# Dillon's Sells Books

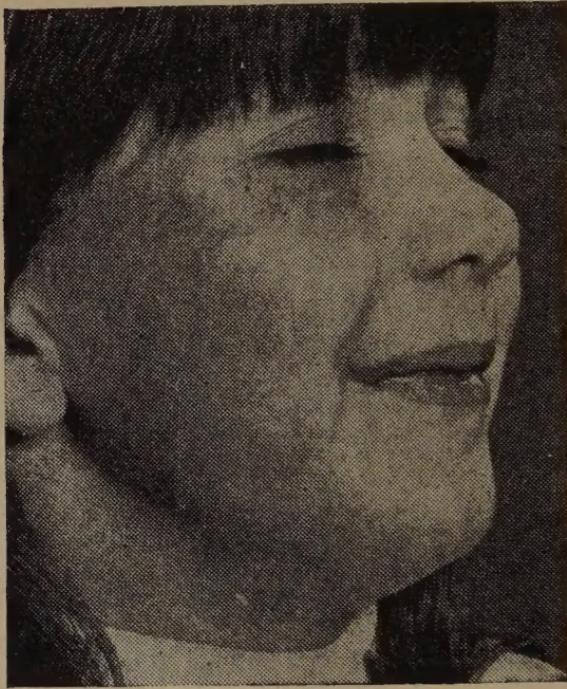

A bookshop designed for people who care about books, we now have one of the largest stocks of books (including paperbacks) in London: fifteen rooms on five floors.

We specialize in importing books from the United States, and from other places abroad.

Lists of recent and forthcoming books are available in many subjects, and recent comprehensive catalogues include Geography, Mathematics, Education, Computers and Psychology. Write, telephone, or call in for all your book needs.

**Dillon's University Bookshop Ltd.,  
1, Malet Street, London, WC1  
01-636 1577**

# Janet has no fear of the dark—now

Janet has lost her sight, but once again she is like any other little girl – happy and mischievous. Her parents knew they could rely on the RNIB. The RNIB help the blind of all ages, help nearly all the 116,000 blind of Britain.

With their Sunshine Homes and Schools for blind babies and children, rehabilitation centres for the newly blind and homes for the elderly. And with braille literature, Talking Books and many other special aids for the blind.

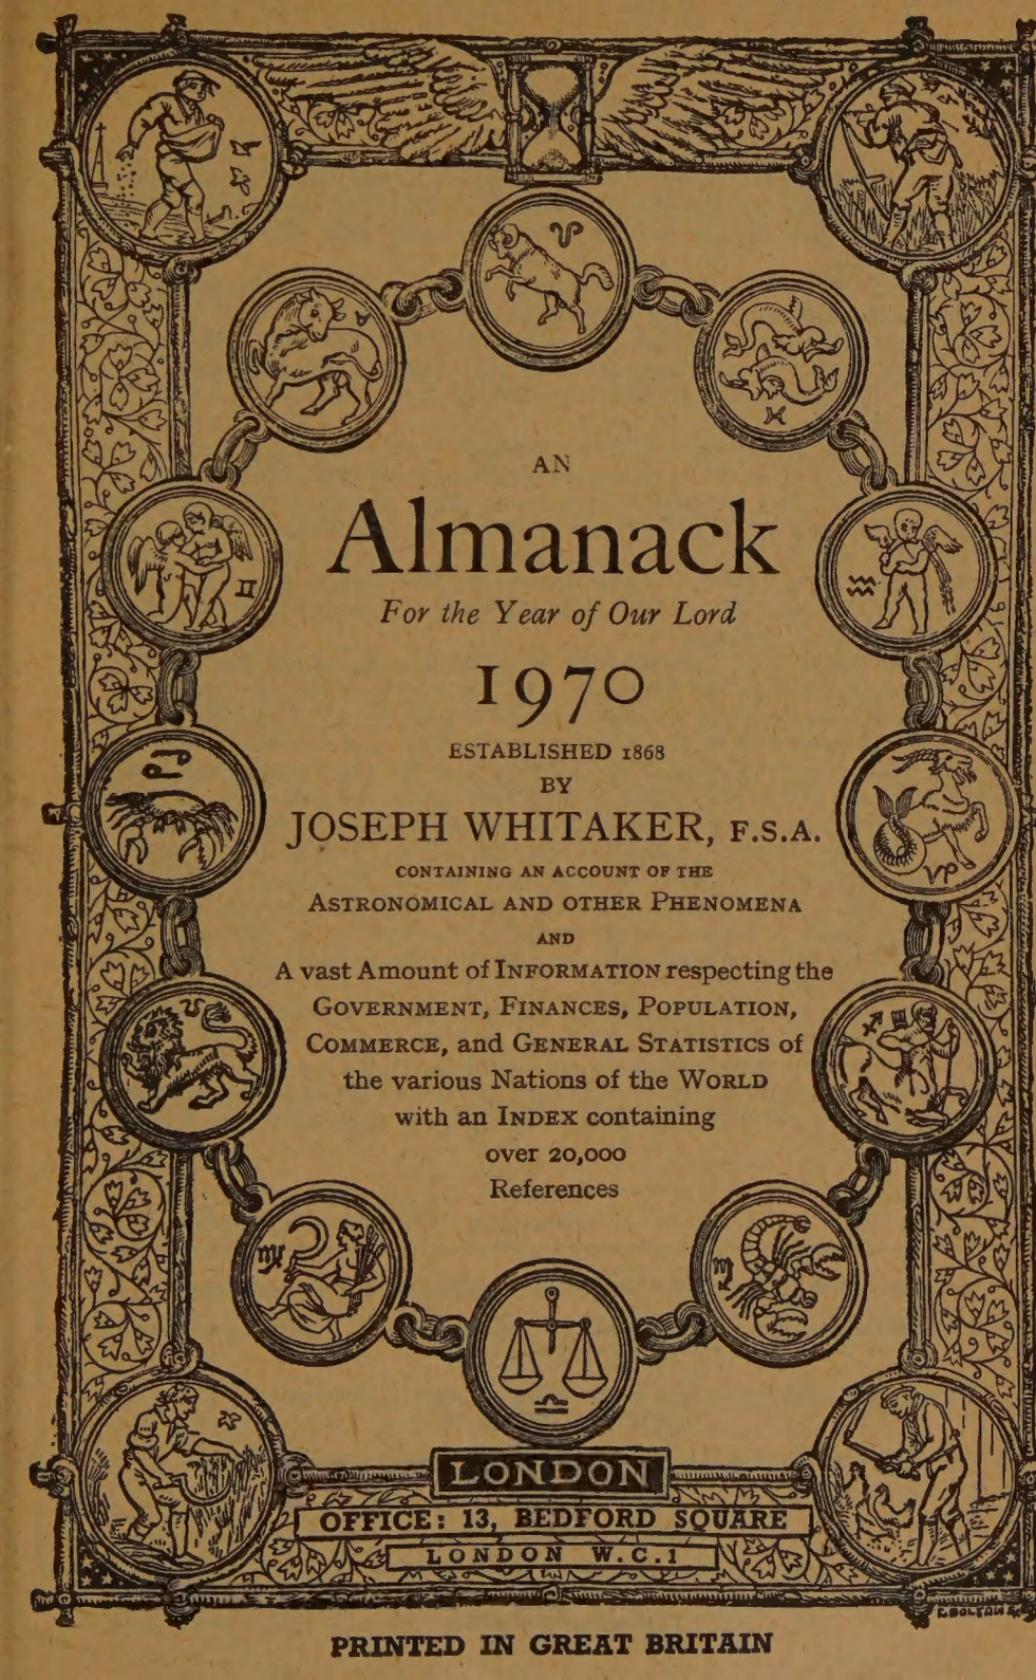

For all this, the RNIB need donations and legacies. Please give generously.

LONDON W.C.1

PRINTED IN GREAT BRITAIN

Ret. AY 754 W5 1970  
PREFACE TO THE 102<sup>ND</sup> ANNUAL VOLUME  
(1970)

The greater part of each edition of "Whitaker" inevitably consists of those regular features to which its users habitually turn. But the Editor also seeks not only to describe contemporary events but to introduce each year features which are distinctively topical.

The year under review will be most memorable for man's first landing on the Moon. This great event is fully chronicled and illustrated. Subjects of other illustrations include the investiture of the Prince of Wales, the new Presidents of the United States and of France, and the *Queen Elizabeth II*. Unrest in Ulster during the year (which is also illustrated) caused the inclusion of a special section on Northern Ireland among Events of the Year.

As in a number of recent years Cabinet changes took place while the Almanack was going to press. Ministries were reorganized and many new appointments made. An up-to-date list of Her Majesty's Ministry is given among Occurrences during Printing, where information about the new arrangement of Offices will also be found. Meanwhile many more new official bodies were set up during the year and appear in Government and Public Offices. They include the Metrication Board, the Gaming Board, the Commission for Industrial Relations, the National Freight Corporation and the National Bus Company.

New subjects selected for Topics of the Year include the Maud Report on local government reorganization in England, and its counterpart for Scotland, the Wheatley Report; the choice of the third airport site for London; the British Trans-Arctic Expedition; the new Victoria Underground line, and the Theft Act. Some other topics, notably that of surgical transplants, have been retained as still justifying inclusion as Topics of the Year, and information about decimal coinage has been expanded, with reference to the 1969 Act; conversion tables have also been supplied.

An Easy Reference Calendar has been introduced, from which it is possible at a glance to find the day of the week for any date between the years 1753 and 2000. Other new features include a special article on Earnings-Related Social Security, explaining the current proposals, and expanded expectation of life tables, which include geographical comparisons not only within the British Isles but between Britain and other countries.

The year was one of marked success for British sport. Results of the European Games at Athens are given in detail, and there are illustrations of British victories in the Games, as well as at Wimbledon and in the Open Golf Championship.

The Editor once more wishes to express his gratitude to his many correspondents. Their readiness to supply information and their helpful suggestions are alike of the greatest value.

# TAKE UP PELMANISM

For Progress and Prosperity

**PELMANISM** is a working course in Practical Psychology directed to the needs of the average man and woman.

The Pelman Course is based on over 75 years' intensive study concurrent with experience in dealing with the difficulties, failings, fears, aspirations, and ambitions of more than a million men and women of all ages and occupations in all parts of the world.

You would like your affairs to prosper and your income to increase. Pelmanism will help you to achieve this and will enable you to develop that zest for living which comes with an awakened mind; also with quickened mental powers your awakened ability will enable you to enjoy those purchasable pleasures that come with extra money.

The Pelman training is scientific, precise, and individual, and is a sure way to success.

Pelmanism will rapidly and permanently banish defects and weaknesses. It will keep your mind vigilant and self-reliant and develop valuable positive qualities.

Pelmanism is a true philosophy of living for ordinary sensible people who wish to make the best of themselves at all times and under all circumstances.

## Easy to Follow

Half an hour a day of spare time for a few weeks is enough. Everything is simply set out and described and no drudgery is entailed. The books are printed in handy pocket size, so that you can study them in spare moments during the day. Even the busiest man or woman can spare a few minutes daily for Pelmanism, especially when minutes so spent bring in such rich rewards.

### HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian without translation. Write for particulars of the language that interests you, which will be sent free.

**Pelman Languages Institute,**  
200 Tudor House, Carter Lane,  
London, E.C.4

## What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

But Pelmanism does more than eliminate failings. It awakens dormant faculties. It develops power you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops:—

—Optimism	—Observation
—Perception	—Initiative
—Judgment	—Originality
—Self-Control	—Reliability
—Concentration	—Will-Power
—Mental Energy	—Personality
—Self-Confidence	—Resourcefulness
—Reliable Memory	—Presence of Mind

Pelmanists are not left to make the applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

*Remember—Everything you do is preceded by your attitude of mind*

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.

### Send for the Free Book

The Pelman Course is simple and interesting and takes up very little time. You can enrol on the most convenient terms: The Course is fully described in *The Science of Success*, which will be sent to you, free, on application to:—

**PELMAN INSTITUTE**  
200 Tudor House  
Carter Lane, London, E.C.4

*Established over 75 years*

*All correspondence is confidential.*

# The Association of Certified and Corporate Accountants

In an age when the emphasis is increasingly on specialised training, the demand for men and women possessing professional skill is all the greater.

Consequently the role of the Certified Accountant becomes ever more important in helping to meet the needs of industry, commerce and the public alike—in addition to providing new opportunities for a most satisfying career.

The Association is the second largest of the statutorily recognised bodies of Accountants in the United Kingdom having a membership in excess of 12,000.

The designation of Members is “Certified Accountant”. Fellows are denoted by the letters F.A.C.C.A. and Associates by the letters A.A.C.C.A.

*Full details about the Association and its examinations can be obtained on application to the Secretary.*

# A DEED OF GRATITUDE

A legacy for the Methodist Homes for the Aged is a means many generous people adopt in expressing gratitude for their own home and for serenity and peace-of-mind in their old age.

There are so many who are less fortunate and for lonely and anxious old people the Methodist Homes for the Aged are a haven and a home. Our constantly growing income from legacies, more than any other factor, has enabled us to embark on the capital expenditure for twenty-eight Homes. Unfortunately even these will accommodate only a few of the hundreds of deserving people on the tragically long waiting list.

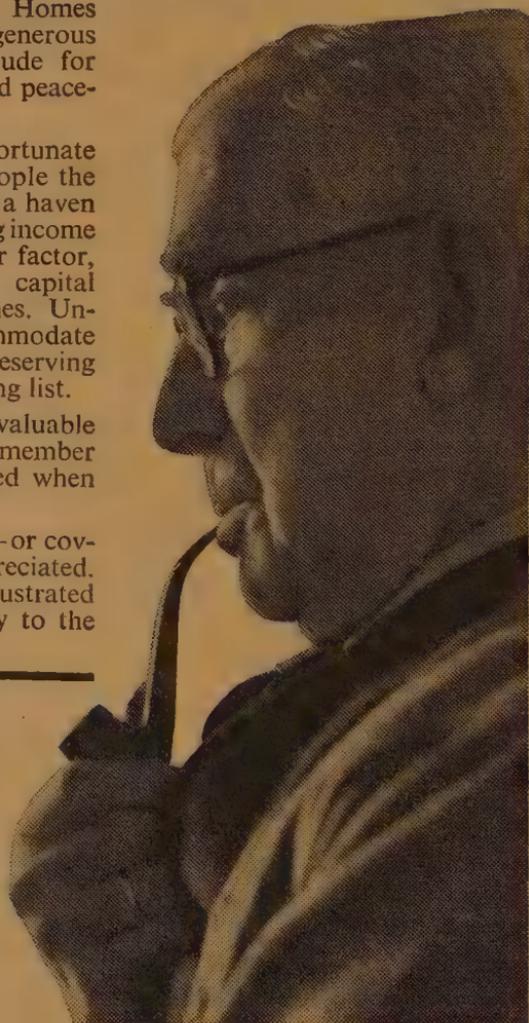

We thankfully acknowledge this valuable assistance and ask you please to remember the Methodist Homes for the Aged when making your will.

Bequests of money and property—or covenanted gifts—are all greatly appreciated. May we send you copies of illustrated literature? Please write personally to the General Secretary.

## Methodist Homes for the Aged

General Secretary:  
Rev. R. J. Connell, B.A., B.D.

1 Central Buildings,  
Westminster, London SW1

# CHURCH ARMY

turns

## CONCERN INTO ACTION

A large family of elderly people in homes, hostels, and in over 700 flatlets.

A growing involvement with the young in Youth Centres, Forces Clubs, Mother and Baby Homes, and centres for prevention of drug addiction.

A constant caring ministry to the old, lonely, and all in need through Winter Relief work, Holiday Homes, Parish and Prison work.

A concern to proclaim a message of hope and to train others for definite and practical Christian witness.

### BE PARTNERS WITH US IN THIS GREAT CHRISTIAN CONCERN

Enquiries to: **The Financial Organizing Secretary,  
Church Army Headquarters,  
P.O. Box 67,  
185, Marylebone Road,  
London, N.W.1.**

**Patrons:**

HER MAJESTY THE QUEEN

HER MAJESTY QUEEN ELIZABETH THE QUEEN MOTHER

President: H.R.H. THE PRINCESS MARGARET

Chairman of the Governing Body: BRIGADIER THE MOST HON. MARQUESS DOURO, M.V.O., O.B.E., M.C.

Chairman of Central Executive Committee: MAJOR JOHN L. WILLS

Joint Hon. Treasurers: A. C. SENDEN, ESQ., R. P. FAWKNER-CORBETT, ESQ.

Because teenage delinquency continues to increase it is vital that further remedies are necessary. You will remember that the youthful years are exciting with an urgency that needs adventurous and even hazardous satisfaction and this we provide but, owing to financial stringency, in insufficient quantity. Today's youth are tomorrow's adults so if you and yours look for stability in the years ahead, support those societies that help the young to become reliable people. We opened a School of Adventure in the West Highlands in 1964 but many further establishments are a necessity. Literature and Annual Report sent on request.

# **CENTRAL COUNCIL FOR THE DISABLED**

*(Formerly Central Council for the Care of Cripples)*

**34 ECCLESTON SQUARE, LONDON, S.W.1**

*(Registered in accordance with the  
Charities Act, 1960)*

Founded in 1919, this is the national co-ordinating body for over 200 local affiliated bodies. Its objects are to promote measures for the discovery, treatment, training and general welfare of the disabled.

Standing commitments include liaison with international organisations and orthopaedic hospitals; the maintenance of a school for handicapped children and an advisory service; the operation of a travelling exhibition of aids and a case committee for the making of small grants.

Among other present activities, research is being carried out on domestic design, clothing, and leisure projects for the disabled; and a campaign is in being to make all public buildings accessible to them.

***Dependent Upon Voluntary Contributions***

# HELP the CENTRAL CHURCH FUND *WITH A BEQUEST*

As a faithful member of the Anglican Church you may want to leave a share of your estate in order to benefit the general purposes of the Church of England, after your lifetime.

You can best give effect to this desire by including in your Will a bequest to the Central Church Fund, expressed in the following suggested form of words:—

“I give and bequeath to the Central Board of Finance of the Church of England, whose registered office is at Church House, Dean’s Yard, Westminster, London, S.W.1. . . . per cent of the residue of my estate to be credited to the Central Church Fund and to be applied both as to capital and income to such ecclesiastical charitable purposes in the Church of England as the said Board shall in its absolute discretion decide, and I declare that the receipt of the Secretary for the time being of the said Board shall be sufficient discharge to my executors for the same.”

*Annual Report with Accounts and any further information  
available from The Secretary*

# A legacy in happiness for 8,000 children

It may surprise you to learn that our work depends entirely on voluntary support. The overloaded Welfare State simply cannot cope with the thousands of British children who need help. A Barnardo bequest helps us to carry on with all these vital ventures:

We have over 120 homes in Britain and overseas.

We are a Registered Adoption Society and endeavour to place as many children as possible with foster parents.

We operate a Family Care Service. Its chief object is to keep children and parents together; to support and sustain the family.

