Coutts keep their
customers in the picture

And this is only one part of the view. Coutts's tradition is to offer full banking facilities coupled with personal service and an understanding of the financial problems of customers wherever they may live. Our method of book-keeping enables us to provide detailed statements as often as the customer requires. Would you like to be put in the picture? Please write for more information to:—The Manager, Coutts & Co., 440 Strand, London, WC2

A.D. 1692

DILLON'S University Bookshop

One of Britain's largest bookshops, with many hundreds of thousands of books: new, secondhand and antiquarian.

Our fifteen rooms on five floors are full of essential titles for commercial scientific and personal libraries, including of course *Whitaker's Almanack* (27s 6d) and *Who's Who* (8 gns) for which we will gladly accept standing orders. We welcome your custom by post, telephone or personal visit.

1 MALET STREET LONDON WC1

**You'd help a blind man
cross the road...
but is that enough?**

Of all the acts of kindness you can do for the blind, none is so great as your gift of money. We at RNIB help all Britain's blind to lead normal, happy and useful lives. Through us many can become academically qualified and manually skilled. We cannot restore their sight, but we can restore their self-reliance and self-esteem. For all Britain's blind, we need your greatest gift of kindness now—your donation. Please send it to us today.

Shorter Edition, Orange Paper Cover, 694 pages—15s. net
(SBN 85021 020 8)

PREFACE TO THE 101ST ANNUAL VOLUME (1969)

As “ Whitaker ” moves into its second century of publication, it continues to be the Editor’s policy to maintain all those essential sections of the book to which its users are accustomed, but to seek also to present new features of particular topical interest.

Innovations in 1968 included a section of Topics of the Year. A number of these have been retained as being of continued importance, and the new topics chosen for the 1969 edition include the gold crisis, heart transplant operations, the Royal Commission on Trade Unions and Employers’ Associations, the foot-and-mouth epidemic, Sir Alec Rose’s voyage, the first report of the Committee on Public Schools, and the great new Isaac Newton telescope at Herstmonceux. A picture of Her Majesty the Queen inaugurating the telescope is among the illustrations.

In the diary of events of the year, a special section has been devoted to the recent occurrences in Czechoslovakia and extended reference has also been made to the war in Vietnam, the assassination of Senator Kennedy and the French political crisis.

At home during the year there have been many Cabinet changes, and these included considerable reorganization of offices as well as new Ministerial appointments as the Almanack was going to press. All these changes have been duly noted. New bodies to appear in the Government and Public Offices section include the Race Relations Board, the Parole Board and the Shipbuilding Industry Board.

Other new items include articles on Industrial Training Boards and the Queen’s Award to Industry, showing this year’s winners of the awards. Additional information is provided about I.T.A. programme companies, as re-organized this year.

The list of member States of the Commonwealth grows annually and this is reflected in the current edition by separate articles on Barbados, Mauritius and Swaziland. A sketch-map of Cyprus has been added to those which first appeared in the Centenary Edition.

The Olympic Games in Mexico City were held too late for the results to be shown in the Sports pages of the Almanack, but arrangements have been made for the inclusion among Occurrences during Printing of the winners of all principal events.

The Editor would yet again wish to thank his world-wide circle of correspondents, official and unofficial, who have once more so greatly assisted him in the compilation of the Almanack.

TAKE UP PELMANISM

For Progress and Prosperity

PELMANISM is a working course in Practical Psychology directed to the needs of the average man and woman.

The Pelman Course is based on over 70 years' intensive study concurrent with experience in dealing with the difficulties, failings, fears, aspirations, and ambitions of more than a million men and women of all ages and occupations in all parts of the world.

You would like your affairs to prosper and your income to increase. Pelmanism will help you to achieve this and will enable you to develop that zest for living which comes with an awakened mind; also with quickened mental powers your awakened ability will enable you to enjoy those purchasable pleasures that come with extra money.

The Pelman training is scientific, precise, and individual, and is a sure way to success.

Pelmanism will rapidly and permanently banish defects and weaknesses. It will keep your mind vigilant and self-reliant and develop valuable positive qualities.

Pelmanism is a true philosophy of living for ordinary sensible people who wish to make the best of themselves at all times and under all circumstances.

Easy to Follow

Half an hour a day of spare time for a few weeks is enough. Everything is simply set out and described and no drudgery is entailed. The books are printed in handy pocket size, so that you can study them in spare moments during the day. Even the busiest man or woman can spare a few minutes daily for Pelmanism, especially when minutes so spent bring in such rich rewards.

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian without translation. Write for particulars of the language that interests you, which will be sent free.

Pelman Languages Institute,
200 Tudor House, Carter Lane,
London, E.C.4

What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

But Pelmanism does more than eliminate failings. It awakens dormant faculties. It develops power you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops:-

—Optimism	—Observation
—Perception	—Initiative
—Judgment	—Originality
—Self-Control	—Reliability
—Concentration	—Will-Power
—Mental Energy	—Personality
—Self-Confidence	—Resourcefulness
—Reliable Memory	—Presence of Mind

Pelmanists are not left to make the applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

Remember—Everything you do is preceded by your attitude of mind

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.

Send for the Free Book

The Pelman Course is simple and interesting and takes up very little time. You can enrol on the most convenient terms: The Course is fully described in ***The Science of Success***, which will be sent to you, free, on application to:-

OTHERS CAN FORGET - He can't

50 years after the first Armistice Day, we're still looking after old and incapacitated war veterans in our British Legion Homes. We're helping youngsters too. We're providing work for the war-disabled, grants for widows in need, help for ex-servicemen or families in hardship or distress. That's our job. But Poppy Appeal funds can no longer meet the steadily rising costs. Donations, deeds of covenant, legacies are essential. Please help.

A DEED OF GRATITUDE

A legacy for the Methodist Homes for the Aged is a means many generous people adopt in expressing gratitude for their own home and for serenity and peace-of-mind in their old age.

There are so many who are less fortunate and for lonely and anxious old people the Methodist Homes for the Aged are a haven and a home. Our constantly growing income from legacies, more than any other factor, has enabled us to embark on the capital expenditure for twenty-eight Homes. Unfortunately even these will accommodate only ■ few of the hundreds of deserving people on the tragically long waiting list.

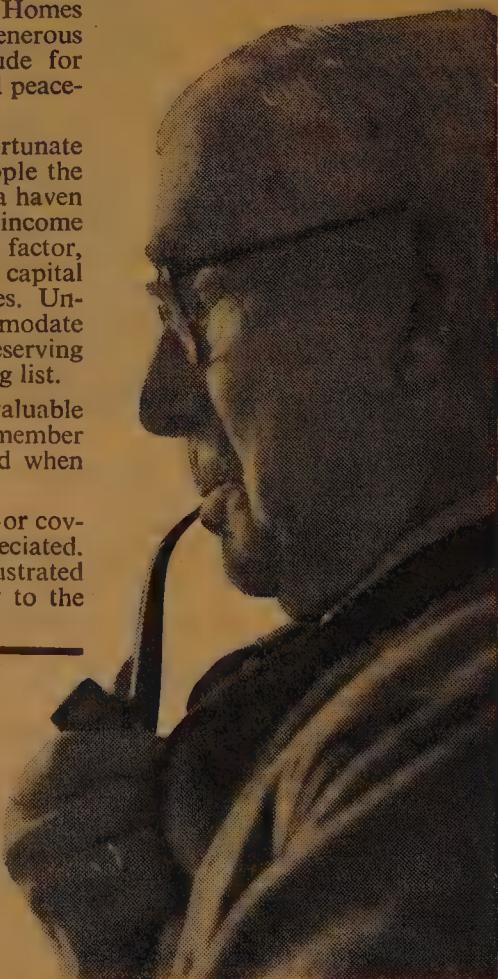

We thankfully acknowledge this valuable assistance and ask you please to remember the Methodist Homes for the Aged when making your will.

Bequests of money and property—or covenanted gifts—are all greatly appreciated. May we send you copies of illustrated literature? Please write personally to the General Secretary.

Methodist Homes for the Aged

General Secretary:
Rev. R. J. Connell, B.A., B.D.

1 Central Buildings,
Westminster, London SW1

The Association of Certified and Corporate Accountants

In an age when the emphasis is increasingly on specialised training, the demand for men and women possessing professional skill is all the greater.

Consequently the role of the Certified Accountant becomes ever more important in helping to meet the needs of industry, commerce and the public alike—in addition to providing new opportunities for a most satisfying career.

The Association is the second largest of the statutorily recognised bodies of Accountants in the United Kingdom having a membership in excess of 12,000.

The designation of Members is "Certified Accountant". Fellows are denoted by the letters F.A.C.C.A. and Associates by the letters A.A.C.C.A.

Full details about the Association and its examinations can be obtained on application to the Secretary.

Please remember ST. DUNSTAN'S in your Will

The cherished sense of independence returns to the war blinded with the knowledge of their ability to earn their own living. St. Dunstan's has brought confidence to war blinded Servicemen and women with its special training in skilled trades and professions and the help given both at work and at home.

All information from the Chairman
THE LORD FRASER OF LONSDALE

**ST. DUNSTAN'S, 101 MARYLEBONE ROAD
LONDON NW1**

(St. Dunstan's is registered in accordance with the National Assistance Act, 1948)

MORDEN COLLEGE

Blackheath, S.E.3

Founded in ■■■ by ■■■ John Morden.

Accommodation with allowances or external pensions for poor men of good character, widowers or unmarried at least sixty years of age, who have been merchants and have lost their estates by accident or misfortune in their honest endeavours to get their living by way of trading. In default of applicants possessing these qualifications, applications may be considered from poor men who have attained rank or position of substantial authority in their employment, business or profession and who are prevented from continuing in their employment, business or profession by illness, accident or misfortune. Accommodation and external pensions are provided for married couples, also for widows and unmarried daughters of poor men who at the date of death possessed the qualifications mentioned. All elections are at the absolute discretion of the Trustees.

Clerk to the Trustees: Montague S. Graham

SCOTLAND CALLING!

Royal Scottish Society for
Prevention of Cruelty to Children

Last Year, 6,723 cases of neglect or ill-treatment were investigated and 22,631 children safeguarded.

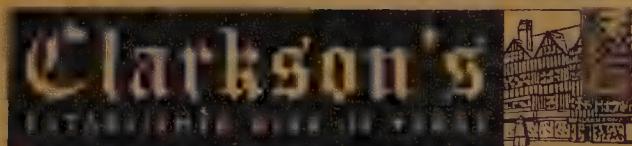

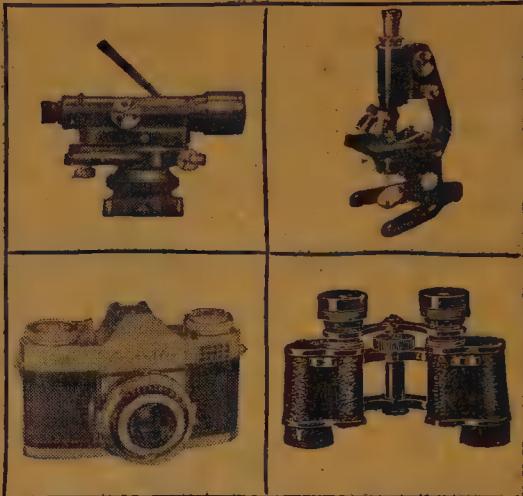

Please help us in our work to make life endurable for unloved children and give them ■ fair chance by sending a contribution to the

GENERAL SECRETARY
16 Melville Street, Edinburgh 3

Do your headaches begin at Calais?

Many people who are keen to do business abroad feel hampered by lack of knowledge about overseas markets and openings, or frustrated by red tape and currency regulations. For many years National and Grindlays have specialised in international banking, not only through our unique chain of branches in Asia and Africa, but also on a world basis through our extensive connections and correspondents. If you have a problem in the import and export field, with foreign exchange or simply through lack of information, why not call us at Head Office? (01-588 4040 Ext. 310).

Ask for Mr. Kendon or Mr. Bruce). Or write to:

The Trade Development Department,

**NATIONAL AND GRINDLAYS
BANK LIMITED**

OCCURRENCES DURING PRINTING

Home Affairs. Oct. 16.—Foreign Office and Commonwealth Offices merged; Mr. G. M. Thomson, Commonwealth Secretary, became Minister without Portfolio. Mr. Wilson announced merging of Ministries of Health and Social Security on Nov. 1, with Mr. Crossman as Secretary of State.

Oct. 17.—Further Ministerial changes included appointment of Mrs. Hart as Paymaster General and Mr. K. Robinson as Minister for Planning and Land at the Ministry of Housing and Local Government. Mr. T. F. Peart became Lord President of the Council and Lord Shackleton Lord Privy Seal.

Overseas. Oct. 2.—At least 40 persons were killed in gun battles in streets of Mexico City. President Johnson accepted with deep regret Mr. Justice Abe Fortas' request for withdrawal of latter's nomination ■ Chief Justice of U.S.A.

Oct. 3.—President Fernando Belaunde Terry of Peru was deposed by military coup.

Oct. 8.—Mr. Wilson arrived at Gibraltar for talks with Mr. Ian Smith, which took place ■ H.M.S. Fearless. Czech Praesidium agreed to terms laid down by Russia.

Oct. 11.—Three-man Apollo 7 spacecraft was launched successfully from Cape Kennedy.

Oct. 13.—Statement at conclusion of talks between Mr. Wilson and Mr. Smith said that disagreement on fundamental issues remained.

Oct. 22.—Apollo 7 spacecraft returned safely to Atlantic Ocean after 11 days in orbit.

Obituary. Oct. 18.—William Oscar James Robinson, Labour M.P. for East Walthamstow since 1966, aged ■ (by-election pending). Oct. 20.—Bud Flanagan, O.B.E., famous comedian, aged 72.

ASTRONOMICAL NOTES

MERCURY is not suitably placed for observation until the beginning of the second week of the month when it becomes visible ■ an evening star, magnitude -0.6 to about +1, low above the south-western horizon, at the end of civil twilight. The period of visibility is approximately two weeks.

VENUS is ■ brilliant evening star, magnitude -3.9, visible in the western sky for several hours after sunset. It is at its greatest eastern elongation on the 26th. On the early evening of the 21st there is a close conjunction with the crescent Moon.

MARS is a morning star, magnitude +1.3, visible in the south-eastern sky for several hours

before twilight. During the month Mars passes from Virgo into Libra. Mars is near the Moon on the mornings of the 12th and 13th.

JUPITER is a magnificent morning star, magnitude -1.8, and by the end of the month is visible long before midnight.

SATURN is an evening star, magnitude +0.8, in the constellation of Pisces. The Moon is near the planet on the evenings of the 23rd and 24th.

AURORA. The latest information available is that sunspot maximum will have occurred during the second half of 1968. Thus observers, particularly those with clear northern skies, should remember that there is a better than average chance of seeing an aurora in 1969.

ASTRONOMICAL NOTES

MERCURY, although at its greatest western elongation from the Sun on the 23rd (27°) is unsuitably placed for observation.

VENUS is a brilliant evening star, magnitude -4.2, dominating the western sky for several hours after sunset. Venus is near the crescent Moon on the evenings of the 19th and 20th.

MARS is a morning star, magnitude +0.8. Mars is in Libra though by the end of the month its direct motion takes it to within 1° of degree of β Scorpii. The Moon passes 6° S. of Mars on the morning of the 10th.

JUPITER is a magnificent morning star, magnitude -1.9, in Virgo.

SATURN is an evening star, magnitude +0.8, in the constellation of Pisces. Saturn's largest satellite, Titan, magnitude +8½, is visible in small telescopes. On the evening of the 20th the crescent Moon passes 5° N. of the planet.

ZODIACAL LIGHT. The evening cone may be observed in the western sky after the end of twilight from the 4th to the 17th. This faint phenomenon is only visible in the absence of both moonlight and artificial lighting. Unfortunately, during both February and March, the brilliance of the planet Venus will interfere with observation.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation throughout the month.

VENUS is a magnificent evening star, magnitude -4·1, attaining its greatest brilliancy on the 3rd. However, the period available for observation is shortening and by the end of the month the planet sets 1½ hours after the Sun. Venus is near the crescent Moon on the evenings of the 19th and 20th.

Mars is a morning star, brightening noticeably during the month from magnitude +0·5 to -0·2. Mars passes from Scorpius to Ophiuchus during the month. The Moon passes 6° S. of Mars on the morning of the 10th.

JUPITER is at opposition ■ the 21st and thus

visible all night. It is a magnificent object in Virgo, magnitude -2·0.

SATURN is an evening star, magnitude +0·8, but is moving towards the Sun and is only visible for a short while after sunset; by the end of the month it is a very difficult object to locate in the twilight sky.

URANUS is at opposition on the 22nd, in the constellation of Virgo. It is barely visible to the naked eye but telescopically it shows a slightly greenish disk 4" in diameter. It is easily located with only small optical aid.

ECLIPSE. There is an annular eclipse of the Sun on the 18th. See page 148 for details.

ZODIACAL LIGHT. The evening cone may be observed in the western sky from the 5th to the 19th.

ASTRONOMICAL NOTES

MERCURY becomes an evening star shortly after the middle of the month, magnitude -1.3 to 0.0, visible above the W.N.W. horizon at the end of civil twilight.

VENUS is a brilliant evening star, magnitude -3.3, for the first few days of the month, though only visible for a very short while after sunset, low on the W.N.W. horizon. It is moving rapidly towards the Sun, inferior conjunction occurring on the 8th. Only a few days afterward (because of

its rapid retrograde motion) it becomes visible as a morning star, magnitude -3.6. Through a telescope Venus is a beautiful sight, appearing as a thin crescent almost a minute of arc in diameter.

MARS is a bright morning star, magnitude -0.7, and by the end of the month is visible before midnight. The Moon passes 6° S. of Mars on the morning of the 7th.

JUPITER is a magnificent evening star, magnitude -2.0, moving very slowly westwards in Virgo.

SATURN is unsuitably placed for observation, conjunction occurring on the 18th.

Mean Longitude of Ascending
Node on May 1, 358°.

PHENOMENA

May 4^d 15^h Mars in conjunction with the Moon. Mars 4° N.

5^d 23^h Mercury at greatest eastern elongation (21°).

13^d 01^h Venus in conjunction with the Moon. Venus 1° S.

14^d 09^h Venus at greatest brilliancy.

14^d 15^h Saturn in conjunction with the Moon. Saturn 5° S.

17^d 10^h Mercury in conjunction with the Moon. Mercury 4° S.

18^d 12^h Neptune at opposition.

26^d 09^h Jupiter in conjunction with the Moon. Jupiter 1° N.

29^d 10^h Mercury in inferior conjunction with the Sun.

31^d 14^h Mars in conjunction with the Moon. Mars 3° N.

31^d 16^h Mars at opposition.

CONSTELLATIONS

The following constellations are near the meridian at

d	h	d	h
April 1	24	April 15	23
May 1	23	May 16	21
June 1	20	June 15	19

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Minor, Ursa Major, Canes Venatici, Coma Berenices, Bootes, Leo, Virgo, Crater, Corvus and Hydra.

ALGOL

ALGOL is inconveniently situated for observation during May.

MONTHLY NOTES

May 9. Half-Quarter Day. Bank and General Holiday, Channel Islands.

15. Whitsunday (Scotland). Scottish Term Day.

17. Norway's National Day.

23. Jewish Pentecost (Feast of Weeks) begins.

26. Bank and General Holiday, Gt. Britain and N. Ireland.

28. Removal Day, Scotland.

ASTRONOMICAL NOTES

MERCURY is an evening star for the first half of the month, magnitude 0.0 to +1.7, visible above the W.N.W. horizon at the end of civil twilight. This evening apparition is the most suitable one of the year for observers in the northern hemisphere.

VENUS is a brilliant morning star, attaining its greatest brilliancy, magnitude -4.2, on the 14th. As seen through a telescope the apparent diameter of the planet shrinks from 48° to 30° as the distance from the Earth increases. At the same time the phase increases from a thin crescent to a 39% illuminated disk by the end of the month. There

is a close conjunction with the crescent Moon in the early morning of the 13th.

MARS reaches opposition on the 31st, attaining a magnitude of -1.9. Although visible practically all night, its southern declination (24°) means that it never attains a great altitude above the horizon—even from southern England the maximum altitude does not exceed 15°. The gibbous Moon passes south of Mars on the 4th and again on the 31st.

JUPITER is a magnificent evening star, magnitude -1.8.

SATURN is unsuitably placed for observation.

NEPTUNE is at opposition on the 18th, in the constellation of Libra, magnitude +7.7.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, although it reaches its greatest western elongation on the 23rd.

VENUS is a brilliant morning star, magnitude -4.0, reaching greatest western elongation on the 17th. There is a close conjunction of Venus and Saturn on the 11th, with the crescent Moon passing some 6° to the north of the planets.

MARS is a splendid evening star, magnitude -1.8. Its retrograde movement takes it from Ophiuchus back into Scorpius during the month,

passing 2° N. of Antares on the 3rd. Note the reddish colour of both objects. The gibbous Moon is near Mars on the evening of the 27th.

JUPITER is a splendid evening star, magnitude -1.6. Eclipses and shadow transits of the Galilean satellites of Jupiter are given on page 147.

SATURN is unsuitably placed for observation for most of the month. At the end of the month it gradually becomes a morning star, magnitude +0.7 though the fact that even nautical twilight is continuous through the night means that it will not be an easy object to locate.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 22nd.

VENUS is a brilliant morning star, magnitude -3.7. During the second half of the month observers with good E.N.E. horizons should be able to see it shortly before 02^h. Between the 11th and the 17th Venus is very close to the Hyades and on the morning of the 14th the planet passes within 0°.1 of the star ε Tauri, between that star and Aldebaran.

MARS is a splendid evening star, magnitude -1.2, in the constellation of Scorpius. On the

evening of the 24th the gibbous Moon will be seen approaching Mars, conjunction occurring at midnight.

JUPITER is a splendid evening star, magnitude -1.4. Jupiter is moving slowly eastwards in Virgo and by the end of the month is no longer visible after 21^h.

SATURN is a morning star, magnitude +0.6. Although not an easy object the planet may be detected above the eastern horizon around midnight. The Moon will be seen a few degrees above Saturn on the morning of the 8th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is a brilliant morning star, magnitude -3.5, visible in the east for several hours before sunrise.

MARS is an evening star, magnitude -0.6, no longer such a conspicuous object as it was in May, when at opposition. Mars, having resumed its direct motion in July, is now moving more rapidly eastwards, passing from Scorpius to Ophiuchus during the month.

JUPITER is an evening star at first, magnitude

-1.3, but by the middle of the month is lost in the evening twilight.

SATURN is a morning star, magnitude +0.5, more readily visible now that it is drawing away from the Sun and also because twilight is shortening. Late on the 4th the gibbous Moon passes 7° N. of the planet.

METEORS. The maximum of the famous Perseid meteor shower occurs on the 12th. Conditions for observation are very favourable — there will be no interference from moonlight as New Moon occurs on the 13th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation although it reaches greatest eastern elongation on the 3rd.

VENUS is a brilliant morning star, magnitude -3·4. Observers on the morning of the 22nd will see Venus approaching Regulus, passing only -°·4 N. of the star during the daylight hours.

MARS is an evening star, magnitude -0·1. It is now reaching its maximum southerly declination (-26°) and thus its maximum altitude from southern England does not exceed 13°.

JUPITER is unsuitably placed for observation.

SATURN is a morning star, magnitude +0·3 in the constellation of Aries. By the end of the month it is visible in the eastern sky 1½ hours after sunset. The Moon passes 7° N. of Saturn on the 1st and is near the planet again on the mornings of the 28th and 29th.

ECLIPSE. There is an annular eclipse of the Sun on the 11th. See page 148 for details.

ZODIACAL LIGHT. The morning cone may be seen in the eastern sky before twilight commences, from the 10th to the 24th.

ASTRONOMICAL NOTES

MERCURY is a morning star after the first week of the month, magnitude +1.0 to -0.9, visible low on the eastern horizon about the time of beginning of civil twilight. For observers in the northern hemisphere this is the most suitable morning apparition of the year. On the morning of the 26th Mercury is only about 1° N. of Jupiter.

VENUS is a brilliant morning star, magnitude -3.4. On the morning of the 9th the crescent Moon passes only 1° S. of the planet.

MARS is an evening star, magnitude +0.2, in the constellation of Sagittarius.

JUPITER is unsuitably placed for observation at first, conjunction occurring on the 9th. For the last few days of the month it may be seen ■ a morning star, magnitude -1.2, low above the E.S.E. horizon at the beginning of morning civil twilight.

SATURN is at opposition on the 29th, magnitude +0.1, and thus is available for observation throughout the night. On the evening of the 25th the Moon passes 7° N. of Saturn.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 16th.

VENUS is a conspicuous morning star, magnitude -3.4. It is drawing towards the Sun, the period available for observation shortening noticeably during the month. On the 4th Venus, Jupiter and Spica are all within a few degrees of each other. Venus is near the crescent Moon on the morning of the 8th and 9th.

MARS is an evening star, magnitude +0.6, passing from Sagittarius to Capricornus during the month.

JUPITER is a morning star, magnitude -1.3, visible in the south-eastern sky before dawn.

SATURN is a conspicuous evening star, magnitude +0.1, in the constellation of Aries. The gibbous Moon passes 7° N. of Saturn on the night of the 21st-22nd.

ASTRONOMICAL NOTES

MERCURY is a evening star, magnitude -0.4 to -0.0, during the last week of the month, visible low on the south-western horizon at the end of civil twilight.

VENUS is a morning star, magnitude -3.4, during the first part of the month, visible low in the S.E. for a short while before sunrise. Thereafter it is lost in the morning twilight. On the 11th Venus passes 5° N. of Antares.

MARS is an evening star, magnitude +0.9, and by the end of the year has moved into Aquarius. Mars is moving northwards again and it is interesting to note that, as seen from the latitude of the

British Isles, it is visible for ■ little longer each evening, despite the fact that its elongation from the Sun is decreasing.

JUPITER is a splendid morning star, magnitude -1.4, in the constellation of Virgo.

SATURN is a conspicuous evening star, magnitude +0.3, in the constellation of Pisces. In the early hours of the 19th the gibbous Moon passes 7° N. of the planet.

METEORS. The maximum of the well known Geminid meteor shower occurs on the 13th. Conditions are favourable as the Moon sets early in the evening.

INTRODUCTION TO ASTRONOMICAL SECTION

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Astronomical Ephemeris* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for oh G.M.T., or the midnight at the beginning of the day named.

(See notes on British Standard Time, p. 142.)

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 15th edition, 1964; 2s.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow West, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56° , are devoted to risings and settings, the range 50° to 58° can be covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of

constellations may be extended indefinitely at the rate just quoted.

Times of MINIMA OF ALGOL are approximate times of the middle of the period of diminished light (see p. 153).

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0° , 90° , 180° or 270° . The times of perigee and apogees are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5° , the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The Sun's semi-diameter, in arc, is given once a month.

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying \pm to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. Apparent Solar Time is equal to the Mean Solar Time plus the Equation of Time. For example at noon on Aug. 11 the Equation of Time is $-5^{\text{m}} 38^{\text{s}}$ and thus at 12^h Mean Time on that day the Apparent Time is $12^{\text{h}} - 5^{\text{m}} 38^{\text{s}} = 11^{\text{h}} 54^{\text{m}} 22^{\text{s}}$.

The Sidereal Time at oh and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is oh) are used for converting mean time to sidereal time and vice versa.

The G.M.T. of transit of the Sun at Greenwich may also be taken as the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be $34'$, and the Sun's semi-diameter to be $16'$, the time given is that when the true zenith distance of the Sun's centre is $90^{\circ} + 34' + 16'$ or $90^{\circ} 50'$, or, in other words, when the depression of the Sun's centre below the true horizon is $50'$. The upper

limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light reaches us before sunrise and also continues to reach us for some time after sunset. The interval between darkness and sunrise or sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin or end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

- (1) *Sunrise or Sunset*, defined as above.
- (2) *Civil twilight*, which begins or ends when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight may commence or must cease. In England it varies from about 30 to 60 minutes after sunset.
- (3) *Nautical twilight*, which begins or ends when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.
- (4) *Astronomical twilight*, which begins or ends when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

To assist observers the durations of civil, nautical and astronomical twilights are given at intervals of ten days. The beginning of a particular twilight is found by subtracting the duration from the time of sunrise, while the end is found by adding the duration to the time of sunset. Thus the beginning of astronomical twilight in latitude 52° , on the Greenwich meridian, on March 11 is found as $06^h 25^m - 11^m = 04^h 32^m$ and similarly the end of civil twilight as $17^h 56^m + 34^m = 18^h 30^m$.

The letters T.A.N. are printed when twilight lasts all night.

Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading ASTRONOMICAL NOTES will be found notes describing the position and visibility of the planets and also of other phenomena; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of

accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach 1° .

The lunar terminator is the line separating the bright from the dark part of the Moon's disk. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The selenographic longitude of the terminator is measured from the mean centre of the visible disk, which may differ from the visible centre by as much as 8° , because of libration.

Instead of the longitude of the terminator the Sun's selenographic colongitude is tabulated. It is numerically equal to the selenographic longitude of the morning terminator, measured eastward from the mean centre of the disk. Thus its value is approximately 270° at New Moon, 360° at First Quarter, 90° at Full Moon and 180° at Last Quarter.

The Position Angle of the Bright Limb is the position angle of the midpoint of the illuminated limb, measured eastwards from the north point on the disk. The column PHASE shows the percentage of the area of the Moon's disk illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9''$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57'$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^\circ 50'$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes (except in high latitudes).

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56° . They give Greenwich Mean Time (G.M.T.) throughout the year. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $1^\circ = 4m$ and $15' = 1m$.

The G.M.T. of transit of the Moon over the meridian of Greenwich is given; these times are independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is

conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^{h} (or 360°) of the longitude, and will be greater than 12^{h} (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^{\text{h}} 05^{\text{m}}$ east, so $\lambda = 13^{\text{h}} 55^{\text{m}}$ and the fraction $\lambda/24$ is 0.58. The transit on the local date 1969 Aug. 1 is found as follows:

	d h m
G.M.T. of transit at Greenwich....	Aug. 8 08 18
λ	13 55
$0.58 \times (09^{\text{h}} 10^{\text{m}} - 08^{\text{h}} 18^{\text{m}})$	30
	<hr/>
G.M.T. of transit at Sydney.....	■ 22 43
Corr. to N.S.W. Standard Time....	10 00
	<hr/>

Local standard time of transit 9 08 43

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^{\text{h}} 55^{\text{m}}$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disk. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior

brightness of these planets. The polar diameter of Jupiter is about 3° less than the equatorial diameter, while that of Saturn is about 2° less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed on three occasions in 1966 and were open at their widest extent in the middle of 1958.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time, but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time scale, and this has led to the concept of Mean Solar Time in which all the days are of exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

Greenwich Mean Time

The daily rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (G.M.T.) The solar day is divided into 24 hours and, for astronomical and other scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated a.m. (before noon) and p.m. (after noon).

See also notes on British Standard Time, p. 142.

Universal Time

Before January 1, 1925, G.M.T. was reckoned in 24 hours commencing at noon: since that date it has been reckoned from midnight. In view of the risk of confusion in the use of the designation G.M.T. before and after 1925, the International Astronomical Union recommended in 1928 that astronomers should, for the present, employ the term Universal Time, U.T. (or Weltzeit, W.Z.) to denote G.M.T. measured from Greenwich Mean Midnight.

In precision work it has now become necessary to take account of small variations, hitherto negligible, in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated U.T.0. Observed time corrected for the effects of the motion of the poles (giving rise to a "wandering" in longitude) is designated U.T.1. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. U.T.1 corrected for this effect is designated U.T.2, and provides a time scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

Apparent Solar Time

As has been mentioned, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle, but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun. The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right-angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of $23^{\circ} 27'$. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its maximum values in February (-14 mins.) and early November ($+16$ mins.). It has a zero value on our dates during the year, and it is only on these dates (approx. April 15, June 14, Sept. 1, and Dec. 25) that a sundial shows Mean Solar Time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or "star") time is perhaps a little misleading since the time scale so defined is not exactly the same as that which would be defined by successive transits of a selected star; there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0.008 seconds. Superimposed on this steady precessional motion are small oscillations called nutation, giving rise to fluctuations in

apparent sidereal time amounting to as much as 1-2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion of G.M.T. to Greenwich sidereal time (G.S.T.) may be performed by adding the value of the G.S.T. at αh on the day in question (page II of each month) to the G.M.T. converted to sidereal time using the table on p. 146.

Example. To find the G.S.T. at $2^{\text{h}} 41^{\text{m}} 11^{\text{s}}$ G.M.T. on Aug. 8

					h	m	s
G.S.T. at oh	21	05	18
G.M.T.	2	41	11
Acceleration for 2h			20
" "	41 ^m	11 ^s			7

$$\text{Sum} = \text{G.S.T.} = \dots \quad \dots \quad \dots \quad 23 \quad 46 \quad 56$$

If the observer is not on the Greenwich meridian then his longitude, measured positively westwards from Greenwich, must be subtracted from the G.S.T. to obtain Local Sidereal Time (L.S.T.). Thus, in the above example, an observer 5° east of Greenwich, or 19° west, would find his L.S.T. as $4^{\text{h}} 46^{\text{m}} 56^{\text{s}}$.

Ephemeris Time

In the study of the motions of the Sun, Moon and planets, observations taken over an extended period are used in the preparation of tables giving the apparent position of the body each day. A table of this sort is known as an ephemeris, and may be used in the comparison of current observations with tabulated positions. A detailed examination of the observations made over the past 300 years shows that the Sun, Moon and planets appear to depart from their predicted positions by amounts proportional to their mean motions. The only satisfactory explanation is that the time scale to which the observations were referred was not uniform as had been supposed. Since the time scale was based on the rotation of the Earth, it follows that this rotation is subject to irregularities. The fact that the discrepancies between the observed and ephemeris positions were proportional to the mean motions of the bodies made it possible to secure agreement by substituting a revised time scale and recomputing the ephemeris positions. The time scale which brings the ephemeris into agreement with the observations has been named Ephemeris Time (E.T.).

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun ($1/31556925.9747$ of the Tropical Year for 1900-January 0 at 12h. E.T.) instead of in terms of the diurnal rotation of the Earth on its axis ($1/86\,400$ of the Mean Solar Day). In many branches of scientific work other than astronomy there has been a demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mesures in 1956. The length of the unit has been chosen to provide general agreement with U.T. throughout the 19th and 20th centuries. During 1969 the estimated difference E.T. - U.T. is 40 seconds. The precise determination of E.T. from

astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, a comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with its ephemeris position. Even in this case, however, the requisite standard of accuracy can only be achieved by averaging over a number of years.

Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the revolution of the electrons in their orbits around the nuclei. The continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals: it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard. Because of the high precision attained in the comparisons, cumulative errors in the integrated time scale do not become serious in the course of a few years, and the atomic time scale may thus be compared with the astronomical time scale.

Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. Signals by land line from the Observatory correct the Post Office Speaking Clock, TIM.

