Secretary, **STAMFORD HOUSE, LONDON, W.4**
Chiswick 6660

The FACULTY of SECRETARIES LIMITED (BY GUARANTEE)

Founded in 1930 the Faculty provides a central organisation for Secretaries and Administrative Officers of Public Bodies and Local Government Authorities, and is well represented both at home and abroad including South Africa where there is a large membership.

The examinations have been widely recognised by the Ministry of Labour and by Public and Municipal Undertakings.

Fellows and Associates use the Qualifying letters F.F.C.S., and A.F.C.S., and the distinctive title of "Corporate Secretary".

The official journal is "The Corporate Secretary" published quarterly.

Regulations as to admission to membership, examination syllabus, etc. can be obtained for 6d. stamp from:

THE REGISTRAR, DEPT. W., G.P.O. BOX 9, GUILDFORD

OCCURRENCES DURING PRINTING

The Royal Family and Court

Oct. 2.—Princess Alexandra flew from Bangkok to Phnom Penh, capital of Cambodia.

Oct. 7.—Her Royal Highness, after short stay in India, arrived back at London Airport.

Politics

Oct. 8.—Polling took place in General Election.

Oct. 8-9.—First results of election showed a number of Conservative gains. In the early hours of Oct. 9, Mr Gaitskell conceded that the Labour Party had lost the election, and final figures showed that Conservatives and their associates had made net gain of 23 seats, and that they would have 365 members in new Parliament, with 258 Labour and 6 Liberals.

Oct. 9.—Admiralty announced that battleship *Vanguard* would be scrapped in 1960.

Oct. 14.—Mr. Macmillan announced membership of his reconstructed Cabinet. Mr. Lennox-Boyd, Secretary of State for the Colonies, and Mr. Geoffrey Lloyd, Minister of Education, had resigned and were replaced by Mr. I. N. Macleod, the former Minister of Labour, and Sir David Eccles, President of the Board of Trade. Lord Mills, hitherto Minister of Power, remained in the Cabinet as Paymaster-General.

The Ministry of Transport and Civil Aviation was divided. Mr. Duncan Sandys, Minister of Defence, became Minister of Aviation, and was succeeded by Mr. H. A. Watkinson. Mr. Ernest Marples, the former Postmaster-General, was made Minister of Transport.

Mr. Butler, while remaining Home Secretary and Leader of the House of Commons, became also Chairman of the Conservative Party Organization. He was succeeded as Lord Privy Seal by Lord Hailsham, who also became the first Minister of Science and Technology, with responsibility for the Atomic Energy Authority, the D.S.I.R., the Medical Research Council, the Agricultural Research Council, the Overseas Research Council and the Nature Conservancy.

Lord Hailsham's office of Lord President of the Council was assumed by the Earl of Home, who also continued as Secretary of State for Commonwealth Relations and Leader of the House of Lords. The Ministry of Supply was abolished, many of its functions being assumed by the new Ministry of Aviation.

Oct. 15.—National Coal Board announced proposed reduction of £175,000,000 in capital expenditure programme.

Oct. 16.—Further ministerial appointments were made. Lord Carrington, until recently High Commissioner in Australia, became First Lord of the Admiralty in place of the Earl of Selkirk.

Oct. 17.—Mr. James Griffiths resigned, on grounds of age, from deputy leadership of Labour Party. Lord Ogmore, former minister in Labour Government, joined Liberal Party.

Oct. 19.—Large increases in fares on British Railways announced, to become operative on Nov. 1.

Oct. 20.—Commons met for election of Speaker, and chose Sir Harry Hylton-Foster.

Crimes and Trials

Oct. 6.—Home Secretary referred case of Gunther Podola to Court of Criminal Appeal, and date fixed for Podola's execution was cancelled. After two days' hearing, full court of five judges of Court of Criminal Appeal dismissed the appeal on Oct. 15.

Oct. 12.—It was discovered that jewellery and cash valued at more than £200,000 had been stolen during week-end from four London branches of same jewellers' firm.

Labour

Oct. 6.—End of oxygen workers' strike, after many men in different industries in all parts of the country had been thrown out of work by it.

Oct. 13.—Leaders of 18 unions decided to submit claim to building employers' federation for extra 4d. an hour, at estimated cost of £40,000,000 a year.

Shortage of sheet steel compelled Vauxhall Motors to stop Saturday morning working for three months.

Oct. 14.—Unofficial dock strike in Liverpool spread to affect nearly 1,500 men. 720 welders went on strike in Clyde shipyards.

Commonwealth

Oct. 2.—Ceylon cabinet decided to introduce legislation to restore death penalty.

Proclamation signed in South Africa prohibiting non-whites from attending hitherto open universities after Jan. 1, 1960.

Oct. 6.—Sir Ralph Grey, Deputy Governor General of Federation of Nigeria, appointed Governor of British Guiana.

Ceylon Government imposed censorship of press.

Oct. 13.—Kenya Government's new land policy plans were published, including proposal that White Highlands should no longer be reserved exclusively for Europeans, but that test should be best use of land.

Foreign and International

Oct. 4.—It was stated that Russian 612-lb. "automatic interplanetary station" had been fired into space at head of multi-stage rocket, and was intended to circle moon and photograph its far side before returning to earth, of which it would probably become another satellite.

Oct. 7.—Attempted assassination of Gen. Kassem, Iraq Prime Minister, who was wounded by bullets fired at him as he drove through Baghdad.

Oct. 9.—U.S.S.R. presented plan for complete disarmament within four years to United Nations.

Oct. 15.—Nobel prize for medicine for 1959 awarded jointly to Professors Severo Ochoa and Arthur Kornberg of U.S.A.

Oct. 18.—Tass Agency said that Russian rocket, Lunik III, had photographed far side of moon. Photographs were being processed and would be published.

Obituary

Oct. 6.—Bernard Berenson, art critic, aged 94. Oct. 7.—Lt.-Gen. Sir Sidney Clive, former Military Secretary and Marshal of the Diplomatic Corps, aged 85. Mario Lanza, singer and film actor, aged 38.

Oct. 9.—Sir Henry Tizard, C.C.B., F.R.S., scientist, aged 74. Oct. 14.—Errol Flynn, film star, aged 50.

Oct. 16.—General of the Army George Catlett Marshall, American soldier and statesman, aged 78.

Oct. 20.—Sir Albert Braithwaite, Conservative M.P. for West Harrow, aged 66 (*by-election pending*).

Mean semi-diameter in arc 16'.3; in time 1^m 10^s.

* In the sense Apparent *minus* Mean. Throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY reaches superior conjunction on the 26th and is badly placed for observation, from this country, throughout the month.

VENUS is a brilliant morning star (magnitude -3.6) and is visible in the south-east for a short time before sunrise. Venus is in close conjunction with Jupiter on the 21st.

MARS (Magnitude +1.6) although only visible for a short time, in the south-east, before sunrise, can be identified by its reddish tint. At the beginning of the month, Mars is in the constellation Ophiuchus, about 10° E.N.E. of *Antares*, and at the end of the month is in the constellation Sagittarius.

On the 1st Mars is about 2° S.E. of Jupiter, and on the 31st, about 1° south of Saturn.

JUPITER (magnitude -1.4) begins the year as a morning star; it is visible for a short while before sunrise throughout January. The planet is situated in the constellation Ophiuchus, moving from about 10° E.N.E. of *Antares* to about 15° east of the same star.

SATURN was in conjunction with the Sun on December 31st; it is, therefore, too close to the Sun to be seen during the first half of January. Later in the month it is a morning star (magnitude +0.8) in the constellation Sagittarius, rising just before sunrise.

MONTHLY NOTES

February 1. Pheasant and partridge shooting ends.
 2. Scottish Term Day.
 5. 8 Elizabeth II ends.
 6. 9 Elizabeth II begins. New Zealand Day.
 8. Half-Quarter Day.
 28. Ramādan begins.

QUARTER DAYS

(England, Wales and Northern Ireland)

Lady Day.....	March 25	Michaelmas.....	September 29
Midsummer.....	June 24	Christmas.....	December 25
HALF-QUARTER DAYS are Feb. 8, May 9, Aug. 11 and Nov. 11.			

SCOTTISH TERM DAYS

Candlemas.....	February 2	Lammas.....	August 1
Whitsunday.....	May 15	Martinmas.....	November 11

Removal Terms are May 28 and November 28.

** Centenary.

Apogee (251,720 miles)... 7 06

Mean semi-diameter in arc $16'.2$; in time $1^m 0^s.7$.

* In the sense Apparent *minus* Mean. Throughout February subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY (magnitude $+0.1$) may be seen low in the west after sunset during the latter part of the month; it is at greatest eastern elongation from the Sun on the 24th. Mercury is the only planet visible as an evening star during February.

VENUS is a morning star visible in the south-east before sunrise; it is easily identified by its superior brilliance (magnitude -3.4). There is a close conjunction with Saturn on the 7th, when Venus passes only $0^{\circ}.2$ north of Saturn; Venus is also in conjunction with Mars on the 17th.

MARS is a morning star (magnitude $+1.5$), visible at the beginning of the month 3° N.N.E. of the star σ in the constellation Sagittarius; its eastward movement carries it into the constellation Capricornus towards the end of the month. The

close conjunction with Venus on the 17th should be noted.

JUPITER is a morning star (magnitude -1.5), visible for two or three hours before sunrise. For the first half of the month it is in the constellation Ophiuchus, and in the second half in Sagittarius.

SATURN is a morning star (magnitude $+0.8$) moving slowly eastwards in the constellation Sagittarius; at the beginning of the month it is about 1° north of Mars.

URANUS is at opposition on the 8th; it is in the constellation Leo, about 10° west and 4° north of *Regulus*; it can only just be seen with the naked eye, but in a telescope shows a greenish disc $4''$ in diameter.

An occultation of *Aldebaran* is visible from the British Isles on the 6th (see p. 146).

MONTHLY NOTES

- March 1. Auditors of Boroughs, Eng. and W., to be elected.
- 2. Lent begins (ends midnight April 16).
- 8. Last day for sending list of persons employed in factories.
- 17. Bank Holiday in Northern Ireland.
- 25. Lady Day. Quarter Day. Accounts of Local Government Authorities, Eng. and W., to be made up to 31st. Quarter Sessions to be held 21 days before or after this date.
- 31. Financial Year 1959-60 ends.

Mean semi-diameter in arc $16'.1$; in time $1m\ 05^s$.

* In the sense Apparent *minus* Mean. Throughout March subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at inferior conjunction on the 10th and will only be visible (magnitude $+1.0$) during the last few days of the month, low in the east just before sunrise. Mercury passes 2° north of Venus on the 25th.

VENUS (magnitude -3.3) is still a brilliant object, visible in the east just before sunrise. On the 26th it is at aphelion, a distance of 67,600,000 miles from the Sun.

MARS is a morning star (magnitude $+1.4$) visible for a short while before sunrise; it passes 1° north of the 3rd magnitude star δ in the constellation Capricornus on the evening of the 24th.

JUPITER is a morning star (magnitude -1.7); it is in the constellation Sagittarius, about 20° east of *Antares*.

SATURN is also a morning star (magnitude $+0.8$). At the beginning of the month it is about 1° south of the star π Sagittarius. Titan, the brightest satellite of Saturn, may be seen at eastern elongation on the 3rd and 19th, and at western elongation on the 12th and 28th.

A total eclipse of the Moon on March 13th will not be visible from the British Isles (see p. 146).

A partial eclipse of the Sun on March 27th will only be visible from Southern Australia and Antarctica (see p. 146).

An occultation of MERCURY on March 25th is visible from the British Isles (see p. 146).

PHENOMENA

April 7. Mercury at greatest western elongation (28").

16^d 19^h. Jupiter in conjunction with the Moon. Jupiter 5° S.

17^d 21^h. Saturn in conjunction with the Moon. Saturn 4° S.

22^d 1^h. Mars in conjunction with the Moon. Mars 2° S.

24^d 1^h. Mercury in conjunction with the Moon. Mercury 1° S.

24^d 13^h. Venus in conjunction with the Moon. Venus 1° N.

28. Neptune in opposition.

CONSTELLATIONS

The following constellations are near the meridian at

	d	h		d	h
Mar.	1	24	Mar.	16	23
April	1	22	April	15	21
May	1	20	May	16	19

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Major, Leo Minor, Leo, Sextans, Hydra and Crater.

Apogee (251,360 miles) ...	2	22
Perigee (227,020 ,,) ...	14	19
Apogee (251,860 ,,) ...	30	16

Mean Longitude of Ascending Node on April 1, 174°.

According to the Summer Time Act, 1925, *Summer Time* 1960 should begin at 2 A.M., G.M.T., on April 10 and should end on October 2 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

April 1. Refreshment House Licences to be renewed.
 5. Income Tax Year (1959-60) ends.
 8. Lady Day Fire Insurances must be paid.
 12. First day of Jewish Passover.
 15. Good Friday. Banks and Stock Exchange closed.
 16. Lent ends at midnight.
 —. Israel Independence Day.
 18. Bank and General Holiday, England, Wales and N. Ireland.

** Centenary.

Mean semi-diameter in arc 16'·0; in time 1m 05".

* In the sense Apparent *minus* Mean. From April 1-15 apply as in March (see page 99) and for the remainder of the month as in May (see page 107).

MORNING AND EVENING STARS

MERCURY (magnitude +0.8 to -0.1) is visible throughout the month as a morning star, low in the east, just before sunrise; it reaches greatest western elongation on the 7th. Mercury passes 1° south of the Moon on the 24th, which should give a good opportunity for locating it.

VENUS (magnitude -3.3) although still visible for a short while before sunrise, is getting progressively closer to the Sun; it passes 1° north of the Moon on the 24th, so that it should be interesting to see Venus above and Mercury below the Moon, on the same day.

MARS (magnitude +1.3) is a morning star in Aqarius; it is visible in the east before sunrise.

JUPITER is a conspicuous morning star, situated

between the stars μ and λ Sagittarius; it is stationary on the 20th, after which it retrogrades towards the west. Its magnitude during the month increases from -1.8 to -2.0.

SATURN remains a morning star (magnitude +0.7), situated in the constellation Sagittarius, about 30° south of *Alair*. Saturn is stationary on the 27th and is almost motionless throughout the month. Titan is at eastern elongation on the 4th and 20th, and at western elongation on the 13th and 29th.

NEPTUNE is in opposition on April 28th, when it is about 2° N.E. of the star λ in the constellation Virgo; its magnitude is +8 and it shows a greenish disc of $2\frac{1}{2}''$ diameter in a telescope.

An occultation of *Aldebaran* on April 28th is visible from the British Isles (see p. 146).

Mean semi-diameter in arc 15'.8; in time 1m 07s.

* In the sense Apparent *minus* Mean. Throughout May add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in superior conjunction with the Sun on the 17th and is too close to the Sun to be seen during May.

VENUS is too close to the Sun to be seen this month, as it is in superior conjunction in June; it will not be visible again until August.

MARS can be seen as a morning star (magnitude +1.2), passing through the constellation Pisces, about 30° south of *Alpheratz*. At the end of the month, Mars is in a straight line with the extension of the diagonal joining the stars β and γ of the

"Square of Pegasus". On the 26th, Mars is at perihelion, a distance of 128 million miles from the Sun.

JUPITER is a conspicuous evening star (magnitude -2.1), visible nearly all night; it is in the constellation Sagittarius, slowly retrograding towards Ophiuchus and about 25° east of *Antares*.

SATURN increases slightly in magnitude during the month from +0.6 to +0.5; it is also situated in Sagittarius and is slowly retrograding; it is about 15° east of Jupiter. Titan is at eastern elongation on the 6th and 22nd and at western elongation on the 15th and 31st.

PHENOMENA

June 10^d 7^h. Jupiter in conjunction with the Moon. Jupiter 5° S.

11^d 10^h. Saturn in conjunction with the Moon. Saturn 4° S.

18^d 19^h. Mars in conjunction with the Moon. Mars 2° N.

19. Mercury at greatest eastern elongation (25°).

20. Jupiter in opposition.

21. Summer Solstice.

22. Venus in superior conjunction with the Sun.

26^d 9^h. Mercury in conjunction with the Moon. Mercury 3° N.

CONSTELLATIONS

The following constellations are near the meridian at

	d	h		d	h
May	1	24	May	16	23
June	1	22	June	15	21
July	1	20	July	16	19

Cassiopeia (below the Pole), Ursa Minor, Draco, Ursa Major, Canes Venatici, Bootes, Corona, Serpens, Virgo and Libra.

ALGOL is inconveniently situated for observation during June.

Mean Longitude of Ascending Node on June 1, 171°.		

See note on *Summer Time*, page 102.

MONTHLY NOTES

- June
1. Jewish Pentecost (Feast of Weeks) begins.
 4. Eton celebration day (George III's birthday).
 5. Constitution Day, Denmark.
 6. Bank and General Holiday, England, Wales and N. Ireland.
 21. Longest day.
 24. Midsummer Day. Quarter Day. Sheriffs of London to be elected by the Liverymen.
- County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following June 24.

** Centenary.

Mean semi-diameter in arc 15'.8; in time 1^m 09^s.

* In the sense Apparent *minus* Mean. From June 1-13 apply as in May (see page 107) and for the remainder of the month as in July (see page 115).

MORNING AND EVENING STARS

MERCURY is at greatest eastern elongation on the 19th (magnitude +0.8) and is favourably placed for observation, from the British Isles, for most of the month. It may be seen in the west after sunset. Mercury passes through the "Twins", south of *Castor* and *Pollux* on the 19th and 20th.

VENUS is too close to the Sun for observation, being in superior conjunction with the Sun on the 22nd.

MARS is a morning star, moving from the constellation *Pisces* into *Aries*. Mars (magnitude

+1.0) rises 2 to 3 hours before the Sun. On the 25th Mars is about 10° due south of *Hamal* (the brightest star in the constellation *Aries*).

JUPITER is now at its brightest for this year (magnitude -2.2) and is visible throughout the night; it is situated about 20° east of *Antares*. Jupiter is in opposition on the 20th.

SATURN at the end of the month, is at its brightest for this year (magnitude +0.3), when it is about one degree south of the 3rd magnitude star π of the constellation *Sagittarius*. Titan is at eastern elongation on the 7th and 23rd and at western elongation on the 15th.

PHENOMENA

July 2. Earth at Aphelion, i.e. at greatest distance (94,500,000 miles) from the Sun.

7. Saturn in opposition.

7^d 12^h. Jupiter in conjunction with the Moon. Jupiter 5° S.

8^d 18^h. Saturn in conjunction with the Moon. Saturn 4° S.

17. Mercury in inferior conjunction with the Sun.

17^d 17^h. Mars in conjunction with the Moon. Mars 3° N.

CONSTELLATIONS

The following constellations are near the meridian at

MONTHLY NOTES

- July 1. Special Session for Licences to deal in Game to be held this month
3. Dog Days begin (end Aug. 15).
 5. Dividends due. Tynwald Day, Isle of Man.
 8. Midsummer Fire Insurances to be paid.
 12. Bank and General Holiday, Northern Ireland.
 15. Latest date for receiving corrections for next year's "WHITAKER."
 21. Belgian Independence Day (1831).
 26. Moslem New Year (A.H. 1380).
 31. Gun and Game Licences expire.

Mean semi-diameter in arc 15'.8; in time 1^m 08^s.

* In the sense Apparent minus Mean. Throughout July subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY may be visible low in the west just after sunset (magnitude +1.8) for the first few days of the month; it then becomes too close to the Sun for observation, being in inferior conjunction on the 17th. Mercury may again be visible, as a morning star, very low in the east before sunrise, for the last few days of the month (magnitude +1.3).

VENUS is still too close to the Sun to be visible.

MARS is a morning star (magnitude +0.9); at the beginning of the month it is about 10° south-east of Hamal in the constellation Aries and moves into Taurus on the 22nd, when it is about 16° west of the first magnitude star Aldebaran. At the end of the month Mars is a few degrees south of the Pleiades.

JUPITER has now become an evening star (magnitude -2.1), moving from the constellation Sagittarius into Ophiuchus; it is situated about 10° south-east of the second magnitude star η Ophiuchus, known as Sabik.

SATURN is still at its brightest (magnitude +0.3); it reaches opposition on the 7th, when it is just south of the third magnitude star π in the constellation Sagittarius. Titan is at western elongation on the 1st and 17th, and at eastern elongation on the 9th and 25th.

An occultation of Aldebaran by the Moon takes place on July 19th; it is visible throughout the British Isles, but as it takes place in daylight, a telescope will be necessary to see this occultation (see p. 146 for details).

Mean semi-diameter in arc 15'.8; in time 1^m 05^s.

* In the sense Apparent *minus* Mean. Throughout August subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY reaches greatest western elongation on the 5th and is visible (magnitude +0.5) in the east, for a short while before sunrise, until the middle of the month. For the latter part of the month Mercury is too close to the Sun for observation, being in superior conjunction on the 30th at midnight.

VENUS becomes visible as an evening star (magnitude -3.3) during August; after the first week it should be visible very low in the west after sunset.

MARS is now visible just before midnight till sunrise; it is situated in the constellation Taurus and on the 17th passes 5° north of *Aldebaran*; its

magnitude increases from +0.8 to +0.6 during the month, so that it is a little brighter than *Aldebaran*.

JUPITER is a brilliant evening star (magnitude -2.0), almost motionless in the constellation *Ophiuchus*, about 15° east of *Antares*.

SATURN is an evening star (magnitude +0.5), moving very slowly in the constellation *Sagittarius* about 3° north of the star σ (named *Nunki*). Titan is at western elongation on the 2nd and 18th and at eastern elongation on the 10th and 26th.

The well known meteor shower of the *Persids* comes to a maximum on the 12th, when the Moon is near Last Quarter; there is always a better chance of seeing a greater number of shooting stars after midnight.

Mean Longitude of Ascending Node on September 1, 166°.

See note on *Summer time*, page 126.

MONTHLY NOTES

September 1. Partridge shooting begins. Salmon close-time begins.

5. Harvest Moon.

8. Malta's National Day (1565).

22. Jewish New Year (A.M. 5721).

28. Sheriffs of London to be sworn in.

29. Michaelmas. Quarter day. Lord Mayor of London elected.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Sept. 29.

** Centenary.

Mean semi-diameter in arc 15'.9; in time 1m 04".

* In the sense Apparent minus Mean. Except on September 1 (when the rule is reversed) add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is only visible towards the end of the month, when it becomes an evening star (magnitude -0.1), visible low in the west after sunset.

VENUS is an evening star (magnitude -3.3) and is visible in the west for a short time after sunset; it passes 3° north of Spica on the 20th.

MARS is the only planet visible before sunrise; it moves from the constellation Taurus into Gemini and on the 19th is about 15° north of Betelgeuse; its average magnitude is +0.5, so that it is a little brighter than Betelgeuse.

JUPITER is a brilliant evening star, visible from sunset till about 2 hours before midnight; its mag-

nitude is -1.8 and it is situated on the borders of the constellations Ophiuchus and Sagittarius, being about 15° east of Antares.

SATURN (magnitude +0.6) is stationary on the 15th, when it is about 3° north of Nunki the second magnitude star σ in the constellation Sagittarius; it is visible from sunset till about an hour before midnight. Titan is at western elongation on the 3rd and 19th and at eastern elongation on the 11th and 27th.

A total eclipse of the Moon on the 5th is not visible from the British Isles (see p. 146).

A partial eclipse of the Sun near midnight on the 20th is also not visible from the British Isles (see p. 146).

DAY OF	
Month	Week

Octo (eight), 8th month of Roman (pre-Julian) Calendar.
Sun's Longitude 210° 11' 23" 10h

PHENOMENA

October 11^d 22^h. Mars in conjunction with the Moon. Mars 5° N.
15. Mercury at greatest eastern elongation (25°).

22^d 4^h. Mercury in conjunction with the Moon. Mercury 8° S.

22^d 21^h. Venus in conjunction with the Moon. Venus 6° S.

24^d 22^h. Jupiter in conjunction with the Moon. Jupiter 5° S.

25^d 21^h. Saturn in conjunction with the Moon. Saturn 4° S.

CONSTELLATIONS

The following constellations are near the meridian at

Mean Longitude of Ascending Node on October 1, 164°.		

According to the Summer Time Act, 1925, Summer Time 1960 should begin at 2 A.M., G.M.T., on April 10 and should end on October 2 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

- October 1. Yom Kippur (Jewish Day of Atonement).
 - Pheasant shooting begins.
 - 4. Hunter's Moon.
 - 12. Columbus Day, U.S.A.
 - 14. Michaelmas Fire Insurances must be paid.
 - 29. Turkish National Holiday.

** Centenary.

Mean semi-diameter in arc 16'.1; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout October add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY reaches greatest eastern elongation on the 15th, when its magnitude is +0.1; it is visible for a short time in the south-west after sunset.

VENUS is a conspicuous evening star (magnitude -3.4) visible for about an hour after sunset; it passes 3° north of *Antares* on the 28th.

MARS is a morning star and brightens during the month from magnitude +0.2 to magnitude -0.2, so that it is an outstanding object in the constellation

Gemini; it rises 2 to 3 hours before midnight and is visible till dawn.

JUPITER (magnitude -1.6) is visible as an evening star in the west from sunset till about 8 p.m. It is situated in the constellation Sagittarius, about 20° east of *Antares*.

SATURN is an evening star (magnitude +0.7) situated in the constellation Sagittarius, about 15° east of Jupiter. Titan is at western elongation on the 5th and 21st and at eastern elongation on the 13th and 29th.

PHENOMENA
 November 1. Neptune in conjunction with the Sun.

7. Transit of Mercury. See page 146.

9^d 0^h. Mars in conjunction with the Moon. Mars 6° N.

17^d 16^h. Mercury in conjunction with the Moon. Mercury 2° S.

19^d 2^h. Venus in conjunction with Jupiter. Venus 2° S.

21^d 15^h. Jupiter in conjunction with the Moon. Jupiter 5° S.

21^d 19^h. Venus in conjunction with the Moon. Venus 7° S.

22^d 8^h. Saturn in conjunction with the Moon. Saturn 4° S.

24. Mercury at greatest western elongation (20°).

28^d 7^h. Venus in conjunction with Saturn. Venus 2° S.

Mean Longitude of Ascending Node on November 1, 163°.

MONTHLY NOTES

- November 1. Halloween. Fox-hunting begins.
 11. Martinmas. Scottish Term Day.
 —. Half-Quarter Day, Eng. and W.
 12. Lord Mayor's Day. County Sheriffs, Eng. and W., for next year, nominated.
 13. Remembrance Sunday.
 15. Solicitors', notaries', proctors' and sworn clerks' certificates expire. See note, Dec. 15.
 24. Thanksgiving Day, U.S.A.
 28. Removal Day, Scotland.

** Centenary.

Mean semi-diameter in arc 16'.2; in time 1^m 09^s.

* In the sense Apparent *minus* Mean. Throughout November add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in inferior conjunction and transits the Sun's disc on the 7th (for details see p. 146). It becomes visible as a morning star in the east, during the latter part of the month (brightening from magnitude +0.4 to -0.4) and reaches greatest western elongation on the 24th.

VENUS is an evening star (magnitude -3.5), visible in the south-west for about two hours after sunset. Venus passes 2° south of Jupiter on the 20th, and 2° south of Saturn on the 28th.

MARS is a morning star, increasing in magnitude from -0.3 to 0.8; it is visible from mid-

evening till dawn, and is almost stationary, just north of the 3rd magnitude star δ in the constellation Gemlni.

JUPITER is an evening star of magnitude -1.5, almost stationary in the constellation Sagittarius; its conjunction with Venus on the 19th should be noted.

SATURN is also an evening star of magnitude +0.8, which together with Venus and Jupiter makes the evening sky in the west, after sunset, most interesting. Titan is at western elongation on the 6th and 22nd and at eastern elongation on the 14th and 30th.

MONTHLY NOTES

December 9. Grouse and Black Game Shooting ends.
 15. Last day for renewing solicitors' certificates. Notices to owners and occupiers affected by private Bills in Parliament must be delivered.
 21. Common Council Elections, City of London.
 25. Quarter Day.
 —. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Dec. 25.
 26. Boxing Day. Bank and General Holiday, Eng. and W. N. Ireland.
 31. Various licences expire.

Mean semi-diameter in arc 16'.3; in time 1^m 11s.

* In the sense Apparent minus Mean. From December 1-25 apply as in November (see page 131) and for the remainder of the month as in January (see page 91).

MORNING AND EVENING STARS

MERCURY (magnitude -0.5) is only visible during the early part of the month, low in the east just before sunrise; for the latter part of the month it is too close to the Sun to be visible.

VENUS is a conspicuous object in the west in the early evening sky (magnitude -3.6 to -3.8).

MARS is a morning star, increasing in brightness from magnitude -0.9 to -1.3; it reaches opposition on the 30th, when it is 57 million miles from the Earth. Mars is visible nearly all night in the constellation Gemini.

JUPITER is rapidly approaching the Sun and will only be visible very low in the west after sunset until the middle of the month; its magnitude is -1.4.

SATURN (magnitude +0.8) is also rapidly approaching the Sun, but is a little further from the Sun than Jupiter; it will be visible low in the west after sunset until the last few days of the month, when it is too close to the Sun to be seen.

An occultation of Aldebaran on the 3rd is visible throughout the British Isles (see p. 146).

Introduction to Astronomical Section

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Astronomical Ephemeris* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0^h G.M.T., or the midnight at the beginning of the day named. No allowance is made for Summer Time, the dates of which, although given by the Summer Time Act, 1925, may be altered by Order in Council.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 14th edition, 1959; 17s. 6d.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow West, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time if in force.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22^h local mean time. Allowance

must be made for Summer Time if necessary. The fact that any star crosses the meridian 4^m earlier each night or 2^h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

Times of MINIMA OF ALCOL are approximate times of the middle of the period of diminished light (see p. 152).

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12^h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. The footnote given each month indicates when the numerical quantities given are to be added and when they are to be subtracted.

The Sidereal Time at 0^h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0^h) are used for converting mean time to sidereal time and vice versa.

The time SUN SOUTH is the G.M.T. of transit of the Sun at Greenwich, or the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34', and the Sun's semi-diameter to be 16', the time

given is that when the true zenith distance of the Sun's centre is $90^\circ + 34' + 16'$ or $90^\circ 50'$, or, in other words, when the depression of the Sun's centre below the true horizon is $50'$. The upper limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light continues to reach us for some time after sunset, and the interval between sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin and end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

- (1) *Sunset*, defined as above.
- (2) *Civil twilight*, when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight must cease. In England it varies from about 30 to 50 minutes after sunset.
- (3) *Nautical twilight*, when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.
- (4) *Astronomical twilight*, when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading MORNING AND EVENING STARS will be found notes describing the position and visibility of the planets; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach 1° .

The lunar terminator is the line separating the bright from the dark part of the Moon's disc. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The tabulated selenographic longitude of the terminator is measured from the mean centre of the visible disc, which may differ from the visible centre by as much as 8° , because of libration. A positive sign indicates westerly longitude, or to the right hand, and applies between New Moon and First Quarter or from Full Moon to Last Quarter. A minus sign indicates easterly longitude and applies from First Quarter to Full Moon and from Last Quarter to New Moon. When the Moon is passing from New to Full the line is called the morning terminator because the Sun is rising on the region of the Moon on which it falls; from Full to New it is the evening terminator. As the terminator changes at New or Full Moon, its longitude changes abruptly from -90° to $+90^\circ$. Interpolation between two such values may be performed by taking the complement of either of them to 180° , and changing the sign. Thus the value -83° may be treated as $+97^\circ$, or the value $+85^\circ$ as -95° .

The position angle of the terminator is the position angle of the northern cusp; it is subject to very rapid changes at New and Full Moon. The column PHASE shows the percentage of the area of the Moon's disc illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-axis minor is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9''$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57'$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^\circ 50'$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56° . They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $1^\circ = 4^m$ and $15' = 1^m$.