We have special schools for the care and education of

physically handicapped children.

We provide special care for maladjusted and emotionally disturbed children.

We run Adventure Training Courses for boys and girls.

We have special holiday homes where mothers can have a much needed holiday together with their children.

We organise full time training courses in child care,

*Ask your secretary to send for brochures and further details of our work.*

**Please help  
Barnardo's  
help a child**

To: Dr. Barnardo's, Tanners Lane, Barkingside, Ilford, Essex.  
*Please send me full details about the work of Barnardo's.*

## 90 PER CENT OF OUR INCOME...

is spent on providing independent flatlets and a comfortable, companionable way of life for many elderly people.

Yet each year we receive hundreds of requests for accommodation and help from lonely, distressed, elderly people from all parts of the country.

**The only way we can assist them is by increasing our income.**

Please help us to do this. Donations of any size will be most gratefully received.

The Secretary (WA):

**FELLOWSHIP HOUSES TRUST,  
Clock House House, Byfleet,  
Weybridge, Surrey.**

Telephone: Byfleet 43172

# A MOST WORTHY CAUSE

The HOMES OF ST. BARNABAS provide in lovely country a really happy and secure old age to some 40 retired Anglican Clergy. Each has his comfortable quarters and full use of the fine library and common rooms. There are Chapels where those who are able celebrate and conduct the Services. There is an infirmary wing under a S.R.N. Each resident pays what he can but that is insufficient. Please help to fill the gap by

THE BLIND ARE PEOPLE LIKE YOU...

Many people who are blind were once able to see as you do. Then what seemed catastrophe struck them. They knew that courage alone was not enough and that help was needed to re-build shattered lives.

At this very moment there are people having to face the distressing truth that they will never see again. They need help desperately—new help for the future through rehabilitation and training—and the help of *your* contribution towards the cost of these services. The Greater London Fund for the Blind asks for £250,000 a year for services which restore purpose, confidence and hope to lives without sight. **Please send a contribution—or remember the Fund in your Will.**

**GREATER LONDON FUND FOR THE BLIND**

*Registered in accordance with the National Assistance Act 1948 and the Charities Act 1960*

**PATRON: H. M. QUEEN ELIZABETH THE QUEEN MOTHER**

**2(W) WYNDHAM PLACE, LONDON, W1H 2AQ 01-262 0191**

# KING GEORGE'S JUBILEE TRUST

*Patron:*

HER MAJESTY  
THE QUEEN

*Chairman:*

H.R.H. The Duke of  
Gloucester, K.G., K.T.

The Trust exists for the benefit of young people in the United Kingdom. It makes grants to voluntary youth organisations, and aids pioneer projects for youth.

Its experience over the years ensures that funds are used to the best advantage. Since its foundation in 1935, grants of more than £1.9 million have been made.

Young people need challenge, opportunity, and leadership, to encourage a sound sense of values and responsibility. Towards these objectives the Trust devotes its funds and energies.

**Please support this constructive work by a donation, covenant or bequest.**

Suggested wording for bequests and covenants:

*"I hereby bequeath or covenant over 7 or 10 years the sum of £... free of duty to King George's Jubilee Trust, 166 Piccadilly, W.1. for use in accordance with the terms of its Trust Deed."*

Patron: H.R.H. Princess Alexandra, the Hon. Mrs. Angus Ogilvy, G.C.V.O.

## LONDON ASSOCIATION FOR THE BLIND

(Founded 1857)

A National Charity which has helped blind people throughout the British Isles for over a hundred years. So that it may continue to care for the elderly, train and employ others and provide annuities for those in need, please send a donation to

**THE HON. TREASURER, 88/92 PECKHAM ROAD,  
LONDON, S.E.15**

(Registered in accordance with the National Assistance Act, 1948 and as a National Charity under the Charities Act, 1960)

# PRESENT IMPERFECT.... FUTURE INDEFINITE

for all the thousands of sufferers from MS – Multiple Sclerosis (also known as Disseminated Sclerosis). This is a disease of the central nervous system which renders victims partially or even totally incapacitated. It strikes young and old, male and female.

There is no known cause and no known cure.

The Multiple Sclerosis Society of Great Britain and Northern Ireland exists to further vital research and to help sufferers.

We rely heavily upon voluntary contributions, endowments, legacies. Every little helps – how about putting a £1 in an envelope and sending it off right now?

**THE MULTIPLE SCLEROSIS SOCIETY**  
of Great Britain and N. Ireland

4 Tachbrook Street, London SW1  
01-834 8231/2/3

## EVERY MITE COUNTS

Children become deprived of normal family life for many different reasons. Our first aim in caring for them is to restore them to their families. This means an essentially individual approach to the personal problem of every child in our care. As we always have over 3,000 in any one year, and we *could* accept many more if we had the funds, we need your generous support.

Please write to The Principal

# QUEEN ELIZABETH'S FOUNDATION FOR THE DISABLED

*Photograph by courtesy of the Times*

## *Patron: Her Majesty Queen Elizabeth the Queen Mother*

This many-sided organisation provides vocational training, residential workshops holiday and convalescent amenities, and medical rehabilitation for men and women suffering from physical and mental disabilities. Nearly 1,000 disabled people receive help from one or other of the four units of the Foundation each year. Progress, however, is limited through lack of extra funds. The Foundation urgently needs help to enable them to train the handicapped to live a fuller and more useful life. Your legacy or donation, large or small, will be put to vital use wherever it is most needed.

BANSTEAD PLACE medical rehabilitation

QUEEN ELIZABETH'S TRAINING COLLEGE FOR THE DISABLED vocational training and rehabilitation

DORINCOURT residential sheltered workshops

LULWORTH COURT holiday and convalescent home for the severely disabled

*Please make bequests and donations to*

# The Royal Hospital and Home for Incurables, Putney

Vacancies occur from time to time at The Royal Hospital and Home for Incurables, Putney, for a limited number of patients who are able to pay £28 per week towards the present cost of maintenance.

Patients receive the most up-to-date medical care, nursing, Occupational Therapy and Physiotherapy, in the atmosphere of a home, where they can stay for the rest of their lives which in many cases are long and happy ones.

Wards are small (2-6 beds) and public rooms large and well appointed. There is a great variety of social activities and vocational classes.

The Hospital is set in 10 acres of spacious and beautiful grounds and a flat is available for visiting relations who come from afar. Holidays are arranged and encouraged and transport is available in two specially appointed ambulances.

Our patients suffer from Rheumatoid Arthritis, Multiple Sclerosis and kindred chronic illnesses. Though considered to be "beyond likelihood of cure" every case is treated hopefully and many patients make remarkable progress. We do not accept sufferers from Cancer, Epilepsy and infectious diseases and those of unsound mind.

Enquiries should be addressed to:

**The Secretary,  
The Royal Hospital & Home for Incurables,  
West Hill, London, S.W.15.  
Telephone: 01-788 4511**

THE BEST WAY TO SAY

# “THANK YOU, NURSE”

Give to

## THE ROYAL COLLEGE OF NURSING AND NATIONAL COUNCIL OF NURSES OF THE UNITED KINGDOM

Patrons: Her Majesty the Queen, Her Majesty Queen Elizabeth the Queen Mother  
Her Royal Highness The Princess Margaret, Countess of Snowdon

The College works unceasingly to promote the science and art of nursing.  
Funds are urgently needed for

**expansion, research, maintenance.**

Remember the nurses who help you in times of sickness. Help them to maintain their College which serves the public through the nursing profession.

Please send a subscription or donation NOW or make a bequest.

All gifts gratefully received by The Appeals Secretary, Dept. 18, 1A Henrietta Place,  
Cavendish Square, London, W.1

“I’d love to make a donation.  
But right now  
I simply don’t have the cash!”

In these days of tight money control we fully understand your position. But may we suggest another way in which you can help the Blind. A legacy. By remembering the Blind in your will you can do a lot to maintain and extend the care and training programmes of The Royal London Society for the Blind. The Honorary Secretary will send you details. Or ask your solicitor.

**THE ROYAL LONDON SOCIETY FOR THE BLIND**  
107N Salusbury Road, London, N.W.6

Patron: Her Majesty the Queen

Registered in accordance with the National Assistance Act, 1948 and the Charities Act, 1960

**Please also remember us in your will**

**THE ROYAL NATIONAL PENSION  
FUND FOR NURSES**

Patron: Queen Elizabeth The Queen Mother

For over 80 years The Royal National Pension Fund has helped thousands of nurses who hold policies to achieve independence in their retirement.

However, there are many nurses who failed to make provision through the fund for their retirement, and many more were unable to do so.

These nurses are helped as far as finance allows by our associated charitable organisations.

The Nurses' Memorial to King Edward VII provides subsidised residential accommodation for those no longer able to care for themselves.

The Junius S. Morgan Benevolent Fund alleviates hardship in individual cases by the payment of cash grants or annuities.

Will you help us to meet the expanding need? Both these charities will warmly welcome cash gifts, deeds of covenant or bequests at Burdett House, 15 Buckingham Street, London WC2.

# RNBT

## THE ROYAL NAVAL BENEVOLENT TRUST

has been supported and administered by the men of the Royal Navy since it was established in 1922. It provides relief in distress not only to all serving and ex-serving Naval men, but also to their families, widows, orphans and dependants. RNBT administers and maintains a Home for Aged Ex-Naval Men in Gillingham, and the Naval School of Motoring at Portsmouth, where Naval men are taught to drive and service motor-vehicles.

HEAD OFFICE : HIGH STREET, BROMPTON, GILLINGHAM, KENT

Local Offices : Batchelor Street, CHATHAM ; Stopford Place, Stoke, DEVONPORT  
2a Tipner Road, PORTSMOUTH

## SOCIETY FOR THE ASSISTANCE OF LADIES IN REDUCED CIRCUMSTANCES

(Founded by the late Miss Smallwood)

Patron: Her Majesty the Queen

**This Society is entirely supported by Voluntary Contributions**

In these difficult times this Society is carrying on its much-needed work of helping poor ladies, many elderly and some great invalids trying to live on very little.

All gifts of money gratefully received. If you cannot give a donation now, **please remember this work in your Will.**

Making cheques payable to—

**MISS SMALLWOOD'S SOCIETY**

**Lancaster House Malvern Worc.**

## OCCURRENCES DURING PRINTING

Home Affairs. Oct. 3.—Labour Party Conference at Brighton approved Executive's policy statement by 3,562,000 to 2,272,000.

Oct. 5.—In Government reconstruction, Mr. R. W. Marsh, Minister of Transport, ceased to hold office and other Ministers not retained were Mr. F. Lee, Chancellor of the Duchy of Lancaster, and Mr. K. Robinson, Minister of Planning and Land. The Department of Economic Affairs was wound up, and Mr. C. A. R. Crosland was appointed to new office of Secretary of State for Local Government and Planning. The Ministry of Power was merged in the Ministry of Technology, which also took over various responsibilities from the Board of Trade and the Department of Economic Affairs. Mr. Greenwood, while remaining Minister of Housing and Local Government, ceased to be in the Cabinet.

Oct. 6.—Unofficial strike of dustmen, which had already affected several London boroughs, spread to involve almost whole of Greater London area, as well as many places elsewhere, and was joined by other council workmen.

Oct. 9.—Mr. R. E. Prentice, newly-appointed Minister of State for Technology, resigned after only four days in the post.

Oct. 11.—In renewed rioting in Belfast, a policeman and two civilians were shot dead.

Oct. 12.—In completing reconstruction of Government, Mr. Wilson created two new posts for Ministers of State.

Oct. 13.—Unofficial strike of Yorkshire miners brought all pits but one in county to standstill.

Overseas. Oct. 1.—Spanish Government cut telephone lines linking Spain with Gibraltar. Mr. Olof Palme succeeded Mr. Erlander as Prime Minister of Sweden.

Oct. 15.—Day of demonstration against war in Vietnam was widely observed in U.S.A. President Shermarke of Somalia was assassinated.

Oct. 21.—Herr Willy Brandt received requisite number of votes in Bundestag and became Chancellor of West Germany.

Obituary. Oct. 5.—Walter Hagen, famous U.S. golfer, aged 76. Oct. 12.—Sonja Henie, former world skating champion, aged 56. Oct. 18.—Emrys Hughes, Labour M.P. for South Ayrshire since 1946, aged 75 (by-election pending). Oct. 19.—Sir Harold Scott, G.C.V.O., K.C.B., C.B.E., former Commissioner of Metropolitan Police, aged 81.

## SERVICE PAY, ALLOWANCES AND PENSIONS

1969 Increases (Superseding rates shown on pp. 477-483)

Pay rises averaging 3½ per cent. and effective from April 1, 1969, were announced in a White Paper on October 1, 1969, together with improved rates of allowances and retirement benefits.

PAY.—Examples of the increases for officers of the Royal Navy (and equivalent ranks in the other Services) with four years' service in the rank are: Lieutenant, increase of £55 per annum (new rate, £1,424); Lt.-Cdr., increase of £82 (£2,090); Cdr. increase of £110 (£2,756); Captain, increase of £137 (£3,522). Ratings, Soldiers and Airmen (Weekly rates).—R.N.: Ordinary Seaman, increase of 8s. 9d. (to £10 6s. 6d.); Able Seaman, 8s. 9d. (to £12 3s. 3d.); Leading Seaman (age 23), 12s. 3d. (to £15 9s. 9d.); Petty Officer (age 27), 15s. 9d. (to £20 7s. 9d.); C.P.O. (age 34), 19s. 3d. (to £24 8s. 3d.); Chief Artificer (32), 22s. 9d. (to £28 14s.). Army: Private (9 yrs. engagement), 8s. 9d. (to £10 6s. 6d.); Private (Tradesman Cl. 3), 8s. 9d. (to £11 14s. 6d.); Sgt. (age 30; 15 yrs. engagement), 15s. 9d. (to £19 12s.); Staff-Sgt. (age 34; 21 yrs. engagement), 19s. 3d. (£23 17s. 9d.); W.O.1 (age 36; 21 yrs. engagement), 21s. (to £26 15s. 6d.); W.O.1 (Tech.) (age 36; 21 yrs. engagement), 24s. 6d. (to £30 14s. 3d.). R.A.F.: Aircraftman (9 yrs.), 8s. 9d. (to £10 6s. 6d.); Sen. Aircraftman (9 yrs.), 8s. 9d. (to £12 13s. 9d.); Chief Technician (age 35; 9 yrs.), 21s. (to £26 13s. 9d.); Warrant Offr., Electronic Fitter (age 48), 22s. 9d. (to £31 4s. 9d.).

PAY, MARRIAGE ALLOWANCE AND RATION ALLOWANCE (Married officers under 25).—R.N.: Acting Sub-Officers: R.N. Acting Sub. Lt., increase of £265 (in Married Quarters, £156) to £1,472 (£1,363); Army 2nd Lieut., £265 (in Married Quarters, £156) to £1,490 (£1,381); R.A.F. Pilot Officer, £265 (in Married Quarters,

£156) to £1,490 (£1,391). (Married men under 21).—R.N. Able Seaman, increase of £2 12s. 6d. wkly. to £20 15s. 11d.; Army Gp. "A" Tradesman (9 yrs.), £2 12s. 6d. wkly. to £20 7s. 2d.; R.A.F. Senior Aircraftman (9 yrs.), £2 12s. 6d. wkly. to £21 6s. 5d.

RETIREMENT PAY.—Examples of new rates of officers' retired pay (with old rate following) are: Captain, with 16 yrs. reckonable service over age 21, £680 (£655); Major (16 yrs. service), £790 (£760); Lt.-Col. (16 yrs. service), £950 (£915); Brigadier (22 yrs. service), £1,770 (£1,700); Maj.-Gen. (24 yrs. service), £2,090 (£2,010); Lt.-Gen. (27 yrs. service), £2,525 (£2,430); Field Marshal, £4,510 (£4,335). Ratings, Soldiers and Airmen. For each of the first 22 years of reckonable service, plus amount for each additional year over 22 years—weekly rates (with women's services rates in parentheses): Below Corporal, 3s. 5d.+6s. 10d. (women, 2s. 10d.+5s. 8d.); Corporal, 4s. 3d.+8s. 6d. (3s. 8d.+7s. 4d.); Sergeant, 5s. 4d.+10s. 8d. (4s. 7d.+9s. 2d.); Staff-Sgt., 6s. 2d.+12s. 4d. (5s. 2d.+10s. 4d.); W.O.II., 6s. 8d.+13s. 4d. (5s. 8d.+11s. 4d.); W.O.I., 7s.+14s. (6s.+12s.).

GRATUITIES.—Officers, for the first 22 years' qualifying service, £1,530 (women officers, £1,300 10s.); for each further year's qualifying service, £305 (women, £259 5s.). Short service gratuity, £225 for each year of service (women officers, £191 5s. per yr.). Other Ranks after at least 12 years' service, £205 (women, £174 5s.); after 17 years' service, £520 (£442); after 21 years' service, £850 (£722 10s.).

HER MAJESTY'S MINISTRY  
(as reconstructed on several occasions)  
THE CABINET

Prime Minister and First Lord of the Treasury, THE RT. HON. JAMES HAROLD WILSON, O.B.E., M.P., born 1916.

 L.R.F.P.S.G., Do. of the Royal Faculty of Physicians and Surgeons of Glasgow.  
 L.S.A., Do. of Society of Apothecaries.  
 L.Th., Licentiate in Theology.  
 L.T.M., Do. of Tropical Medicine.  
 Lat., Latitude.  
 lb. (*libra*), Pound weight.  
 L.C.C., London County Council.  
 L.C.J., Lord Chief Justice.  
 L.C.M., Least Common Multiple.  
 Lit., Literally.  
 Litt.D., Doctor of Letters.  
 L.J., Lord Justice.  
 LL.B., Bachelor of Laws.  
 LL.D., Doctor of Laws.  
 LL.M., Master of Laws.  
 L.S. (*loco sigilli*), Place of the Seal.  
 l s. d. (*Librae, solidi, denarii*). Pounds, shillings, pence.  
 L.T.A., Lawn Tennis Association.  
 Ltd., Limited Liability.  
 LXX., Septuagint.

## M

M.A., Master of Arts.  
 M.Ch.—of Surgery.  
 M.Ch.D.—of Dental Surgery.  
 M.S.—of Surgery.  
 M.Sc.—of Science.  
 M.Th.—of Theology.  
 M.B., Bachelor of Medicine.  
 M.D., Doctor of ditto.  
 M.B.E., Member of British Empire Order.  
 M.E.C.—of Executive Council.  
 M.I.C.E.—of Institution of Civil Engineers.  
 M.I.Chem.E.—of Chemical Engineers.  
 M.I.E.E.—of Electrical Engineers.  
 M.I.Mar.E.—of Institute of Marine Engineers.