For survey and scientific purposes in which the highest accuracy is required, special signals are transmitted from the Post Office Radio Station at Rugby. The International Signals, consisting of a five-minute series of pips, one-tenth of a second long, with the pips at the minutes lengthened for identification, are radiated at 02.54-03.00, 08.54-09.00, 14.54-15.00, 20.54-21.00 from GBR (16 kHz) and associated H.F. transmitters. The seconds pulses superposed on the MSF standard frequency

transmissions, which consists of five cycles of a 1,000 c.p.s. tone, are derived from the same master control at the transmitting station, and are radiated for ten minutes in each quarter-hour on 2½, 5, and 10 MHz for 24 hours per day, and continuously on 60 kHz. The carrier frequencies of all the MSF transmissions, and of GBR, are closely controlled, and measured regularly at the National Physical Laboratory in terms of the caesium atomic resonance. The time signals, derived from the same master oscillator, and thus rigidly locked to the carrier frequencies, are monitored regularly at the Royal Greenwich Observatory. A uniform rate is maintained throughout the year and, if corrections are required to keep the time signals in agreement with UT₂, a step adjustment of 100 milliseconds is made on all transmissions on the first day of a month. Since April 1960 the Rugby service has been run in close co-operation with the time services of the United States. By mutual agreement, the rates are adjusted to correspond, and the signals are synchronised. Any necessary adjustments are made simultaneously in the U.K. and U.S.A. services. The American transmissions concerned are: WWV (Boulder) 2½, 5, 10, 15, 20, 25 MHz; WWVH (Hawaii) 5, 10, 15 MHz; NBA (Canal Zone) 18 kHz. Other national Observatories have agreed to some measure of co-ordination

STANDARD TIME

From October 27, 1968, the standard time of the United Kingdom will be one hour fast on G.M.T. The internationally adopted name for this time is Central European Time. However, despite protests from informed scientific circles about the possibility of confusion (British Standard Time implies time related to a standard meridian passing through the British Isles, i.e. G.M.T.) the name British Standard Time is that given to this time in this country only. The proposal to adopt a time one hour fast on G.M.T. has aroused considerable controversy and the original suggestion of making it permanent has been modified so that it will now be in force for a trial period of three years.

The use of G.M.T. in astronomy and other sciences, and in navigation, will continue as before.

SUMMER TIME

Variations from the standard time of some countries occurs during part of the year: they are decided annually and are usually referred to as Summer Time or Daylight Saving Time. These variations occur in:

British Commonwealth.—Bahamas; British Honduras; Canada; Channel Islands; Hong Kong; Tasmania.

Foreign Countries.—Albania; Argentina; Brazil; parts of China; Dominican Republic; Egypt; Formosa; Iceland; Irish Republic; Italy; Macao; Norway; Pescadores Is.; Poland; parts of U.S.A.; Syria; Turkey; Uruguay.

In British Honduras and the Dominican Republic the variation occurs in winter and is called Winter Time.

STANDARD TIME

In the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. *The standard time of the United Kingdom is Central European Time (under the title BRITISH STANDARD TIME) for a trial period of three years from October 27, 1968.*

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately $7\frac{1}{2}$ ° on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R. centred at 60° E. to 180° E.

Fast on Greenwich Time

- 12 hrs. F... Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).
- $11\frac{1}{2}$ " F... Norfolk I., Nauru I.
- 11 " F... New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.
- 10 " F... Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroine Is. (west of 160° E.), Australian Capital Territory, Mariana Is.
- 9 $\frac{1}{2}$ " F... South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area).
- 9 " F... Japan, Schouten Is., Sakhalin south of 50° N., Kurile Is., Manchuria, Korea, West Irian (Indonesia).
- 8 $\frac{1}{2}$ " F... Molucca Is.
- 8 " F... China (coast), Hong Kong, Philippine Is., Macao, Timor, West Australia, Celebes, Indonesian Borneo, Formosa, Pescadores Is., Malaysia, Vietnam (south).
- 7 $\frac{1}{2}$ " F... Singapore.
- 7 " F... Sumatra, Java, Christmas I. (Indian Ocean), Thailand, Cambodia, Laos, Vietnam (north).
- 6 $\frac{1}{2}$ " F... Burma, Cocos-Keeling Is.
- 6 " F... Pakistan (East).
- 5 $\frac{1}{2}$ " F... India, Ceylon, Laccadive Is., Andaman and Nicobar Is.
- 5 " F... Chagos Archipelago, Pakistan (West).
- 4 " F... Mauritius, Seychelles, Réunion, Oman, U.S.S.R., 40° E. to $52^{\circ}30'$ E.
- 3 $\frac{1}{2}$ " F... Iran.
- 3 " F... U.S.S.R. west of 40° E., Iraq, Ethiopia, Aden, Socotra I., Somali Republic, Comoro Is., Madagascar, Uganda, Kenya, Tanzania.

E. European

Turkey, Greece, Bulgaria, Rumania, Finland, Israel, Jordan, U.A.R., Syria, Cyprus, Rhodesia, Malawi, South Africa and Protectorates, Mozambique, Sudan, Congoese Republic, Crete, Lebanon, Libya, Zambia, Botswana, Lesotho.

* Summer Time is the "legal" time during the period in which its use is ordained.

1 hr. F... The United Kingdom, Republic of Ireland, Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France, Luxemburg, Spain, Gibraltar, Monaco, Balearic Is., Poland, Austria, Hungary, Switzerland, Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, Central African Republic, Cameroon Republic, Republic of Congo, Angola, Spitzbergen, Algeria, Dahomey, Corsica, Sardinia, Portugal.

Central-European. Greenwich. Faroe, Channel Is., Algeria, Morocco, Mauritania, Sierra Leone, Ivory Coast, Ifni, Ghana, Principe I., St. Helena, Gambia, Canary Is., Ascension I., Tangier, São Thomé, Rio de Oro, Madeira, Mali, Niger.

Slow on Greenwich Time

- 1 hr. S... Iceland, Azores, Portuguese Guinea.
- 2 hrs. S... Cape Verde Is., Fernando Noronha I., Scoresby Sound, South Georgia.
- 3 " S... Greenland (excluding Scoresby Sound and Thule), Eastern Brazil.
- 3 $\frac{1}{2}$ " S... Newfoundland, Labrador, Dutch Guiana, Uruguay.
- 3 $\frac{3}{4}$ " S... Guyana.
- 4 " S... Canada east of 68° W., Greenland (Thule Area), Puerto Rico, Lesser Antilles, Argentina, Central Brazil, Falkland Is., Paraguay, Bermuda, Bolivia, French Guiana, Chile, Curaçao I., Venezuela.

Atlantic. 5 " S... Canada from 68° W. to 85° W. (north) or 90° W. (south), Eastern States of U.S.A., Jamaica, Bahama Is., Cuba, Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Dominican Republic.

6 hrs. S... Central parts of U.S.A., Canada from 85° W. (north) or 90° W. (south) to 102° W., Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.

7 hrs. S... Canada from 102° W. to 120° W., Mountain. Mountain States of U.S.A., part of Mexico.

8 hrs. S... Canada west of 120° W., Alaska, Pacific. (south-east coast), Western States of U.S.A., part of Mexico.

9 hrs. S... Alaska N. of Cross Sound to 141° W., Yukon.

10 " S... Alaska from 141° W. to 162° W., Low Archipelago, Austral and Society Is., Hawaii, Fanning I., Christmas Is. (Pacific Ocean).

11 " S... Aleutian Is., Alaska (west coast), Samoa, Midway Is.

In the Tonga Islands the time $13\frac{1}{2}$ fast and in Chatham Is. $12\frac{1}{2}$ fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	15° S.	$172^{\circ}30'$ W.	53° N.	170° E.
51° S.	180°	5° S.	180°	$65^{\circ}30'$ N.	169° W.
45° S.	$172^{\circ}30'$ W.	48° N.	180°	75° N.	180°

SUNRISE AND SUNSET

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and applying it to the time of transit given in the ephemeris for each month. The hour angle is negative for sunrise and positive for sunset. A small correction to the hour angle, which always has the effect of increasing it numerically, is necessary to allow for the Sun's semi-diameter (16') and for refraction (34'). This correction may be obtained from Table 2. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12^h fast on G.M.T.) of sunset on May 24 at Auckland. The latitude is 36° 50' south (or minus) and the longitude 171° 30^m east. Taking the declination as +20° 7, we find

MOONRISE AND MOONSET

It is possible to calculate the times of moonrise and moonset using Table 1 though the method is more complicated because the apparent motion of the Moon is much more rapid than that of the Sun.

Notation

 φ = latitude of observer λ = longitude of observer (measured positively towards the west) T_{-1} = time of transit of Moon on previous day T_0 = time of transit of Moon on day in question T_1 = time of transit of Moon on following day δ_0 = approximate declination of Moon δ_R = declination of Moon at moonrise δ_S = declination of Moon at moonset h_0 = approximate hour angle of Moon h_R = hour angle of Moon at moonrise h_S = hour angle of Moon at moonset t_R = time of moonrise t_S = time of moonset

The parallax of the Moon, about 57', is near to the sum of the semi-diameter and refraction but has the opposite effect on these times. It is thus convenient to neglect all three quantities in the method outlined below.

METHOD

- With arguments φ, δ_0 enter Table 1 on p. 144 to determine h_0 where h_0 is negative for moonrise and positive for moonset.
- Form approximate times from
 $t_R = T_0 + \lambda + h_0$
 $t_S = T_0 + \lambda + h_0$
- Determine δ_R, δ_S for times t_R, t_S respectively.
- Re-enter Table 1 on p. 144 with—
 - arguments φ, δ_R to determine h_R
 - arguments φ, δ_S to determine h_S
- Form $t_R = T_0 + \lambda + h_R + AX$
 $t_S = T_0 + \lambda + h_S + AX$
where $A = (\lambda + h)$
 $X = (T_0 - T_{-1})$ if $(\lambda + h)$ is negative
and $X = (T_1 - T_0)$ if $(\lambda + h)$ is positive
 AX is the respondent in Table 3.

Example.—To find the times of moonrise and moonset at Vancouver ($\varphi = +49^\circ$, $\lambda = +8^\circ 12^m$) on 1969 October 10. The starting data (from p. 128) are

$$h \text{ m}$$

$$T_{-1} = 10^{\text{h}} 20^m$$

$$T_0 = 11^{\text{h}} 03^m$$

$$T_1 = 11^{\text{h}} 47^m$$

$$\delta_0 = -2^\circ$$

$$1. h_0 = \pm 5^h 50^m$$

$$2. \text{ Approximate values}$$

$$t_R = 10^d 11^h 03^m + 8^h 12^m + (-5^h 50^m)$$

$$= 10^d 13^h 25^m$$

$$t_S = 10^d 11^h 03^m + 8^h 12^m + (+5^h 50^m)$$

$$= 11^d 01^h 05^m$$

$$3. \delta_R = -4^\circ 0$$

$$\delta_S = -7^\circ 0$$

$$4. h_R = -5^h 41^m$$

$$h_S = +5^h 27^m$$

$$5. t_R = 10^d 11^h 03^m + 8^h 12^m - 5^h 41^m + 5^m$$

$$= 10^d 13^h 39^m$$

$$t_S = 10^d 11^h 03^m + 8^h 12^m + 5^h 27^m + 25^m$$

$$= 11^d 01^h 07^m$$

To get the L.M.T. of the phenomenon the longitude is subtracted from the G.M.T. thus

$$\text{Moonrise} = 10^d 13^h 39^m - 8^h 12^m = 10^d 05^h 27^m$$

$$\text{Moonset} = 11^d 01^h 07^m - 8^h 12^m = 10^d 16^h 55^m$$

11	■	48	23	3	47	60	00		11	■	48	23	3	46	60	00
12	1	58	24	3	57	12	■	58	12	■	58	24	3	56	12	58

The length of a sidereal day in mean time is $23^{\text{h}} 56^{\text{m}} 04^{\text{s}}\cdot09$. Hence $1^{\text{h}} \text{M.T.} = 1^{\text{h}} + 9^{\text{s}}\cdot86$ S.T. and $1^{\text{h}} \text{S.T.} = 1^{\text{h}} - 9^{\text{s}}\cdot83$ M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these

two entries is the required acceleration or retardation. Thus the acceleration for $11^{\text{m}} 26^{\text{s}}$ (which lies between the entries $9^{\text{m}} 07^{\text{s}}$ and $15^{\text{m}} 13^{\text{s}}$) is 2^{s} . If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for $45^{\text{m}} 46^{\text{s}}$ is 7^{s} .

Example.—Convert $14^{\text{h}} 27^{\text{m}} 35^{\text{s}}$ from S.T. to M.T.

	m	s
Given S.T.	14	27 35
Retardation for 14^{h}		■ 18
Retardation for 27^{m} 35^{s}		5

Corresponding M.T. $14^{\text{h}} 25^{\text{m}} 13^{\text{s}}$

For further explanation, see p. 142.

The refraction table is also in the form of a critical table.

THE SUMMER TIME ACTS

In 1926 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Acts*, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War the duration of Summer Time was extended and in the years 1941–

45 and in 1947, Double Summer Time (2 hrs. in advance of Greenwich Mean Time) was in force. Summer Time was extended in each year from 1948 to 1952 and again in 1961–1964, by Order in Council.

The duration of Summer Time during the last few years is given in the following table.

1953 Apr. 19–Oct. 4	1961 Mar. 26–Oct. 23
1954 Apr. 11–Oct. 3	1962 Mar. 25–Oct. 23
1955 Apr. 17–Oct. 2	1963 Mar. 31–Oct. 27
1956 Apr. 22–Oct. 7	1964 Mar. 22–Oct. 25
1957 Apr. 14–Oct. 6	1965 Mar. 21–Oct. 24
1958 Apr. 20–Oct. 5	1966 Mar. 20–Oct. 23
1959 Apr. 19–Oct. 4	1967 Mar. 19–Oct. 29
1960 Apr. 10–Oct. 2	1968 Feb. 18–Oct. 27

Jupiter's satellites transit across the disk from east to west, and pass behind the disk from west to east. The shadows that they cast also transit across the disk. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east

of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The list of phenomena gives most of the eclipses and shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse
Sh. = Shadow transit

c. = commences
f. = finishes

CELESTIAL PHENOMENA FOR OBSERVATION IN 1969

ECLIPSES, 1969

There will be only two eclipses during 1969, the minimum number that can occur in a year. Both eclipses are of the Sun and neither of them will be visible from the British Isles.

1. An annular eclipse of the Sun on March 18. The path of the annular phase commences in the Indian Ocean, crosses Indonesia and ends near the Marshall Islands. The annular phase begins at $03^{\text{h}}\ 09^{\text{m}}$ and ends at $06^{\text{h}}\ 40^{\text{m}}$. The maximum duration is $1^{\text{m}}\ 15^{\text{s}}$. The partial phase which occurs between $02^{\text{h}}\ 06^{\text{m}}$ and $07^{\text{h}}\ 42^{\text{m}}$, is visible from Antarctica, Madagascar, Thailand, Cambodia, Indonesia, south-east China, Korea, the Philippines, Formosa, Japan and Australia.

2. An annular eclipse of the Sun on September 21. The path of the annular phase, which has a maximum duration of $3^{\text{m}}\ 10^{\text{s}}$, begins in the North Pacific Ocean, several hundred miles south of the Aleutian Islands, crosses Peru and ends in the western part of Bolivia. The annular phase begins at $18^{\text{h}}\ 07^{\text{m}}$ and ends at $21^{\text{h}}\ 50^{\text{m}}$. The partial phase, which occurs between $17^{\text{h}}\ 01^{\text{m}}$ and $22^{\text{h}}\ 55^{\text{m}}$, is visible from eastern Siberia, North America except the north-eastern part, the Caribbean and South America except for southern Patagonia and the extreme east.

OCCULTATIONS, 1969

From the British Isles no bright stars or planets will be occulted during the year. However a series of occultations of one or more stars in the Pleiades commences during the autumn—see the Z.C. (Zodiacal Catalogue) star numbers 536–561; in particular Z.C. 552 is Alcyone, η Tauri.

Occultation Observations.—Observations of the times of these occultations are made by both amateurs and professionals. Such observations are later analysed to yield accurate positions of the Moon: this is one method of determining the difference between ephemeris time and universal time.

Many of the observations made by amateurs are obtained with the use of a stop-watch which is compared with a time signal immediately after the observation. Thus an accuracy of about one-fifth of a second is obtainable, though the observer's personal equation may amount to one-third or one-half of a second.

OCCULTATIONS OF STARS

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6·5 are normally included, and reappearances to 6·0 magnitude. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope. The altitude limit is

reduced from 10° to 2° for stars and planets brighter than magnitude 2·0 and such occultations are also predicted in daylight.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. The column headed "El. of Moon" gives the elongation of the Moon from the Sun, in degrees. The elongation increases from 0° at New Moon to 180° at Full Moon and on to 360° (or 0°) at New Moon again. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. $51^{\circ}\ 29'$, Long. 0°) and Edinburgh (Lat. $55^{\circ}\ 56'$, Long. $3^{\circ}\ 11'$ west). The coefficients a and b are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^{m} generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a\Delta\lambda + b\Delta\phi$ to the given G.M.T.

As an illustration the disappearance of Z.C. 552 on November 23 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude.....	$0^{\circ}0$	$+3^{\circ}2$
Long. of Liverpool.....	$+3^{\circ}0$	$+3^{\circ}0$
$\Delta\lambda$	$+3^{\circ}0$	$-0^{\circ}2$
Latitude	$+53^{\circ}5$	$+55^{\circ}9$
Lat. of Liverpool.....	$+53^{\circ}4$	$+53^{\circ}4$
$\Delta\phi$	$+1^{\circ}9$	$-2^{\circ}5$
..... h m h m		
G.M.T.	$18\ 55^{\circ}4$	$19\ 02^{\circ}7$
$a\Delta\lambda$	$-0^{\circ}9$	$0^{\circ}0$
$b\Delta\phi$	$+3^{\circ}2$	$-4^{\circ}5$
	$18\ 57^{\circ}7$	$18\ 58^{\circ}2$

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No. occn. = star not occulted.

Low = star's altitude less than 10° (2° for bright stars and planets).

Sun = Sun not sufficiently below the horizon.

Graze = occultation is of very short duration.

It will be noticed that in some cases the coefficients a and b are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3° a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between $+20''$ and $-20''$ according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the complement of the latitude.

Thus in London (Lat. $51^{\circ} 30'$)
the meridian altitude of Sirius is
found thus:

Altitude of equator..... 38 30
Declination south..... 16 40
Difference..... 50

The altitude of Capella (Dec.
 $+45^{\circ} 56'$) at lower transit is:

Altitude of pole..... 51 30
Polar distance of star ... 44 02
Difference..... 7 28

The brightness of a heavenly
body is denoted by its magnitude.
Omitting the exceptionally bright
stars Sirius and Canopus, the
twenty brightest stars are of the
first magnitude, while the faintest
stars visible to the naked eye are
of the sixth magnitude. The
magnitude scale is a precise one,
as a difference of five magnitudes
represents a ratio of 100 to 1 in
brightness. Typical second mag-
nitude stars are Polaris and the
stars in the Belt of Orion. The
scale is most easily fixed in
memory by comparing the stars
with Norton's *Star Atlas* (see
page 138). The stars Sirius and
Canopus and the planets Venus
and Jupiter are so bright that their
magnitudes are expressed by
negative numbers. A small tele-
scope will show stars down to the
ninth or tenth magnitude, while
stars fainter than the twentieth
magnitude may be photographed
by long exposures with the largest
telescopes.

Some of the astronomical in-
formation in this ALMANACK has
been taken from the *Astronomical
Ephemeris*, and is published here
by arrangement with, and with
the permission of, the Controller
of H.M. Stationery Office.

*a Herculis, mag. 3.1 to 3.9.

Cephei, mag. 3.7 to 4.4. Spectrum F5 to Go.

THE STRUCTURE OF THE UNIVERSE

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Nebula in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Nebula. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes 1½ seconds to reach us from the Moon, our nearest neighbour in space; just over 1 minute to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Nebula, and over 1000 million years from the most distant bodies yet photographed. We therefore talk about a star being so many light years distant. Astronomers also use another unit of distance, the parsec. 1 parsec equals 3.26 light years.

THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. The 200-inch telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearer star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra. The distances of some double and variable stars can

be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star.

When the distance of any star has been determined, and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like Sirius, are characterized by very strong hydrogen lines. F, G and K stars, like Procyon, our Sun, and Arcturus, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like Betelgeuse, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7000°; G, 5500°; K, 4500°; M, 3000°. This sequence is also one of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, -4; B, -2; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from -4

to +11, or fainter, is known as the "main sequence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those of types O to F and a few of types G to M are still brighter, with absolute magnitudes ranging from -4 to -7. The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about 0 are called giants, those of -4 to -7 are called supergiants.

The sizes of the stars have been determined mostly by theoretical calculation. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 864,000 miles in diameter. The main sequence is found to be a sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while an average M star has a radius of one-third of the Sun. The giant stars of types G to M have radii between 10 and 100 times the Sun; supergiants have radii between 30 and 2000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately

even in large telescopes; their binary nature is revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. Some spectroscopic binaries, as they are called, are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is *Algol*, or β Persei.

VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Nova are stars whose light increases by 10 to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Prae-tepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude -3. There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to

dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulae. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulae, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulae are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulae because they are relatively bright and can be seen at large distances.

THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system, which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system, called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novae and supernovae, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulae, form part of the Galaxy. The distribution of these various objects in the Galaxy is not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some extragalactic nebulae. This structure was first shown by studying the positions of O and B

stars; these trace out spiral arms. Radio astronomers subsequently found that interstellar neutral hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation has enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 200 thousand million times the mass of the Sun.

STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

EXTRAGALACTIC NEBULÆ

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are the extragalactic nebulae, also known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral nebulae consist of a central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical nebulae and the central bulges of the spiral nebulae are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral nebulae; the presence of hydrogen gas has been proved by the observation of regions of glowing gas and by the reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual

stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Nebula in Andromeda, at a distance of 2,000,000 light years; this spiral nebula is believed to be similar to our own Galaxy in size and stellar content. Extragalactic nebulae frequently occur in large clusters, each containing hundreds of nebulae. Many extragalactic nebulae are in rotation in a manner similar to our own Galaxy and with comparable periods.

RADIO SOURCES

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulae are also sources of radio noise, but many of the apparently isolated sources, “radio stars”, do not seem to coincide with any visible stars or nebulae. Recently several sources have been discovered which exhibit extremely regular variations in radio “brightness”, with incredibly short periods (of the order of 1 second).

QUASARS

The observation of occultations of radio sources by the Moon has led to the accurate determination of the positions of these radio sources. Thus it has been possible to use large optical telescopes with small angular fields of view and high magnifications to photograph these positions. This has led

to the discovery of a new type of object called a quasar (or quasi-stellar object or QSO). On a photographic plate such objects appear almost stellar, so they are not readily identified without the help of information from the radio astronomers. Spectroscopic examination of four of them shows that, like external galaxies, they have enormous velocities of recession. Such velocities imply great distances, yet no ordinary star (or even supergiant) would be detectable at even a fraction of these distances. The answer to the question ‘what are quasars?’ is not yet known with any certainty but the current explanation is that they are radio sources with the shape of a star but many millions of times larger, with unusually high ultra-violet radiation and sometimes with large red shifts. Already several dozen quasars are known.

COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulae through the observable region of space. It has been found that in spite of the tendency of galaxies to cluster together, on a still larger scale the galaxies are distributed remarkably uniformly. Observations have shown that distant galaxies have spectra showing “red-shifts”, which have been interpreted as Doppler shifts due to velocities of recession; all the distant galaxies appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. One theory postulates a gigantic initial explosion some 5,000 million years ago. Another postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Some recent observations suggest that the latter theory is no longer tenable.

THE SOLAR SYSTEM

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary ■ the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming ■ looped path which is ■ consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of ■ comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of ■ comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates ■ temperature of about $5,700^{\circ}$ C., but a relatively short distance inside the surface the temperature reaches $1,000,000^{\circ}$ and deeper in the interior, near the centre, it is believed to be in the region of $14,000,000^{\circ}$. Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas"

does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling on the Earth. It is possible to infer with some certainty, by considering the Sun as ■ typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40° - 50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on ■ axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in ■ telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (April, 1947) covered 7,000 million square miles at its greatest, or approximately 0.7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from ■ few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as ■ rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in ■ particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of ■ cycle, while later on there is ■ gradual drift of the most densely occupied zones towards the equator. In addition, ■ strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

ELEMENTS OF THE SOLAR SYSTEM

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11.1 years.

Maxima	Minima
1837-2	1907-0
1848-1	1917-6
1860-1	1928-4
1870-6	1937-4
1883-9	1947-5
1894-1	1957-9
	1843-5 1913-6
	1856-0 1923-6
	1867-2 1933-8
	1878-9 1944-2
	1889-6 1954-3
	1901-7 1964-7

The last sunspot maximum was unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots; the next maximum was expected to occur in 1968.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as H α , the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm. A very few large flares have had associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the

Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered sky-light is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked-eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in Great Britain at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutinized

ized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. Different results have been obtained by recent radar observations which are supported by theoretical investigations. The question of whether Mercury has atmosphere cannot be regarded as settled.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47° . Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, probably owing to cloud, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 82-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at $3^h 32^m, +82^\circ$, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Recent radar observations have provided the unexpected value for the period of rotation given on p. 157.

The spectrum of the atmosphere above the re-

flecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about ■ years ■ months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 6 inches aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about $41\frac{1}{2}$ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, and the infra-red absorption spectra of the polar caps support this view. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a olive-grey colour. The latter were once thought to be seas; but it is now known that

there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but ■ 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of ■ truly seasonal character apart from the waxing and waning of the polar caps.

The controversy over the canal-like markings on Mars has ended with the successful close range photography of the surface by Mariner 4. The photographs show a surface covered with craters, but no "canals".

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none has ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock revolving round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 420 miles in diameter, Pallas 285, Juno 150, and Vesta 240 miles.

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far ■ Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1932 when carefully planned photo-

graphic recording of the planet and the surrounding stars enabled measurements of its distance to be made, and hence a new value of the distance of the Sun from the Earth to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, ■ in finding the masses of Mercury or Venus.

JUPITER

Jupiter, the largest planet, has a volume over 2000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately 9^h 50^m, while most of those in higher latitudes give periods between 11^h 55^m and 9^h 56^m, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about +25°; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878-80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with ■ similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1902 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the

surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order — 120° C., which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of liquid rather than gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Seven other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13.5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Some evidence indicates that there is a connection between the position of the satellite Io and these radio bursts.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become almost completely invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about 10 $\frac{1}{2}$ hours, in higher latitudes 10 $\frac{1}{2}$ hours has been found in the northern hemisphere and 10 $\frac{1}{2}$ hours in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding

the polar by about one part in nine. The general appearance of the disk is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has ten satellites, of which the largest, Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phoebe, has a retrograde motion.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disk, which is quite obvious, though less than 4" in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be $10\frac{1}{2}$ hours; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disk of well over 2" in diameter. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

The planet was found in 1846 as a result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a diameter possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only ■ a star of the 14th-15th magnitude.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in ■ elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in ■ retrograde direction, making one complete revolution in 18.6 years.

The Moon, whose diameter is ≈ 2160 miles, rotates in the same time that it revolves ($27d\ 7h\ 43m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In ■ telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming ■ impressive picture of jet-black shadows and bright highlights. Recent photographs obtained from the successful *Ranger* series of lunar probes show craters as small ■ yard in diameter. From the investigations of the spacecraft which have soft landed on the Moon it appears that the surface is suitable for a future landing by a manned lunar probe.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than ■ sidereal revolution, so that the phases of the Moon repeat themselves in ■ period that varies slightly about a mean of $29\frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such ■ occultation causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates ■ complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from ■ rather small area of the Earth.

As a result of its eastward movement among the stars the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle ■ small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of ■ marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of ■ stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as ■ whole near sunspot maximum. Although the solar origin of great displays (e.g. January 25, 1938 and January 24-26, 1949) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as ■ cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when its brightest parts may appear brighter than the Galaxy.

Occasionally, under very good conditions, an extension of the Cone may be traced right round the ecliptic. This is known as the Zodiacal Band. The Gegenschein or "Counter-glow" may also be detected as a widening of the band at the anti-solar point.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micro-meteorites. These probably act ■ centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors ("shooting-stars") or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant

as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids, Perseids, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 75 miles at the beginning and about 43 miles at the end. The speeds vary from 10 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. A number of meteorites have been found at Barwell, Leicestershire as the result of two exploding fireballs on 24 December, 1965. At the other end of the scale are the micro-meteorites which are too

small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 100 million miles—a fine spectacle. Most comets are found accidentally and few observers search for these objects. One of the few is G. E. D. Alcock of Peterborough, Northants, who, after searching unsuccessfully for six years, found two new comets in August, 1959, within the space of 5 days. Two naked-eye comets which appeared in 1957 (Comet Arend-Roland in April, and Comet Mirkos in August) aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7926 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known ■ the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}^{\circ}$. This tilt is the cause of the seasons, in mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second. It makes a complete rotation on its axis in about $23^{\text{h}} 56^{\text{m}}$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^{\text{h}} 50^{\text{m}}$ interval between consecutive meridian passages of the Moon. Briefly, a high tide occurs when the Moon is near the meridian because the attraction on the water is greater than on the solid earth. On the other side of the Earth the water is farther from the Moon than the solid earth and thus is less strongly attracted to the Moon and a second high tide occurs at this point. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of

past observations of times and heights. It is found that the height can be expressed as the sum of ■ series of periodic terms, which can be carried forward. (See pages 170-184.)

High water does not necessarily occur at the same time ■ the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from ■ small amount, ■ in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is increasing by about a thousandth of a second every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that ■ light bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to ■ directing force impelling it to take up ■ constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-north-west at the end.

William Gilbert gave the first approximately correct explanation of the then known facts. In the proximity of the Earth magnetized needles behave much as if the Earth itself were a large magnetized sphere. It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634, found the direction to be about 4° east of north, whereas there was undoubtedly evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates

slowly through a small angle every day. The movement is eastwards till about 08^h U.T., then rather quickly westwards till about 14^h U.T., after which there is a gradual return eastwards. The amplitude may be as much as 15° in the summer.

A magnetic compass points along a horizontal component of a magnetic line of force passing through the "magnetic dip-poles." At these poles a freely suspended magnetized needle would be directed into the vertical. Not only do the positions of these poles change with time, but their exact location is ill-defined, particularly so in the case of the north dip-pole where the lines of force, on the north side of it, instead of converging radially, tend to bunch into a channel. Although it is therefore unrealistic to attempt to specify the locations of the dip-poles exactly, the present adopted positions are $75^{\circ}.5$ N., $100^{\circ}.5$ W. and $66^{\circ}.5$ S., $139^{\circ}.5$ E. The two magnetic dip-poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 700 miles. The distances of the magnetic dip-poles from the north and south geographic poles appear now to be about 1,000 and 1,700 miles respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 2° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Secular changes differ throughout the world. Although the London observations strongly suggest a cycle of several hundred years, an exact repetition is unlikely.

London	Greenwich
1580 11° 15' E.	1850 22° 24' W.
1622 6 00 E.	1907 16 00 W.
1660 0 00	1929 12 23 W.
1720 13 00 W.	1946 9 38 W.
1815 24 27 W.	1965 7 29 W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1969 is $6^\circ 51'$ west and allowing an increase of $13'$ for each degree of latitude northwards and one of $30'$ for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about $6^\circ 51' + 39' + 150'$, i.e. $10^\circ 20'$ west. The average annual change at the present time is about $5'$ decrease.

The number of magnetic observatories now approaches 200—widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands, while a fourth is maintained by Stonyhurst College, Lancashire. Some recent mean values of the magnetic elements for Hartland are given below.

The normal worldwide terrestrial magnetic field corresponds approximately to that of a very strong small bar magnet near the centre of the Earth but with appreciable smooth spatial departures. The origin and slow secular change of the normal field is not yet fully understood but is generally ascribed to fluid motions within the Earth's core. Superposed on the normal field are local and regional anomalies whose magnitude may in places exceed that of the normal field and are due to the influence of mineral deposits in the Earth's crust. A small proportion of the field is of external origin, mostly associated with electric currents in the ionosphere. The configuration of the external field and the ionization of the atmosphere depend on the incident particle and radiation flux. There are, therefore, short-term and non-periodic as well as diurnal, 27-day, seasonal and 11-year periodic changes in the magnetic field, dependent upon the position of the Sun and the degree of solar activity.

Year	Declination West	Dip or Inclination	Horizontal Force	Vertical Force

1967	9 20	66 32	o 1892	o 4357

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's magnetic field is subject for several hours to marked disturbance. In extreme cases, departures in field intensity as much as one tenth the normal value are experienced. In many instances, such disturbances are accompanied by widespread displays of aurorae, marked changes in the incidence of cosmic rays, an increase in the reception of 'noise' from the Sun at radio-frequencies together with rapid changes in the ionosphere and induced electric currents within the earth which adversely affect radio and telegraphic communications. The disturbances are generally ascribed to flux changes in the stream of neutral and ionized particles which emanates from the Sun and through which the Earth is continuously passing. Some of these changes are associated with visible eruptions on the Sun, usually in the region of sun-spots. There is a marked tendency for disturbances to recur after intervals of about 27 days, the apparent period of rotation of the Sun on its axis, which is consistent with the sources being located on particular areas of the Sun.

ARTIFICIAL SATELLITES AND SPACE PROBES

The progress of rocket research during the last war led to the development by the Germans in 1944 of the V.2 rocket which, if fired vertically, attained a height of 110 miles. Before the end of the decade the U.S. rocket engineers had increased this maximum height to 250 miles by using a two-stage rocket, the first stage being a V.2 and the second a WAC Corporal. Plans for using multi-stage rockets to put artificial satellites into orbit around the earth during the International Geophysical Year (July 1957–December 1958) were announced by both the U.S. and the U.S.S.R. Such projects also called for an immense effort in establishing optical, radio, and radar tracking facilities around the world.

The historic event which heralded the Space Age occurred on October 4, 1957, when the U.S.S.R. successfully injected ■ “Sputnik” into an orbit inclined at 65° to the earth's equator. One month later “Sputnik 2” was also put into orbit, carrying a dog that survived the ascent trajectory and lived for several days orbiting the earth. The rate of satellite launching has increased since 1957 and by the end of 1960 the number of artificial satellites in orbit around the Earth exceeded the number of natural satellites known to be in the Solar System. All the satellites launched up to the end of 1960 have been sent up in the same direction as the rotation of the Earth, i.e., eastwards. Thus they are able to start with the benefit of the Earth's rotational velocity at the particular launching site. This is why these satellites always appear to move in an easterly direction. However, the first satellite launching of 1961 (*Samos 2*) achieved a retrograde orbit.

Satellite Orbits

To consider the orbit of an artificial satellite it is best to imagine that one is looking at the Earth from a distant point in space. The Earth would then be seen to be rotating about its axis inside the orbit described by the rapidly revolving satellite. The inclination of a satellite orbit to the Earth's equator (which generally remains almost constant throughout the satellite's lifetime) gives at once the maximum range of latitudes over which the satellite passes. Thus a satellite whose orbit has an inclination of 53° will pass overhead all latitudes between 53° S. and 53° N., but would never be seen in the zenith of any place nearer the poles than these latitudes. If we consider a particular place on the earth, whose latitude is less than the inclination of the satellite's orbit then the Earth's rotation carries this place under first the north-bound part of the orbit and then, later on, under the southbound portion of the orbit, these two occurrences being always less than 12 hours apart for satellites moving in direct orbits (i.e. to the east). For satellites in retrograde orbits the words “northbound” and “southbound” should be interchanged in the preceding statement. As the value of the latitude of the observer increases and approaches the value of the inclination of the orbit, so this interval gets shorter until (when the latitude

is equal to the inclination) only one overhead passage occurs each day.

Orbital Variations

The relatively simple picture described above is unfortunately complicated by the considerable variations in the shape, orientation and size of the orbit during a satellite's lifetime. The major variations are due to the Earth's oblateness and to air-drag. A third cause, radiation pressure from the Sun, is noticeable only on large satellites of extremely low density.

The oblate shape of the Earth—the equatorial diameter is 27 miles longer than the polar diameter—has two marked effects on a satellite orbit. It causes a regression of the nodes, amounting to several degrees a day for close satellites. Thus from a point in space, the whole orbit is seen to twist around the Earth, making a complete turn of 360° within ■ few months. This regression, which may also be described as the rotation of the orbital plane around the Earth's axis, is in the opposite direction to the satellite's motion, i.e. the orbit of ■ satellite with a direct motion regresses to the west. The actual amount of the regression depends, first, on the inclination of the orbit to the equator, being greatest at low inclinations and zero for a true polar orbit (inclination 90°). It is also dependent on the distance of the satellite from the Earth, being greatest for small orbits. At the distance of the Moon the regression is only 19° a year.