The column MOON SOUTHS gives the G.M.T.

of transit of the Moon over the meridian of Greenwich. It is independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^{h} (or 360°) of the longitude, and will be greater than 12^{h} (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda^{\circ}/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^{\text{h}} 05^{\text{m}}$ east, so $\lambda = 13^{\text{h}} 55^{\text{m}}$ and the fraction $\lambda/24$ is 0.58. The transit on the local date 1960 Jan. 26 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich.....	Jan. 26	10	24
λ		13	55
$0.58 \times (13^{\text{h}} 24^{\text{m}} - 10^{\text{h}} 24^{\text{m}})$		0	35
<hr style="width: 50%; margin-left: auto; margin-right: 0;"/>			
G.M.T. of transit at Sydney.....	27	00	54
Corr. to N.S.W. Standard Time....		10	00
<hr style="width: 50%; margin-left: auto; margin-right: 0;"/>			
Local standard time of transit	27	10	54

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^{\text{h}} 55^{\text{m}}$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disc. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. when the planet souths at Greenwich is also given; it follows columns relating to times when the planet is in the east and precedes those relating to times when the planet is in the west. By this arrangement the times given for any date are consecutive, but it has sometimes been necessary to extend the hours beyond 24; thus Jan. 11^d 26^h is the same as January 12^d 02^h. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $2''$ less than the equatorial diameter, while that of Saturn is about $2''$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed in September, 1950, and open at their widest extent in the Summer of 1958.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time, but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time scale, and this has led to the concept of Mean Solar Time in which all the days are of exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

Greenwich Mean Time

The diurnal rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meri-

dian transit of a fictitious Mean sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (G.M.T.). The mean solar day is divided into 24 hours and, for astronomical and scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated a.m. (before noon) and p.m. (after noon): Civil time is also usually advanced by one hour during summer time (see later), whereas G.M.T. remains unchanged.

Universal Time

Before 1925 January 1, G.M.T. was reckoned in 24 hours commencing at noon: since that date it has been reckoned from midnight. In view of the risk of confusion in the use of the designation G.M.T. before and after 1925, the International Astronomical Union recommended in 1928 that astronomers should, for the present, employ the term Universal Time, U.T. (or *Weltzeit*, *W.Z.*) to denote G.M.T. measured from Greenwich Mean Midnight.

In precision work it has now become necessary to take account of small variations, hitherto negligible, in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated U.T.o. Observed time corrected for the effects of the motion of the poles (giving rise to a "wandering" in longitude) is designated U.T.1. In 1958 the corrections which had to be applied to the time observations at the Royal Greenwich Observatory varied between -0.035^s (June) and $+0.021^s$ (December). There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. In 1958 the corresponding corrections varied from $+0.035^s$ (May) to -0.028^s (October). U.T.1 corrected for this effect is designated U.T.2, and provides a time scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

Apparent Solar Time

As has been mentioned, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle, but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun. The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right-angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of $23^{\circ} 27'$. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the com-

ponents due to obliquity and eccentricity, the equation of time reaches its maximum values in February (-14 mins.) and early November ($+16$ mins.). It has a zero value on four dates during the year, and it is only on these dates (approx. April 15, June 14, Sept. 1, and Dec. 25) that a sundial shows Mean Solar Time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or "star") time is perhaps a little misleading since the time scale so defined is not exactly the same as that which would be defined by successive transits of a selected star, as there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0.008 seconds. Superimposed on this steady precessional motion are small oscillations called nutation, giving rise to fluctuations in apparent sidereal time amounting to as much as 1.2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion between mean and sidereal time has been described in previous years; for example, see page 141 of the 1959 edition.

Ephemeris Time

In the study of the motions of the Sun, Moon and planets, observations taken over an extended period are used in the preparation of tables giving the apparent position of the body each day. A table of this sort is known as an ephemeris, and may be used in the comparison of current observations with tabulated positions. A detailed examination of the observations made over the past 300 years shows that the Sun, Moon and planets appear to depart from their predicted positions by amounts proportional to their mean motions. The only satisfactory explanation is that the time scale to which the observations were referred was not uniform as had been supposed. Since the time scale was based on the rotation of the Earth, it follows that this rotation is subject to irregularities. The fact that the discrepancies between the observed and ephemeris positions were proportional to the mean motions of the bodies made it possible to secure agreement by substituting a revised time scale and recomputing the ephemeris positions. The time scale which brings the ephemeris into agreement with the observations has been named Ephemeris Time (E.T.).

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun ($1/31556925.9747$ of the Tropical Year for 1900 January 0 at 12 h. E.T.) instead of in terms of the diurnal rotation of the Earth on its axis ($1/86400$ of the Mean Solar Day). In many branches of scientific work other than astronomy there has been a demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mesures in 1956. The length of the unit has been chosen to

provide general agreement with U.T. throughout the 19th and 20th centuries. During 1960 the estimated difference E.T.—U.T. is 35 seconds. The precise determination of E.T. from astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, a comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with the *Improved Lunar Ephemeris*. Even in this case, however, the requisite standard of accuracy can only be achieved by averaging over a number of years.

Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the rotation of the electrons in their orbits around the nuclei. The continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals: it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard. Because of the high precision attained in the comparisons, cumulative errors in the integrated time scale do not become serious in the course of a few years, and the atomic time scale may thus be compared with the astronomical time scale.

Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. These are of adequate accuracy for normal domestic and commercial needs but for precision users engaged in scientific and survey work special time signals controlled by the Royal Observatory are broadcast by the Post Office each day at 1000 and 1800 U.T. These signals consist

of a series of pips marking the seconds, and extending over five minutes: the minute pips are lengthened to facilitate identification. These signals are monitored at the Observatory, and corrections to the times of reception are published. They are normally radiated by Rugby GBR (16 kc/s), with Criggion GBZ (19.6 kc/s) as reserve, together with associated short-wave transmitters.

SUMMER TIME IN THE UNITED KINGDOM

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Acts, 1922 to 1925*, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April, and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War, the duration of Summer Time was extended, and in some years Double Summer Time was in force. The dates of the actual duration since 1939 are:

1939 Apr. 16—Nov. 19	1950 Apr. 16—Oct. 23
1940 Feb. 25—Dec. 31	1951 Apr. 15—Oct. 21
1941 Jan. 1—Dec. 31	1952 Apr. 20—Oct. 26
1942 Jan. 1—Dec. 31	1953 Apr. 19—Oct. 4
1943 Jan. 1—Dec. 31	1954 Apr. 11—Oct. 3
1944 Jan. 1—Dec. 31	1955 Apr. 17—Oct. 2
1945 Jan. 1—Oct. 7	1956 Apr. 22—Oct. 7
1946 Apr. 14—Oct. 6	1957 Apr. 14—Oct. 6
1947 Mar. 16—Nov. 2	1958 Apr. 20—Oct. 5
1948 Mar. 14—Oct. 31	1959 Apr. 19—Oct. 4
1949 Apr. 3—Oct. 30	

DOUBLE SUMMER TIME

1941 May 4—Aug. 10	1944 Apr. 2—Sept. 17
1942 Apr. 5—Aug. 9	1945 Apr. 2—July 15
1943 Apr. 4—Aug. 15	1947 Apr. 13—Aug. 10

SUMMER TIME ABROAD

Variations of the Standard time may be used and the dates of adoption are decided annually. In some countries the variations occur in winter and are called Winter Time†.

British Commonwealth—	Foreign Countries—	
Bermuda	Albania	Israel
British Honduras†	Azores	Korea
Canada (except Yukon)	Brazil	Macao
Channel Islands	Parts of China	Madagascar
Hong Kong	Egypt	Madeira
	Formosa	Morocco
	Hungary	Norway
	Iceland	Pescadores Is.
	Indo-China	Poland
	Irish Republic	Portugal
		Parts of U.S.A.

Standard Time

IN the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. In some countries (†) Standard Time is no longer used and the time given in the table below is that in normal use.

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately $7\frac{1}{2}^{\circ}$ on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R. centred at 60° E. to 180° E.

Fast on Greenwich Time.

- 12 hrs. F...Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).
- 11½ " F...Norfolk I., Nauru I.
- 11 " F...New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.
- 10 " F... Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (west of 160° E.), Australian Capital Territory, Marianas Is.
- 9½ " F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area), Dutch New Guinea.
- 9 " F...Japan, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kuri Is.
- 8½ " F...Molucca Is., Korea, Manchuria.
- 8 " F...China (coast), Hong Kong, Philippine Is., Labuan, Macao, Timor, West Australia, Celebes, Sarawak, N. Borneo Formosa, Pescadores Is.
- 7½ " F...Federation of Malaya, Singapore, Indonesian Borneo and Java.
- 7 " F...S. Sumatra, Christmas I. (Indian Ocean), Thailand, Indo-China, Cambodia, Laos, Vietnam.
- 6½ " F...Burma, Cocos-Keeling Is., N. Sumatra
- 6 " F...Pakistan (East).
- 5½ " F...India, Portuguese India, Ceylon, Laccadive Is., Andaman and Nicobar Is.
- 5 " F...Chagos Archipelago, Pakistan (West).
- 4 " F...Mauritius, Seychelles, Réunion, Oman, U.S.S.R., 40° E. to $52^{\circ}30'$ E.
- 3½ " F...Persia
- 3 " F...U.S.S.R. west of 40° E., Iraq, Eritrea, Aden, Socotra I., Somaliland, Comoro Is., Madagascar, Uganda, Kenya, Tanganyika, Zanzibar, Estonia, Latvia, Lithuania.
- 2 " F...Turkey, Greece Bulgaria, Roumania, Finland, Egypt, Israel, Jordan, Syria.
- E. European. Cyprus, Rhodesia, Union of South Africa and Protectorates, Mozambique, Republic of Sudan, Belgian Congo (East), Cyrenaica †, Crete, Lebanon, Tripolitania.

- 1 hr. F...Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France †, Luxemburg †, Spain †, Gibraltar †, Monaco †, Balearic Is. †, Poland, Austria, Hungary, Switzerland.
- Mid-European. Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, French Equatorial Africa, Cameroons, Belgian Congo (West), Angola, Spitzbergen, Algeria, Dahomey, Corsica †, Sardinia.
- Greenwich. Great Britain, Ireland, Faroë, Channel Is., Portugal, Morocco, Mauritania, Sierra Leone, Ivory Coast, Togoland, Ghana, Principé I., Guinea Republic, Senegal, St. Helena, Gambia, Canary Is. †, Ascension I., Tristan Da Cunha, Tangier.

Slow on Greenwich Time.

- 1 hr. S...Iceland, Madeira, Portuguese Guinea.
- 2 hrs. S...Azores, Cape Verde Is., Fernando Noronha I., Scoresby Sound, South Georgia.
- 3 " S...Greenland (excluding Scoresby Sound and Thule), Eastern Brazil, Uruguay, Argentina †.
- 3½ " S...Newfoundland, Labrador, Dutch Guiana.
- 3¾ " S...British Guiana.
- 4 " S...Canada east of 68° W., Greenland (Thule Area), Puerto Rico, Lesser Antilles, Central Brazil, Falkland Is., Paraguay, Bermuda, Bolivia, French Guiana, Chile.
- 4½ hrs. S...Venezuela, Curaçao I.
- 5 " S...Canada from 68° W. to 85° W. (north) or 90° W. (south), Eastern States of U.S.A., Jamaica, Bahama Is., Cuba, Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Dominican Republic.
- 6 hrs. S...Central parts of U.S.A., Canada from 85° W. (north) or 90° W. (south) to 102° W., Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.
- 7 hrs. S...Canada from 102° W. to 120° W., Mountain States of U.S.A., part of Mexico.
- 8 hrs. S...Canada west of 120° W., Alaska (south-east coast), Western States of U.S.A., part of Mexico.
- 9 hrs. S...Alaska N. of Cross Sound to 141° W., Yukon.
- 10 " S...Alaska from 141° W. to 162° W., Low Archipelago, Marquesas, Austral and Society Is., Hawaii, Christmas I. (Pacific Ocean), Fanning I.
- 11 " S...Aleutian Is., Alaska (west coast), Samoa, Midway Is.

In the Tonga Islands the time 12h. 20m. fast and in Chatham Is. † 12h. 45m. fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	15° S.	$172\frac{1}{2}^{\circ}$ W.	53° N.	170° E.
1° S.	180°	5° S.	180°	$65\frac{1}{2}^{\circ}$ N.	169° W.
45° S.	$172\frac{1}{2}^{\circ}$ W.	48° N.	180°	75° N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained.

L.S.T.	Cor.	L.S.T.	Cor.	L.S.T.	Cor.	L.S.T.	Cor.	L.S.T.	Cor.	L.S.T.	Cor.

3 00	-53	7 00	-13	11 00	+40	15 00	+53	19 00	+14	23 00	-39
3 20	-52	7 20	- 8	11 20	+43	15 20	+52	19 20	+ 9	23 20	-43
3 40	-50	7 40	- 3	11 40	+46	15 40	+50	19 40	+ 5	23 40	-46
4 00	-47	8 00	+ 1	12 00	+48	16 00	+48	20 00	- 0	24 00	-48

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1' throughout the year for all latitudes up to 60°.

Example.—On July 4 at 23^h 17^m G.M.T. in longitude 2^h 34^m west, the altitude of *Polaris* (corrected for dip, etc.) is found to be 41° 56'.

The local sidereal time is found by the method given on page 141 of the 1959 edition to be 15^h 35^m. Hence

Observed altitude.....	41 56
Correction from table.....	+50
Latitude.....	42 46

MEAN AND SIDEREAL TIME

MEAN REFRACTION

Acceleration						Retardation						Alt. Ref.			
h	m	s	h	m	s	m	s	h	m	s	h	m	s	Alt. Ref.	Alt. Ref.
1	0	10	13	2	08	0	00	1	0	10	13	2	08	0	00
2	0	20	14	2	18	3	02	2	0	20	14	2	18	3	03
3	0	30	15	2	28	9	07	3	0	29	15	2	27	9	09
4	0	39	16	2	38	15	13	4	0	39	16	2	37	15	15
5	0	49	17	2	48	21	18	5	0	49	17	2	47	21	21
6	0	59	18	2	57	27	23	6	0	59	18	2	57	27	28
7	1	09	19	3	07	33	28	7	1	09	19	3	07	33	34
8	1	19	20	3	17	39	34	8	1	19	20	3	17	45	46
9	1	29	21	3	27	45	39	9	1	28	21	3	26	51	53
10	1	39	22	3	37	51	44	10	1	38	22	3	36	57	59
11	1	48	23	3	47	57	49	11	1	48	23	3	46	60	00
12	1	58	24	3	57	60	00	12	1	58	24	3	56		

The length of a sidereal day in mean time is 23^h 56^m 04^s.09. Hence 1^h M.T. = 1^h 0^m 9^s.86 S.T. and 1^h S.T. = 1^h - 9^s.83 M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these

two entries is the required acceleration or retardation. Thus the acceleration for 11^m 26^s (which lies between the entries 9^m 07^s and 15^m 13^s) is 2^s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for 45^m 46^s is 7^s.

Example.—Convert 14^h 27^m 35^s from S.T. to M.T.

Given S.T.....	14 27 35
Retardation for 14 ^h	2 18
Retardation for 27 ^m 35 ^s	5

Corresponding M.T..... 14 25 12

For further explanation, see p. 141, 1959 edition. The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1960

ECLIPSES, 1960

In 1960 there will be four eclipses, two of the Sun and two of the Moon.

1. A total eclipse of the Moon on March 13; the eclipse will have only entered the penumbra stage (shortly after beginning) when the Moon sets in the British Isles. The shadow of the Earth first appears on the Moon at 6^h 38^m and leaves the Moon at 10^h 18^m; the total phase lasts from 7^h 40^m to 9^h 15^m. The eclipse is generally visible from North Africa, the Atlantic Ocean, North America, South America, the Pacific Ocean, Australasia, parts of Asia and parts of Antarctica.

2. A partial eclipse of the Sun on March 27; invisible from this country. This eclipse is only visible from Australia, Antarctica and the southern oceans. It begins at 5^h 29^m and ends at 9^h 22^m. At maximum eclipse 70 per cent of the Sun is obscured.

3. A total eclipse of the Moon on September 5, invisible from this country. The shadow of the Earth first appears on the Moon at 9^h 36^m and leaves the Moon at 13^h 7^m; totality lasts from 10^h 38^m till 12^h 5^m. The eclipse is generally visible from North America, the western part of South America, the Pacific Ocean, Australasia, parts of Asia, the Eastern part of the Indian Ocean and parts of Antarctica.

4. A partial eclipse of the Sun on September 20-21, invisible from the British Isles. The eclipse begins at 21^h 9^m on the 20th and ends at 0^h 50^m on the 21st. At maximum eclipse 61 per cent of the Sun is obscured. The eclipse is visible from North America, the north-eastern part of the Pacific Ocean and the eastern part of Siberia.

TRANSIT OF MERCURY, 1960

A transit of Mercury across the Sun's disk occurs on November 7 and is partly visible from the British Isles. From this country Mercury enters the disk at 14^h 35^m, at the lower left hand edge and will be still crossing the disk at sunset. Mercury is only 10" in diameter and a small telescope will be needed to see it; if possible the Sun's disk should be projected on to a sheet of white paper as in no circumstances may the Sun be viewed directly with the naked eye! This transit is visible generally from Europe, Africa, the Atlantic Ocean, America, the Pacific Ocean, New Zealand and Antarctica. The transit begins at 14^h 34^m and ends at 19^h 12^m.

OCCULTATIONS, 1960

Ocultaions of *Aldebaran* (α Tauri, magnitude 1.1) are visible from the British Isles on February 6, April 28, July 19 and December 3.

The planet Mercury will be occulted by the Moon on March 25 (visible from Europe, including the British Isles, North Africa and America) and on April 24 (Russia). Venus will also be occulted by the Moon on April 24 (South America and South Africa) and on August 23 (Antarctica) and Mars on May 20 (East Indies, Northern Australia and the Pacific Ocean).

OCCULTATIONS OF STARS

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6.5 are normally included, and reappearances to fifth magnitude only. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29'. Long. 0°) and Edinburgh (Lat. 55° 55', Long. 3° 11' west). The coefficients *a* and *b* are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a.\Delta\lambda + b.\Delta\phi$ to the given G.M.T.

As an illustration the reappearance of Mercury on March 25 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude	0.3	+3.3
Long. of Liverpool	+3.3	+3.3
$\Delta\lambda$	+3.0	-0.3
Latitude	51.5	55.3
Lat. of Liverpool	53.4	53.4
$\Delta\phi$	+1.9	-2.5
	h m	h m
G.M.T.	13 03.6	12 57.3
$a.\Delta\lambda$	-3.0	+0.2
$b.\Delta\phi$	-1.0	+2.0
G.M.T. at Liverpool	12 59.6	12 59.5

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

- No occn. = star not occulted.
- Low = star's altitude less than 10°.
- Sun = Sun not sufficiently below the horizon.
- Graze = occultation is of very short duration.

It will be noticed that in some cases the coefficients *a* and *b* are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

Some of the astronomical information in this ALMANACK has been taken from the *Astronomical Ephemeris*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

OCCULTATIONS OF STARS BY THE MOON, 1960

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the Star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3^s a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (Lat. $51^{\circ} 30'$) the meridian altitude of *Sirius* is found thus:

Altitude of equator.....	38	30
Declination south.....	16	40

Difference..... 21 50

The Altitude of *Capella* (Dec. $+45^{\circ} 58'$) at lower transit is:

Altitude of pole.....	51	30
Polar distance of Star...	44	02

Difference..... 7 28

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 138). The stars *Sirius* and *Canopus* and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars as faint as the twentieth magnitude may be photographed by long exposures with the largest telescopes.

* α Herculis, mag. 3.1 to 3.9.

δ Cephei, mag. 3.7 to 4.4. Spectrum F₅ to G₀.

The Structure of the Universe

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Nebula in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Nebula. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes $1\frac{1}{2}$ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Nebula, and about 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. 1 parsec equals 3.26 light years.

THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. Stars fainter than this are not visible to the naked eye; the 200-inch telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearest star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra.

The distances of some double and variable stars can be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star. As mentioned earlier, light takes 3.26 years to travel a distance of one parsec.

When the distance of any star has been determined, and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like *Vega* and *Sirius*, are characterized by very strong hydrogen lines. F, G and K stars, like *Procyon*, our *Sun*, and *Arcturus*, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like *Betelgeuse* and *Antares*, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7000°; G, 5500°; K, 4500°; M, 3000°. The sequence O to M is also a sequence of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types. There is the further advantage that colours can be measured for stars too faint for study by spectroscopic techniques.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, -4; B, -2; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used

instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from -4 to $+11$, or fainter, is known as the "main sequence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those of types O to F and a few of types G to M are still brighter, with absolute magnitudes ranging from -4 to -7 . The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about 0 are called giants, those of -4 to -7 are called supergiants.

The sizes of the stars have been determined mostly by calculation from known surface temperatures and absolute magnitudes. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 864,000 miles in diameter. The main sequence is found to be a sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while an average M star has a radius of one-third of the Sun. The giant stars of types G to M have radii between 20 and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately even in large telescopes; their binary nature is revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. The periods of these stars, known as spectroscopic binaries, varies from a few hours to a few years. Some spectroscopic binaries are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is *Algol*, or β Persei, a star normally of the second magnitude (see p. I of each month).

VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by 10 to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Praesepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but

differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude -3 . There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulae. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulae, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulae are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulae because they are relatively bright and can be seen at large distances.

THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system, which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system, called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novae and supernovae, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulae, form part of the Galaxy. The distribution of these various objects in the Galaxy are not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be

less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some extragalactic nebulae. This structure was first shown by studying the positions of O and B stars; these stars trace out spiral arms. Radio astronomers subsequently found that interstellar hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation has enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 100 thousand million times the mass of the Sun.

STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

EXTRAGALACTIC NEBULAE

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are the extragalactic nebulae, also known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral nebulae consist of a

NEBULÆ AND CLUSTERS

Object	Constellation	R.A.	Dec.	Description
		h m	°	
47 Tucanæ	Tucana	0 22	- 72.4	2nd finest globular cluster, 42' diam., lucid
M31	Andromeda	0 40	+ 41.0	Great Spiral Nebula, 2° × ½°, lucid
Nub. Minor	Tucana	0 50	- 73.9	Small Magellanic Cloud, 10 sq. deg., lucid
M33	Triangulum	1 31	+ 30.4	Spiral nebula, 1° × ½°
H VI 33, 34	Perscus	2 18	+ 56.9	Double cluster, each 36' diam., lucid
Pleiades	Taurus	3 45	+ 23.9	Open cluster, 1½° × 1°, lucid
Hyades	Taurus	4 26	+ 15.8	Open cluster, 3° across, lucid
Nub. Major	Dor.-Mensa	5 25	- 69.3	Large Magellanic Cloud, lucid
M1	Taurus	5 32	+ 22.0	"Crab" nebula, 3' × 1'
M42	Orion	5 33	- 5.4	"Great" nebula, lucid, round θ Orionis
30 Dor.	Dorado	5 39	- 69.1	"Looped" nebula and cluster
M 44	Cancer	8 37	+ 20.2	"Præsepe" or "Beehive" cluster, 1° sq.
η Carinæ	Carina	10 43	- 59.4	"Keyhole" nebula, 80' diam.
κ Crucis	Crux	12 51	- 60.1	Loose cluster, 10' diam., just lucid
ω Centauri	Centaurus	13 24	- 47.1	Finest globular cluster, 45' diam., lucid
M51	Can. Ven.	13 28	+ 47.4	Bright double spiral nebula
M3	Can. Ven.	13 40	+ 28.6	Globular cluster, 18' diam., lucid
M13	Hercules	16 40	+ 36.6	3rd finest globular cluster, 15' diam., lucid
M20	Sagittarius	17 59	- 23.0	"Trifid" nebula, 20' diam.
M8	Sagittarius	18 01	- 24.4	"Lagoon" nebula, 25' diam., lucid
M57	Lyra	18 52	+ 33.0	"Ring" nebula, 1' diam.
M27	Vulpecula	19 57	+ 22.6	"Dumb Bell" nebula, planetary, 5' diam.

M=Messier. H=Sir W. Herschel. Lucid=visible to unaided eye.

central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical nebulae and the central bulges of the spiral nebulae are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral nebulae; the presence of hydrogen gas has been proved by the observation of regions of glowing gas and by the reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Nebula in Andromeda, at a distance of 2,000,000 light years; this spiral nebula is believed to be similar to our own Galaxy in size and stellar content. Extragalactic nebulae frequently occur in large clusters, each containing hundreds of nebulae. Many extragalactic nebulae are in rotation in a manner similar to our own Galaxy and with comparable periods.

RADIO STARS

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important

source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulae are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebulae. A few strong sources have been identified with peculiar extragalactic nebulae, and in other cases the source appears to be two colliding nebulae. There is a growing feeling that many of the radio stars may be very distant objects, perhaps even beyond the range of optical telescopes. The process by which the radio waves are generated has not yet been explained.

COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulae through the observable region of space. It has been found that in spite of the tendency of nebulae to cluster together, on a still larger scale the nebulae are distributed remarkably uniformly. Observations have shown that distant nebulae have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distant nebulae appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. There are two rival theories of the cause of this expansion. One postulates a gigantic initial explosion some 5,000 million years ago. The other postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Observations have not yet succeeded in distinguishing between these theories.

The Solar System

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about $5,700^{\circ}\text{C}$., but a relatively short distance inside the surface the temperature reaches $1,000,000^{\circ}$ and deeper in the interior, near the centre, it is believed to be in the region of $14,000,000^{\circ}$. Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas"

does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling onto the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40° - 50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (1947 April) covered 7,000 million square miles at its greatest, or approximately 0.7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11.1 years.

Maxima		Minima	
1837.2	1907.0	1833.9	1901.7
1848.1	1917.6	1843.5	1913.6
1860.1	1928.4	1856.0	1923.6
1870.6	1937.4	1867.2	1933.8
1883.9	1947.5	1878.9	1944.2
1894.1		1889.6	1954.3

The present sunspot maximum (1957-58) is unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots; the previous maxima in 1937-38 and 1947-49 were also notable for great activity.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as H α , the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm. A very few large flares have had associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the

Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered skylight is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west, as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 13° to 28°. The planet is best placed for naked eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in England at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutin-

ized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. The question of whether Mercury has an atmosphere cannot be regarded as settled.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47°. Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, probably owing to cloud, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 82-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at 3^h 32^m, +81°, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Further observations will be required to deduce the speed of rotation of the planet, but it is considered that this cannot exceed a few weeks.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of

carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 6 inches aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41 $\frac{1}{2}$ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, and the infra-red absorption spectra of the polar caps support this view. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there are broad large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that

there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The question of the so-called Martian "canals" is very controversial. Most skilled observers would probably deny the very existence of these excessively thin linear markings, attributing them to optical or physiological effects. To speculate on their being the work of intelligent beings is therefore, to say the least, premature.

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none have ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock flying round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 421 miles in diameter, Pallas 280, Juno 150 and Vesta 241 miles.

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1931, when carefully planned photo-

graphic recording of the planet and the surrounding stars, enabled measures of its distance to be made, and hence a new value of the distance of the Sun from the Earth (the solar parallax) to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, or in finding the masses of Mercury or Venus.

JUPITER

Jupiter, the largest planet, has a volume over 1000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately 9^h 50^m, while most of those in higher latitudes give periods between 6^h 55^m and 9^h 56^m, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about +25°; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878-80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the

surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order -120°C. , which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Seven other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13.5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Similar evidence has been obtained from other quarters, and an investigation is now being made to discover possible correlations between these radio outbursts and the times at which visible markings on the belts of Jupiter transit across the centre of the disk.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^{\text{h}} 15^{\text{m}}$, in higher latitudes $10^{\text{h}} 38^{\text{m}}$ has been found in the northern hemisphere and $10^{\text{h}} 37^{\text{m}}$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters

that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disc is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has nine satellites, of which the largest Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phœbe, has a retrograde motion.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disk, which is quite obvious, though less than $4''$ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be $10\frac{2}{3}$ hours; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disk of well over $2''$ in diameter. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

The planet was found in 1846 as a result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, was discovered by Lassell soon after

the discovery of the planet. Triton revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite, found by Kuiper in 1949, revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th-15th magnitude.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18.6 years.

The Moon, whose diameter is 2160 miles, rotates in the same time that it revolves ($27^d 7^h 43^m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of $29\frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars, the Moon rises later each day by a variable amount that depends on the inclination of its

apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon, although in this Almanack the name is always given to the Full Moon of September. The next Full Moon is called the Hunters' Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25 and 1949 January 24-26) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when it may appear brighter than the Galaxy in its brightest area.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micro-meteorites. These probably act as centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors, shooting-stars or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids,

Perseids, Gacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Gemnids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 10 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. At the other end of the scale are the micro-meteorites which are too small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the

position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 100 million miles—a fine spectacle. The majority of comets are still found accidentally, and it is rare for any observer to search for these objects. There have been unusually few bright ones for nearly half a century, and the two naked-eye comets which appeared in 1957 (Comet Arend-Roland in April, and Comet Mrkos in August) therefore aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, and whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

Apart from these two annual comets there are eight periodic comets for which predictions have been made of returns in 1960. These are all faint, short period comets: Schaumasse, Vaisala, Gale, Borrelly (1), Brooks (2), Harrington (2), Finlay, Reinmuth (2). Further information about these comets may be found in the British Astronomical Association's *Handbook* for 1960.

The Earth

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7927 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}^\circ$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second. It makes a complete rotation on its axis in about $23^h 56^m$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^h 50^m$ interval between consecutive meridian passages of the Moon. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward.

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day

as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is diminishing by about a thousandth of a second per day every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a light bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to a directing force impelling it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-west at the end.

In 1576 Robert Norman, an English instrument maker, was impressed by the fact that a compass needle perfectly balanced before magnetization, was no longer in balance after being magnetized, but its north-seeking end was always lower. He devised an instrument to show that, in London, the needle would incline at about 72° to the horizontal if allowed to swing in a vertical plane defined by the direction indicated by an ordinary compass needle.

William Gilbert, physician to Queen Elizabeth I, gave the first approximately correct explanation of the then known facts. Magnetized needles behave as if in proximity to a large magnetized sphere, which he conceived to be the Earth itself.

It was soon found that the direction of the force in a particular locality slowly changed. Henry Cellibrand, observing near Greenwich in 1534,

found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates slowly through a small angle every day. The movement is eastwards till about 8 a.m., then rather quickly westwards till about 2 p.m., after which there is a gradual return eastwards. The amplitude may be as much as $15'$ in the summer.

The compass needle points along a magnetic line of force passing through the "magnetic poles." At these poles a freely suspended magnetized needle would be directed into the vertical. The north magnetic pole was located by Sir James Ross in 1831 in Arctic Canada at 70° N., 97° W. The Norwegian explorer, Amundsen, in 1904, placed the position about 35 miles north-east of Ross's site. Recent investigations by Canadian surveying parties indicate a position of approximately 75° N. 101° W., but the lines of force do not converge radially upon this point tending rather, on the north side, to concentrate into a channel. From observations by members of Mawson's Australian Antarctic Expedition in 1912 the inferred position of the South magnetic pole was approximately 71° S. 151° E. Results obtained during a French Antarctic Expedition in 1951-2 suggest a position in close agreement with that obtained from an analysis of the field, viz. 67° S. 142° E. The two magnetic poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 700 miles. The distances of the magnetic poles from the north and south geographical poles appear now to be about 1,000 and 1,600 miles respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 5° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

It is evident that the compass needle will not, in general, indicate true north. For example, in Greenland it points $50'$ to the west, and in British Columbia $30'$ to the east. A line, running through places where the magnetic and true north coincide is known as an agonic line. One such passes from Hudson Bay through Ontario, Ohio, Carolina, the Bahamas, over South America to Buenos Aires and the South Atlantic; a second, from Sweden and the Baltic, across Poland to Rumania, Asia Minor, Egypt and Ethiopia, whence it passes south of Arabia, across northern India to China and eastern Russia, returning through the north-western Pacific Ocean to Siam, and thence through Sumatra to West Australia.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Combination of the two

phenomena suggests that a whole cycle may perhaps occupy several hundred years; it is uncertain whether an exact repetition would then follow.