M.I.Mech.E.—of Institution of Mechanical Engineers.  
 M.Inst.Met.—of Institute of Metals.  
 M.Inst.T.—of Institute of Transport.  
 M.J.I.—of Journalists.  
 M.L.A., Member of Legislative Assembly.  
 M.L.C., ditto Council.  
 M.N., Merchant Navy.  
 M.P., Member of Parliament (also Military Police).  
 M.P.S. — of Pharmaceutical Society.  
 M.R.C.P.—of Royal College of Physicians.  
 M.R.C.S.—of Royal College of Surgeons.  
 M.R.C.V.S.—of Royal College of Veterinary Surgeons.  
 M.V.O.—of Royal Victorian Order.  
 M.C., Military Cross.  
 M.C.C., Marylebone Cricket Club.  
 M.F.H., Master of Fox Hounds.  
 Mgr., Monsignor.  
 Min. Plenip., Minister Plenipotentiary.  
 Mlle., Mademoiselle.  
 M.M., Military Medal (also MM., Messieurs).  
 Mme., Madame.  
 M.O.H., Medical Officer of Health.  
 m.p.h., Miles per hour.  
 MS., manuscript (pl. MSS).  
 Mus. D. [B.J.] Doctor, [Bachelor], of Music.

## N

N.A.A.F.I., Navy, Army and Air Force Institutes.  
 N.A.T.O., North Atlantic Treaty Organization.  
 N.B., North Britain.  
 N.B. (*Nota bene*), Note well.  
 N.C.B., National Coal Board.  
 N.C.O., Non - commissioned Officer.  
 n.d., no date (of books).  
 N.D.P.S., National Data Processing Service.  
 Nem. con. (*Nemine contradicente*), No one contradicting.  
 N.F.U. — National Farmers' Union.  
 No. (*Numero*), Number.  
 N.P., Notary Public.  
 Non seq. (*non sequitur*), It does not follow.  
 N.R.A., National Rifle Association.  
 N.S., Nova Scotia.  
 N.S.P.C.C., National Society for the Prevention of Cruelty to Children.  
 N.S.W., New South Wales.  
 N.T., New Testament.  
 N.U.J., National Union of Journalists.  
 N.U.R.—of Railwaymen.  
 N.U.S.—of Students.  
 N.W.P.[T.], North West Provinces [Territory].  
 N.Y., New York.  
 N.Z., New Zealand.

O  
 O.B.E., Officer of British Empire Order.  
*ob.*, or *obit.*, died.  
 O.C., Officer Commanding.  
 O.E.C.D., Organisation for Economic Co-operation and Development.  
 O.E.D., Oxford English Dictionary.  
 O.H.M.S., On Her Majesty's Service.  
 O.M., Order of Merit (and member of).  
 O.P., Opposite Prompt side (of Theatre), Out of Print (of books).  
*op. cit.* (*opere citato*), in the work cited.  
 O.S., Old Style.  
 O.S.B., Order of St. Benedict.  
 O.T., Old Testament.  
 O.U.D.S., Oxford University Dramatic Society.  
 Oxon., Oxford.  
 Oz., Ounce.

## P

P.A., Press Association.  
 P.C., Privy Councillor.  
 P.E.N. (*Club*), Poets, Essayists, Novelists.  
*p.f.t.*, Passed Flying College.  
 Ph.D., Doctor of Philosophy.  
*pinx(it)*, he (or she) painted it.  
 P.L.A., Port of London Authority.  
 P.M. (*post meridiem*), Afternoon (also *post mortem*).  
 P.M.G., Postmaster-General.  
 P.N.E.U., Parents' National Educational Union.  
*p.p.*, or per pro. (*per procuratorem*)—by proxy.  
 Pro tem. (*pro tempore*), For the time being.  
 Prox. (*proximo*), Next month.  
 P.S. (*Post scriptum*), Postscript.  
*p.s.c.*, Passed Staff College.  
 P.T., Physical Training.  
 P.T.O., Please turn over.

## Q

Q.C., Queen's Counsel.  
 Q.e.d. (*quod erat demonstrandum*), which was to be proved.  
 Q.H.C., Honorary Chaplain to the Queen; Q.H.P., ditto Physician; Q.H.S., ditto Surgeon; Q.H.D.S., ditto Dental Surgeon; Q.H.N.S., ditto Nursing Sister.  
 Q.M.G., Quartermaster-General.  
 Q.S., Quarter Sessions.  
 Q.S.O., Quasi-stellar object (quasar).  
*q.v.* (*quod vide*), "which see".

## R

R.A., Royal Artillery or Royal Academy (or Academician).  
 R.A.C.—Armoured Corps (also Royal Automobile Club).  
 R.A.D.C.—Army Dental Corps.  
 R.A.E.C.—Army Educational Corps.  
 R.Ac.S., Royal Aeronautical Society.  
 R.A.F.—Air Force.  
 R.A.M.—Academy of Music.

R.A.M.C. — Army Medical Corps.  
 R.A.N.—Australian Navy.  
 R.A.P.C.—Army Pay Corps.  
 R.A.O.C.—Army Ordnance Corps.  
 R.A.V.C.—Army Veterinary Corps.  
 R.B.A.—Society of British Artists.  
 R.B.S.—Society of British Sculptors.  
 R.C.N.—Canadian Navy.  
 R.C.N.C.—Corps of Naval Constructors.  
 R.C.T.—Corps of Transport.  
 R.D.—Naval Reserve Decoration, or Rural Dean.  
 R.E.—Engineers.  
 R.E.M.E.—Electrical and Mechanical do.  
 R.H.A.—Horse Artillery or—Hibernian Academy.  
 R.I.A.—Irish Academy.  
 R.M.—Marines.  
 R.M.A.—Military Academy.  
 R.M.S.—Mail Steamer.  
 R.N.—Navy; R.N.R. Naval Reserve; R.N.V.R., Naval Volunteer Reserve.  
 R.O.I.—Institute of Oil Painters.  
 R.P.—Society of Portrait Painters.  
 R.P.C.—Pay Corps.  
 R.Sigs.—Signals.  
 R.S.A.—Scottish Academician.  
 R.S.P.C.A.—Society for the Prevention of Cruelty to Animals.  
 R.W.S.—Water Colour Society.  
 R.Y.S.—Yacht Squadron.  
 R.C., Roman Catholic.  
 R.D., Refer to drawer (banking).  
 R.D.C., Rural District Council.  
 R.D.I., Designer for Industry of the Royal Society of Arts.  
 R.I.P. (*Requiescat in pace*), May he (she) rest in peace.  
 Ro. (*recto*), On the right-hand page. (See Vo.)  
 R.O.C., Royal Observer Corps.  
 r.p.m., revolutions per minute.  
 R.R.C., Lady of Royal Red Cross.  
 R.S.V.P. (*Répondez, s'il vous plaît*), Answer, if you please.  
 R.V., Revised Version (of Bible).

R.O.I.—Institute of Oil Painters.

Sc.D., Doctor of Science.  
 S.E.A.T.O.—South East Asia Treaty Organization.  
 S.E.T., Selective Employment Tax.  
 S.H.A.P.E.—Supreme Headquarters, Allied Powers, Europe.  
*Sic*, So written.  
 S.J., Society of Jesus.  
 S.O.S. ("Save Our Souls") Distress Signal.  
*s.p.* (*sine prole*), Without issue.  
 S.P.C.K., Society for Promoting Christian Knowledge.  
 S.P.Q.R. (*Senatus Populusque Romanus*), The Senate and People of Rome.  
 S.R.N., State Registered Nurse.  
 S.S.A.F.A., Soldiers', Sailors', and Airmen's Families Assoc.

## S

S.S.C., Solicitor in the Supreme Court (Scotland).  
*Stet.*, Let it stand.  
 S.T.P. (=D.D.), *Sacrae Theologiae Professor*.

## T

T.A.N., Twilight all night.  
 t.b., Tuberculosis.  
 T.D., Territorial Decoration.  
 T.C.D., Trinity College, Dublin.  
 T.N.T., Trinitrotoluene (explosive).  
 Toc. H., Talbot House.  
 T.U.C., Trades Union Congress.

## U

Ult. (*ultimo*), in the preceding month.  
 U.D.C., Urban District Council.  
 U.K., United Kingdom.  
 U.N.A.C., United Nations Appeal for Children.  
 U.N.E.S.C.O., United Nations Educational, Scientific and Cultural Organization.  
 U.N.O., United Nations Organization.  
 U.P., United Press.  
 U.P.U., Universal Postal Union.  
 U.S.A. or U.S., United States of America.  
 U.S.C.L., United Society for Christian Literature.  
 U.S.S.R., Union of Soviet Socialist Republics.

## V

*v.* (*versus*), Against.  
 V.A., Victoria and Albert Order or Vicar Apostolic.  
 V.A.D., Voluntary Aid Detachment.  
 V.C., Victoria Cross.  
 V.D., Vol. Officers' Decoration.  
 Ven., Venerable.  
*Verb. sap.* (*Verbum sapienti sat*); *est*, A word to the wise is enough.  
 V.I.P., Very Important Person.  
 Viz. (*videlicet*), Namely.  
 Vo. (*verso*), On the left-hand page. (See Ro.)  
 V.R., Victoria Regina.  
 V.R.D.—Volunteer Reserve Decoration.

## W

W.A.A.F., now W.R.A.F., Women's Auxiliary Air Force.  
 W.H.O., World Health Organization.  
 W.M.O. World Meteorological Organization.  
 W.O., Warrant Officer.  
 W.R.A.C., Woman's Royal Army Corps.  
 W.R.A.F., Women's Royal Air Force.  
 W.R.N.S., Women's Royal Naval Service.  
 W.R.V.S., Women's Royal Voluntary Services.  
 W.S., Writer to the Signet.

## Y

Y.M.C.A., Young Men's Christian Association.  
 Y.W.C.A., Young Women's do.

ASTRONOMICAL NOTES

MERCURY is ■ difficult evening star, magnitude about zero, for the first few days in January, visible low above the south-western horizon at the end of civil twilight. For the remainder of the month it is too close to the Sun for observation.

VENUS is unsuitably placed for observation.

MARS is ■ evening star, magnitude +1.1, and moves from Aquarius into Pisces during the month.

On the evening of the 11th the Moon will be seen to the west of Mars passing just N. of it on the morning of the 12th.

JUPITER is a splendid morning star, magnitude -1.5, in the constellation of Virgo. The four Galilean satellites of Jupiter are easily visible with only small optical aid.

SATURN is ■ evening star, magnitude +0.5 on the borders of Pisces, Cetus and Aries.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is unsuitably placed for observation for almost the whole of the month. On the last couple of evenings, however, a keen-sighted observer might be able to glimpse the planet immediately after sunset, about 5° above the W.S.W. horizon.

MARS is an evening star, magnitude +1.4, in the constellation of Pisces. The Moon passes 3° N. of Mars on the morning of the 10th.

JUPITER is a splendid morning star, magnitude -1.7, almost stationary in the eastern part of Virgo.

SATURN is an evening star, magnitude +0.6, in the south-west corner of Aries.

ECLIPSE. A partial eclipse of the Moon occurs on the 21st. See page 148 for details.

ZODIACAL LIGHT. The evening cone may be observed in the western sky after the end of twilight from the beginning of the month to the 7th and again after the 22nd. This phenomenon is only visible in the absence of both moonlight and artificial lighting.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 23rd.

VENUS is slowly becoming visible low in the west in the evenings, magnitude -3.4, and by the end of the month may be seen for the best part of an hour after sunset.

MARS is an evening star, magnitude +1.6, moving eastwards from Pisces into Aries.

JUPITER is a splendid morning star, magnitude -1.9, in the constellation of Virgo.

SATURN is an evening star, magnitude +0.6, in the constellation of Aries. Mars overtakes Saturn

during this month, the two planets being within 3° of each other on the 17th. The crescent Moon passes both planets on the morning of the 11th.

URANUS is at opposition on the 27th, in the constellation of Virgo. It is barely visible to the naked eye (magnitude +5.7) but telescopically it shows a slightly greenish disk 4" in diameter. It is easily located with only small optical aid.

ECLIPSE. A total eclipse of the Sun occurs on the 7th. See page 148 for details.

ZODIACAL LIGHT. The evening cone may be observed in the western sky from the beginning of the month to the 9th and again after the 23rd.

ASTRONOMICAL NOTES

MERCURY is ■ evening star except for the first few days of the month. Its magnitude ranges from -1 on the 5th to +2 by the end of the month. ■ is visible above the W.N.W. horizon around the end of civil twilight. This is the most favourable evening apparition of the year for observers in the northern hemisphere. Mercury passes 5°N. of Saturn ■ the evening of the 12th.

VENUS is an evening star, magnitude -3.3, visible in the W.N.W. sky after sunset. The Moon

passes N. of both Venus and Saturn on the 7th, and of Mars on the 8th.

MARS is ■ evening star, magnitude +1.7, moving eastwards from Aries into Taurus. By the end of the month it is passing between the Pleiades and the Hyades. Aldebaran, the bright reddish star in Taurus, is about half ■ magnitude brighter than Mars, which also has ■ reddish hue.

JUPITER is at opposition on the 21st and thus visible all night. It is ■ splendid object, magnitude -2.0, moving slowly westwards towards Spica.

SATURN is an evening star at first, magnitude +0.5, but is soon lost in the evening twilight.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, inferior conjunction occurring on the 9th (but see below).

VENUS is a magnificent evening star, magnitude -3.4, visible in the W.N.W. sky after sunset. By the end of the month Venus is visible for nearly two hours after dusk. On the 9th Venus passes only 0.2° N. of Mars.

MARS is moving towards the Sun and the lengthening period of twilight increasingly hinders observation so that it will no longer be visible in the evenings at all by the end of the month. On

the evening of the 3rd Mars passes 6° N. of Aldebaran.

JUPITER is a splendid evening star, magnitude -2.0, in Virgo, only a few degrees east of Spica.

SATURN is unsuitably placed for observation, conjunction occurring on the 2nd.

NEPTUNE is at opposition on the 20th, magnitude +7.7, in the constellation of Libra. It shows a slightly greenish disk, diameter 2.1", in a telescope.

TRANSIT. A transit of Mercury, visible from the British Isles, occurs on the 9th. See page 148 for details.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is a magnificent evening star, magnitude -3.5, visible in the W.N.W. sky after sunset. The thin crescent Moon passes 2° N. of Venus on the evening of the 6th. During the second week of the month Venus passes south of the Twins, Castor and Pollux.

MARS is unsuitably placed for observation.

JUPITER is still a splendid evening star, magnitude -1.9; by the end of the month it is not visible after midnight. Eclipses and shadow transits of the Galilean satellites of Jupiter are mentioned on page 147.

SATURN is unsuitably placed for observation for the first part of the month. Towards the end of the month it may be glimpsed as a morning star, magnitude +0.5, low above the eastern horizon before civil twilight commences.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 6th.

VENUS is still a magnificent evening star, magnitude -3.6, visible in the western sky after sunset. The crescent Moon will be near on the evenings of the 6th and 7th. On the 11th Venus passes 1° N. of Regulus.

MARS is unsuitably placed for observation.

JUPITER is a splendid evening star, magnitude -1.7. It is moving slowly eastwards in Virgo. The Moon passes 6° S. of Jupiter on the 12th.

SATURN is a morning star, magnitude +0.5, and by the end of the month it is visible low above the eastern horizon by midnight. Saturn is in Aries. On the morning of the 27th the Moon passes 8° N. of Saturn.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is a magnificent evening star, magnitude -3.8, visible in the W.S.W. sky after sunset. Although approaching greatest elongation, the duration of evening visibility is already shortening due to the rapid southward movement of the planet. The crescent Moon is near on the evenings of the 5th and 6th. Venus passes only 0°.2 S. of Spica on the 31st.

MARS is unsuitably placed for observation, conjunction occurring on the 2nd.

JUPITER is an evening star, magnitude -1.5. The period of observation is shortening as the planet draws nearer to the Sun and by the end of the

month it will be difficult to detect, low above the W.S.W. horizon at the end of civil twilight.

SATURN is a morning star, magnitude +0.4, situated on the borders of Aries and Taurus.

ECLIPSE. A partial eclipse of the Moon, visible from the British Isles, occurs on the 17th. See page 148 for details.

ECLIPSE. An annular eclipse of the Sun occurs on Aug. 31-Sept. 1. See page 148 for details.

METEORS. The maximum of the famous Perseid meteor shower occurs on the night of the 11th-12th. During the late evening the radiant gets higher in the N.E. so the Moon will be sinking in the S.W. and thus conditions for observation improve as the night wears on.

ASTRONOMICAL NOTES

MERCURY becomes morning star for the last ten days of the month, magnitude +1.5 to -0.5. It is visible above the eastern horizon around the beginning of civil twilight.

VENUS is a magnificent evening star, magnitude -4.2, low above the W.S.W. horizon after sunset. Although at greatest eastern elongation at the beginning of the month, the period of visibility is shortening rapidly and Venus gets too close to the Sun for observation shortly after the middle of the month. Venus passes 5° S. of Jupiter on the 14th.

MARS is unsuitably placed for observation at first but gradually becomes a difficult morning star,

magnitude +2.0, towards the end of the month.

JUPITER can only be detected with difficulty, low above the W.S.W. horizon at the end of civil twilight, for the first few days of the month. For the remainder of the month it is unsuitably placed for observation.

SATURN is a morning star, magnitude +0.3, almost stationary in the extreme western part of Taurus.

ZODIACAL LIGHT. The morning cone may be seen in the morning sky before twilight commences from the beginning of the month to the 14th and again after the 28th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 27th.

VENUS is unsuitably placed for observation. Although its elongation from the Sun at the beginning of the month is 42°, its low declination (-23°) completely nullifies this effect, ■ seen from the attitude of the British Isles.

MARS ■ a morning star, magnitude +2.0, draw-

ing slowly away from the Sun, visible after about 04<sup>h</sup> 30<sup>m</sup> low in the E.S.E. sky. The Moon is near Mars on the morning of the 27th and 28th.

JUPITER is unsuitably placed for observation.

SATURN is ■ morning star, though by the end of the month it is visible almost all night. Its magnitude is +0.1. Saturn is slowly retrograding in Aries. The gibbous Moon passes 8° N. of Saturn on the night of the 16th-17th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is unsuitably placed for observation at first, inferior conjunction occurring on the 10th. However, by the middle of the month Venus becomes ■ morning star, its magnitude increasing from -3.3 to -4.2.

MARS is ■ morning star, magnitude +1.9, in the constellation of Virgo, passing 3° N. of Spica on

the 24th, and itself being overtaken by the Moon on the 25th.

JUPITER is unsuitably placed for observation, conjunction occurring on the 9th.

SATURN magnitude -0.1, is at opposition on the 11th and thus is available for observation throughout the hours of darkness. Saturn's largest satellite, Titan, magnitude +8.5, is visible in small telescopes. The Full Moon passes 8° N. of Saturn on the 13th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is a magnificent morning star, attaining its greatest brilliancy, magnitude -4.4, on the 16th. By the end of the month Venus is visible for over three hours before sunrise. The planet is ■ beautiful sight in a telescope and during the month the phase increases from a thin crescent (12% illuminated), to 37% illuminated, while at the same time its angular diameter decreases from 52" to 32".