The orbit of *Samos 2* is extremely interesting from this point of view as its regression is to the east at almost an identical rate with the movement of the Sun. Thus there is hardly any change in the area of visibility over a long period of time.

The other effect the Earth's oblateness has on ■ satellite orbit is to cause a rotation of the line of apsides (i.e. the line joining the perigee and apogee points of the orbit). The rate of the rotation is dependent on the inclination of the orbit, and also on the distance of the satellite, again being greater for close satellites than for more distant ones. The value of this rotation has its greatest positive value (i.e. it moves forward along the orbit in the same direction as the satellite) at the equator and becomes zero at an inclination of $63^{\circ}.4$. As the inclination moves from $63^{\circ}.4$ to 90° the value increases again numerically, but with the opposite sign, the motion of the line of apsides being backwards along the orbit.

Even at heights of several hundred miles there is still sufficient atmosphere to cause a retarding effect on satellites. Although air-drag will have most effect around the perigee point the actual result is to reduce the height of the apogee point with hardly any change in perigee height and thus to decrease the eccentricity of the orbit until, in the final stage of a satellite's life-time, the orbit is almost circular. Unfortunately the air density at perigee height is not constant. It alters as the perigee moves from daylight into darkness and from darkness into daylight, and also as the latitude of perigee changes

SATELLITE HEIGHTS AND VELOCITIES

due to the rotation of the line of apsides. There is already some evidence that the atmospheric density varies with the sunspot cycle. In addition unpredictable short-period variations in the output of solar radiation may also occur and these have the effect of increasing the air density at any given height. Thus the air-drag on a satellite is by no means a constant factor and this is the reason why it is not possible to forecast accurately the position of a satellite for any considerable period of time. There is also some retardation due to electrified particles but this effect may be included with the air-drag.

Radiation pressure from the Sun only has any appreciable effect on large satellites of extremely low density such as the 200-ft. diameter balloon, *Echo 1*. For such satellites, however, this effect can be severe, and for heights greater than a few hundred miles, it can equal or even surpass that due to air drag. The effect on the orbit is very much more complicated than that due to air-drag, and even the signs of the variations can change periodically with time. Thus it is possible for the eccentricity to increase rather than decrease, with an increase in apogee height and a decrease in perigee height.

For close artificial satellites the gravitational attractions of the Sun and Moon are many thousand times weaker than that of the Earth's equatorial bulge and need only be considered in an extremely precise analysis of observational material.

Height and Velocity

The mean height of a satellite above the Earth's surface, which is determined by its orbital velocity, is related to its period of revolution around the Earth as is shown by the table above. This table is only strictly valid for circular orbits.

As the orbit shrinks due to air drag, both the mean height and the period decrease so that the retarding effect of air drag actually causes the satellite to move faster, though in a smaller orbit.

Satellite Launchings, 1957-67

Many different types of orbit have been achieved though the vast majority have had ■ direct motion. The majority of the Russian satellite orbits have had inclinations of 65° or 49° and orbits entirely below 1200 miles height. An important exception was Lunik 3 whose original inclination was 75° and initial apogee height 293,000 miles. This satellite orbited the Moon on its first revolution, returning with the first photographs of the other side of the Moon, which were transmitted back to the Earth when near perigee.

The American satellites have been injected into orbits of various inclinations. The early Explorers and Vanguards are in orbits of inclination about 28-35° while near-polar orbits were achieved with the Discoverers. Other series of launchings such as the Transit, Tiros and Echo put satellites in orbits of intermediate inclinations. In contrast to the heavy, but short-lived, Russian satellites, a number of those launched by the U.S. have been very small and have been put in larger orbits which have given them considerably longer life-times.

One launching project has caused great controversy amongst astronomers. This is the so-called "West Ford" project, involving the launching of a Midas satellite into a polar orbit, carrying a dispenser. The dispenser contains several hundred million small needles and these are released after the Midas has been successfully injected into ■ selected orbit. The needles form a belt around the Earth which is used as a reflector for radio signals. The first attempt (1961 a 8) failed but the second (1963-14) has been successful.

An interesting feature of some of the Cosmos satellites in 65° orbits is that after ■ days in orbit they return to Earth (Russia) in ■ controlled re-entry through the atmosphere.

A third Anglo-American satellite, Ariel 3, was launched on May 5, 1967 and has been of great interest to visual observers. Sets of mirrors and highly reflective solar cells on its sides cause the observer to see a series of flashes and the observations are used to determine the direction of the axis of rotation of the satellite.

Apart from their names, e.g. Cosmos 6 Rocket or Injun 3, the satellites are also classified according to their date of launch. Thus 1961 α refers to the launching of Samos 2. The next satellite launching was 1961 β and so on. A number following the Greek letter is intended to indicate the relative brightness of the satellites put in orbit. From the beginning of 1963 the Greek letters are replaced by numbers and the numbers by roman letters e.g. 1963— α A. In this table are given the designation and names of the main objects in orbit (in the order A, B, C . . . etc.), the launch date and some initial orbital data. This data consists of the inclination to the equator (i), the nodal period of revolution (P), the eccentricity, e , and the perigee height. The names of those satellites which have already disintegrated in the Earth's atmosphere or returned to the Earth's surface are printed in italics. A satellite which carried ■ human being is indicated by an asterisk.

Since the last edition of *Whitaker's Almanack* the following satellites launched in the years 1960–67 have disintegrated in the Earth's atmosphere:—

1960/2	1960/1	1962/8K1	1962/876
1964-15A	1965-11B	1965-11C	1965-17B
1965-17C	1965-17D	1965-20A	1965-20B
1965-20C	1965-50A	1965-62B	1965-105B
1966-19A	1966-83B	1963-117A	1965-117B
1967-19A	1967-38A		

Some American satellites are of military significance and details of their orbits are not disclosed. This is the reason for the gaps in the table.

Observation of Satellites

The regression of the orbit around the Earth causes alternate periods of visibility and invisibility, though this is of little concern to the radio or radar observer. To the visual observer the following cycle of events normally occurs (though the cycle may start in any position): invisibility, morning observations before dawn, invisibility, evening observations after dusk, invisibility, morning observations before dawn, and so on. With reasonably high satellites and for observers in high latitudes around the summer solstice the evening observation's follow the morning observations without interruption as sunlight passing over the polar regions can still illuminate satellites which are passing over temperate latitudes at local midnight. At the moment all satellites rely on sunlight to make them visible though a satellite with ■ flashing light has been suggested for ■ future launching. The observer must be in darkness or twilight in order to make any useful observations and the durations of twilight and the sunrise, sunset times given on page II of each month will be ■ useful guide.

Some of the satellites are visible to the naked eye and much interest has been aroused by the spectacle of ■ bright satellite disappearing into the Earth's shadow. The event is even more fascinating telescopically ■ the disappearance occurs gradually as the satellite traverses the Earth's penumbral shadow, and during the last few seconds before the eclipse is complete the satellite may change colour (under suitable atmospheric conditions) from yellow to red. This is because the last rays of sunlight are refracted through the denser layers of our atmosphere before striking the satellite.

Some satellites rotate about one or more axes so that a periodic variation in brightness is observed. This was particularly noticeable in several of the U.S.S.R. satellites.

Satellite research has already provided some interesting results. Among them may be mentioned ■ revised value of the Earth's oblateness, $1/298.2$, and the discovery of the Van Allen radiation belts. Apart from space travel itself great possibilities are being opened up in other fields, e.g. communications, navigation and meteorology.

THE ZODIAC

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about $50''$ ■ year is due to precession;

the signs no longer coincide with the constellations whose names they bear.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiaca! or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright, black stone about $2\frac{1}{2}$ feet high and $1\frac{1}{2}$ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Baghdad and its date is estimated to be about 1187–1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month.

Tidal Constants

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 172, 173, etc.) and adding thereto the quantities annexed. The columns headed "Springs" and "Neaps" show the height of the tide above datum for Mean High Water Springs and Mean High Water Neaps respectively.

Tidal data is no longer available for a number of places which formerly appeared in the list below. These places (with the name of the substitute now recorded) are: *Air Point* (Mostyn Quay); *Ardribsaig* (East Loch Tarbert); *Arisaig* (Loch Moidart); *Ayr Pt.*, *I.o.M.* (Peele); *Beachy Head* (Eastbourne); *Beaumaris* (Menai Bridge); *Brielle* (Scheveningen); *Broughty Ferry* (Newburgh); *Burryport* (Whiteford Lighthouse); *Caen* (Cayeux); *Caernarvon* (Llanddwyn Isld.); *Chesilston* (Worthing); *Dumbarton* (Bowling); *Dumfries* (Port Carlisle); *Fareham* (Itchenor); *Fifeness* (Anstruther Easter); *Glasson Dock* (Tarn Pt.); *Gravesend* (Tilbury Dock); *Greenwich* (R. Albert Dock); *Hythe* (Totland Bay); *Lancaster* (Dudden Bar); *Lymouth* (Porlock Bay); *Nash Pr.* (Chepstow); *Needles Pt.* (Freshwater Bay); *Neath* (Porthcawl); *Nore Lt.* (Chatham); *Port Harrington* (Hestan Islet); *Portishead* (Avonmouth); *St. Agnes* (Coverack); *St. Mary's* (Sennen Cove); *Star Pt.* (Lulworth Cove); *Stockton* (Seaham); *Sutton Bridge* (Blacktoft); *Torbay* (Torquay); *Woolwich* (Hammersmith Br.); *Worms Head* (Ferryside); *Honfleur Harbour* (Duclair).

NOTES ON TIDAL PREDICTIONS

Changes in Chart Datum

During recent years the Department of the Hydrographer of the Navy has been carrying out a survey of tidal levels. On the conclusion of each section of the survey the Department is taking the opportunity to regularize the sequence of chart datums so that eventually chart datums throughout the British Isles will approximate to the Lowest Astronomical Tide, i.e. the lowest level which can be predicted to occur under average meteorological conditions and under any combination of meteorological conditions.

In some cases the changes in chart datum will be appreciable (perhaps as much as 3 feet) and the resulting predictions will appear to give heights of tide quite different from those of previous years. In such cases there has been no change in the tidal conditions, but simply an apparent change due to the fact that the new heights have been measured from a different level.

It will be found that, where such datum changes have been made, the relationship between Ordnance Datum and the datum of the predictions will also have been altered. In order to compare the predictions for one year with those of another year for which the datum has been altered, it is necessary to refer both years to the same datum. Ordnance

Datum (Newlyn) is a convenient datum to which tidal heights may thus be referred.

Example.—In 1965, at Devonport, the highest predicted high water was 17·6 feet above chart datum; chart datum for that year was 8·9 feet below Ordnance Datum (Newlyn). In 1966 the highest predicted high water was 19·6 feet above chart datum, while chart datum for this year was altered to 10·6 feet below Ordnance Datum (Newlyn). To compare these two maximum predicted levels we must reduce both to Ordnance Datum (Newlyn), with the following results:

$$\begin{array}{rcc} 1965 & 17\cdot6 & -8\cdot9 = +8\cdot7 \\ 1966 & 19\cdot6 & -10\cdot6 = +9\cdot0 \end{array}$$

Thus it will be seen that the highest prediction for 1966 is only 0·3 feet higher than for 1965.

The datum of the predictions for each port to be found in the headings of each of the preceding pages is unchanged from those quoted in *Whitaker, 1968*.

Tidal predictions for London Bridge, Liverpool, Bristol, Hull, Greenock and Leith are supplied by the University of Liverpool Tidal Institute and Observatory, copyright reserved. Tidal predictions for Dun Laoghaire are based upon data supplied by the University of Liverpool Tidal Institute and Observatory, copyright reserved.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20–400 million years. Study of radioactivity has since shown cooling to have been slower. Holmes and others gave 1,500–2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALÆOZOIC (Old Animal Life) PERIODS include:—

Camrian, *Ordovician* and *Silurian* rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.–S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.–W. lines of hills and valleys, and some N.–S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R. *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC OR CENOZOIC (Recent forms of Life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period icesheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100–200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm or Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenoorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Simanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Broken Hill, Rhodesia, are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the Pithecanthropus group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cro-Magnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 8 or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillian and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skilfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palaeolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working

deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in northwest Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, northwest Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnius).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial or Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see *Roman Calendar*) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not a leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 1658, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed — *Anno Domini* 1969—*Anno Lucis* 5969. This *Year of Light* is based on the Book of Genesis I: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 17 of the present Queen began on Feb. 6, 1968. The system was used for dating Acts of Parliament until 1962. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI. and 1 Elizabeth II. An Act to effect the dating of Acts of Parliament by the calendar year, from Jan. 1, 1963, received the Royal Assent on July 19, 1962.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 22 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time — a fraction

thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365½ days less about 11 minutes, and therefore, if ■ Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June 22 (1971). By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses. In the year 2000 the Summer Solstice reaches its earliest date for 100 years, i.e., June 21^d 02^h.

To remedy this the last year of ■ century is in most cases not ■ Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 (1972) and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. In the year 2000 the Winter Solstice reaches its earliest date, i.e., Dec. 21^d 13^h. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is ■ circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to ■ greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The Lord Mayor of London was previously elected on the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be ■ Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. The Lord Mayor is now presented to the Lord Chief

Justice at the Royal Courts of Justice, on the second Saturday in November to make the final declaration of office, having been sworn in at Guildhall on the preceding day.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) Cycle.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same day of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indication ($28 \times 19 \times 15$).

Roman Indication.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June, July and August, Midsummer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e., about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*,

Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e., about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In Great Britain

the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In North America the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters *B.C.* (Before Christ) or, more rarely, *A.C.* (*Anno Christum*), and *A.D.* (*Anno Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, *A.M.* 3761 (Jewish Chronology), and the 471st year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (*A.D.* 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, *A.D.* 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 *B.C.*, is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 12 of the Calendar, whereas at the time of the Council of Nicaea, *A.D.* 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 186). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583. Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Rumania in 1920, and by Greece in February, 1923. The Russian, Greek, Serbian and Rumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words *Old and New Style* have been used in a sense which is not strictly correct, but is nevertheless expressive.

The *Dominical Letter* is one of the letters A–G which are used to denote the Sundays in successive years. If the first day of the year is Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1–Feb. 29, the second for March 1–Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of exceptional importance from the time of the Council of Nicaea (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plough Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and *Septuagesima*.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maundy Thursday the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the

Iunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 222) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The pro-

cessions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptized. But other derivations have been suggested. An early writer says: "This day is called Wytte Sonday because the Holy Ghost brought Wyte and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (born 1118; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*) there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the 25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

A TABLE OF THE MOBILE FEASTS FOR 10 YEARS—1965-74

Year	Ash Wednesday	Easter	Ascension	Whit Sunday	Suns. after Trin.	Advent
1965.....	March 3	April 18	May 27	June 6	xxiii	Nov. 28

1974.....	Feb. 27	April 14	May 23	June 2	xxiv	Dec. 2

NOTES CONCERNING TABLE OF MOBILE FEASTS

Ash Wednesday (first Day in Lent) can fall at earliest on February 4 and at latest on March 10. *Easter Day* can fall at earliest on March 22 and at latest on April 25.

Ascension Day can fall at earliest on April 30 and at latest on June 3.

Whit Sunday can fall at earliest on May 10 and at latest on June 13.

Trinity Sunday is the Sunday next before *Holy Thursday* (Ascension Day).

Corpus Christi falls on the Thursday next after *Trinity Sunday*.

There are not less than xxii and not more than xxvii Sundays after *Trinity*.

Advent Sunday is the Sunday nearest to November 30.

PUBLIC HOLIDAYS

BANK HOLIDAYS IN ENGLAND, WALES, NORTHERN IRELAND AND THE CHANNEL ISLANDS ARE (1969):—Easter Monday (April 7); Whit Monday (May 26); Sept. 1; and December 26: (1970) March 30; May 25 (Spring Holiday); Aug. 31; and Dec. 26.

New Year's Day and Liberation Day (May 9) are bank and public holidays in the Channel Islands.

Banks are also closed on Good Friday and Christmas Day.

The Stock Exchange is closed on Bank Holidays, Good Friday, Christmas Day and New Year's Day; and on Saturdays throughout the year.

Custom House and Docks, as Banks; with the Queen's Birthday (when decreed).

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and *Abib* was to be the first month of

Excise and Stamp Offices, as Banks; with Whit Tuesday and Coronation Day, if and when decreed.

Law Offices.—Good Friday, Easter Monday and Tuesday, Spring Bank Holiday (see col. 1), Christmas Day, and first week-day after Christmas.

BANK HOLIDAYS IN SCOTLAND ARE (1969): New Year's Day (Jan. 1); May 26; and August 4; (1970) Jan. 1; May 25; and August 3.

Banks in Scotland are also closed on Good Friday and Christmas Day. There are also Spring and Autumn holidays in most Scottish cities and towns.

Scotland has special Term (Quarter) Days:—Candlemas, Feb. 2; Whitsunday, May 15 (Fixed date); Lammas, Aug. 1; and Martinmas, Nov. 11; the Removal Terms are May 28 and Nov. 28.

CALENDAR

the year. In the First Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II, a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the

tropical year as found by Hipparchus (*Circ. 120 B.C.*) which differ little from those adopted at the present day. The year 5729 (1968-69 A.D.) is the 10th year of the 302nd Metonic (Minor or Lunar) Cycle of 19 years and the 17th year of the 205th Solar (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 minims. The normal calendar year, called ■ Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally ■ difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not

fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is ■ further postponement of a day. These rules and others have been considered in detail, and finally ■ calendar scheme has been drawn up in which ■ Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as ■ Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is 2h. 23m. in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

Jewish Calendar 5729-5731

Jewish Month	A.M. 5729	A.M. 5730	A.M. 5731
Tishri	1 .. 1968 September 23 ..	1969 September 13 ..	1970 October ..

"	22 Solemn Assembly.	Sivan 6 and 7	Shavuot (Pentecost or Feast of
"	23 Rejoicing of the Law.	Tammuz 17	*Fast of Tammuz.
Kislev	25 Dedication of the Temple.	Ab 9	*Fast of Ab.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day.

§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on ■ Sabbath.

THE ROMAN CALENDAR

Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1969 is MMDCCXXII (2722). A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Caesar, who was then Pontifex

Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the table below. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissexta dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty- eight days, and in Leap Year twenty-nine

8	VIII	16	XVI	60	LX	500	D	2000	MM

Other Examples: 43=XLIII; 66=LXVI; 98=XCVIII.

339=CCXXXIX; 619=DCXIX; 988=CMLXXXVIII; 996=CMXCVI.

1674=MDCLXXIV; 1962=MCMLXII.

A bar placed over a numeral has the effect of multiplying the number by 1,000, e.g.:

6,000=VI; 16,000=XVI; 160,000=CLX; 666,000=DCLXVI.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Julian Calendar. *Hejira* years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the *Hejira*. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the *Hejira* year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a *Hejira* year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle. If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1388 gives a quotient of 46 with remainder 8 and is a common year. A.H. 1389, with remainder 9 is also a common year. A.H. 1390, with remainder 10, is *kabishah*.

Hejira Years 1388 and 1389

Name and Length of Month	A.H. 1388	A.H. 1389
Muharram (30) . . .	1968 Mar. 31	1969 Mar. 20
Safar (29)	April 30	April 19
Rabia I (30)	May 29	May 18
Rabia II (29)	June 28	June 17
Jumâda I (30)	July 27	July 16
Jumâda II (29)	Aug. 26	Aug. 15
Rajab (30)	Sept. 24	Sept. 13
Shaabân (29)	Oct. 24	Oct. 13
Ramadân (30)	Nov. 22	Nov. 11
Shawwâl (29)	Dec. 22	Dec. 11
Dhu 'l-Qâ'dâ (30) . .	1969 Jan. 20	1970 Jan. 9
Dhu 'l-Hijja (29 or 30)	Feb. 19	Feb. ■

NOTE.—A.H. 1390 (*kabishah* year of 355 days) begins on 1970, March 9.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet, Hong Kong, Singapore, Malaysia and elsewhere in South-East Asia.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap year and in these years there are 6 complementary days.

The Intercalary year of the Coptic Calendar immediately precedes the Leap year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1969 is, therefore, the year 2026 of the *Vikrama Era*.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1969 is 1891 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshis, or saints, were translated and became the stars of the Great Bear in 526 B.C.

The Buddhists reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of *Hejira*, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Persia and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the former British system of Regnal years, but differing from it in the particular that each year of ■ period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31
 " Taishô 1912 Aug. 1 to 1926 Dec. 25
 " Shôwa " 1926 Dec. 26

Hence the year Shôwa 44 begins 1969 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyôbi (Sun-day), Getsuyôbi (Moon-day), Kayôbi (Fire-day), Suiyôbi (Water-day), Mokuyôbi (Wood-day), Kinyôbi (Metal-day), Doyôbi (Earth-day).

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

To USE THE CALENDAR.—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables: add these three numbers together and add also the Day of the Month; in the fourth table, opposite the sum obtained, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (See p. 188.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g. 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

For dates known to be Old Style between Jan. 1-Mar. 24 before 1752, add one year to the date before applying the formula above (see notes on New Year's Day, p. 186).

The World

The Superficial Area of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The Diameter of the Earth at the Equator is 7,926 English miles, and at the Poles 7,900 English miles. The Equatorial Circumference is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901·8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION

The total population of the world in June, 1966, was estimated by the United Nations Statistical Office at 3,353,000,000 compared with 3,003,000,000 in 1960 and 2,070,000,000 in 1930. Figures of areas in the following table are of land area and inland water, but exclude uninhabited polar regions and some uninhabited islands. Figures for Europe and Asia exclude U.S.S.R. which is shown separately. Figures for Oceania include Hawaii.

Continent, etc.	Area		Estimated Population, 1966
	Sq. miles	Sq. km.	
Europe.....	1,993	4,920	449,000,000
Asia*.....	10,661	27,611	1,867,000,000
U.S.S.R.....	8,649	22,402	233,000,000

Total.....	52,422	135,773	3,353,000,000

* Includes European and Asiatic Turkey.

A United Nations report (*The Future Growth of World Population*) in 1958, pointed out that the population of the world had increased since the beginning of the 20th Century at an unprecedented rate: in 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:—

Continent	[millions]			
	1975		2000

* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

THE CONTINENTS

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12' N., to

Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 83° W., and the extreme latitudes, Punta Gallinas, 12° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly Islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

COUNTRIES OF THE WORLD AND THEIR CAPITALS

The appended tables of area and population are based on such information as is immediately available. With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled. For the area and population of separate departments, overseas provinces, etc., of foreign countries see main articles.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.—From Gizeh (near Cairo) to southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 2,700 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.—Adjoining Nebuchadnezzar's palace, 60 miles south of Baghdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memory originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHESUS.—Ionic temple erected about 350 B.C. in honour of the goddess and burned by the Goths in A.D. 262.
- V. THE COLOSSUS OF RHODES.—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 36,198 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans		
Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific	63,986,000	Mariana Trench
Atlantic	31,530,000	Porto Rico Trench, 36,198
Indian	28,350,000	Diamantina, 27,498
Arctic	5,541,600	26,400

Name	Area of Basin (sq. miles)	Seas	Greatest Depth (feet)
Malay	3,137,000	Kei Trench	21,342
Central American	1,770,270	Cayman	23,000
Mediterranean	1,145,000	Matapan	14,435
Behring	878,000	Buldir Trough	13,422
Okhotsk	582,000	Kurile Trough	11,154
East China	480,000	about 10,500	
Hudson Bay	472,000	about 1,500	
Japan	405,000	about 10,200	
Andaman	305,000	about 11,000	
North Sea	221,000	Skaggerak, 1,998	
Red Sea	178,000	20° N., 7,254	
Baltic	158,000	about 1,300

THE CINQUE PORTS

As their name implies the Cinque Ports were originally 5 in number, Hastings, New Romney, Hythe, Dover and Sandwich. They were in existence before the Norman Conquest and were the Anglo-Saxon successors to the Roman system of coast defence organized from the Wash to Spithead to resist Saxon onslaughts. William the Conqueror reconstituted them and granted peculiar jurisdiction, most of which was abolished in 1855. Only jurisdiction in Admiralty still survives.

At some time after the Conquest the "ancient towns" of Winchelsea and Rye were added with equal privileges. The other members of the Confederation, known as Limbs, are:-Lydd, Faversham, Folkestone, Deal, Tenterden, Margate and Ramsgate.

The Barons of the Cinque Ports have the ancient privilege of attending the Coronation Ceremony

and are allotted special places in Westminster Abbey.

Lord Warden, Rt. Hon. Sir Robert Menzies, K.T., C.H., Q.C.

Judge, Court of Admiralty, Sir Henry Barnard.
Registrar, James A. Johnson, New Bridge House, Dover.

Lord Wardens since 1891

Marquess of Dufferin and Ava	1891
Marquess of Salisbury	1895
Marquess Curzon	1904
The Prince of Wales	1905
Earl Brassey	1908
Earl Beauchamp	1913
Marquess of Reading	1934
Marquess of Willingdon	1936
Sir Winston Churchill	1941
Sir Robert Menzies	1965

DISTANCE OF THE HORIZON

The limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of n feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of	the range is	At a height of	the range is
5 ft.	2.9 miles	500 ft.	29.5 miles	4,000 ft.	83.3 miles

After the liberation of Paris, General Charles de Gaulle entered the capital and formed a provisional government on Sept. 10, 1944. This was regarded as a continuation of the *Third Republic*. De Gaulle was named provisional President. He resigned and was succeeded by Félix Gouin on Jan. 23, 1946. A new National Assembly was elected and on June 2, 1946, Gouin resigned and was succeeded by Georges Bidault.

A new Constitution (*Fourth Republic*), adopted on Oct. 13, 1946, and amended in 1954, was in force until 1958.

Vincent Auriol, born 1884 Jan. 16, 1947
René Coty, born 1882 Jan. 17, 1954

The *Fifth French Republic* came into being on October 5, 1958, following the approval of its constitution by a national referendum in September, 1958.]

Charles de Gaulle, born 1890 Jan. 8, 1959

POPES FROM 1623

JAMES VI (Ascended the Throne of England 1603)	Son of Mary, by second marriage	1542	1587

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958.

Younger Sons of the younger Sons of Peers.
Baronet's younger Sons.
Younger Sons of Knights in the same order as their Fathers.
Naval, Military, Air, and other Esquires by Office.

WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brother's wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross, see pp. 298-9.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly (normally) the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the Mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—See Index.

The Queen's Household

Lord Chamberlain, The Lord Cobbold, P.C., G.C.V.O.
Lord Steward, The Viscount Cobham, K.G., P.C., G.C.M.G., T.D.

 Dame Albertine Winner, D.B.E., formerly *Deputy Chief Medical Officer, Ministry of Health*; Dr. J. H. F. Brotherton, *Chief Medical Officer, Scottish Home and Health Department*; Dr. J. O. F. Davies, C.B.E., *Senior Administrative Medical Officer, Oxford Regional Hospital Board*; Dr. S. C. Gawne, *Medical Officer of Health, Lancashire*; Dr. J. W. Howie, *Medical Director, Public Health Laboratory Service*; Dr. S. L. Wright, *Medical Officer of Health, Croydon*.

THE QUEEN'S BIRTHDAY, 1969

The date for the observance of the Queen's Birthday in 1969, both at home and abroad, will be Saturday, June 14. For the Customs and Excise Department, and the officers and servants of the dock companies in England and Northern Ireland, the day appointed for the observance will be Saturday, June 28.

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the Civil List, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000
Salaries of Household	185,000
Expenses of Household	121,800
Royal Bounty, alms and special services	23,200
Supplementary Provision	95,000

£475,000

ROYAL SALUTES

On the Anniversaries of the Birth, Accession and Coronation of the Sovereign a salute of 62 guns is fired on the wharf at the Tower of London.

On extraordinary and triumphal occasions, such as on the occasion of the Sovereign opening, proroguing or dissolving Parliament in Person, or when passing through London in procession, except when otherwise ordered, 41 guns only are fired.

On the occasion of the birth of a Royal infant, a salute of 41 guns is fired from the two Saluting Stations in London, i.e. Hyde Park and the Tower of London.

Constable of the Royal Palace and Fortress of London, Field-Marshal Sir Gerald Templer, K.G., G.C.B., G.C.M.G., K.B.E., D.S.O. (1965).

Lieutenant of the Tower of London, Lieut.-Gen. Sir Richard Craddock, K.B.E., C.B., D.S.O.

Major, Resident Governor and Keeper of the Jewel House, Col. Sir Thomas Butler, Bt., D.S.O., O.B.E. *Master Gunner of St. James's Park*, General Sir Robert Mansergh, G.C.B., K.B.E., M.C. (1960).

THE ROYAL ARMS

QUARTERLY.—1st and 4th *gules*, three lions passant guardant in pale *or* (*England*); 2nd *or*, a lion rampant within a double tressure flory counterflory *gules* (*Scotland*); 3rd *azure*, a harp *or*, stringed *argent* (*Ireland*); the whole encircled with the Garter.

SUPPORTERS.—*Dexter*: A lion rampant guardant *or*, imperially crowned. *Sinister*: a unicorn *argent*, armed crined and unguled *or*, gorged with a coronet composed of crosses patee and fleurs de lis, a chain affixed passing between the forelegs and reflexed over the back.

BADGES.—The red and white rose united (*England*); a thistle (*Scotland*); a harp *or*, the strings *argent*, with a shamrock leaf *vert* (*Ireland*); upon a mount *vert*, a dragon passant wings elevated *gules* (*Wales*).

THE UNION JACK

The national flag of the United Kingdom is the Union Flag, generally known as the Union Jack, the name deriving from the use of the Union Flag on the jack-staff of naval vessels. It is a combination of the cross of the patron saint of England, St. George (*cross gules in a field argent*), the cross of the patron saint of Scotland, St. Andrew (*salire argent in a field azure*) and a cross similar to that of St. Patrick, patron saint of Ireland (*salire gules in a field argent*). The Union Flag was first introduced in 1606 after the union of England and Scotland, the cross of St. Patrick being added in 1801.

ANNUITIES TO THE ROYAL FAMILY

Queen Elizabeth the Queen Mother	£70,000
The Duke of Edinburgh	40,000
The Duke of Gloucester	35,000
The Princess Margaret	15,000

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE FLYING OF FLAGS

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

February 19 (1960).—Birthday of Prince Andrew.

March 1.—St. David's Day (in Wales only).

March 10 (1964).—Birthday of Prince Edward.

March 31 (1900).—Birthday of Duke of Gloucester.

April 21 (1926).—Birthday of Her Majesty the Queen.

April 23.—St. George's Day (in England only).

Where a building has two or more flagstaffs the Cross of St. George may be flown in addition to the Union Jack but not in a superior position.

June 2 (1953).—Coronation Day.

June 10 (1921) Birthday of the Duke of Edinburgh.

June 14.—Queen's Official Birthday, 1969.

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 21 (1930).—Birthday of the Princess Margaret.

Nov. 9.—Remembrance Sunday, 1969.

Nov. 14 (1948).—Birthday of the Prince of Wales.

Nov. 20 (1947).—Her Majesty's Wedding Day.

Nov. 30.—St. Andrew's Day (in Scotland only). And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

municated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, e.g. on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of the United Kingdom.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The Royal Standard is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on Red-Letter Days at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and Statutes were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet coatee with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order or the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office.

Governor, Maj.-Gen. Sir Edmund Hakewill Smith, K.C.V.O., C.B., C.B.E., M.C.

Military Knights. Major H. K. Clough, O.B.E.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Brigadier W. P. A. Robinson, M.C.; Major R. W. Garnett, M.B.E.; Lt.-Colonel G. F. G. Turner, O.B.E., D.C.M.; Brigadier A. A. Crook, D.S.O.; Lt.-Colonel R. L. Penfold; Lt.-Colonel L. W. Giles, O.B.E., M.C.; Lt.-Colonel H. G. Duncombe, D.S.O.; Major R. W. Dobbin, O.B.E.; Lt.-Colonel P. U. Campbell, D.S.O.

The Peerage

THE PEERAGE AND ITS DEGREES

The rules which govern the creation and succession of Peerages are extremely complicated. There were separate Peerages of England, of Scotland, and of Ireland, until the unions of the three countries: of England and Scotland, forming Great Britain, in 1707; and of Great Britain and Ireland, forming the United Kingdom, in 1801. Some Scottish Peers received additional Peerages of Great Britain or of the United Kingdom, since 1707; and some Irish Peers additional Peerages of the United Kingdom since 1801.

All Peers of England, Scotland, Great Britain, or the United Kingdom who are of full age are entitled to seats in the House of Lords. But Peers of Ireland who have no additional United Kingdom Peerage are not entitled to sit, although they are eligible for election to the House of Commons (which other Peers are not).

Certain ancient Peerages pass on death to the nearest heir, male or female, and several are now held by women who are thus Peeresses in their own Right. They are entitled to sit in the House of Lords if they are of full age and British nationality.

Since 1876 the Crown has conferred non-hereditary or Life Peerages in the degree of Baron on eminent judges to enable them to carry out the judicial function of the House of Lords. They are known as Law Lords. Under an Act passed in 1958 the Crown may confer Life Peerages on men and women giving them, in the degree of Baron or Baroness, seats in the House of Lords.

In 1963 an Act was passed enabling Peers to disclaim their Peerages for life: living Peers, within 12 months after the passing of the Act (July 31, 1963), future Peers within 12 months (one month if an M.P.) after the date of their succession, or of attaining their majority if later.

No fees for Dignities have been payable since 1937. No hereditary Peerages have been created since 1964.

PEERAGES EXTINCT SINCE THE LAST ISSUE

EARLDOMS (2)—Chesterfield (cr. 1628); Stanhope (cr. 1718).

VISCOUNTCY—Bruce of Melbourne (cr. 1947).

BARONIES (3)—Fleck (cr. 1961); Lumbury (cr. 1962); Whitburgh (cr. 1912).

DISCLAIMER OF PEERAGES

The following peers have disclaimed their peerages under the Peerage Act, 1963: Earl of Home; Earl of Sandwich; Viscount Hailsham; Viscount Stansgate; Lord Altringham; Lord Beaverbrook; Lord Fraser of Allander; Lord Monkswell; Lord Southampton.

PEERS WHO ARE MINORS

(As at Jan. 1, 1969)

THE PRINCE OF WALES (Duke of Cornwall) (b.

1948).

EARLS (5): Belmore (b. 1951); Caithness (b. 1948); Cottenham (b. 1948); Craven (b. 1957); Lovelace (b. 1951).

VISCOUNT (1): Astor (b. 1951).

BARONS (4): Brocket (b. 1952); Fairfax of Cameron (b. 1956); Hesketh (b. 1950); Londesborough (b. 1959).

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—**S.** or **I.** appended to the date of creation denotes a *Scottish* or *Irish* title, the further addition of **II.** * implies that the Peer in question holds also an *Imperial* title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.*. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. The mark **o** signifies that there is no "of" in the Marquessate or Earldom so designated; **b.** signifies born; **s.**, succeeded; **m.**, married; **w.**, widower or widow; **M.**, minor.

1308	<i>Zouche</i> (8th), James Assheton Frankland, b. 1943, s. 1965.	Hon. Roger N. F., b. 1909.

Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

COUNTESSES IN THEIR OWN RIGHT.—Style, The Countess of — Addressed as, My Lady.

Created.

<i>Created.</i>	<i>Title, Name, etc.</i>	<i>Eldest Son or Heir.</i>
1643	<i>Dysart</i> , Wenefryde Agatha Greaves, b. 1889, s. 1935, w.	Lady Rosamund G., b. 1914.

Courtesy Titles (in actual use in 1969)

Holders of Courtesy Titles are addressed in the same manner as holders of substantive titles

From this list it will be seen that, for example, the "Marquess of Blandford" is heir to the Dukedom of Marlborough, and "Viscount Althorp" to the Earldom of Spencer. Titles of second heirs are also given, and the Courtesy Title of the father of a second heir is indicated by *; e.g., Earl of Sunderland, eldest son of *Marquess of Blandford.

In addition, the heir, and sometimes the second heir, to some Scottish peerages is usually styled "The Master of ____"; e.g., "The Master of Falkland" is heir to Viscount Falkland; and "The Master of Lindsay" is eldest son of *Lord Balniel, heir to the Earl of Crawford and Balcarres. Users of this style are not included here.