London		Greenwich	
1580	$11^\circ 15'$ E.	1820	$24^\circ 21'$ W.
1622	6 00 E.	1840	$23^\circ 20'$ W.
1657	0 00	1860	$21^\circ 14'$ W.
1692	6 00 W.	1880	$18^\circ 33'$ W.
1723	$14^\circ 17'$ W.	1900	$16^\circ 29'$ W.
1773	$21^\circ 09'$ W.	1920	$14^\circ 09'$ W.
1805	$24^\circ 08'$ W.	1925	$13^\circ 10'$ W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart. The earliest world-chart of magnetic declination was published in 1701 by Edmund Halley, later Astronomer Royal. Charts of other magnetic elements, such as horizontal intensity, vertical intensity, and dip are also published.

Since the secular change in long periods is not predictable with sufficient accuracy in many parts of the world, information on the subject has to be obtained from fixed observatories. Magnetic surveys both by sea and land must also be undertaken periodically.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1960 is $7^\circ 38'$ west and allowing an increase of $15'$ for each degree of latitude northwards and one of $33'$ for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about $7^\circ 38' + 45' + 165'$, i.e. $11^\circ 8'$ west. The average annual change at the present time is about $7'$ decrease.

The phenomena of terrestrial magnetism have been the subject of continuous study at fixed observatories since early in the 19th century. The number of such observatories now approaches 100—widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands. The new Hartland Observatory (a department of the Royal Greenwich Observatory) came into operation in 1957 to take the place of the magnetic observatory at Abinger, Surrey which ceased to operate later in the year. The mean values of the magnetic elements at Abinger are given below.

The phenomena of terrestrial magnetism are due primarily to a field of magnetic force emanating from within the Earth, the origin and behaviour of which is still not satisfactorily explained, and secondarily to magnetic fields imposed from without by the flow of streams of ions or electric currents in the higher regions of the atmosphere. It is undoubted that the latter effects are closely associ-

ated with the position of the Sun and with the state of activity of that body, for the diurnal oscillation of the needle everywhere follows local time, and is also more than twice as great in summer as in winter in temperate latitudes. Again, it is considerably larger during years of increased solar activity (as indicated by the occurrence of many sunspots) than in the quiet years.

† Inferred ‡ In gauss

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's field is subject for several hours to marked disturbance, indicated by continuous irregular movements of the recording magnets and accompanied in many instances by a widespread display of aurora. In severe magnetic storms, induced earth-currents also develop which seriously interfere with telegraphic communication. The disturbances are generally ascribed to the passage of the Earth through vast streams of ions or electrified particles that have been expelled from the Sun during an explosive outburst at the solar surface. Such eruptions can be seen and photographed. Often a conspicuous spot has been apparent near the centre of the Sun's disk a day or two before; but the appearance of a spot is by no means always followed by the occurrence of a magnetic storm. There is a tendency for disturbances to recur after intervals of 27 or 28 days, corresponding closely to the apparent period of rotation of the Sun on its axis; this would be explained if the source of the disturbance were located on a particular area of the sun's surface.

The Zodiac

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about $50''$ a year is due to precession; the signs no longer coincide with the constellations whose names they bear.

It is unknown when or by what race the stars were first grouped into constellations; but undoubtedly the twelve figures that lie in the Zodiac have been considered of special importance from very early times, for indications of them are found more often than any others on ancient monuments. The First Point of Aries must have coincided with this constellation rather more than 2000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy.

Much mystical credence has been bestowed upon the Signs of the Zodiac, but we are on surer ground in noting that Mazzaroth (Job xxxviii, 32), which means to encircle or surround, was the Hebrew

name for the Zodiac. The latter word is evidently of Greek derivation.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright, black stone about $2\frac{1}{2}$ feet high and $1\frac{1}{2}$ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Bagdad and its date is estimated to be about 1187-1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month.

These times of entry in 1960 are shown in the Table below with the names of the signs and their symbols.

SIGNS OF THE ZODIAC

In 1960 the Sun enters—	d	h
♈ Aquarius, the Water Bearer.....	Jan.	21 01
♉ Pisces, the Fishes.....	Feb.	19 15
♊ Aries, the Ram.....	Mar.	20 15
♋ Taurus, the Bull.....	April	20 02
♌ Gemini, the Twins.....	May	21 02
♍ Cancer, the Crab.....	June	21 10
♎ Leo, the Lion.....	July	22 21
♏ Virgo, the Virgin.....	Aug.	23 04
♏ Libra, the Balance.....	Sept.	23 01
♐ Scorpio, the Scorpion.....	Oct.	23 10
♑ Sagittarius, the Archer.....	Nov.	22 07
♒ Capricornus, the Sea Goat.....	Dec.	21 20

Tidal Constants

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 167, 168, etc.) and adding thereto the quantities annexed. The time thus found will be Greenwich Time for British, Irish, French and Belgian Ports, and Amsterdam Time for Netherlands Ports. The rise of the tide at Springs and Neaps is given in the last two columns. An * denotes Range of Tide. During the period of SUMMER TIME one hour must be added to the times shown on pp. 167-178, before the system is applied.

EXAMPLE.—Required times of high water at Stranraer on April 6, 1960:—

(a) Morning Tide.

Appropriate time of high

water at Greenock.....18h. 49m. April 5.

Add tide interval.....11h. 53m.

Sum.....30h. 42m.

Subtract 24h.24h. 0m.

Time of high water at

Stranraer, April 6th .. .6h. 42m. a.m.

(b) Afternoon Tide.

Appropriate time of high

water at Greenock 6h. 54m. April 5.

Add tide interval.....11h. 53m.

Sum.....18h. 47m.

Subtract 12h.12h. 0m.

Time of high water at

Stranraer, April 6th .. .6h. 47m. p.m.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20-400 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500-2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALÆOZOIC (Old Animal Life) PERIODS include:—

Cambrian, Ordovician and Silurian rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.-S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone, *Carboniferous*, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Herzynian* because widespread in W. Germany and adjacent areas. In Britain there are E.-W. lines of hills and valleys, and some N.-S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R. *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of Life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period ice sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100-200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of

Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kromdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene. The late Dr. Broom inferred that *Australopithecus prometheus* made use of fire, i.e., was, at any rate, near-human.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group. A skull from Galilee, and a skull from Broken Hill, Rhodesia, are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Pittdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neanderthal group, and probably the Pithecanthropus group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cro-Magnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 8 or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillean and Acheullan) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Ologesallie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skillfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Paleolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development

the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, northwest Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnus).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial* or *Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 165 $\frac{3}{4}$, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini 1960—Anno Lucis 5660*. This *Year of Light* is based on the Book of Genesis 1: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 8 of the present Queen began on Feb. 6, 1959. The system is used for dating Acts of Parliament. The *Summer Time Act of 1925*, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI and 1 Elizabeth II.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556,

Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365 $\frac{1}{4}$ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June 22. By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The Lord Mayor was previously elected on the day of the Feast of St. Simon and St. Jude (Oct. 28), and from the time of

Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. At the time of going to press, legislation had been promoted to provide for the Lord Mayor in future to be presented to the Lord Chief Justice on the second Saturday in November and for him to be sworn in on the previous day.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) Cycle.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in *figures of gold* on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epaet.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the

months of May, June, July and August, Midsummer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e., about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1960 is MMDCCLXII (2713), A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 183. The year containing 365 days was called *bissextilis annus*, as it had a double sixth day (*bissexius dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty-eight days, and in Leap Year twenty-nine

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Anno Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 181). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the

German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700-1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The Dominical Letter is one of the letters A-G which are used to denote the Sundays (Lord's Days) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of

A TABLE OF THE MOVABLE FEASTS FOR 10 YEARS—1955-1965

Year	Ash Wednesday	Easter	Ascension	Whit Sunday	Suns. after Trin.	Advent
1956	Feb. 15	April 1	May 10	May 20	xxvi	Dec. 2
1957	March 6	April 21	May 30	June 9	xxii	Dec. 1
1958	Feb. 19	April 6	May 15	May 25	xxv	Nov. 30
1959	Feb. 11	March 29	May 7	May 17	xxvi	Nov. 29
1960	March 2	April 17	May 26	June 5	xxiii	Nov. 27
1961	Feb. 15	April 2	May 11	May 21	xxvi	Dec. 3
1962	March 7	April 23	May 31	June 10	xxiii	Dec. 2
1963	Feb. 27	April 14	May 23	June 2	xxiv	Dec. 1
1964	Feb. 12	March 29	May 7	May 17	xxvi	Nov. 29
1965	March 3	April 18	May 27	June 6	xxiii	Nov. 28

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first Day in *Lent*) can fall at earliest on February 4 and at latest on March 10.
Easter Day can fall at earliest on March 22 and at latest on April 25.
Ascension Day can fall at earliest on April 30 and at latest on June 3.
Whit Sunday can fall at earliest on May 10 and at latest on June 13.
Rogation Sunday is the Sunday next before *Holy Thursday* (Ascension Day).
Trinity Sunday is the Sunday next after *Whit Sunday*.
Corpus Christi falls on the Thursday next after *Trinity Sunday*.
 There are not less than xxii and not more than xxvii *Sundays* after *Trinity*.
Advent Sunday is the Sunday nearest to November 30.

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, *opposite the sum obtained*, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (See p. 183)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g. 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

exceptional importance from the time of the Nicene Council (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maudy Thursday, the day before Good Friday the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, *Easter-Day* is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that *Easter-Day* shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the

Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammass (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 223) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptised. But other derivations have been suggested. An early writer says: "This day is called Wyte Sunday because the Holy Ghost brought Wyte and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (born 1120; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the

25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

Thistle Sunday (Scotland) is the first Sunday after St. Andrew's Day.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and *Abib* was to be the first month of the year. In the First Book of Kings three months are mentioned by name, *Zif* the second month, *Ethanim* the seventh and *Bul* the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II., a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (*Circ.* 120 B.C.) which differ little from those adopted at the present day. The year 5720 (1059-60 A.D.) is the 1st year of the 32nd *Metonic* (Minor or Lunar)

Cycle of 19 years and the 8th year of the 205th *Solar* (or Major) *Cycle* of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called *Embolismic*. Of the 19 years that form a *Metonic* cycle, 7 are *embolismic*; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which

A.M. 5720 (known as 720 in the short system) is a Common Abundant year of 12 months, 51 Sabbaths and 355 days.

A.M. 5721 (721) is a Common Regular year of 12 months, 51 Sabbaths and 354 days.

A.M. 5722 (722) is an Embolismic Deficient year of 13 months, 54 Sabbaths and 383 days.

NOTES.—* In these dates fall on the Sabbath the Fast is kept on the following day.

This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and night-fall. The time used is that of the meridian of Jerusalem, which is *zh. zim.* in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Gregorian Calendar. Hejira years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the Hejira. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the Hejira year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a Hejira year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle, if the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1379 gives a quotient of 45 and a remainder of 29, and is thus *kabishah*. A.H. 1380 gives a quotient of 46 without remainder and is a common year. A.H. 1381, with remainder 1, is also a common year.

Hejira Years 1379 and 1380

Name	A.H. 1379	A.H. 1380
Length of Month		
Muharram (30)...	1959 July 7	1960 June 26
Saphar (29)....	Aug. 6	July 26
Rabia I (30)....	Sept. 4	Aug. 24
Rabia II (29)....	Oct. 4	Sept. 23
Jomada I (30)...	Nov. 2	Oct. 22
Jomada II (29)...	Dec. 2	Nov. 21
Rajab (30).....	Dec. 31	Dec. 20
Shaaban (29)....	1960 Jan. 30	1961 Jan. 19
Ramadan (30)...	Feb. 28	Feb. 17
Shawwâl (29)...	Mar. 29	Mar. 19
Dulkaada (30)...	April 27	April 17
Dulheggia (29 or 30).....	May 27	May 17

NOTE.—A.H. 1381 (common year of 354 days) begins on 1961, June 15.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet, Hong Kong, Singapore, Malaya and elsewhere in South-East Asia.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1960 is, therefore, the year 2017 of the Vikrama Era.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1960 is 1882 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the

moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of

which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31
 " Taishō " 1912 Aug. 1 to 1926 Dec. 25
 " Shōwa " 1926 Dec. 26

Hence the year Shōwa 35 begins 1960 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiryōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

TEMPERATURE AND RAINFALL RECORDS

GENERAL: The *maximum shade temperature* of the air on record is 136° F. at Azizia (Uzzizia) in Tripoli on Sept. 13, 1922; the *extreme lowest recorded temperature* is -90.4° F. (122° below freezing point) at Verkhoysk, Siberia, on Feb. 5 & 7, 1892 and at Oymekon, Siberia, on Feb. 6, 1933. In the upper air temperatures as low as -133° F. have been recorded—e.g. over Agra (India), at a height of 16½ kilometres (54,000 feet).

The *wettest place* in the world is considered to be the neighbourhood of Cherrapunji in Assam where annual averages exceeding 400 inches have been obtained, of which 90 per cent. usually falls in the six months April to September, and annual totals have reached 670 inches.

U.K.: The *maximum shade temperature* recorded in the air at 4 feet above the ground is 100° F. at Greenwich Observatory (Aug. 9, 1911).

The *lowest shade temperatures* are -17° F. at Braemar (Feb. 11, 1895) and -16° F. at Kelso (Dec. 3, 1879).

The *greatest rainfall* recorded in a day was at Martinstown, near Dorchester, 11.00 inches in the 24 hours commencing 9 a.m. (July 18, 1955). *Annual*

totals exceeding 240 inches were recorded at The Styte, Borrowdale, in 1872, 1923, 1928 and 1954; at Ben Nevis Observatory in 1898 and at Llyn Llydaw, Snowdon, in 1909. The *smallest annual total* is 9.29 inches at Margate in 1921 and the largest may be regarded as 257 inches at Sprinkling Tarn in 1954.

The *maximum wind-velocity* on record occurred on the top of Costa Hill, Orkney, on December 12, 1956, in a gust of 127 miles per hour.

SUNSHINE RECORDS IN UNITED KINGDOM, 1958

Of the 320 stations reporting the number of hours of bright sunshine in the *Monthly Weather Reports* published by the Meteorological Office the following include the largest values in 1958, the recorded sunshine being given in hours:—Shanklin 1701, Jersey 1676, Sandown 1637, Margate 1623, Ventnor 1615, Littlehampton 1613. The sunshine during 1958 was about 93 per cent. of average. January was generally sunnier than usual. Over England and Wales no other month recorded more than the average amount. Over Scotland, May, July, September, October and December also gave more than average.

TEMPERATURE AND SUNSHINE
AT VARIOUS PLACES IN GREAT BRITAIN

Mean Temperature of the air (°F.) and Bright Sunshine (as mean hours per day) at representative British Health Resorts and Towns during the year July, 1958, to June, 1959, and the calendar year 1958. Also height of Climatological Station above mean sea level, altitude being given in feet. Fuller details of the weather are given in the *Monthly Weather Report* published by the Meteorological Office.

TEMPERATURE AND SUNSHINE AT VARIOUS PLACES IN GREAT BRITAIN

Mean Temperature of the air (° F.) and Bright Sunshine (as mean hours per day) at representative British Health Resorts and Towns during the year July, 1958, to June, 1959, and the calendar year 1958. Also height of Climatological Station above mean sea level, altitude being given in feet. Fuller details of the weather are given in the *Monthly Weather Report* published by the Meteorological Office.

Entries of Maximum Temperature cover day period 9-21 h.; Minimum Temperature night period 21-9 h. and are entered to day of reading; Rainfall the 24 hours commencing at 9 h. on day of entry; Sunshine the 24 hours 0-24 h.; Pressure and Wind are recorded at 9 h.; Wind is recorded in degrees, E=90°, S=180°, W=270° and N=360°. Pressure is corrected and reduced to M.S.L. Rainfall 1000 mm. = 39.37 in. Averages refer to the following standard periods:—Temperature, Pressure and Sunshine 1921-50; Rainfall, 1831-1915.

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901.8 English miles, divided into 360 Degrees of Longitude, each of 69.17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901.8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION.

The population of the world in June, 1957, estimated by the *United Nations Statistical Yearbook, 1958*, is 2,795,000,000, an increase of 1.6 per cent. over 1956. Distribution by continents, with annual increase per cent., was:—

Continent	Area, Square Miles	Estimated Population, 1957 (millions)	Increase per cent.
Europe.....	2,085,000	414	0.7
Asia.....	18,635,000	1,556	1.8
Africa.....	11,699,000	225	1.8
America....	20,220,000	381	2.1
Oceania...	3,201,000	15.4	2.2
Total....	196,836,000	2,795.0	1.6

A United Nations report (*The Future Growth of World Population*) in 1958, pointed out that the population of the world had increased since the beginning of the 20th Century at an unprecedented rate: in 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:—

Continent	1975		2000	
	Estimated Population	Per cent.	Estimated Population	Per cent.
Europe†...	7.1	19.6	9.47	15.1
Asia*.....	2.210	57.7	3,870	61.8
Africa.....	303	7.9	517	8.2
N. America.	240	6.3	312	5.0
Latin America†.	303	7.9	592	9.4
Oceania....	21	0.5	29	0.5
World.....	3,828	100	6,267	100

* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

The British Dominions extend over the largest area (14,000,000 sq. miles); the U.S.S.R. is second (8,337,000 sq. miles); France (in 1939) was third, with 4,336,000 sq. miles. Other large areas are China, 4,135,000 sq. miles; the United States, with its Insular Jurisdiction, &c., 3,750,000 sq. miles; and Brazil 3,220,000 sq. miles.

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12' N., to

Cape Matapau, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe, its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

Area and Population of the World by Continents

The appended tables of area and population are based on such information as is immediately available. With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

The *League of Nations Handbook*, which contained a large amount of statistical material, ceased to appear soon after the outbreak of the war of 1939-1945 and has been replaced by the *Monthly Bulletin of Statistics* prepared by the Statistical Office of the United Nations with the assistance of the statistical offices of the various governments and of specialized agencies. The *Monthly Bulletin* is published at the headquarters of the United Nations at Great Neck (Lake Success Branch), New York, U.S.A.

ASIA

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:—*Near East* (Turkey to Persia) 25°–60° E. long. *Middle East* (Baluchistan to Burma) 60°–100° E. long. *Far East* (Siam to Japan) 100°–160° E. long.

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 35,948 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans		Seas	
Name	Area of Basin (sq. miles)	Name	Greatest Depth (feet)

THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 3,000 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.—Adjoining Nebuchadnezzar's palace, 60 miles south of Bagdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHEBUS.—A marble temple designed by Ctesiphon and erected by cities of Ionia in honour of the goddess about 480 B.C.
- V. THE COLOSSUS OF RHODES.—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfillment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958.

INDEPENDENT PRINCES, A.D. 844 to 1282

PRINCESS MARGARET ROSE, C.I., G.C.V.O., Colonel-in-Chief, the 3rd The King's Own Hussars, the Suffolk Regiment, the Highland Light Infantry, Queen Alexandra's Royal Army Nursing Corps, Women's Royal Australian Army Corps, Commandant-in-Chief, St. John Ambulance Brigade Cadets, Dame Grand Cross of the Order of St. John of Jerusalem, Commodore Sea Ranger Section of the Girl Guides Association; *born* at Glamis Castle, Angus, Scotland, Aug. 21, 1930.

ORDER OF SUCCESSION TO THE THRONE

The Queen's son and daughter are in the order of succession to the throne, and after the Princess Margaret, the Duke of Gloucester and his sons; then the Duke of Kent, his brother and his sister; then the Princess Royal, her elder son and his sons, and her younger son and his son; then The Duke of Fife, son of the late Countess of Southesk; then King Olav of Norway and his children; then the children of the second daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the children of the third daughter (the late Princess Alexandra of Hohenlohe-Langenburg); then the children of the eldest son of the late Princess Margaret of Connaught (Crown Princess of Sweden), her other sons and her daughter (Queen Ingrid of Denmark) and her children; then the younger daughter of the first Duke of Connaught and Strathearn (Lady Patricia Ramsay) and her son; then the Princess Alice (Countess of Athlone) and her daughter and grandchildren. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be profitless to pursue the investigation any further.

Precedence in England

- The Sovereign.
 The Prince Philip, Duke of Edinburgh
 The Prince of Wales.
 The Duke of Gloucester.
 The Duke of Windsor.
 Archbishop of Canterbury.
 Lord High Chancellor.
 Archbishop of York.
 The Prime Minister.
 Lord President of the Council.
 Speaker of the House of Commons.
 Lord Privy Seal.
 High Commissioners of Commonwealth Countries and Ambassadors of Foreign States.
 Dukes, according to their Patents of Creation:
 (1) Of England; (2) of Scotland; (3) of Great Britain; (4) of Ireland; (5) those created since the Union.
 Ministers and Envoys.
 Eldest sons of Dukes of Blood Royal.
 Marquesses, in same order as Dukes.
 Dukes' eldest Sons.
 Earls, in same order as Dukes.
 Younger sons of Dukes of Blood Royal.
 Marquesses' eldest Sons.
 Dukes' younger Sons.
 Viscounts, in same order as Dukes.
 Earls' eldest Sons.
 Marquesses' younger Sons.
 Bishops of London, Durham and Winchester.
 All other English Bishops, according to their seniority of consecration.
 Secretaries of State, if of the degree of a Baron.
 Barons, in same order as Dukes.
 Treasurer of H.M.'s Household.
 Comptroller of H.M.'s Household.
 Vice-Chamberlain of H.M.'s Household.
 Secretaries of State under the degree of Baron.
- Viscounts' eldest Sons.
 Earls' younger Sons.
 Barons' eldest Sons.
 Knights of the Garter if Commoners.
 Privy Councillors if of no higher rank.
 Chancellor of the Exchequer.
 Chancellor of the Duchy of Lancaster.
 Lord Chief Justice of England.
 Master of the Rolls.
 President of the Probate Court.
 The Lords Justices of Appeal.
 Judges of the High Court.
 Vice-Chancellor of County Palatine of Lancaster.
 Viscounts' younger Sons.
 Barons' younger Sons.
 Sons of Life Peers.
 Baronets of either Kingdom, according to date of Patents.
 Knights of Thistle and St. Patrick if Commoners.
 Knights Grand Cross of the Bath.
 Members of the Order of Merit.
 Knights Grand Commanders of the Star of India.
 Knights Grand Cross of St. Michael and St. George.
 Knights Grand Commanders of the Indian Empire.
 Knights Grand Cross of the Royal Victorian Order.
 Knights Grand Cross of Order of the British Empire.
 Companions of Honour.
 Knights Commanders of the above Orders.
 Knights Bachelor.
 Official Referees of The Supreme Court.
 Judges of County Courts and Judges of the Mayor's and City of London Court.
 Serjeants at law.
 Masters in Lunacy.
- Companions and Commanders, e.g. C.B.; C.S.I.; C.M.G.; C.I.E.; C.V.O.; C.B.E.; D.S.O.; M.V.O. (4th); O.B.E.; I.S.O.
 Eldest Sons of younger Sons of Peers.
 Baronets' eldest Sons.
 Eldest Sons of Knights in the same order as their Fathers.
 M.V.O. (5th); M.B.E.
 Younger Sons of the younger Sons of Peers.
 Baronets' younger Sons.
 Younger Sons of Knights in the same order as their Fathers.
 Naval, Military, Air, and other Esquires by Office.
- WOMEN**
- Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.
 For Dames Grand Cross and Dames Commanders, see pp. 298-299.
- LOCAL PRECEDENCE**
- ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor:
- SCOTLAND.—See p. 684.

The Queen's Household

Lord Chamberlain, The Earl of Scarbrough, K.G., P.C., G.C.S.I., G.C.I.E., G.C.V.O., T.D.

trol; Dr. H. E. Seiler, Medical Officer of Health for
Edinburgh; Dr. H. K. Snell, Director of Medical
Services, Prison Commission; Dr. G. W. H.
Townsend, County Medical Officer of Health,
Buckinghamshire.

ROYAL SALUTES

On the Anniversaries of the Birth, Accession
and Coronation of the Sovereign a salute of 62
guns is fired on the wharf at the Tower of London.

On extraordinary and triumphal occasions, such
as on the occasion of the Sovereign opening,
proroguing or dissolving Parliament in Person, or
when passing through London in procession, except
when otherwise ordered, 41 guns only are fired.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and the Statutes by which they are still governed were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office.

Governor, Maj.-Gen. Edmund Hakewill Smith, C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel R. Pennell, D.S.O.; Lt.-Colonel C. L. Hodgson; Major H. K. Clough, O.B.E.; Colonel A. H. W. Haywood, C.M.G., C.B.E., D.S.O.; Lt.-Colonel L. W. La T. Cockcraft, D.S.O. M.V.O.; Colonel J. A. Fraser, D.S.O., O.B.E., D.C.M.; Lt.-Colonel J. M. Mackenzie, D.S.O.; Lt.-Colonel L. Holbech, C.V.O., D.S.O., O.B.E., M.C.; Lt.-Colonel F. C. Hitchcock, O.B.E., M.C.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Lt.-Colonel E. P. O. Boyle, M.V.O.

On the occasion of the birth of a Royal infant, a salute of 41 guns is fired from the two Saluting Stations in London, i.e. Hyde Park and the Tower of London.

Constable of the Royal Palace and Fortress of London, Field-Marshal the Lord Wilson, G.C.B., G.B.E., D.S.O. (1955).

Lieutenant of the Tower of London, Lieut.-Gen. Sir Euan Miller, K.C.B., K.B.E., D.S.O., M.C.

Major and Resident Governor, Brig. L. F. E. Wieler, C.B., C.B.E.

Master Gunner of St. James's Park, General Sir Cameron Nicholson, G.C.B., K.B.E., D.S.O., M.C. (1956).

THE ROYAL ARMS

CORONATION DATES, 1714-1953

Sovereign.	Accession.	Coronation.
George I.	Aug. 1 1714	Oct. 20, 1717
George II.	June 12, 1727	Oct. 11, 1727
George III.	Oct. 25, 1760	Sept. 22, 1761
George IV.	Jan. 29, 1820	July 19, 1821
William IV.	June 26, 1830	Sept. 8, 1831
Victoria.	June 20, 1837	June 28, 1838
Edward VII.	Jan. 22, 1901	Aug. 9, 1902
George V.	May 6 1910	June 22, 1911
Edward VIII.	Jan. 20, 1936	..
George VI.	Dec. 11, 1936	May 12 1937
Elizabeth II.	Feb. 6, 1952	June 2, 1953

THE QUEEN'S BIRTHDAY, 1960

The date for the observance of the Queen's Birthday in 1960, both at home and abroad, will be Saturday, June 11. For the Customs and Excise Department, and the officers and servants of the dock-companies in England and Northern Ireland, the day appointed for the observance will be Saturday, June 25.

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000	Queen Elizabeth the Queen Mother ..	£70,000
Salaries of Household	185,000	The Duke of Edinburgh	40,000
Expenses of Household	121,800	The Duke of Gloucester	35,000
Royal Bounty, alms and special services	13,200	The Princess Margaret	6,000
Supplementary Provision	95,000	The Princess Royal	6,000
	<u>£475,000</u>		

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE UNION JACK

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

March 31 (1900).—Birthday of Duke of Gloucester.

April 21 (1926).—Birthday of Her Majesty the Queen.

April 25 (1897).—Birthday of the Princess Royal.

May 24.—Commonwealth Day.

June 2 (1953).—Coronation Day.

June 10 (1921) Birthday of the Duke of Edinburgh.

June 11.—Queen's Official Birthday, 1960.

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 21 (1930).—Birthday of the Princess Margaret.

Nov. 13.—Remembrance Sunday, 1960.

Nov. 14 (1948).—Birthday of the Prince of Wales.

Nov. 20 (1947).—Her Majesty's Wedding Day.

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Works by Her Majesty's command and communicated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases

where it has been the practice to fly the Union Jack daily, e.g. on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of Great Britain.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown:

(a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be bolstered when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days* at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

„ 11.	Queen's Official Birthday.		

THE PEERAGE AND ITS DEGREES

The rules which govern the arrangements of the Peerage are marked by so many complications that even an expert may occasionally be perplexed. All Peers of England are Peers of Parliament. In Scotland and Ireland there are Peerages of equally long standing and upon the successive Unions of those two Kingdoms with the Kingdom of England a certain number of Scottish and Irish Peers received titles in the Peerage of Great Britain, or of the United Kingdom, carrying the right of summons to the House of Lords.

All Peers of Parliament up to June 20, 1707, are classed as Peers of England and rank before all others of like degree; from that date to December 31, 1800, all fresh creations either in England or in Scotland were called Peers of Great Britain, and creations from January 1, 1801, onwards, either in Great Britain or Ireland, are known as Peers of the United Kingdom, save only that the Sovereign retains the power to create one new Peer of Ireland for every three Irish Peerages of older date than the Union which have become extinct. In 1868 the Barony of Rathdonnell was so created and in 1898 that of Curzon of Kedleston, the latter being designed to permit the holder (who was Viceroy of India from 1898 to 1905) to return to the House of Commons instead of entering the House of Lords.

From the date of the Union with Scotland 16 Scottish Peers, not entitled to sit in the House of Lords by virtue of a British or United Kingdom Peerage, are elected as Representative Peers for the duration of each Parliament; and from the date of the Union with Ireland 28 Irish Peers were so elected for life; the number of the latter is now reduced to one, and the 27 vacancies are unlikely to be filled.

No Peer of England, Scotland, Great Britain or of the United Kingdom can be elected a Member of the House of Commons, but an Irish Peer who holds no title carrying the right to sit in the House of Lords can be so elected for any constituency out of Ireland itself, but while he sits as a Member of the Commons he loses his privileges as a Peer. Viscount Palmerston, so long M.P. for Tiverton, was an eminent example.

Fees for Dignities were payable as Inland Revenue until abolished by the Finance Act of 1937. They were in the form of revenue stamps, as follows: for a Dukedom £350; a Marquessate £300; an Earldom £250; a Viscounty £200; a Barony £150; a Baronetcy £100.

PEERAGES CREATED SINCE THE LAST ISSUE

BARONS (7)—Crathorne; Forster of Harray; Jenkins (Life Peer); Netherthorpe; Parker of Waddington (Life Peer); Rootes; Spens.

For Life Peers created under the Life Peerages Act, 1958, see pp. 250-1.

PEERAGES EXTINCT SINCE THE LAST ISSUE

VISCOUNTIES (2)—Cecil of Chelwood (cr. 1923); Templewood (cr. 1944).

PEERS WHO ARE MINORS

(As at Jan. 1, 1960)

THE PRINCE OF WALES (Duke of Cornwall) (b. 1948).

EARLS (2): Chichester (b. 1944); Kingston (b. 1943).

1829	<i>Wynford</i> (8th), Robert Samuel Best, M.B.E., b. 1917, s. 1943, m.	Hon. John P. R. B., b. 1950.

SCOTTISH LORDS OF COURT OF SESSION

The word "Lord" prefixed to the names of Judges of the Court of Session, or to titles different from their names, is strictly an official honour and may be compared with the terms "Hon. Mr. Justice" and "Lord Chief Justice" in England, which replaced the titles "Baron" and "Lord Chief Baron." An Order in Council of February, 1905, authorized the retention of this Scottish honour for life, irrespective of retirement, and the style "Lady" is to be enjoyed by the wife and to continue in widowhood, though not after remarriage; but no distinction is conferred upon children. Lord in this case takes the prefix "Hon." in place of "Rt. Hon." of actual Lords, unless the Judges are also Privy Councillors, in which case "Rt. Hon." is correct (see p. 253). There are 14 Lords of Session (see Index). The Chairman of the Scottish Land Court has the same rank and tenure as if he had been appointed a Judge of the Court of Session.

Peereesses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

COUNTESSSES IN THEIR OWN RIGHT.—*Style, The Countess of —* *Addressed as, My Lady.*

Created.
1861

Title, Name, etc.
Cromartie, Sibell Lillian Mackenzie, *b.* 1878, *s.* 1895, *w.*

Eldest Son or Heir.
Viscount Tarbat, M.C., *b.* 1904.

1643 *s.* Dysart, Wenefryde Agatha Greaves, *b.* 1889, *s.* 1935, *w.*

Lady Rosamund G., *b.* 1911.