MARS is ■ morning star, magnitude +1.8, moving eastwards from Virgo into Libra.

JUPITER is ■ morning star, magnitude -1.3. It is in Libra.

SATURN is ■ prominent evening star, magnitude +0.1, in the constellation of Aries. The Moon passes 8° N. of Saturn on the 10th.

MORNING SKIES. The morning skies of the 24th-26th will provide a pleasing spectacle as the crescent Moon passes S. of the planets Mars, Venus and Jupiter.

METEORS. The maximum of the well-known Geminid meteor shower occurs on the night of the 12th-13th. Observation will be considerably hindered by the Full Moon being above the horizon all night.

## INTRODUCTION TO ASTRONOMICAL SECTION

## GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Astronomical Ephemeris* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All times are, unless otherwise stated, for 0<sup>h</sup> G.M.T., or the midnight at the beginning of the day named.

(See notes on *British Standard Time*, p. 142).

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 15th edition, 1964; 21s.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the *British Astronomical Association Handbook*, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow West, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° can be covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

## PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

THE FASTS and FESTIVALS in black-letter type are those given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22<sup>h</sup> local time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4<sup>m</sup> earlier each night 2<sup>h</sup> earlier each month may be used, in conjunction with the lists given each month, to determine what constellations are favourably placed at any moment. The table preceding the list of

constellations may be extended indefinitely in rate just quoted.

Times of MINIMA OF ALGOL are approximate times of the middle of the period of diminished light (see p. 153).

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

## PAGE II OF EACH MONTH

The Sun's semi-diameter, in arc, is given at the month.

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12<sup>h</sup> to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. Apparent Solar Time is equal to the Mean Solar Time plus the Equation of Time. For example at noon on Aug. 1 the Equation of Time is -5<sup>m</sup> 38<sup>s</sup> and thus at 12<sup>h</sup> Mean Time that day the Apparent Time is 12<sup>h</sup> - 5<sup>m</sup> 38<sup>s</sup> = 11<sup>h</sup> 54<sup>m</sup> 22<sup>s</sup>.

The Sidereal Time at 0<sup>h</sup> and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0<sup>h</sup>) are given for converting mean time to sidereal time and vice versa.

The G.M.T. of transit of the Sun at Greenwich may also be taken as the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the refraction to be 34', and the Sun's semi-diameter to be 16', the time given is that when the true zenith distance of the Sun's centre is 90° + 34' + 16' or 90° 50', or, in other words, when the depression of the Sun's centre below the true horizon is 50'. The apparent

limb is then  $34'$  below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is  $90^\circ 50'$  is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light reaches us before sunrise and also continues to reach us for some time after sunset. The interval between darkness and sunrise or sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin when the Sun's centre is  $18^\circ$  below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of  $18^\circ$  is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

- (1) *Sunrise* is *Sunset*, defined as above.
- (2) *Civil twilight*, which begins or ends when the Sun's centre is  $6^\circ$  below the horizon. This marks the time when operations requiring daylight may commence or must cease. In England it varies from about 30 to 60 minutes after sunset.
- (3) *Nautical twilight*, which begins or ends when the Sun's centre is  $12^\circ$  below the horizon. This marks the time when it is, to all intents and purposes, completely dark.
- (4) *Astronomical twilight*, which begins or ends when the Sun's centre is  $18^\circ$  below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

To assist observers the durations of civil, nautical and astronomical twilights are given at intervals of ten days. The beginning of a particular twilight is found by subtracting the duration from the time of sunrise, while the end is found by adding the duration to the time of sunset. Thus the beginning of astronomical twilight in latitude  $52^\circ$ , on the Greenwich meridian, on March 11 is found as  $06^h 25^m - 113^m = 04^h 32^m$  and similarly the end of civil twilight as  $17^h 56^m + 34^m = 18^h 30^m$ .

The letters T.A.N. are printed when twilight lasts all night.

Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading ASTRONOMICAL NOTES will be found notes describing the position and visibility of the planets and also of other phenomena; these are intended to guide naked-eye observers, or those using small telescopes.

#### PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of

accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach  $1^\circ$ .

The lunar terminator is the line separating the bright from the dark part of the Moon's disk. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The selenographic longitude of the terminator is measured from the mean centre of the visible disk, which may differ from the visible centre by as much as  $8^\circ$ , because of libration.

Instead of the longitude of the terminator the Sun's selenographic colongitude is tabulated. It is numerically equal to the selenographic longitude of the morning terminator, measured eastward from the mean centre of the disk. Thus its value is approximately  $270^\circ$  at New Moon,  $360^\circ$  at First Quarter,  $90^\circ$  at Full Moon and  $180^\circ$  at Last Quarter.

The Position Angle of the Bright Limb is the position angle of the midpoint of the illuminated limb, measured eastwards from the north point on the disk. The column PHASE shows the percentage of the area of the Moon's disk illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about  $9''$ , and is negligible when considering sunrise and sunset, but that of the Moon averages about  $57'$ . Hence the computed time represents the moment when the true zenith distance of the Moon is  $90^\circ 50'$  (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes (except in high latitudes).

The tables have been constructed for the meridian of Greenwich, and for latitudes  $52^\circ$  and  $56^\circ$ . They give Greenwich Mean Time (G.M.T.) throughout the year. To obtain the G.M.T. of any phenomenon at any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as is usually the case for Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of  $1^\circ = 4^m$  and  $15' = 1^m$ .

The G.M.T. of transit of the Moon over the meridian of Greenwich is given; these times are independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is

conveniently determined by first finding the west longitude  $\lambda$  of the place. If the place is in west longitude,  $\lambda$  is the ordinary west longitude; if the place is in east longitude  $\lambda$  is the complement to  $24^h$  (or  $360^\circ$ ) of the longitude, and will be greater than  $12^h$  (or  $180^\circ$ ). The correction then consists of two positive portions, namely  $\lambda$  and the fraction  $\lambda/24$  (or  $\lambda^\circ/360$ ) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is  $151^m 05^s$  east,  $\lambda = 13^h 55^m$  and the fraction  $\lambda/24$  is 0.58. The transit on the local date 1970 Aug. 9 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich... Aug. 8	16	23	
$\lambda$ .....		13	55
0.58 $\times$ ( $17^h 09^m - 16^h 23^m$ ) .....			27
<hr/>			
G.M.T. of transit at Sydney.....	9	06	45
Corr. to N.S.W. Standard Time....		10	00
<hr/>			
Local standard time of transit .....	9	16	45

It is evident, of course, that for any given place the quantities  $\lambda$  and the correction to local standard time may be combined permanently, being here  $23^h 55^m$ .

Positions of Mercury  $\blacksquare$  given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disk. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of  $5^\circ$  has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes  $\blacksquare$  not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude  $\blacksquare$  in the case of the Sun and Moon.

The G.M.T. at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way,  $\blacksquare$  already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset  $\blacksquare$  half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is  $10^\circ$  high instead of  $5^\circ$  high are given; this is because of the inferior

brightness of these planets. The polar diameter of Jupiter is about  $3''$  less than the equatorial diameter, while that of Saturn is about  $2''$  less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former  $\blacksquare$  a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed on three occasions in 1966 and were open at their widest extent in the middle of 1958.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time, but  $\blacksquare$  subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time scale, and this has led to the concept of Mean Solar Time in which all the days are of exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

Greenwich Mean Time

The daily rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (G.M.T.) The mean solar day is divided into 24 hours and, for astronomical and other scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated a.m. (before noon) and p.m. (after noon).

See also notes on British Standard Time, p. 142.

Universal Time

Before January 1, 1925, G.M.T. was reckoned in 24 hours commencing at noon: since that date it has been reckoned from midnight. In view of the risk of confusion in the use of the designation G.M.T. before and after 1925, the International Astronomical Union recommended in 1928 that astronomers should, for the present, employ the term Universal Time, U.T. (or Weltzeit, W.Z.) to denote G.M.T. measured from Greenwich Mean Midnight.

In precision work it has now become necessary to take account of small variations, hitherto negligible, in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated U.T.o. Observed time corrected for the effects of the motion of the poles (giving rise to "wandering" in longitude) is designated U.T.x. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. U.T.x corrected for this effect is designated U.T.z, and provides a time scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

Apparent Solar Time

As has been mentioned, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle, but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun. The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right-angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of 23° 27'. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its maximum values in February (-14 mins.) and early November (+16 mins.). It has a zero value on four dates during the year, and it is only on these dates (approx. April 15, June 24, Sept. 1, and Dec. 25) that a sundial shows Mean Solar Time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or "star") time is perhaps a little misleading since the time scale so defined is not exactly the same as that which would be defined by successive transits of a selected star; there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0.008 seconds. Superimposed on this steady precessional motion are small oscillations called nutation, giving rise to fluctuations in

apparent sidereal time amounting to as much as 1.2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion of G.M.T. to Greenwich sidereal time (G.S.T.) may be performed by adding the value of the G.S.T. at 0h on the day in question (page II of each month) to the G.M.T. converted to sidereal time using the table on p. 146.

Example. To find the G.S.T. at 2h 41m 11s G.M.T. on Aug. 11

				h	m	s
G.S.T. at 0h	..	..	..	21	04	21
G.M.T.	..	..	..	..	41	11
Acceleration for 2h	..	..	..	..	..	..
"	..	41m 11s	..	..	..	7
Sum = G.S.T. =				..	..	23 45 59

If the observer is not on the Greenwich meridian then his longitude, measured positively westwards from Greenwich, must be subtracted from the G.S.T. to obtain Local Sidereal Time (L.S.T.). Thus, in the above example, an observer 5h east of Greenwich, or 19h west, would find his L.S.T. 4h 45m 59s.

Ephemeris Time

In the study of the motions of the Sun, Moon and planets, observations taken over an extended period are used in the preparation of tables giving the apparent position of the body each day. A table of this sort is known as an ephemeris, and may be used in the comparison of current observations with tabulated positions. A detailed examination of the observations made over the past 300 years shows that the Sun, Moon and planets appear to depart from their predicted positions by amounts proportional to their mean motions. The only satisfactory explanation is that the time scale to which the observations were referred was not uniform as had been supposed. Since the time scale was based on the rotation of the Earth, it follows that this rotation is subject to irregularities. The fact that the discrepancies between the observed and ephemeris positions were proportional to the mean motions of the bodies made it possible to secure agreement by substituting a revised time scale and recomputing the ephemeris positions. The time scale which brings the ephemeris into agreement with the observations has been named Ephemeris Time (E.T.).

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun (1/31556925.9747 of the Tropical Year for 1900 January 0 at 12h. E.T.) instead of in terms of the diurnal rotation of the Earth on its axis (1/86 400 of the Mean Solar Day). In many branches of scientific work other than astronomy there has been a demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mesures in 1956. The length of the unit has been chosen to provide general agreement with U.T. throughout the 19th and 20th centuries. During 1970 the estimated difference E.T. - U.T. is 40 seconds. The precise determination of E.T. from

astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, a comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with its ephemeris position. Even in this case, however, the requisite standard of accuracy can only be achieved by averaging over a number of years.

#### Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the revolution of the electrons in their orbits around the nuclei. The continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals; it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard. Because of the high precision attained in the comparisons, cumulative errors in the integrated time scale do not become serious in the course of a few years and the atomic time scale may thus be compared with the astronomical time scale.

#### Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. Signals by land line from the Observatory correct the Post Office Speaking Clock, TIM.

For survey and scientific purposes in which the highest accuracy is required, special signals are transmitted from the Post Office Radio Station at Rugby. The International Signals, consisting of a five-minute series of pips, one-tenth of a second long, with the pips at the minutes lengthened for identification, are radiated at 02.54-03.00, 08.54-09.00, 14.54-15.00, 20.54-21.00 from GBR (16 kHz) and associated H.F. transmitters. The seconds pulses superposed on the MSF standard frequency

transmissions, which consists of five cycles of a 1,000 c.p.s. tone, are derived from the same master control at the transmitting station, and are radiated for ten minutes in each quarter-hour on 2½, 5, and 10 MHz for 24 hours per day, and continuously on 60 kHz. The carrier frequencies of all the MSF transmissions, and of GBR, are closely controlled, and measured regularly at the National Physical Laboratory in terms of the caesium atomic resonance. The time signals, derived from the same master oscillator, and thus rigidly locked to the carrier frequencies, are monitored regularly at the Royal Greenwich Observatory. A uniform rate is maintained throughout the year and, if corrections are required to keep the time signals in agreement with UT<sub>2</sub>, a step adjustment of a few milliseconds is made on all transmissions on the first day of a month. Since April 1960 the Rugby service has been run in close co-operation with the time services of the United States. By mutual agreement, the rates are adjusted to correspond, and the signals are synchronised. Any necessary adjustments are made simultaneously in the U.K. and U.S.A. services. The American transmissions concerned are: WWV (Beltsville) 2½, 5, 10, 15, 20, 25 MHz; WWVH (Hawaii) 5, 10, 15 MHz; NBA (Canal Zone) 18 kHz. Other national Observatories have agreed to some measure of co-ordination.

#### STANDARD TIME

Since October 27, 1968, the standard time of the United Kingdom has been one hour fast on G.M.T. The internationally adopted name for this time is Central European Time. However, despite protests from informed scientific circles about the possibility of confusion (British Standard Time implies time related to a standard meridian passing through the British Isles, i.e. G.M.T.) the name British Standard Time is that given to this time in this country only. The proposal to adopt a time one hour fast on G.M.T. has aroused considerable controversy and the original suggestion of making it permanent has been modified so that it will now be in force for a trial period of three years.

The use of G.M.T. in astronomy and other sciences, and in navigation, will continue as before.

#### SUMMER TIME

Variations from the standard time of some countries occurs during part of the year: they are decided annually and are usually referred to as Summer Time or Daylight Saving Time. These variations occur in:

*British Commonwealth.*—Bahamas; British Honduras; Canada; Channel Islands; Hong Kong; Tasmania.

*Foreign Countries.*—Albania; Argentina; Brazil; Chile; parts of China; Dominican Republic; Egypt; Formosa; Iceland; Irish Republic; Italy; Macao; Morocco; Norway; Pescadores Is.; Poland; parts of U.S.A.; Syria; Turkey; Uruguay.

In British Honduras and the Dominican Republic the variation occurs in winter and is called Winter Time.

STANDARD TIME

In the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.\* Since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world ■ Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. *The standard time of the United Kingdom is Central European Time (under the title BRITISH STANDARD TIME) for ■ trial period of three years from October 27, 1968.*

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately 7½° on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R. centred at 60° E. to 180° E.

Fast ■ Greenwich Time

- 12 hrs. F...Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).
- 11½ " F...Norfolk I., Nauru I.
- 11 " F...New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.
- 10 = F...Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (west of 160° E.), Australian Capital Territory, Mariana Is.
- 9½ " F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area).
- 9 " F...Japan, Schouten Is., Sakhalin south of 50° N., Kurile Is., Manchuria, Korea, West Irian (Indonesia).
- 8½ " F...Molucca Is.
- 8 " F...China (coast), Hong Kong, Philippine Is., Macao, Timor, West Australia, Celebes, Indonesian Borneo, Formosa, Pescadores Is., Malaysia, Vietnam (south).
- 7½ " F...Singapore.
- 7 " F...Sumatra, Java, Christmas I. (Indian Ocean), Thailand, Cambodia, Laos, Vietnam (north).
- 6½ " F...Burma, Cocos-Keeling Is.
- 6 " F...Pakistan (East).
- 5½ " F...India, Ceylon, Laccadive Is., Andaman and Nicobar Is.
- 5 = F...Chagos Archipelago, Pakistan (West).
- 4 " F...Mauritius, Seychelles, Réunion, Oman, U.S.S.R., 40° E. to 52°30' E.
- 3½ " F...Iran.
- " F...U.S.S.R. west of 40° E., Iraq, Ethiopia, Southern Yemen, Socotra I., Somal Republic, Comoro Is., Madagascar, Uganda, Kenya, Tanzania.

- " F...Turkey, Greece, Bulgaria, Rumania, Finland, Israel, Jordan, U.A.R., Syria, Cyprus, Rhodesia.
- E. European Malawi, South Africa and Protectorates, Mozambique, Sudan, Congolese Republic, Crete, Lebanon, Libya, Zambia, Botswana, Lesotho.

- hr. F...The United Kingdom, Republic of Ireland, Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France, Luxembourg, Spain, Gibraltar, Monaco, Balearic Is., Poland, Austria, Hungary, Switzerland, Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, Central African Republic, Cameroon Republic, Republic of Congo, Angola, Spitzbergen, Algeria, Dahomey, Corsica, Sardinia, Portugal.

- Greenwich Time. Faroe, Channel Is., Algeria, Morocco, Iceland, Mauritania, Sierra Leone, Ivory Coast, Ifni, Ghana, Principe I., St. Helena, Gambia, Canary Is., Ascension I., Tangier, São Tomé, Rio de Oro, Madeira, Mali, Niger.

Slow ■ Greenwich Time

- 1 hr. S...Azores, Portuguese Guinea.
- 2 hrs. S...Cape Verde Is., Fernando Noronha I., Scoresby Sound, South Georgia.
- 3 " S...Greenland (excluding Scoresby Sound and Thule), Eastern Brazil.
- 3½ " S...Newfoundland, Labrador, Dutch Guiana, Uruguay.
- 3¾ " S...Guyana.
- 4 " S...Canada east of 68° W., Greenland (Thule Arca), Puerto Rico, Lesser Antilles, Argentina, Central Brazil, Falkland Is., Paraguay, Bermuda, Bolivia, French Guiana, Chile, Cuba, Curaçao I., Venezuela.
- 5 " S...Canada from 68° W. to 85° W. (north) or 90° W. (south), Eastern States of U.S.A., Jamaica, Bahama Is., Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Dominican Republic.
- 6 hrs. S...Central parts of U.S.A., Canada from 85° W. (north) or 90° W. (south) to 102° W., Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.
- 7 hrs. S...Canada from 102° W. to 120° W., Mountain. Mountain States of U.S.A., part of Mexico.
- 8 hrs. S...Canada west of 120° W., Alaska, (south-east coast), Western States of U.S.A., part of Mexico.
- 9 hrs. S...Alaska N. of Cross Sound to 141° W., Yukon.
- 10 " S...Alaska from 141° W. to 162° W., Low Archipelago, Austral and Society Is., Hawaii, Fanning I., Christmas Is. (Pacific Ocean).
- 11 = S...Aleutian Is., Alaska (west coast), Samoa, Midway Is.

In the Tonga Islands the time 13h fast and in Chatham Is. 12h 45m fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is ■ modification of the 180th meridian, and is drawn so ■ to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	25° S.	172½° W.	53° N.	170° E.
52° S.	180°	5° S.	180°	65½° N.	169° W.
45° S.	172½° W.	48° N.	180°	75° N.	180°

\* Summer Time ■ the "legal" time during the period ■ which its use is ordained.