THE PRIVY COUNCIL

The Privy Council consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committee of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the judicial Committee, the Board of Trade, q.v.

THE ORDER OF MERIT (1902)—O.M.

Ribbon, Blue and Crimson.
This Order is designed ■ a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

O.M. Civ.

H.R.H. THE DUKE OF EDINBURGH (1968).

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since 1902. Badge, a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border. Classes are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

H.R.H. the Princess Alice, Countess of Athlone.

SECOND CLASS.

Lady Victoria Patricia Helena Ramsay.

H.M. Queen Victoria Eugénie of Spain.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by a Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1948.

Lady Victoria Patricia Helena Ramsay, 1911.

Doreen Geraldine, Dowager Baroness Brabourne, 1937.

H.M. Queen Elizabeth the Queen Mother, 1931.

Dorothy Evelyn Augusta, Dowager Countess of Halifax, 1926.

Eugenie Marie, Countess Wavell, 1943.

H.R.H. the Princess Margaret, Countess of Snowdon, 1947.

Pamela, Countess of Lytton, 1927.

Florence Amery, 1945.

H.R.H. the Duchess of Gloucester, 1937.

H.H. Maharani Regent of Travancore, 1929.

Agnes Anne, Dowager Baroness Clydesmuir, 1948.

Baronets, Knights Grand Cross, Knights Grand Commanders Knights Commanders and Knights Bachelor

Badge of Baronets
of England, Great Britain, U.K.,
(and Ireland marked I.).

Badge of Baronets
of Scotland or Nova Scotia
(marked S.).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains ■ follows:—"That no person whose name is not entered upon the Official Roll shall be received ■ a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When ■ obelisk (†) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing ■ "Sir Robert A—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless ■ daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner ■ Baronets (q.v.), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir — (first or Christian name)" and in writing ■ "Sir A— B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed ■ stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, ■ miniature reproduction being shown above. The Officers of the Society are:—Knight Principal, Sir Anthony Wagner, K.C.V.O., Deputy Knight Principal, Hon. Sir George Belieu, K.C.B., K.C.V.O.; Hon. Registrar, Sir John Weir Russell; Clerk, Mrs. Rodney; Registry and Library, 21 Old Buildings, Lincoln's Inn, W.C.1.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 19, 1958)

Peers are not included in this list.

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Dames Grand Cross and Dames Commanders of the Order of St. Michael and St. George, the Royal Victorian Order and the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.M.G., G.C.V.O. or G.B.E.) and Dames Commanders (D.C.M.G., D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. “Miss Florence Smith,” after receiving the honour would be addressed as “Dame Florence,” and in writing, as “Dame Florence Smith, G. (or D.) C.M.G., G. (or D.) C.V.O., or G. (or D.) B.E.” Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. “The Countess of —, G.C.V.O.” Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

 Woolcombe, Dame Jocelyn May, D.B.E.
 Wormald, Dame Ethel May, D.B.E.
 Younghusband, Dame Eileen Louise, D.B.E.

THE VICTORIA CROSS, VC

The ribbon is Crimson for all Services (until 1918 it was Blue for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED January 29th, 1856.

The VC is worn before all other decorations, on the left breast, and consists of a cross-pattée of bronze, $\frac{1}{4}$ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the VC receive a tax-free annuity of £100, irrespective of need or other conditions. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

THE GEORGE CROSS, G.C.—FOR GALLANTRY

The ribbon is dark blue threaded through a bar adorned with laurel leaves.

INSTITUTED September 24th, 1940 (with amendments, November 3, 1942).

The George Cross is worn before all other decorations (except the VC) on the left breast § and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon 1½ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger. From April 1, 1965, holders of the Cross have received a tax-free annuity of £100.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

Ribbon, Red, with Blue Edges.

OTHER DECORATIONS AND MEDALS (*continued*)

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

 Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the SOVEREIGN and Companions (not exclusively male) to ■ number not exceeding 740, of whom 360 may belong to the Home Services, 180 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence)

Victoria Cross.—1856.—

George Cross.—1940.—G.C.

British Orders of Knighthood.

Royal Red Cross.—1883—R.R.C. (Class I).—For ladies, Distinguished Service Cross.—1914.—D.S.C.—In substitution for the Conspicuous Service Cross, 1901; is for officers of R.N. below the rank of Captain, and Warrant Officers.

Military Cross.—Dec. 1914.—M.C.—Awarded to Captains, Lieutenants, and Warrant Officers (Cl I. and II.) in the Army and Indian and Colonial Forces.

Distinguished Flying Cross.—1918.—D.F.C.—For bestowal upon Officers and Warrant Officers in the Royal Air Force (and Fleet Air Arm from April 9, 1941) for acts of gallantry when flying in active operations against the enemy.

Air Force Cross.—1918.—A.F.C.—Instituted as preceding but for acts of courage or devotion to duty when flying, although not in active operations against the enemy (extended to Fleet Air Arm since April 9, 1941).

Royal Red Cross (Class II).

Order of British India.

Kaisar-i-Hind Medal.

Order of St. John.

Albert Medal.—1866—A.M.—"For Gallantry in Saving Life at Sea" or "on Land".

Union of South Africa Queen's Medal for Bravery, in Gold. Medal for Distinguished Conduct in the Field.—1854.—D.C.M.—Awarded to warrant officers, non-commissioned officers and men of the Army and R.A.F.

Conspicuous Gallantry Medal.—1874.—C.G.M.—Is bestowed upon warrant officers and men of the R.N. and since 1942 of Mercantile Marine and R.A.F.

The George Medal.—G.M.—Established by King George VI in 1940 is a recognition of acts of gallantry.

Queen's Police and Fire Services Medal for Gallantry.

The Edward Medal.—1907—In recognition of heroic acts by miners and quarrymen, or of others who have endangered their lives in rescuing those so employed.

Royal West African Frontier Force Distinguished Conduct Medal.

King's African Rifles Distinguished Conduct Medal.

Union of South Africa Queen's Medal for Bravery in Silver.

Distinguished Service Medal.—1914.—D.S.M.—For chief petty officers, petty officers, men, and boys of all branches of the Royal Navy, and since 1942 of Mercantile Marine, to non-commissioned officers and men of the Royal Marines, and to all other persons holding corresponding positions in Her Majesty's Service afloat.

Military Medal.—1916.—M.M.—For warrant and non-commissioned officers and men and serving women.

Distinguished Flying Medal.—1918.—D.F.M.—and the Air Force Medal.—A.F.M.—for warrant and non-commissioned officers and men for equivalent services as for D.F.C. and A.F.C. (extended to Fleet Air Arm, April 9, 1941).

Constabulary Medal (Ireland).

Medal for Saving Life at Sea.

Colonial Police Medal for Gallantry.

British Empire Medal.—B.E.M.—(formerly the Medal of the Order of the British Empire, for Meritorious Service; also includes the Medal of the Order awarded before Dec. 29, 1922).

Canada Medal.

Queen's Police, and Fire Services Medal.

Queen's Medal for Chiefs.

War Medals and Stars (in order of date).

Polar Medals (in order of date).

Royal Victorian Medal (Gold, Silver and Bronze).

Imperial Service Medal.

Police Medals for Valuable Service.

Badge of Honour.

Jubilee, Coronation and Durbar Medals.

King George V, King George VI and Queen Elizabeth II.

Long and Faithful Service Medals.

Long Service and Good Conduct Medal.

Naval Long Service and Good Conduct Medal.

Medal for Meritorious Service.

Royal Marine Meritorious Service Medal.

Royal Air Force Meritorious Service Medal.

Royal Air Force Long Service and Good Conduct Medal.

Royal West African Frontier Force Long Service and Good Conduct Medal.

King's African Rifles Long Service and Good Conduct Medal.

Police and Fire Brigade Long Service and Good Conduct Medal.

African Police Medal for Meritorious Services.

Colonial Police and Fire Brigades Long Service Medal.

Colonial Prison Service Medal.

Army Emergency Reserve Decoration.

Volunteer Officers' Decoration.—V.D.

Volunteer Long Service Medal.

Volunteer Officers' Decoration (for India and the Colonies).

Volunteer Long Service Medal (for India and the Colonies).

Colonial Auxiliary Forces Officers' Decoration.

Colonial Auxiliary Forces Long Service Medal.

Medal for Good Shooting (Naval).

Milits Long Service Medal.

Imperial Yeomanry Long Service Medal.

Territorial Decoration.—1908.—T.D.

Efficiency Decoration.—E.D.

Territorial Efficiency Medal.

Efficiency Medal.

Special Reserve Long Service and Good Conduct Medal.

Decoration for Officers, Royal Naval Reserve.—1910.—R.D.

Decoration for Officers, R.N.V.R.—V.R.D.

Royal Naval Reserve Long Service and Good Conduct Medal.

R.N.V.R. Long Service and Good Conduct Medal.

Royal Naval Auxiliary Sick Berth Reserve Long Service and Good Conduct Medal.

Royal Fleet Reserve Long Service and Good Conduct Medal.

Royal Naval Wireless Auxiliary Reserve Long Service and Good Conduct Medal.

Air Efficiency Award.—1942.

The Queen's Medal.—(For Champion Shots in the Army, Territorial Army and R.A.F.)

Cadet Forces Medal.

Coast Life Saving Corps Long Service Medal.

Special Constabulary Long Service Medal.

Royal Observer Corps Medal.

Civil Defence Long Service Medal.

Service Medal of the Order of St. John.

Badge of the Order of the League of Mercy.

Voluntary Medical Service Medal.—1932.

Woman's Voluntary Service Medal.

Colonial Special Constabulary Medal.

Foreign Orders, Decorations and Medals (in order of date).

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, ■ Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable". The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed ■ The Right (or Rt.) Hon. —. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) —, P.C., or, less elaborately, The Lord (or Earl or Viscount) — P.C.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision was made for 17 Ministers of the first rank (Cabinet Ministers) and this number has been increased by later legislation. The *Ministers of the Crown (Parliamentary Secretaries) Act* (1960) laid down an aggregate limit of 33 Parliamentary Secretaries. Parts of these Acts were repealed by the *Ministers of the Crown Act* (1964) which varied the number of Parliamentary Secretaries (other than Treasury Secretaries) to 36.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000, and in 1965 to £4,500.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," pp. 307–308). Bills of major importance are usually sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a Select Committee, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the

Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's visit to Canada in 1967, the Councillors of State were the Prince of Wales, Queen Elizabeth the Queen Mother, Princess Margaret and the Duke of Gloucester. This was the first time that the Prince of Wales had been so appointed.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. Since the Prince of Wales attained the age of 18 in November 1966, the provisions of the Regency Act as to age no longer apply in the event of his accession to the throne.

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND.

1660.	Sir H. Grimston.	1685.	Sir John Trevor.
1661.	Sir E. Turner.	1688.	H. Powle.
1673.	Sir J. Charlton.	1694.	Paul Foley.
1673.	Edwd. Seymour.	1698.	Sir T. Lyttelton.
1678.	Sir Robt. Sawyer.	1700.	Robert Harley (Earl of Oxford and Mortimer).
1679.	Serjeant William Gregory.	1702.	John Smith.
1680.	W. Williams.		

PARLIAMENT OF GREAT BRITAIN.

1708	Sir Richard Onslow (Lord Onslow).	1761.	Sir John Cust.
1710.	Wm. Bromley.	1770.	Sir F. Norton.
1713.	Sir Th. Hanmer.	1780.	C. W. Cornwall.
1715.	Spencer Compton (Earl of Wilmington).	1788.	Hon. W. Grenville (Lord Grenville).
1727.	Arthur Onslow.	1789.	Henry Addington (Viscount Sidmouth).

PARLIAMENT OF UNITED KINGDOM.

1802.	Sir John Mitford (Lord Redesdale).
1802.	Charles Abbot (Lord Colchester).
1817.	Charles M. Sutton (Viscount Canterbury).
1835.	James Abercromby (Lord Dunfermline).
1839.	Charles Shaw-Lefevre (Viscount Eversley).
1857.	I. Evelyn Denison (Viscount Ossington).
1872.	Sir Henry Brand (Viscount Hampden).
1884.	Arthur Wellesley Peel (Viscount Peel).
1895.	William Court Gully (Viscount Selby).
1905.	James W. Lowther (Viscount Ullswater).
1921.	John Henry Whitley.
1928.	Hon. Edward Algernon FitzRoy.
1943.	Col. D. Clifton Brown (Viscount Ruffside).
1951.	William Shepherd Morrison (Viscount Dunrossil).
1959.	Sir Harry Hylton-Foster.
1965.	Horace Maybray King, Ph.D.

THE HOUSES OF PARLIAMENT

Parliament emerged during the late thirteenth and early fourteenth centuries ■ a result of diverse forces including the general need for a superior court to deal with legal and administrative problems on a national basis, ambition of the baronage to influence the King's government, and the King's desire to make his government more effective by involving in it all important sections of the community. The nucleus of early Parliaments were the officers of the King's household and the King's judges, who were joined by such ecclesiastical and lay magnates as the King might summon and occasionally by the knights of the shire, burghers and proctors of the lower clergy. The Commons were summoned to all the Parliaments of Edward III and by the end of the reign a "House of Commons" was beginning to appear. The first known Speaker was elected in 1377.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland, except for criminal cases in Scotland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. Bills such ■ the Finance Bill, which imposes taxation, and the Consolidated Fund Bills, which authorise expenditure, and are commonly known as Supply Bills, must begin in the Commons and have not been amended by the Lords in any respect in modern times. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regard to Lords' amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1949—(a) a bill which the Speaker has certified ■ a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence: (b) any other public bill (except one to extend the life of a Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914-18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but ■ General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1918, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 ■ similar course was followed and Parliament which first met ■ Nov. 26, 1935, was not dissolved until June 15, 1945.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 19 hrs. 16 minutes (from 2.30 p.m. to 9.46 a.m. Feb. 29-Mar. 1, 1968).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid. They are entitled to re-imbursement of travelling expenses from their residence to the House in respect of regular attendance and repayment of expenses within a maximum of £4 14s. 6d. for each day of such attendance.

Since 1911 Members of the House of Commons have received payments and travelling facilities. Their salary of £400 was increased to £600 in 1937, to £1,000 in 1947, to £1,750 in 1957 and to £3,250 in October 1964; they are entitled to claim income tax relief on expenses incurred in the course of their Parliamentary duties. The Members' Pensions Act, 1965, introduced the first comprehensive pension scheme providing Members of Parliament and their dependants with a legal right to a pension. Members contribute £150 per annum and the Exchequer an amount equal to the aggregate of the Members' contributions. Members receive pensions from age 65 or on ceasing to be ■ Member if later, provided they have served for 10 years or more. The pension, £600 per annum for 10 years' service, increases to £900 after 15 years' service and by £24 for each further year thereafter. Members re-elected at the 1964 General Election would be able to count up to 10 years' service before that date on a non-contributory basis. Members will also continue to contribute £24 per annum and the Treasury £22,000 ■ year towards ■ Fund to provide annual or lump sum grants to ex-Members, their widows and children whose incomes are below certain limits. The income of the Fund in 1966-67 was £43,877 and expenditure on grants £37,370. The capital account stood in 1967 at £153,762.

THE HOUSE OF LORDS

The House of Lords consists of some 1,050 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers and Peeresses by descent of England, Scotland, Great Britain or the United Kingdom, peers of new creation, Lords of Appeal in Ordinary (who are life peers), Peeresses in their own right, and Life Peers and Life Peeresses created under the Life Peerages Act, 1958. An Irish Peer not in the House of Lords is eligible for election as ■ member of the House of Commons, and unlike Peers who are members of the House of Lords, to

vote in parliamentary Elections. Under the Peerage Act, 1963, a person inheriting a peerage may within one year (or one month in the case of a Member of the House of Commons) disclaim the peerage for life. The subsequent descent of the peerage after his death is not affected.

THE HOUSE OF COMMONS

By the Representation of the People Act (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by ■ similar Act (1918) it was increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615. Irish

representation being reduced from 105 to 13 members. By the *Representation of the People Act* of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act*, 1949, the total membership has now been increased to 630.

THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kepid wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1040. St. Stephen's Chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 13½-ton Hour Bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1850. The dials of the clock are 23 feet in diameter, the hands being 9 feet and 14 feet long (including balance piece). The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sunset to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The Lord High Chancellor of Great Britain is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the Woolsacks, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister, No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord

and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the *Chéquers* estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

- Sir Robert Walpole, *Whig*, April 3, 1721.
- Earl of Wilmington, *Whig*, Feb. 16, 1742.
- Henry Pelham, *Whig*, Aug. 25, 1743.
- Duke of Newcastle, *Whig*, May 18, 1754.
- Duke of Devonshire, *Whig*, Nov. 16, 1756.
- Duke of Newcastle, *Whig*, July 2, 1757.
- Earl of Bute, *Tory*, May 28, 1762.
- George Grenville, *Whig*, April 15, 1763.
- Marquess of Rockingham, *Whig*, July 10, 1765.
- Earl of Chatham, *Whig*, Aug. 2, 1766.
- Duke of Grafton, *Whig*, Dec. 1767.
- Lord North, *Tory*, Feb. 6, 1770.
- Marquess of Rockingham, *Whig*, March 27, 1782.
- Earl of Shelburne, *Whig*, July 13, 1782.
- Duke of Portland, *Coalition*, April 4, 1783.
- William Pitt, *Tory*, Dec. 7, 1783.
- Henry Addington, *Tory*, March 21, 1801.
- William Pitt, *Tory*, May 16, 1804.
- Lord Grenville, *Whig*, Feb. 10, 1806.
- Duke of Portland, *Tory*, March 31, 1807.
- Spencer Perceval, *Tory*, Dec. 6, 1809.
- Earl of Liverpool, *Tory*, June 16, 1812.
- George Canning, *Tory*, April 30, 1827.
- Viscount Goderich, *Tory*, Sept. 8, 1827.
- Duke of Wellington, *Tory*, Jan. 26, 1828.
- Earl Grey, *Whig*, Nov. 24, 1830.
- Viscount Melbourne, *Whig*, July 13, 1834.
- Sir Robert Peel, *Tory*, Dec. 26, 1841.
- Viscount Melbourne, *Whig*, March 18, 1855.
- Sir Robert Peel, *Tory*, Sept. 6, 1841.
- Lord John Russell, *Whig*, July 6, 1846.
- Earl of Derby, *Tory*, Feb. 28, 1852.
- Earl of Aberdeen, *Peelite*, Dec. 28, 1852.
- Viscount Palmerston, *Liberal*, Feb. 10, 1855.
- Earl of Derby, *Conservative*, Feb. 25, 1858.
- Viscount Palmerston, *Liberal*, June 18, 1858.
- Earl Russell, *Liberal*, Nov. 6, 1865.
- Earl of Derby, *Conservative*, July 6, 1866.
- Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
- W. E. Gladstone, *Liberal*, Dec. 9, 1868.
- Benjamin Disraeli, *Conservative*, Feb. 21, 1871.
- W. E. Gladstone, *Liberal*, April 28, 1880.
- Marquess of Salisbury, *Conservative*, June 24, 1885.
- W. E. Gladstone, *Liberal*, Feb. 6, 1886.
- Marquess of Salisbury, *Conservative*, Aug. 3, 1886.
- W. E. Gladstone, *Liberal*, Aug. 18, 1892.
- Earl of Rosebery, *Liberal*, March 3, 1894.
- Marquess of Salisbury, *Conservative*, July 2, 1895.
- A. J. Balfour, *Conservative*, July 12, 1902.
- Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
- H. H. Asquith, *Liberal*, April 8, 1908.
- H. H. Asquith, *Coalition*, May 26, 1915.
- D. Lloyd-George, *Coalition*, Dec. 7, 1916.
- A. Bonar Law, *Conservative*, Oct. 23, 1922.
- S. Baldwin, *Conservative*, May 22, 1923.
- J. R. MacDonald, *Labour*, Jan. 22, 1924.
- S. Baldwin, *Conservative*, Nov. 4, 1924.
- J. R. MacDonald, *Labour*, June 8, 1929.
- J. R. MacDonald, *Coalition*, Aug. 25, 1931.
- S. Baldwin, *Coalition*, June 7, 1935.
- N. Chamberlain, *Coalition*, May 28, 1937.
- W. S. Churchill, *Coalition*, May 11, 1940.
- W. S. Churchill, *Conservative*, May 23, 1945.
- C. R. Attlee, *Labour*, July 26, 1945.
- Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
- Sir A. Eden, *Conservative*, April 6, 1955.
- H. Macmillan, *Conservative*, Jan. 13, 1957.
- Sir A. Douglas-Home, *Conservative*, Oct. 19, 1963.
- J. H. Wilson, *Labour*, Oct. 16, 1964.

OFFICERS OF THE HOUSE OF LORDS

Speaker, The Rt. Hon. Gerald Austin Gardiner, Lord Gardiner

(+ £10,500 as Lord Chancellor) £4,000

*Private Secretary to the Lord Chancellor, T. S. Legg.**Lord Chairman of Committees, The Earl of Listowel, P.C., G.C.M.G.....* £4,875*Clerk of the Parliaments, Sir David Stephens, K.C.B., C.V.O.....* £8,600*Clerk Assistant, R. W. Perceval.....* £6,000*Reading Clerk and Principal Clerk, Public Bills, P. G. Henderson.....* £5,375*Counsel to Lord Chairman of Committees, T. G. Talbot, C.B., Q.C.....* £5,375*Principal Clerks, R. P. Cave (Judicial Office and Fourth Clerk at the Table); E.D. Graham (Private Bills and Committees).....* £4,875*Chief Clerks, J. V. D. Webb; J. E. Grey*
£3,625 to £4,625*Senior Clerks, J. C. Sainty (Clerk of the Journals); M. A. J. Wheeler-Booth (seconded as Special Assistant to the Leader of the House); D. Dewar (seconded as Secretary to the Leader of the House and the Chief Whip); J. A. Vallance White.....* £2,600 to £3,580*Clerk of the Records, M. F. Bond, O.B.E., F.S.A.*

Stancliffe, M.A.....* £879*Editor, Official Report (Hansard), L. W. Bear**£3,625 to £3,800**Shorthand Writer, A. R. Kennedy..... fees**Deliverer of the Vote, P. K. Marsden**£2,444 to £3,455*

DEPT. OF THE SERJEANT AT ARMS

Sergeant at Arms, Rear-Admiral A. H. C. Gordon Lennox, C.B., D.S.O..... £5,375*Deputy do., Lt.-Col P. F. Thorne, C.B.E.**£3,625 to £4,625**Assistant do., Cdr. D. Swanston, D.S.O., D.S.C., R.N. (ret.).....* £2,129 to £3,449*Deputy Assistant do., Major G. V. S. Le Fanu**£2,726 to £3,139*

DEPT. OF THE LIBRARY

Librarian, D. C. L. Holland..... £3,625 to £4,625*Deputy Librarian, D. Menhennet, D.Phil.**£3,064 to £3,625**Assistant Librarian, D. J. T. Englefield**£3,064 to £3,625**Deputy Assistant Librarians, R. F. C. Butcher, V.R.D.; E. C. Thompson; H. J. Palmer; G. F. Lock.....* £2,53 to £3,449

ADMINISTRATION DEPT.

*Clerk Administrator, H. R. M. Farmer, C.B.**£5,375**Accountant, F. J. Wilkin, D.F.M. £2,696 to £3,625**Deputy Accountant, G. Powter.....* £2,240 to £2,705*Head of Establishments Section, H. McE. Allen.....* £2,876 to £3,334

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the Chiltern Hundreds, or Steward of the Manor of Northstead, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the Chiltern Hundreds and the Manor of Northstead as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. Morning sittings on Monday and Wednesday were held from February-July, 1967 and occasionally during 1968. Strangers are present during the debates of both Houses on sufferance and may be excluded at any time; this applies equally to the Press Gallery. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The Quorum of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within four minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The Quorum of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (*see* p. 304).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g. ineligibility to sit owing to his bribery or cor-

ruption of the electors. Such petitions were originally decided by the House itself, but a party feeling was too much inclined to dictate the decision, their trial in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as having caught the Speaker's eye. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "seated and covered." He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the Clerk of the House of Commons, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the Clerk of the Parliaments. Members of the House may put an unlimited number of questions to Ministers, but not more than two demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the House of Commons deals with the subject of Committees, which are of three kinds:—Committee of the Whole House, Select Committees (appointed for a specific purpose) and the Standing Committees which consider public bills and whose composition, though laid down by Standing Orders, is frequently

modified by Sessional Orders. When a bill dealing exclusively with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made *that the question be now put*. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *GUILLOTINE* represents a more rigorous and systematic application of the *Closure*. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of Parliament, but privileges in their accepted mean-

ing are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The Speaker of the House of Commons is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a member is to *Name* him. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the Chairman of Committees, officially the Chairman of *Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes (except when the voting is equal). A Deputy Chairman of *Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679-80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and *Tory* to *Conservative*.

Before the reign of William and Mary (1688-1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of personnel or resignation of the whole body of Ministers.

The accession of George I, who was unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1801 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951, 1953 and 1959 Elections. It is now 10.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a

separate *Liberal Unionist* organization was maintained until 1921, when it was united with the Conservatives under the title of *National Unionist Association of Conservative and Liberal Unionist Organizations*, the members of which became known as *Unionists*.

The Labour Party.—Labour candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

In 1900 the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a three-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip* in the Commons) receiving £3,750; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant de.*) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £2,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

The House of Lords

The Government Whips are: The Captain of the Honourable Corps of the Gentlemen at Arms (Lord Beswick), the Captain of the Queen's Bodyguard of the Yeomen of the Guard (Lord Bowles) and the (Political) Lords in Waiting.

The Conservative Whips are: Earl St. Aldwyn; Lord Goschen; Lord Denham; Earl Ferrers.

The Liberal Whips are Lord Amulree and Lord Henley.

The House of Commons

				[Ministry of Defence since 1964]			

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated only in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister. After the Regency ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a Speaker's Conference of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the Parliament (Qualification of Women) Act con-

taining the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. At the General Election of 1966, 26 women members (19 Labour and 7 Conservatives) were returned. Since that date one woman member (Dame Megan Lloyd George) has died, and one new woman member (Mrs. Winifred Ewing) has been elected; the total therefore remains the same.

POLLING FIGURES AND FORFEITED DEPOSITS

The total electorate at the 1966 general election was 35,964,684; votes cast were 27,283,606.

Since 1918, candidates at parliamentary elections who fail to obtain more than one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge.

Deposits forfeited at the 1966 election totalled 237, 50 more than in 1964. Deposits were lost by 104 Liberal candidates (51 more than in 1964), 9 Conservatives, 3 Labour, 57 Communists, 18 Plaid Cymru, 10 Scottish Nationalists and 36 others. In 1950 the record number of 443 deposits was lost.

SMALL MAJORITIES

Sir H. Nicholls (C.), Peterborough	3
N. R. Wylie (C.), Edinburgh, Pentlands	44
F. J. Silvester (C.) Walthamstow, W. (by-election)	62
R. A. R. MacLellan (Lab.), Caithness and Sutherland	64
D. J. Winnick (Lab.), Croydon, S.	81
J. E. B. Hill (C.), Norfolk, S.	119
J. C. Jennings (C.), Burton	277
R. Body (C.), Holland with Boston	316
G. H. Perry (Lab.), Nottingham, S.	316
Dame Joan Vickers (C.), Devonport	319
J. M. L. Prior (C.), Lowestoft	358

THE HOUSE OF COMMONS BY CONSTITUENCIES

The figures following the name of the Constituency denote the total number of Electors in the Parliamentary Division at the General Election of 1966.

ABBREVIATIONS.—C. = Conservative; Comm. = Communist; N.I. Lab. = Northern Ireland Labour; Ind. = Independent; L. = Liberal; Lab. = Labour; Nat. L. = National Liberal; Scot. Nat. = Scottish Nationalist; Repub. = Republican; U.U. = Ulster Unionist.
An asterisk * denotes membership of the last House for the same division; † for a different division.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1967-68

When Parliament resumed sitting after the summer recess, on Oct. 23, it was continuing the exceptionally long Session that had begun after the General Election of Mar. 31, 1966; and four days were spent in clearing up unfinished business. This included the Abortion Bill, which came up on report in the House of Lords, and Lady Stocks moved an amendment to delete the requirement that one of the doctors concerned with deciding on a termination of pregnancy must be an approved consultant. The amendment was carried by 113-79. A Government amendment to restore to the Bill the so-called "social clause" (requiring possible harm to the physical or mental health of existing members of the family to be considered when deciding for or against termination) was debated at length, and was carried by 86 to 19 votes. The Bill then passed its remaining stages, the House having sat until after midnight to complete the debate. The Lords' amendments were agreed to by the other House on Oct. 25, and the Act received the Royal Assent on Oct. 27 (on which day Parliament was prorogued), together with six other Acts, bringing the total of new Acts passed into law since Oct. 18, 1966, to 137.

CHANGES.—During the Summer recess the Prime Minister had made an extensive redeployment of his ministerial colleagues, the changes (announced on Aug. 29) including two resignations from the Cabinet: Mr. Bowden, Commonwealth Secretary, who left the Commons and accepted a life peerage (as Lord Aylestone), becoming chairman of the Independent Television Authority; and Mr. Jay, President of the Board of Trade, who retired to the back benches. He was joined there by Mr. Bottomley, formerly Minister of Overseas Development; Mr. Willey, formerly Minister of Land

and Natural Resources, and latterly Minister of State for Housing and Local Government; and (in the Lords) Lord Walston, formerly at the Board of Trade. At the same time Mr. Wilson announced that he would take command of the Department of Economic Affairs, although there would also be a Secretary of State for Economic Affairs, to which post he promoted the former Under-secretary, Mr. Shore. Mr. Michael Stewart, who had been Minister of Economic Affairs, was appointed First Secretary of State, his duties to include chairmanship of Cabinet committees on all home matters

except economic affairs. Mr. Gordon Walker, hitherto without a portfolio, was appointed Secretary of State for Education and Science in place of Mr. Crosland, who moved to the presidency of the Board of Trade. Mr. George Thomson replaced Mr. Bowden at the Commonwealth Office; Mr. Prentice moved from Public Building and Works to replace Mr. Bottomley, and was himself succeeded by Mr. Mellish; and promotion came to several junior ministers and backbenchers. The Prime Minister also strengthened Labour's representation in the House of Lords by recommending the creation of 14 new life peerages, including two women and three trade union leaders.

THE QUEEN'S SPEECH.—The State Opening of the new Session took place on Oct. 31, when the Queen read the Speech from the Throne in a packed House of Lords. She was accompanied by the Duke of Edinburgh and, for the first time, by the Prince of Wales and the Princess Anne. Towards the end of the Speech came a paragraph of special significance in that place; it read "Legislation will be introduced to reduce the powers of the House of Lords and to eliminate its present hereditary basis, thereby enabling it to develop within the framework of a modern Parliamentary system. My Government are prepared to enter into consultations appropriate to a constitutional change of such importance." Earlier, it was stated in the Speech that the principal aim of the Government was the achievement of a strong economy, which should combine a balance of payments surplus sufficient to meet our obligations and maintain the strength of sterling with satisfactory growth of output and with full employment. Plans included help for the development areas, larger powers to aid technological advance in industry, and the promotion of a policy for productivity, prices and incomes. A National Loans Fund would be established. Legislation would be introduced to implement recommendations of the Aberfan disaster inquiry tribunal; to integrate road and rail transport under public control, reorganize the inland waterways, and establish a central system of vehicle licensing; and to convert the Post Office into a public corporation. Improved housing and planning, increased compensation for tenant farmers, the welfare of farm animals, prevention of misleading trade descriptions, improved safety and quality of medicines, higher family allowances, educational improvements, law reform—especially gaming law, family law, and the position of justices of the peace—and race relations, were other subjects for legislation referred to in the Speech.

LORDS REFORM.—Both Houses reassembled separately after the Queen had withdrawn, and in the House of Lords a motion for an Address in reply to the Speech was moved by two Labour life peers, Lord Cooper of Stockton and Lord Campbell of Eskan, the former dealing mainly with trade unions and the latter with the need for better understanding between the public and the government. It was for the Opposition leader, Lord Carrington, to raise the subject of reform of their House, on which he said it was not proper that either party should unilaterally alter the Constitution, of which their House was a part, without first seeking agreement with the other parties. Lord Byers (L.) also hoped that reform, to which his party had long looked forward, would be effected by consent. The Earl of Longford, from the Government side, agreed that reform by consent would be best, and said it was intended that negotiations should be entirely genuine. This was part of the attempt to modernize Parliament, and they sought a Chamber embracing the best qualities of the present but with added capacity to carry a

heavier load. Reform must be a three-fold package: in function, composition, and powers. The motion for the Address was agreed to.

In the House of Commons the motion for an Address was moved by Mr. Delargy, a Member since 1945, and seconded by Mr. Ashley, who was first elected a Member in 1966. Mr. Delargy amused the House by recalling that the Peasants' Revolt of 1381, which he said began in his Essex constituency, Thurrock, arose from a demand for higher wages to meet the increased cost of living. Parliament rejected the demand, and even "slipped on another tax—an employment tax." The men of Thurrock liquidated the local tax collectors. Mr. Ashley contented himself with welcoming the proposals about the House of Lords, although, he said, they might seem like "shearing shorn sheep."

NEW LOOK.—The Leader of the Opposition, opening the debate, said he welcomed a reference in the Speech to Rhodesia, and urged the Government to look at that problem from the point of view of moving forward to a new legality, rather than insisting on a return to the old legality first. Mr. Heath said the Government had deliberately opted out of its responsibilities, and never before had a British Government exerted less influence on overseas affairs. At home the situation was equally difficult, with unemployment at its highest level for the time of year since the thirties. Mr. Wilson said one of the main Bills in the Session would be the Transport Bill, and another would be the Industrial Expansion Bill, which would be an instrument in the Government's partnership with industry on a voluntary basis. On Lords reform Mr. Wilson said the peers had an important role in improving legislation and debating issues of great moment. But it was an anachronism that House not responsible to the electorate should have powers "so vast that they were virtually unusable." There would be consultations with all parties on the Government's proposals for reform; but if agreement became impossible and the talks were unconsciously delayed, the Government would go ahead with its own legislation. The debate on the Address occupied five further days, ranging widely over current affairs, and the motion was agreed to on Nov. 7.

DEVALUATION.—On Friday, Nov. 17, the Chancellor of the Exchequer announced, outside the House, devaluation of the £ by 14·3 per cent. to a new rate of \$2.40, after a period of intense international activity in currency transactions. Efforts by M.P.s in the House on that day to extract a statement of the Government's intentions were unsuccessful, and accusations of filibustering were made against ministers who steadfastly held the House to debating the London Cab and the Trustee Savings Banks Bills. The dammed flood of criticism and support was released on the following Monday, Nov. 20, when Mr. Callaghan explained the effects of the devaluation and announced some economy measures. But he had a stormy passage on that day and the two following days during which the House debated a Government motion approving the Chancellor's measures. The motion was eventually carried by 335 to 258 votes. But Mr. Callaghan did not long continue in office as Chancellor after the devaluation. On the first day of the debate he had said "I recommended the Cabinet to devalue. They accepted my advice. It is my immediate responsibility to see that the operation is successful." On Nov. 29 it was announced that he had resigned, exchanging offices with the Home Secretary, Mr. Roy Jenkins. The House of Lords adjourned on Dec. 1 and the

House of Commons on Dec. 21, for the Christmas recess.