Life Peers Created under Life Peerages Act, 1958—(continued)

BARONESSES

- 1958 Elliot of Harwood, Katharine Elliot, D.B.E., b. 1903, w.
 1958 Ravensdale of Kedleston, see Baronesses in their own Right, "Ravensdale", p. 247.
 1958 Swanborough, Stella, Dowager Marchioness of Reading, G.B.E., w.
 1958 Wootton of Abinger, Barbara Frances Wright, b. 1897, m.

Courtesy Titles (in actual use in 1960)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles

From this list it will be seen that the "Marquess of Blandford" is the heir to the Dukedom of Marlborough and the "Earl of Aboyne" to the Marquessate of Huntly, and "Viscount Acheson" heir to the Earldom of Gosford; *the titles of second heirs are also given; e.g. Viscount Savernake, eldest son of the "Earl of Cardigan" heir to the Marquessate of Ailesbury.

∴ In addition to these Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled "The Master of ——" e.g. "The Master of Falkland," eldest son of Viscount Falkland.

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—s. or i. appended to the date of creation denotes a Scottish or Irish title, the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as Engl., Brit., or U.K. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. h. indicates that the Peer is a representative peer for Scotland or Ireland. The mark ° signifies that there is no "of" in the Marquessate or Earldom so designated; b, signifies born; s., succeeded; m., married; w., widower or widow; M., minor.

Her Majesty's Most Honourable Privy Council

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the chief advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee, the Board of Trade, *q.v.* The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

Clerk of the Council, W. G. Agnew.

Deputy Clerk of the Council, E. N. Landale.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable." The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Right (or Rt.) Hon. —. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) —, P.C., or, less elaborately, The Lord (or Earl or Viscount) — P.C.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 740, of whom 360 may belong to the Home Services, 180 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence).

Victoria Cross.—1856.—*V.C.* See pp. 300-4.

THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

This Order is designed as a special distinction for eminent men and women—with it conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since the death of Queen Victoria. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

- Princess Wilhelmina of the Netherlands.

SECOND CLASS.

- H.R.H. the Princess Alice, Countess of Athlone.

H.R.H. the Princess Alfonso d'Orleans-Bourbon.

Lady Victoria Patricia Helena Ramsay.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1948.

- H.M. THE QUEEN, 1947.
 H.M. Queen Elizabeth the Queen Mother, 1931.

Baronets, Knights Grand Cross, Knights Grand Commanders, Knights Commanders and Knights Bachelor

Badge of Baronets
of England, Great Britain, U.K.
(and Ireland marked 1).

Badge of Baronets
of Scotland or Nova Scotia
(marked s.).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir —" (first or Christian name) and in writing as "Sir A— B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knight Principal*, Hon. Sir George Bellew, K.C.V.O., Garter King of Arms; *Hon. Registrar*, Major Sir Thomas Lumley-Smith, D.S.O.; *Clerk*, Mrs. Rodney; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.2.

BARONETAGE AND KNIGHTAGE

Peers are not included in this list

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Baronetcies Extinct (Since last issue)—

Baker of Wembley (U.K. 1802); Benyon (U.K. 1958); Child of Newfield (U.K. 1868); Flannery (U.K. 1904); Fox (U.K. 1924); Hansen (U.K. 1921); Hughes of Denford (U.K. 1942); Poë-Domville (U.K. 1912); Prescott-Westcar (G.B. 1794); Williams

of Glyn-dwr (U.K. 1935); Williams of Llanelly (U.K. 1955); Worsley-Taylor (U.K. 1917).

Baronetcies Created—

Bibby; Llewellyn of Baglan; Oakshott; Pickthorn; Platt of Grindleford.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of —, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

K.B.E. (Military)
Air Marshal C. E. Chilton.
Lieut.-Gen. R. G. Collingwood.
Air Vice-Marshal L. Dalton-Morris.
Air Vice-Marshal F. W. P. Dixon.
Vice-Adm. J. G. T. Inglis.
Air Marshal H. D. Jackman.
Rear-Adm. A. C. C. Miers, *VC*.
Vice-Adm. A. R. Pedder.
Maj.-Gen. O. P. J. Rooney.
Vice-Adm. G. B. Sayer.
Vice-Adm. G. Thistleton-Smith.

K.B.E. (Civil)

John Anderson.
 Hubert Ashton, M.P.
 Alexander Brackenridge.
Prof. Sir David Brunt.
 G. W. H. Gardner.
 J. T. Henderson.
Commander G. H. Hughes-Onslow.
Major Sir Jocelyn Lucas, Bt., M.P.
 Lord Mancroft.
 Sir Alec Martin.
 Joseph Simpson.
 E. A. Vasey.
 Sir George Wilson.

D.B.E. (Military)

Brig. Mary Colvin.

D.B.E. (Civil)

Viscountess Brookeborough.
 Hon. Ruth Buckley.
 Miss Rebecca West.

KNIGHTS BACHELOR

V. R. Bairamian.
Prof. Dugald Baird.

C. W. Black, M.P.
 R. V. Bridgland.
 A. F. Burke.
 N. J. K. Cadzow.
Col. L. G. A. Cust.
Maj.-Gen. C. A. L. Dunphie.
 W. S. Duthie, M.P.
Prof. A. W. G. Ewing.
 L. C. Gainage.
 R. E. German.
 Stuart Gillett.
 S. E. Gomes.
 C. F. Gothard.
 A. J. Grattan-Bellew.
 H. R. Grime.
 Alec Guinness.
 O. P. Gunning.
 R. F. Harrod.
Col. J. H. Haygarth.
 I. J. Hayward.
Prof. W. V. D. Hodge.
 E. Milner Holland, Q.C.
 Hubert Hull.
 A. R. Hurd, M.P.
 D. J. James.
 A. M. C. Jenour.
 I. A. Johnson-Gilbert.
 Gaston Johnstone.
 R. L. M. Kirkwood.
 J. W. Laing.
Prof. A. J. Lewis.
 R. P. Linstead.
 R. O. Lloyd.
 D. W. Logan.
 I. D. Lyle.
 C. M. MacGregor.
Major W. C. McKee.

J. A. Mahoney.
 M. A. S. Margai.
 J. C. Masterman.
 J. A. Milne.
 James Mitchell.
Brig. G. D. K. Murray.
 G. M. Paterson.
 J. R. Pearson.
Capt. F. R. J. Peel.
 L. E. Peppiatt.
 E. J. Pode.
Capt. W. M. H. Pollen.
 George Pollock, Q.C.
 K. H. Preston.
Brig. O. L. Prior-Palmer, M.P.
His. Hon. J. A. Pugh.
Maj. C. E. Pym.
 Michael Redgrave.
 R. D. Ropner.
 E. P. Rugg.
 W. P. Smith.
Air Cdre. H. P. Smyth-Osbourne.
 K. T. Spencer.
 Stanley Spencer.
 W. E. Sykes.
Prof. Ronald Syme.
 R. T. Symonette.
Capt. T. A. R. Terrell.
Prof. A. P. Thomson.
 J. B. Thomson.
 J. K. R. Thorp.
 W. G. N. Walker.
 Walter Ward.
 M. L. Warren.
 T. C. S. Wilkinson.
 W. W. Wood.
 Thomas Yates.

THE VICTORIA CROSS, *VC*

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1855.*

The *VC* is worn before all other decorations, on the left breast, and consists of a cross-pattee of bronze, $\frac{1}{2}$ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the *VC* receive a tax-free annuity of £100, irrespective of need or other conditions. In 1921, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

THE GEORGE CROSS, G.C.

The ribbon is dark blue threaded through a bar adorned with laurel leaves
FOR GALLANTRY

INSTITUTED September 24th, 1940 (with amendments, November 3rd, 1942)

The George Cross is worn before all other decorations (except the VC) on the left breast & consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon $1\frac{1}{2}$ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939. In the list below, the date of award of the Empire Gallantry Medal and of its exchange for the George Cross is noted.

THE GRAND PRIORY IN THE BRITISH REALM OF THE MOST VENERABLE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM

(INCORPORATED MAY 14, 1888, WITH ADDENDA 1888, 1890, 1907, 1926, 1955 and 1958), St. John's Gate, Clerkenwell, E.C.1.
Sovereign Head H.M. the Queen.
Grand Prior H.R.H. The Duke of Gloucester,
 K.G., P.C., K.T., K.P., G.M.B., G.C.M.G.,
 G.C.V.O.
Lord Prior The Lord Wakehurst, K.C.M.G.

The Order had its origin in Jerusalem where a hospice for the relief of Christian pilgrims was founded in the eleventh century. Initially a monastic order, it later became militarised and its Knights fought alongside the Crusaders against the spread of Islam. After the loss of the Holy Land, the Order became sovereign in Rhodes and then in Malta. Like other ancient Orders of Chivalry, the Order of St. John was represented in most European countries, though its Priors in England and Scotland were dissolved at the same time as the monasteries. The Order was expelled from Malta by Napoleon in 1798 and the Grand Magistracy eventually settled in Rome.

In 1827 the Knights of France, with the authority of the Grand Magistracy, assisted in the revival of what is now the Grand Priory in the British Realm of the Most Venerable Order of the Hospital of St. John of Jerusalem, whose Chancery is at St. John's Gate, the surviving gatehouse of the former Priory of England in Clerkenwell. A Royal Charter was granted to the Order in 1888 by Queen Victoria, and the first Grand Prior was King Edward VII, while Prince of Wales. The Badge is a white eight-pointed cross, embellished in alternate angles with a lion and an unicorn; the rihand is of black watered silk. By a Royal Charter of March 15, 1955, members are divided into six grades:—(1) Bailiffs and Dames Grand Cross; (2) Knights and Dames of Justice and of Grace; (3) Commanders; (4) Officers; (5) Serving Brothers and Sisters; and (6) Esquires. The Chaplains of the Order form a special class, taking precedence between the Knights and Commanders. A notification of these distinctions having been conferred appears in the London Gazette, but they do not confer any rank, title or precedence.

The work of the Order consists of the maintenance of its three Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882); The St. John Ambulance Association, which is concerned with education in First Aid and kindred subjects; and the St. John Ambulance Brigade, the main object of which is to provide trained personnel for attendance on the public where the rendering of First Aid may be required.

Prelate—His Grace the Archbishop of Canterbury.
Chancellor—Lieut.-Gen. Sir Henry Pownall, K.C.B., K.B.E., D.S.O., M.C.
Secretary-General—C. T. Evans, C.M.G.
Director-General, St. John Ambulance Association—H. F. Parshall, T.D.
Receiver-General—L. G. Whyte.
Hospitaller—Brig. Sir Stewart Duke-Elder, G.C.V.O., M.D.

Almoner—Sir Gerald Creasy, K.C.M.G., K.C.V.O., O.B.E.
Librarian—Major R. Williams, F.S.A.
Registrar—Sir Harry Luke, K.C.M.G., D.Litt., LL.D.
Genealogist—The Hon. Sir George Bellew, K.C.V.O.
Director of Ceremonies—Maj. A. Urquhart, D.S.O.
Commissioner-in-Chief, St. John Ambulance Brigade—Maj.-Gen. J. M. Kirkman, C.B., C.B.E.

CLUB AND LIBRARY EDITION OF WHITAKER, 1960

The Club and Library Edition of Whitaker's Almanack, 1960, contains 1,206 pages, including illustrations and coloured maps (The World, The British Isles, Baltic States, Russia and her neighbours, Germany and her neighbours, France and Spain, The Far East, India, Pakistan and Burma, Africa, Canada and Newfoundland, The United States, South America, Australia, New Zealand) in strong leather binding, with gilt top and silk headband. Price 37s. 6d. net.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision is made for 17 Ministers of the first rank (Cabinet Ministers) of whom not more than 15 may be members of the House of Commons, and for 23 *Parliamentary Secretaries* of whom not more than 21 may be members of the House of Commons and not fewer than 2 of the Lords.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000.

THE PRINCIPAL PARTIES IN PARLIAMENT

(1900-1959)

General Election	Conservative and Unionist	Liberal	Labour
1900.....	402	185	11
1906.....	158	387	41

1959.....	365 (m)	6	258 (o)

NOTES.—(a) Including 48 Non-Coalition Unionists. (b) Including 28 Non-Coalition Liberals. (c) Including 63 Non-Coalition Labour. (d) Liberal National 59; Liberal 59. (e) Liberal National 35 (Simon); Liberal 33 (Sainuel); 4 (Lloyd George). (f) National Labour 13 (MacDonald); Labour 52 (Henderson). (g) Liberal

National 33; Liberal 21. (h) National Labour 8; Labour 154; I.L.P. 4. (i) Liberal National 13. Liberal 12. (j) Labour 393; I.L.P. 3. (k) Incl. Nat. Liberal. (l) Irish Nationalists (2) and Speaker make total of 625. (m) Including associates. (n) Sinn Fein (2) and Speaker make total of 630. (o) Independent (1) makes total of 630.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," pp. 314-5). Bills of major importance are usually, and Money Bills are always, sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bills accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's Canadian tour in 1959, the Councillors of State were Queen Elizabeth the Queen Mother, Princess Margaret, the Duke of Gloucester, the Duke of Kent and Princess Alexandra.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. The Regency Act, 1953, has designated the Duke of Edinburgh as Regent, should a Regency become necessary during the minority of the children of her present Majesty.

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679-80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and Tory to *Conservative*.

The Oxford English Dictionary explains the terms as follows:—

Whig [origin obscure; probably shortening of *Whiggamore*].—An adherent of the Presbyterian cause in Scotland in the seventeenth century. Applied to the Exclusionists who opposed the succession of James, Duke of York, to the crown, on the ground of his being a Roman Catholic.

Tory [Anglicized spelling of Irish *toraidhe* "pursuer"] . . . applied to any Irish Papist or Royalist in arms. A nickname given 1679-80 by the Exclusionists to those who opposed the exclusion of James, Duke of York (a Roman Catholic), from the succession to the crown.

Before the reign of William and Mary (1688-1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montagu (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The *Act of Settlement* (1701) secured the Protestant succession to the throne and with the accession of George I (1714) the main cause of the political division was removed, leaving the Whigs as the dominant party for many years, the Tories being regarded as Jacobites in permanent opposition to the Hanoverians; but before the close of George II's reign (1760) they had become reconciled to the dynasty and during the French wars they secured an ascendancy in Parliament.

The accession of a King unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As

the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951 and 1955 Elections.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour Candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." Of this number John Burns (Battersea) and J. Keir Hardie (West Ham) were elected "Labour" Members of Parliament and 13 others as "Liberal-Labour" members. At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

On Feb. 27, 1900, as a result of a resolution passed by the Trades Union Congress in the previous September, a Conference of Trade Union and Socialist bodies was held in the Memorial Hall, Farringdon Street, London, and an organization called the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a five-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,750; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant*

do.) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £2,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

The House of Lords

The *Government Whips* in 1959 were: The Captain of the Honourable Corps of the Gentlemen at Arms (The Earl St. Aldwyn), the Captain of the Queen's Bodyguard and the Yeomen of the Guard (The Earl of Onslow) and the (Political) Lords in Waiting (Earl Bathurst, the Earl of Gosford and Lord Chesham).

The *Labour Whips* were: The Earl of Lucan (*Chief Whip*); The Lords Burden, Kershaw and Haden-Guest.

The *Liberal Whip* was The Lord Amulree.

The House of Commons

The *Government Whips* in 1959 were: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* (who are unpaid) are also usually appointed.

The *Labour Whips* were: H. W. Bowden (*Chief Whip*); E. Popplewell; A. Pearson; H. E. Holmes; W. A. Wilkins; A. C. Allen; G. E. C. Wigg; J. T. Price; G. H. R. Rogers.

The *Liberal National Whip* was Sir Herbert Walter Butcher.

The *Liberal Whip* was D. W. Wade.

SCOTTISH REPRESENTATIVE PEERS

(Elected at the Palace of Holyroodhouse, Oct, 1959).

Sixteen Representative Peers are elected for each Parliament by the entire adult Peerage of Scotland specially convened for that purpose.

Duke of Atholl.	Lord Forbes.
Earl of Caithness.	Lord Saltoun.
Earl of Perth.	Lord Sempill.
Earl of Haddington.	Lord Balfour of Burleigh.
Earl of Airlie.	Lord Fairfax of Cameron.
Earl of Selkirk.	Lord Polwarth.
Earl of Mar and Kellie.	Lord Sinclair.
Earl of Northesk.	
Earl of Dundonald.	

IRISH REPRESENTATIVE PEERS

No further elections have been held since the establishment of the Irish Free State in 1920.

Peer	Date of Election
Earl of Kilmorey	Feb. 14, 1919

(And 27 vacancies.)

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the Journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

THE HOUSES OF PARLIAMENT

Parliament originated in the demand of the King's Great Council, consisting of prelates, earls and barons, that there should be discussion about the affairs of state, and in 1242 the word "parliament" was first used in an official document to describe such an assembly. In 1265 Simon de Montfort in the king's name summoned to a parliament not only the great men but also for the first time two representatives elected by each county, city and town, and by the end of the reign of Edward I it had become usual to summon the Commons.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. The Finance Bill, which imposes taxation, and Consolidated Fund Bills, which authorise expenditure, must begin in the Commons and may not be amended by the Lords in any respect whatever. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regards to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1948—(a) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (b) any other public bill (except one to extend the life of a Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914-18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Parliament is dissolved (as it is summoned) by the Sovereign, and until the passing of the Representation of the People Act (1867), Parliament was dissolved by the Demise of the Crown, but in that Act provision was made for its continuance to the normal duration, unless previously dissolved.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 11 hrs. 57 minutes (from 4.15 p.m. to 4.12 a.m. Nov. 1934).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid but are entitled to a daily expense allowance of up to £3 3s. and to travelling expenses from their homes to the House.

Since 1921 members of the House of Commons have received salaries and travelling facilities over the railways, the payment of £400 being increased in 1937 to £600, and in 1946 to £1,000 per annum. In 1954 a sessional expense allowance of £2 for each Parliamentary day, excluding Fridays, was introduced. In 1957 this was superseded by a tax free annual expense allowance of £750. Members of Parliament contribute at the rate of £18 per annum towards a Fund to provide pensions or grants to ex-members, their widows and orphans whose incomes are below certain limits; income from investments in 1957-58 was £3,347 and expenditure in grants £17,101. The Capital Account (1958) stood at £96,938. An Act was passed in 1957 enabling the Treasury to make an annual contribution to the fund. £10,000 was so contributed in 1957-58.

THE HOUSE OF LORDS

The House of Lords consists of some 800 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers by descent of England, Great Britain or the United Kingdom, peers of new creation, Lords of Appeal in Ordinary (who are life peers), one Irish Representative Peer (elected before 1921 for life), Scottish Representative Peers (16 elected for duration of Parliament) and life Peers and Life Peeresses created under the Life Peerages Act, 1958. An Irish Peer not in the House of Lords is eligible for election as a member of the House of Commons for an English, Welsh or Scottish constituency.

THE HOUSE OF COMMONS

By the *Representation of the People Act* (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by a similar Act (1918) it was increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615, Irish representation being reduced from 105 to 13

members. By the *Representation of the People Act* of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act*, 1949, the total membership has now been increased to 630.

THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kept wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's Chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 13½-ton Hour Bell named after Sir Benjamin Hall, first Commissioner of Works when the original bell was cast in 1856. The dials of the clock are 22½ feet in diameter, the hands being 11 feet (hour) and 14 feet (minute) in length. The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The *Lord High Chancellor of England* is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister. No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
Earl of Wilmington, *Whig*, Feb. 16, 1742.

Viscount Goderich, *Tory*, Sept. 8, 1827.
Duke of Wellington, *Tory*, Jan. 26, 1828.
Earl Grey, *Whig*, Nov. 24, 1830.
Viscount Melbourne, *Whig*, July 18, 1834.
Sir Robert Peel, *Tory*, Dec. 26, 1834.
Viscount Melbourne, *Whig*, March 14, 1835.
Sir Robert Peel, *Tory*, Sept. 6, 1841.
Lord John Russell, *Whig*, July 6, 1846.
Earl of Derby, *Tory*, Feb. 28, 1852.
Earl of Aberdeen, *Peelite*, Dec. 28, 1852.
Viscount Palmerston, *Liberal*, Feb. 10, 1855.
Earl of Derby, *Conservative*, Feb. 25, 1858.
Viscount Palmerston, *Liberal*, June 18, 1858.
Earl Russell, *Liberal*, Nov. 6, 1865.
Earl of Derby, *Conservative*, July 6, 1865.
Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
W. E. Gladstone, *Liberal*, Dec. 9, 1868.
Benjamin Disraeli, *Conservative*, Feb. 21, 1874.
W. E. Gladstone, *Liberal*, April 28, 1880.
Marquess of Salisbury, *Conservative*, June 24, 1885.
W. E. Gladstone, *Liberal*, Feb. 6, 1886.
Marquess of Salisbury, *Conservative*, Aug. 3, 1886.
W. E. Gladstone, *Liberal*, Aug. 18, 1892.
Earl of Rosebery, *Liberal*, March 3, 1894.
Marquess of Salisbury, *Conservative*, July 2, 1895.
A. J. Balfour, *Conservative*, July 12, 1902.
Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
H. H. Asquith, *Liberal*, April 8, 1908.
H. H. Asquith, *Coalition*, May 26, 1915.
D. Lloyd George, *Coalition*, Dec. 7, 1916.
A. Bonar Law, *Conservative*, Oct. 23, 1922.
S. Baldwin, *Conservative*, May 22, 1923.
J. R. MacDonald, *Labour*, Jan. 22, 1924.
S. Baldwin, *Conservative*, Nov. 4, 1924.
J. R. MacDonald, *Labour*, June 8, 1929.
J. R. MacDonald, *Coalition*, Aug. 25, 1931.
S. Baldwin, *Coalition*, June 7, 1935.
N. Chamberlain, *Coalition*, May 28, 1937.
W. S. Churchill, *Coalition*, May 11, 1940.
W. S. Churchill, *Conservative*, May, 23, 1945.
C. R. Attlee, *Labour*, July 26, 1945.
Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
Sir A. Eden, *Conservative*, April 6, 1955.
H. Macmillan, *Conservative*, Jan. 13, 1957.

Of the 43 Prime Ministers 18 sat in the House of Lords and 24 in the House of Commons during their term of office. One, Lord John Russell (afterwards Earl Russell) sat in his first Ministry in the House of Commons, and in his second in the House of Lords. Benjamin Disraeli was raised to the peerage as Earl of Beaconsfield during his second term of office.

Lord Palmerston, as an Irish peer, and Lord North, as the holder of a courtesy title, both sat in the House of Commons.

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the *Chiltern Hundreds* and the *Manor of Northstead* as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. *Strangers* are present during the debates of both Houses on sufferance, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within two minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (*see p. 312*).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g.

ineligibility to sit owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered*." He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the *Clerk of the House of Commons*, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the *Clerk of the Parliaments*. Members of the House may put an unlimited number of questions to Ministers, but forty-eight hours' notice must be given, and not more than three demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the

House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing *exclusively* with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made that *the question be now put*. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the *Closure*. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of

Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The *Speaker of the House of Commons* is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a member is to *Name* him. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes. A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND.

1660. Sir H. Grimston.	1685. Sir John Trevor.
1661. Sir E. Turner.	1688. H. Powle.
1673. Sir J. Charlton.	1694. Paul Foley.
1673. Edwd. Seymour.	1698. Sir T. Lyttleton.
1678. Sir Robt. Sawyer.	1700. Robert Harley
1679. Scrgiant William Gregory.	(<i>Earl of Oxford and Mortimer</i>).
1680. W. Williams.	1702. John Smith.

PARLIAMENT OF GREAT BRITAIN.

1708 Sir Richard Onslow (<i>Lord Onslow</i>).	1761. Sir John Cust.
1710. Wm. Bromley.	1770. Sir F. Norton.
1713. Sir Th. Hanmer.	1780. C. W. Cornwall.
1715. Spencer Compton (<i>Earl of Wilmington</i>).	1788. Hon. W. Grenville (<i>Lord Grenville</i>).
1727. Arthur Onslow.	1789. Henry Addington (<i>Viscount Sidmouth</i>).

PARLIAMENT OF UNITED KINGDOM.

1801. Sir John Mitford (<i>Lord Redesdale</i>).
1802. Charles Abbot (<i>Lord Colchester</i>).
1817. Charles M. Sutton (<i>Viscount Canterbury</i>).
1835. James Abercomby (<i>Lord Dunfermline</i>).
1839. Charles Shaw-Lefevre (<i>Viscount Eversley</i>).
1857. J. Evelyn Denison (<i>Viscount Ossington</i>).
1872. Sir H. W. B. Brand (<i>Viscount Hampden</i>).
1884. Arthur Wellesley Peel (<i>Viscount Peel</i>).
1895. William Court Gully (<i>Viscount Selby</i>).
1905. James W. Lowther (<i>Viscount Ullswater</i>).
1921. John Henry Whitley.
1928. Hon. Edward Algernon FitzRoy.
1943. Col. D. Clifton Brown (<i>Viscount Ruffside</i>).
1951. William Shepherd Morrison.
1959. Sir Harry Hylton-Foster.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a *Speaker's Conference* of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the *Parliament (Qualification of Women) Act* containing the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. Twenty-four women were elected at the 1959 Election (13 Labour, 10 Conservative and 1 Ulster Unionist), 2 fewer than at the Dissolution.

FORFEITED DEPOSITS

Candidates at parliamentary elections who fail to obtain more than one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge. This law has been in force since the 1918 election.

Deposits forfeited at the 1959 Election totalled 116, 16 more than in 1951. Deposits were lost by 55 Liberal candidates, 16 Communists, 14 Welsh Nationalists, 7 Sinn Fein, 3 Scottish Nationalists, 2 Conservatives, 1 Labour and 18 others. Sixteen out of 17 Communist candidates forfeited their deposits. In 1950 the record number of 443 deposits was lost.

THE INTER-PARLIAMENTARY UNION

6 Rue Constantin, Geneva, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

BRITISH GROUP.

Hon. Presidents, The Lord Chancellor; Mr. Speaker. *President*, The Rt. Hon. Harold Macmillan, M.P. *Vice-Presidents*, The Viscount Stansgate, D.S.O., D.F.C.; The Marquess of Salisbury, K.G.; The Earl of Scarborough, K.G.; The Rt. Hon. J. S. B. Lloyd, C.B.E., T.D., Q.C., M.P.; The Rt. Hon. H. T. N. Gaitskell, C.B.E., M.P.; The Rt. Hon. Clement Davies, Q.C., M.P. *Chairman*, J. D. R. T. Tilney, T.D., M.P. *Secretary*, Maj-Gen. W. A. Dimoline, C.B., C.M.G., C.B.E., D.S.O. M.C.

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" in 1911. Its object was, then as now, to facilitate the exchange of information, closer understanding and more frequent intercourse between those engaged in the parliamentary government of the Commonwealth. In 1949, the Association was reorganized as the Commonwealth Parliamentary Association, and a General Council was instituted as the governing body.

The Association now consists of ten main branches in the Parliaments of the self-governing countries of the Commonwealth—the United Kingdom, Canada, Australia, New Zealand, South Africa, India, Pakistan, Ceylon, Ghana, and the Federation of Malaya—and four auxiliary branches, in the Parliaments of the Federation of Rhodesia and Nyasaland, the Federation of Nigeria, the Federation of the West Indies, and Malta. There are also branches in Provincial and State Legislatures, as well as in the Parliaments of Northern Ireland, the Isle of Man, and the States of Jersey. In addition, there are eleven affiliated branches in Legislatures of those Commonwealth countries which are not completely self-governing, making a total of 68 branches. Commonwealth Parliamentary Conferences and General Meetings are held in alternate years and meetings of the General Council every year, in different countries of the Commonwealth.

Chairman of the General Council, M. A. Ayyangar (India).

Secretary-General and Editor of Publications, Sir Howard d'Egville K.B.E., LL.D., Houses of Parliament, S.W.1.

Secretary, United Kingdom Branch, Major J. G. Lockhart, C.B.E., Westminster Hall, Houses of Parliament, S.W.1.

Her Majesty's Ministry

(As reconstructed in Oct. 1959)

(NOTE.—This list, revised to Oct. 1959, in some cases supersedes the information given under "Government and Public Offices.")

- Prime Minister and First Lord of the Treasury*, The Rt. Hon. Harold Macmillan, M.P., born Feb. 10, 1894.
Secretary of State for Foreign Affairs, The Rt. Hon. John Selwyn Brooke Lloyd, C.B.E., T.D., Q.C., M.P., born July 28, 1904.
Chancellor of the Exchequer, The Rt. Hon. Derick Heathcoat-Amory, M.P., born Dec. 26, 1899.
Lord President of the Council, Secretary of State for Commonwealth Relations and Leader of the House of Lords, The Rt. Hon. the Earl of Home, born July 2, 1903.
Lord High Chancellor, The Rt. Hon. Viscount Kilmuir, G.C.V.O., born May 29, 1900.
Lord Privy Seal (and Minister in charge of Science and Technology), The Rt. Hon. Viscount Hailsham, Q.C., born Oct. 9, 1907.
Secretary of State for the Home Department and Leader of the House of Commons, The Rt. Hon. Richard Austen Butler, C.H., M.P., born Dec. 9, 1902.
Secretary of State for the Colonies, The Rt. Hon. Iain Norman Macleod, M.P., born Nov. 11, 1913.
Secretary of State for Scotland, The Rt. Hon. John Scott MacLay, C.M.G., M.P., born Oct. 26, 1905.
Minister of Labour, The Rt. Hon. Edward Richard George Heath, M.B.E., M.P., born July 9, 1916.
President of the Board of Trade, The Rt. Hon. Reginald Maudling, M.P., born March 7, 1917.
Minister of Housing and Local Government and Minister for Welsh Affairs, The Rt. Hon. Henry Brooke, M.P., born April 9, 1903.
Chancellor of the Duchy of Lancaster, The Rt. Hon. Charles Hill, M.D., M.P., born Jan. 15, 1904.
Minister of Agriculture, Fisheries and Food, The Rt. Hon. John Hugh Hare, O.B.E., M.P., born Jan. 22, 1911.
Minister of Education, The Rt. Hon. Sir David McAdam Eccles, K.C.V.O., M.P., born Sept. 18, 1904.
Minister of Transport, The Rt. Hon. Ernest Marples, M.P., born Dec. 9, 1907.
Minister of Aviation, The Rt. Hon. Duncan Sandys, M.P., born Jan. 24, 1908.
Paymaster-General, The Rt. Hon. Lord Mills, K.B.E., born Jan. 4, 1890.
Minister of Defence, The Rt. Hon. Harold Arthur Watkinson, M.P., born Jan. 25, 1910.

The above form the Cabinet

MINISTERS OF CABINET RANK

- First Lord of the Admiralty*, The Lord Carrington, K.C.M.G., M.C., born June 6, 1919.
Secretary of State for War, The Rt. Hon. Arthur Christopher John Soames, C.B.E., M.P., born Oct. 12, 1920.
Secretary of State for Air, The Rt. Hon. George Reginald Ward, M.P., born Nov. 20, 1907.
Minister of State (Foreign Affairs), The Rt. Hon. William David Ormsby-Gore, M.P., born May 20, 1918.
Minister of State (Commonwealth Relations), Cuthbert James McCall Alport, T.D., M.P., born March 22, 1913.
Minister of State (Colonial Affairs), The Rt. Hon. the Earl of Perth, born May 13, 1907.
Minister of State (Scottish Office), Jack Nixon Browne, C.B.E., born Sept. 3, 1904.
Minister of Trade (Board of Trade), Frederick James Erroll, M.P., born May 27, 1914.
Minister of State (Welsh Affairs), The Lord Brecon, born 1905.
Minister of Pensions and National Insurance, The Rt. Hon. John Archibald Boyd-Carpenter, M.P., born June 2, 1908.
Postmaster-General, The Rt. Hon. John Reginald Bevins, M.P., born August 20, 1908.
Minister of Health, The Rt. Hon. Derek Colclough Walker-Smith, T.D., Q.C., M.P., born 1910.
Minister of Works, The Rt. Hon. Lord John Hope, M.P., born April 7, 1912.
Minister of Power, The Rt. Hon. Richard Frederick Wood, M.P., born Oct. 5, 1920.
Minister without Portfolio, The Rt. Hon. the Earl of Dundee, born May 3, 1902.