SUNRISE AND SUNSET

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and applying it to the time of transit given in the ephemeris for each month. The hour angle is negative for sunrise and positive for sunset. A small correction to the hour angle, which always has the effect of increasing it numerically, is necessary to allow for the Sun's semi-diameter (16') and for refraction (34'). This correction may be obtained from Table 2. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12<sup>h</sup> fast on G.M.T.) of sunset on May 24 at Auckland. The latitude is 36° 50' south (or minus) and the longitude 173° 30' east. Taking the declination as +20°.7, we

MOONRISE AND MOONSET

It is possible to calculate the times of moonrise and moonset using Table 1 though the method is more complicated because the apparent motion of the Moon is much more rapid than that of the Sun.

Table 3. Longitude Correction

Notation

- $\varphi$  = latitude of observer
- $\lambda$  = longitude of observer (measured positively towards the west)
- $T_{-1}$  = time of transit of Moon on previous day
- $T_0$  = time of transit of Moon on day in question
- $T_1$  = time of transit of Moon on following day
- $\delta_0$  = approximate declination of Moon
- $\delta_R$  = declination of Moon at moonrise
- $\delta_S$  = declination of Moon at moonset
- $h_0$  = approximate hour angle of Moon
- $h_R$  = hour angle of Moon at moonrise
- $h_S$  = hour angle of Moon at moonset
- $t_R$  = time of moonrise
- $t_S$  = time of moonset

The parallax of the Moon, about 57', is **■** to the sum of the semi-diameter and refraction but has the opposite effect on these times. It is thus convenient to neglect all three quantities in the method outlined below.

METHOD

1. With arguments  $\varphi, \delta_0$  enter Table ■ on p. 144 to determine  $h_0$  where  $h_0$  is negative for moonrise and positive for moonset.
2. Form approximate times from
 
$$t_R = T_0 + \lambda + h_0$$

$$t_S = T_0 + \lambda + h_0$$
3. Determine  $\delta_R, \delta_S$  for times  $t_R, t_S$  respectively.
4. Re-enter Table 1 on p. 144 with—
  - a) arguments  $\varphi, \delta_R$  to determine  $h_R$
  - b) arguments  $\varphi, \delta_S$  to determine  $h_S$
5. Form
 
$$t_R = T_0 + \lambda + h_R + AX$$

$$t_S = T_0 + \lambda + h_S + AX$$

where  $A = (\lambda + h)$

$X = (T_0 - T_{-1})$  if  $(\lambda + h)$  is negative

and  $X = (T_1 - T_0)$  if  $(\lambda + h)$  is positive

$AX$  is the respondent in Table 3.

Example.—To find the times of moonrise and moonset at Vancouver ( $\varphi = +49^\circ, \lambda = +8^h 12^m$ ) on 1970 October 10. The starting data (from p. 128) are

$$h = \text{■}$$

$$T_{-1} = 19^h 28^m$$

$$T_0 = 20^h 23^m$$

$$T_1 = 21^h 15^m$$

$$\delta_0 = -16^\circ$$

1.  $h_0 = \pm 4^h 43^m$
  2. Approximate values
 
$$t_R = 10^d 20^h 23^m + 8^h 12^m + (-4^h 43^m)$$

$$= 10^d 23^h 52^m$$

$$t_S = 10^d 20^h 23^m + 8^h 12^m + (+4^h 43^m)$$

$$= 11^d 09^h 18^m$$
  3.  $\delta_R = -14^\circ.1$   
 $\delta_S = -11^\circ.7$
  4.  $h_R = -4^h 53^m$   
 $h_S = +5^h 04^m$
  5.  $t_R = 10^d 20^h 23^m + 8^h 12^m - 4^h 53^m + 6^m$   
 $= 10^d 23^h 48^m$   
 $t_S = 10^d 20^h 23^m + 8^h 12^m + 5^h 04^m + 28^m$   
 $= 11^d 10^h 07^m$
- To get the L.M.T. of the phenomenon the longitude is subtracted from the G.M.T. thus
- Moonrise =  $10^d 23^h 48^m - 8^h 12^m = 10^d 15^h 36^m$
- Moonset =  $11^d 10^h 07^m - 8^h 12^m = 11^d 01^h 55^m$

												4 30	11 90 00

The length of a sidereal day in mean time is  $23^h 56^m 04^s.09$ . Hence  $1^h$  M.T. =  $1^h + 9^s.86$  S.T. and  $1^h$  S.T. =  $1^h - 9^s.83$  M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these

two entries is the required acceleration or retardation. Thus the acceleration for  $11^m 26^s$  (which lies between the entries  $9^m 07^s$  and  $15^m 13^s$ ) is  $2^s$ . If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for  $45^m 46^s$  is  $7^s$ .

Example.—Convert  $14^h 27^m 35^s$  from S.T. to M.T.

	h	m	s
Given S.T.....	14	27	35
Retardation for $14^h$ .....			2 18
Retardation for $27^m 35^s$ .....			5

Corresponding M.T..... 14 25 12

For further explanation, see p. 142.

The refraction table is also in the form of a critical table.

THE SUMMER TIME ACTS

In 1926 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Acts, 1922 to 1925*, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War the duration of Summer Time was extended and in the years 1941-

45 and in 1947, Double Summer Time (2 hrs. in advance of Greenwich Mean Time) was in force. Summer Time was extended in each year from 1948 to 1952 and again in 1961-1964, by Order in Council.

The duration of Summer Time during the last few years is given in the following table.

1953 Apr. 19—Oct. ■	1961 Mar. 26—Oct. 29
1954 Apr. 11—Oct. 3	1962 Mar. 25—Oct. 23
1955 Apr. 17—Oct. ■	1963 Mar. 31—Oct. 27
1956 Apr. 22—Oct. 7	1964 Mar. 22—Oct. 25
1957 Apr. 14—Oct. 6	1965 Mar. 21—Oct. 24
1958 Apr. 20—Oct. ■	1966 Mar. 20—Oct. 23
1959 Apr. 19—Oct. 4	1967 Mar. 19—Oct. 29
1960 Apr. 10—Oct. ■	1968 Feb. 18—Oct. 27

Jupiter's satellites transit across the disk from east to west, and pass behind the disk from west to east. The shadows that they cast also transit across the disk. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb and reappears from eclipse to the east of the planet. At times approximately two to

four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The list of phenomena gives most of the eclipses and shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse  
 Sh. = Shadow transit  
 D = Disappearance

R = Reappearance  
 I = Ingress  
 E = Egress

## CELESTIAL PHENOMENA FOR OBSERVATION IN 1970

## ECLIPSES, 1970

There will be four eclipses during 1970, two of the Sun and two of the Moon.

*Penumbral eclipses are not mentioned in this section as they are so difficult to observe.*

1. A partial eclipse of the Moon on February 21, not visible from the British Isles. The eclipse is of short duration, beginning at 08<sup>h</sup> 02<sup>m</sup> and ending at 08<sup>h</sup> 58<sup>m</sup>; at maximum only 5 per cent. of the Moon's diameter is obscured. The eclipse is visible from the Americas, the Pacific, Australia and New Zealand, north-east Asia and the arctic regions.

2. A total eclipse of the Sun on March 7. The path of totality starts in the Pacific Ocean, crosses Mexico and Florida and passes north-eastwards to Nova Scotia and Newfoundland before finishing in the Atlantic. The partial phase will be visible from North and Central America, the north-western part of South America, Greenland, Iceland and the western part of Ireland. The eclipse begins at 15<sup>h</sup> 04<sup>m</sup> and ends at 20<sup>h</sup> 11<sup>m</sup>; it is total from some place on the Earth from 16<sup>h</sup> 05<sup>m</sup> to 19<sup>h</sup> 11<sup>m</sup>, while the maximum duration is 3<sup>m</sup> 28<sup>s</sup>.

3. A partial eclipse of the Moon on August 17, visible from the British Isles. The area of visibility includes Europe, Africa, the Americas and Antarctica. At the time of maximum eclipse 0.41 per cent. of the Moon's diameter is obscured. The eclipse begins at 02<sup>h</sup> 17<sup>m</sup> and ends at 04<sup>h</sup> 30<sup>m</sup>.

4. An annular eclipse of the Sun on August 31-September 1, not visible from the British Isles. The annular phase can only be seen from the Cook Islands, and a few others, in the Pacific Ocean. The annular phase occurs between 20<sup>h</sup> 15<sup>m</sup> and 23<sup>h</sup> 35<sup>m</sup>, with a maximum duration of 6<sup>m</sup> 44<sup>s</sup>. The partial phase is visible from New Guinea, eastern Australia, New Zealand and part of Antarctica, between 19<sup>h</sup> 00<sup>m</sup> and 00<sup>h</sup> 49<sup>m</sup>.

## TRANSIT, 1970

A transit of Mercury occurs on May 9, visible from the British Isles. The first contact occurs at 04<sup>h</sup> 19<sup>m</sup> and last contact at 12<sup>h</sup> 13<sup>m</sup>. Because of the long duration part of the transit will be visible from most inhabited areas of the Earth except for a portion of the western side of North America. From the British Isles the transit begins at about 04<sup>h</sup> 19<sup>m</sup>.7 which is the approximate time of sunrise for eastern and north-eastern parts; further west the Sun rises shortly after the transit begins.

## OCCULTATIONS, 1970

Although Venus is occulted on October 31, this occurs in daylight with Venus only 16° from the Sun. Regulus is occulted three times from Edinburgh and twice from Greenwich. Some stars in the Pleiades are occulted on March 12 and September 20.

## OCCULTATIONS OF STARS

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down

to magnitude 6.5 are normally included, and reappearances to 6.0 magnitude. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope. The altitude limit is reduced from 10° to 2° for stars and planets brighter than magnitude 2.0 and such occultations are also predicted in daylight.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. The column headed "El. of Moon" gives the elongation of the Moon from the Sun, in degrees. The elongation increases from 0° at New Moon to 180° at Full Moon and on to 360° (or 0°) at New Moon again. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29', Long. 0°) and Edinburgh (Lat. 55° 56' Long. 3° 11' west). The coefficients *a* and *b* are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1<sup>m</sup> generally) to be found for any point in the British Isles. If the point of observation is  $\Delta\lambda$  degrees west and  $\Delta\phi$  degrees north, the approximate time is found by adding  $a.\Delta\lambda + b.\Delta\phi$  to the given G.M.T.

As an illustration the disappearance of 19 Tauri on March 12 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude.....	0°0	+3°2
Long. of Liverpool.....	+3°0	+3°0
$\Delta\lambda$ .....	+3°0	-0°2
Latitude.....	+51°5	+55°9
Lat. of Liverpool.....	+53°4	+53°4
$\Delta\phi$ .....	+1°9	-2°5
	h m	h m
G.M.T.....	22 56°0	22 49°4
$a.\Delta\lambda$ .....	+0°6	0°0
$b.\Delta\phi$ .....	-3°0	+4°0
	22 53°6	22 53°4

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No. occn. = star not occulted.

Low = star's altitude less than 10° (2° for bright stars and planets).

Sun = Sun not sufficiently below the horizon.

Graz = occultation is of very short duration.

It will be noticed that in some cases the coefficients *a* and *b* are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3" a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (Lat. 52° 30') the meridian altitude of *Sirius* is found as follows:

Altitude of equator..... 38 30  
Declination south..... 16 40

Difference..... 21 50

The altitude of *Capella* (Dec. +45° 58') at lower transit is:

Altitude of pole..... 52 30  
Polar distance of star... 44 02

Difference..... 7 28

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 138). The stars *Sirius* and *Canopus* and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars fainter than the twentieth magnitude may be photographed by long exposures with the largest telescopes.

Some of the astronomical information in this ALMANACK has been taken from the *Astronomical Ephemeris*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

\*α Herculis, mag. 3.2 to 3.9.

■ Cephei, mag. 3.7 to 4.4, Spectrum F5 to G0.

## THE STRUCTURE OF THE UNIVERSE

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Nebula in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Nebula. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 300,000 kilometres a second; it takes  $1\frac{1}{2}$  seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Nebula, and over 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. A parsec equals 3.26 light years.

### THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. The 200-inch telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearer star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra. The distances of some double and variable stars

can be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star.

When the distance of any star has been determined, and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

### STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like *Sirius*, are characterized by very strong hydrogen lines. F, G and K stars, like *Procyon*, our *Sun*, and *Arcturus*, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like *Betelgeuse*, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7000°; G, 5500°; K, 4500°; M, 3000°. This sequence is also one of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, -4; B, -3; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from -4

to  $\pm 11$ , or fainter, ■ known ■ the "main sequence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those of types O to F and a few of types G to M are still brighter, with absolute magnitudes ranging from  $-4$  to  $-7$ . The exceptional brightness of these stars is believed to be due to their sizes; those with absolute magnitudes about 0 are called giants, those of  $-4$  to  $-7$  are called supergiants.

The sizes of the stars have been determined mostly by theoretical calculation. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 1,392,000 kilometres in diameter. The main sequence is found to be ■ sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while ■ average M star has ■ radius of one-third of the Sun. The giant stars of types G to M have radii between 10 and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

#### DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be ■■ separately

even in large telescopes; their binary nature ■ revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. Some spectroscopic binaries, ■ they are called, are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is *Algol*, or  $\beta$  Persei.

#### VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of ■ Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by ■ to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached ■ year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

#### STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Praesepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when ■ cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude  $-3$ . There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

#### INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which ■■ to

dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulae. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulae, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulae are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulae because they are relatively bright and can be seen at large distances.

### THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system, which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system, called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novae and supernovae, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulae, form part of the Galaxy. The distribution of these various objects in the Galaxy is not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some extragalactic nebulae. This structure was first shown by studying the positions of O and B

stars; these trace the spiral arms. Radio astronomers subsequently found that interstellar neutral hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation have enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 100 thousand million times the mass of the Sun.

### STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

### EXTRAGALACTIC NEBULAE

Outside our own Galaxy there are large numbers of objects having more or less hazy appearance on photographs. These are the extragalactic nebulae, also known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral nebulae consist of a central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical nebulae and the central bulges of the spiral nebulae are believed to be composed of stars of Population II. The spiral arms are composed of Population I and Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral nebulae; the presence of hydrogen gas has been proved by the observation of regions of glowing H $\alpha$  and by the reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual

Types: N—Nebula. PN—Planetary Nebula. OC—Open Cluster. GC—Globular Cluster. G—Galaxy

stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and ■■■■ thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Nebula in Andromeda, at a distance of 2,000,000 light years; this spiral nebula is believed to be similar to our own Galaxy in size and stellar content. Extragalactic nebulae frequently occur in large clusters, each containing hundreds of nebulae. Many extragalactic nebulae are in rotation in a manner similar to our own Galaxy and with comparable periods.

#### RADIO SOURCES

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulae are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebulae. Recently several sources have been discovered which exhibit extremely regular variations in radio "brightness", with incredibly short periods (of the order of 1 second). These sources are now called "pulsars".

#### QUASARS

The observation of occultations of radio sources by the Moon has led to the accurate determination of the positions of these radio sources. Thus it has been possible to use large optical telescopes with small angular fields of view and high magnifications to photograph these positions. This has led

to the discovery of ■ new type of object called a quasar (or quasi-stellar object or QSO). On a photographic plate such objects appear almost stellar, so they are not readily identified without the help of information from the radio astronomers. Spectroscopic examination of four of them shows that, like external galaxies, they have enormous velocities of recession. Such velocities imply great distances, yet no ordinary star (or even supergiant) would be detectable at even ■ fraction of these distances. The answer to the question 'what are quasars?' is not yet known with any certainty but the current explanation is that they are radio sources with the shape of a star but many millions of times larger, with unusually high ultra-violet radiation and sometimes with large red shifts. Already several dozen quasars are known.

#### COSMOLOGY

The large scale problems of the Universe ■■ concerned with the motions and distribution of the extragalactic nebulae through the observable region of space. It has been found that in spite of the tendency of galaxies to cluster together, on a still larger scale the galaxies are distributed remarkably uniformly. Observations have shown that distant galaxies have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distant galaxies appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. One theory postulates ■■ gigantic initial explosion some 5,000 million years ago. Another postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Some recent observations suggest that the latter theory is no longer tenable.

## THE SOLAR SYSTEM

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

## THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about  $5,700^{\circ}\text{C}$ ., but a relatively short distance inside the surface the temperature reaches  $1,000,000^{\circ}$  and deeper in the interior, near the centre, it is believed to be in the region of  $14,000,000^{\circ}$ . Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun is in much the same way as a "perfect gas"

does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling on the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer just below the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of  $40^{\circ}$ - $50^{\circ}$  north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on its axis which is inclined about  $7^{\circ}$  to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (April 1947) covered 18,000 million square kilometres at its greatest, or approximately 0.7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11.1 years.

Maxima		Minima	
1837.2	1907.0	1843.5	1913.6
1848.1	1917.6	1856.0	1923.6
1860.1	1928.4	1867.2	1933.8
1870.6	1937.4	1878.9	1944.2
1883.9	1947.5	1889.6	1954.3
1894.1	1957.9	1901.7	1964.7

The 1957 sunspot maximum was unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots; the next maximum probably occurred in 1968.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as H $\alpha$ , the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm. A very few large flares have had associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the

Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered skylight is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily visible. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

## MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked-eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in Great Britain at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutin-

ized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. Different results have been obtained by recent radar observations which are supported by theoretical investigations. The question of whether Mercury has an atmosphere cannot be regarded as settled.

## VENUS

Venus, next from the Sun, has a diameter only four or five hundred kilometres less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47°. Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, probably owing to cloud, that its true surface is never observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 82-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at  $3^h 32^m, +81^\circ$ , which is in Cepheus. The equator of Venus is therefore tilted at an angle of about  $32^\circ$  to its orbit. Recent radar observations have provided the unexpected value for the period of rotation given on p. 157.

The spectrum of the atmosphere above the re-

flecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

## MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about a year and 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 56 and 100 million kilometres. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs in the early autumn, the distance may be less than 65 million kilometres and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 15 cm. aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41½ minutes longer than that of the Earth. The axis of rotation is inclined at about  $24^\circ$  to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, and the infra-red absorption spectra of the polar caps support this view. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that

there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but ■ 15 ■ 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The controversy over the canal-like markings on Mars has ended with the successful close range photography of the surface by Mariner 4. The photographs show a surface covered with craters, but no "canals".

Mars has ■ atmosphere believed to be considerably less dense than our own. The spectroscopists have been unable to establish that it contains either oxygen or water vapour, which ■ therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

### THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 ■ the permanent list, and several dozen are likely to be added each year; and always there ■ many still under investigation. All are faint—none has ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little ■ than ■ of rock revolving round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 670 kilometres in diameter, Pallas, 450, Juno 240, and Vesta 385 kilometres.

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction ■ these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet ■ also the longest period, 14 years, and travels out ■ far ■ Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within ■ orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in ■ circumstances it can be within 21 million kilometres of the Earth. This happened in 1931 when carefully planned photo-

graphic recording of the planet and the surrounding stars enabled measurements of its distance to be made, and hence a new value of the distance of the Sun from the Earth to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, ■ in the precise measurement of the equinox and equator, or in finding the ■ of Mercury ■ Venus.