ECONOMY MEASURES.—The House of Commons was recalled a day earlier than had been intended, on Jan. 16, to hear the Government's decisions on expenditure cuts and curbs designed, as the Prime Minister said, "to make devaluation work." These included large cuts in the defence forces and their weapons and equipment, notably cancellation of the order for 50 American F111 aircraft, reduction of 75,000 men by the end of 1971, withdrawal of forces from the Far East and the Persian Gulf by the same date, and consequent phasing out of the carriers and cuts in the nuclear-powered submarines programme, a reduction of 80,000 civil defence workers, and the disbanding of the Civil Defence Corps and the Auxiliary Fire Service. Raising of the school leaving age would be deferred two years, to 1973, and the supply of free milk to secondary schools would cease in September, 1968. In the National Health Service, a prescription charge of 2s. 6d. would begin in the Spring, the dental treatment charge would go up from £1 to 3s., and the weekly combined health and insurance stamp contributions would rise by 1s. 6d. (employer 6d., employee 1s.). Other measures concerned cutbacks in housing, roads, and local government spending. Mr. Wilson said the prescription charge and higher dental charge would not be payable by people over 65 or under 15, by expectant or nursing mothers, or the chronic sick. He estimated the total savings, including the higher N.H.S. contributions, at £766m. over the next two years. This review was part of a continuing process which would dominate national economic management over that period, but other measures, including budgetary ones, would be required. The Government's measures were not approved by the Earl of Longford, Lord Privy Seal, who resigned that office. He was replaced by Lord Shackleton, who also succeeded Lord Longford as Leader of the House.

SEARCH FOR SURPLUS.—These proposals met with keen criticism from Members of all parties, especially when the House went on to debate the Transport Holding Company Bill, to increase from £30m. to £60m. the amount the company may borrow. Half the additional money was needed, said Mr. Swinler, in moving the second reading, to complete purchase of the shares of the British Electric Traction bus group. Mr. Peter Walker commented that the Government were saving £25m. by reintroducing prescription charges, and asking for £70m. to nationalize bus services. The Bill was given a second reading by 270-217. A two-day debate on the Prime Minister's economy statement followed, on a Government motion approving it and an Opposition amendment recognizing the need to curtail public expenditure but deplored the defence cuts. Opening the debate, the new Chancellor, Mr. Jenkins, said they needed to work towards a surplus of £500m. a year, but these cuts would not do the whole job. He would open his budget several weeks earlier than usual, and it would necessarily be a harsh one. Increased taxation would be necessary. Mr. Heath said the Government had failed to take effective action directly after devaluation, and the Chancellor's reference to further taxation to come was a further incitement to people to spend, and shops to stock up and thereby increase imports. He urged speedy action. After wide-ranging debate the Opposition amendment was rejected 334-229, and the Government motion was then carried by 304 to 9.

IMMIGRATION.—By the beginning of February it was clear that the legislative programme for the Session would need adjustment because of the heavy demands being made on all Members. The Leader of the House, Mr. Crossman, announced on Feb. 1 that the Bill to convert the Post Office into a public corporation, and the reform of the House of Lords, would not be dealt with in the current Session. One Bill that could not be postponed was the Revenue (No. 2) Bill, to implement savings proposed when devaluation was announced. These, Mr. Diamond reminded the House in moving the second reading on Feb. 8, included the abolition of export rebates, and the cancellation of special employment tax refunds and bonuses to manufacturers, except those in development areas. This Bill passed through all its stages speedily, and received the Royal Assent on Mar. 13. The Home Secretary, in a statement on Commonwealth immigration on Feb. 23, announced the introduction of a Bill to control the immigration of people holding U.K. passports who had no substantial connection with this country. This was necessitated by the recent large influx of Asians from East Africa holding U.K. passports—over 7,000 had arrived in the past three months. The Commonwealth Immigrants Bill was promptly introduced, and after a debate that was often acrimonious it was given a second reading on Feb. 27 by 372-62. After some amendment in Committee next day the Bill passed its third reading in the House of Commons by 145-31; but this was not until 7.30 next morning, after a continuous debate of 15 hrs. 25 mins. The House of Lords sat all night to pass the Bill through all stages, and after a record non-stop sitting of 19½ hours it received the Royal Assent shortly before 10 a.m. on Mar. 1.

FOREIGN OFFICE CHANGE.—Rhodesia, which had been the subject of several statements and questions during the Session, aroused heated debate in both Houses on Mar. 6 and 7, after news of the execution in Salisbury of three African murderers, on whose behalf an extension of clemency had been sought from the Queen which was not recognized as valid by Mr. Smith's government. A fresh international currency crisis, with much buying and selling of gold, occurred in early March. On Mar. 14 the House of Commons, after a further debate on Rhodesia, sat all night to debate a time-table motion ("guillotine") for the consideration of the long and complicated Transport Bill. During the night (as afterwards appeared) the Prime Minister was informed from Washington of moves to stop the run on gold. Mr. Wilson consulted Mr. Jenkins and Mr. Shore, and about midnight they all attended a Privy Council at which the Queen signed a proclamation temporarily closing the stock exchanges and the London gold market. Mr. Brown, the Foreign Secretary, who was not consulted, discovered after the Council had ended what had happened. With other ministers he had an interview with Mr. Wilson, and on Mar. 15 Mr. Brown resigned from the Government. He made a personal statement, critical of the methods of government, in the House on Mar. 18. Mr. Wilson, having accepted the resignation, promptly appointed Mr. Michael Stewart, First Secretary of State, who had preceded Mr. Brown as Foreign Secretary, to return to the Foreign Office as his successor. At the same time Mr. Wilson announced that the Commonwealth Office would be amalgamated with the Foreign Office under Mr. Stewart, with Mr. Thomson continuing in the Cabinet as Commonwealth Secretary until amalgamation was completed.

THE BUDGET.—This event caused considerable

stir, but the Budget, which was presented four days later, diverted public attention away from Mr. Brown's backbench seat to the Treasury Bench. Mr. Jenkins introduced, on Mar. 19, a Budget which broke several records—and introduced it with notable fluency and mastery of facts and figures. It was a harsher Budget than any of the prophets had foreseen; his speech, of two and a quarter hours, was longer than any Budget speech since the end of the last war; and it imposed the heaviest total increase in taxation, £933m., ever proposed by any Chancellor in history. Mr. Jenkins defined the main purposes of his Budget as the reduction of home consumption by two per cent. a year, the increasing of savings, and the speedy achievement of a balance of payments surplus of £500m. a year. His chief surprises were his decisions not to raise the standard rate of income tax, to make no changes in hire-purchase terms, to levy a one-year "wealth tax" and to increase the rates of selective employment tax by 50 per cent. He also surprised, and pleased, his hearers by announcing that the duty on beer would not be changed; but other favourite milk-cows of chancellors—wines and spirits, tobacco, petrol—were all further burdened to produce the needed revenue.

INCREASED DUTIES.—Excise duties were to be increased by amounts equivalent to a rise of 2s. 6d. on a bottle of spirits, 1s. on heavy wines and 6d. on light wines, the same increases to apply to British wines. The new rates would yield an additional £15m. of revenue, the Chancellor estimated. Tobacco duty would go up by 4s. 4d. a lb., equivalent to ad. on a packet of 20 cigarettes of most brands, and 3d. or 4d. on an ounce of pipe tobacco, to bring in £30m. extra revenue. Increased duty on hydrocarbon oils (mainly petrol and diesel oil) would add 4d. to the price of a gallon, but there would be no increase in duty on heavy oils (not used for road transport). Motorists, however, would be further taxed, through increases in the excise licences—for cars, from £17 10s. to £25 a year (with £9 3s. instead of £6 8s. for a 4-month licence); for motor cycles, three-wheeled and pedestrian-controlled vehicles, increases from £2, £4 and £8 to £2 10s., £5 and £10; for light goods vehicles an increase of about one-third, and heavy vehicles about 50 per cent. higher duty. The total yield of higher oil duties and vehicles licences would be £202m.

Shopping and betting were the other two main fields of the Chancellor's activities. All three rates of purchase tax were to be increased immediately, and a fourth rate introduced. The 11 per cent. rate (on such articles as furniture, carpets, and clothing, except children's) would become 12½ per cent.; the existing 16½ per cent. rate (confectionery, ice cream, soft drinks) would go up to 20 per cent.; the 27½ per cent. rate (cars, motor cycles, gramophones, tape recorders, refrigerators, vacuum cleaners, washing machines, television sets) would be increased to 33½ per cent.; and a new rate of 50 per cent. tax would be applied to "luxury" goods, which would include a wide range of articles, from Christmas cards to jewellery, from ash trays to cine projectors and cameras, from diaries to gramophone records, from lipsticks to furs. As for betting, the Chancellor doubled the existing 2½ per cent. tax on stake money, raised the pool betting duty on football pools and fixed odds football betting from 25 per cent. to 33½ per cent. on stakes, and also increased the rates of the gaming licence duties by various rates, the £100 rate to £125, the £50,000 rate to £75,000. He estimated the yield from higher purchase tax at £163m. and that from higher betting duties at £30m.

FACTS AND SACRIFICES.—Mr. Jenkins began his speech by repeating what he had said on Jan. 17 that they must have "a stiff Budget followed by two years of hard slog." The purpose of his Budget, he said, was to present the facts, impose the sacrifices and provide the opportunities. The inevitability of devaluation last November was shown by the balance of payments figures for the fourth quarter, which gave an identified deficit of about £350m., making the total deficit for 1967 £540m. Probably more than half of this was due to special factors such as the closure of the Suez Canal, and the dock strike; but there was a continuing underlying deficit which was to some extent attributable to lack of competitive strength. The vital thing this year and next year was to put the balance of payments into substantial surplus; which meant sacrificing the normal claims of home demand. But when the adjustment had been completed there would be no reason why personal consumption should not rise annually in accordance with increased output. Therefore he must budget for a two per cent. cutback a year in consumption from the one per cent. rise which would have been likely without budgetary action. This would require "extremely severe increases in taxation."

The Chancellor said he intended to publish soon, for the first time, economic forecasts for the 18-month period from the second half of 1967 to the first half of 1969. According to these forecasts we could expect, after the cut in personal consumption, an average rate of growth in the gross domestic product in real terms of at least three per cent. a year over the period; if exports and output grew quickly, four per cent. was possible. During 1967 average earnings per head rose by about six per cent. but the increase in productivity rose no more than three per cent. The implications for our costs were obvious; and they must hold back pressures for wage and salary increases. New legislation would be needed with the main object of limiting these increases to 3½ per cent.—and this would include company dividends—except where more was justified by specific productivity agreements. Restraint on the growth of money incomes was essential, but a 3½ per cent. ceiling on wage increases could press hard on people with small incomes and large families. He therefore proposed to increase family allowances from Oct. 8, 1968, by a further 3s. weekly, additional to the 7s. increase payable from April 9, 1968. But to concentrate this new benefit where need was greatest he would adjust the child dependency and family allowances (against income tax) and recover the further increase from those who paid tax. He would meet the net cost of this 3s. increase by a small change in national insurance benefits, by discontinuing payment of benefit for the first three days off work.

REVENUE AND LOANS.—Total revenue in 1967-8 was expected—allowing for the Budget's coming before the end of the financial year—to be £1,177m., i.e. £84m. more than the estimate; and total expenditure £1,0878m. (£519m. higher). The surplus on the Consolidated Fund (the difference between revenue and expenditure) was thus £299m., a decrease of £435m. on last year's Budget estimate when converted to the new bases. This surplus was transferred to the National Loans Fund. The provisional total of loans from the fund was £1,748m. The reduction of £18m. on the Budget estimate was mainly the result of a shortfall of £135m. in drawings by local authorities from the Public Works Loan Board, offset by additional lendings to the nationalized industries. After taking into account the £299m. surplus on the Consolidated Fund, the balance on the National

Loans Fund, which is met mainly from borrowing, was expected to be £1,449m., against an estimated £1,032m. For the coming year, Consolidated Fund revenue from taxation and other receipts was estimated at £11,952m. ■ the bases of existing taxation rates, and total expenditure at £11,312m. The immediate outlook prevented any relaxation of credit restraint by the banks, but there was an opportunity for helping the National Savings Movement, and to do this he was making three changes. The limit on personal holdings of current certificates would be raised from £750 to £1,000. A new British Savings Bond would replace the National Development Bond from April 1, carrying six per cent. interest a year plus ■ £2 per cent. tax-free bonus if held for five years. These new bonds would be in £5 units with a £10,000 limit, and could be cashed at one month's notice. And in the case of Premium Savings Bonds, he would increase the size of the prize fund, the number of draws, and the number of prizes. There would be ■ weekly draw for one £25,000 prize, in addition to the normal full-scale monthly draws.

NATIONAL LOTTERY.—These changes would be financed by increasing the interest rate on which the prize fund was calculated from 4½ to 4¾ per cent. Mr. Jenkins went on to refer to another form of revenue raising, which was not saving but which could attract money—a National Lottery. It might well raise a sizable sum for public purposes. He would invite Mr. Tinn (*Lab.*), whose Bill to establish such ■ lottery had had its second reading in the House, to withdraw it in favour of an enabling clause, on which there would be a free vote, in the Finance Bill. He added that they were not looking to ■ lottery as ■ major way out of their difficulties. It would be a very small item in the context of this Budget.

Turning to his taxation proposals, the Chancellor said he had decided against any novel taxes. He had also decided against increasing direct taxation that would reduce the pay packet, and in favour of obtaining the bulk of additional revenue from indirect taxation. It was no longer the case that direct taxation was substantially paid only by the well-to-do. Our direct taxation on earned incomes was high, perhaps too high, but this was not ■ year for reducing it. On the other hand, indirect taxation inevitably affected the retail price index, which direct taxation did not. But indirect taxation offered the individual a choice. "If he is horrified by the impost he can abstain from some part of his consumption, and produce the same demand-reduction by saving." Mr. Jenkins then set out his proposals for increasing indirect taxation (summarized above), which he said should be selective. After stating the increased duties ■ vehicles he said that, in view of the increased duty on the heaviest goods vehicles, and the increased fuel duty, the Minister of Transport (Mrs. Castle) had agreed to drop the wear-and-tear and the indivisible load charges proposed in the Transport Bill (then before the House). This provoked Opposition laughter, which changed to cries of protest when Mr. Jenkins added that the duties on these vehicles would be increased by about 50 per cent., with lighter increases for light goods, farmers' and showmen's vehicles.

NOT YET ENOUGH.—At this point the Chancellor said the yield of the increases announced so far would be £440m. for a full year (£397m. in the current year), but this was "not nearly enough." He had still ■ substantial sum to find, and only two main sources to look to for large amounts: the selective employment tax and direct taxation.

He announced that ■ inquiry would be made into the effects of selective employment tax. Meanwhile, he proposed to increase all rates of S.E.T. by 50 per cent. from Sept. 2, 1968—an announcement that drew sounds of anguish and protest from Members. This increase would yield an additional £165m. net in a full year after he had made certain concessions, which included leaving the rates of tax on part-time employees as they were by increasing the refunds; extending the rates for part-timers to all employees over 65; and refunding the tax to hotels in rural parts of development areas. He also announced increases in employers' contributions (made as part of the weekly insurance stamp) to the Redundancy Fund, from the same date. This led to direct taxation, where he said his inclination was towards fewer loopholes and lower rates. Major alterations in the tax code would involve long preparation and much extra work for the Inland Revenue department, so they must be postponed. But he would propose three changes in Estate Duty, which would affect gifts made before death, gifts of insurance policies that ranked ■ separate estate, and discretionary trusts; and three changes in Corporation Tax, relating to scrip options, partnerships, and annuities. He would speed the payment of income tax, surtax, corporation tax and capital gains tax by reducing from three months to two the period after payment became due during which no interest was charged on the tax owed; and he expected this change, operational from July 1, would bring into the year 1968-9 about £25m. of tax which would otherwise not be received until the following year. The practice of allowing barristers and certain other professional men to pay no tax on earnings received after retirement would cease immediately, although there would be a "tapering off" for those aged 51 or over on April 6, 1968. Other changes relating to personal taxation included new conditions for certain life assurances; the ending of full tax allowances to bridegrooms for the year of marriage; and reduction of tax allowances in respect of dependent children for whom the increased family allowances were paid. Also, investment income of minors would in future be taxed, by being aggregated with their parents' income. But the Chancellor made a concession to people aged 65 and over, raising the age exemption from £401 to £415 for a single person, and from £643 to £665 for married couples.

WEALTH TAX.—Mr. Jenkins proposed no change in the income tax or surtax rates. But he aroused cheers and protests by his remarks about "unearned" incomes, leading up to his proposal for "an impost on the wealth of private individuals." This would be ■ special charge for one year only, on those with investment income exceeding £3,000, as computed for the charge of surtax for 1967-8. This graduated "wealth tax" would be at rates ranging from 2s. in the £ on incomes of £3,000-£4,000, to 9s. above £8,000. He estimated the yield at £100m., bringing the total product of these changes in direct taxation (which included minor changes in the capital gains tax) to £321m. (£227m. in 1968-9); and the total yield from all the changes he had announced to £923m. for the full year (£775m. in 1968-9). Those figures included, he said, measures announced before the Budget—increase in corporation tax to 42½ per cent. and tax recoveries of the 7s. increase in family allowance. The net result was to raise the estimated surplus to be transferred from the Consolidated Fund to the National Loans Fund in 1968-9 from £640m. to £1,386m., and thus to reduce the National Loans Fund borrowing requirement

from £1,104m. to £358m., a reduction of £746m. Mr. Jenkins concluded by saying that there was now no rational cause for the economy's not going forward to strong success.

HELP FOR HOTELS.—Making the customary first comment on the Chancellor's speech, the Leader of the Opposition said it had been "a hard, cold Budget without a glimmer of warmth." Even the concession about family allowances was going to be paid for by the sick. It had increased the people's burden by £923m., which was more than two and a half times the maximum which any chancellor had ever imposed in any one Budget. And this had been done by a Government which had promised the country in March 1966 that there would be no general increase in taxation. Since the Labour Party came to power three and a half years ago they had imposed £2,216m. worth of extra taxation. There were no incentives, either personal or corporate, in this Budget. Mr. Heath said he resented other private enterprise countries—the U.S.A., West Germany, Italy, Benelux, Sweden—which would never dream of instituting statutory wage or price controls, telling our Government that this was what they had to impose on the British people.

During the Budget debate, which occupied three days, Mr. Crosland announced an extensive incentives scheme for hotels. The Government proposed to provide development grants and loans for new buildings and extensions, and for plant and equipment; but long-term residential hotels would be excluded, and hotels in development areas would be eligible for higher percentage grants and loans. The maximum amount of loan for any one project would be £500,000. Assistance would be available only for hotel projects begun between March 31, 1968, and April 1, 1971, for completion before March 31, 1973.

The debate ended on Mar. 25, when a resolution to amend the law on the National Debt was carried by 332–248, and a resolution on the special employment tax was carried by 266–9. Other resolutions were agreed to, and the Finance Bill was brought in and read the first time.

MORE CHANGES.—Ten days after Budget Day, and possibly influenced by the economic difficulties with which the Budget had been so sombrely concerned, came a notable electoral upset for the Government. Four by-elections were held on the same day, Mar. 28, and proved to be a "grand slam" for the Conservatives. They held the seat at Warwick and Leamington with a greatly increased majority, and won three seats from Labour, at Acton, Dudley, and Meriden. The average swing from Labour to the Tories in the four constituencies was 18·4 per cent.

Mr. Wilson made another major change in the name and functions of a ministry on April 5, when he announced that the Ministry of Labour was to be renamed the Department of Employment and Productivity, and would include some of the responsibilities of the Department of Economic Affairs. He transferred to this reconstructed department Mrs. Castle, Minister of Transport, and gave her the additional title of First Secretary of State. Mr. Wilson also announced, in answer to a question in the House, that he had given up the special responsibilities as "overlord" of the Department of Economic Affairs which he had assumed on Aug. 29.

Mrs. Castle's promotion was one of 16 Government changes announced by the Prime Minister on April 5, involving the departure from the Cabinet of Mr. Gordon Walker after just over seven months in office ■ Secretary for Education and Science.

Mr. Darling also resigned as Minister of State, Board of Trade. The Treasury team was strengthened by the appointment there, for the first time, of a Minister of State, Mr. Taverne taking this new post on promotion from his under-secretaryship at the Home Office, where he was replaced by a newcomer to Parliament, Mr. Elystan Morgan. Mr. Peart, after 3½ years as Minister of Agriculture, became Lord Privy Seal and Leader of the House in place of Mr. Crossman, who remained in the Cabinet as Lord President with special oversight of the social services. Mr. Cledwyn Hughes became Minister of Agriculture, and Mr. George Thomas moved from the Commonwealth Office to succeed him as Secretary for Wales, and became ■ Privy Councillor. Mr. Walker's place at Education was filled by Mr. Short, who was replaced as Postmaster General by Mr. Mason, from the Ministry of Defence. Making way for Mrs. Castle, Mr. Gunter became Minister of Power; the former Minister of Power, Mr. Marsh, replaced Mrs. Castle as Minister of Transport; and the office of Paymaster General, vacant since the departure of Mr. Wiggo to the House of Lords and the race courses, went to Lord Shackleton, formerly Lord Privy Seal, who continued to lead the House of Lords. For consequential changes and appointments after the Easter recess, see p. 315.

TAXATION DEFENDED.—In the debate on the 2nd reading of the Finance Bill (April 24) critics of the Budget proposals directed their attacks mainly on the increased selective employment tax, the aggregation of children's income with that of their parents, and the once-for-all wealth levy. Of S.E.T. Mr. Jenkins said it worked smoothly, broadened the taxation base, probably increased productivity, cost one-third of the amount of other taxes in administration, and had one-fifth of the effect on the cost of living. The Bill was given its 2nd reading 286–232 (maj. 54). An Opposition motion to take the committee stage on the floor of the House instead of in a standing committee was rejected 291–223 (maj. 68). On May 21 the Bill, which comprised 56 clauses and 20 schedules, was subjected to the "guillotine" procedure, a Government timetable motion being carried 303–245, and confirmed by 283 votes to 228 on May 23 after the standing committee had endured two all-night sittings, the second of which culminated in a voting tie. Mr. Dunnett (Lab.) had moved an amendment on life policies which Mr. Diamond said was already covered in the Bill. The Opposition refused to let Mr. Dunnett withdraw it, and on dividing with Mr. Dunnett abstaining, the voting was 21–21. The deputy chairman cast his deciding vote for the Govt. When the Bill was recommitted to the House (June 18) Mr. Higgins (C.) moved to reduce purchase tax on greetings cards, including those sold for charities. Mr. Lever replied that cards were not among essential items, the higher rate tax would add about a ha'penny to the cost of the average card, the concession would cost about £3,750,000, and there should be no preferential taxation for charities operating ■ commercial enterprise. The amendment was rejected 234–173 (maj. 61).

NO STATE LOTTERY.—The Chancellor's suggestion of a national lottery was embodied in clause 50 of the Bill, and an amendment to delete it was moved by Mr. Temple (C.) and received support from both sides of the House when it was debated (July 2). Mr. Timm (Lab.), speaking in favour of the clause, said opinion polls showed that about 75–85 per cent of public opinion wanted such a lottery.

But Miss Herbison (*Lab.*) said that for ■ Labour chancellor to be even thinking in terms of such a lottery was "a sorry spectacle." Mr. Lever, defending the clause, said the proposal was not that the Government should take all the profits, but that it should take only the same rate of betting duty as the pools paid, and devote the surplus to worthy causes, guided by a national lotteries board. On a free vote the amendment was carried 116-76 (maj. against the Govt. 90). The three party leaders did not vote. On the same day the Government announced that it would give Liverpool Corporation financial assistance to buy Aintree racecourse, thus ensuring the continuance of the Grand National. The report stage of the Finance Bill was concluded and it passed the 3rd reading on July 4 by 295 votes to 243 (Govt. maj. 52). The Bill passed through all stages in the House of Lords on July 17 and received the Royal Assent on July 26.

PRICES AND INCOMES.—The Government's third Prices and Incomes Bill in the present Parliament was hotly debated on and reading (May 21) when Mrs. Castle said it was designed to enable the nation to expand the economy on the basis of an export-led boom by exploiting the opportunities given by devaluation. Mr. Carr (C.) described her speech as an expedition in "cloud-cuckoo land" and put forward a 7-point alternative economic programme. Several Labour M.P.'s spoke in opposition to the Bill, about which Mr. Shinwell said many had grave doubts, and the Government's majority fell to 35 on the motion for the 2nd reading (290-255). Because of the volume of Government legislation the unusual course was taken during the report stage in the Commons of introducing ■■■ identical No. ■ Bill in the Lords, where it was given a 2nd reading on June 27. On the same day the original Bill was read the 3rd time in the Commons 280-238 (maj. 42), and next day the second Bill was withdrawn in the Lords, who then debated the first Bill in committee. It passed the 3rd reading on July 8 and received the Royal Assent on July 10. Out of this Act further controversy arose in the Commons in the last week before the recess over the Prices and Incomes (General Considerations) Order, debate on this (July 22) involving Mrs. Castle's intervention in the busmen's wages negotiations. When this debate ended the Opposition protested that they had been denied ■ division on the Order, and on July 25 Mr. Macleod moved that it be withdrawn. After debate Mr. Wilson promised ■ statement would be made next day, but in spite of this assurance the Government's majority against the motion fell to 24 (262-238).

PEERS REVOLT.—The problem of House of Lords reform came to a point of crisis during a two-day debate (June 17-18) on the Southern Rhodesia (United Nations) Sanctions Order, 1968. It had become apparent already that, although ■■■ all-party committee on reform was nearing agreement, it was unlikely that the reform Bill referred to in the Queen's Speech could be introduced in the current session. But many peers were so strongly opposed to the Sanctions Order—which was approved in the other House (June 17) by 319 to 246 (maj. 73)—that it was evident that the House of Lords might reject it. Speakers on the Government side found in this possibility ■ constitutional issue, but Opposition peers argued that their House had ■ constitutional right and duty to give the Commons time to reconsider. In the event, the Government motion to approve the Order was defeated, in ■ more than usually crowded House, by 193 votes to 184 (maj. against the Govt. 9). This defeat in the Lords involved a delay of 28 days to

enable the Commons to think again, and caused some M.P.'s to utter dark threats of instant abolition. The Prime Minister, in a statement on June 20, said the Commons "cannot accept what has happened, and cannot but treat it as a denial of democracy and a total frustration of the spirit of our constitution." He announced the end of the all-party talks on reform and the Government's intention to introduce radical reform legislation at an early date. The Lords, unabashed, administered three defeats to the Government during the first day (June 24) of the committee stage of the Transport Bill, with majorities against the Government of 67, 77 and 47. Meanwhile the machinery continued to turn. The Rhodesian Sanctions Order, differently worded, was approved by the House of Commons by 298 to 242 (July 15), and after it had been debated in the House of Lords for the second time three days later the Order was agreed to without ■ division, many Conservative peers walking out when the question was put.

PARLIAMENTARY DISCIPLINE.—The normal routine of activities in the House of Commons was disturbed several times between the Easter and Summer recesses by allegations of breach of Parliamentary privilege and other happenings. Dame Irene Ward (who first entered the House in 1931) made a defiant protest on May 23 during a division on a timetable motion on the Finance Bill debates. During the division she took a stand before the mace at the foot of the clerks' table, obstructed the tellers when they returned to announce the voting figures, and failed to obey the Speaker's request, several times repeated, to resume her seat. Eventually he "named" Dame Irene, and the Leader of the House moved her suspension. A division was called, but Mr. Whitelaw, Conservative chief whip, told his fellow members that if they voted they would be voting against the Speaker, with the result that there were no tellers against the motion. Mr. Speaker then declared the motion carried, and as Dame Irene persisted in trying to voice her protest from where she stood Dr. King directed the Sergeant at Arms to escort her from the Chamber. She went quietly. The effect of the motion was to bar her from entering the Chamber for a week, until the Whitsun recess.

On the same day Mr. Hannan, the Member for Glasgow, Maryhill, complained of breach of privilege in a letter written by Mrs. Ewing, the recently elected Scottish Nationalist Member for Hamilton, and published in *The Scotsman*. The letter alleged that "the customary stance of some M.P.'s while at the House is closer to the many bars than to the Bar of the House," which Mr. Hannan called "a gross libel." It was, he said, maliciously attacking the behaviour of Members "many of whom, like myself, are members of the temperance group in the House." After the customary 24 hours' consideration Mr. Speaker ruled (May 24) that the complaint did raise ■ matter of privilege. Mrs. Ewing said she regretted any idea that she had impugned the honour of the House or Mr. Hannan, and denied malice, adding that her letter was intended to refer to attendance in the Chamber, and her remark about bars to be taken as a joke. After she had left the Chamber Mr. Peart moved reference to the Committee of Privileges; but after debate the motion was withdrawn.

An unusual event occurred on June 24 in the House of Lords, where questions of breach of Parliamentary privilege are rarely raised, when Lord Drumalbyn drew attention to an article in *The Times Business News*. The letter related to ■ Bill then before the House. After debate this motion, too, was withdrawn.

MEMBER'S "GROSS CONTEMPT".—Much more serious in its results, however, was a complaint made in the House of Commons on May 27 by Mr. Palmer, Member for Bristol, Central, about an article in *The Observer* on biological warfare. Next day the Speaker ruled that it raised a matter of privilege, and Mr. Peart moved reference to the Committee of Privileges. The motion was carried 398–14. The Committee duly investigated the matter, and it was not until almost two months later that it reported that Mr. Dalyell, the young Member for West Lothian, had been guilty of a breach of privilege and "gross contempt of the House" in giving Mr. Marks, a journalist, confidential proof of evidence taken in private by the Select Committee on Science and Technology (of which Mr. Dalyell was a member) concerning the biological and chemical warfare establishment at Porton Down. The Committee also found the journalist concerned and the editor of the newspaper (Mr. David Astor) had committed contempt of the House but recommended no action against them. The report was brought before the House by Mr. Peart on July 24, when, after Mr. Dalyell had expressed his deep regrets and withdrawn, the Leader of the House moved that he be reprimanded by the Speaker. After debate, during which it was pointed out that Mr. Dalyell had not handed over the document for money, and that it contained nothing secret, the motion was carried 244–52 (maj. 192). Mr. Dalyell then returned to his place, and in a sad and embarrassed silence the House heard Dr. King, wearing a black tricorn hat over his wig, gravely read out the reprimand. As Mr. Peart recalled, it was 21 years since the last similar occasion, and everyone in the Chamber was deeply moved. Mr. Dalyell, who said afterwards that he did not intend to resign his seat, first entered the House in 1962.

LATE Sittings.—The full programme of legisla-

PUBLIC ACTS OF PARLIAMENT 1967–68

The list commences with notes on two Public Acts of Parliament which received the Royal Assent before September 1967, and which were mentioned briefly in the last summary. Those Public Acts which follow received the Royal Assent after August, 1967. The date stated after each Act is the date on which it came into operation.

APPROPRIATION ACT 1967 (July 27, 1967) applies a sum out of the Consolidated Fund to the service of the year ending March 31, 1968, and makes provision for appropriation of further supplies.

POLICE (SCOTLAND) ACT 1967 (s. 39 on a day to be appointed, the remainder on October 27, 1967) consolidates statute law relating to Police in Scotland and the execution of warrants in the border counties of England and Scotland and repeals obsolete provisions.

DANGEROUS DRUGS ACT 1967 (October 27, 1967) provides for the control of drug addiction, amongst other things by giving the Secretary of State power to make regulations, for example, to prohibit any medical practitioner from administering or supplying such drugs to drug addicts; and makes further provision relating to drugs.

SEA FISHERIES (SHELLFISH) ACT 1967 (November 27, 1967) consolidates, with amendments, statute law relating to shellfish fisheries and shellfish.

SEA FISH (CONSERVATION) ACT 1967 (November 27, 1967) consolidates, with corrections and improvements, the statute law regulating the commercial use of, fishing for, and landing of, sea fish and authorizes measures for the increase or improvement of marine resources.

VESSELS (PROTECTION) ACT 1967 (October 27, 1967) makes it an offence to take away a vessel without authority, or to use or be a party to the use

tion announced in the Queen's Speech could not be adhered to despite many morning and late night sittings; and as it was, the heavy pressure drew protests in both Houses. In the House of Lords (May 22) Lord Carrington said the Labour Party were doing great disservice to parliamentary government in the way they were pushing legislation through Parliament. M.P.'s protested bitterly on May 29 when the detailed and controversial Transport Bill was being debated in the House itself while 15 different committees were considering other measures "upstairs." Members were frequently called from the committee rooms by the bells summoning them to the lobbies to vote in divisions on the Transport Bill. The report stage of this Bill was the subject of a four-day "marathon" debate in the week beginning May 27. On that day and each of the next three days the House of Commons sat into the small hours of the following day, and on each of those three days there was an additional morning sitting on the Bill, which was at last given its 3rd reading by 265 votes to 225 on May 30. Next day the M.P.'s were glad to adjourn for their Whitsun recess until June 11.

The last week before the Summer recess began was almost as busy. Beginning on July 22 M.P.'s sat into the small hours of Tuesday and Wednesday, had a morning session on Wednesday followed by an all-night sitting until 10.38 a.m. on Thursday, sat again until nearly midnight, and wound up with a full day's sitting on Friday, adjourning them until Oct. 14. The peers were less fortunate—they lost two weeks of their Summer holiday. They not only sat on all five days of that week—until almost midnight on four of them—but they had to prolong their deliberations into the following week, rising on Aug. 1 after hearing the Royal Assent given to 35 new Acts. These brought the total of completed Acts since April 23 to 77. With some business still uncompleted the House of Lords then dispersed, to reassemble on Oct. 7.

of a vessel so taken unless the act was done in the reasonable belief that the owner would, if asked, have given his consent; penalties on conviction, a fine or imprisonment; and provides for connected purposes.

COUNTRYSIDE (SCOTLAND) ACT 1967 (October 27, 1967) makes provision for the better enjoyment of the Scottish countryside; establishes a Countryside Commission for Scotland; provides for the improvement of recreational and other facilities, e.g. the creation of country parks, and for connected purposes.

ABORTION ACT 1967 (April 27, 1968) amends and clarifies the law relating to the termination of pregnancy by registered medical practitioners. It will be lawful so to do provided, *inter alia*, two medical practitioners are of the opinion that continuance of the pregnancy would involve a greater risk to the life of the pregnant woman. The Act does not apply to the destruction of a child capable of being born alive; but it does make provision for persons having a conscientious objection to participation in termination of pregnancy.

LEASEHOLD REFORM ACT 1967 (ss. 34–36 on October 27, 1967, Part II on November 27, 1967, the remainder on January 1, 1968) enables tenants of houses held on long leases at low rents to acquire

the freehold or an extended lease. (See also Legal Notes.)

EXPIRING LAWS CONTINUANCE ACT 1967 (December 26, 1967) continues in force certain laws which otherwise would expire.

FAMILY ALLOWANCES AND NATIONAL INSURANCE ACT 1967 (December 26, 1967) increases family allowances under the Family Allowance Act, 1965 and makes related adjustments of certain benefits under the National Insurance Act 1965 or the National Insurance (Industrial Injuries) Act 1965; makes further provision as to the time at which a person ceases to be a child within the meaning of those Acts; and for connected purposes.

COAL INDUSTRY ACT 1967 (December 26, 1967) makes further provision for borrowing by and grants to the National Coal Board and for supplementary payments to redundant workers in the coal industry; and for connected purposes.

CONSOLIDATED FUND ACT 1968 (February 1, 1968) applies a sum out of the Consolidated Fund to the service of the year ending on March 31, 1968.

PROVISIONAL COLLECTION OF TAXES ACT 1968 (February 1, 1968) consolidates the Act of 1913 and other statute law relating to the provisional collection of taxes or matters connected therewith.

CAPITAL ALLOWANCES ACT 1968 (Principal provisions on April 6, 1968) consolidates Parts X and XI of the Income Tax Act 1952 with related provisions in that Act and subsequent Acts, but only the portion relating to capital expenditure and allowances, and not patents or certain agricultural estate management expenditure.

ERSKINE BRIDGE TOLLS ACT 1968 (February 15, 1968) gives the Secretary of State power to levy tolls, to provide parking, to impose prohibitions, restrictions and other requirements in respect of the use of a new road over the River Clyde at Erskine; and for connected purposes.

TRUSTEE SAVINGS BANKS ACT 1968 (February 15, 1968) amends the law relating to trustee savings banks, e.g. it increases the rate of interest on ordinary deposits to £3 13s. od per cent.