PARLIAMENTARY UNDER SECRETARIES AND OTHER MINISTERS

- Attorney-General*, Rt. Hon. Sir Reginald Manningham-Buller, Bt., Q.C., M.P.
Solicitor-General, Sir Jocelyn Simon, Q.C., M.P.
Lord Advocate, Rt. Hon. W. R. Milligan, Q.C., M.P.
Solicitor-General for Scotland, Rt. Hon. W. Grant, Q.C., M.P.
Admiralty (Civil Lord), C. I. Orr-Ewing, M.P.
Agriculture and Fisheries (Joint), The Earl Waldegrave, T.D.; J. B. Godber, M.P.
Air, W. J. Taylor, O.B.E., M.P.
Aviation, A. G. F. Rippon, M.P.
Colonies, J. Amery, M.P.
Commonwealth Relations, R. H. M. Thompson, M.P.
Education, K. P. Thompson, M.P.
Foreign (Joint), The Marquess of Lansdowne; R. A. Allan, D.S.O., O.B.E., M.P.
Health, Miss E. M. Pitt, O.B.E., M.P.
Home (Joint), Rt. Hon. D. F. Vosper, M.P.; D. L. M. Renton, T.D., Q.C., M.P.
Housing and Local Govt., Sir Keith Joseph, Bt., M.P.
Labour, P. J. M. Thomas, M.P.
Pensions and National Insurance (Joint), The Rt. Hon. Patricia Hornsby-Smith, M.P.; W. M. F. Vane, T.D., M.P.
Post Office (Asst. P.M.G.), Miss I. M. P. Pike, M.P.
Power, J. C. George, M.P.
Scottish Office (Joint), N. M. S. Macpherson, M.P.; Hon. T. G. D. Galbraith, M.P.; W. G. Leburn, T.D., M.P.
Trade, J. C. Rodgers, M.P.
Transport (Joint), J. A. Hay, M.P.; The Lord Chesham.
Treasury, Rt. Hon. M. Redmayne, D.S.O., M.P.; (do.) *Financial Secretary*, Sir Edward Boyle, Bt., M.P.; (do.) *Economic Secretary*, A. P. L. Barber, T.D., M.P.
Junior Lords, R. C. Brooman-White, M.P.; P. E. O. Bryan, M.C., M.P.; M. H. C. Hughes-Young, M.C., M.P.; G. B. Finlay, M.P.; J. D. Gibson-Watt, M.P.
War Office, Hon. H. C. P. J. Fraser, M.B.E., M.P.
Works, H. Nicholls, M.P.

Leader of the Opposition, The Rt. Hon. Hugh Todd Naylor Gaitskell, C.B.E., M.P., born April 9, 1906.

GENERAL ELECTION, 1959

RETIRING MEMBERS

Sixty-seven members of the 1955 Parliament did not seek re-election in 1959.

They were as follows:

CONSERVATIVES AND ASSOCIATES (42).—C. W. Armstrong (Armagh); Hon. J. J. Astor (Plymouth, Sutton); J. M. Baldock (Harborough); Sir Archer Baldwin (Leominster); Col. C. Banks (Pudsey); R. F. S. Body (Billerica); Sir Alfred Bossom (Maldstone); Sir Roger Conant (Rutland and Stamford); Sir John Crowder (Finchley); Lady Davidson (Hemel Hempstead); A. D. Dodds-Parker (Banbury); E. H. G. Evans (Denbigh); Sir Fergus Graham (Darlington); Hon. J. Grimston (St. Albans); Sir Alan Gomme-Duncan (Perth and E. Perthshire); R. F. Hesketh (Southport); Dame Florence Horsbrugh (Manchester, Moss Side); W. R. A. Hudson (Hull, North); Sir Ian Hutchison (Edinburgh, West); Sir James Hutchison (Scots-toun); H. S. Johnson (Brighton, Kemptown); Sir Roland Jennings (Sheffield, Hallam); D. M. Keegan (Nottingham, South); D. T. Llewellyn (Cardiff, North); Sir Guy Lloyd (Renfrewshire, East); P. B. Lucas (Brentford and Chiswick); Sir Charles MacAndrew (Bute and North Ayrshire); Sir Peter Macdonald (Isle of Wight); Sir Harry Mackeson (Folkestone and Hythe); Sir Frank Medicott (Norfolk, Central); N. Nicolson (Bournemouth East and Christchurch); Commander A. H. P. Noble (Chelsea); Hon. P. R. H. O'Neill (Antrim, North); Hon. P. F. Remnant (Wokingham); Sir Harold Roper (North Cornwall); Commander R. Scott-Miller (King's Lynn); H. R. Spence (Aberdeen, West); Sir William Steward (Woolwich, West); J. Stuart (Moray and Nairn); H. F. L. Turner (Oxford); Sir George Harvie-Watt (Richmond) and Sir Harold Webbe (Cities of London and Westminster).

LABOUR (24).—A. C. Allen (Bosworth); A. Balfour (West Stirling); W. T. Cove (Aberavon); J. Clunie (Dunfermline); H. Dalton (Bishop Auckland); E. A. J. Davies (Enfield, East); D. R. Grenfell (Gower); Dr. S. Hastings (Barking); H. E. Holmes (Hemsworth); T. F. Hubbard (Kirkcaldy); G. A. Isaacs (Southwark); H. Morrison (Lewisham, South); Mrs. J. Mann (Coatbridge and Airdrie); W. H. Mainwaring (Rhondda, East); J. McGovern (Shettleston); Sir Frederick Messer (Tottenham); W. Paling (Dearn Valley); W. T. Paling (Dewsbury); M. P. Price (Gloucestershire, West); J. Reeves (Greenwich); S. P. Viant (Willesden, West); H. White (Derbyshire, North-East); T. Williams (Don Valley) and K. G. Younger (Grimsby).

THE SPEAKER.—W. S. Morrison (Cirencester and Tewkesbury).

NEW MEMBERS

One hundred and one candidates secured election to Parliament for the first time at the 1959 election. They were:

CONSERVATIVES AND ASSOCIATES (73).—Lt. Col. J. H. Allason (Hemel Hempstead); Miss M. B. H. Anderson (Renfrewshire, East); Maj. A. T. Bourne-Arton (Darlington); H. J. Berkeley (Lancaster); C. Bossom (Leominster); D. S. Box (Cardiff, North); P. B. Browne (Torrington); G. T. C. Campbell (Moray and Nairn); W. C. Carr (Barons Court); C. J. Chataway (Lewisham, North); H. Clark (Antrim, North); W. G. A. Clark (Nottingham, South); L. H. Cleaver (Yardley); R. C. M. Collard (Norfolk, Central); J. H. Cordle (Bournemouth, East and Christchurch); A. P. Costain (Folkestone and Hythe); J. M. Coulson (Hull, North); J. M. G. Critchley (Rochester and Chatham); C. Curran (Uxbridge); P. F. H. Emery (Reading); J. A. Farr (Harborough); I. M. Fraser (Plymouth, Sutton); E. L. Gardner (Billerica);

Dr. A. J. Glyn (Clapham); V. H. Goodhew (St. Albans); M. C. Hamilton (Wellingborough); A. F. Hendry (Aberdeenshire, West); J. Hiley (Pudsey); P. N. Hocking (Coventry, South); P. W. Holland (Acton); J. H. Hollingworth (Birmingham, All Saints); A. C. N. Hopkins (Bristol, North East); J. S. R. Scott-Hopkins (N. Cornwall); F. L. J. Jackson (Derbyshire, South East); D. P. James (Brighton, Kemptown); Cmdr. J. S. Kerans (Hartlepool); T. P. G. Kitson (Richmond, Yorks.); K. Lewis (Rutland and Stamford); F. J. P. Lilley (Kelvingrove); Capt. J. S. S. Litchfield (Chelsea); C. B. Longbottom (York); I. McArthur (Perth and East Perthshire); M. McLaren (Bristol, North West); J. E. Maglennis (Armagh); H. N. Marten (Banbury); G. R. Matthews (Meriden); W. S. Mills (Belfast, North); W. F. Montgomery (Newcastle, East); W. G. O. Morgan (Denbigh); J. H. Osborn (Hallam); F. F. Pearson (Clitheroe); W. I. Percival (Southport); J. M. L. Prior (Lowestoft); G. W. Proudfoot (Cleveland); J. E. H. Rees (Swansea, West); Hon. N. Ridley (Cirencester and Tewkesbury); W. L. Roots (Kensington, South); A. H. F. Royle (Richmond, Surrey); L. G. Seymour (Sparkbrook); T. H. H. Skeet (Willesden, East); D. G. Smith (Brentford and Chiswick); G. Johnson Smith (Holborn and St. Pancras, South); J. A. Stodart (Edinburgh, West); J. E. Talbot (Brierley Hill); P. H. B. Tapsell (Nottingham, West); Mrs. M. H. Thatcher (Finchley); C. W. C. Turner (Woolwich, West); W. R. van Straubenzee (Wokingham); J. Watts (Moss Side); J. J. Wells (Maidstone); Hon. C. M. Woodhouse (Oxford); H. F. M. Woodnutt (Isle of Wight) and W. M. J. Worsley (Keighley).

LABOUR (27).—W. Baxter (Stirling, West); A. Beany (Hemsworth); H. J. Boyden (Bishop Auckland); A. G. Brown (Tottenham); G. E. Davies (Rhondda, East); I. Davies (Gower); J. Dempsey (Coatbridge and Airdrie); M. Galpern (Shettleston); D. Ginsburg (Dewsbury); H. P. H. Gourlay (Kirkcaldy); Mrs. J. C. M. Hart (Lanark); J. M. Hill (Midlothian); C. A. Johnson (Lewisham, South); D. Jones (Burnley); R. Kelley (Don Valley); C. W. Loughlin (Gloucestershire, West); J. Mackie (Enfield, East); G. Mapp (Oldham, East); R. W. Marsh (Greenwich); B. THE HOUSE OF COMMONS BY CONSTITUENCIES

The figures following the name of the Constituency denote the total number of *Electors* in the Parliamentary Division at the General Election of 1959.

ABBREVIATIONS.—C. = Conservative; *Comm.* = Communist; *I.L.P.* = Independent Labour Party; *Ind.* = Independent; *L.* = Liberal; *Lab.* = Labour; *Nat. L.* = National Liberal; *Scot. Nat.* = Scottish Nationalist; *S.F.* = Sinn Féin; *U.U.* = Ulster Unionist; *Welsh Nat.* = Welsh Nationalist. An asterisk * denotes membership of the last House for the same division; an obelisk †, for a different division.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1958-59

STATE OPENING TELEVISIED.—For the first time the State opening of the new session by the Queen was televised, and on Oct. 28, 1958, millions of Her Majesty's subjects saw the traditional ceremony on their screens, though necessarily without the vivid colouring. Through Eurovision the spectacle was also shown in seven European countries, and on sound radio in the United Kingdom a description of the proceedings and the Queen's Speech outlining the proposals of the Government were heard. The innovation was a complete success and a triumph for those responsible for the presentation. The third session of Parliament had been prorogued on Oct. 23, when both Houses met after the summer recess. The Upper Chamber had also held a sitting on the previous day to enable the new life peers and peeresses to take the oath and their seats. The customary formalities were observed, though with slight variations in the wording of the introductory, and the peeresses, each with two sponsors, wore robes almost similar to those in which hereditary peers made their entry. The first peeress to become a member of the Chamber was Baroness Swanborough (the Dowager Marchioness of Reading), and later came the turn of Baroness Wootton of Ahinger (Mrs. Barbara Wootton), and on the following day Baroness Elliot of Harwood (Dame Katharine Elliot) and Baroness Ravensdale of Kedleston (Baroness Ravensdale in her own right) were introduced.

THE QUEEN'S SPEECH.—A full programme for the session was promised in the speech from the Throne. After expressing the pleasure with which she looked forward to her coming visit to Canada, the Queen said the Government would seek to promote the closest cooperation within the Commonwealth, and would neglect no opportunity to promote the advance of the Colonial territories and the increasing association of their peoples with the management of their own affairs. In cooperation with the Commonwealth, Ministers would seek to expand our overseas trade, both in Europe by the creation of a free trade area, and throughout the world. Legislation would be introduced to enable special assistance to be given to small farmers, and for the protection and control of deer in Scotland. Proposals would be laid before Parliament for placing the National Insurance Scheme on a sound financial basis and enabling a large section of the people to build up pension rights related to their earnings. A new bill would replace the existing law on mental health in England and Wales, and legislation would be introduced to amend and strengthen the Factories Acts, to repeal the Catering Wages Act and to convert the four Catering Wages Boards into Wages Councils. The extension of facilities for higher education would be further encouraged and the nation's schools developed. The increase in crime was viewed with gravity, and the Government would seek to improve the penal system and to make methods of dealing with offenders more effective. Bills would be introduced to improve the basis of compensation for compulsory acquisition of land, to give further encouragement to home ownership, and to provide for the future

management of the new towns in England and Wales. The Address in reply was moved in the House of Commons by Mr. Peter Thomas and seconded by Mr. David Price. Mr. Gaitskell, who followed, said that most of the Speech seemed to him a rather unimpressive statement of state platitudes and a dull catalogue of mostly minor legislation. With regard to the proposed pensions scheme, he said that the more one studied it the less one liked it. It was not really a national super-annuation scheme, but one which deliberately set out to replace the Exchequer liability for a basic pension with a severe tax on those who came into the scheme. The Prime Minister said that the Speech showed that there was a full programme of work. There was no diminution of the Government's energies, no staleness, no unseemly scuttling from power and responsibilities. After dealing with the coming legislation, Mr. Macmillan compared the economic situation with that in the preceding year and said he did not think that the most prejudiced critic would deny that the Government had made progress. The nation was stronger than at any time since the war and could move forward with confidence. On the following day, Mr. James Griffiths described the Government's pensions plan as a shoddy imitation of that proposed by the Labour Party, and said that millions of workers would be excluded. The Minister of Pensions and National Insurance, Mr. Boyd-Carpenter, said it was the Government's policy to concentrate the Exchequer subsidy more in the direction of those who particularly needed it. The general debate was concluded on Oct. 31, and on Nov. 4, after a two-day debate, an official Opposition amendment regretting the omission from the Speech of "any

measures directed towards the expansion of production and employment while maintaining stable prices" was rejected by 324 to 255, a Government majority of 69, and the motion for the Address was agreed to. The Address in the Upper Chamber was moved by Earl Jellicoe and seconded by Viscount Goschen, and was agreed to on Nov. 6 after a Labour amendment on output and employment had been negatived.

INCOME TAX REDUCED.—In the closing words of a long speech in which Mr. Heathcoat Amory introduced his second Budget on April 7, the Chancellor gave his own description of his proposals. "This is no spending spree Budget," he said, "but I believe that the measures will bring benefits to every section of the community and will give an invigorating stimulus to the economy which will encourage us as a nation to make the most of the opportunities that lie before us." His main proposals were a reduction of *qd.* in the standard rate of income tax (*6d.* in the lower rates), a reduction of one-sixth in each of the three higher rates of purchase tax, the beer duty reduced by the equivalent of 2d. a pint, the general restoration of investment allowances, and repayment of post-war credits to men of 63 (instead of 65) and women of 58 (instead of 60) and in three categories of hardship, with interest of 2½ per cent. on credits not eligible for repayment. Mr. Amory said that his forecasts that home demand would remain firm but export demand would slacken and that our balance of payments would remain strong had been borne out, and he claimed that we had had a year in which much had been achieved. Revenue was £5,480,000,000, £137,000,000 more than in the preceding year, Inland Revenue duties having yielded £3,016,000,000 and Customs and Excise duties £2,191,000,000. Expenditure above the line was £5,103,000,000, defence expenditure totalling £1,468,000,000. There was, therefore, a surplus of £377,000,000, compared with his estimate of £364,000,000. Below the line receipts were £326,000,000 and payments amounted to £885,000,000, a deficit of £559,000,000. So the overall result, which determined how much Government expenditure had to be met by borrowing, was a deficit of £182,000,000, compared with his estimate of £236,000,000. The Chancellor described as "very heartening" the fact that there had been an increase of well over £300,000,000 net in the amount invested in the various forms of national savings, the best figure for 12 years. Coming to prospects for the year ahead, he said that on the basis of existing taxation Inland Revenue duties were expected to yield £3,050,000,000, and Customs and Excise £2,245,000,000, total revenue above the line being estimated at £5,620,000,000, or £140,000,000 more than in 1958. Expenditure above the line would increase substantially to £5,223,000,000, which was £120,000,000 more than last year's actual out-turn. Of the total, £4,495,000,000 was supply expenditure, defence expenditure being up by £34,000,000 and civil expenditure by £144,000,000, the latter increase being mainly due to the social services. On the basis of existing taxation, therefore, they had a surplus above the line of £397,000,000, or £20,000,000 more than the actual surplus last year. Below the line he expected the net total of payments to be £752,000,000, providing a net expenditure of £355,000,000 to be met by borrowing, compared with £182,000,000 last year. Discussing the economic outlook, the Chancellor said he expected the gold reserves to show some fall in 1959, owing to special payments, but he thought it should be a satisfactory year, both for the balance of payments and the external economic

position generally. His expectation was that our total exports would continue at around about the present levels for a few months and then they should increase. But the prospect for home production did not represent quite a full enough use of the capital resources created recently, and he therefore thought it right to consider most seriously whether a further stimulus should be given to the economy. After urging restraint in negotiations for wage and salary increases and remarking that the cost of living had been virtually stable for almost a year, Mr. Amory said we were going to have to earn our living in an increasingly competitive world, which meant that we must keep our costs and prices stable. Amid cheers, he said he had come to the conclusion that it would be right to seek to give a further limited but effective impetus to the expansion of our economic activity. In the present circumstances a surplus of £397,000,000 was no longer needed, and he could now contemplate with safety some tax reductions that would lead to a fuller use of our resources without creating dangerous pressure on the economy. Before announcing these, the Chancellor said he hoped shortly to give additional help to public service pensioners and to provide in the Finance Bill further methods to prevent dividend stripping and "bond washing". First he proposed to reduce the excise duty payable on buses and coaches to help operators to maintain rural services. Next, he announced the total abolition of the corporation tax, the yield from which was only about £150,000 a year, the substitution for the present system of stamp duties on sea insurance policies of a fixed duty of 6d., and a modest increase in the scale of the amounts that might be deducted for profits tax purposes from the remuneration of directors. His first major proposal was to reduce the three higher rates of purchase tax by one-sixth each, the 60 per cent. rate becoming 50 per cent., the 30 per cent. 25 per cent., and the 15 per cent. 12½ per cent. The 5 per cent. rate would not be changed, but in addition he removed the purchase tax on commercial vehicle chassis and on replacement television tubes. The total cost of these reliefs would be £59,000,000 this year and £81,250,000 in a full year. Remarking that the beer duty had a marked effect on the cost of living, he announced a reduction of the duty to 43s. 7d. a barrel, which, together with a new and simpler system of liquor licence duties, meant reduction of 2d. a pint in the retail price of beer, the cost being estimated at £36,000,000 this year and £40,000,000 in a full year. Coming to income tax, the Chancellor said the present high rates were bad for industry and tended to discourage effort and initiative, and therefore he had decided to propose a reduction of *qd.* in the standard rate and of 6d. in each of the reduced rates. These changes would cost £192,000,000 this year and £229,000,000 in a full year. The general effect of these proposals would be to stimulate the economy, but present circumstances demanded that he should do more, and he had decided upon a general restoration of investment allowances in respect of capital expenditure. The rates would be 20 per cent. for new plant and machinery and 10 per cent. for expenditure on the construction of industrial buildings, with additional initial allowances of 10 per cent. on new plant and machinery and 5 per cent. on the construction of industrial buildings. These would take the place of the present initial allowances. New mining works and new agricultural and forestry buildings would also receive allowances. Mr. Amory said that was as far as he could go on taxation reliefs. But he thought he could allow some further stimulus with safety and with benefit to the community, and that gave him

an opportunity to do something for the holders of post-war credits. He proposed to reduce by two years the ages at which owners of credits became entitled to repayment, the qualifying ages becoming 63 for men and 58 for women. That was as far as he felt justified in going, but he was seeking enabling powers to permit the repayment of credits by statutory order. All credits now belonging to the beneficiaries of holders who had died would be paid forthwith, and credits still outstanding would be repaid on the death of the holder. In addition, he had selected three categories of hardship in which credits would be repaid—persons who for a continuous period of 12 weeks had been receiving national assistance, persons named in a register of blind persons, and persons who were receiving constant attendance allowance or unemployment supplement. Finally, post-war credits that had not become eligible for payment on Oct. 1, 1959, would carry interest of 2½ per cent. from that date, which would not be liable to tax. He estimated that a total of £89,000,000 out of the £430,000,000 outstanding would be paid off this year. Summing up, the Chancellor said his tax changes would cost £295,000,000 this year and leave an estimated surplus above the line of £102,000,000. The post-war credit proposals would cost £71,000,000 below the line, leaving the sum to be met by borrowing at £721,000,000. There was now room in our economy for more production, he said in conclusion. This should give us room for rather more personal spending. "But, even more, I want to encourage the continuance of a high level of saving, because on that the growth of investment and our whole future welfare depend."

The Budget resolutions were agreed to, and in the subsequent debate Mr. Gaitskell complimented Mr. Amory on "a massive performance", and while welcoming the tax reliefs, expressed regret that the old age pensioners had been left out. On the following day, Mr. Harold Wilson supposed that the Budget would be called an assignment with the general election and charged the Government with having deliberately held back industrial recovery in 1958 to set the stage for this year's tax concessions. He contended that if the country was more prosperous, the Government's duty was to make provision for the under-privileged, not for those who were better off. Winding up the three days' general debate, the Chancellor said that the situation a year ago and the problems with which they were then faced were less favourable than today and it would have been a grievous error to have started expansion too soon. As to the issue of pensions, he said the Government regarded the rates of national insurance benefits as a matter of prime importance which would be kept under review, but the Budget was not the occasion for dealing with it and separate major legislation would be required. The Finance Bill was read a first time on April 15, and after a debate on old age pensions on April 20, when a Labour motion was rejected by 319 to 256 and a Government amendment carried by 319 to 257, the second reading was agreed to without a division on April 28. During the debate, Mr. Gordon-Walker for the Opposition said the Chancellor had not distributed in the best way the reliefs he felt able to give in purchase tax. The result had been a deliberate redistribution of income from those who could least afford it to the richest in the community. Mr. Heathcoat Amory in reply said his proposals were designed throughout to invigorate and improve the strength and competitiveness of the national economy, and claimed that the gain from the income tax reductions was proportionately bigger for the less wealthy than for the better off.

The committee stage opened on May 11, and

on the following day a Labour amendment to reduce the 5 per cent. rate of purchase tax to one per cent. was rejected by 247 to 203. On May 13 attempts to increase income tax relief, including one to change the earned income allowance to one quarter for incomes under £1,000, were defeated. Dealing with a proposed new clause brought forward by 15 Conservative members to reduce entertainments duty, the Chancellor told the committee on June 10 that he intended to move a new clause on the report stage to effect a further reduction of about 25 per cent. in the current rate of duty on cinema admission prices, with the idea of helping small rural cinemas and those in small market towns. A Labour proposal to repeal the duty was negatived by 166 to 162 on the following day, as was a clause to give the Inland Revenue statutory powers to call for more information on business expenses. The committee stage was closed on June 15 after Mr. Amory had said that he could not recommend a proposal to exempt owner-occupiers from Schedule A tax this year owing to the cost, when substantial relief had been given by the reduction of the standard rate of income tax. On the report stage on July 7, the Chancellor carried out his promise to relieve those cinemas which most needed help by moving a new clause to reduce by £20 each week the entertainments duty payable in respect of admissions, and this was agreed to. The House also accepted new clauses which raised the weight limit on invalid carriages from 5 cwt. to 6 cwt. for excise duty exemption and extended the dependent relative allowance to a taxpayer who maintained his mother or mother-in-law if she had been deserted by her husband or a woman living apart from her husband or where there had been a divorce or judicial separation. Another Government amendment provided that a small registered club whose purchases of intoxicating liquors in a year amounted to £200 or less would be entitled to claim a refund of half the cost of the £5 club licence, and that those which bought no intoxicating liquors could claim a refund of the whole of the duty. The Bill was read a third time on July 10, when Mr. Amory said that since the Budget was presented the most important development had been an increase in general confidence. This was bringing about a steady expansion of activity which was steadily working back to the heavy and capital goods industries. After a speedy passage through the House of Lords, the Royal Assent was given on July 29. The Royal Assent had been given on April 30 to the Bill authorizing the earlier payment of post-war credits. During the second reading debate, the Chancellor said that the amount outstanding was about £430,000,000, and the present rate of repayment was about £18,000,000 a year. It was estimated that 1,400,000 people might become entitled to claim repayment under the new proposals in addition to about 300,000 under the normal procedure. Interest would be at the same rate as in the Post Office Savings Bank, 2½ per cent., and would not be liable to income tax.

GRADUATED PENSIONS ON RETIREMENT.—Higher pensions related to earnings were proposed in the Government's new superannuation scheme, which was embodied in a Bill passed during the Session. The plan, as outlined in a White Paper, proposed a flat-rate minimum pension contribution for persons earning up to £9 a week and an additional contribution related to wages for those earning between £9 and £15 a week or more. Those running private occupational pension schemes would be allowed to contract out of the graduated part of the State scheme, on conditions including evidence of solvency. The minimum contribution, in-

cluding that to the National Health Service, would be 8s. 4d. for men and 7s. 2d. for women, employers paying 7s. 0d. and 6s. 4d. respectively, and on earnings between £9 and £15 a week the Government proposed a graduated contribution of 8½ per cent. of earnings, employer and employee each paying half, in both cases in addition to the basic minimum contribution. These graduated contributions, the White Paper stated, would entitle the contributor to graduated additions to the retirement pension, each £15 of graduated contributions providing for a man a pension of 1s. 0d. a week at the age of 65. The House of Commons approved a motion on Nov. 11 welcoming the White Paper by 308 to 261, after rejecting by 311 to 260 a Labour amendment declaring that the scheme failed to provide a fully comprehensive system of national superannuation which would abolish poverty in old age. Mr. Crossman described the plan as not a pension plan at all but a means of relieving the taxpayer. Moving the second reading of the National Insurance Bill on Jan. 27, Mr. Boyd-Carpenter, Minister of Pensions and National Insurance, said the Bill differed in certain respects from the White Paper, and, dealing with the earnings limit for those at work after pensionable age, announced that he was increasing the earnings limit for retirement pensioners and widows under the existing regulations from the present 50s. to 60s., preserving the 6d. in the shilling for the next pound above that. For widowed mothers the figure was raised from 60s. to 80s. The effect was to raise to £6 the amount that could be earned before pension was extinguished and in the case of widowed mothers to £7. Mr. Boyd-Carpenter claimed that the Government's proposals would not bring back inflation, whereas those of the Opposition were plainly inflationary. Mr. Marquand, for the Labour Party, moved an amendment for rejection on the ground that the Bill did nothing to improve the lot of existing old age pensioners and failed to provide for a fully comprehensive national superannuation scheme. This was rejected by 305 to 259 and the Bill was read a second time and sent to a standing committee. A Labour amendment to raise the basic old age pension from £2 10s. to £3 or a single person was rejected by 18 to 17 on March 10. The Minister said it would be wiser to keep the situation under review rather than to "dangle" in front of pensioners a precise figure which might have to be implemented. A proposed new clause to provide for an annual review of the basic rate was defeated by 18 to 14. During consideration on report in the House on June 8, a Labour amendment raising the ceiling for the new graduated pension from £15 to £25 was rejected by 229 to 181. The Bill was read a third time by 309 to 248 on June 9, the Minister announcing that April, 1961, remained the date on which the Government intended to bring the Bill into operation. The House of Lords passed it by July 6 and the Royal Assent was given on July 9.

NEW CODE FOR MENTAL ILLNESS.—Sweeping reforms of the existing laws on mental illness and mental deficiency, involving the repeal of Acts of Parliament over a period of 70 years and their replacement by a new code, were proposed in the Government's Mental Health Bill (applicable only to England and Wales), which, in its main provisions, was welcomed on both sides of the two Houses. As the Minister of Health, Mr. Walker-Smith, emphasised in moving the second reading on Jan. 26, the Bill generally followed the recommendations of the recent Royal Commission, but in some respects he thought they had been able to improve upon them. The Government had had two main principles in mind in the formulation

of the Bill, he said; first, that as much treatment as possible should be given on a voluntary and informal basis; second, that proper provision should be made for that unfortunately inevitable residual category of cases where compulsion was necessary in the interests of society or the patient. Under the new provisions, it would be required that one of the medical recommendations should be by a medical practitioner approved by a local authority as having special experience in diagnosis or treatment of mental disorder, while one practitioner must, if practicable, have a previous acquaintance with the patient. Explaining the functions of the 15 review tribunals, one for each Health Service hospital region in England and Wales, which were to be set up, the Minister said a patient would be entitled to apply to a tribunal within six months of admission if he challenged the necessity of compulsory admission. If a tribunal were satisfied that a patient was not suffering from disorder to the requisite degree and that it was not necessary that his detention should continue, the tribunal would discharge the patient. Special provision would be made for psychopaths and sub-normal persons. An important principle was the re-orientation of the mental health services away from institutional care towards care in the community, added Mr. Walker-Smith. The Bill also proposed that the powers of a Justice of the Peace to make an order for the detention of a patient should be superseded, that there should be no more "designated" hospitals, and that the Board of Control should be wound up, the three State hospitals (Broadmoor, Rampton and Moss-side) coming under the direct management of the Minister of Health. Dr. Edith Summerskill said the Opposition welcomed the Bill, the success of which would be determined by the country's ability to find the man-power and finance and to educate the public. The Bill was given an easy passage, the second reading being granted without a division, and it was read a third time on May 6, again without opposition. In the Lords the second reading was secured on June 4 and the third reading on July 16, the Royal Assent being accorded on July 29.

CLEARING VICE OFF THE STREETS.—Some of the recommendations of the Wolfenden Committee on prostitution formed the basis of the Street Offences Bill which the Home Secretary presented to the House of Commons early in the session. It made it an offence for a common prostitute to loiter or solicit in a street or public place for the purpose of prostitution, imposing maximum penalties of £10 for a first offence, £25 for a second offence, and £25 or three months' imprisonment, or both, for a third or subsequent offence. A constable was given power to arrest without warrant anyone he found in a street or public place and reasonably suspected of loitering or soliciting for purposes of prostitution. It was also proposed that proprietors of all-night cafés where prostitutes assembled would be liable to heavier fines as well as to the forfeiture of their licences, and that men convicted of living on immoral earnings would become liable to a maximum penalty of four years' imprisonment, instead of two years'. When Mr. Butler moved the second reading on Jan. 29, he said it was not the object of the Bill to make prostitution illegal or to provide a cure for it. The object was to help clear the streets and make it possible to charge prostitutes who plied their trade in a street and to stiffen the penalties against them. No woman would be charged for the first time with soliciting until she had been cautioned by a police officer. He hoped that this might have some effect in redeeming such women. A Labour motion for rejection was defeated by 235 to 88, and the Bill was given a

second reading and sent to a standing committee. An amendment to substitute the words "any person" for "common prostitute" was rejected on *Feb. 25* by 23 to 15, and another to ensure that a woman should be brought before a magistrate to receive a caution was defeated by 18 to 14 on *March 11*. The committee on *March 25* rejected by 20 to 9 an amendment to delete the penalty of up to three months' imprisonment for offenders with a previous conviction for prostitution in favour of a maximum penalty of £25. Another to delete the provision to give a constable power to arrest without warrant anyone found in a public place and suspected with reasonable cause of committing an offence under the section was lost by 18 to 14. On *April 8* the committee defeated by 22 to 8 a proposal to give courts power to recommend the deportation from Britain of immigrants from the Commonwealth, the colonies or the Republic of Ireland who were convicted of living on the earnings of prostitution, but accepted an amendment increasing from 5 to 7 years the maximum term of imprisonment for those so convicted. Considered on report, a new clause was added under which a woman who had been cautioned would be entitled to apply within 14 days for an order from the magistrate that her name should be expunged from any police record, and the third reading was carried by 131 to 25. The House of Lords gave the Bill a second reading on *May 5* by 46 to 11 after the Lord Chancellor had stated that the Commissioner of Police had decided that if the Bill were passed he would give instructions that no woman who had not been previously convicted of soliciting was to be charged with committing an offence unless she had been twice formally cautioned, and this procedure would be commended to provincial chief officers of police. In committee, the Upper House agreed with the Commons committee on *June 9* by defeating by 72 to 46 an amendment to substitute "any person" for "common prostitute" in the main clause, despite the support of the Archbishop of Canterbury, who regarded the exclusion of men as a violation of justice. Another amendment to make the acceptance of a prostitute's invitation an offence was rejected by 48 to 15. The Bill was read a third time on *July 14*, and received the Royal Assent two days later, its provisions coming into force a month later.