### JUPITER

Jupiter, the largest planet, has a volume over ■ times that of the Earth, but ■ density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately 9<sup>h</sup> 50<sup>m</sup>, while most of those in higher latitudes give periods between 9<sup>h</sup> 55<sup>m</sup> and 9<sup>h</sup> 56<sup>m</sup>, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods ■ examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution ■ latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas ■ definite formula connects the periods of solar spots with their latitude, no such law ■ be found for Jupiter. Actually the fastest moving spots are confined to a ■ strip in latitude about +25°; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878-80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests ■ connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known ■ the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents ■ unknown, but it is probable that hydrogen and ■ abundant and that ■ light clouds of ■

surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order  $-120^{\circ}\text{C}$ ., which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 100 kilometres or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Seven other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13.5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Some evidence indicates that there is a connection between the position of the satellite Io and these radio bursts.

## SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and ■ inner dusky one, which is transparent enough for the body of the planet to be ■ through it. The dark line separating the two outer rings is known ■ Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at  $27^{\circ}$  to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become almost completely invisible even in the greatest telescopes. Thus they cannot present when edgewise ■ width of more than ■ very few kilometres.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about  $10^{\text{h}} 39^{\text{m}}$ , in higher latitudes  $10^{\text{h}} 38^{\text{m}}$  has been found in the northern hemisphere and  $10^{\text{h}} 37^{\text{m}}$  in the southern. There is thus some analogy with Jupiter, but we ■ ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding

the polar by about one part in nine. The general appearance of the disk is banded, but the dusky belts are fewer and wider than those on Jupiter, and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring ■ composed will suffer little or no loss.

Saturn has ten satellites, of which the largest, Titan, ■ easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only ■ which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same ■ as those of Jupiter. The faint outermost satellite, Phoebe, has a retrograde motion.

## URANUS

This planet ■ discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in ■ telescope is distinguishable by its disk, which is quite obvious, though less than  $4''$  in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined  $82^{\circ}$  to the plane of the ecliptic. A fifth satellite ■ discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be  $10\frac{1}{2}$  hours; the direction is the same as that of the satellites.

## NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting ■ disk of well over  $2''$  in diameter. A rotation period of 15.8 hours, inferred spectroscopically, is now generally adopted for the planet.

The planet ■ found in 1846 as ■ result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

### PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th-15th magnitude.

### THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about  $5^\circ$  to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making a complete revolution in 18.3 years.

The Moon, whose diameter is 3,476 kilometres, rotates in the same time that it revolves ( $27^d 7^h 43^m$ ) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights. Recent photographs obtained from the successful *Ranger* series of lunar probes show craters as small as a yard in diameter. From the investigations of the spacecraft which have soft landed on the Moon it appears that the surface is suitable for future landing by a manned lunar probe.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of  $29\frac{1}{2}$  days. Each month the Moon passes in front of all stars in its path. Such an occultation causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon.

### THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 100 kilometres; upwards, it may extend to 500 kilometres or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about  $67^\circ$ ); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. January 25, 1938 and January 24-26, 1949) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn on its axis with respect to the Earth.

### THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from  $60^\circ$  to  $110^\circ$  from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when its brightest parts may appear brighter than the Galaxy.

Occasionally, under very good conditions, an extension of the Cone may be traced right round the ecliptic. This is known as the Zodiacal Band. The *Gegenschein* or "Counter-glow" may also be detected as a widening of the band at the anti-solar point.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall to the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micro-meteorites. These probably act as centres of condensation in the formation of rain.

### METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors ("shooting-stars") or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant

as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids, Perseids, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

### METEOR SHOWERS

■ Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 110 kilometres at the beginning and about 75 kilometres at the end. The speeds vary from 15 to 80 km. per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. A number of meteorites have been found at Barwell, Leicestershire, as the result of two exploding fireballs on 24 December, 1965. At the other end of the scale are the micro-meteorites which are too

small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

### COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 150 million kilometres—a fine spectacle. Most comets are found accidentally and few observers search for these objects. One of the few is G. E. D. Alcock of Peterborough, Northants, who, after searching unsuccessfully for six years, found two new comets in August, 1959, within the space of 5 days. Two naked-eye comets which appeared in 1957 (Comet Arend-Roland in April, and Comet Mrkos in August) aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few kilometres in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its return is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

## THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 12,756 kilometres, and that of the polar axis 12,714 kilometres. The density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of  $23\frac{1}{2}^\circ$ . This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is 30 kilometres a second. It makes a complete rotation on its axis in about  $23^h 56^m$  of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over a few metres in diameter.

## THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about  $12\frac{1}{2}$  hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the  $24^h 50^m$  interval between consecutive meridian passages of the Moon. Briefly, a high tide occurs when the Moon is near the meridian because the attraction on the water is greater than on the solid earth. On the other side of the Earth the water is farther from the Moon than the solid earth and thus is less strongly attracted to the Moon and a second high tide occurs at this point. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of

past observations of times and heights. It is found that the height may be expressed as the sum of a series of periodic terms, which can be carried forward. (See pages 170-184.)

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about  $2\frac{1}{2}$  days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 13 metres in the Severn Estuary and 16 metres in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is increasing by about a thousandth of a second every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

## TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to a directing force causing it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle in a reed floated on water. From this primitive device the Mariner's compass subsequently developed. That the direction, though roughly north to south, is by no means accurately so, was known to the Chinese before A.D. 1000.

William Gilbert gave the first approximately correct explanation of the then known facts. In the proximity of the Earth magnetized needles behave much as if the Earth itself were a large magnetized sphere. It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634, found the direction to be about  $4^\circ$  east of north, whereas there was undoubted evidence that in 1580 it had been about  $11^\circ$  east in the same neighbourhood. In 1722, Graham, the clockmaker found that the direction oscillated slowly through a small angle every day. In the

British Isles the movement is eastwards till about 08<sup>h</sup> U.T., then rather quickly westwards till about 14<sup>h</sup> U.T., after which there is a gradual return eastwards. The amplitude may be as much as 15' in the summer.

A magnetic compass points along the horizontal component of the magnetic line of force. These directions converge on the "magnetic dip-poles". At these poles a freely suspended magnetized needle would become vertical. Not only do the positions of these poles change with time, but their exact location is ill-defined, particularly so in the case of the north dip-pole where the lines of force, on the north side of it, instead of converging radially, tend to bunch into a channel. Although it is therefore unrealistic to attempt to specify the locations of the dip-poles exactly, the present adopted positions are 75°·5 N., 100°·5 W. and 66°·5 S., 139°·5 E. The two magnetic dip-poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 1,100 kilometres. The distances of the magnetic dip-poles from the north and south geographic poles are about 1,600 and 2,700 kilometres respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and the magnetized needle remains horizontal. This line runs between 2° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it crosses the geographical equator in mid-Pacific.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Secular changes differ throughout the world. Although the London observations strongly suggest a cycle of several hundred years, an exact repetition is unlikely.

London		Greenwich	
1580	11° 15' E.	1850	22° 24' W.
1622	6 00 E.	1907	16 00 W.
1660	0 00	1929	12 23 W.
1720	13 00 W.	1946	9 38 W.
1815	24 27 W.	1965	7 29 W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonic) passing through all places at which specified values of declination will be found at the date of the chart.

In the British Isles, isogonic lines now run from north-east to south-west, making an angle of about 15° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1970 is 6° 47' west and allowing an increase of 13' for each degree of latitude northwards and 11' for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 6° 47' + 39' + 150', i.e. 9° 56' west. The average annual change at the present time is about 4' decrease.

The number of magnetic observatories now approaches 200—widely scattered over the globe. In Great Britain three are maintained by the Government: at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands, while a fourth is maintained by Stonyhurst College, Lancashire. Some recent annual mean values of the magnetic elements for Hartland are given below.

The normal worldwide terrestrial magnetic field corresponds approximately to that of a very strong small bar magnet near the centre of the Earth but with appreciable smooth spatial departures. The origin and slow secular change of the normal field is not yet fully understood but is generally ascribed to electric currents associated with fluid motions within the Earth's core. Superposed on the normal field are local and regional anomalies whose magnitudes may in places exceed that of the normal field; these are due to the influence of mineral deposits in the Earth's crust. A small proportion of the field is of external origin, mostly associated with electric currents in the ionosphere. The configuration of the external field and the ionization of the atmosphere depend on the incident particle and radiation flux. There are, therefore, short-term and non-periodic as well as diurnal, 27-day, seasonal and 11-year periodic changes in the magnetic field, dependent upon the position of the Sun and the degree of solar activity.

Year	Declination West	Dip or Inclination	Horizontal Force	Vertical Force
1940	12 30	66 55	0·1839	0·4315
1945	11 46	66 55	0·1843	0·4326
1950	11 6	66 54	0·1848	0·4334
1955	10 30	66 49	0·1859	0·4340
1960	9 59	66 44	0·1871	0·4350
1965	9 30	66 34	0·1887	0·4354
1968	9 16	66 30	0·1896	0·4359

*Magnetic Storms.* Occasionally—sometimes with great suddenness—the Earth's magnetic field is subject for several hours to marked disturbance. In extreme cases, departures in field intensity as much as one tenth the normal value are experienced. In many instances, such disturbances are accompanied by widespread displays of aurorae, marked changes in the incidence of cosmic rays, an increase in the reception of 'noise' from the Sun at radio frequencies together with rapid changes in the ionosphere and induced electric currents within the earth which adversely affect radio and telegraphic communications. The disturbances are generally ascribed to flux changes in the stream of neutral and ionized particles which emanates from the Sun and through which the Earth is continuously passing. Some of these changes are associated with visible eruptions on the Sun, usually in the region of sunspots. There is a marked tendency for disturbance: to recur after intervals of about 27 days, the apparent period of rotation of the Sun on its axis, which is consistent with the sources being located on particular areas of the Sun.

## ARTIFICIAL SATELLITES AND SPACE PROBES

The progress of rocket research during the last war led to the development by the Germans in 1944 of the V<sub>2</sub> rocket which, if fired vertically, attained a height of 180 km. Before the end of the decade the U.S. rocket engineers had increased this maximum height to 400 km by using a two-stage rocket, the first stage being a V<sub>2</sub> and the second a WAC Corporal. Plans for using multi-stage rockets to put artificial satellites into orbit around the earth during the International Geophysical Year (July 1957–December 1958) were announced by both the U.S. and the U.S.S.R. Such projects also called for an immense effort in establishing optical, radio, and radar tracking facilities around the world.

The historic event which heralded the Space Age occurred on October 4, 1957, when the U.S.S.R. successfully injected a "sputnik" into orbit inclined at 65° to the earth's equator. One month later "Sputnik 2" was also put into orbit, carrying a dog that survived the ascent trajectory and lived for several days orbiting the earth. The rate of satellite launching has increased since 1957 and by the end of 1960 the number of artificial satellites in orbit around the Earth exceeded the number of natural satellites known to be in the Solar System. All the satellites launched up to the end of 1960 have been sent up in the same direction as the rotation of the Earth, i.e., eastwards. Thus they are able to start with the benefit of the Earth's rotational velocity at the particular launching site. This is why these satellites always appear to move in an easterly direction. However, the first satellite launching of 1961 (*Samos 2*) achieved a retrograde orbit.

## Satellite Orbits

To consider the orbit of an artificial satellite it is best to imagine that one is looking at the Earth from a distant point in space. The Earth would then be seen to be rotating about its axis inside the orbit described by the rapidly revolving satellite. The inclination of a satellite orbit to the Earth's equator (which generally remains almost constant throughout the satellite's lifetime) gives at once the maximum range of latitudes over which the satellite passes. Thus a satellite whose orbit has an inclination of 53° will pass overhead all latitudes between 53° S. and 53° N., but would never be seen in the zenith of any place nearer the poles than these latitudes. If we consider a particular place on the earth, whose latitude is less than the inclination of the satellite's orbit then the Earth's rotation carries this place under first the northbound part of the orbit and then, later on, under the southbound portion of the orbit, these two occurrences being always less than 24 hours apart for satellites moving in direct orbits (i.e. to the east). For satellites in retrograde orbits the words "northbound" and "southbound" should be interchanged in the preceding statement. As the value of the latitude of the observer increases and approaches the value of the inclination of the orbit, so this interval gets shorter until (when the latitude

is equal to the inclination) only one overhead passage occurs each day.

## Orbital Variations

The relatively simple picture described above is unfortunately complicated by the considerable variations in the shape, orientation and size of the orbit during a satellite's lifetime. The major variations are due to the Earth's oblateness and to air-drag. A third cause, radiation pressure from the Sun, is noticeable only in large satellites of extremely low density.

The oblate shape of the Earth—the equatorial diameter is 43 km longer than the polar diameter—has two marked effects on a satellite orbit. It causes a regression of the nodes, amounting to several degrees a day for close satellites. Thus from a point in space, the whole orbit is seen to twist around the Earth, making a complete turn of 360° within a few months. This regression, which may also be described as the rotation of the orbital plane around the Earth's axis, is in the opposite direction to the satellite's motion, i.e. the orbit of a satellite with a direct motion regresses to the west. The actual amount of the regression depends, first, on the inclination of the orbit to the equator, being greatest at low inclinations and zero for a true polar orbit (inclination 90°). It is also dependent on the distance of the satellite from the Earth, being greatest for small orbits. At the distance of the Moon the regression is only 19° a year.

The orbit of *Samos 2* is extremely interesting from this point of view as its regression is to the east at almost an identical rate with the movement of the Sun. Thus there is hardly any change in the area of visibility over a long period of time.

The other effect the Earth's oblateness has on a satellite orbit is to cause a rotation of the line of apsides (i.e. the line joining the perigee and apogee points of the orbit). The rate of the rotation is dependent on the inclination of the orbit, and also on the distance of the satellite, again being greater for close satellites than for more distant ones. The value of this rotation has its greatest positive value (i.e. it moves forward along the orbit in the same direction as the satellite) at the equator and becomes zero at an inclination of 63° 4'. As the inclination moves from 63° 4' to 90° the value increases again numerically, but with the opposite sign, the motion of the line of apsides being backwards along the orbit.

Even at heights of several hundred kilometres there is still sufficient atmosphere to cause a retarding effect on satellites. Although air-drag will have most effect around the perigee point the actual result is to reduce the height of the apogee point with hardly any change in perigee height and thus to decrease the eccentricity of the orbit until, in the final stage of a satellite's life-time, the orbit is almost circular. Unfortunately the air density at perigee height is not constant. It alters as the perigee moves from daylight into darkness and from darkness into daylight, and also the latitude of perigee changes

## SATELLITE HEIGHTS AND VELOCITIES

Period		Height, kilometres	Velocity km per hour	Period		Height kilometres	Velocity km per hour
h	m			h	m		
1	28	182	28,077	3	40	5,700	20,686

3	20	4,958	21,354	24	00	35,871	11,059
3	30	5,332	21,010				

due to the rotation of the line of apsides. There is already some evidence that the atmospheric density varies with the sunspot cycle. In addition unpredictable short-period variations in the output of solar radiation may also occur and these have the effect of increasing the air density in any given height. Thus the air-drag on a satellite is by no means a constant factor and this is the reason why it is not possible to forecast accurately the position of a satellite for any considerable period of time. There is also some retardation due to electrified particles but this effect may be included with the air-drag.

Radiation pressure from the Sun only has any appreciable effect on large satellites of extremely low density such as the 30 metre diameter balloon, *Echo 1*. For such satellites, however, this effect can be severe, and for heights greater than a few hundred kilometres, it can equal or even surpass that due to air drag. The effect on the orbit is very much more complicated than that due to air-drag, and even the signs of the variations can change periodically with time. Thus it is possible for the eccentricity to increase rather than decrease, with an increase in apogee height and a decrease in perigee height.

For close artificial satellites the gravitational attractions of the Sun and Moon are many thousand times weaker than that of the Earth's equatorial bulge and need only be considered in an extremely precise analysis of observational material.

#### Height and Velocity

The mean height of a satellite above the Earth's surface, which is determined by its orbital velocity, is related to its period of revolution around the Earth as is shown by the table above. This table is only strictly valid for circular orbits.

As the orbit shrinks due to air drag, both the height and the period decrease so that the retarding effect of air drag actually causes the satellite to move faster, though in a smaller orbit.

#### Satellite Launchings, 1957-67

Many different types of orbit have been achieved though the vast majority have had a direct motion. The majority of the Russian satellite orbits have had inclinations of 65° or 49° and orbits entirely below 2000 kilometres in height. An important exception was Lunik 3 whose original inclination was 75° and initial apogee height 470,000 km. This satellite orbited the Moon on its first revolution, returning with the first photographs of the other side of the Moon, which were transmitted back to the Earth when near perigee.

The American satellites have been injected into orbits of various inclinations. The early Explorers and Vanguarders are in orbits of inclination about 28-35° while near-polar orbits were achieved with the Discoverers. Other series of launchings such as the Transit, Tiros and Echo put satellites in orbits of intermediate inclinations. In contrast to the heavy, but short-lived, Russian satellites, a number of those launched by the U.S. have been very small and have been put in larger orbits which have given them considerably longer life-times.

One launching project has caused great controversy amongst astronomers. This is the so-called "West Ford" project, involving the launching of a Midas satellite into a polar orbit, carrying a dispenser. The dispenser contains several hundred million small needles and these are released after the Midas has been successfully injected into a selected orbit. The needles form a belt around the Earth which is used as a reflector for radio signals. The first attempt (1961  $\alpha$   $\delta$ ) failed but the second (1963-14) has been successful. [continued on p. 169

An interesting feature of some of the Cosmos satellites in  $65^\circ$  orbits is that after 8 days in orbit they return to Earth (Russia) in a controlled re-entry through the atmosphere.

A third Anglo-American satellite, Ariel 3, was launched on May 5, 1967 and has been of great interest to visual observers. Sets of mirrors and highly reflective solar cells on its sides cause the observer to see a series of flashes and the observations are used to determine the direction of the axis of rotation of the satellite.

Apart from their names, e.g. Cosmos 6 Rocket or Injun 3, the satellites are also classified according to their date of launch. Thus 1961  $\alpha$  refers to the launching of Samos 2. The next satellite launching was 1961  $\beta$  and so on. A number following the Greek letter is intended to indicate the relative brightness of the satellites put in orbit. From the beginning of 1963 the Greek letters are replaced by numbers and the numbers by roman letters e.g. 1963—01A. In this table are given the designation and names of the main objects in orbit (in the order A, B, C... etc.), the launch date and some initial orbital data. This data consists of the inclination to the equator ( $i$ ), the nodal period of revolution ( $P$ ), the eccentricity,  $e$ , and the perigee height. The names of those satellites which have already disintegrated in the Earth's atmosphere or returned to the Earth's surface are printed in italics. A satellite which carried a human being is indicated by an asterisk.