LONDON CAB ACT 1968 (February 15, 1968) makes miscellaneous provisions regarding taxis in London, e.g. it extends the power of the Secretary of State to regulate fares to all journeys within the metropolitan police district and the City of London.

MAURITIUS INDEPENDENCE ACT 1968 (February 29, 1968) makes provision for, and in connection with, the attainment by Mauritius of fully responsible status within the Commonwealth.

COMMONWEALTH IMMIGRANTS ACT 1968 (s. 3 and s. 5 on March 8, 1968 the remainder on March 1, 1968) amends the law which governs the entry of those Commonwealth citizens into the U.K. subject to immigration control and makes further provision on connected matters, e.g. by extending to 28 days the period after arrival within which any examination of persons landing in the U.K. must begin.

TRANSPORT HOLDING COMPANY ACT 1968 (March 6, 1968) amends or clarifies s. 29 Transport Act 1962 by increasing the powers of the Company to borrow money and clarifying its powers to acquire, hold and dispose of securities in companies.

REVENUE ACT 1968 (March 13, 1968) reduces the refund of selective employment tax except in development areas, terminates export rebates but gives the Treasury power to re-introduce them.

TEACHERS' SUPERANNUATION (SCOTLAND) ACT 1968 (March 13, 1968) amends the law in Scotland relating to the superannuation and other benefits payable to teachers and certain other persons employed and connected with education, but it does not affect the existing basis of the Superannua-

tion and Family Benefit Schemes; and provides for connected purposes.

NATIONAL LOANS ACT 1968 (April 1, 1968) except where otherwise expressly provided in the Act establishes a National Loans Fund which is to be substituted for the Consolidated Fund in certain Acts; and makes various provisions relating to Government borrowing and the management of the Government's financial business.

PUBLIC EXPENDITURE AND RECEIPTS ACT 1968 (ss. 1 (1), 2 May 6, 1968, remainder on March 20, 1968) increases National Health Service and flat-rate National Insurance contributions and strengthens the provisions as to enforcement under the National Insurance Act 1965 and makes provisions for various connected matters, e.g.: providing that milk shall no longer be supplied to secondary school pupils.

CONSOLIDATED FUND (NO. 2) ACT 1968 (March 28, 1968) applies certain sums out of the Consolidated Fund to the service of the years ending on March 31, 1967, 1968 and 1969.

NEW TOWNS (SCOTLAND) ACT 1968 (April 1, 1968) consolidates statute law relating to new towns in Scotland and to matters connected therewith with various corrections and improvements.

EDUCATION ACT 1968 (April 10, 1968) amends the law relating to changes in the character, size or situation of county or voluntary schools to enable special age limits to be adopted for existing as well as new schools and makes other provisions with respect to school premises, e.g. as to the Secretary of State's power to relax the prescribed standards for school premises.

CONSULAR RELATIONS ACT 1968 (day to be appointed) adopts the Vienna Convention on Consular Relations dealing with the functions, privileges and immunities of career and honorary consular officers; provides for reciprocal restrictions of privileges and immunities and for connected matters; and extends certain provisions of the Diplomatic Privileges Act 1964 to consular officers.

CRIMINAL APPEAL ACT 1968 (September 1, 1968) consolidates the statute law relating to appeals in criminal cases to the criminal division of the Court of Appeal and to the House of Lords.

COURTS-MARTIAL (APPEALS) ACT 1968 (September 1, 1968) consolidates the statute law relating to Courts-Martial appeals and appeals from the Courts-Martial Appeal Court to the House of Lords.

CRIMINAL APPEAL (NORTHERN IRELAND) ACT 1968 (September 1, 1968) consolidates the statute law relating to the Court of Criminal Appeal in Northern Ireland, the jurisdiction of the Court and appeals therefrom to the House of Lords.

LEGITIMATION (SCOTLAND) ACT 1968 (June 8, 1968) amends and codifies the law of Scotland relating to the legitimation of illegitimate persons by the subsequent marriage of their parents; makes provision for the recognition in Scotland of legitimation under foreign law and the effects of such recognition; and for connected purposes.

RENT ACT 1968 (June 8, 1968) consolidates the statute law relating to protected or statutory tenancies; rents under regulated or controlled tenancies; furnished lettings; and other related statutes.

COMMONWEALTH TELECOMMUNICATIONS ACT 1968 (May 8, 1968) provides for the legal capacity of the Commonwealth Telecommunications Bureau and repeals provisions relating to the Commonwealth Telecommunications Board.

LOCAL AUTHORITIES' MUTUAL INVESTMENT TRUST ACT 1968 (May 30, 1968) extends the scope of the powers of investment made collectively by local authorities through Local Authorities' Mutual Investment Trust.

EXPORT GUARANTEES ACT 1968 (May 30, 1968) consolidates the statute law relating to export guarantees.

FIREARMS ACT 1968 (August 1, 1968) consolidates the Firearms Act 1937 and 1965, the Air Guns and Shot Guns etc. Act 1962, Part V of the Criminal Justice Act 1967 and certain connected enactments.

WILLS ACT 1968 (May 30, 1968) restricts the operation of s. 15 of the Wills Act 1837 so that if a person who or whose spouse is a beneficiary under a will, attests the will, the gift will not be avoided if the will is duly executed without his attestation.

TRADE DESCRIPTIONS ACT 1968 (November 30, 1968) replaces the Merchandise Marks Acts by fresh provisions prohibiting misdescription of goods, services, accommodation and facilities provided in the course of trade; prohibits false or misleading indications as to prices of goods; and makes provision for connected purposes.

AIR CORPORATIONS ACT 1968 (May 30, 1968) increases the borrowing powers of the B.E.A., and provides for connected purposes.

HOUSING (FINANCIAL PROVISIONS) (SCOTLAND) ACT 1968 (August 30, 1968) consolidates the statute law relating to the giving of financial assistance for the provision or improvement of housing accommodation in Scotland and to other connected financial matters.

INDUSTRIAL EXPANSION ACT 1968 (May 30, 1968) provides for financial support for industrial projects calculated to improve efficiency and productive capacity, and promote or support technological improvements (*e.g.* the Concorde and the *Queen Elizabeth II*) and in that connection extend the powers of the National Research Development Corporation and the Industrial Reorganisation Corporation; and makes copious provisions for related matters.

CUSTOMS DUTIES (DUMPING AND SUBSIDIES) AMENDMENT ACT 1968 (July 3, 1968) makes further provision regarding the imposition of customs duties where goods have been dumped or subsidized.

AGRICULTURE (MISCELLANEOUS PROVISIONS) ACT 1968 (Part I on September 3, 1968, the remainder on July 3, 1968) makes further provision with respect to livestock welfare, provides for additional payments to certain tenants of agricultural holdings who receive compensation for disturbance, etc. in respect of their holdings, provides further for the termination of agricultural holding tenancies in Scotland acquired by succession; and provides for drainage charges, rates and grants in England and Wales, and makes many other provisions for related matters.

WATER RESOURCES ACT 1968 (July 3, 1968) amends s. 27 Water Resources Act 1963 and provides for related purposes.

Maintenance Orders ACT 1968 (August 3, 1968) amends the statute law relating to matrimonial, guardianship and affiliation proceedings by removing the upper limit on the weekly rate of the maintenance payments ordered by the magistrates court.

EDUCATION (No. 2) ACT 1968 (various dates) makes further provision for the government and conduct of colleges of education and other institutions of further education and special schools maintained by local education authorities.

SALE OF VENISON (SCOTLAND) ACT 1968 (July 3, 1968) provides for the registration of dealers in venison, and for such dealers to keep records; and for related matters.

GAS AND ELECTRICITY ACT 1968 (July 3, 1968)

extends the borrowing powers of the Gas Council and Area Gas Boards, and enables the Electricity Council, the Scottish Electricity Boards and the Gas Council to borrow foreign currency, and provides for related purposes.

FAMILY ALLOWANCES AND NATIONAL INSURANCE ACT 1968 (various dates) increases family allowances under the Family Allowances Act 1965 and makes related adjustments of certain benefits under the National Insurance Act 1965 and the National Insurance (Industrial Injuries) Act 1965; and for related purposes.

COUNTRYSIDE ACT 1968 (August 3, 1968) enlarges the functions of the National Parks Commission (now to be called the Countryside Commission), confers new powers on local authorities and other bodies for the conservation and enhancement of natural beauty and for the benefit of those resorting to the countryside and makes further provisions for related purposes.

FINANCE ACT 1968 (July 26, 1968) grants certain duties, alters other duties and amends the law relating to the National Debt and the Public Revenue and makes further provision in connection with finance; for example, where a person's aggregate investment income exceeds £3,000 and his surtax personal allowance, he is liable for a special charge; a person whose taxable amount for capital gains tax for the year of assessment does not exceed £50 is exempt from capital gains tax.

BRITISH STANDARD TIME ACT 1968 (October 27, 1968) establishes the time for general purposes in the U.K. at one hour in advance of Greenwich Mean Time throughout the year until October 31, 1971, unless made permanent under the provisions in the Act.

HIGHLANDS AND ISLANDS DEVELOPMENT (SCOTLAND) ACT 1968 (July 26, 1968) empowers the Highlands and Islands Development Board to form, promote and acquire shares in companies whose business or other activities contribute to the economic or social development of the Highlands and Islands; and provides for related matters.

SWAZILAND INDEPENDENCE ACT 1968 (July 26, 1968) provides for, and in connection with, the attainment by Swaziland on September 6, 1968 of fully responsible status within the Commonwealth.

INTERNATIONAL MONETARY FUND ACT 1968 (July 26, 1968) enables effect to be given to certain amendments of the Articles of Agreement of the International Monetary Fund; and provides for connected purposes.

HOVERCRAFT ACT 1968 (July 26, 1968 except for s. 4 (3) on a day to be appointed) makes further provision with respect to hovercraft.

THEFT ACT 1968 (January 1, 1969) revises the law of England and Wales as to theft and related offences by establishing a new concept of criminal liability in relation to offences against property.

ADOPTION ACT 1968.

APPROPRIATION ACT 1968.

CARAVAN SITES ACT 1968.

FRIENDLY AND INDUSTRIAL AND PROVIDENT SOCIETIES ACT 1968.

HEALTH SERVICES AND PUBLIC HEALTH ACT 1968.

HEARING AID COUNCIL ACT 1968.

INTERNATIONAL ORGANISATIONS ACT 1968.

OVERSEAS AID ACT 1968.

PRICES AND INCOMES ACT 1968.

SEWERAGE (SCOTLAND) ACT 1968.

SOCIAL WORK (SCOTLAND) ACT 1968.

THEATRES ACT 1968.

PARLIAMENTARY ASSOCIATIONS

THE INTER-PARLIAMENTARY UNION

Place du Petit-Saconnex, Geneva 19, Switzerland.
The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

BRITISH GROUP.

*Hon. Presidents, The Lord Chancellor; Mr. Speaker.
President, Rt. Hon. J. H. Wilson, O.B.E., M.P.*

Vice-Presidents, The Marquess of Salisbury, K.G.; The Earl of Scarbrough, K.G., G.C.S.I., G.C.I.E., G.C.V.O.; The Rt. Hon. Sir Alec Douglas-Home, K.T., M.P.; The Rt. Hon. E. R. G. Heath, M.B.E., M.P.; The Rt. Hon. J. S. B. Lloyd, C.H., C.B.E., T.D., Q.C., M.P.; The Lord Butler of Saffron Walden, P.C., C.H.; The Rt. Hon. R. M. M. Stewart, M.P.; The Rt. Hon. G. A. Brown, M.P.

Chairman A. Roberts M.P.

Secretary, Brigadier M. J. A. Paterson, D.S.O.

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" in 1911. Its aims are to promote understanding and co-operation among those persons engaged in and those formerly associated with Parliaments and Legislatures in the countries of the Commonwealth by the exchange of information and visits, and by conferences of Members of such Parliaments and Legislatures; similarly to promote understanding and co-operation with legislators of countries outside the Commonwealth having close historical and parliamentary associations with it.

The Association now consists of ■ main branches in Parliaments of the self-governing countries of the Commonwealth and 4 auxiliary branches. There are also branches in State, Provincial and Territorial Legislatures, as well as in the Parliaments of Northern Ireland, the Isle of Man, and the States of Jersey. In addition, there are 13 affiliated branches in Legislatures of those Commonwealth countries which are not completely self-governing, and 12 subsidiary branches in colonial territories making a total of 88 branches. Commonwealth Parliamentary conferences and general meetings are held every year in different countries of the Commonwealth.

Chairman of the General Council, Hon. L. O. Sindling (Bahamas).

*Secretary-General, R. V. Vanderfelt, O.B.E., Houses
of Parliament, S.W.1.*

*Secretary, United Kingdom Branch, P. G. Molloy,
M.C., Westminster Hall, Houses of Parliament,

Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, e.g. the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Waterguard.

NOTE.—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

ADMIRALTY
(see Royal Navy)
**MINISTRY OF AGRICULTURE,
FISHERIES AND FOOD**
Whitehall Place, S.W.1. †

[01-839-7711]

The Ministry of Agriculture, Fisheries and Food was established in April 1955 and assumed responsibilities previously discharged by the Ministry of Agriculture and Fisheries and the Ministry of Food.

The Ministry has a general responsibility for food supplies, both home produced and imported, and for food manufacture, distribution and storage.

The Ministry provides financial assistance and free technical advice to the agricultural (including horticultural) and fishing industries in England and Wales. Financial assistance under the Agriculture Acts of 1947 to 1967 includes deficiency payments in respect of most of the main agricultural products to ensure a fair return to the producer, and a number of production grants and subsidies to promote improved farming efficiency. Free advice is available on farm management, and the technical aspects of agricultural production, including farm buildings and fixed equipment, land drainage, and crop and animal husbandry.

The Ministry is also responsible for schemes designed to improve the quality of livestock and of other agricultural products through the dissemination of the results of research carried out by the Agricultural Research Council and other institutions and through the control and eradication of animal and plant disease and of pests. It is also concerned with the safety, health, welfare and wages of agricultural workers.

The Ministry is concerned with the interests and development of the fishing industry in England and Wales, including the processing and distributive trades, whaling and research.

The Ministry has primary responsibility for administering part of the food and drugs legislation, in particular the composition, labelling and advertising of food; for slaughterhouses and meat inspection, and for the quality and cleanliness of milk; the Ministry maintains relations with Commonwealth and other countries and participates in the work of a number of international bodies, concerned with agriculture, fisheries and food.

The Ministry is also responsible for the Royal Botanic Gardens, Kew.

*Minister of Agriculture, Fisheries and Food, THE RT.
HON. CLEDWYN HUGHES, M.P.* £8,500

Private Sec., D. F. Williamson

*Assistant Private Secs., P. A. Cocking; Miss
I. E. Wheeler.*

AGRICULTURAL RESEARCH COUNCIL

160 Great Portland Street, W.t

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931. In accordance with the provisions of the *Agricultural Research Act*, 1956, the Council is charged with the organization and development of agricultural and food research and may, in particular, establish or develop institutions or departments of institutions and make grants for investigation and research relating to the advance of agriculture. The Council is financed from the Parliamentary vote of the Department of Education and Science.

Council, The Hon. J. Astor, M.B.E. (*Chairman*); The Hon. J. Addington; J. D. Alston, C.B.E.; Prof. T. A. Bennett-Clark, C.B.E., Ph.D., F.R.S.; Prof. F. W. R. Brambell, C.B.E., D.Sc., Ph.D., F.R.S.; Prof. P. W. Brian, Sc.D., F.R.S.; Major J. E. M. Dugdale, T.D.; A. C. Frazer, C.B.E., M.D., D.Sc., Ph.D.; Prof. J. E. Harris, C.B.E., Ph.D., F.R.S.; W. E. Jones; Prof. O. V. S. Heath, D.Sc., F.R.S.; Prof. B. Katz, M.D., Ph.D., Sc.D., F.R.S.; J. S. Martin; Prof. C. L. Oakley, M.D., D.Sc., F.R.S.; J. Reid, C.B.; Sir John Ritchie, C.B., F.R.S.E.; J. I. Smith; Prof. A. R. Ubbelohde, C.B.E., D.Sc., F.R.S.; R. H. Watherston, C.B.E.

Secretary, Sir Gordon Cox, K.B.E., T.D., D.Sc., F.R.S. *Deputy Secretary*, W. G. Alexander, C.B.E., F.R.S.E. *Assistant Secretaries*, W. E. Berry, Ph.D.; D. J. Parkinson, O.B.E.; F. J. S. Culley.

Scientific Advisers to the Secretary, K. N. Burns; D. L. Gunn, C.B.E., D.Sc., Ph.D.; D. Rudd Jones, Ph.D.; R. Scarisbrick, F.I.D.; K. L. Robinson, D.Sc.; G. C. Stevenson; C. C. Webster, C.M.G., Ph.D.

Principal, L. S. Porter, O.B.E. *Senior Chief Executive Officer*, J. H. Shimwell. *Chief Executive Officers*, F. V. Bird; K. H. J. Clarke; M. R. Beauchamp; P. Ramsden.

Senior Executive Officers, R. Matthews Jones; C. Mason.

For the Research Institutes under the control of the Council, see *Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the various Commonwealth Governments, including one for the dependent territories, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Commonwealth and the Republic of Ireland. The Governments of the Commonwealth and Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. A Commonwealth Bureau of Agricultural Economics has since been established and International Food Information Service inaugurated. The Annual Reports of the

Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman, R. F. Turnbull.

Vice-Chairman, M. K. A. Agyeman.

Secretary, Sir Thomas Scrivenor, C.M.G.

Institutes

Commonwealth Institute of Entomology, Natura History Museum, S.W.7. *Director*, (vacant).

Commonwealth Mycological Institute, Ferry Lane, Kew, Surrey. *Director*, G. C. Ainsworth, Ph.D.

Commonwealth Institute of Biological Control, Gordon Street, Curepe, Trinidad. *Director*, F. J. Simmonds, Ph.D., D.Sc.

Bureaux

Agricultural Economics, 31a St. Giles, Oxford.—*Director*, J. Owen Jones.

Animal Breeding and Genetics, Animal Breeding Research Organization, King's Buildings, West Mains Road, Edinburgh 9, Scotland.—*Director*, J. P. Maule.

Animal Health, Central Veterinary Laboratory, New Haw, Weybridge, Surrey.—*Director*, M. R. Dhanda.

Animal Nutrition, Rowett Research Institute, Bucksburn, Aberdeen, Scotland.—*Director*, Miss D. L. Duncan, Ph.D.

Dairy Science and Technology, National Institute for Research in Dairying, Shinfield, nr. Reading.—*Director*, E. J. Mann.

Forestry, Commonwealth Forestry Institute, South Parks Road, Oxford.—*Director*, C. Swabey, C.M.G.

Helminthology, The White House, 103 St. Peter's Street, St. Albans, Herts.—*Director*, Miss S. M. Willmott, Ph.D.

Horticulture and Plantation Crops, East Malling Research Station, East Malling, nr. Maidstone, Kent.—*Director*, G. K. Argles.

Commonwealth Bureau of Pastures and Field Crops, Hurley, nr. Maidenhead, Berks. *Director*, C. L. Skidmore.

Soils, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, W. D. Brind.

AIR MINISTRY (see Royal Air Force)

AIR REGISTRATION BOARD

Brabazon House, Redhill, Surrey

[Redhill: 65966]

Set up on Feb. 26, 1937, under the *Companies Act*, the Board is an autonomous non-profit making limited company. Delegated to the Board are certain powers relating to the design, construction and maintenance of civil aircraft; investigation by surveyors of aircraft and associated equipment for the purpose of recommending to the Minister concerning issues and renewals of certificates of airworthiness. The Board also conducts technical examinations for licences of aircraft maintenance engineers, flight engineers and commercial pilots.

Chairman, The Lord Kings Norton, Ph.D.

Chief Executive, R. E. Hardingham, C.M.G., O.B.E.

AIR TRANSPORT LICENSING BOARD

Gaywood House, Great Peter Street, S.W.1.

[01-222-7231]

Established by the *Civil Aviation (Licensing) Act*, 1960, to license air services (with certain exceptions). The Board considers representations in relation to air transport services by U.K. registered aircraft, or to facilities, tariffs or charges in connection therewith, reporting their conclusions and recommendations to the Board of Trade.

<i>Chairman</i> , Sir Daniel Jack, C.B.E.	£5,750
<i>Deputy Chairman</i> , Sir John Evans, K.B.E., C.B.	£4,000
<i>Members</i> , Sir Roy Allen, C.B.E.; E. Baldry, O.B.E.; J. M. Drummond; Sir Fiston How, C.B.; J. H. Lawrie; J. J. Taylor, O.B.E.	
	each 18 gns. per session
<i>Secretary</i> , C. R. F. Lark.....	£3,500 to £4,500

COLLEGE OF ARMS OR HERALDS COLLEGE

Queen Victoria Street, E.C.4

[City: 2762]

The College of Arms is open daily from 10-4 (Saturdays, 10-1) when an Officer of Arms is in attendance to deal with enquiries by the public, though such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There ■■ 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for ■ Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., G.B.E., Royal Victorian Chain.

Kings of Arms

Garter, Sir Anthony Richard Wagner, K.C.V.O. D.Litt., F.S.A.

Clarendon, (vacant)

Norroy and Ulster, Richard Preston Graham-Vivian, M.V.O., M.C.

Heralds

Lancaster, John Riddell Bromhead Walker, M.V.O., M.C.

Chester, Walter John George Verco, M.V.O. (*Earl Marshal's Secretary*).

Windsor (and Registrar), Alexander Colin Cole, F.S.A. *Richmond*, John Philip Brooke Brooke-Little, F.S.A. *Somerset*, Lt.-Col. Rodney Onslow Dennys, O.B.E., F.S.A.

York, Conrad Marshall John Fisher Swan, Ph.D.

Pursuivants

Rouge Croix (vacant).

Rouge Dragon (vacant).

Bluemantle (vacant).

Portcullis (vacant).

COURT OF THE LORD LYON

H.M. Register House, Edinburgh

[031-556-7255]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Sennachie* of Scotland's Celtic Kings, adjudicates rights to ■■ and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chieftainship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As Royal Commissioner in Armory, he grants

Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birthbribes. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£84) and matriculations (£22) are payable to H.M. Exchequer.

Lord Lyon King of Arms, Sir Thomas Innes of Learney, G.C.V.O., LL.D., F.S.A.Scot., Advocate

Three Herald

Rothesay, Lt.-Col. H. A. B. Lawson, M.V.O., F.S.A. Scot.

Marchmont, James Monteith Grant, w.s.

Albany, Sir Iain Moncreiffe of that Ilk, Bt., Ph.D., Advocate.

Three Pursuivants

Kintyre, Charles Eliot Jauncey of Tullichettle, Q.C. *Carrick*, Malcolm Rognvald Innes of Edingight, W.S., F.S.A., Scot.

Unicorn, John Inglis Drever Pottinger.

Lyon Clerk and Keeper of Records, Malcolm Rognvald Innes of Edingight, W.S., F.S.A. Scot. *Procurator-Fiscal*, Ivor Reginald Guild, W.S. *Herald Painter*, Mrs. Katherine Chart. *Macer*, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

■ Carlton Gardens, S.W.1

[Whitehall: 3935]

Appointed in May, 1924, "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open ■ the said Commission, if they so desire, to call the attention of any of Our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We do authorize and empower you, or any three or more of you, to visit and personally inspect such places ■ you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, Sir Colin Anderson.

Commissioners, The Marquess of Anglesey, F.S.A.; John Betjeman, C.B.E.; Sir Hugh Casson, A.R.A., F.R.I.B.A.; Howard Colvin, C.B.E.; Ralph Freeman, C.V.O., C.B.E.; Sir Gilbert Ingfield, C.B.E., T.D.; The Lord Llewelyn-Davies, F.R.I.B.A.; Raymond Erith, R.A.; The Lord Esher, R.I.B.A.; Sir Frederick Gibberd, C.B.E., A.R.A.; The Lord Holford, A.R.A.; Sir Leslie Martin, C.B.E.; Henry Moore, O.M., C.H.; Prof. N. B. L. Pevsner, C.B.E., Ph.D., F.S.A.; John Piper; Peter Shepheard, F.R.I.B.A.; Sir Basil Spence, O.M., O.B.E., T.D., R.A., F.R.I.B.A.

Secretary, The Hon. Godfrey Samuel.

ROYAL FINE ART COMMISSION FOR

SCOTLAND

22 Melville Street,

Edinburgh 3

[Edinburgh 225-5434]

Commissioners, The Lord Johnston, T.D. (*Chairman*); J. A. Coia, C.B.E., R.S.A., F.R.I.B.A.; Sir Charles Connell; W. A. Fairhurst, C.B.E.; Prof. F. Fielden, F.R.I.B.A.; C. L. Matthew, F.R.I.B.A.; Prof. Sir Robert Matthew, C.B.E., A.R.S.A., P.R.I.B.A.; R. Philipson, R.S.A.; A. Rechab, O.B.E., F.R.I.B.A.; Lady Victoria Wemyss, C.V.O.; H. A. Wheeler, A.R.S.A.

NATIONAL GALLERY

Trafalgar Square, W.C.2

[Whitehall: 7618-91]

Hours of opening.—Weekdays 10 to 6 (June-Sept. Tuesdays and Thursdays 10 to 9), Sundays and Boxing Day 2 to 6. Admission free. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1870, 1887, 1911, 1928, 1930, 1937 and 1961. Expenses for 1968-69 were estimated at £442,000.

TRUSTEES

Sir John Witt (*Chairman*); Henry Moore, O.M., C.H.; Miss C. V. Wedgwood, C.B.E.; Sir Karl Parker, C.B.E., Ph.D.; W. J. Keswick; Denis Mahon, C.B.E.; Prof. W. V. Maynard, C.B.E., F.R.S.; Andrew Forge; John Piper; The Lord Robbins, C.B.; Sir Edward Playfair, K.C.B.

OFFICERS

Finance and Establishments, R. H. Mitchem.....	£2,345 to £2,845

NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2

[Whitehall: 85xx]

Open Monday to Friday 10 to 5. Saturday 10 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a gallery of the portraits of the most eminent persons in British history, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1869, £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £8,000 for purchase of portraits, was estimated at £94,000 for 1968-69.

Chairman, The Lord Kenyon.

Trustees, The Lord President of the Council; The President of the Royal Academy of Arts; Field-Marshal Sir Gerald Templer, K.G., G.C.B., G.C.M.G., K.B.E., D.S.O.; R. W. Ketton-Cremer, F.S.A.; Lawrence Gowring, C.B.E.; The Earl of Euston, F.S.A.; J. H. Plumb, Ph.D., Litt.D., F.S.A.; A. D. Powell, C.B.E.; The Very Rev. S. J. A. Evans, F.S.A.; Sir Gyles Isham, Bt., F.S.A.; The Viscount de l'Isle, F.C., P.C., G.C.M.G., G.C.V.O.; Sir John Summerson, C.B.E., F.B.A., F.S.A.; Dame Helen Gardner, D.B.E., F.B.A.; C. S. Cockerell, C.B.E.; The Countess of Longford.

Director, Keeper and Secretary, R. C. Strong, Ph.D., F.S.A..... £4,390

Assistant Keeper (I), J. F. Kerslake, F.S.A..... £1,869 to £3,039

TATE GALLERY

Millbank, S.W.1

[0x-828-4444]

Hours of opening.—Weekdays 10 to 6. Sundays and Boxing Day 2 to 6. Admission free, except to temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The Tate Gallery comprises two national art collections: (a) British painting, from the 16th century to the present day, including works by Turner, Blake, Constable and the Pre-Raphaelites; (b) Modern Foreign Painting, from the Impressionists, and Modern Sculpture, British and foreign. There is an almost continuous programme of temporary exhibitions within the field of the collection. The Gallery was opened in 1897, the cost of erection (£80,000) being defrayed by Sir Henry Tate, who also contributed the nucleus of the present collection. The Turner Wing, built at the expense of Sir Joseph Duveen and his son, Lord Duveen, was opened in 1920. Lord Duveen also defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. Expenses for 1967-68 were estimated at £289,000.

Director, N. R. Reid..... £4,950

Keeper of the British Collection, M. R. F. Butlin..... £3,625 to £4,125

Keeper of the Modern Collection, R. E. Alley..... £3,625 to £4,125

Keeper of Conservation, S. Slabczynski..... £3,625

Deputy Keeper, Mrs. J. Jeffreys..... £3,064 to £3,625

Assistant Keepers (Class I), M. G. Compton; R. Morphet..... £1,869 to £3,039

WALLACE COLLECTION

Hertford House, Manchester Square, W.1

[0x-935-0087]

Admission free. Open on weekdays 10 a.m. to 5 p.m.; Sundays 2 p.m. to 5 p.m. Closed on Good Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the nation by the widow of Sir Richard Wallace, Bt., K.C.B., M.P., on her death in 1897, and Hertford House was subsequently acquired by the Government. The collection includes pictures, drawings and miniatures, French furniture, sculpture, bronzes, porcelain, armour and miscellaneous objets d'art. The total net expenses were estimated at £74,000 in 1967-68.

Director, F. J. B. Watson, C.V.O., F.S.A..... £4,000

Assistant Directors, R. A. Cecil; A. V. B. Norman, F.S.A. (Scot.)..... £1,744 to £2,914

NATIONAL GALLERIES OF SCOTLAND

Mound, Edinburgh

UNITED KINGDOM ATOMIC ENERGY AUTHORITY

xx Charles II Street, S.W.1
[10-930-6262]

Established by the *Atomic Energy Authority Act*, 1954, the Authority took over, on August 1, 1954, the control of atomic energy research and development. The Minister of Technology is responsible to Parliament for general atomic energy policy and for money provided for the Authority.

The Authority is organized in groups, ■ shown below:—

(a) the *Research Group*. The Research Establishment at Harwell, Berks., conducts fundamental research into nuclear physics and atomic energy and provides information to the other establishments. It includes the Education and Training Centre. Thermonuclear research is now concentrated at Culham. New uses of radioisotopes are investigated at Wantage.

(b) the *Weapons Group*. Research work ■ atomic weapons is carried on at the Research Establishment, Aldermaston, Berks.

(c) the *Reactor Group*. Responsible for the design, construction and development of nuclear power reactors, and controls the Dounreay Experimental Reactor Establishment in Caithness and the Atomic Energy Establishment at Winfrith, Dorset. It also acts as engineering consultant for the Electricity Boards, overseas organizations and the British Consortia formed for the building of nuclear power stations. Headquarters are at Risley, Lancs.

(d) the *Production Group*. Responsible for the operation of the nuclear reactors at Calder Hall and Chapelcross and for management of the uranium and plutonium production factories at Springfields in Lancashire, Windscale in Cumberland, and Capenhurst in Cheshire.

(e) the *Engineering Group*. Responsible for the design and construction of Authority plants, works and buildings. Headquarters are at Risley.

Chairman, J. M. Hill, Ph.D. £11,000

Deputy Chairman, Sir Charles Cunningham, K.C.B., K.B.E., C.V.O. £10,000

Members (Full-time), J. C. C. Stewart, C.B.E. (Reactors); Alf Chief Marshal Sir Denis Barnett, G.C.B., C.B.E., D.F.C. (Weapons); Dr. J. B. Adams, C.M.G., F.R.S. (Research). each £7,000 to £9,500 (Part-time) Sir Frank Kearton, O.B.E., F.R.S.; S. J. Pears; The Lord Carron. each £1,000; J. C. Duckworth; E. S. Booth, F.R.S. (unpaid).

Secretary, D. E. H. Peirson, C.B.E.

BRITISH AIRPORTS AUTHORITY

■ Buckingham Gate, S.W.1.

Set up under the *Airports Authority Act*, 1965, to manage the three London airports—Heathrow, Gatwick and Stansted—and Prestwick Airport, from April 1, 1966.

Chairman, P. G. Masefield. (part-time) £6,000

BRITISH BROADCASTING CORPORATION

Broadcasting House, Portland Place, W.1

[10x-580-4408]

The BBC was incorporated under Royal Charter as successor to the British Broadcasting Company, Ltd., whose licence expired Dec. 31, 1926. Its present Charter came into force July 30, 1964, and expires July 31, 1976. The Chairman, Vice-Chairman and other Governors are appointed by the Crown. The BBC is financed by revenue from receiving licences for the Home services and by ■ Grant in Aid from Parliament for the External services. The total number of licences in force in March 1968 was 16,618,237, of which 15,033,361 were for combined radio and television licences and 20,428 for combined radio and colour television services.

Chairman, The Lord Hill of Luton, P.C.

Vice-Chairman, The Lord Fulton. £2,000

Governors, Lady Baird, C.B.E. (Scotland), £2,000;

Prof. G. Williams, D.Litt. (Wales), £2,000; The

Lord Dunleath, T.D. (N. Ireland); Sir Ralph

Murray, K.C.M.G., C.B.; Sir Robert Bellinger, G.B.E.; P. N. Wilson, O.B.E., D.S.C.; T. Jackson; Dame Mary Georgina Green, D.B.E.; Sir Learie Constantine, M.B.E. (each) £1,000

Director-General, Sir Hugh Greene, K.C.M.G., O.B.E. (from March 31, 1969, C. J. Curran).

Managing Directors, H. Wheldon, O.B.E., M.C. (Television); F. G. Gillard, C.B.E. (Radio); O. J. Whitley (External Broadcasting).

Directors, J. H. Arkell, C.B.E. (Administration); J. Redmond (Engineering); Hon. K. H. L. Lamb (Public Affairs).

Deputy Director of Engineering, D. B. Weigall. Assistant Director of Radio, R. D'A. Marriott, C.B.E., D.F.C.

Director, Programmes, Television, D. F. Attenborough. Controller, Finance, J. G. L. Francis, C.B.E.

General Manager, Publications, R. S. C. Hall, C.B.E. Legal Adviser, E. C. Robbins, C.B.E.

Controller, Information Services, G. T. M. de M. Morgan, M.C.

Head of Publicity, G. Campey, O.B.E.

Head of Secretariat, R. D. Pendlebury.

Controllers of Regional Offices Scotland, A. Milne, Broadcasting House, Queen Margaret Drive, Glasgow, W.2.

Northern Ireland, B. W. Maguire, Broadcasting House, Ormeau Avenue, Belfast. Wales, J. H. Rowley, C.B.E., Broadcasting House, Llandaff, Cardiff.

Midlands, P. M. Beech, Broadcasting House, 52 Carpenter Road, Edgbaston, Birmingham, 15. North, R. Stead, C.B.E., Broadcasting House, Piccadilly, Manchester 1.

South and West, A. D. Hawkins, O.B.E., Broadcasting House, Whiteladies Road, Clifton, Bristol 8.

BRITISH EUROPEAN AIRWAYS CORPORATION

Bealine House, Ruislip, Middlesex

[Viking: 1234]

Chairman, Sir Anthony Milward, C.B.E. £11,000

Deputy Chairman, K. A. Keith. (part-time) £2,000

Chief Executive, H. E. Marking, M.C.

Operations Director, J. W. G. James, O.B.E.

Chief Public Relations Officer, W. Simpson, O.B.E., D.I.C.

Secretary and Solicitor, M. J. Lester.

BRITISH OVERSEAS AIRWAYS CORPORATION

B.O.A.C. Headquarters, London Airport,

Hounslow, Middlesex

[Skyport: 5511]

Established in 1939, British Overseas Airways Corporation acquired, on April 1, 1940, the air transport undertakings of Imperial Airways and British Airways, which had been at the disposal of the Secretary of State for Air since the outbreak of war.

B.O.A.C. is the larger of the two Government Corporations which are charged with the task of developing and operating British scheduled air transport services under the provisions of the Air Corporations Act, 1967. It operates round-the-world services and services to Africa, the Middle and Far East, Australia and New Zealand, and North and South America. In June 1968, the Corporation was operating about 100 routes, with unduplicated route mileage of about 250,000. On these routes there were more than 200 services weekly in each direction.

The members of the Corporation are appointed by the President of the Board of Trade.