THE LAW OF OBSCENITY.—Leave to introduce a Bill amending the law relating to the publication of obscene matter and providing for the protection of literature was given by the House of Commons to Mr. Roy Jenkins on *Nov. 18*, and on *Dec. 16* Mr. Butler expressed the hope that progress might be made with it if the promoters would agree with the Government's recommendations. The main clause provided that any publication would be deemed to be obscene if its effect as a whole was such as to tend to deprave and corrupt persons to or among whom it was likely to be distributed, circulated, sold, offered for sale or let on hire. In deciding whether or not a publication was obscene, it was laid down that the court should take into consideration any evidence proffered as to the literary, artistic, scientific or other merits. The Bill was given a formal second reading on *Jan. 23* and sent to a standing committee, which agreed to new clauses presented by the Government. The most important of these, accepted on *March 11*, prohibited the publication of matter defined as obscene if its effect, taken as a whole, was such as to tend to deprave and corrupt persons likely to read, see or hear it. The maximum fine on summary conviction was fixed at £100. An amendment designed to secure the admissibility of expert evi-

dence as to the literary, artistic, or scientific or other merits of matter proceeded against was carried on *March 18*. On the report stage on *April 24*, a new clause was added providing as a defence in court that publication of the matter was justified as being for the public good, in the interests of science, literature, art or learning or of other objects of general concern, and the Bill was read a third time. When the House of Lords discussed the Bill on second reading on *June 2*, the Lord Chancellor said the Government felt that such things as private film shows of grossly obscene films should be covered, and in committee on *June 22* an amendment was agreed to adding the showing, playing or projecting of matter, but sound broadcasting and television were not covered. The Bill was read a third time on *July 7*, and, the Commons accepting the Lords amendments, the Royal Assent was given on *July 29*.

EASING THE HOUSING PROBLEM.—Some important Bills, intended, directly or indirectly, to increase the supply of houses and other accommodation, were passed during the session. The most useful was probably the House Purchase and Housing Bill, which introduced a new system of standard improvement grants which could be given by local councils to owner-occupiers and property owners to enable them to modernise old houses. The grants would not be available for ordinary maintenance work or repairs but for specific improvements, comprising bathroom, hot water supply, W.C., and food store, or any one or more of them not already in the house. Moving the second reading of the Bill on *Dec. 15*, Mr. Henry Brooke, Minister of Housing and Local Government, said it was the greatest measure for assisting home ownership that had ever been introduced by any government. Alluding to the section giving effect to the scheme for Government aid to building societies to allow them to make 95 per cent. advances for home ownership of old houses, he said the building societies movement provided the most convenient method of lending the additional money required to encourage home ownership, and that was why they had chosen the societies to be the instrument of their purpose. The Bill provided for Exchequer advances of up to £100,000,000, and if necessary the Government would be prepared to ask Parliament for more. The requirements were that, to qualify for an improvement grant, a house must have been built before 1919 and that its value should not be more than £2,500. For the Labour Party, Mr. Mitchison said they would not divide against the Bill, but it would be their policy when returned to power at the next election to provide for advances of 100 per cent. In committee on *Feb. 4* an amendment to require that there should not be any discrimination between men and women borrowers by building societies was defeated by 237 to 211, and on the following day a Government amendment was agreed to raising to £3,000 the maximum value of a pre-war house in the Metropolitan Police district for the purpose of a Government advance to a building society. The Bill was read a third time on *March 11* without a division and received the Royal Assent on *May 17*. A private member's Bill which was passed later imposed a fine of up to £100 on anyone who attempted to obtain an excessive price for furniture or fittings as a condition for renewing or issuing a lease. The Town and Country Planning Bill, introduced early in the session, provided that when public authorities bought land under compulsory powers they would pay the price ruling in the open market if it had been offered for sale. Additional compensation could also be claimed if land was compulsorily

bought for one purpose but was used within five years for a different purpose which made it more valuable. Mr. Bevins, Parliamentary Secretary of the Ministry of Housing and Local Government, said, when the Bill received its second reading on Nov. 13, that the Bill provided that a resident owner occupier, unable to sell his property at a fair price, might require a public authority to buy his house forthwith at a price unaffected by a development scheme. The Bill was carefully considered in committee by both Houses and received the Royal Assent on July 16. Another Government measure was the New Towns Bill, which transferred assets in the new towns built by the Development Corporations in England and Wales to a new body, the Commission for New Towns, of 15 paid members, which would maintain and enhance the value of the properties by promoting the settling up and expansion of businesses and providing amenities. Mr. Bevins, moving the second reading on Dec. 1, said that by the middle 'sixties about 150,000 houses would have been constructed in the new towns with a total population in England and Wales of over 500,000. Mr. Brooke said that some of the new towns were nearly completed and the next stage was one of consolidation and maturing. The Commission would be set up in good time to be ready to take over the first of the new towns that reached completion. The Bill was read a second time by 286 to 251 and a third time on June 30. It was passed by the House of Lords and received the Royal Assent on July 29.

BY CAR TO THE POLL.—Because of the approach of the general election, considerable interest was taken in a Government measure to repeal the provision restricting the number of motor vehicles which could be used by or on behalf of candidates to take voters to the poll at a Parliamentary election, and Labour members opposed it at every opportunity. The Home Secretary, moving the second reading on Nov. 5, said the restrictions were quite out of accord with present day social conditions, were unnecessary to secure fair play between the parties, and caused inconvenience to candidates. The alleged justification for the restrictions imposed in the Act of 1949, was the assumption that the motor car was a one-party privilege, but that was nonsense today. The Bill was read a second time by 316 to 245. A Labour amendment to postpone the operation of the Bill until July, 1960, was rejected in committee by 263 to 206 on Nov. 18, and when another amendment was resisted by the Attorney-General, Mr. Wigg first moved the adjournment of the debate without success, and then, as a protest, called attention to the fact that there were "strangers" present. As a result the Chamber was cleared and before the committee stage was closed two further divisions took place in secret. The third reading was secured on Nov. 25 by 305 to 228. The House of Lords read the Bill a second time on Dec. 9 after Earl Attlee had described it as a rather mean little political device, designed to load the dice against the Labour Party at the next election. The remaining stages were passed on Dec. 15 and the Bill received the Royal Assent on Dec. 18.

MALTA'S CONSTITUTION.—As a result of the breakdown of the negotiations with the Maltese government for a new constitution for the George Cross island and the consequent revocation of the existing constitution, Parliament early in the year passed a Bill restoring the royal prerogative power to amend or revoke any part of the constitution,

thus enabling the Governor to rule under emergency regulations after April. This was given a second reading in the House of Commons by 311 to 248 on Feb. 2. The Colonial Secretary, Mr. Lennox-Boyd, said that the British Government had a vision of a peaceful, happy Malta with busy dockyards and factories, and they were prepared to contribute generously to its fulfilment. They would have been glad to avoid revocation and he hoped that it would be only for a short time. Mr. Aneurin Bevan expressed the hope that the Government would take back the Bill and have another attempt to settle the problem, in which effort they would have the support of the Opposition. This offer met with no response, and the Labour Party divided against the third reading, which was carried on Feb. 16 by 273 to 220. The House of Lords gave the Bill a second reading on Feb. 19, when it passed through the remaining stages and received the Royal Assent.

A VARIED BAG.—Among the many other measures passed before the adjournment was one to raise the maximum grant for church schools, expected to cost the Exchequer about £40,000,000 for the next 15 to 20 years, which was designed to prevent the development of a situation in which, through lack of funds, children in aided or special agreement schools had less good opportunities than those in county or controlled schools. Another aimed at diminishing the fire risks to which workers were exposed in factories and placing legal responsibility for means of escape in case of fire with the fire authorities instead of district localities. A third repealed the Catering Wages Act, 1943, and converted the four wages boards established under that Act into wages councils, the object being to bring more flexibility into the industry. Heavier penalties for the unlawful taking or killing of red deer, including a fine of up to £500 or two years' imprisonment, or both, for "gang" offences, a close season in the near future, and the appointment of a commission for conservation and control were the main principles of another measure. A private member's bill making it an offence to possess or sell flick knives received Government support and was passed, as was one to legitimate the child of parents who subsequently married where one of the parents was married to a third party at the time the child was born.

THE DISSOLUTION OF PARLIAMENT.—The summer recess, fixed before the adjournment to extend until Oct. 22, had lasted less than six weeks when, on Sept. 8, the Prime Minister announced in a statement from Downing Street that the Queen had agreed to his request to grant a dissolution of Parliament. Immediately after his visit to Balmoral to see Her Majesty, Mr. Macmillan stated that a general election must take place either this autumn or early in 1960, and because important international negotiations lay ahead it was "clearly right that the people should have the opportunity of deciding, as soon as possible, who are to represent them in these negotiations". Parliament would be prorogued and dissolved on Sept. 18, and polling would take place on Oct. 8. The new House of Commons would meet on Oct. 20 for the election of a Speaker in succession to Mr. W. S. Morrison, who was resigning both the office and his seat, and for the swearing in of members, and the new Parliament would be opened on Oct. 27. During the adjournment debate on July 30, tributes were paid both to Mr. Morrison and to Sir Charles MacAndrew, the Chairman of Ways and Means, who was also leaving Parliament.

PUBLIC ACTS OF PARLIAMENT, 1958-59

Set out below is a list of the Public Acts of Parliament which received the Royal Assent between September, 1958, and September, 1959. The date stated after each Act is the date on which it came into operation. In many cases the object of the Statute is stated shortly, but in some instances the provisions of the Act are considered in more detail.

ARMED FORCES (HOUSING LOANS) ACT, 1958 (December 18, 1958) makes further provision for housing accommodation for service families.

AGRICULTURAL MORTGAGE CORPORATION ACT, 1958 (December 18, 1958) increases the amounts which may be advanced to the Agricultural Mortgage Corporation by the Minister of Agriculture, Fisheries and Food.

DEVELOPMENT OF INVENTIONS ACT, 1958 (December 18, 1958) extends the period during which advances may be made out of the Consolidated Fund to the National Research Development Corporation.

EXPIRING LAWS CONTINUANCE ACT, 1958 (December 18, 1958) continues in force certain enactments that would otherwise expire.

ADOPTION ACT, 1958 (April 1, 1959) consolidates with minor amendments the enactments relating to adoption of children.

NATIONAL DEBT ACT, 1958 (December 18, 1958) consolidates certain enactments relating to the National Debt.

MANOEUVRES ACT, 1958 (January 18, 1959) consolidates certain enactments relating to defence manoeuvres.

SLAUGHTER OF ANIMALS ACT, 1958 (January 18, 1959) consolidates certain enactments relating to the slaughter of animals.

REPRESENTATION OF THE PEOPLE (AMENDMENT) ACT, 1958 (December 18, 1958) withdraws the restriction imposed by the Representation of the People Act, 1949, s. 88, on the use of motor vehicles at parliamentary elections on behalf of a candidate.

NAVY, ARMY AND AIR FORCE RESERVES ACT, 1959 (February 19, 1959) extends until the end of June, 1964, or until the attainment of the age of 45, whichever is earlier, the liability for service in the reserve of men called up on or after January 1, 1949, who complete their whole-time and part-time service, and volunteers who became regulars on or after January 1, 1949, and would otherwise have been liable to do National Service.

EUROPEAN MONETARY AGREEMENT ACT, 1959 (February 19, 1959) makes certain financial provisions in connection with the operation of the European Monetary Agreement.

AGRICULTURE (SMALL FARMERS) ACT, 1959 (February 19, 1959) enables schemes to be made for payment of grants to a person carrying on a small farm business in connection with the carrying out of a programme (to last for at least three years) for increasing the efficiency of the business. The Act defines a small farm business as a trade or business consisting in the carrying out of agricultural operations on land comprised in the business where the amount of that land under crops or grass (excluding any rough grazing land) does not exceed 150 acres. Provision is also made for the payment of grants in respect of certain matters arising during a period not over three years.

MARRIAGE (SECRETARIES OF SYNAGOGUES) ACT, 1959 (February 19, 1959) amends the definition of "secretary of a synagogue" in the Marriage Act, 1949.

MALTA (LETTERS PATENT) ACT, 1959 (February 19, 1959) removes the limitation of Her Majesty's power to revoke or amend the Malta (Constitution) Letters Patent, 1947.

CONSOLIDATED FUND ACT, 1959 (March 25, 1959) authorizes the issue of money out of the Consolidated Fund to the service of the years ending on March 31, 1958, 1959 and 1960.

TRANSPORT (BORROWING POWERS) ACT, 1959 (March 25, 1959) extends the borrowing powers of the British Transport Commission.

INTERNATIONAL BANK AND MONETARY FUND ACT, 1959 (March 25, 1959) enables effect to be given to proposed increases in the quotas of the International Monetary Fund and in the capital stock of the International Bank for Reconstruction and Development.

FAMILY ALLOWANCES AND NATIONAL INSURANCE ACT, 1959 (various dates) transfers the determination of claims to family allowances to the machinery of the National Insurance Acts, and makes provision for appeals from medical appeal tribunals.

EMERGENCY LAWS (REPEAL) ACT, 1959 (March 25, 1959) repeals certain emergency laws and continues in force for a limited period certain Defence Regulations.

ELECTRICITY (BORROWING POWERS) ACT, 1959 (March 25, 1959) increases the borrowing powers of the Electricity Council.

INTESTATE HUSBAND'S ESTATE (SCOTLAND) ACT, 1959 (April 25, 1959) increases to £5,000 the sum to which a surviving husband or wife is entitled under certain Acts applying to Scotland on the death intestate of the other spouse.

COUNTY COURTS ACT, 1959 (October 1, 1959) consolidates with improvements certain enactments relating to county courts.

OVERSEAS RESOURCES DEVELOPMENT ACT, 1959 (March 25, 1959) consolidates the Overseas Resources Development Acts, 1948 to 1958, other than the provisions relating to the Overseas Food Corporation.

BUILDING (SCOTLAND) ACT, 1959 (various dates) makes as respects Scotland new provisions for safety, health and other matters in respect of the construction of buildings and for safety in respect of the conduct of building operations.

HIGHWAYS ACT, 1959 (January 1, 1960) consolidates with amendments certain enactments relating to highways, streets and bridges.

TERMS AND CONDITIONS OF EMPLOYMENT ACT, 1959 (May 30, 1959).—See Parliamentary Summary.

SEA FISHERIES (COMPENSATION) (SCOTLAND) ACT, 1959 (April 30, 1959) makes further provision as to compensation for any loss or damage occasioned to fishing nets or gear detained by sea fishery officers in Scotland.

INCOME TAX (REPAYMENT OF POST-WAR CREDITS) ACT, 1959 (April 30, 1959) provides that qualification to receive repayment of post-war credits shall be such as are prescribed by the Treasury. The Post-War Credits (Income Tax) Regulations, 1959, provide that the following qualify:

- (a) men of 63 or over, women of 58 or over;
- (b) the personal representatives or beneficiaries of a deceased holder;
- (c) certain other persons on grounds of hardship, e.g., those in receipt of National Assistance for 12 weeks continuously.

It is also provided that post-war credits shall carry compound interest at 2½ per cent. free of tax with yearly rests from October 1, 1959, payable when the credit is repaid.

COLONIAL DEVELOPMENT AND WELFARE (AMENDMENT) ACT, 1959 (April 30, 1959) makes further provision with respect to the development and welfare of colonies and other territories.

NATIONAL ASSISTANCE (AMENDMENT) ACT, 1959 (April 30, 1959) makes slight amendments to the National Assistance Act, 1948.

AGRICULTURAL IMPROVEMENT GRANTS ACT, 1959 (April 30, 1959) enables provision to be made as to the payment of improvement grants under the Hill Farming and Livestock Rearing Acts, 1946 to 1956, and as to the payment of grants and contributions under certain other enactments.

EISTEDDFOD ACT, 1959 (April 30, 1959) provides for contribution towards the cost of a Royal National Eisteddfod.

HOUSE PURCHASE AND HOUSING ACT, 1959 (June 14, 1959) gives power to the Minister of Housing and Local Government to make advances to a designated permanent building society, limited in any financial year by reference to the amount advanced by the society in that year, in respect of houses completed before 1919. There is also a provision enabling local authorities to make advances up to the full estimated value of houses under the Small Dwellings Acquisition Act, 1899, and the Housing (Financial Provisions) Act, 1958, and under the latter Act advances can now be made even though the estimated value of the house exceeds £5,000 (Part 1).

Part 2 of the Act is concerned with improvement of dwellings in England and Wales. A local authority is to give assistance in respect of any dwelling provided before the end of 1944 to enable it to be provided for the exclusive use of its occupants with the standard amenities, i.e., a fixed bath or shower in a bath-room, wash-hand basin, hot water supply, water-closet in or near the house, and satisfactory facilities for storing food. A local authority must approve an application for a grant if satisfied that after completion of the works the house is likely to remain fit for human habitation and available for use as a dwelling for at least 15 years, and that the applicant either owns the fee simple or has a lease with at least 15 years unexpired. The amount of the grant is half the cost of executing the necessary works subject to a maximum grant of £155 if the house has none of the standard amenities. If the house has some of these amenities but not all, the maximum is reduced by varying amounts.

Part 3 is concerned with assistance for improvement of dwellings in Scotland, and its provisions are very similar to those set out above.

HOUSING (UNDERGROUND ROOMS) ACT, 1959 (June 14, 1959) makes provision as to the circumstances in which underground rooms are to be deemed unfit for human habitation.

SMALL LOTTERIES AND GAMING ACT, 1956 (AMENDMENT) ACT, 1959 (May 14, 1959) permits the conduct of small lotteries on licensed premises.

RATING AND VALUATION ACT, 1959 (May 14, 1959) postpones the coming into force of the new valuation lists under Part 3 of the Local Government Act, 1948, from April 1, 1961, to April 1, 1963.

RESTRICTION OF OFFENSIVE WEAPONS ACT, 1959 (June 15, 1959) makes it an offence to manufacture, sell or hire, lend or give to any person, a knife known as a "flick-knife" or "flick-gun" or a knife known as a "gravity-knife". The offence is punishable with up to three months' imprisonment or a fine not exceeding £50, or both, in the case of a first offence, and up to 6 months' imprisonment or a fine not exceeding £200, or both, in cases of subsequent offences. The Act also prohibits the importation of such knives.

POLICE FEDERATION ACT, 1959 (May 14, 1959) amends the Police Act, 1919, with respect to the dates of elections of Branch Boards and of annual meetings of Branch Boards and Central Conferences of the Police Federation.

SUPREME COURT OF JUDICATURE (AMENDMENT) ACT, 1959 (May 4, 1959) enables the High Court,

where it is satisfied that any person has habitually and persistently and without reasonable ground instituted vexatious legal proceedings, to prohibit the institution of further proceedings without leave.

DEER (SCOTLAND) ACT, 1959 (June 14, 1959) furthers the conservation and control of red deer in Scotland and prevents the illegal taking and killing of all species of deer in Scotland. It establishes "the Red Deer Commission" to have the general functions of the conservation and control of red deer.

CRIMINAL JUSTICE ADMINISTRATION (AMENDMENT) ACT, 1959 (July 9, 1959) amends the law relating to the formation of additional courts of quarter sessions in boroughs.

SOLICITORS (AMENDMENT) ACT, 1959 (July 9, 1959) makes provision for an increase in the membership of the disciplinary committee constituted under the Solicitors Act, 1957.

POST OFFICE WORKS ACT, 1959 (July 9, 1959) vests in the Postmaster-General certain underground works constructed in London, Manchester and Birmingham in the exercise of emergency powers.

FIRE SERVICES ACT, 1959 (days to be appointed) amends the Fire Services Act, 1947, and makes further provision as to the pensions of persons transferring to or from the fire service and as to members of fire brigades becoming temporary instructors in training establishments.

METROPOLITAN MAGISTRATES' COURTS ACT, 1959 (July 9, 1959) increases the maximum number of the metropolitan stipendiary magistrates, authorizes the appointment of acting stipendiary magistrates for the metropolitan stipendiary court area, enables the Receiver for the Metropolitan Police District to provide premises required for the probation system within the area, and makes further provision with respect to the power of the Receiver to borrow money.

NUCLEAR INSTALLATIONS (LICENSING AND INSURANCE) ACT, 1959 (day to be appointed) makes provision for the regulation of certain installations capable of emitting ionizing radiations and with respect to the incidence of, and the provision of cover for, liability in respect of any such radiations emitted from, or in connection with the use of, any such installation.

NATIONAL INSURANCE ACT, 1959 (July 9, 1959).
—See Parliamentary Summary.

COTTON INDUSTRY ACT, 1959 (July 9, 1959) enables schemes made with a view to eliminating excess capacity in the cotton industry to provide for paying compensation for any such elimination and for raising the sums required for that and other purposes by levies on the industry, and enables the Board of Trade to make contributions towards any such compensation and to make grants for the re-equipment of the industry.

CHEVENING ESTATE ACT, 1959 (July 9, 1959) confirms and gives effect to a vesting deed and trust instrument relating to the Chevening Estate and other property to be used as a country residence by certain persons to be nominated by the Prime Minister.

PENSIONS (INCREASE) ACT, 1959 (July 9, 1959) provides for increases of certain pensions. It is not possible to set out here the very detailed provisions of the Act, but sect. 1 provides that, subject to certain qualifications, the annual rate of any pension specified in the Schedule to the Act which began not later than April 1, 1957, may be increased by the pension authority by a certain proportion of the pension rate. The percentage depends on the date when the pension began.

LICENSING (SCOTLAND) ACT, 1959 (January 1, 1960) consolidates certain enactments relating to licensing in Scotland.

NATIONAL ASSISTANCE ACT, 1959 (July 9, 1959) empowers the Minister of Pensions and National Insurance to make orders affecting the value of assets which may be disregarded in computing resources for the purposes of the National Assistance Act, 1948.

TOWN AND COUNTRY PLANNING ACT, 1959 (August 16, 1959) is a lengthy Act making important changes in the law relating to compensation on compulsory purchase and amending planning law. Part 1 of the Act restores open market value as the basis for assessing compensation on compulsory purchase of land. Part 2 relates to the acquisition, appropriation and disposal of land by local authorities and other public bodies. Part 3 gives a statutory right of appeal in respect of certain planning decisions, and amends the law with regard to purchase notices, applications for planning permission, and enforcement notices. Part 4 contains provisions designed to give assistance to owners whose land has become virtually unsaleable because of planning proposals.

WEEDS ACT, 1959 (July 16, 1959) consolidates certain enactments relating to weeds. Its main provision gives power to the Minister of Agriculture, Fisheries and Food to require an occupier of land to take action to prevent the spread of injurious weeds.

DOG LICENCES ACT, 1959 (October 16, 1959) consolidates certain enactments relating to the licensing of dogs. With certain exemptions, e.g., for dogs under 6 months, and for dogs kept by blind persons, a licence must be taken out annually in respect of every dog kept in Great Britain and a duty of 7s. 6d. paid.

RIGHTS OF LIGHT ACT, 1959 (October 16, 1959) amends in certain respects the Prescription Act, 1832, in relation to the acquisition of rights of light, and provides for the registration of a notice instead of an actual obstruction of an access of light in order to prevent an easement of light being acquired by long-user.

STREET OFFENCES ACT, 1959 (August 16, 1959).—See Parliamentary Summary.

FINANCE ACT, 1959 (various dates).—See Parliamentary Summary.

APPROPRIATION ACT, 1959 (July 29, 1959) applies a sum out of the Consolidated Fund to the service of the year ending March 31, 1960.

EDUCATION ACT, 1959 (July 29, 1959) enlarges the powers of the Minister of Education to make contributions, grants and loans in respect of aided schools and special agreement schools.

NATIONAL GALLERIES OF SCOTLAND ACT, 1959 (July 29, 1959) authorizes payment out of moneys provided by Parliament of expenditure incurred by the Board of Trustees for the National Galleries of Scotland in performance of certain functions conferred on them by statute.

NEW TOWNS ACT, 1959 (July 29, 1959) provides that where a development corporation for a new town has achieved its purposes under the New Towns Act, 1946, the Minister of Housing and Local Government may direct that its property shall vest in the Commission for the New Towns established under the Act.

EXPORT GUARANTEES ACT, 1959 (July 29, 1959) increases the amount of the liabilities which may be undertaken by the Board of Trade in respect of guarantees given by the Board under the Export Guarantees Act, 1949.

LANDLORD AND TENANT (FURNITURE AND FITTINGS) ACT, 1959 (August 29, 1959) relates to

the requiring of a premium in respect of a tenancy of a house within the Rent Acts or decontrolled by the Rent Act, 1957. It is made an offence in connection with a proposed grant, renewal, continuance or assignment of such a tenancy on terms which require the purchase of furniture to offer the furniture (which includes fittings) at a price which the seller knows or ought to know is unreasonably high. It is also made an offence for such a person to fail to give a written and priced inventory of the furniture to anyone seeking to obtain or retain accommodation whom he provides with particulars of such a tenancy.

FATAL ACCIDENTS ACT, 1959 (July 29, 1959) enlarges the class of persons for whose benefit an action may be brought under the Fatal Accidents Act, 1846, and the Carriage by Air Act, 1932. The benefit of the 1846 Act is extended to any person who is, or is the issue of, a brother, sister, uncle or aunt of the deceased person. Relationship for the purposes of the Act may be by adoption, by affinity, or of the half blood, a stepchild is treated as a child, and an illegitimate person as the legitimate child of his mother and reputed father. The Act also provides that certain benefits are to be left out of account in assessing damages in an action.

OBSCENE PUBLICATIONS ACT, 1959 (August 29, 1959) provides that it is an offence to publish an obscene article, and that "an article shall be deemed to be obscene if its effect or (where the article comprises two or more distinct items) the effect of any one of its items is, if taken as a whole, such as to tend to deprave and corrupt persons who are likely, having regard to all relevant circumstances, to read, see or hear the matter contained or embodied in it." It is a defence if the accused person can show that he had not examined the article, and had no reasonable cause to suspect that it was obscene. The Act further provides that obscene articles can only be seized on a search warrant and only then if kept for publication for gain.

FACTORIES ACT, 1959 (day to be appointed) makes further provision as to the health, safety and welfare of persons employed in factories and other premises to which the Factories Acts apply.

STATUTE LAW REVISION ACT, 1959 (July 29, 1959) repeals certain obsolete, spent, unnecessary or superseded enactments.

WAGES COUNCIL ACT, 1959 (August 29, 1959) consolidates the enactments relating to Wages Councils.

TOWN AND COUNTRY PLANNING (SCOTLAND) ACT, 1959 (August 16, 1959) re-enacts in the form in which they apply to Scotland the provisions of the Town and Country Planning Act, 1959.

COLONIAL DEVELOPMENT AND WELFARE ACT, 1959 (July 29, 1959) consolidates the Colonial Development and Welfare Acts, 1940 to 1959.

MENTAL HEALTH ACT, 1959 (day to be appointed).—See Parliamentary Summary.

LEGITIMACY ACT, 1959 (October 29, 1959) amends the Legitimacy Act, 1926, by providing that the marriage of the parents of an illegitimate child shall operate to legitimate the child even though the father or mother was married to a third person at the time of the birth. The Act also provides that the child of a void marriage is to be treated as the legitimate child of its parents if at the time of the act of intercourse resulting in the birth (or at the time of the celebration of the marriage if later) both or either of the parties reasonably believed that the marriage was valid. The Act also contains provisions with regard to the custody and guardianship of illegitimate infants, and as to applications under the Affiliation Proceedings Act, 1957.

Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, e.g. the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Waterguard.

NOTE.—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

ADMIRALTY (see Royal Navy)

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, S.W.1. †
[Trafalgar: 7711]

The Ministry of Agriculture, Fisheries and Food was established in April 1955 and assumed the responsibilities previously discharged by the Ministry of Agriculture and Fisheries and the Ministry of Food.

The Ministry has a general responsibility for food supplies, both home produced and imported, and for food manufacture, distribution and storage.

It is responsible generally for the efficiency of the agricultural, horticultural and fishing industries in England and Wales; this involves:—grant and subsidy schemes and the provision of certain trading services; schemes designed to improve the quality of livestock and agricultural produce, to control or eradicate animal diseases, plant diseases, and pests, and to facilitate production on marginal land; market intelligence and technical advice on food production; agricultural education, research applied to agriculture, horticulture and fisheries, and land drainage, enforcement of agricultural wages awards, safety, welfare and labour supply. With other Government Departments, the Ministry is concerned with improving such rural services as housing, farm buildings, water supplies and electricity, with the supply of machinery, fertilisers and seeds and with land use. It is also concerned with the purchase and sale of land by the Minister and with general land management questions.

The Ministry administers, in England and Wales, the guarantees to farmers under the *Agriculture Acts, 1947 and 1957*, including deficiency payments schemes for fatstock and for the main cereal crops. It is also generally responsible for schemes for milk, eggs, potatoes and wool operated through producers' marketing boards.

The Ministry is concerned with the interests and development of the fishing industry in England and Wales, including the processing and distributive trades, whaling and research.

The Ministry has primary responsibility for administering part of the food and drugs legislation, in particular the composition of food, labelling and advertising. It is responsible for research applied to food nutrition, technology and defence and for matters concerning slaughterhouses and meat inspection, and for legislation relating to the quality and cleanliness of milk; the Ministry maintains relations with Commonwealth and other countries and contributes to the work of a number of international bodies, in regard to agriculture and food.

The Ministry is also responsible for the Royal Botanic Gardens, Kew, and the Ordnance Survey Department.

Minister of Agriculture, Fisheries and Food, THE RT. HON. JOHN HUGH HARE, O.B.E., M.P. £5,000
Private Sec., J. H. Locke.

† Unless otherwise stated, Divisions of the Ministry are at this address.

Assistant Private Secs., B. D. Hayes; Miss J. E. Arthur.

Parliamentary do., A. B. C. Harrison, M.P. unpaid
Parliamentary Clerk, M. F. Grant £1,395 to £1,660

Parliamentary Secretaries, The Earl Waldegrave, T.D.; J. B. Godber, M.P. £2,500

Private Secretaries, H. Pease; E. J. G. Smith.
Permanent Secretary, Sir John Winniffrith, K.C.B. £7,000

Chief Scientific Advisers, (Agriculture) Professor H. G. Sanders; (Food) Dr. H. R. Barnell £5,000

Liaison Officers, Sir Cecil Armitage, C.B.E.; Major J. W. Fitzberbert-Brockholes, C.B.E., M.C.; The Lord de Ramsey, T.D.; Col. Sir Robert Gooch, Bt., D.S.O.; E. G. E. Griffith; The Earl of Malmesbury, T.D.; E. G. Parsons; R. Phillips, D.Sc.; Col. N. V. Stopford Sackville, O.B.E., T.D.; Sir Donald Scott; D. Skilbeck, C.B.E.; R. W. Trumper, C.B.E.; Capt. N. G. Garnons Williams, M.B.E., R.N. (ret.) unpaid

Rickwood, M.B.E. (Isle of Ely); E. K. Roberts (Middlesex); E. Roberts, C.B.E. (Denbigh); J. C. E. Robinson, C.B.E. (Beds.); W. J. Simmons, O.B.E. (Berks.); Col. N. V. Stopford Sackville, O.B.E., T.D. (Northants.); R. A. Stark (Isle of Wight); J. R. H. Sumner, C.B.E. (Wores.); R. Thompson, O.B.E. (Durham); D. M. Tudor (Merioneth); Lt.-Col. R. B. Verdin, O.B.E., T.D. (Cheshire); F. W. Ward (Salop); P. M. Williams, O.B.E. (Cornwall); G. Comer White (Somerset).