Since the last edition of *Whitaker's Almanack* the following satellites launched in the years 1960-68 have disintegrated in the Earth's atmosphere:—

1961K	1962 $\beta$ 72	1963-03A	1963-27A
1964-04A	1964-11A	1964-76A	1965-11A
1965-55A	1965-60A	1966-44B	1966-92A
1966-92D	1966-118A	1967-31A	1967-71A
1967-104A	1967-109B	1967-120A	1968-28A
1968-28B			

Some American satellites are of military significance and details of their orbits are not disclosed. This is the reason for the gaps in the table.

## ROYAL OBSERVATORIES

### Royal Greenwich Observatory Herstmonceux, Sussex

The Royal Observatory was established at Greenwich in 1675 by Charles II for improving methods of navigation. Latterly the growth of London, with its smoke and bright lights, seriously hampered astronomical observations there, and it was decided in 1946 to move the telescopes to Herstmonceux Castle in Sussex. The removal was completed by 1958. The meridian of zero longitude still passes through the old site, which now houses the Department of Navigation and Astronomy of the National Maritime Museum.

At the Observatory astronomical measurements are made of the positions, motions and distances of the heavenly bodies, and of such physical characteristics as their luminosities, masses and temperatures. Two meridian instruments and six equatorially-mounted telescopes are devoted to this work, and the Isaac Newton telescope, 8-inch reflector for the use of any qualified British astronomer, was completed in 1967. The Observatory is responsible for the time service of the United Kingdom and the time zones of the world are based on Greenwich Mean Time.

*Astronomer Royal*, Sir Richard Woolley, O.B.E.,  
S.C.D., F.R.S.

### Observation of Satellites

The regression of the orbit around the Earth causes alternate periods of visibility and invisibility, though this is of little concern to the radio or radar observer. To the visual observer the following cycle of events normally occurs (though the cycle may start in any position): invisibility, morning observations before dawn, invisibility, evening observations after dusk, invisibility, morning observations before dawn, and so on. With reasonably high satellites and for observers in high latitudes around the summer solstice the evening observations follow the morning observations without interruption as sunlight passing over the polar regions can still illuminate satellites which are passing over temperate latitudes at local midnight. At the moment all satellites rely on sunlight to make them visible though a satellite with a flashing light has been suggested for a future launching. The observer must be in darkness or twilight in order to make any useful observations and the durations of twilight and the sunrise, sunset times given in page  $\square$  of each month will be a useful guide.

Some of the satellites are visible to the naked eye and much interest has been aroused by the spectacle of a bright satellite disappearing into the Earth's shadow. The event is even more fascinating telescopically as the disappearance occurs gradually as the satellite traverses the Earth's penumbral shadow, and during the last few seconds before the eclipse is complete the satellite may change colour (under suitable atmospheric conditions) from yellow to red. This is because the last rays of sunlight are refracted through the denser layers of our atmosphere before striking the satellite.

Some satellites rotate about one or more axes so that a periodic variation in brightness is observed. This was particularly noticeable in several of the U.S.S.R. satellites.

Satellite research has already provided some interesting results. Among them may be mentioned a revised value of the Earth's oblateness, 1/298.2, and the discovery of the Van Allen radiation belts.

### H.M. Nautical Almanac Office

The *Nautical Almanac* was first published for 1767 by the Board of Longitude. The Office is now a branch of the Royal Greenwich Observatory. Annual publications—Astronomical Ephemeris, Nautical Almanac, Air Almanac, Star Almanac.

### Royal Observatory

Blackford Hill, Edinburgh 9

The Observatory, founded by the Astronomical Institution in 1818 on Calton Hill, was moved to its present site in 1896. Its work, which is closely linked to that of the Astronomy Department of Edinburgh University, is concerned with the physics of stars and interstellar matter and the structure and evolution of the Galaxy. Observational data are secured with four telescopes on Blackford Hill and one at an outstation at Monte Porzio, Italy. Satellite tracking is pursued at a second outstation in Peebleshire. Much of the work of the Observatory is directed to the design and construction of new instruments and to the introduction of automation into astronomy.

*Astronomer Royal for Scotland and Regius Professor of Astronomy in the University of Edinburgh*, Prof.  
H. A. Brück, C.B.E., D.Phil, Ph.D.

## TIDAL CONSTANTS

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 172, 173, etc.) and adding thereto the quantities annexed. The columns headed "Springs" and "Neaps" show the height of the tide above datum for Mean High Water Springs and Mean High Water Neaps respectively.

Tidal data is no longer available for a number of places which formerly appeared in the list below. These places (with the name of the substitute now recorded) are: *Air Point* (Mostyn Quay); *Ardrisaig* (East Loch Tarbert); *Arisaig* (Loch Moidart); *Ayr Pt.*, *I.o.M.* (Peel); *Beachy Head* (Eastbourne); *Beaumaris* (Menai Bridge); *Brielle* (Scheveningen); *Broughty Ferry* (Newburgh); *Burryport* (Whiteford Lighthouse); *Caen* (Cayeux); *Caernarvon* (Llanddwyn Isld.); *Dumbarton* (Bowling); *Dumfries* (Port Carlisle); *Fa'caem* (Ichenor); *Fifeness* (Anstruther Easter); *Glasson Dock* (Tarn Pt.); *Gravesend* (Tilbury Dock); *Greenwich* (R. Albert Dock); *Hythe* (Totland Bay); *Lancaster* (Duddon Bar); *Lynnmouth* (Porlock Bay); *Nash Pt.* (Chepstow); *Needles Pt.* (Freshwater Bay); *Neath* (Porthcawl); *Nore Lt.* (Chatham); *Port Harrington* (Hestan Islet); *Portishead* (Avonmouth); *St. Agnes* (Coverack); *St. Mary's* (Sennen Cove); *Start Pt.* (Lulworth Cove); *Sockton* (Seaham); *Sutton Bridge* (Blacktoft); *Torbay* (Torquay); *Woolwich* (Hammersmith Br.); *Worms Head* (Ferryside); *Honfleur Harbour* (Duclair).

EXAMPLE.—Required times of high water at Stranraer ■ January 10, 1970:—

a) Morning Tide.

Appropriate time of high water at *Greenock*..... 0257 hrs. (Jan. 10)  
Tidal difference..... -0020 hrs.

b) Afternoon Tide.

Appropriate time of high water at *Greenock*..... 1506 hrs. (Jan. 10)  
Tidal difference..... -0020 hrs.

H.W. at *Stranraer*... 0237 hrs.

H.W. at *Stranraer*... 1446 hrs.

\* Approximate figures only, owing to abnormality of tides in area.

† 1st H.W. (Springs). †† 1st H.W.

## NOTES ON TIDAL PREDICTIONS

## Changes in Chart Datum

During recent years the Department of the Hydrographer of the Navy has been carrying out a survey of tidal levels. On the conclusion of each section of the survey the Department is taking the opportunity to regularize the sequence of chart datums so that eventually chart datums throughout the British Isles will approximate to the Lowest Astronomical Tide, *i.e.* the lowest level which can be predicted to occur under average meteorological conditions and under any combination of meteorological conditions.

In some cases the changes in chart datum will be appreciable (perhaps as much as 3 feet) and the resulting predictions will appear to give heights of tide quite different from those of previous years. In such cases there has been no change in the tidal conditions, but simply an apparent change due to the fact that the new heights have been measured from a different level.

It will be found that, where such datum changes have been made, the relationship between Ordnance Datum and the datum of the predictions will also have been altered. In order to compare the predictions for one year with those of another year for which the datum has been altered, it is necessary to refer both years to the same datum. Ordnance

Datum (Newlyn) is a convenient datum to which tidal heights may thus be referred.

*Example.*—In 1965, at Devonport, the highest predicted high water was 17.6 feet above chart datum; chart datum for that year was 8.9 feet below Ordnance Datum (Newlyn). In 1966 the highest predicted high water was 19.6 feet above chart datum, while chart datum for this year was altered to 10.6 feet below Ordnance Datum (Newlyn). To compare these two maximum predicted levels we must reduce both to Ordnance Datum (Newlyn), with the following results:—

$$\begin{array}{r} 1965 \quad 17.6 - 8.9 = +8.7 \\ 1966 \quad 19.6 - 10.6 = +9.0 \end{array}$$

Thus it will be seen that the highest prediction for 1966 is only 0.3 feet higher than for 1965.

The datum of the predictions for each port to be found in the headings of each of the preceding pages is unchanged from those quoted in *Whitaker, 1969*.

Tidal predictions for London Bridge, Liverpool, Bristol, Hull, Greenock and Leith are supplied by the Institute of Coastal Oceanography and Tides, copyright reserved. Tidal predictions for Dun Laoghaire are based upon data supplied by the Institute of Coastal Oceanography and Tides, copyright reserved.

## Chronological Notes

## TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20-400 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500-2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

## PALÆOZOIC (Old Animal Life) PERIODS include:—

*Cambrian, Ordovician and Silurian* rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.-S.W. lines of hills and valleys in several areas.

*Devonian*, including the Old Red Sandstone. *Carboniferous*, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.-W. lines of hills and valleys, and some N.-S.

## MESOZOIC (Middle Forms of Life) PERIODS include:—

*Permian* rocks, widespread in Perm district, U.S.S.R., *Triassic*, including New Red Sandstone, *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

## CAINOZOIC or CENOZOIC (Recent forms of Life) PERIODS include:—

*Eocene*. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period ice sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100-200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

## Phases of the Pleistocene:—

(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

#### MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenoorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- to late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Broken Hill, Zambia, are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the *Pithecanthropus* group, became extinct. Well-known specimens of ■■■■ of modern type with diversity of form have been found at Combe Capelle, Cromagnon, Chancelade and elsewhere in the later Pleistocene in France and others ■ Czechoslovakia.

#### HUMAN CULTURAL STAGES

Until about ■ or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillean and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesallie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated ■ cores and shaped very skilfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped ■ Palæolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as ■ source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stoves in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to ■ high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working

deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, north-west Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

## TIME MEASUREMENT AND CALENDARS

### MEASUREMENTS OF TIME

*Measurements of Time.*—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnus).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The *Year*.—The *Equinoctial* or *Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextille* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not a leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The *Historical Year*.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 1658, the lower figure showing the Historical year.

The *Masonic Year*.—Two dates are quoted in

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed *Anno Domini 1970—Anno Lucis 5970*. This *Year of Light* is based on the Book of Genesis I: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

*Regnal Years*.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 18 of the present Queen began on Feb. 6, 1969. The system was used for dating Acts of Parliament until 1962. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI. and 1 Elizabeth II. An Act to effect the dating of Acts of Parliament by the calendar year, from Jan. 1, 1963, received the Royal Assent on July 19, 1962.

*New Year's Day*.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556. Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The *Longest Day*.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction

thereof, but it will be on June 22 (local date) in Japan, and therefore June ■ will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365 $\frac{1}{4}$  days less about 11 minutes, and therefore, if a Solstice happens late ■ June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June ■ (1971). By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses. In the year 2000 the Summer Solstice reaches its earliest date for 100 years, i.e., June 21<sup>d</sup> 02<sup>h</sup>.

To remedy this the last year of a century is in most ■ not ■ Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

*The Shortest Day.*—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 (1972) and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. In the year ■ the Winter Solstice reaches its earliest date, i.e., Dec. 21<sup>d</sup> 13<sup>h</sup>. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

*Lord Mayor's Day.*—The Lord Mayor of London was previously elected on the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. The Lord Mayor is now presented to the Lord Chief

Justice at the Royal Courts of Justice, on the second Saturday in November to make the final declaration of office, having been sworn in at Guildhall on the preceding day.

*Dog Days.*—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

*Metonic (Lunar, or Minor) Cycle.*—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in ■ cycle of nineteen years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of ■ year in the Cycle is called the Golden Number of that year.

*Solar (or Major) Cycle.*—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same day of the month.

*Julian Period.*—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indication (28 × 19 × 15).

*Roman Indication.*—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

*Epact.*—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

## THE FOUR SEASONS

**SPRING**, the first season of the year, is defined astronomically to begin in the Northern Hemisphere at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In Great Britain, Spring in popular parlance comprises the months of February, March and April; in North America the months of March, April and May. In the Southern Hemisphere Spring corresponds with Autumn in the Northern Hemisphere.

**SUMMER**, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in Great Britain includes the months of May, June, July and August, Midsummer Day being June 24. In North America the season includes the months of June, July and August.

**AUTUMN**, the third season, begins astronomically at the Autumnal Equinox (i.e., about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In Great Britain it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known ■ "St. Luke's Summer." In North America,

Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain*

the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

### THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 104th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 826. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

*Old and New Style.*—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nicaea, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 186). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Rumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Rumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The *Dominical Letter* is one of the letters A–G which are used to denote the Sundays in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

*Epiphany.*—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of exceptional importance from the time of the Council of Nicaea (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

*Lent.*—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

*Sexagesima and Septuagesima.*—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

*Palm Sunday* commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (when palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

*Maundy Thursday*, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

*Easter-Day* is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the

junctions of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

*A Fixed Easter*.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

*Holy Days and Saints Days* were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 225) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

*Rogation Days*.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The pro-

cessions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

*Ember Days*.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

*Whit Sunday*.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptized. But other derivations have been suggested. An early writer says: "This day is called Wyte Sondag because the Holy Ghost brought Wyte and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

*Trinity Sunday*.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (born 1118; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

*Advent Sunday* is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22—26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*) there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the 25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

A TABLE OF THE MOVABLE FEASTS FOR 10 YEARS—1966-75

Year	Ash Wednesday	Easter	Ascension	Whit Sunday	Suns. after Trin.	Advent
1966.....	Feb. 23	April 10	May 19	May 29	xxiv	Nov. 27

1975.....	Feb 12	March 30	May 8	May 18	xxvi	Nov. 30

NOTES CONCERNING TABLE OF MOVABLE FEASTS

*Ash Wednesday* (first Day in Lent) can fall at earliest on February 4 and at latest on March 10.

*Easter Day* can fall at earliest on March 22 and at latest on April 25.

*Ascension Day* can fall at earliest on April 30 and at latest on June 3.

*Whit Sunday* can fall at earliest on May 10 and at latest on June 13.

*Rogation Sunday* is the Sunday next before *Holy Thursday* (Ascension Day).

*Trinity Sunday* is the Sunday next after *Whit Sunday*.

*Corpus Christi* falls on the Thursday next after *Trinity Sunday*.

There are not less than xxii and not more than xxvii Sundays after Trinity.

*Advent Sunday* is the Sunday nearest to November 30.

PUBLIC HOLIDAYS

BANK HOLIDAYS IN ENGLAND, WALES, NORTHERN IRELAND AND THE CHANNEL ISLANDS ARE (1970):—Easter Monday (March 30), Spring Holiday (May 25), August Bank Holiday (August 31), and December 26; (1971) April 12; May 31 (Whit Monday); August 30; and Dec. 27; (1972) April 3; May 29; August 28; and Dec. 26.

New Year's Day and Liberation Day (May 9) are bank and public holidays in the Channel Islands.

Banks are also closed on Good Friday and Christ- Day and on all Saturdays.

The Stock Exchange is closed on Bank Holidays, Good Friday, Christmas Day and New Year's Day; and on Saturdays throughout the year.

Custom House and Docks, as Banks; with the Queen's Birthday (when decreed).

Excise and Stamp Offices, as Banks; with Whit Tuesday and Coronation Day, if and when decreed.

Law Offices.—Good Friday, Easter Monday and Tuesday, Spring Bank Holiday (see col. 1), Christmas Day, and first week-day after Christmas.

BANK HOLIDAYS IN SCOTLAND ARE (1970): New Year's Day (Jan. 1); May 25; and August 3; (1971) Jan. 1; May 31; and August 2; (1972) Jan. 1; May 1 and August 7.

Banks in Scotland are also closed on Good Friday, Christmas Day and on Saturdays. There are also Spring and Autumn holidays in most Scottish cities and towns.

Scotland has special Term (Quarter) Days:—Candlemas, Feb. 2; Whitsunday, May 15 (Fixed date); Lammas, Aug. 1; and Martinmas, Nov. 11; the Removal Terms are May and Nov. 28.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of Abib as the month when the Israelites came out from Egypt and Abib was to be the first month of

the year. In the First Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II, a descendant of Gamaliel —though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the

tropical year as found by Hipparchus (*Circ.* 120 B.C.) which differ little from those adopted at the present day. The year 5730 (1969-70 A.D.) is the 11th year of the 302nd Metonic (Minor or Lunar) Cycle of 19 years and the 18th year of the 205th Solar (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, the thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of 1 day or two. In practice, in 1 month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must

fall on Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as Jewish law it cannot be altered except by the great Synhedrion.

The Jewish day begins between sunset and night-fall. The time used that of the meridian of Jerusalem, which is 2h. 21m. in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

A.M. 5730 (known as 730 in the short system) is an Embolismic Deficient year of 13 months, 55 Sabbaths and 383 days. A.M. 5731 (731) is a Common Regular year of 12 months, 51 Sabbaths and 354 days. A.M. 5732 (732) is a Common Abundant year of 12 months, 50 Sabbaths and 355 days.

#### Jewish Fasts and Festivals

Tishri	3 Rosh Hoshanah (New Year).	Tebet	10 Fast of Tebet.
"	3 *Fast of Gedaliah.	Adar	13 §Fast of Esther.
"	10 Yom Kippur (Day of Atonement).	"	14 Purim.
"	15-20 Succoth (Feast of Tabernacles).	"	15 Shushan Purim.
"	21 Hoshana Rabba.	Nisan 15-21	Passover. [Weeks].
"	■ Solemn Assembly.	Sivan 6 and 7	Shavuot (Pentecost or Feast of Weeks).
"	23 Rejoicing of the Law.	Tammuz 17	*Fast of Tammuz.
Kislev	25 Dedication of the Temple.	Ab	9 *Fast of Ab.

NOTES.—\* If these dates fall on the Sabbath the Fast is kept on the following day.

§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

THE ROMAN CALENDAR

Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year 1970 is 2723 A.U.C. (MMDCCXXIII). The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 21 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex

Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the table below. The year containing 366 days was called *bissextilis annus*, it had a doubled sixth day (*bissextus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty-eight days, and in Leap Year twenty-nine

8 ..... VIII	16 ..... XVI	60 ..... LX	500 ..... D	2000 ..... MM

Other Examples: 43 = XLIII; 66 = LXVI; 98 = XCVIII.  
 339 = CCCXXXIX; 619 = DCXIX; 988 = CMLXXXVIII; 996 = CMXCVI.  
 1674 = MDCLXXIV; 1962 = MCMLXII.

A bar placed over a numeral has the effect of multiplying the number by 1,000, e.g.:  
 6,000 = VĪ; 16,000 = XVĪ; 160,000 = CLX̄; 666,000 = DCLXVĪ.

## THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Julian Calendar. *Hejira* years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the *Hejira*. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent ■ that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the *Hejira* year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a *Hejira* year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place or the year in the current cycle. If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

*Hejira* year 1389 gives ■ quotient of 46 with remainder ■ and is a common year. A.H. 1390, with remainder 10, is *kabishah*. A.H. 1391 and A.H. 1392, with remainders of 11 and 12 respectively, are common years.