Chairman, C. E. M. Hardie, C.B.E. (part-time)

Deputy Chairman and Managing Director, K. Granville, C.B.E. £9,500

BRITISH RAILWAYS BOARD

222 Marylebone Road, N.W.1.

[or-262-3232]

The British Railways Board was established by the *Transport Act*, 1962 and assumed the railway and certain other associated assets of the former British Transport Commission on January 1, 1963. The Board's duty is to provide railway services in Great Britain and such other ancillary services and facilities as appear expedient. These include hotel and catering and certain shipping services.

Its Members are appointed by the Minister of Transport and, with the approval of the Minister, the Board has set up five Regional Railway Boards to whom it delegates certain management and operational functions. The Board reserves to itself general financial control, industrial relations of a national character, determination of the future size and shape of the system, design and manufacture of equipment, and approval of major engineering projects.

Chairman, Sir Henry Johnson, C.B.E. £12,500
Vice-Chairmen, W. G. Thorpe £10,000;
 J. M. W. Bosworth £13,000

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

[01-930-5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836). The Commissioners have three main tasks:

(1) the management of their capital assets so that they may earn income;

(2) the proper distribution of that income; and

(3) the discharge of a large number of administrative duties conferred on them by Acts of Parliament and Measures of the Church Assembly.

The Commissioners' income for the year ended March 31, 1968, was derived from the following sources:

Stock exchange investments.....	£11,651,380
Land and property.....	6,019,342
Mortgages and loans.....	3,043,159
Money received for particular beneficiaries.....	1,175,475
	£21,889,356

This income was used as follows:

Clergy stipends and pensions.....	£15,367,227
Clergy houses (maintenance, outgoings, provision and improvement).....	2,346,596
Other church property.....	502,313
Other grant schemes.....	130,746
Added to capital to improve future income.....	1,304,994
Administration.....	1,101,193
General reserve (to be used for major schemes).....	1,130,287
	£21,889,356

Constitution

The Archbishops, the 4x diocesan Bishops & deans, 10 other clerks and 10 laymen appointed by the Church Assembly; 4 laymen nominated by the Queen; 4 persons nominated by the Archbishop

of Canterbury; The Lord Chancellor; The Lord President of the Council; the First Lord of the Treasury; The Chancellor of the Exchequer; The Secretary of State for the Home Dept.; The Speaker of the House of Commons; The Lord Chief Justice; The Master of the Rolls; The Attorney-General; The Solicitor-General; The Lord Mayor and two Aldermen of the City of London; The Lord Mayor of York and one representative from each of the Universities of Oxford and Cambridge.

(Other Commonwealth Territories).

Secretary General, C. A. G. Coleridge, O.B.E.

COUNTRYSIDE COMMISSION

1 Cambridge Gate, Regent's Park, N.W.1
 [01-935-0366]

The Countryside Commission was set up under the Countryside Act, 1968. It has absorbed the National Parks Commission, taking over the duties of that body under the National Parks and Access to the Countryside Act, 1949, and having in addition a wider range of advisory and executive functions relating to the whole of the countryside and coast. Members of the Commission are appointed by the Minister of Housing and Local Government and the Secretary of State for Wales acting jointly. The Commission reports annually to the Ministers and the report is laid before Parliament.

The Countryside Commission is entrusted with the task of designating National Parks and areas of outstanding natural beauty in England and Wales. The former must be extensive tracts of country affording facilities for open-air recreation. The Parks are administered by Local Planning Authorities, subject to general supervision by the Parks Commission. Ten National Parks, covering in all some 5,258 square miles, and 24 areas of outstanding natural beauty have been established. For main article, see Index.

The Commission is also required to report to the Minister of Housing and Local Government or the Secretary of State for Wales on long-distance footpaths or bridleways, along which there will be continuous right of way for walkers and riders, e.g., the Pennine Way; to make representations to Ministers or Local Planning Authorities on any proposed development likely to be prejudicial to the natural beauty of any area in England and Wales; and to provide information services for the public.

Under the new Act the Commission keeps under review all matters relating to the provision and improvement of facilities for the enjoyment of the countryside, the conservation and enhancement of its natural beauty and amenity and the need to secure public access for open-air recreation.

Chairman, The Baroness Wootton of Abinger £2,000

Deputy Chairman, J. M. McC. Fisher £1,000
Members, A. Buxton, M.C.; Mrs. E. Davies; G. Howard; W. E. E. Jones; C. H. King; Sir William Lindsay, C.B.E.; Prof. O. R. McGregor; P. F. Sheppard, P.R.I.B.A. unpaid
Secretary, M. F. B. Bell £3,500 to £4,500
Principal Planning Officer, R. J. S. Hookway £3,500 to £4,000
Principal, J. R. B. Ferguson £2,250 to £3,107

Chief Executive Officers, T. Farmer, M.B.E.; Mrs. M. B. Jones £2,860 to £3,400
Senior Planning Officer, B. A. Hennessy £2,639 to £3,105
Field Officer, L. J. Watson £2,220 to £2,720
Senior Executive Officers, E. J. S. Burbidge; T. G. Miller £2,220 to £2,720
Senior Information Officer, R. S. Bush £2,220 to £2,720

COVENT GARDEN MARKET AUTHORITY

Bedford Chambers, Covent Garden, W.C.2
 [01-240-2311]

The Covent Garden Market Authority is constituted under the Covent Garden Market Acts, 1961 and 1966, the members being appointed by the Ministry of Agriculture, Fisheries and Food. The Authority owns 6½ acres of land at Covent Garden comprising five central market buildings used for wholesale trading in horticultural produce; and other property including five blocks of offices. It is charged with the duty of building a new market on a site of about 60 acres at Nine Elms in the Boroughs of Wandsworth and Lambeth, and of securing the expeditious and economic development or disposal of its Covent Garden lands. The Authority is empowered to borrow capital up to £45,000,000.

Chairman, Sir Henry Hardiman, K.C.B.
Members, W. M. Balch; R. G. E. Jarvis; J. W. Rodden, C.B.E.; Sir Harold Samuel; Sir Alex Samuels, C.B.E. (Nominated by the Minister of Transport); W. J. Tudor.

General Manager, C. M. G. Allen.
Assistant General Manager, L. T. G. Sully, C.B.E.
Secretary, N. R. C. Dockeray, C.B.E.

CROWN AGENTS FOR OVERSEAS GOVERNMENTS AND ADMINISTRATIONS

4 Millbank, Westminster, S.W.1

[01-222-7730]

The Crown Agents are the officially appointed business and financial agents of a large number of Governments and public authorities. These include a number of independent Commonwealth Governments as well as all the territories overseas under British administration or trusteeship. Other authorities for whom they act include the United Nations, many railway, transport, broadcasting, telecommunications and electrical undertakings, port commissions, universities, currency boards and local government authorities, in addition to many development and research bodies. The office is not a Department of the United Kingdom Government, and no vote for it comes before the United Kingdom Parliament. It is self-supporting, its funds being derived from fees charged to its principals from whom instructions are received direct. The Crown Agents do not act for private individuals or commercial concerns.

The work of the Crown Agents' office includes the purchase, inspection, shipment and insurance of engineering plant and equipment and of stores of all kinds; the design of engineering structures; the issue and management of loans and the investment of funds; the payment of salaries to officers on leave; the engagement of staff for certain oversea Government appointments; the booking of passages for Government officers and their families; and many other functions.

Chairman, C. J. Hayes.
Crown Agent, E. A. Morris, C.M.G., O.B.E.
Crown Agent and Engineer-in-Chief, J. H. P. Hawtrey, C.B.E.

CROWN ESTATE COMMISSIONERS

Whitehall, S.W.1

[01-839-2211]

THE CROWN ESTATE (formerly **The Crown Lands**).—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III surrendered

them and received a fixed annual payment or Civil List. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1968, the total Receipts by the Commissioners were £5,516,747. The Expenditure was £1,954,680. The sum of £3,725,000 was paid to the Exchequer in 1967-68 as Surplus Revenue, being a net sum from which no deductions have to be made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

First Commissioner and Chairman (part-time), The Earl of Perth, P.C.

Second Commissioner (and Secretary) W. A. Wood

DEVELOPMENT COMMISSION

3 Dean's Yard, Westminster, S.W.1

[01-222-1177]

The Development Commission was established and constituted under the *Development and Road Improvements Funds Act*, 1909, and the amending Act of 1910. The Act of 1909 as affected by the *Forestry Act*, 1929, the *Ministry of Transport Act*, 1919, the *Fisheries Act*, 1955 and the *Science and Technology Act*, 1965, empowers the Treasury, on the recommendation of the Development Commissioners, to make advances by way of grant or loan to Government departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life, and to promote the development of fisheries.

Chairman, The Countess of Albemarle, D.B.E. Other Commissioners, Lt.-Col. Hon. R. E. B. Beaumont, C.B.E., T.D.; C. I. C. Bosanquet; J. P. R. Glynn; J. L. Longland; W. Scholes; W. B. Swan, C.B.E., T.D.; R. C. Tress, C.B.E. Secretary, B. E. Lincoln. £3,625 to £4,625

H.M. DIPLOMATIC SERVICE

On the recommendations of the Committee on Representative Services Overseas appointed by the Prime Minister under the Chairmanship of Lord Plowden in 1962, H.M. Diplomatic Service was created on Jan. 1, 1965, by the amalgamation of the Foreign Service, the Commonwealth Service, and the Trade Commission Service, and is now responsible for the manning of the overseas posts of these three former services. On Aug. 1, 1966, the Colonial Office was merged into the Commonwealth Relations Office to form the Commonwealth Office. The Foreign Office and Commonwealth Office combined on Oct. 1, 1968.

Head of the Diplomatic Service, Sir Denis Greenhill, K.C.M.G., O.B.E. (from Feb. 1969). £9,200

Downing Street, S.W.1

THE DUCHY OF CORNWALL

10 Buckingham Gate, S.W.1

[Telephone: 01-834-7346]

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council

H.R.H. The Prince Philip, Duke of Edinburgh, K.G., K.T.; The Earl Waldegrave, T.D. (Lord Warden of the Stannaries); The Lord Ashburton, K.C.V.O. (Receiver General); The Lord Roborough; Brig. The Lord Tryon, K.C.B., K.C.V.O., D.S.O.; The Lord Franks, P.C., G.C.M.G., K.C.B., C.B.E., F.B.A.; Sir Joseph Molony, Q.C. (Attorney-General of the Duchy); Sir John Carew Pole, Bt., D.S.O., T.D.; Sir Patrick Kingsley, K.C.V.O. (Secretary).

Other Officers of the Duchy of Cornwall

Auditor, W. E. Parker, C.B.E.

Solicitor, B. B. D. Stopford.

Asst. Secretary, M. R. E. Ruffer, T.D.

Deputy Receiver, G. A. Briggs.

Sheriff (1968-69), F. J. Williams.

THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.2

[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancastrian inheritance it goes back to 1265. Edward III. erected Lancashire into ■ County Palatine in 1351.

Chancellor of the Duchy of Lancaster, THE RT. HON. FREDERICK LEE, M.P. £9,750
Parliamentary Private Secretary, W. W. Small, M.P.

Private Secretary, M. J. Addison.
Attorney-General and Attorney and Sergeant within the County Palatine of Lancaster, Sir Milner Holland, K.C.V.O., C.B.E., Q.C.

Receiver-General, Brig. The Lord Tryon, K.C.B., K.C.V.O., D.S.O.

Vice-Chancellor, T. A. C. Burgess.

Clerk of Council and Keeper of Records, Sir Robert Somerville, K.C.V.O.

Solicitor, C. R. Crockett.

Chief Clerk, E. R. Wheeler, M.V.O., M.B.E.

Registrar, Lancashire Chancery Court, R. A. Forrester, C.V.O.

**COURT OF CHANCERY OF THE COUNTY
PALATINE OF DURHAM**

Registrar's Chambers, Saddler Street, Durham
 It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I., in reorganizing his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Norham and Islandsshire (roughly the northern quarter of Northumberland) and Bedlingtonshire. Palatinate rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of co-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers on behalf of the Crown.

Chancellor, H. E. Salt, Q.C.

Attorney-General, R. Lyons, Q.C.

Solicitor-General, P. Stanley-Price, Q.C.

Registrar of Chancery Court, H. Curry, D.F.C.

Chief Information Officer, E. C. Crosfield (acting)
 £3,500 to £4,500

DEPARTMENT OF EDUCATION
AND SCIENCE

Curzon Street, W.1

[01-493-7070]

The Government Department of Education was until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. In April 1964 the office of the Minister of Science was combined with the Ministry to form the Department of Education and Science. The cost of administration for the financial year 1968-69 was estimated at £7,926,000.

Secretary of State for Education and Science, THE RT. HON. EDWARD WATSON SHORT, M.P. £8,500

Private Sec., N. T. Hardiman.

Part-time Members, J. Ballantyne; T. Fulton (Chairman of Consultative Council) (£1,875); Rt. Hon. T. Fraser; J. Kane; C. H. Offord, C.B.E.; W. Ure; G. Wallace..... each £1,000

Secretary, D. L. McDonald.

DEPARTMENT OF EMPLOYMENT AND PRODUCTIVITY

8 St. James's Square, S.W.1.

[01-930-6200]

The Department of Employment and Productivity was created in April 1968 to take over all the functions of the Ministry of Labour and responsibility for productivity, prices and incomes policy previously carried out by the Department of Economic Affairs. The department provides a free service, through a national network of employment exchanges, for employers seeking labour and for workers who are unemployed or wish to change their jobs. The arrangements cover all categories of labour, including men and women with technical and scientific qualifications, professional and executive workers, those released from H. M. Forces, discharged prisoners and foreign workers. The exchanges also act as agencies for other Government Departments in such matters as the payment of unemployment benefit and the issue of passports.

It is responsible for the administration of the Redundancy Payments Act, 1965, the Industrial Training Act, 1964 and the Selective Employment Repayments Act, 1966. In Government Training Centres, courses are provided to help persons in need of training or retraining, and to reduce shortages of skilled labour. Through its 22 Industrial Rehabilitation Units, the department helps disabled and handicapped men and women to regain working fitness. It is also responsible for the central, and some local, administration of the Youth Employment Service; the promotion of safety, health and welfare amongst workpeople in offices, shops, some railway premises, and in factories, etc.; the enforcement of statutory minimum wages, holidays and hours of work laid down by Wages Councils; and the collection and publication of statistics about manpower, wages, hours of work, and the index of retail prices.

The department, through its advisory and conciliation services, assists in the prevention or settlement of industrial disputes, the promotion of good management/employee practices and increased security at work, e.g. through the Contracts of Employment Act, 1963; its activities overseas include the maintenance of labour attachés in certain foreign countries and liaison with the International Labour Organisation.

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4

[01-353-8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Consolidated and National Loans Funds after satisfying himself that Parliament has given authority for them. He examines the accounts of the Consolidated and

National Loans Funds and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of funds provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

Comptroller and Auditor General, Sir Bruce Fraser, K.C.B. £8,600

Secretary, A. R. Slyth, C.B., O.B.E. £5,375

FORESTRY COMMISSION

25 Savile Row, W.R.

[01-734-0221]

The Forestry Commissioners are charged with the general duty of promoting the interests of forestry, the development of afforestation, the production and supply of timber and the maintenance of reserves of growing trees in Great Britain. Including the former Crown Woods, transferred to it in 1924, the Commission has acquired about 2,800,000 acres of land (70 per cent. being plantable), of which 1,650,000 acres are under plantations. Under various grant schemes, financial assistance is given to private owners and local authorities in respect of approved works of afforestation.

Chairman, L. A. W. Jenkins (*part-time*) £5,000
Director-General and Deputy Chairman, J. A. Dickinson £6,300
Head of Forest Management, A. Watt, C.B.E. £5,250

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER	

17 North Audley Street, W.1
[01-629-7001]

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Trustee Saving Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act and the Superannuation and other Trust Funds (Validation) Act. Under the Industrial Assurance Acts the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

<i>Chief Registrar and Industrial Assurance Commissioner</i> , S. D. Musson, C.B., M.B.E.	£6,300

[Whitehall: 1481]

Instituted in 1908 for the purpose of organizing official hospitality on a regular basis, with a view to the promotion of international goodwill.

Minister in Charge, RT. HON. ROBERT JOSEPH MELLISH, M.P.

Secretary, W. J. M. Paterson, C.M.G.

GOVERNMENT SOCIAL SURVEY DEPARTMENT

Atlantic House Holborn Viaduct, E.C.1

[01-583-8931]

The Government Social Survey, a department administratively responsible to Treasury Ministers, conducts research into the circumstances, behaviour and attitudes of individuals. It operates by direct contact with samples of the general population or of particular groups. Such work is undertaken, on request, as a direct service to other Government Departments concerned with social and economic problems; and the Department's experience of the large scale use of interviewers and the evaluation and testing of statistical data collected in this way, enables it to advise on techniques and in general to be a focal point in the Government service for matters of survey research.

Controller, T. D. Kingdom, C.B. £5,375

Director, L. Moss £3,925 to £4,925
Deputy Director, C. G. Thomas £3,781 to £4,125

Senior Executive Officer, E. A. Hunter
£2,240 to £2,705

MINISTRY OF HEALTH

Alexander Fleming House, Elephant and Castle, S.E.1

[01-407-5522]

The Ministry of Health is responsible (in England and Wales) for the administration of the National Health Service and for the welfare services run by local authorities for the elderly, infirm, blind, deaf and other persons in need, and it has functions relating to food hygiene and welfare foods. The Ministry is also concerned with the medical and surgical treatment of war pensioners in England and Wales, the Channel Islands and the Isle of Man, or living in the Irish Republic. The Ministry is responsible for the National Hospital Service Reserve and for the Ambulance and First Aid Services in emergency, under the Civil Defence Act, 1948. The exercise of the Ministry's functions in Wales has been delegated to the Welsh Board of Health, the members of which are appointed by the Minister of Health. The United Kingdom is represented by the Ministry of Health on the World Health Organization of the United Nations. Minister, THE RT. HON. KENNETH ROBINSON, M.P.

NATIONAL HEALTH SERVICE

(For main article, see Index)

Regional Hospital Boards

England and Wales are divided into 15 hospital regions, each with its own Regional Hospital Board which administers the hospital and specialist services in the area. The Regional Hospital Boards do not, however, administer Teaching Hospitals, which have their own Boards of Governors.

The Chairmen and members of Regional Hospital Boards and Boards of Governors are appointed by the Minister of Health in accordance with the third schedule to the National Health Service Act, 1946.

Areas

Newcastle, Benfield Road, Walker Gate, Newcastle upon Tyne 6. Chairman, A. W. Kay, O.B.E. Secretary, R. Dobbins.

Leeds, Park Parade, Harrogate, Yorks. Chairman, L. E. Laycock, C.B.E. Secretary, W. Bowring.

Sheffield, Fulwood House, Old Fulwood Road, Sheffield, 10. Chairman, Sir Albert Martin, C.B.E. Secretary, W. N. Naylor.

East Anglian (Cambridge), Union Lane, Chesterton, Cambridge. Chairman, Sir Stephen Green, Bt., C.B.E. Secretary, K. V. F. Morton, C.I.E.

North West Metropolitan, 40 Eastbourne Terrace, W.2. Chairman, M. Hackett, O.B.E. Secretary, G. H. Weston.

North East Metropolitan, 40 Eastbourne Terrace, W.2. Chairman, Sir Graham Rowlandson, M.B.E. Secretary, C. Phipps.

South East Metropolitan, 40 Eastbourne Terrace, W.2. Chairman, A. W. Briggs. Secretary, H. N. Lamb.

South West Metropolitan, 40 Eastbourne Terrace, W.2. Chairman, A. D. Bonham-Carter, T.D. Secretary, E. G. Braithwaite.

Oxford, Old Road, Headington, Oxford. Chairman, Dame Isabel Graham-Bryce, D.B.E. Secretary, G. Watts, O.B.E.

South Western, 27 Tyndalls Park Road, Bristol 8. Chairman, W. J. English, M.B.E. Secretary, W. H. White, O.B.E.

Wales, Temple of Peace and Health, Cathays Park, Cardiff. Chairman, G. Prys-Davies. Secretary, A. E. Newell, O.B.E.

Birmingham, Arthur Thomson House, 140-150 Hagley Road, Birmingham 16. Chairman, J. T. Lewis, O.B.E. Secretary, F. S. Adams, O.B.E. Manchester, Cheetwood Road, Manchester 8. Chairman, T. Hourigan. Secretary, F. Pethybridge. Liverpool, Pearl Assurance House, 55 Castle Street, Liverpool 2. Chairman, D. A. Solomon, M.B.E. Secretary, J. D. Shepherd.

Wessex, Highcroft, Romsey Road, Winchester, Hants. Chairman, P. G. Templeman, C.B.E. Secretary, G. Bowden.

HISTORIC BUILDINGS COUNCILS

Under the *Historic Buildings and Ancient Monuments Act*, 1953, as since amended, these councils advise the Minister of Housing and Local Government and the Secretaries of State for Scotland and Wales on the exercise of the powers contained in the Act to make grants towards the repair or maintenance of buildings of outstanding historic or architectural interest, their contents and adjoining land, and, where necessary, to acquire such buildings or to assist the National Trusts or local authorities to acquire them. In 1968-69, £550,000 is available for repair and maintenance grants in England. Over the three-year period, April 1, 1967-March 31, 1970, £220,000 is available for allocation as repair and maintenance grants in Scotland.

ROYAL COMMISSION ON HISTORICAL MONUMENTS (ENGLAND)

Fielden House, Great College Street, S.W.1

[Whitchall: 9652]

The Royal Commission on Historical Monuments (England) was appointed in 1908 to survey and publish in inventory form an account of every building, earthwork or stone construction up to the year 1714. The terminal date was extended after the late war to 1850. The Commission has published up to present date inventories covering seven counties, three cities and Roman York. It is a purely recording body and while the Commissioners may recommend that certain structures should be preserved, they have no power to implement their recommendations. The Commission is also responsible for the direction of the National Monuments Record, created in 1964, which includes the National Buildings Record, begun in 1941, of which the Commissioners are the managing trustees.

Chairman, The Marquess of Salisbury, K.G., P.C., F.S.A.
Commissioners, Sir John Summerson, C.B.E., F.B.A.-F.S.A., A.R.I.B.A.; C. A. Raleigh Radford, D.Litt., F.B.A., F.S.A.; Prof. J. G. D. Clark, Ph.D., F.B.A., F.S.A.; Prof. F. Wormald, Litt.D., F.B.A., F.S.A.; H. M. Colvin, C.B.E., F.B.A.; D. B. Harden, O.B.E.

Ph.D., F.S.A.; W. A. Pantin, F.B.A., F.S.A.; Prof. N. Pevsner, C.B.E., Ph.D., F.S.A.; A. J. Taylor, F.S.A.; Prof. W. F. Grimes, C.B.E., D.Litt., F.S.A.; Prof. S. S. Frere, F.S.A.; M. W. Barley, V.P.S.A.; Prof. R. J. C. Atkinson, F.S.A.; A. S. Oswald; Prof. H. C. Darby, O.B.E., Ph.D., and the Lords Lieutenant of the counties at the time of survey.

Secretary, A. R. Dufty, V.P.S.A. £4,000

ROYAL COMMISSION ON ANCIENT MONUMENTS IN WALES AND MONMOUTHSHIRE

Edleston House, Queens Road, Aberystwyth
[Aberystwyth: 2255]

The Commission was appointed in 1908 to make an inventory of the Ancient and Historical Monuments in Wales and Monmouthshire. The Commission now includes the National Monuments Record for Wales and Monmouthshire.

Chairman, Prof. W. F. Grimes, C.B.E., F.B.A., F.S.A.

Commissioners, Prof. R. J. C. Atkinson, F.S.A.; Prof. I. L. Foster, F.S.A.; Prof. E. M. Jope, F.S.A.; J. D. K. Lloyd, O.B.E., F.S.A.; A. J. Taylor, F.S.A.; Prof. Glynor Williams; Prof. J. G. Williams; R. B. Wood-Jones, D.Phil., F.S.A.

Secretary, A. H. A. Hogg, F.S.A.

ROYAL COMMISSION ON ANCIENT AND HISTORICAL MONUMENTS OF SCOTLAND

52-54 Melville Street, Edinburgh 3
[031-225-5994]

The Commission was appointed in 1908 to make an inventory of the Ancient and Historical Monuments of Scotland from the earliest times to 1707, and to specify those that seem most worthy of preservation. The terms of reference were extended by Royal Warrant dated Jan. 1, 1948, to cover the period since 1707 at the Commissioners' discretion. On April 1, 1966, the Scottish National Building Board was transferred to the Commission. It has been extended in scope, and the name has been changed to the National Monuments Record of Scotland.

Chairman, The Earl of Wemyss and March, K.T., LL.D.

Commissioners, Prof. S. A. Piggott, D.Litt., F.R.S.E., F.B.A., F.S.A.; W. Douglas Simpson, C.B.E., D.Litt., LL.D., F.S.A.; Mrs. A. I. Dunlop, O.B.E., Ph.D., D.Litt., LL.D.; A. HOME OFFICE

Whitehall, S.W.1

[01-930-3200]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and Her subjects, and between the U.K. Government and the Governments of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—maintenance of law and order; efficiency of the police service; control and administration of prisons and borstal institutions; treatment of offenders, including juvenile offenders; efficiency of the probation service; organization of magistrates' courts; legislation on criminal justice; supervision of the fire service; civil defence services; care of children by local authorities and voluntary societies; regulation of the employment of children and young persons; control of Commonwealth immigrants and aliens and the naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, by-laws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonials and formal business connected with honours.

HORSERACE TOTALISATOR BOARD	
<i>163 Euston Road, N.W.1</i>	
<i>[Euston: 5871]</i>	
Established by the Betting Levy Act, 1961, ■ successor in title to the Racecourse Betting Control Board established by the Racecourse Betting Act, 1928.	
Its function is to operate totalisators on approved horse racecourses in Great Britain, and thus to provide moneys for the improvement of breeds of horses, the sport of horse racing and the advancement and encouragement of veterinary science and education, by means of an annual levy paid to the Horserace Betting Levy Board established under the same Act in 1961.	
Members	
Apptd. by the Home Secretary: Sir Alexander Sim (Chairman); Hon. J. J. Astor, M.B.E.; The Lord Oakshott, M.B.E.; The Hon. J. P. Philpotts, T.D. Secretary, Captain E. T. Graham, O.B.E., R.N. (ret.).	
MINISTRY OF HOUSING AND LOCAL GOVERNMENT	
<i>Whitehall, S.W.1</i>	
<i>[01-930-4300]</i>	
The Ministry of Housing and Local Government set up in 1951 under the title of Ministry of Local Government and Planning and is responsible for the administration of government housing policy, housing standards and the general supervision of local authority housing programmes; the administration of the planning acts concerning the use and development of land; and it is the department principally concerned in the supervision of the work of local authorities.	
An Order in Council dissolved the Ministry of Land and Natural Resources and transferred to the Minister of Housing and Local Government all the functions of the Minister of Land and Natural Resources except certain functions in respect of Wales which were transferred to the Secretary of	

State for Wales and functions relating to forestry which were transferred to the Minister of Agriculture, Fisheries and Food.

Small Scale Drawing and Reproduction Col. F. M. Sexton, O.B.E.

Establishments, F. Judd; R. W. Gough, O.B.E. £2,860 to £3,400

Finance, A. E. Rich. £2,860 to £3,400

Publication, Miss B. D. Drewett. £2,860 to £3,400

Assistant Directors, Lt.-Col. E. X. Halliday, M.B.E.;

Lt.-Col. I. E. Sleep; Lt.-Col. D. G. Wilde;

W. A. Seymour.

INDEPENDENT TELEVISION AUTHORITY

70 Brompton Road, S.W.3.

[01-584-7011]

The Independent Television Authority was created in August, 1954, to provide public television services of information, education and entertainment. The Television Act was renewed in 1964 for a further 12 years. The Chairman and Members of the Authority are appointed by the Postmaster General. The programmes transmitted from the Authority's 45 stations are provided by 15 independent programme contractors whose revenue derives from the sale, subject to controls exercised by the Authority, of advertising time. The contractors pay a rent to the Authority, to meet the ITA's own requirements and a levy based on net advertising revenue to the Exchequer.

Chairman, The Lord Aylestone, P.C., C.B.E.

Deputy Chairman, Sir Ronald Gould. £2,000

Members, Mrs. M. Adams, O.B.E.; The Baroness Burton of Coventry; D. Gilliland; W. M. Gray, O.B.E.; Sir Patrick Hamilton, Bt.; Prof. H. Hunt; The Baroness Plummer; Prof. Sir Owen Saunders, D.Sc., F.R.S.; The Baroness Sharp, G.B.E.; Sir Vincent Tewson, C.B.E., M.C.; Sir Ben Bowen Thomas. £1,000

Director-General, Sir Robert Fraser, O.B.E.

Deputy Directors General, B. C. Sendall, C.B.E. (Programme Services); A. W. Pragnell, O.B.E., D.F.C. (Administrative Services).

Chief Engineer, H. Steele.

Head of Finance, A. S. Curbishley, O.B.E.

Secretary, B. Rook.

INDUSTRIAL REORGANISATION CORPORATION

46 Pall Mall, S.W.1

[01-839-7391]

Set up in December, 1966, to increase the competitiveness and efficiency of British industry, the Corporation has authority to promote or assist the reorganization or development of any industry, or part of an industry, and to promote the establishment or development of any individual enterprise, if requested to do so by the Government.

Chairman, Sir Frank Kearton, O.B.E., F.R.S.

Managing Director, C. H. Villiers, M.C. £20,000

Directors, J. P. Berkin, C.B.E.; B. Boxall, C.B.E.; L. Cannon; B. R. Cant; Sir Joseph Lockwood; Professor W. G. McClelland; Sir Frank Schon; Sir Donald Stokes.

CENTRAL OFFICE OF INFORMATION

Hercules Road, Westminster Bridge Road, S.E.1

[01-928-2345]

The Central Office of Information is a common service department which produces information and publicity material, and supplies publicity services, for other Government departments which require them. In the United Kingdom it conducts Government display press, television and poster advertising (except for the National Savings Committee), produces and distributes booklets, leaflets, films, television material, exhibitions, photographs and other visual material; and distributes departmental press notices. For the overseas departments it supplies British Information posts overseas with press, radio and television material, booklets, magazines,

reference services, films, exhibitions, photographs, display and reading room material; manages schemes for promoting the overseas sale of British books, periodicals and newspapers; arranges tours in the United Kingdom for official visitors from overseas; and provides exhibition stands at trade fairs (for the Board of Trade). Administratively, the Central Office of Information is responsible to Treasury ministers, while the ministers whose departments it serves are responsible for the policy expressed in its work.

Director-General, Sir Fife Clark, C.B.E. £6,300
Private Secretary, Miss E. M. Butler, M.B.E.

Controllers, F. D. Bickerton (*Home*); D. F. Kerr, C.V.G., O.B.E. (*Overseas*) £5,125

BOARD OF INLAND REVENUE

Somerset House, W.C.2

[01-836-2407]

The Board of Inland Revenue was constituted under the Inland Revenue Board Act, 1849, by the consolidation of the Board of Excise and the Board of Stamps and Taxes. In 1909 the administration of excise duties was transferred to the Board of Customs. The Board of Inland Revenue is responsible for the management and collection of income tax, surtax, profits tax, capital gains tax,

corporation tax, estate duty, stamp duties and other direct taxes, and for the valuation of freehold and leasehold property for Inland Revenue taxation, for certain purposes on behalf of other Government Departments and public authorities and, in England and Wales, for local authority rating. The Board is also responsible for the management and collection of tithe redemption annuities, and for administering the Scheme of compensation for War Damage (except to highways) under the War Damage Act, 1943. Salaries and expenses of the Board for 1968-69 were estimated at £87,446,000.

The Board

Chairman, Sir Arnold France, K.C.B.	£8,600

James (North Western Region); D. G. Blyth (Office for Scotland)	£3,259 to £3,837

H.M. LAND REGISTRY

Lincoln's Inn Fields, W.C.2

[or-405-3488]

The registration of title to land was first introduced in England and Wales by the Land Registry Act, 1862. Many changes have been made to the original system by subsequent legislation and H.M. Land Registry operates today under the Land Registration Acts, 1925 to 1966. The object of registering title to land is for dealings with it to be made more simple and economical. This is achieved by maintaining a register of land owners whose title is guaranteed by the State and by providing simple forms for the transfer, mortgage and other dealings with real property. Under the Land Registration Act 1966, the voluntary first registration of land in non-compulsory areas was severely curtailed in order to facilitate an accelerated programme for the extension of the compulsory system to cover all the built-up areas of the country within a few years. The intention is that registration of title shall ultimately be universal throughout England and Wales. Nevertheless, a great deal of land was formerly registered voluntarily in non-compulsory areas and it is still possible to register building estates, upon certain conditions, throughout the country. A great deal of land in some non-compulsory areas is therefore already registered. H.M. Land Registry is administered under the Lord Chancellor by the Chief Land Registrar and the work is decentralized to a number of regional offices. The Chief Land Registrar is also responsible for the Land Charges Department and the Agricultural Credits Department.

Headquarters Office

Chief Land Registrar, T. B. F. Ruoff, C.B.E.

£6,300

Deputy Chief Land Registrar, S. L. Whiteley £5,250

Chief Assistant (Establishment Officer), K. E. Aris £4,000

Land Registrar, R. B. Roper £3,650 to £4,500

Controllers, H. R. Goose (North); B. M. White (South) £3,150 to £3,500

Chief Executive Officers, P. Gittings; E. W. Hannam; J. L. Memory; D. C. King; J. C. Poynter; L. A. Jenks; T. Chipperfield; G. H. Fisher; R. B. Parker £2,751 to £3,209

Establishment and Accounts

Deputy Establishment Officer, G. E. Marriott, O.B.E. £3,150 to £3,500

Finance Officer, J. H. Haynes £2,751 to £3,209

NATIONAL LIBRARY OF SCOTLAND

George IV Bridge, Edinburgh x
 [031-225-4104]

Open free. Reading Room, weekdays, 9.30 a.m. to 8.30 p.m. Saturdays 9.30 to 1. Map Room, weekdays, 9.30 to 5 p.m.; Saturdays, 9.30 to 1. Exhibition, weekdays, 9.30 a.m. to 5 p.m. Saturdays, 9.30 to 1; Sundays, 11 to 5. During Edinburgh International Festival open till 8.30 p.m. on weekdays. (Sundays, 2 to 5.)

The Library, which had been founded as the Advocates' Library in 1682, became the National Library of Scotland by Act of Parliament in 1925. It continues to share the rights conferred by successive Copyright Acts since 1709. Its collections of printed books and MSS., augmented by purchase and gift, are very large and it has an unrivalled Scottish collection. The present building was opened by H.M. the Queen in 1956.

The Reading Room is for reference and research which cannot conveniently be pursued elsewhere. Admission is by ticket issued to an approved applicant.

Chairman of the Trustees, The Earl of Crawford and Balcarres, B.T., G.B.E.

Librarian and Secretary to the Trustees, Prof. William Beattie, C.B.E..... £4,500

Secretary of the Library, M. A. Pegg, Ph.D.
 (+ allce. £217) £1,744 to £2,914

 £1,744 to £2,914

THE NATIONAL LIBRARY OF WALES
LLYFRGELL GENEDLAETHOL CYMRU
 Aberystwyth

Readers' room open on weekdays, 9.30 a.m. to 6 p.m. (Saturdays, 5 p.m.); closed on Sundays. Admission by Reader's Ticket.

Founded by Royal Charter, 1907, and maintained by annual grant from the Treasury. One of the six libraries entitled to certain privileges under Copyright Act. Contains nearly 2,000,000 printed books, 30,000 manuscripts, 3,500,000 deeds and documents, and numerous maps, prints and drawings. Specializes in manuscripts and books relating to Wales and the Celtic peoples. Repository for pre-1858 Welsh probate records. Approved by the Master of the Rolls as a repository for manorial records and tithe documents, and by the Lord Chancellor for certain legal records. Bureau of the Regional Libraries Scheme for Wales and Monmouthshire.

Librarian, E. D. Jones, C.B.E.