AGRICULTURAL LAND COMMISSION

26 Sussex Place, Regent's Park, N.W.1
[Ambassador: 1631]

The Agricultural Land Commission, set up under the *Agriculture Act, 1947*, is responsible for the management of land vested in the Minister of Agriculture, Fisheries and Food, or for which he has become responsible (163,410 acres approx.). The Commission advises the Minister in matters relating to the management of agricultural land and on the exercise of his powers of compulsory purchase under the Act, to ensure the full and efficient use of agricultural land.

Chairman (part-time), Sir Frederick Burrows, G.C.S.I., G.C.I.E.....£1,500
Deputy-Chairman (part-time) and Chairman of Welsh Sub-Commission, Col. J. C. Wynne Finch, C.B.E., M.C.....£1,000

Other Commissioners (part-time), W. C. Farnsworth, C.B.E.; E. Watson Jones, C.B.E.; Sir Francis Verner Wylie, G.C.I.E., K.C.S.I..... each £500
Secretary, C. Gallehawk..... £1,730 to £1,950
Laud Agent, E. T. King (+altc.) £1,790 to £2,070
Welsh Sub-Commissioners (part-time), J. Gwyn Jones; Prof. R. Alun Roberts, Ph.D.; J. N. Vaughan Richards, T.D..... each £500
Secretary (Welsh Sub-Commission), R. Davies £1,355 to £1,610
Land Agent (do.), E. O. Hughes £1,285 to £1,730

AGRICULTURAL RESEARCH COUNCIL

Cunard Building, 15 Regent Street, S.W.1

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931. In accordance with the provisions of the *Agricultural Research Act, 1956*, the Council is charged, under a Committee of the Privy Council, with the organization and development of agricultural research and may, in particular, establish or develop institutions or departments of institutions and make grants for investigation and research relating to the advance of agriculture. The Council's finance is, under the 1956 Act, derived from the Agricultural Research Fund into which monies provided by Parliament for the purpose of the Act, and other sums received by the Council, are paid.

Council, The Duke of Northumberland, K.G. (Chairman); D. Lowe, C.B.E. (Deputy Chairman); J. D. Alston; Prof. T. A. Bennet-Clark, Ph.D., F.R.S.; Prof. E. G. Cox, T.D., D.Sc., F.R.S.; R. E. Glover, D.Sc.; J. Hensley; Prof. J. W. Howie, M.D.; Elwyn Jones, O.B.E.; Prof. Sir Hans Krebs, M.D., F.R.S.; Prof. K. Mather, C.B.E., D.Sc., Ph.D., F.R.S.; Prof. P. B. Medawar, C.B.E., D.Sc., F.R.S.; F. Rayns, C.B.E.; J. N. Ritchie, C.B.; Prof. H. G. Sanders, Ph.D.; W. H. Senior, F.R.S.E.; Prof. S. J. Watson, C.B.E., D.Sc., F.R.S.E.; Prof. Sir Solly Zuckerman, C.B., M.D., D.Sc., F.R.S.
Secretary, Sir William Slater, K.B.E., D.Sc., F.R.S.
Deputy Secretary, W. G. Alexander, C.B.E.
Assistant Secretaries, W. Ness, C.B.E.; P. A. C. Thorne; A. J. D. Woods, C.B.E.
Scientific Assistants to the Secretary, E. E. Cheesman, D.Sc.; R. Scarisbrick, Ph.D.; G. G. Samuel.
Principals, J. S. F. Law; L. S. Porter; A. Oates.
Chief Executive Officer, J. H. Shimwell.
Senior Executive Officer, T. E. Pearson.

For the Research institutes under the control of the council, see *Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH

AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the various Commonwealth Governments, and of the Colonial Office, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Commonwealth and Empire. The Governments of the Commonwealth and Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman, J. G. Malloch, M.B.E., Ph.D.
Vice-Chairman, A. Perera.
Secretary, Sir Herbert Howard.

Institutes

- Commonwealth Institute of Entomology*, Natural History Museum, S.W.7. *Director*, E. O. Pearson.
- Commonwealth Mycological Institute*, Ferry Lane, Kew, Surrey. *Director*, J. C. Hopkins, D.Sc.
- Commonwealth Institute of Biological Control*, Science Buildings, Carling Avenue, Ottawa, Ontario, Canada. *Director*, F. J. Simmonds, Ph.D.

Bureaux

- Animal Breeding and Genetics*, Institute of Animal Genetics, King's Buildings, West Mains Road, Edinburgh 9, Scotland.—*Director*, J. P. Maule.
- Animal Health*, Central Veterinary Laboratory, New Haw, Weybridge, Surrey.—*Director*, M. Crawford.
- Animal Nutrition*, Rowett Research Institute, Bucksburn, Aberdeen, Scotland.—*Director*, I. Lelch, O.B.E., D.Sc.
- Dairy Science and Technology*, National Institute for Research in Dairying, Shinfield, nr. Reading.—*Director*, E. J. Mann.
- Forestry*, Imperial Forestry Institute, South Parks Road, Oxford.—*Director*, F. C. Ford Robertson.
- Helminthology*, The White House, 103 St. Peter's Street, St. Albans, Herts.—*Director*, J. M. Watson, D.Sc.
- Horticulture and Plantation Crops*, East Malling Research Station, East Malling, nr. Maidstone, Kent.—*Director*, G. K. Argles.
- Commonwealth Bureau of Pastures and Field Crops*, Hurley, nr. Maidenhead, Berks.—*Director*, A. G. G. Hill.
- Plant Breeding and Genetics*, School of Agriculture, Downing Street, Cambridge.—*Director*, P. S. Hudson, O.B.E., Ph.D.
- Soils*, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, G. V. Jacks.

AIR MINISTRY

(see Royal Air Force)

AIR TRANSPORT ADVISORY COUNCIL

3 Dean's Yard, S.W.1

The Council is a statutory body which considers representations from the public regarding the air transport facilities provided by the Airline Corporations and the charges for any such facilities, and questions referred to it by the Minister of Transport and Civil Aviation. It also considers in accordance with terms of reference issued to it by the Minister of Civil Aviation on July 30, 1952, applications from the Airline Corporations and independent air transport companies to operate scheduled air services under the arrangements announced by the Minister on May 27, 1952.

- Chairman*, The Lord Terrington, K.B.E.
- Deputy Chairman*, Air Marshal Sir John D'Albair, K.C.V.O., K.B.E., C.B., D.S.O.
- Members*, Sir John Ure Primrose; J. J. Taylor, O.B.E.; A. Witcomb-Smith, O.B.E.
- Assessor*, W. W. Burkett, C.B.E., M.C.
- Secretary*, K. J. Willoughby.
- Assistant Secretary*, R. G. Cook.

COLLEGE OF ARMS OR HERALDS
COLLEGE

Queen Victoria Street, E.C.4

[City: 2762]

The College of Arms is open daily from 10-4 and an Officer of Arms is always in attendance to deal with enquiries by the public. But such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who all

specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and Pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., Royal Victorian Chain.

Kings of Arms

Garter, Hon. Sir George Rothe Bellew, K.C.V.O., F.S.A.

Clarenceux, Sir John Dunamace Heaton-Armstrong, M.V.O.

Norroy and Ulster, Aubrey John Toppin, M.V.O., F.S.A.

Heralds

Ridmond (and Registrar), Anthony Richard Wagner, C.V.O., F.S.A.

Windsor, Richard Preston Graham-Vivian, M.C. (and *Earl Marshal's Secretary*).

Somerset, Michael Roger Trappes-Lomax.

Lancaster, John Riddell Bromhead Walker, M.V.O., M.C.

Chester, James Arnold Frere, F.S.A.

York, The Lord Sinclair, M.V.O.

Pursuivants

Rouge Dragon, Robin de la Lanne Mirrieles.

Rouge Croix, Walter John George Verco, M.V.O.

Bluemantle, John Philip Brooke Brooke-Little.

Porteuillis, Alexander Colin Cole.

COURT OF THE LORD LYON

H.M. Register House, Edinburgh

[Edinburgh: 30371]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Sennachie* of Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birth-briefs. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£50) and matriculations (£20) are payable to H.M. Exchequer.

Lord Lyon King of Arms, Sir Thomas Innes of Learney, K.C.V.O., LL.D., F.S.A.Scot., Advocate
£1,200

Three Heralds (£25 each)

Rothsay, Lt.-Col. H. A. B. Lawson, F.S.A.Scot.

Albany, Major Charles Ian Fraser of Reelig.

Marchmont, James Monteith Grant, W.C.

Three Pursuivants (£16 13s. 4d. each)
 Unicorn, Sir Iain Moncreiffe of Moncreiffe, Bt.,
 Ph.D., Advocate.
 Kintyre, Charles Eliot Jauncey, Advocate.
 Carrick, Malcolm Rognvald Innes of Edingight.
 Lintlithgow (Extraordinary), John I. D. Pottinger.

Lyon Clerk and Keeper of Records, Harold Andrew
 Balvairst Lawson. £900
 Precruiator-Fiscal, Malcolm Robertson MacGregor,
 W.S.
 Herald Painter, Mrs Katherine Chart.
 Maer, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

5 Old Palace Yard, S.W.1
 [Whitehall: 3935]

Appointed in May, 1924, "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of Our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, The Lord Bridges, P.C., G.C.B., G.C.V.O., M.C., F.R.S.

Commissioners, John Betjeman; Hon. Lionel Brett; Louis de Soissons, C.V.O., O.B.E., R.A.; Frederick Gibberd, C.B.E.; Sir William Holford; G. A. Jellicoe; Sir Leslie Martin; Sir Thomas Merton, K.B.E., F.R.S.; Lord Methuen, R.A.; Henry Moore, C.H.; Sir Allan Quartermaine, C.B.E., M.C.; J. M. Richards, C.B.E.; Sir Arthur Richmond, C.B.E.; Basil Spence, O.B.E., A.R.A.; Prof. Geoffrey Webb, C.B.E.

Secretary, Hon. Godfrey Samuel.

ROYAL FINE ART COMMISSION FOR SCOTLAND

Royal Scottish Museum,
 Edinburgh 1

[Tel.: Edinburgh Caledonian: 7534]

Appointed in 1927 "to enquire into such questions of public amenity or of artistic importance relating to Scotland as may be referred to them by any of our Departments of State, and to report thereon to such Departments; and, furthermore,

to give advice on similar questions when so requested by public or quasi-public bodies when it appears to the said Commission that their assistance would be advantageous." Under Royal Warrant of May 8, 1953, the terms of reference of the Commission were extended so that it is now open to the Commission, if it so desires, to call the attention of any Department of State or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the Commission may appear to affect amenities of a national or public character; and to call before it any persons, examine any documents or visit any places it might deem expedient for the more effectual carrying out of its duties.

Commissioners, Sir Hector Hetherington, K.B.E. (Chairman); Lady MacGregor of MacGregor, O.B.E.; Charles d'O. Pilkington-Jackson, A.R.S.A.; J. Cameron Smail, O.B.E., LL.D., F.R.S.E.; A. Graham Henderson, R.S.A., P.P.R.I.B.A.; William H. Kininmonth, R.S.A., F.R.I.B.A.; R. H. Matthew, C.B.E., A.R.S.A.; Ian G. Lindsay, O.B.E., A.R.S.A., F.R.I.B.A.; The Earl Haig.
 Secretary, Ian Finlay.

NATIONAL GALLERY

Trafalgar Square, W.C.2
 [Whitehall: 7618-9]

Hours of opening.—Weekdays 10 to 6, Sundays 2 to 6. Admission free. Closed on Good Friday, Christmas Eve, and Christmas Day

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1833 and enlarged in 1876, 1887, 1911, 1928, 1930 and 1937. Expenses for 1959-60 were estimated at £112,347.

TRUSTEES

The Earl of Crawford and Balcarres, K.T., G.B.E.; Lord Herbert, C.V.O.; Brinsley Ford; Sir Thomas Merton, K.B.E., F.R.S.; J. C. Witt; Henry Moore, C.H.; Denis Mahon; Sir William Coldstream, C.B.F.; The Viscount Chandos, P.C., D.S.O., M.C.; Field-Marshal Sir Gerald Templer, G.C.B., G.C.M.G., K.B.E., D.S.O.; The Marquess of Salisbury, K.G., P.C., F.R.S.

OFFICERS

Director, Sir Philip Hendy £3,800
 Keeper, William Gibson £2,400 to £2,700
 Deputy Keepers, M. Davies; N. McLaren
 £1,910 to £2,200
 Deputy Keeper and Scientific Adviser to the Trustees,
 F. I. G. Rawlins £1,910 to £2,200
 Assistant Keepers, C. H. M. Gould; M. V. Levey
 £1,217 to £1,915
 Chief Restorer, A. W. Lucas £1,860 to £2,150
 Restorer, N. S. Brommelle £1,165 to £1,855

NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2
 [Whitehall: 8511]

Open Monday to Friday 10 to 5. Saturday 10 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a gallery of the portraits of the most eminent persons in British history, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896, £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £4,082 for purchase of portraits, was estimated at £34,753 for 1958-59.

Director, Keeper and Secretary, C. K. Adams, C.B.E.
 £2,650
 Assistant Keepers (1), D. T. Piper; J. F. Kerlake
 £1,185 to £1,865

TATE GALLERY

Millbank, S.W.1

[Tate Gallery: 4444]

Hours of opening.—Weekdays 10 to 6. Sundays 2 to 6. Admission free, except to certain temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The Tate Gallery, which constitutes the National Collection of British painting, of modern foreign painting and of modern sculpture, was opened in 1897, the cost of erection (£80,000), being defrayed by the late Sir Henry Tate, who also contributed the nucleus of the present collection. The Turner Wing, built at the expense of Sir Joseph Duveen and his son, Lord Duveen, was opened in 1910. There are also special collections by Blake, Watts and Alfred Stevens. Lord Duveen also defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. Expenses for 1957-58 were estimated at £59,563. *Director and Keeper*, Sir John Rothenstein, G.B.E., Ph.D. £3,100
Deputy Director, N. R. Reid £1,040 to £2,220
Deputy Keeper, R. E. Alley £1,820 to £2,100
Assistant Keepers (Grade I), Mary Chamot; Judith Cloake; D. L. A. Farr; M. R. F. Butlin.
Men, £1,217 to £1,910; *Women*, £1,163 to £1,849

WALLACE COLLECTION

Hertford House, Manchester Square, W.1

[Welbeck: 0687-8]

Admission free. Open on weekdays 10 a.m. to 5 p.m., Sundays 2 p.m. to 5 p.m. Closed on Good Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the nation by the widow of Sir Richard Wallace, Bt., K.C.B., M.P., on her death in 1897, and Hertford House was subsequently acquired by the Government. The collection includes pictures, drawings and miniatures, French furniture, sculpture, bronzes, porcelain, armour and miscellaneous objects d'art. The total net expenses were estimated at £41,744 in 1959-60.

Director, Sir James Mann, K.C.V.O. £2,500
Assistant Directors, F. J. B. Watson; R. A. Cecil
 £1,217 to £1,950

UNITED KINGDOM ATOMIC ENERGY AUTHORITY

11 Charles II Street, S.W.1

[Whitehall: 6262]

Established by the *Atomic Energy Authority Act*, 1954, the Authority took over, on August 1, 1954, the control of atomic energy research and development. The Prime Minister is responsible to Parliament for general atomic energy policy and for money provided for the Authority.

The Authority is organized in four groups. Each full-time technical Member of the Authority is responsible for a particular group as shown below:—

(a) the *Research Group*. The Research Establishment at Harwell, Berks., conducts fundamental research into nuclear physics and atomic energy and provides information to the other establishments. It includes the Isotope School (1951) and Reactor School (1954). The Radiochemical Centre at Amersham, Bucks., prepares radio-active substances such as radium, radon and isotopes produced in the atomic pile, for medical, scientific and industrial purposes. The Group also includes the Atomic Energy Establishment which is being developed at Winfrith Heath, Dorset.

(b) the *Weapons Group*. Research work on atomic weapons is carried on at the Research Establishment, Aldermaston, Berks.

(c) the *Development and Engineering Group*. Responsible for the design, construction and development of reactors and associated plant; engineering consultant work for the Electricity Boards, overseas organizations and groups of industrial firms formed for the building of nuclear power stations; general design and construction of all major building projects in the Authority as a whole. Headquarters of the Group are at Risley, Lancs., with an establishment at Dounreay (Caithness) (Experimental Reactor Establishment) and laboratories at Culcheth (Lancs.). The Group also includes the research and development organization at Capenhurst (Cheshire), Windscale (Cumberland) and Springfields (Lancs.).

(d) the *Production Group*. Responsible for the operation of the Authority's factories; research and development in aid of factory processes; and other commercial activities. Headquarters: Risley, with plants at Capenhurst (Cheshire), Springfields (Lancs.), Windscale and Calder (Cumberland) and Chapelcross (Dumfriesshire).

Chairman, Sir Roger Makins, G.C.M.G., K.C.B.

£10,000
Members, (Full-time) Sir William Penney, K.B.E., F.R.S. (*Scientific Research*); Sir Donald Perrott, K.B.E. (*Finance and Administration*); Sir William Cook, C.B. (*Development and Engineering*); Sir Alan Hitchman, K.C.B. (*External Relations and Commercial Policy*) each £7,500
Air Chief Marshal Sir Claude Pelly, G.B.E., K.C.B., M.C. (*Weapons Research*) £6,500
(Part-time) Sir John Cockroft, O.M., K.C.B., C.B.E., F.R.S. £3,000

The Lord Citrine, P.C., G.B.E.; C. F. Kearton, O.B.E.; Sir Rowland Smith; Sir James Chadwick, M.D., F.R.S. each £1,000
Secretary, D. E. H. Peirson.

ATOMIC ENERGY OFFICE

1 Richmond Terrace, S.W.1

[Trafalgar: 6371]

The Atomic Energy Office came into being on August 1, 1954, when control of the United Kingdom atomic energy project passed to the United Kingdom Atomic Energy Authority. The Office is staffed by a small number of civil servants and assists the Prime Minister in his responsibilities for atomic energy. The secretary of the office is the accounting officer for the Atomic Energy Vote. The office is responsible, in conjunction with the Foreign Office and the Commonwealth Relations Office, for international matters in the atomic energy field, and for advice to the Prime Minister on atomic energy matters.

Secretary, F. F. Turnbull, C.B., C.I.E. £5,000
Under Secretary, M. I. Michaels £3,800
Asst. Secretary, R. A. Thompson, £2,400 to £3,000
Principals, P. W. Ridley; G. Smith
 £1,500 to £2,120

BRITISH BROADCASTING CORPORATION

Broadcasting House, Portland Place, W.1

[Langham: 4468]

The BBC was incorporated under Royal Charter as successor to the British Broadcasting Company, Ltd., whose licence expired Dec. 31,

1926. Its present Charter came into force July 1, 1952, and expires June 30, 1962. The Chairman, Vice-Chairman and other Governors are appointed by the Crown. The BBC is financed by means of revenue from receiving licences for the Home services and by a Grant in Aid from Parliament for the External services. The total number of licences in force in July 1959 was 14,874,472, of which 9,549,789 were for television as well as sound broadcasting.

Chairman, Sir Arthur Forde, £3,000
Vice-Chairman, Sir Philip Morris, C.B.E., £1,000
Governors, The Earl of Balfour (Scotland), £1,000;
 The Lord Macdonald of Gwaenysgor, P.C., K.C.M.G. (Wales), £1,000; J. R. McKee (N. Ireland); Mrs. T. Cazalet-Keir, C.B.E.; Dame Florence Hancock, D.B.E.; Sir Edward Benthall, K.C.S.I.; Sir James Duff, each £600
Director-General, H. Carleton Greene, O.B.E.
Directors, Sir Beresford Clark, K.C.M.G., C.B.E. (External Broadcasting); H. J. G. Grisewood (Chief Assistant to the Director-General); Sir Harold Bishop, C.B.E. (Engineering); R. E. L. Wellington, C.B.E. (Sound Broadcasting); G. C. Beadle, C.B.E. (Television); T. R. P. Hole, C.B.E. (Administration); J. H. Arkell (Staff Administration).
Deputy Director of Television Broadcasting, C. McGivern, C.B.E.
Assistant Director of External Broadcasting, E. Tangye Lean, C.B.E.
Assistant Director of Sound Broadcasting, R. D'A. Marriott, D.F.C.
Chief Engineer, Hon. R. T. B. Wynn, C.B.E.
Deputy Chief Engineer, F. C. McLean, C.B.E.
Consulting Civil Engineer, M. T. Tudsbury, C.B.E.
Controller, Finance, J. G. L. Francis.
General Manager, Publications, G. S. Strode, C.B.E., M.M.
Legal Adviser, E. C. Robbins, C.B.E.
Secretary, M. G. Farquharson, O.B.E., M.C.

Controllers of Regional Offices

Scotland, A. Stewart, C.B.E., Broadcasting House, Queen Margaret Drive, Glasgow.
Northern Ireland, R. McCall, C.M.G., Broadcasting House, Ormeau Avenue, Belfast.
Wales, A. B. Oldfield-Davies, C.B.E., Broadcasting House, Park Place, Cardiff.
Midland, H. J. Dunkerley, C.B.E., Broadcasting House, 52 Carpenter Road, Edgbaston, Birmingham.
North, R. Stead, Broadcasting House, Piccadilly, Manchester.
West, F. G. Gillard, O.B.E., Broadcasting House, Whiteladies Road, Clifton, Bristol.

BRITISH EUROPEAN AIRWAYS CORPORATION

Keyline House, Ruislip, Middlesex
 [Waxlow: 4334]

Chairman, Marshal of the Royal Air Force Lord Douglas of Kirtleside, G.C.B., M.C., D.F.C.

* Fees not drawn.

BRITISH OVERSEAS AIRWAYS CORPORATION

B.O.A.C. Headquarters, London Airport, Hounslow, Middlesex
 [Skyport: 5511]

Established in 1939, British Overseas Airways Corporation acquired, on April 1, 1940, the air transport undertakings of Imperial Airways and British Airways, which had been at the disposal of the Secretary of State for Air since the outbreak of war.

B.O.A.C. is the larger of the two Government Corporations which are charged with the task of developing and operating British scheduled air transport services under the provisions of the Air Corporations Act, 1949. Its functions are to operate the Commonwealth, North Atlantic, South Atlantic and Far Eastern routes from the United Kingdom. In June, 1959, the Corporation was operating sixty routes, with a gross route mileage of nearly 300,000. On these routes there were a hundred services weekly in each direction, and the mileage covered was more than 860,000 per week.

The members of the Corporation are appointed by the Minister of Transport and Civil Aviation.
Chairman, Sir Gerard d'Eranger, C.B.E. (Allowances £1,000) £5,000
Deputy Chairman, Sir George Cribbitt, K.B.E., C.M.G. (Allowances £500) £7,500
Members (full-time), B. Smallpelce (Managing Director); K. Granville, C.B.E. (Deputy Managing Director) £5,000
Members (part-time) J. W. Booth; Sir Wilfred Neden, C.B., C.B.E.; H. L. Newlands, M.B.E.; The Lord Rennell, K.B.E., C.B.; F. Taylor; The Lord Tweedsmuir, O.B.E., each £1,000; Sir John Stephenson, C.B.E. (unpaid).

BRITISH TRANSPORT COMMISSION

222 Marylebone Road, N.W.1
 [Ambassador: 7711]

The British Transport Commission was established as a public authority under the provisions of the *Transport Act, 1947*. On Jan. 1, 1948, the main-line railways of Great Britain, together with their ancillary services, the smaller railway undertakings previously under the jurisdiction of the Railway Executive Committee, the railways and road services formerly controlled by the *London Passenger Transport Board*, and various canal and inland waterway undertakings specified in the Act, were vested in the Commission. In accordance with the 1947 Act the Commission acquired road haulage undertakings which in 1946 were engaged in carriage of goods involving routes of 40 miles, or upwards, and necessitating journeys beyond a 25 miles radius from the operating centre. Under the provisions of the *Transport Act, 1953*, however, the Commission was required to dispose of a major part of the property held by it for the purposes of the part of its undertaking carried on through the Road Haulage Executive. The 1953 Act also provided for the re-constitution of the Commission, the abolition of the Railway Executive and the reorganization of the railways. On and from Oct. 1, 1953, all the functions of the Railways, the Road Haulage, the Docks and Inland Waterways and the Hotels Executives, respectively, were assumed by the Commission.

From Jan. 1, 1955, six regional Area Boards for the management of the railways were established and separate managements were set up for road haulage, hotels, docks and inland waterways.

Chairman, Gen. Sir Brian Robertson, Bt., G.C.B., G.B.E., K.C.M.G., K.C.V.O., D.S.O., M.C. . . . £10,000

Deputy Chairman, Sir John Benstead, C.B.E. . . £8,000

Members, K. W. C. Grand; J. Ratter, C.B.E.; Maj.-Gen. G. N. Russell, C.B., C.B.E.; Sir Reginald Wilson, each £7,500; A. B. B. Valentine (unpaid).

Part-time Members, H. P. Barker; D. H. Cameron of Lochiel, T.D.; F. Donachy; R. F. Hanks; Sir Leonard Sinclair; T. H. Summerson; Sir Philip Warter; Sir Cecil Weir, K.C.M.G., K.B.E., M.C. (each £1,000).

Secretary, General, Maj.-Gen. L. Wansbrough-Jones, C.B., C.B.E.

Chief Secretary, S. B. Taylor.

Chief Accountant and Financial Adviser, H. E. Osborn.

Chief Solicitor and Legal Adviser, M. H. B. Gilmour.

Traffic Adviser, T. H. Hollingsworth.

Manpower Adviser, A. R. Dunbar, O.B.E.

Technical Adviser, R. C. Bond.

Public Relations Adviser, J. H. Brebner, O.B.E.

Adviser (Special Projects), G. W. Quick Smith.

London Transport Executive

55, Broadway, Westminster, S.W.1

[Abbey: 5600]

Chairman, A. B. B. Valentine £7,500

Deputy Chairman and Managing Director, A. H. Grainger £6,000

Members, L. C. Hawkins; B. H. Harbour; A. Bull, O.B.E. (each £5,000); and (part-time) The Lord Williams; The Lord Geddes of Epsom, C.B.E.; S. H. Leake, O.B.E. (each £1,000).

Secretary, R. M. Robbins.

Eastern Area Board

Liverpool Street Station, E.C.2

[Bishopgate: 7600]

Chairman, Sir Reginald Wilson.

Members, A. McLeod; A. F. Pegler; J. B. Pelle; Maj.-Gen. G. N. Russell, C.B., C.B.E.; J. Tanner, C.B.E.; The Right Hon. Sir Henry Willink, Bt., M.C., Q.C.

Secretary, G. A. V. Hayes, M.B.E.

London Midland Area Board

Euston Station, N.W.1

[Euston: 1234]

Chairman: The Lord Rusholme.

Secretary, M. T. Howard Williams, M.B.E.

North Eastern Area Board

Railway Headquarters Offices, York

[York: 53022]

Chairman, T. H. Summerson.

Members, J. W. Armit, Ph.D.; J. Bowman, O.B.E.; G. H. Kitson, O.B.E., T.D.; L. H. McRobert, C.B.E., T.D.; P. D. Priestman, O.B.E.; Sir George Walton, K.B.E., C.B., T.D.

Secretary, C. H. Rafton.

Scottish Area Board

302 Buchanan Street, Glasgow, C.2.

[Douglas: 2900]

Chairman, Sir Ian Bolton, Bt., K.B.E., H.M.I.

Members, D. H. Cameron of Lochiel, T.D.; Sir John Denholm, C.B.E.; F. Donachy, O.B.E.; P. L. Meldrum; Sir Hugh Rose, Bt., T.D.; W. G. N. Walker, T.D.

Secretary, R. S. Boyd.

Southern Area Board

Waterloo Station, S.E.1

[Waterloo: 5151]

Chairman, Sir Philip Warter.

Members, J. E. Binks; H. F. B. Iles; H. L. R. Matthews, C.B.E.; K. Preston; J. MacN. Sidey, D.S.O.

Secretary, L. Mapleston.

Western Area Board

Paddington Station, W.2

[Paddington: 7000]

Chairman, R. F. Hanks.

Members, A. Chamberlain, M.C., T.D.; P. T. Heady; F. A. Parish, C.B.E.; Sir John Carew Pole, Bt., D.S.O., T.D.; C. W. Rodd; J. Ryan, C.B.E., M.C.

Secretary, A. H. Curtis Welch.

BRITISH TRAVEL AND HOLIDAYS ASSOCIATION

Headquarters and Tourist Information Centre
Queen's House, 64/65 St. James's Street, S.W.1
[Mayfair: 9191]

Overseas Offices

British Travel Association: 680 Fifth Avenue, New York 19; 39 South La Salle Street, Chicago 3; 606 South Hill Street, Los Angeles 14; 50 Young Street, Sydney; 224 Queen Street, Melbourne; 90 Adelaide Street West, Toronto; 661 Howe Street, Vancouver; 6 Place Vendome, Paris; 22 Neue Mainzerstrasse, Frankfurt/Main; Leidseplein 29, Amsterdam; Norrmalmstorg 1, Stockholm C; Reconquista 375, Buenos Aires; Rua Aurora 960, Salas 2-3, Sao Paulo; 252 Joppe Street, Johannesburg.

The functions of the Association can be summarized as follows: (a) to increase the number of visitors from overseas and (b) to ensure that overseas visitors and home holiday makers are well received and accommodated and have the best facilities that can be provided. The Association is a Company limited by guarantee and registered under the Companies Act and draws its membership from all sections of the tourist and holiday industry. The Association is supported by H.M. Government and receives a Grant-in-Aid from the Board of Trade. The Board consists of a Chairman who is appointed by the President of the Board of Trade, and 19 members, 8 of whom are nominated by the President of the Board of Trade; 7 are elected by the members of the Association and the remainder nominated by the Scottish Tourist Board (2), the Welsh Tourist and Holidays Board (1) and the Northern Ireland Tourist Board (1). Four additional members representing the various interests concerned with travel and holidays in the United Kingdom may be appointed. The Board has the advice of 3 main Committees: the Finance and General Purposes Committee, Tourist Development Committee and the Holiday Development Committee, whose Chairmen are drawn from the Board. The Tourist Development Committee and Holiday Development Committee draw a proportion of their membership from the Board and the remainder from interested organizations.

Chairman, Sir Arthur Morse, C.B.E.

Director-General, J. G. Bridges, O.B.E.

Deputy Director-General, L. J. Lickorish.

Chief Clerk and Establishment Officer, S. P. Anderson, O.B.E., £1,310 to £1,555

CABLE AND WIRELESS LIMITED

Head Office—Mercury House, Theobald's Road, W.C.1

[Chancery: 4433]

Under the Commonwealth Telegraphs Act, 1949, the assets of the telecommunications services conducted by Cable and Wireless, Ltd., in the United Kingdom were transferred to the Post Office. The company, however, continues to be responsible for the operation of its telecommunications services overseas and to own the assets relative to those services.

Cable and Wireless, Ltd., operates overseas telecommunications services, comprising 147,000 nautical miles of submarine cables and 120 wireless circuits. Its operations include telegraphy (cable and radio), phototelegraphy, radiotelephony, ship-shore radiotelegraph including direction finding, aeronautical wireless facilities, internal telephone systems, and broadcasting services in Kenya. It has 105 branches overseas and a Cable Station and Training School in the United Kingdom.

The Company was formed in 1920 (as Imperial and International Communications, Ltd., the name being changed in 1934) to unify the overseas communications of the Empire, consequent upon the Imperial Wireless and Cable Conference of 1928. The Commonwealth Telecommunications Conference, 1945, recommended the acquisition of the services in the U.K. and the other self-governing countries of the Commonwealth by their respective governments, with an unifying Commonwealth Telecommunications Board to replace the existing advisory Commonwealth Communications Council. Cable and Wireless, Ltd., was therefore acquired (under the *Cable and Wireless Act, 1946*) by the U.K. Government as from January 1, 1947, new directors being appointed.