NATIONAL CENTRAL LIBRARY

Store Street, W.C.1
 [01-636-0755]

Incorporated by Royal Charter and maintained by annual grants from the Department of Education and Science, Municipal and County Authorities, University and special libraries, adult education bodies, and public Trusts.

The Library is the national centre for the loan of books (other than fiction and students' text-books) and periodicals to readers in all parts of the British Isles, through their public, university, or other library; and also to and from foreign libraries through their national centres. It is able to draw on over 21,000,000 books in nearly all the principal British libraries. Other work undertaken by the Library includes loans to organized classes of adult students; and the recording of duplicates and discarded books and periodicals and their distribution to appropriate libraries at home and abroad; also the establishment of a catalogue of Slavonic books and periodicals in British libraries. The Library's own stock for loan comprises about 400,000 volumes.

Applications to borrow books must be made through the reader's library and not directly to the National Central Library.

Librarian and Secretary to the Trustees, S. P. L. Filon.
Deputy Librarian, I. P. Gibb.

NATIONAL LENDING LIBRARY FOR SCIENCE AND TECHNOLOGY

Boston Spa, Yorkshire.

Officially opened on November 5, 1962, the library provides a postal loan service to organizations, including industrial companies, learned societies and educational establishments. Individuals can borrow through the public library system. It has stock of about 700,000 volumes and over 31,000 current periodicals. Part of the initial stock was drawn from the library of the Science Museum, London. Gross total annual expenditure £809,000. Director, D. J. Urquhart, Ph.D.

NATIONAL REFERENCE LIBRARY OF SCIENCE AND INVENTION

See under British Museum

SCOTTISH CENTRAL LIBRARY

Lawnmarket, Edinburgh, ■

Carries out in Scotland functions similar to those of the National Central Library, i.e. acts as a clearing-house for inter-library lending, and maintains a Union Catalogue and other records of books held by Scottish libraries. Its own stock of 40,000 books is freely available to all. Photo-copying facilities. *Applications to borrow books must be made through the reader's library.*

Librarian and Secretary to the Trustees, M. C. Pottinger, D.S.C.
Deputy Librarian, Miss C. E. G. Wright.

Lord Privy Seal and Leader of the House of Commons, THE RT. HON. (THOMAS) FREDERICK PEART, M.P. Private Secretary, F. J. Ward.

MEDICAL RESEARCH COUNCIL

20 Park Crescent, W.1

[Museum: 5422]

The Council, formerly the Medical Research Committee established in 1913 under the National Health Insurance Act, was incorporated under its present title by Royal Charter on April 1, 1920; a revised charter was issued in 1966. It is responsible to the Secretary of State for Education and Science.

The Council's constitution enables it to pursue an independent policy for the advancement of knowledge in the medical sciences and to initiate and encourage research both in this country and abroad: it is advised by three Research Boards and a number of expert Committees covering particular fields. The Council supports research by employing its own scientific staff in the National Institute for Medical Research and other research establishments (listed below); by financing projects in university and other departments through various schemes of research grants; and by the award of fellowships and scholarships for training in research methods. The Council is supported by a Parliamentary grant-in-aid but is also in a position to receive funds from private sources.

Members, The Viscount Amory, K.G., P.C., G.C.M.G., T.D. (Chairman); J. A. B. Gray, Sc.D. (Secretary); Sir Edward Collingwood, C.B.E., Sc.D., F.R.S.; D. I. Marquand, M.P.; Prof. A. R. Currie, F.R.S.E.; Prof. M. Roth, M.D.; Prof. J. L. Gowans, D.Phil., F.R.S.; Prof. W. M. Arnott, T.D., M.D.; Prof. G. D. Evans, D.Sc., F.R.S.; Prof. D. A. K. Black, M.D.; Prof. W. T. J. Morgan, C.B.E., D.Sc., F.R.S.; Prof. R. A. Gregory, D.Sc., F.R.S.; Prof. A. W. Kay, M.D.; The Lord Platt, M.D.

Second Secretary, S. G. Owen.

Administrative Secretary, J. G. Duncan.

- Unit for Research on the Epidemiology of Psychiatric Illness*, University Department of Psychiatry, Royal Edinburgh Hospital, Morningside Park, Edinburgh 10. Hon. Director, Prof. G. M. Carsairs, M.D.
- Clinical Psychiatry Research Unit*, Graylingwell Hospital, Chichester. Director, P. Sainsbury, M.D.
- Social Psychiatry Research Unit*, Institute of Psychiatry, de Crespigny Park, S.E.5. Director, J. K. Wing, M.D., Ph.D.
- Applied Psychology Research Unit*, 15 Chaucer Road, Cambridge. Director, D. E. Broadbent, Sc.D., F.R.S.
- Developmental Psychology Research Unit*, Drayton House, Gordon Street, W.C.1. Director, N. O'Connor, Ph.D.
- Clinical and Population Cytogenetics Research Unit*, Western General Hospital, Crewe Road, Edinburgh 4 and Derbyshire House, St. Chad's Street, W.C.1. Director, Prof. W. M. Court Brown, O.B.E.
- Environmental Radiation Research Unit*, University Dept. of Medical Physics, The General Infirmary, Leeds 1. Hon. Director, Prof. F. W. Spiers, C.B.E., D.Sc.
- Radiobiological Research Unit*, Harwell, Berks. Director, J. F. Loutit, C.B.E., D.M., F.R.S.
- Radiological Protection Service* (jointly with the Ministry of Health), Clifton Avenue, Belmont, Sutton, Surrey. Director, W. Binks, C.B.E.
- Radiological Protection Service Regional Centres*: Birmingham, Queen Elizabeth Hospital, Birmingham 15. Hon. Director, R. F. Farr. Leeds, 29 Clarendon Road, Leeds 2. Hon. Director, Prof. F. W. Spiers, C.B.E., D.Sc.
- Manchester*, Christie Hospital and Holt Radium Institute, Withington, Manchester 20. Hon. Director, W. J. Meredith, D.Sc.
- Scottish*, 32 Sherbrooke Avenue, Glasgow, S.1. Hon. Director, J. M. A. Lenihan, Ph.D.
- Experimental Radiopathology Research Unit*, Hammersmith Hospital, Ducane Road, W.12. Director, Miss T. Alper.
- Reproduction and Growth Research Unit*, Princess Mary Maternity Hospital, Newcastle-upon-Tyne. Director, A. M. Thomson.
- Rheumatism Research Unit*, Canadian Red Cross Memorial Hospital, Taplow, Maidenhead, Berks. Director, Prof. E. G. L. Bywaters.
- Unit for Research on the Experimental Pathology of the Skin*, The Medical School, The University, Birmingham 15. Director, C. N. D. Cruickshank, M.D.
- Social Medicine Research Unit*, London School of Hygiene and Tropical Medicine, Keppel Street, W.C.1. Hon. Director, Prof. J. N. Morris, D.Sc.

Medical Sociology Research Unit, Foresterhill, Aberdeen. Hon. Director, Prof. R. Illsley, Ph.D.
Speech and Communication Research Unit, University of Edinburgh, 31 Buccleuch Place, Edinburgh 8. Director, Prof. R. C. Oldfield.
Statistical Research Unit, Clinical Research Centre, University College Hospital Medical School, Gower Street, W.C.1. Director, W. R. S. Doll, O.B.E., M.D., D.Sc., F.R.S.

Toxicology Research Unit, M.R.C. Laboratories, Woodmansterne Road, Carshalton. Director, J. M. Barnes, C.B.E.

Trachoma Research Unit, Lister Institute of Preventive Medicine, Chelsea Bridge Road, S.W.1 and M.R.C. Laboratories, Fajara, Bathurst, Gambia. Hon. Director, Prof. L. H. Collier, M.D.

Tropical Metabolism Research Unit, University of the West Indies, Mona, Kingston, Jamaica. Director, Prof. J. C. Waterlow, M.D., Sc.D.

Tuberculosis and Chest Diseases Research Unit, Brompton Hospital, Fulham Road, S.W.3. Director, W. Fox, M.D.

Unit for Research on Drug Sensitivity in Tuberculosis, Royal Postgraduate Medical School, Ducane Road, W.12. Hon. Director, Prof. D. A. Mitchison.

Experimental Virus Research Unit, Institute of Virology, Church Street, Glasgow, W.1. Hon. Director, Prof. H. Subak-Sharpe, Ph.D.

Vision Research Unit, Institute of Ophthalmology, Judd Street, W.C.1. Director, H. J. A. Dartnall, D.Sc.

Biological Research Board

Chairman, Prof. J. L. Gowans, D.Phil., F.R.S.
 Executive Secretary, Miss N. S. Jones.

Clinical Research Board

(Appointed in consultation with the Ministry of Health and the Scottish Home and Health Department.)

Chairman, Prof. Sir Brian Windeyer.
 Executive Secretary, Miss M. H. Grieve.

Tropical Medicine Research Board

(Appointment in consultation with the Ministry of Overseas Development)

Chairman, Prof. G. M. Bull, M.D.
 Secretary, B. S. Lush, M.D.

MERSEY DOCKS AND HARBOUR BOARD

Dock Office, Liverpool 3

The Mersey Docks and Harbour Board was constituted as a Public Trust under Acts of Parliament in 1857 and 1858, as amended by the Mersey Docks and Harbour Board Revision Order, 1965. The Board consists of not fewer than 16 and not more than 18 Members, six of whom are to be elected by shipowners, six by traders and four appointed by the Minister of Transport, the Board having power to co-opt not more than two persons to serve as Members.

Elective Members, M. D. Oliphant, M.B.E., T.D.; V. A. Arnold, M.C.; N. M. Bacon; A. J. Kentish Barnes; W. B. Briscoe; J. C. Brown; P. G. Clarke; G. P. Holt, M.B.E.; J. Paton; J. C. Taylor; M. S. Webster; J. D. Wilson.

Nominee Members, Sir Joseph Cleary; C. Hull; R. W. Johnson, C.B.E.; J. H. Wall.

Co-opted Member, Sir Clifford Dove, C.B.E., E.R.D. Director-General, Sir Clifford Dove, C.B.E., E.R.D. General Manager, R. S. F. Edwards, C.V.O., C.B.E.

METROPOLITAN WATER BOARD

New River Head, Rosebery Avenue, E.C.1

[01-837-3300]

The Board serves an area of about 540 sq. miles. The charges are levied on net annual value at such rate not exceeding 10 per cent., as the Board may fix, the charge for 1968-69 being 3½ per cent. on net annual value. The Capital Debt on March 31, 1968, amounted to £66,254,471. The supply for the year 1967-68 was 141,331,000,000 gallons (representing 63,000,000 tons), a daily average of 386.2 million gallons.

Chairman of the Metropolitan Water Board, A. J. Gates, O.B.E.
 Clerk of the Board, S. D. Askew.

THE ROYAL MINT Tower Hill, E.C.3

[01-488-3424]

Admission is by order only, application for which should be made to the Deputy Master of the Mint at least 3 months in advance of intended visit. Hours of admission Monday to Friday 9.20 a.m. to 2.30 p.m. (Public holidays excepted.) Additional tours 2.50, 4.45 and 5.0 p.m., Mondays and Thursdays.

Master Worker and Warden, The Chancellor of the Exchequer (ex officio).

Deputy Master and Comptroller, and ex officio Engraver of H.M. Seals, J. H. James, C.B. £6,300

Secretary and Establishment Officer, J. E. Lucas £3,625 to £4,625

Professional Adviser to Deputy Master, H. W. Hobbs, C.B., C.B.E. £4,625

Senior Chief Executive Officer, A. J. Dowling, D.F.C. £3,281 to £3,625

Principals, D. H. S. Biggs; W. Greenwood £2,408 to £3,324

Chief Executive Officers, G. F. Howell; R. F. Liggins; L. E. Morgans; N. P. Howard; F. Cornell £2,751 to £3,209

Senior Executive Officers, H. A. Wright; C. L. Powell; J. D. Goddard; A. T. Layzell; R. Davy; G. M. Fletcher; E. L. Franklin; M. J. Mansley; B. Hatcher £2,115 to £2,580

Superintendent, Operative Department, W. T. Baird £4,125

Deputy do., E. M. Phillips £2,764 to £3,230

Mechanical Engineers, I. F. Harrington; S. J. Wellington; M. R. Tidmarsh; L. B. Burns; R. M. Rayner; A. R. Fisher. £2,010 to £2,635

Chemist and Assayer, E. G. V. Newman, O.B.E. £3,625 to £4,125

Senior Experimental Officer, D. J. Harvey £2,102 to £2,536

Chief Engraver, W. J. Newman, M.V.O. £2,380 to £2,623

Branch of the Royal Mint:

Perth, Western Australia

Deputy Master, C. A. M. Cook.

MONOPOLIES COMMISSION

■ Cornwall Terrace, Regent's Park, N.W.1

[01-636-8801]

The Monopolies and Restrictive Practices Commission, which was set up under the Monopolies and Restrictive Practices (Inquiry and Control) Act, 1948, was reconstituted on Oct. 31, 1956, as the Monopolies Commission in accordance with a provision of the Restrictive Trade Practices Act, 1956. It was again reconstituted and enlarged under the Monopolies and Mergers Act, 1965. The Commission has the duty of investigating and reporting on the existence, in industries referred to it by the Board of Trade, of monopoly, restrictive practices affecting exports and other arrangements not registrable under Part I of the Restrictive Trade Practices Act, 1956, and, where so required by the Board, to report on the effect of such arrangements on the public interest. Under the 1965 Act this duty is extended to monopoly in the supply of services and to the merger of two or more enterprises, one at least carried on in the United Kingdom or under the control of a body incorporated in the United Kingdom.

Chairman, Sir Ashton Roskill, Q.C. £9,000

Deputy Chairman, Sir Henry Hardman, K.C.B.
 Members, Prof. T. Barna, Ph.D.; A. R. Barrowclough; A. H. Bruce, C.B.E.; H. Chisholm, C.B.E.; The Lord Douglass of Cleveland; R. Falk, O.B.E.; Prof. H. Hart; L. A. Hurt; W. E. Jones, C.B.E.; Dame Alix Meynell, D.B.E.; Sir Bernard

Miller; R. G. Opie; E. L. Richards, M.B.E., M.C., T.D.; S. A. Robinson; The Hon. T. G. Roche, Q.C.; Prof. R. S. Sayers; Z. A. Silberston; J. M. A. Smith, C.B.E.; L. H. Williams; Prof. B. S. Yamey.
Secretary, Miss M. W. Dennehy, C.B.E.

MUSEUMS

STANDING COMMISSION ON MUSEUMS AND GALLERIES

■ Carlton Gardens, S.W.1
[or 930-0995]

First appointed Feb. 11, 1931. The functions of the Commission are:—(1) To advise generally on questions relevant to the most effective development of the National Institutions as a whole and on any specific questions which may be referred to them from time to time; (2) to promote co-operation between the National Institutions themselves and between the National and Provincial Institutions; (3) to stimulate the generosity and direct the efforts of those who aspire to become public benefactors.

Chairman. The Earl of Rosse, M.B.E., F.S.A.

Members. The Countess of Albemarle, D.B.E.; J. D. Cowen, M.C., T.D., F.S.A.; Sir Trenchard Cox, C.B.E., F.R.S.A., F.S.A.; The Earl of Cranbrook, C.B.E.; The Earl of Crawford and Balcarres, K.T., G.B.E.; Prof. I. L. Foster, F.S.A.; The Earl of Halsbury; Sir William Hayter, K.C.M.G.; Sir Gilbert Laithwaite, G.C.M.G., K.C.B., K.C.I.E., C.S.L.; Sir Edward Muir, K.C.B., F.S.A.; P. F. Scott; F. J. Stott; Sir John Witt, F.S.A.

Secretary. Miss A. L. T. Oppé.

THE BRITISH MUSEUM

Bloomsbury, W.C.1
[Museum: 1555]

Exhibitions.—Manuscripts, Printed Books, Egyptian, Assyrian, Greek and Roman Sculptures, Romano-British, Prehistoric and Oriental Antiquities and Ethnography (Main Entrance, Great Russell Street, W.C.1). Select Exhibition of works of art and antiquities in the King Edward VII Gallery. Prints and Drawings, Oriental Paintings, Egyptian and Babylonian antiquities (North Entrance, Montague Place, W.C.1). Open weekdays (including Bank Holidays) 10 to 5 and Sundays 2.30 to 6. Closed on Good Friday and Christmas Day. Admission free.

Reading-room open daily to readers, from 9 to 5, (Tues.—Thurs., 9 p.m.), and Newspaper Room, (at Colindale), from 10 to 5 throughout the year, except Good Friday, Christmas and Boxing Day and Sundays. Closed for cleaning the week beginning with first Monday in May. Long-period tickets of admission for purposes of research and reference which cannot be carried on elsewhere, are granted on written application beforehand to the Director. The applicant should state abode, business or profession and full particulars of purpose, and should send a recommendation from a person of recognized position.

The British Museum may be said to date from 1753, when Parliament granted funds to purchase the collections of Sir Hans Sloane and the Harleian manuscripts, and for their proper housing and maintenance. The building (Montague House) was opened in 1759. The present buildings were erected between 1823 and the present day, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Acts. The administrative expenses were estimated at £2,460,000 in 1968-69, and were met by vote under "Museums, Galleries and the Arts," Class VIII of the Civil Estimates. The constitution of the British Museum was revised under the terms of the *British Museum Act, 1963*.

BOARD OF TRUSTEES

Appointed by the Sovereign: The Marquess of Cambridge, G.C.V.O. *Appointed by the Prime Minister:* The Viscount Eccles, P.C., K.C.V.O. (Chairman); The Lord Annan, O.B.E.; Prof. Misha Black, O.B.E.; T. S. R. Boase, M.C., F.B.A.; The Viscount Boyd of Merton, F.C., C.H.; The Archbishop of Canterbury; The Earl of Crawford and Balcarres, K.T., G.B.E.; Prof. H. J. Emeleus, C.B.E., D.Sc., F.R.S.; The Lord Evans of Hungershall, D.Lit.; The Rt. Hon. Sir Eric Fletcher, LL.D., M.P.; L. C. B. Gower, M.B.E., F.B.A.; Sir Ronald Nyholm, D.Sc., Ph.D., F.R.S.; The Viscount Radcliffe, P.C., G.B.E.; Dame Mary Smeeton, D.B.E.; Sir Richard Thompson, Bt.

Nominated by the Royal Society, Royal Academy, British Academy and Society of Antiquaries of London: T. E. Allibone, C.B.E., D.Sc., Ph.D., F.R.S. (Royal Society); Sir Thomas Monnington, P.R.A. (Royal Academy); Sir Mortimer Wheeler, C.H., C.I.E., M.C., D.Lit., F.B.A., F.S.A. (British Academy); Prof. F. Wormald, Litt.D., F.B.A., F.S.A. (*Society of Antiquaries of London*).

Appointed by the Trustees of the British Museum: Sir Eric Ashby, D.Sc., F.R.S.; Sir Kenneth Clark, C.H., K.C.B., F.B.A.; Sir William Hayter, K.C.M.G.; Miss Kathleen Kenyon, C.B.E., D.Lit., L.H.D., F.B.A., F.S.A.; Prof. Stuart Piggott, F.S.A.

OFFICERS

Director and Principal Librarian, Sir Frank Francis, K.C.B. £5,550

Assistant Director, Maysie F. Webb £4,300 to £4,625

Secretary, B. P. C. Bridgewater £3,625 to £4,125

Assistant Secretary, M. Turner £1,869 to £3,039

Publications Officer, H. Jacob £1,869 to £3,039

Exhibitions Officer, Margaret Hall £1,865 to £3,039

Senior Executive Officers, Elsie G. Ding: J. F. W. Ryde; H. E. Cole £2,240 to £2,705

Guide Lecturers, O. E. Holloway; K. P. Whitehorn £2,102 to £2,536

Principal Keeper of Printed Books, A. H. Chaplin £4,300 to £4,625

Keepers, J. L. Wood; R. J. Fulford £3,625 to £4,125

Deputy Keepers, A. H. King; G. H. Spinney; H. M. Nixon; R. F. L. Bancroft; R. S. Pine-Coffin; P. R. Harris; Helen M. Wallis; P. J. Fairs £3,064 to £3,625

Assistant Keepers, G. A. F. Scheele; *Annie O'Donovan; Margaret S. Scheele; Audrey C. Brodhurst; G. D. Painter; E. J. Miller; A. F. Allison; *H. G. Whitehead; *F. J. Hill; Anna E. C. Simoni; L. J. Thomas; G. J. R. Arnold; T. T. Tuckey-Smith; D. E. Rhodes; O. W. Neighbour; P. A. H. Brown; I. R. Willison; P. C. Meade; J. W. Joliffe; R. J. Roberts; M. G. Atkins; Hanna M. Swiderska; D. B. Chrastek; G. B. Morris; Cynthia M. Howard; D. L. Paisley; D. T. Rodger; J. A. Mackay; R. A. Christophers; B. G. F. Holt; J. A. B. Townsend; J. R. Barr; L. L. Dethan; Patricia M. Taylor; Margaret Chaplin.

Superintendent, Newspaper Library (Colindale), P. E. Allen.

Keeper of Manuscripts and Egerton Librarian, T. C. Skeat £3,625 to £4,125

Deputy Keepers, C. E. Wright; G. R. C. Davis; L. J. Gorton £3,064 to £3,625

Assistant Keepers, *Pamela J. Willets; J. P. Hudson; D. H. Turner; M. A. F. Borrie; T. A. J. Burnett; T. S. Pattie; Janet M. Backhouse; Anita J. Stratford; Ann Payne; H. M. T. Cobbe.

Keeper of Oriental Printed Books and Manuscripts, K. B. Gardner £3,625 to £4,125

Deputy Keeper, G. M. Meredith-Owens £3,064 to £3,625

Assistant Keepers, M. Lings; E. D. Grinstead; J. Rosenwasser; R. F. Hosking; Albertine Gaur; G. E. Morrison.

<i>Keeper of Prints and Drawings</i> , E. F. Croft-Murray, C.B.E.	£3,625 to £4,125
<i>Deputy Keeper</i> , J. A. G. Gere	£3,064 to £3,625
<i>Assistant Keepers</i> , P. H. Hulton; J. K. Rowlands; J. A. R. Wilton.	
<i>Keeper of Coins and Medals</i> , G. K. Jenkins	£3,625 to £4,125
<i>Deputy Keeper</i> , R. A. G. Carson	£3,064 to £3,625
<i>Assistant Keepers</i> , J. P. C. Kent; Marion M. Archibald; N. M. Lowick; M. J. Price.	
<i>Keeper of Egyptian Antiquities</i> , L. E. S. Edwards, C.B.E.	£3,625 to £4,125
<i>Assistant Keepers</i> , *T. G. H. James; A. F. Shore.	
<i>Keeper of Western Asiatic Antiquities</i> , R. D. Barnett	£3,625 to £4,125
<i>Assistant Keepers</i> , *E. Sollberger; T. C. Mitchell.	
<i>Keeper of Greek and Roman Antiquities</i> , D. E. L. Haynes.	£3,625 to £4,125
<i>Deputy Keeper</i> , R. A. Higgins	£3,064 to £3,625
<i>Assistant Keepers</i> , D. E. Strong; Ann Birchall.	
<i>Keeper of British and Medieval Antiquities</i> , R. L. S. Bruce-Mitford.	£3,625 to £4,125
<i>Deputy Keeper</i> , J. W. Brailsford.	£3,064 to £3,625
<i>Assistant Keepers</i> , G. H. Tait; G. de G. Sieveking; K. S. Painter; I. H. Longworth; M. R. Taylor; J. Cherry; Leslie E. Webster.	
<i>Keeper of Oriental Antiquities</i> , B. Gray, C.B.E.	£3,625 to £4,125
<i>Deputy Keeper</i> , D. E. Barrett	£3,064 to £3,625
<i>Assistant Keepers</i> , R. H. Pinder-Wilson; W. Zwalf; L. R. H. Smith; Jessica M. Rawson.	
<i>Keeper of Ethnography</i> , A. Digby, C.B.E.	£3,625 to £4,125
<i>Deputy Keeper</i> , W. B. Fagg, C.M.G.	£3,064 to £3,625
<i>Assistant Keepers</i> , B. A. L. Cranstone; Elizabeth M. Carmichael; Sheila G. Weir.	
<i>Keeper of Laboratory</i> , A. E. A. Werner	£3,625 to £4,125
<i>Principal Scientific Officers</i> , A. D. Baynes-Cope; H. Barker.	£2,625 to £3,232

National Reference Library of Science and Invention
 Holborn Division, 25 Southampton Buildings, W.C.2
 [01-405-8721]

Bayswater Division, 10 Porchester Gardens, W.2.
 [02-727-3021]

This Library is part of the Department of Printed Books of the British Museum. The Holborn Division incorporates the former Patent Office Library, which was transferred to the British Museum on April 1, 1966. Its stock of nearly half a million volumes of modern scientific and technical literature is primarily related to industrial and technological innovation. Most is on open-access and it includes some 17,000 periodicals and the only comprehensive collection in Britain of patent literature. The Bayswater Division is not yet open to the public.

Holborn Division open Mon. to Fri. 9.30 a.m.-9 p.m. (Foreign Patents Annex, 9.30 a.m.-5.30 p.m.), Saturdays, 10 a.m.-1 p.m. (Foreign Patents Annex closed). No admission ticket is required. Closed on Sundays and public holidays.

Assistant Keepers, Barbara J. Youngman; S. P. Cooper; *A. Sandison; *M. W. Hill; G. J. Sassoone; Susan Lamble; J. R. Lansley; R. H. De Vere; P. J. Gazder; Amelia D. Crews; D. R. Jamieson; C. D. M. Johnston; Margaret Graham; J. R. Chiswell; R. R. O. Skelton; Dorothy E. A. Wijeyaratnam; D. T. Worthy; E. J. Copley; J. A. Leigh; Jane Britton.

* Receives an allowance.

THE BRITISH MUSEUM (NATURAL HISTORY)

Cromwell Road S.W.7
 [01-589-7321]

Open free on week-days (except Good Friday and Christmas Day) 10 to 6, and on Sundays from 2.30 to 6.

The Natural History Museum originates from the natural history departments of the British Museum, Bloomsbury. During the 19th century the natural history collections grew so extensively that it became necessary to find new quarters for them and in 1881 they were moved to South Kensington. The British Museum Act, 1963, made the Natural History Museum completely independent with its own body of Trustees. The five departments are shown below. The Zoological Museum, Tring, bequeathed by the second Lord Rothschild, has formed part of the Museum since 1938. Research workers are admitted to the libraries and study collections by Student's Ticket, applications for which should be made in writing to the Director. Official Guide Lecturers conduct visitors round some of the exhibition galleries at 3 p.m. on weekdays free of charge, and their services are available at other times for special parties (also free of charge) by arrangement with the Director.

The administrative expenses were estimated at £1,011,000 in 1968-69.

Board of Trustees

Chairman, Sir Landsborough Thomson, C.B., O.B.E.
Appointed by the Prime Minister: The Viscount Boyd of Merton, P.C., C.H.; The Earl of Cranbrook, C.B.E.; The Rt. Hon. Sir Eric Fletcher, M.P.; Prof. T. M. Harris, F.R.S.; The Viscount Radcliffe, P.C., G.B.E.; The Hon. Miriam Rothschild; Dr. J. E. Smith, F.R.S.; Sir John Winnifred, K.C.B.; Prof. Sir Solly Zuckerman, O.M., K.C.B., F.R.S.

Nominated by the Royal Society: Prof. A. R. Clapham, F.R.S.

Appointed by the Trustees of the British Museum (Natural History): Prof. O. M. B. Bulman, F.R.S.; Prof. W. A. Deer, F.R.S.

Director, G. F. Claringbull, Ph.D. £5,375
Secretary, A. P. Coleman (*Establishment Officer*)

£3,281 to £3,625

Assistant Secretary, W. L. Rombach £2,102 to £2,536

Librarian, M. J. Rowlands £2,375 to £3,232

Chief Exhibition Officer, C. P. Carter £2,696 to £3,124

Chief Guide Lecturer, A. G. Leutscher, £2,102 to £2,536

Department of Zoology

Keeper, J. P. Harding, Ph.D. £4,300 to £4,750

Deputy Keepers, R. H. Hedley, Ph.D.; J. G. Sheals, Ph.D. £3,625 to £4,125

Senior Principal Scientific Officers, P. H. Greenwood, D.Sc.; N. B. Marshall, Sc.D.; D. W. Snow, D.Phil. £3,625 to £4,125

Principal Scientific Officers, Miss A. M. Clark; G. B. Corbet, Ph.D.; I. C. J. Galbraith; Miss A. G. C. Grandison; Miss J. E. King; R. W. Sims; P. J. P. Whithead; C. A. Wright, Ph.D. £2,375 to £3,232

Chief Experimental Officer, S. Prudhoe £2,696 to £3,124

Department of Entomology

Keeper, P. Freeman, D.Sc. £3,625 to £4,125

Deputy Keepers, J. F. Perkins, Agr.D.; D. R. Ragge, Ph.D. £3,625 to £4,125

Senior Principal Scientific Officer, H. Oldroyd £3,625 to £4,125

Principal Scientific Officers, Miss T. R. Clay, D.Sc.; J. P. Doncaster, C.B.E.; V. F. Eastop, Ph.D.; D. E. Kimmins; P. F. Mattingly, D.Sc.; I. W. B. Nye, Ph.D.; A. Watson; P. E. S. Whalley; I. H. H. Yarrow, Ph.D. £2,375 to £3,232

Department of Palaeontology

Keeper, H. W. Ball, Ph.D. £3,625 to £4,125

Deputy Keepers, C. G. Adams, Ph.D.; W. T. Dean, D.Sc. £3,625 to £4,125

Principal Scientific Officers, A. J. Charig, Ph.D.;

M. K. Howarth, Ph.D.; R. P. S. Jefferies, Ph.D.;
 A. J. Sutcliffe, Ph.D. £2,375 to £3,232
Chief Experimental Officer, H. A. Toombs
 £2,696 to £3,124

(Sub-Department of Physical Anthropology)
Deputy Keeper, K. P. Oakley, D.Sc., Ph.D., F.B.A.
 F.S.A. £3,625 to £4,125

Department of Mineralogy
Keeper, A. A. Moss, Ph.D. £3,625 to £4,125
Deputy Keeper, J. D. H. Wiseman, Ph.D.
 £3,625 to £4,125

Senior Principal Scientific Officer, M. H. Hey, D.Sc.
 £3,625 to £4,125

Principal Scientific Officers, R. J. Davis, D.Phil.; S. E.
 Ellis. £2,375 to £3,232

Department of Botany
Keeper, R. Ross £4,300 to £4,750
Deputy Keeper, A. Melderis, Ph.D. £3,625 to £4,125
Senior Principal Scientific Officer, W. T. Stearn, D.Sc.
 £3,625 to £4,125

Principal Scientific Officers, J. F. M. Cannon; P. W.
 James; J. Lewis; N. K. B. Robson, Ph.D.
 £2,375 to £3,232

MUSEUM OF LONDON

This museum, which will amalgamate the London and Guildhall Museums under a Board of 18 Governors, appointed (6 each) by the Government, the Corporation of London and the Greater London Council, was approved by Act of Parliament in 1965. When amalgamation takes place, the Museum will be controlled by the Board of Governors and financed in equal shares by the three authorities. It will eventually be housed in a new building to be erected in the City at the west end of London Wall. Meanwhile its two constituent parts will continue to be housed in their present buildings.

THE LONDON MUSEUM

Kensington Palace, W.8.

[01-937 9816]

The collections illustrate the history of London from the earliest times to the present and include archaeological remains, topographical pictures and models, costumes, and royal relics. Originally housed at Kensington Palace, the collections were transferred to Lancaster House in 1914, where they remained till 1950, when most of Lancaster House was converted for use solely as a centre for government hospitality and conferences, and the museum was again granted temporary accommodation at Kensington Palace by King George VI. In 1956 the State Apartments at Kensington Palace were reopened to the public under the administrative control of the London Museum. The Apartments contain pictures from the royal collections, royal costumes, and furniture formerly belonging to Queen Mary.

Director, D. B. Harden, O.B.E., Ph.D., F.S.A.
Assistant Keepers, 1st Class, B. W. Spencer, F.S.A.;
 J. T. Hayes, Ph.D.

THE GUILDHALL MUSEUM

55 Basinghall Street, E.C.2

[01-606 3030]

The collection contains archaeological remains excavated from within the boundaries of the City of London, and other material illustrating the history of the City. It is specially strong on the Roman and medieval periods, including the splendid marble statuary and other finds from the Temple of Mithras.

Director, N. C. Cook, F.S.A.
Assistant Director, R. Merrifield, F.S.A.

THE SCIENCE MUSEUM

South Kensington, S.W.7

[Kensington: 6371]

Open free on weekdays 10 to 6; Sundays 2.30 to
 6. Closed on Good Friday and Christmas Day.

For Science Museum Library, see below.
 The Science Museum, which is the National Museum of Science and Industry, was instituted in 1853 under the Science and Art Department as a part of the South Kensington Museum, and opened in 1857; to it was added in 1883 the Collections of the Patent Museum. In 1909 the administration of the Science Collections was separated from that of the Art Collections, which were transferred to the Victoria and Albert Museum. The Collections in the Science Museum illustrate the development of science and engineering and related industries.

The administrative expenses of the Museum and Library were estimated at £613,000 for 1968-69.
Director and Secretary, Sir David Follett £5,375
Museum Superintendent, J. A. Reeve
 £2,696 to £3,124

Department of Physics

Keeper, F. A. B. Ward, C.B.E. £3,625 to £4,125
Deputy Keeper, V. K. Chew £2,050 to £3,256
Assistant Keeper (First Class), A. B. Sahiar
 £1,869 to £3,039

Department of Chemistry

Keeper, F. Greenaway £3,625 to £4,125
Deputy Keeper, D. B. Thomas £2,086 to £3,256
Assistant Keeper (First Class), A. G. Thoday
 £1,869 to £3,039

Department of Transport, Mining and Circulation Collections

Keeper, W. Winton £3,625 to £4,125
Deputy Keepers, P. L. Sumner; T. M. Simmons
 £2,086 to £3,256

Department of Electrical Engineering, Communications and Agriculture

Keeper, D. Chilton £3,625 to £4,125
Assistant Keepers (First Class), Mrs. L. A. West;
 B. P. Bowers; W. K. E. Geddes
 £1,869 to £3,039

Department of Aeronautics and Sailing Ships
Keeper, G. R. M. Garratt £3,625 to £4,125
Assistant Keepers (First Class), W. J. Tuck; B. W.
Bathe £1,869 to £3,039

Department of Mechanical and Civil Engineering
Keeper, K. R. Gilbert £3,625 to £4,125
Deputy Keeper, G. B. L. Wilson £2,086 to £3,256

Assistant Keeper (First Class), R. J. Law
 £1,869 to £3,039

Department of Astronomy and Geophysics
Keeper, S. E. Janson £3,625 to £4,125
Keeper Emeritus, H. R. Calvert £1,869 to £3,039

Deputy Keeper, J. Wartnaby £2,086 to £3,256
Assistant Keeper, C. St. C. B. Davison
 £1,869 to £3,039

Department of Museum Services
Keeper, Miss M. K. Weston £3,625 to £4,125
Deputy Keeper, G. W. B. Lacey £2,086 to £3,256
Assistant Keeper (First Class), M. R. Preston
 £1,869 to £3,039

Library

SCIENCE MUSEUM LIBRARY, Imperial Institute Road, S.W.7.—A national library especially devoted to pure and applied science, 405,000 volumes, 19,100 periodicals and transactions of learned societies, about 5,000 current. Bibliographies supplied.—Open on weekdays 10 to 5.30. Closed on Sundays and Bank Holiday weekends. Admission free. Photo-copying service.

Keeper, J. A. Chaldecott £3,625 to £4,125
Deputy Keeper, Miss H. J. Parker £2,086 to £3,256
Assistant Keepers (First Class), L. R. Day; Miss H. D.

Phippen £1,869 to £3,039

THE VICTORIA AND ALBERT MUSEUM
 South Kensington, S.W.7
 [Kensington: 6371]