Chairman, Sir Godfrey Ince, G.C.B., K.B.E. £3,500 (and expenses up to £350)

Managing Directors, N. C. Chapling, C.B.E.; H. H. Eggers, C.M.G., O.B.E. £4,000 each (and expenses up to £200 and £150 respectively)

Other Directors, C. N. Gallie (£1,000); K. Anderson, C.B., C.B.E.; Col. D. McMillan, C.B., O.B.E. (unpaid)

Secretary, F. H. Lansbury, O.B.E.

Engineer-in-Chief, C. J. V. Lawson, O.B.E.

Traffic Manager, E. G. L. Howitt, M.B.E.

Chief Accountant, H. G. Thomas, O.B.E.

Staff Manager, E. Mockett, O.B.E.

CHARITY COMMISSION

Ryder Street, St. James's, S.W.1.

[Whitehall: 7621]

The Charity Commission was constituted under Act of Parliament in 1853 "for the better Administration of Charitable Trusts" in England and

Wales. The powers of the Commissioners over all endowments held for educational purposes have now been transferred to the Minister of Education. Chief Commissioner, F. W. W. McCombe, C.B., C.B.E., £3,800
Commissioners, R. L. Daniell, C.B.E., £2,650 to £3,000; Sir Hugh Linstead, O.B.E., M.P., unpaid Secretary and Establishment Officer, S. P. Grounds £2,550

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

(Hours 9 to 5)

[Whitehall: 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of *Queen Anne's Bounty* (established 1704) and the *Ecclesiastical Commissioners* (established 1836). The main function of the Commissioners is the management of assets of the Church in order to endow and augment benefices, &c., and to carry out many administrative duties in relation thereto.

The Commissioners are required to carry all their revenues to a general income and expenditure account, the balance of which, after defraying secured charges, continuing grants and the cost of administration, etc., is available for special grants and provisions.

Summary of Income and Expenditure

(For the year to March 31, 1959)

<i>Receipts:</i>	
Estates (net).....	£4,098,514
Dividends, interest, etc.....	8,492,940
Trust funds.....	625,546
	<u>£13,217,000</u>

<i>Expenditure:</i>	
Benefices, dignitaries, Church property (including payments out of trust funds) and administration, etc.....	£11,060,390
Balance available for special grants and provisions.....	2,156,610
	<u>£13,217,000</u>

COMMONWEALTH RELATIONS OFFICE

Downing Street, S.W.1
[Whitehall: 2323]

In July, 1925, a new Secretaryship of State for Dominion Affairs was created, and as a result the Dominions Office was set up, to take over from the Colonial Office business connected with the self-governing Dominions, the self-governing Colony of Southern Rhodesia and the South African territories (Basutoland, Bechuanaland Protectorate and Swaziland) and business relating to the Imperial Conference.

In July, 1947, the titles of the Secretary of State for Dominion Affairs and the Dominions Office were altered to the Secretary of State for Commonwealth Relations and the Commonwealth Relations Office respectively. As from August 15, 1947, the Secretary of State for Commonwealth Relations assumed responsibility for relations with India and Pakistan and as from February 4, 1948, for relations with Ceylon.

On September 3, 1953, the self-governing Colony of Southern Rhodesia became part of the Federation of Rhodesia and Nyasaland, and the Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and the Federation.

The Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and Ghana as from March 6, 1957 and between the United Kingdom and the Federation of Malaya as from August 31, 1957.

Secretary of State for Commonwealth Relations, THE EARL OF HOME, P.C. £5,000
Private Sec., D. L. Cole, M.C.
Asst. Private Sec., S. W. F. Martin.

Members, Col. D. McMillan, C.B., O.B.E. (United Kingdom); H. A. L. Pattison, C.B.E. (Canada); H. A. de Dassel (Australia); E. H. R. Green, C.B.E. (New Zealand); E. A. Sherlock, M.B.E. (South Africa); H. N. Mukherjee (India); A. A. Ansari (Pakistan (Observer)); A. Perera (Ceylon); G. T. Anstey, C.B. (Rhodesia & Nyasaland); W. J. Bigg, C.M.G. (Other Commonwealth Territories).
Secretary-General, W. W. Shaw-Zambra, C.V.O., C.B.E., T.D.

CONSERVANCY BOARDS

THAMES CONSERVANCY

2-3 Norfolk Street, Strand, W.C.2
 [Temple Bar: 4982]

The conservation of the River Thames was originally granted to twelve Conservators in 1857. In 1909 the Port of London Authority took over all lights, powers and duties of the Conservators in

respect of the river below Teddington. The Conservators of the River Thames under the Thames Conservancy Acts 1932 to 1959 now have jurisdiction over the River Thames from Cricklade in Wiltshire to a point about 265 yards below Teddington Lock; and under the Land Drainage Act, 1930, the Conservators are constituted the Drainage Board of the Thames Catchment Area. The principal duties of the Conservators as a Navigation Authority are the maintenance and improvement of the navigation, and the registration and regulation of craft; the Conservators also exercise jurisdiction for the prevention of pollution over the Thames Catchment Area, and over the fisheries in the River Thames within their jurisdiction. Their income for these purposes is derived from various tolls, fees, rents, licences, payments from the Metropolitan Water Board and certain water undertakers, and contributions by the councils of various riparian counties and county boroughs in the Thames Valley; while the funds for carrying out the powers and duties of a Drainage Board are obtained by precept from the county councils and county borough councils as prescribed by the Land Drainage Act. The Board consists of 41 Conservators and their term of office is three years.

Chairman, Sir Jocelyn Bray.

Vice-Chairman, Sir Humphrey Haslam, O.B.E.

Secretary, Solicitor and Parliamentary Officer, G. E. Walker, O.B.E.

Chief Engineer, H. C. Bowen, O.B.E., T.D.

Treasurer and Accountant, E. A. James.

LEE CONSERVANCY CATCHMENT BOARD

Brettenham House, Lancaster Place
 Strand, W.C.2

This Board was established by the *Land Drainage Act, 1930*, as the flood prevention authority for the Lee watershed, which covers an area of about 600 square miles. Since January 1, 1948, it has also been responsible for the prevention of pollution (by the exercise of powers under the *Lee Conservancy Acts, 1868-1938*, and the *Rivers (Prevention of Pollution) Act, 1951*) and for fisheries. The Board consists of 20 members, one of whom is appointed by the Minister of Agriculture, Fisheries and Food, the remainder being appointed or elected by local authorities in the Catchment Area.

Chairman, E. R. Spragg, O.B.E.

Vice-Chairman, T. H. Joyce.

Clerk of the Board, J. L. Spiller, D.F.C.

Engineer, N. Medington.

Treasurer, W. E. Adams.

Protection of Water Officer, F. W. Swain.

FORTH CONSERVANCY BOARD

Instituted by the Forth Conservancy Order Confirmation Act, 1921, for the preservation, maintenance and improvement of the River and Firth of Forth within the limits prescribed in the Order.

Chairman, The Earl of Mar and Kellie.

Clerk and Treasurer, M. D. Kennedy, W.S., 14

Princes Street, Falkirk.

Engineers, Messrs. Leslie & Reid, C.E., 53 Manor

Place, Edinburgh.

Marine Superintendent, Lt.-Cdr. R. M. Roberts, D.S.C., R.N. (ret.).

COTTON BOARD

Royal Exchange 6th Floor, Manchester 2
 Established under the Cotton Industry Development Council Order, 1948.

Chairman, The Lord Rochdale, O.B.E., T.D.

Other Independent Members, F. Rostron, M.B.E.; O. Bertoya.

Members representing the Employers, W. T. Winterbottom, C.B.E.; J. M. H. Grey; W. Crossley; G. D. Hughes.

Members representing Employees, C. Schofield, O.B.E.;
Sir Alfred Roberts, C.B.E.; L. T. Wright; L.
Sharp, M.B.E.
Director-General, J. Broatch.

CROWN ESTATE COMMISSIONERS

Whiteliall, S.W.1
[Trafalgar: 2211]

THE CROWN ESTATE (formerly The Crown Lands).—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or Civil List. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1959, the total Receipts by the Commissioners were £3,200,051. The Expenditure (including Property Tax allowed) was £1,636,779. The sum of £1,530,000 was paid to the Exchequer in 1958-59 as Surplus Revenue, being a net sum from which no deductions have to be made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

First Commissioner and Chairman (part-time), Sir Malcolm Trustram Eve, Bt., G.B.E., M.C., T.D., Q.C.

Second Commissioner (and Secretary), R. M. J. Harris, C.B., M.V.O. £5,000
Commissioners (part-time), M. F. Berry; The Earl of Bradford, T.D.; D. H. Cameron of Lochiel, T.D.; W. C. Farnsworth, C.B.E.; Sir Edward Gillett; The Lord Williams.

Deputy Commissioner, J. A. Hillman, C.B.E. . . £2,700
Assistant Commissioner, H. A. C. Gill . . . £2,320
Crown Estate Surveyor, L. E. C. Osborne . . £2,700
Deputy Crown Estate Surveyor, C. A. Gardner, O.B.E. . . £1,840 to £2,120

Chief Executive Officer, F. E. J. Behn, O.B.E. . . £1,780 to £2,000

Accountant and Receiver-General, F. V. Mills . . £1,395 to £1,660

Senior Executive Officers, A. P. Brooks; J. Griffiths; C. J. Heather; R. E. Mildren; E. F. Richards . . £1,395 to £1,660

Legal Adviser (part-time), Sir Francis Enever, C.B., M.C.

Senior Legal Assistants, J. G. Allan; A. W. Robinson . . £1,665 to £2,200

Solicitor, Scotland, N. C. Grant.

Windsor Parks and Woods

Surveyor and Deputy Ranger, Sir Eric Savill, K.C.V.O., C.B.E., M.C.

Deputy Surveyor, Maj. A. W. Haig, M.V.O.

BOARD OF CUSTOMS AND EXCISE

King's Beam House, Mark Lane, E.C.3

[Mansion House: 1515]

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" in the Custom House, Lower Thames Street, E.C.3, replacing that built by Charles II and rebuilt after destruction by fire in 1718 and 1814. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on April 1, 1909.

The Board

Chairman, Sir James Crombie, K.C.B., K.B.E., C.M.G. . . £7,000

Private Sec., L. D. Hawken.

Superintendent of Waterguard, W. H. Powell, O.B.E.
£2,500

MINISTRY OF DEFENCE

Storey's Gate, S.W.1

[Whitehall: 7000]

The Ministry of Defence was formally constituted on January 1, 1947, under the *Ministry of Defence Act, 1946*. The Minister of Defence is responsible for the formulation and general application of a unified policy relating to the Armed Forces of the Crown as a whole and their requirements, as defined in White Papers under the heading *Central Organization for Defence* (Cmd. 6923/1946 and Cmd. 476/1958). He has authority to decide (subject to the responsibilities of the Cabinet and the Defence Committee), all major matters of defence policy affecting the size, shape, organization and disposition of the Armed Forces and their weapons and war-like equipment and supply (including defence research and development). He has further responsibilities arising from United Kingdom participation in international defence organizations.

The Minister of Defence is the Deputy Chairman of the Defence Committee of the Cabinet, of which the Prime Minister is Chairman.

DEVELOPMENT COMMISSION

3 Dean's Yard, Westminster, S.W.1

[Abbey: 1177]

The Development Commission was established and constituted under the *Development and Road Improvement Funds Act, 1909*, and the amending Act of 1910. The Act of 1909 as affected by the *Forestry Act, 1919*, the *Ministry of Transport Act, 1919* and the *Fisheries Act, 1955*, empowers the Treasury, on the recommendation of the Development Commission, to make advances by way of grant or loan to Government departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life; and secondly to promote the development and improvement of fisheries by a variety of means, including the promotion of research, both marine and freshwater.

Chairman, The Countess of Albemarle, D.B.E.

Other Commissioners, Lt.-Col. Hon. R. E. B. Be11-
mont, T.D.; C. I. C. Bosanquet; L. K. Elmhirst;

J. L. Longland; J. Sullivan, C.B.E.; Prof. R. C.
Tress; W. J. Wright, C.B.E.
Secretary, F. S. O. Broughton. £2,400 to £3,000

NATIONAL DOCK LABOUR BOARD

22-26 Albert Embankment, S.E.11

The National Dock Labour Board administers the scheme for giving permanent employment to dock workers under the *Dock Workers (Regulation of Employment) Act, 1946*.

Chairman, The Lord Crook.

General Manager and Secretary, M. R. Haddock, O.B.E.

Assistant General Manager, J. H. C. Pape.

Chief Accountant, H. C. Harper. O.B.E.

THE DUCHY OF CORNWALL

Buckingham Gate, S. W. 1

[Victoria: 7345-8]

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council

H.R.H. The Prince Philip, Duke of Edinburgh, K.G., K.T., C.M.B.E.; The Earl of Radnor, K.C.V.O. (*Lord Warden of the Stannaries*); Sir Edward Peacock, G.C.V.O. (*Receiver General*); The Lord Roberough; Brig. The Lord Tryon, K.C.V.O., D.S.O.; Hon. Charles Russell, Q.C. (*Attorney-General of the Duchy*); Sir John Carew Pole, Bt., D.S.O.; P. G. T. Kingsley, C.V.O. (*Secretary*).

Other Officers of the Duchy of Cornwall

Auditor, W. E. Parker, C.B.E.

Solicitor, B. B. D. Stopford.

Asst. Secretary, G. H. H. Syms, M.V.O.

Deputy Receiver, R. F. H. Adams.

Sheriff (1959-60), M. G. Bickford-Smith.

THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.2

[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1265. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

Chancellor of the Duchy of Lancaster, The RIGHT HON.

CHARLES HILL, M.D., M.P. £5,000

Private Secretary, Miss B. M. Shedden.

Vice-Chancellor, Sir Leonard Stone, O.B.E.

Attorney-General and Attorney and Serjeant within the County Palatine of Lancaster, Sir Milner Holland, C.B.E., Q.C.

Receiver-General, Brig. The Lord Tryon, K.C.V.O., D.S.O.

Clerk of Council and Keeper of Records, R. Somerville, C.V.O.

Solicitor, K. R. E. Taylor, C.V.O.

Chief Clerk, E. R. Wheeler, M.B.E.

Registrar, Manchester District, R. A. Forrester.

Do. Liverpool District, W. E. Helsby.

Do. Preston District, W. E. Helsby.

COURT OF CHANCERY OF THE COUNTY PALATINE OF DURHAM

Registrar's Chambers, Durham and Sadberge, Old Elvet, Durham

It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I., in reorganizing

his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Northam and Islandshire (roughly the northern quarter of Northumberland) and Bedlingtonshire. Palatinate rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of co-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers on behalf of the Crown.

Chancellor, A. G. N. Cross, Q.C.

Attorney-General, G. de P. Veale, Q.C.

Solicitor-General, G. S. Waller, O.B.E., Q.C.

Registrar of Chancery Court, E. L. Proud.

MINISTRY OF EDUCATION

Curzon Street, W. 1

[Hyde Park: 7070]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. The cost of administration for the financial year 1959 was estimated at £2,873,264.

Minister of Education, THE RT. HON. GEFREY

WILLIAM LLOYD, M.P. £5,750

ELECTRICITY AUTHORITIES

THE ELECTRICITY COUNCIL

Trafalgar Buildings, S.W.1

(Whitehall: 2121)

Winsley Street, W.1

(Museum: 4040)

The Electricity Act, 1957, provided for the dissolution of the Central Electricity Authority, as from Jan. 1, 1958, and for the allocation of its duties and powers to an Electricity Council and a Central Electricity Generating Board. These bodies were set up on Sept. 1, 1957, and as from Jan. 1, 1958, all liabilities and obligations of the Central Authority in respect of British Electricity Stock issued before that date were transferred to the Electricity Council, and all property, rights, liabilities and obligations which before that date pertained to the Central Authority, with certain exceptions which by agreement under the Act vested in the Council, were transferred to the Generating Board.

Electricity Council

Secretary, A. A. Wallace.

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4
 [Fleet Street: 8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of funds provided by Parliament. the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

Comptroller and Auditor General, Sir Edmund Compton, K.B.E., C.B. £7,000

Private Secretary, C. W. Garside.

Secretary, P. J. Curtis, C.B.E. £3,800

FORESTRY COMMISSION

25 Savile Row, W.1

[Regent: 0221]

The Forestry Commission, a Body Corporate,
is appointed under the *Forestry Acts, 1919 to 1951*.
The Commissioners are charged with the general
duty of promoting the interests of forestry, the
development of afforestation, the production and
supply of timber and the maintenance of reserves
of growing trees in Great Britain. Including the
former Crown Woods, transferred to it in 1924,
the Commission has acquired about 2,254,600 acres
of land (64 per cent. being plantable), of which
1,121,000 acres are under plantations. Under
the Dedication Scheme, financial assistance is given
to private owners and local authorities in respect
of approved works of afforestation.

Chairman, The Earl of Radnor, K.C.V.O. (part-time)
£3,000

Forestry Commissioners (Unpaid), Maj. D. C.
Bowser, O.B.E.; Lt.-Col. Sir Richard Cotterell,
Bt.; A. P. F. Hamilton, C.I.E., O.B.E., M.C.; E. B.
Latham, M.M.; Lloyd O. Owen; Maj. F. W. S.
Steel; Sir John Stirling of Fairburn, K.T., M.B.E.;
R. Taylor.

Director-General, Sir Arthur Gosling, K.B.E., C.B.
£5,000

Deputy Director-General, Sir Henry Beresford-
Peirse, Bt., C.B.....£3,800

Directors (England) G. B. Ryle (1 Princes Gate,
S.W.7); (Scotland), A. Watt (25 Drumshugh
Gardens, Edinburgh, 3); (Wales), J. R. Thom
(Victoria Terrace, Aberystwyth); (Research and
Education), James Macdonald, C.B.E. (25 Savile
Row, W.1).....£3,000

Secretary, H. A. Turner.....£2,400 to £3,000

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COM- MISSIONER

17 North Audley Street, W 1
[Mayfair: 7001]

A Barrister was appointed in 1828 to certify the
Rules of Savings Banks, and in 1829 to certify those
of Friendly Societies. In 1846 he was constituted
Registrar of Friendly Societies. By the Friendly
Societies Act, 1875, the Central Office of the
Registry of Friendly Societies was created, consist-
ing of the Chief Registrar and the Assistant
Registrars for England. It exercises numerous and
important functions under the Friendly Societies
Acts, the Industrial and Provident Societies Acts,
the Building Societies Acts, the Trade Union Acts,
the Scientific Societies Act, the Trustee Saving
Banks and Post Office Savings Bank Acts, the Loan
Societies Act, the Shop Clubs Act, the Super-
annuation and other Trust Funds (Validation) Act
and the Prevention of Fraud (Investments) Act.
Under the Industrial Assurance Acts, the Chief
Registrar is charged with various powers and
duties in relation to Industrial Assurance Com-
panies and Collecting Societies, and in that capacity
is styled the Industrial Assurance Commissioner.

Chief Registrar and Industrial Assurance Commissioner
Sir Cecil Crabbe.....£5,000
Private Sec., Miss M. E. Blake.

Assistant Registrar and Deputy Industrial Assurance
Commissioner, R. E. Grindle.....£3,300

Asst. Registrar, A. Vollmar.....£2,500 to £3,000

Executive Registrar, D. Leigh, O.B.E. (also Establish-
ment Officer).....£2,000 to £2,200

Senior Legal Assistant, J. E. Gower, M.C.
£1,665 to £2,200

Registration Branch (Head), A. A. C. Soper, £1,780
to £2,000; (Assist. Head), J. W. D. Goss
£1,395 to £1,660

Returns and Statistics Branch (Head), H. G. H. Tate,
£1,780 to £2,000; (Assist. Head), J. A. Walter,
£1,395 to £1,660

Establishment and Records Branch (Head), A. J.
Gilliver.....£1,395 to £1,660

Investigations Branch (Head), A. E. M. Brook
£1,395 to £1,660

Disputes Branch (Head), E. S. Burgess
£1,395 to £1,660

Registry of Friendly Societies, Scotland

19 Heriot Row, Edinburgh, 3

[Edinburgh: Waverley: 4371]

Assistant Registrar, J. Craig, w.s.

THE GAS COUNCIL

1 Grosvenor Place, S.W.1

[Sloane: 4554]

The Gas Council was set up by the Gas Act, 1943,
to advise the Minister of Power on the affairs of
the gas industry and to assist the Area Boards in
the discharge of their functions. It is responsible
for the creation and issue of British Gas Stock.
Chairman, Sir Henry Jones, M.B.E.....£8,500
Deputy Chairman, W. K. Hutchison, C.B.E.....£7,500

The Members are the Chairmen of the 12 Area Gas
Boards.

Area Gas Boards

Twelve Area Gas Boards are established by the
Act. The assets and liabilities of former Gas
Undertakings vested on May 1, 1949, in these
Boards which are responsible for the manufacture
and distribution of Gas and for the production of
residuals.

Chairmen

Scottish, S. Smith, C.B.E.

Northern, E. Crowther, C.B.E.

North Western, D. P. Welman.
 North Eastern, Dr. R. S. Edwards.
 East Midlands, R. S. Johnson, M.B.E., T.D.
 West Midlands, G. le B. Diamond, C.B.F.
 Wales, T. Mervyn Jones.
 Eastern, J. H. Dyde, O.B.E.
 North Thames, M. Milne-Watson, C.B.E.
 South Eastern, (vacant).
 Southern, C. H. Leach.
 South Western, C. H. Chester, C.B.E. . . each £6,500

Gas Consultative Councils

Twelve Gas Consultative Councils were set up by the Minister of Power, one for the area of each of the Gas Boards, to represent the interests of consumers. These Councils deal with specific complaints and consider matters of general interest to the consumer. Under the Act the Area Boards are required to inform the Councils of their general plans and arrangements. Each Council Chairman is an *ex officio* member of his Area Board.

Chairmen

Scottish, Sir Robert Nimmo.
 Northern, J. Hoy, M.B.E., B.E.M.
 North Western, R. M. Bradburn.
 North Eastern, H. Sutcliffe.
 East Midlands, A. H. Wood.
 West Midlands, J. H. Lewis, O.B.E.
 Wales, Maj. C. G. Traherne, T.D.
 Eastern, Lt.-Col. R. I. Musson, M.C.
 North Thames, E. Bayliss.
 South Eastern, Dame Alix Meynell, D.B.E.
 Southern, F. C. Rea, O.B.E.
 South Western, Sir Colin Campbell, O.B.E.

GENERAL REGISTER OFFICE

(England and Wales)

Somerset House, W.C.2

[Temple Bar: 2407]

The Registration of Births, Marriages and Deaths is believed to have been inaugurated by Thomas Cromwell in 1522, but it was not until 1837 that the General Register Office was established, when a system of civil registration of births, marriages and deaths was introduced in England and Wales. In 1926 provision was made for the registration of still-births, for the re-registration on the Registrar General's authority of the births of legitimated persons and for the maintenance of a register of adopted children. The Registrar General controls the local registration officers appointed under the consolidating Registration Service Act, 1953, in the execution of their duties, which are set out mainly in two consolidating Acts, the Marriage Act, 1949 and the Births and Deaths Registration Act, 1953. These duties relate to the registration of births, still-births and deaths, the correction of registers, the civil preliminaries to marriage, the solemnization and registration of civil marriages and the registration of certain Nonconformist marriages. Central records of births, still-births, marriages and deaths are maintained at Somerset House.

The Registrar General is also responsible for the collection, processing and analysis of statistics relating to population, fertility, births, marriages, deaths and diseases and for the arrangements for the periodical census of population.

Officers

Registrar General, E. M. T. Firth, C.B. £4,100
 Assistant Secretaries, R. M. Blaikley (*Registration, Marriages and Local Services*); W. J. Littlewood (*Establishments, Accounts, International and General Statistics, Census and Publications*)

 Secretary, Brigadier G. A. C. Macnab, C.B., C.M.G. £2,500

MINISTRY OF HEALTH

6 Savile Row, W.1

[Regent: 8411]

The Ministry of Health was established by the *Ministry of Health Act, 1919*, to exercise in England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commission. Responsibility for the National Health Insurance and the Widows', Orphans' and Old Age Contributory Pensions Schemes was transferred to the Ministry of National Insurance on April 1, 1945. The functions of the Ministry relating to local government, rating and valuation, public health, housing, rent control, burials and coast protection were transferred to the Ministry of Housing and Local Government on January 30, 1951. The responsibility for hospitals, limb-fitting, the supply of surgical appliances and certain treatment services formerly undertaken by the Ministry of Pensions was assumed on August 31, 1953. Since 1955 the Ministry has assumed responsibilities for food hygiene and welfare foods which were

previously carried out by the Ministry of Food. On May 1, 1957, responsibility for certain aspects of the recruitment of nurses and midwives was transferred from the Ministry of Labour and National Service to the Ministry of Health. The main administrative divisions in the Ministry of Health deal with general practitioner services; nursing; general relations with various health professions; Local Authority health and welfare services; hospitals and specialist services; mental health services; nutrition, and international health.

NATIONAL HEALTH SERVICE

(For main article, see Index)

Regional Hospital Boards

England and Wales are divided into 15 hospital regions, each with its own Regional Hospital Board which administers the hospital and specialist services in the area. The Regional Hospital Boards do not, however, administer Teaching Hospitals, which have their own Boards of Governors.

The Chairmen and members of Regional Hospital Boards and Boards of Governors are appointed by the Minister of Health in accordance with the third schedule to the National Health Service Act, 1946.

Areas

ROYAL COMMISSION ON HISTORICAL MONUMENTS (ENGLAND)

34 Chester Terrace, Regent's Park, N.W.1.
[Welbeck: 7721]

The Royal Commission on Historical Monuments (England) was appointed in 1908 to survey and publish in inventory form an account of every building, earthwork or stone construction up to the year 1714. The terminal date was extended after the late war to 1850. The Commission has published up to present date inventories covering nine counties. It is a purely recording body and while the Commissioners may recommend that certain structures should be preserved, they have no power to implement their recommendations.

Chairman, The Marquess of Salisbury K.G., P.C.

Commissioners, Miss Rose Graham, C.B.E., D.Litt., F.S.A.; Sir Cyril Fox, D.Litt., Ph.D., F.B.A., F.S.A.; Walter Godfrey, C.B.E., F.R.I.B.A., F.S.A.; Sir Albert Richardson, K.C.V.O., R.A., Litt.D., F.S.A., F.R.I.B.A.; Professor I. A. Richmond, C.B.E., D.Litt., LL.D., F.B.A., F.S.A.; Sir James Mann, K.C.V.O., F.B.A., F.S.A.; The Earl of Shaftesbury, P.C., K.P., G.C.V.O., C.B.E., LL.D.; Professor V. H. Galbraith, D.Litt., Litt.D., F.B.A.; Professor S. Piggott, F.B.A., F.S.A.; W. Godfrey Allen, F.S.A., F.R.I.B.A.; Lord Digby, D.S.O., M.C., T.D.; Sir John Summerson, C.B.E., F.B.A., F.S.A., A.R.I.B.A.; Professor H. C. Darby, O.B.E., Ph.D.; Christopher Hussey, C.B.E., F.S.A.; C. A. Ralegh Radford, F.B.A., F.S.A.; Prof. J. G. D. Clark, Ph.D., F.B.A., F.S.A.; Prof. F. Wormald, Litt.D., F.B.A., F.S.A.; R. H. Parker, M.C.

Secretary, G. F. Webb, C.B.E., F.B.A., F.S.A... £2,500

ROYAL COMMISSION ON ANCIENT MONUMENTS IN WALES AND MONMOUTHSHIRE

17 Queens Road, Aberystwyth
[Aberystwyth: 256]

The Commission was appointed in 1908 to make an inventory of the Ancient and Historical Monuments in Wales and Monmouthshire.

Chairman, Prof. J. G. Edwards, D.Litt., F.B.A.
Commissioners, Sir Cyril Fox, D.Litt., Ph.D., P.P.S.A., F.B.A.; Sir Ifor Williams, D.Litt., LL.D., F.S.A., F.B.A.; Prof. A. H. Dodd; Prof. I. Ll. Foster, F.S.A.; W. F. Grimes, C.B.E., F.S.A.; T. A. Lloyd, LL.D., F.R.I.B.A., F.S.A.; A. J. Taylor, F.S.A.
Secretary, A. H. A. Hogg, F.S.A.

ROYAL COMMISSION ON ANCIENT AND HISTORICAL MONUMENTS OF SCOTLAND

7 Coates Gardens, Edinburgh 12
[Edinburgh: 65113]

The Commission was appointed in 1908 to make an inventory of the Ancient and Historical Monuments of Scotland from the earliest times to 1707, and to specify those that seem most worthy of preservation. The terms of reference were extended by Royal Warrant dated Jan. 1, 1943, to cover the period since 1707 at the Commissioners' discretion.

Chairman, The Earl of Wemyss and March, LL.D.
Commissioners, Prof. I. A. Richmond, C.B.E., LL.D., Litt.D., D.Litt., F.B.A., F.S.A.; Prof. S. Piggott, F.B.A., F.S.A.; W. Douglas Simpson, O.B.E., D.Litt., F.S.A.; I. G. Lindsay, O.B.E., A.R.S.A., F.R.I.B.A.; Prof. W. C. Dickinson, M.C., LL.D.; G. P. H. Watson, M.B.E., F.R.I.B.A., R.S.W.; Mrs. A. I. Dunlop, O.B.E., Ph.D., D.Litt., LL.D.
Secretary, K. A. Steer, Ph.D., F.S.A..... £2,050

HOME OFFICE

Whitehall S.W.1
[Whitehall: 8100]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and Her subjects, and between the U.K. Government and the Government of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—The maintenance of law and order; the efficiency of the police service; the treatment of offenders, including juvenile offenders; the efficiency of the Probation Service; the organization of Magistrates' Courts; legislation on criminal

justice; the supervision of the Fire Service; the preparations for Civil Defence Services; the care of children by local authorities and voluntary societies; the regulation of the employment of children and young persons; the control and naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, byelaws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonies and formal business connected with honours.

MINISTRY OF HOUSING AND LOCAL GOVERNMENT

Whitehall, S.W.1
[Whitehall: 4300]

The Ministry of Housing and Local Government was set up in 1951 under the title of Ministry of Local Government and Planning and took over the housing and local government functions of the Ministry of Health and the functions of the Ministry of Town and Country Planning. It is responsible for the administration of Government housing policy, housing standards and the general supervision of local authority housing programmes; the administration of the planning acts concerning the use and development of land in England and Wales; and it is the department principally concerned in the supervision of the work of local authorities.

CENTRAL OFFICE OF INFORMATION

Hercules Road, Westminster Bridge Road, S.E.1

[Waterloo: 2345]

The Central Office of Information came into being on April 1, 1946, as a non-Ministerial Department with a separate vote; it operates in England and Wales, the regional work in Scotland being undertaken by the Scottish Home Department, and in Northern Ireland by the Government of Northern Ireland. The Department performs common technical and production functions, and gives specialized assistance and advice to other departments, for both home and overseas publicity purposes. Some of its principal functions are: (a) To act as the central Government agency for the preparation of publicity material required by departments, such as films, press and poster advertising, photographs, books, pamphlets and magazines and exhibitions; to maintain liaison with departments on their publicity requirements; and to provide technical advice and assistance, both at home and overseas. (b) To undertake publicity as required on home matters of inter-departmental scope. (c) To provide a daily service of comment and background information for the use of press officers and other British representatives overseas. (d) To provide a regional publicity organization in this country for the use of departments requiring such services. (e) To provide the machinery in this country for the central issue of Government news.

Director-General, T. Fife Clark, C.B.E. £5,000
Private Secretary, Miss E. M. Butler, M.B.E.

Group 1—Overseas

BOARD OF INLAND REVENUE

Somerset House, W.C.2

[Temple Bar: 2407]

The Board of Inland Revenue was constituted under the Inland Revenue Board Act, 1849, by the consolidation of the Board of Excise and the Board of Stamps and Taxes. In 1909 the administration of excise duties was transferred to the Board of Customs. The Board of Inland Revenue is responsible for the management and collection of income tax, surtax, profits tax, estate duty, stamp duties and other direct taxes, and also for the valuation of freehold and leasehold property for Inland Revenue taxation, for certain purposes on behalf of other Government Departments and public authorities and, in England and Wales, for local authority rating. Salaries and expenses of the Board for 1959/60 are estimated at £46,058,000.

The Board