## Hejira Years 1389 and 1390

Name and Length of Month	A.H. 1389	A.H. 1390
Muharram (30)...	1969 Mar. 20	1970 Mar. 9
Safar (29).....	April 19	April 8
Rabia I (30).....	May 18	May 7
Rabia II (29).....	June 17	June 6
Jumada I (30).....	July 16	July 5
Jumada II (29)....	Aug. 15	Aug. 4
Rajab (30).....	Sept. 13	Sept. 2
Shaaban (29).....	Oct. 13	Oct. ■
Ramadān (30).....	Nov. 11	Oct. 31
Shawwāl (29)....	Dec. 11	Nov. 30
Dhū 'l-Qa'da (30)	1970 Jan. 9	Dec. 29
Dhū 'l-Hijja (29 or 30).....	Feb. 8	1971 Jan. 28

NOTE.—A.H. 1391 (common year of 354 days) begins ■ 1971, February 27.

## OTHER EPOCHS AND CALENDARS

*China*.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1939 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet, Hong Kong, Singapore, Malaysia and elsewhere in South-East Asia.

*Ethiopia*.—In the Coptic Calendar, which is used by part of the population of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is ■ Intercalary or Leap year and in these years there are 6 complementary days.

The Intercalary year of the Coptic Calendar immediately precedes the Leap year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed ■ A.D. 284, Aug. 29 (Julian date).

*Greece*.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

*India*.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1970 is, therefore, the year 2027 of the *Vikrama Era*.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1970 is 1892 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

*Iran*.—The chronology of Iran (Persia) is the Era of *Hejira*, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Persia and India (Parsees) with era beginning A.D. 632, June 16.

*Japan*.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning ■ the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the former British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji	from 1868 Oct. 13	to 1912 July 31
.. Taishō	.. 1912 Aug. 10	to 1926 Dec. 25
.. Shōwa	.. 1926 Dec. 26	

Hence the year Shōwa 45 begins 1970 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week ■ Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiryōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

# The World

The *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of ■ given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901·8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

## AREA AND POPULATION

The total population of the world in June, 1967, was estimated by the *United Nations Statistical Office* at 3,420,000,000 compared with 3,003,000,000 in 1960 and 2,070,000,000 in 1930. Figures of areas in the following table are of land area and inland water, but exclude uninhabited polar regions and some uninhabited islands. Figures for Europe and Asia exclude U.S.S.R., which is shown separately. Figures for Oceania exclude Hawaii which is included with North America, being the 50th State of U.S.A.

Continent, etc.	Area		Estimated Population, 1967
	Sq. miles '000	Sq. km. '000	
Europe.....	1,903	4,929	452,000,000
Asia*.....	10,661	27,611	1,907,000,000
U.S.S.R.....	8,649	22,402	236,000,000
Africa.....	11,683	30,258	328,000,000
America.....	16,241	42,063	479,000,000
Oceania.....	3,286	8,510	18,100,000
Total.....	52,422	135,773	3,420,000,000

\* Excludes U.S.S.R. (shown separately); includes European and Asiatic Turkey.

A United Nations report (*The Future Growth of World Population*) in 1958, pointed out that the population of the world had increased since the beginning of the 20th Century at ■ unprecedented rate: in 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:—

Continent	[millions]			
	1975		2000	
	Estimated Population	Per cent.	Estimated Population	Per cent.
Europe†...	751	19·6	947	15·1
Asia*.....	2,210	57·7	3,870	61·8
Africa.....	303	7·9	517	8·2
N. America.	240	6·3	312	5·0
Latin America†.	303	7·9	592	9·4
Oceania...	21	0·5	29	0·5
World.....	3,828	100	6,267	100

\* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

## THE CONTINENTS

*Europe* (including European Russia) forms about one-fourteenth of the land surface of the globe.

Its length from the North Cape, 71° 12' N., to Cape Matapan, in the south of Greece, 36° 23' N. is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

*Asia* (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

*Africa* is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

*North America*, including Mexico, is ■ little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

*South America* is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

*Oceania* extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

## COUNTRIES OF THE WORLD AND THEIR CAPITALS

The appended tables of area and population are based on such information as is immediately available. With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled. For the area and population of separate departments, overseas provinces, etc., of foreign countries see main articles.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases where later information becomes available during printing the new figures are given in the overseas sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

## THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 2,700 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.—Adjoining Nebuchadnezzar's palace, 60 miles south of Baghdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHEBUS.—Ionic temple erected about 350 B.C. in honour of the goddess and burned by the Goths in A.D. 262.
- V. THE COLOSSUS OF RHODES.—A bronze statue of Apollo, set up about 280 B.C. According to legend it stood with legs astride the harbour entrance at the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

## OCEAN AREAS AND DEPTHS]

The greatest known Ocean Depth (in the Pacific, off the Philippines, 36,198 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans			Seas		
Name	Area of Basin (sq. miles)	Greatest Depth (feet)	Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific.....	63,986,000	Mariana Trench 36,198	Malay.....	3,137,000	Kel Trench, 21,342
Atlantic.....	31,530,000	Porto Rico Trench, 27,498	Central American...	1,770,170	Cayman, 23,000

## THE CINQUE PORTS

As their name implies the Cinque Ports were originally 5 in number, Hastings, New Romney, Hythe, Dover and Sandwich. They were in existence before the Norman Conquest and were the Anglo-Saxon successors to the Roman system of coast defence organized from the Wash to Spithhead to resist Saxon onslaughts. William the Conqueror reconstituted them and granted peculiar jurisdiction, most of which was abolished in 1855. Only jurisdiction in Admiralty still survives.

At some time after the Conquest the "ancient towns" of Winchelsea and Rye were added with equal privileges. The other members of the Confederation, known as Limbs, are:—Lydd, Faversham, Folkestone, Deal, Tenterden, Margate and Ramsgate.

The Barons of the Cinque Ports have the ancient privilege of attending the Coronation Ceremony

and are allotted special places in Westminster Abbey.

Lord Warden, Rt. Hon. Sir Robert Menzies, K.T., C.H., Q.C.

Judge, Court of Admiralty, Sir Henry Barnard.  
Registrar, James A. Johnson, New Bridge House, Dover.

## Lord Wardens since 1891

Marquess of Dufferin and Ava.....	1891
Marquess of Salisbury.....	1895

## DISTANCE OF THE HORIZON

The limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of	the range	At a height of	the
5 ft.	2.9 miles	500 ft.	29.5 miles	4,000 ft.	83.3 miles
20,,	5.9 "	1,000 "	41.6 "	5,000,,	93.1 "
50,,	9.3 "	2,000 "	58.9 "	20,000,,	186.2 "
100,,	13.2 "	3,000 "	72.1 "		

## RULERS OF FOREIGN COUNTRIES

Country	Ruler	Born	Acceded
Afghanistan	Mohamed Zahir Shah, <i>King</i>	Oct. 15, 1914	Nov. 8, 1933
Algeria	Col. Houari Boumedienne, <i>President, Council of Revolution</i>	..	.. 1965
Argentine Republic	Lt.-Gen. Juan Carlos Onganía, <i>President</i>	..	June 29, 1966

## WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958. He was invested at Caernarvon on July 1, 1969.

Younger Sons of the younger Sons of Peers.  
Baronets' younger Sons.  
Younger Sons of Knights in the same order as their Fathers.  
Naval, Military, Air, and other Esquires by Office.

### WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.  
For Dames Grand Cross, see pp. 309-302.

### LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly (normally) the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the Mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.  
SCOTLAND.—See Index.

## The Queen's Household

 castle upon Tyne*; W. E. Thomas, County  
*Medical Officer of Health, Glamorgan County Council*.

## THE QUEEN'S BIRTHDAY, 1970

The date for the observance of the Queen's  
 Birthday in 1970, both at home and abroad, will  
 be Saturday, June 13. For the Customs and  
 Excise Department, and the officers and servants  
 of the dock companies in England and Northern  
 Ireland, the day appointed for the observance will  
 be Saturday, June 27.

## ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £420,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse .....	£60,000	Queen Elizabeth the Queen Mother ..	£70,000
Salaries of Household .....	185,000	The Duke of Edinburgh .....	40,000
Expenses of Household .....	121,800	The Duke of Gloucester .....	35,000
Royal Bounty, alms and special services	13,200	The Princess Margaret .....	15,000
Supplementary Provision .....	95,000		

£475,000

## ROYAL SALUTES

On the Anniversaries of the Birth, Accession and Coronation of the Sovereign a salute of 62 guns is fired on the wharf at the Tower of London.

On extraordinary and triumphal occasions, such as on the occasion of the Sovereign opening, proroguing or dissolving Parliament in Person, or when passing through London in procession, except when otherwise ordered, 41 guns only are fired.

On the occasion of the birth of a Royal infant, a salute of 41 guns is fired from the two Saluting Stations in London, i.e. Hyde Park and the Tower of London.

*Field of the Royal Palace and Fortress of London*, Constable-Marshal Sir Gerald Templer, K.G., G.C.B., G.C.M.G., K.B.E., D.S.O. (1965).

*Lieutenant of the Tower of London*, Lieut.-Gen. Sir Richard Goodwin, K.C.B., C.B.E., D.S.O.

*Major, Resident Governor and Keeper of the Jewel House*, Col. Sir Thomas Butler, Bt., D.S.O., O.B.E.

*Master Gunner of St. James's Park*, General Sir Robert Mansergh, G.C.B., K.B.E., M.C. (1960).

## THE ROYAL ARMS

QUARTERLY.—1st and 4th *gules*, three lions passant guardant in pale or (England); and or, a lion rampant within a double tressure flory counterflory *gules* (Scotland); 3rd *azure*, a harp or, stringed *argent* (Ireland); the whole encircled with the Garter.

SUPPORTERS.—*Dexter*: a lion rampant guardant or, imperially crowned. *Sinister*: a unicorn *argent*, armed crined and unguled or, gorged with a coronet composed of crosses patées and fleurs de lis, a chain affixed passing between the forelegs and reflexed over the back.

BADGES.—The red and white rose united (England), a thistle (Scotland); a harp or, the strings *argent*, with a shamrock leaf *vert* (Ireland); upon a mount *vert*, a dragon passant wings elevated *gules* (Wales).

## THE UNION JACK

The national flag of the United Kingdom is the Union Flag, generally known as the Union Jack, the flag deriving from the use of the Union Flag on the jack-staff of naval vessels. It is a combination of the cross of the patron saint of England, St. George (*cross gules in a field argent*), the cross of the patron saint of Scotland, St. Andrew (*saltaire argent in a field azure*) and a cross similar to that of St. Patrick, patron saint of Ireland (*saltaire gules in a field argent*). The Union Flag was first introduced in 1606 after the union of England and Scotland, the cross of St. Patrick being added in 1801.

These payments are separately charged on the Consolidated Fund, and do form part of the Civil List.

## THE FLYING OF FLAGS

Days for hoisting the Union Flag on Government and Public Buildings (from 11 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

February 19 (1960).—Birthday of Prince Andrew.

March 1.—St. David's Day (in Wales only).

March 10 (1964).—Birthday of Prince Edward.

March 31 (1900).—Birthday of Duke of Gloucester.

April 1 (1926).—Birthday of Her Majesty the Queen.

April 23.—St. George's Day (in England only). Where a building has two or more flagstaffs the Cross of St. George may be flown in addition to the Union Jack but not in a superior position.

June 2 (1953).—Coronation Day.

June 10 (1921) Birthday of the Duke of Edinburgh.

June 13.—Queen's Official Birthday, 1970.

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 1 (1930).—Birthday of the Princess Margaret.

Nov. 8.—Remembrance Sunday, 1970.

Nov. 14 (1948).—Birthday of the Prince of Wales.

Nov. 20 (1947).—Her Majesty's Wedding Day.

Nov. 30.—St. Andrew's Day (in Scotland only).

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Public Building and Works by Her Majesty's command and com-

municated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, e.g. some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of the United Kingdom.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (a) although a member of the Royal Family, or a relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The Royal Standard is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

## RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on Red-Letter Days at the sittings of the Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1970.	May 1.	May 2.	May 3.	May 7.	June 1.	June 7.	June 10.	June 11.	June 13.	June 24.	June 29.	July 1.	July 25.	Aug. 4.	Aug. 18.	Aug. 28.	Nov. 1.	Nov. 14.	Nov. 14.	Nov. 30.	Dec. 21.	
				Philip and St. James.	Ascension Day.	Coronation Day.	Birthday of the Duke of Edinburgh.	St. Barnabas.	Queen's Official Birthday.	St. John the Baptist.	St. Peter.	St. James.		Birthday of Queen Elizabeth the Queen Mother.	St. Luke.	St. Simon and St. Jude.	All Saints.	Lord Mayor's Day.	Birthday of the Prince of Wales.	St. Andrew.	St. Thomas.	
Jan. 25.	Conversion of St. Paul.																					
Feb. 2.	Purification.																					
" 6.	Queen's Accession.																					
" 11.	Ash Wednesday.																					
" 24.	St. Matthias.																					
Mar. 25.	Annunciation.																					
Apr. 21.	Queen's Birthday.																					
" 25.	St. Mark.																					

## THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and Statutes were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet tail-coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office, Governor Maj.-Gen. Sir Edmund Hakewill Smith, K.C.V.O., C.B., C.B.E., M.C.

Military Knights, Major H. K. Clough, O.B.E.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Brigadier W. P. A. Robinson, M.C.; Major R. W. Garnett, M.B.E.; Brigadier A. A. Crook, D.S.O.; Lt.-Colonel R. L. Penfold; Lt.-Colonel L. W. Giles, O.B.E., M.C.; Lt.-Colonel H. G. Duncombe, D.S.O.; Major R. W. Dobbin, O.B.E.; Lt.-Colonel P. U. Campbell, D.S.O.; Major H. Smith, M.B.E.

# The Peerage

## THE PEERAGE AND ITS DEGREES

The rules which govern the creation and succession of Peerages are extremely complicated. There were separate Peerages of England, of Scotland, and of Ireland, until the unions of the three countries: of England and Scotland, forming Great Britain, in 1707; and of Great Britain and Ireland, forming the United Kingdom, in 1801. Some Scottish Peers received additional Peerages of Great Britain or of the United Kingdom, since 1707; and some Irish Peers additional Peerages of the United Kingdom since 1801.

All Peers of England, Scotland, Great Britain, or the United Kingdom who are of full age are entitled to seats in the House of Lords. But Peers of Ireland who have no additional United Kingdom Peerage are not entitled to sit, although they are eligible for election to the House of Commons and to vote (if of voting age) in Parliamentary elections (which other Peers are not). The two Archbishops and 24 of the 41 Bishops of the Church of England also have seats in the House of Lords.

Certain ancient Peerages pass on death to the nearest heir, male or female, and several are now held by women who are thus Peeresses in their own Right. They are entitled to sit in the House of Lords if they are of full age and British nationality.

Since 1876 the Crown has conferred non-hereditary or Life Peerages in the degree of Baron on eminent judges to enable them to carry out the judicial function of the House of Lords. They are known as Law Lords. Under an Act passed in 1958 the Crown may confer Life Peerages on men and women giving them, in the degree of Baron or Baroness, seats in the House of Lords.

In 1963 an Act was passed enabling Peers to disclaim their Peerages for life: living Peers, within 12 months after the passing of the Act (July 31, 1963), future Peers within 12 months (one month if an M.P.) after the date of their succession, or of attaining their majority if later.

No fees for Dignities have been payable since 1937. No hereditary Peerages have been created since 1964.

## PEERAGES EXTINCT SINCE THE LAST ISSUE

BARONIES (2)—Hailey (cr. 1936); Jenkins (Law Life Peerage) (cr. 1959).

## DISCLAIMER OF PEERAGES

The following peers have disclaimed their peerages under the Peerage Act, 1963: Earl of Home; Earl of Sandwich; Viscount Hailsham; Viscount Stangate; Lord Altrincham; Lord Beaverbrook; Lord Fraser of Allander; Lord Monkswell; Lord Southampton.

## PEERS WHO ARE MINORS

(As at Jan. 1, 1970)

EARLS (4): Belmore (b. 1951); Craven (b. 1957); BARONS (4): Brocket (b. 1952); Fairfax of Cameron Lovelace (b. 1951); Woolton (b. 1958). (b. 1956); Hesketh (b. 1950); Londesborough (b. 1959).

## CONTRACTIONS AND SYMBOLS

*Contractions and Symbols.*—S. or L. appended to the date of creation denotes a Scottish or Irish title, the further addition of a \* implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as Engl., Brit., or U.K. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. The mark \* signifies that there is no "of" in the Marquessate or Earldom so designated; b. signifies born; s., succeeded; m., married; w., widower or widow; M., minor.

1308	Zouche (18th), James Assheton Frankland, <i>b.</i> 1943, <i>s.</i> 1965.	Hon. Roger N. F., <i>b.</i> 1909.

### Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

#### COUNTESSSES IN THEIR OWN RIGHT.—*Style, The Countess of —* *Addressed as, My Lady.*

<i>Created.</i>	<i>Title, Name, etc.</i>	<i>Eldest Son or Heir.</i>

### Courtesy Titles (in actual existence in 1970)

Holders of Courtesy Titles are addressed in the same manner as holders of substantive titles

From this list it will be seen that, for example, the "Marquess of Blandford" is heir to the Dukedom of Marlborough, and "Viscount Althorp" to the Earldom of Spencer. Titles of second heirs are also given, and the Courtesy Title of the father of a second heir is indicated by \*; e.g., Earl of Sunderland, eldest son of \*Marquess of Blandford.

In addition, the heir, and sometimes the second heir, to some Scottish peerages is usually styled "The Master of —"; e.g., "The Master of Falkland" is heir to Viscount Falkland; and "The Master of Lindsay" is eldest son of \*Lord Balmiel, heir to the Earl of Crawford and Balcarres. Users of this style are not included here.

#### Marquesses.

## THE PRIVY COUNCIL

The Privy Council consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Counsellors, and they principally form the active Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee, the Board of Trade, &c.

Companion.

#### THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

This Order is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

O.M. Mil.

O.M. Civ.

The Lord Adrian, 1942.

## THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since 1902. Badge, a medallion of Queen Victoria and the Prince Consort, surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

## FIRST CLASS

H.R.H. the Princess Alice, Countess of Athlone.

## SECOND CLASS

Lady Victoria Patricia Helena Ramsay.

## THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted Dec. 31, 1877. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1947.

H.M. THE QUEEN, 1947.  
 H.M. Queen Elizabeth the Queen Mother, 1931.  
 H.R.H. the Princess Margaret, Countess of Snowdon, 1947.  
 H.R.H. the Duchess of Gloucester, 1937.  
 Lady Victoria Patricia Helena Ramsay, 1911.  
 Dorothy Evelyn Augusta, Dowager Countess of Halifax, 1926.  
 Pamela, Countess of Lytton, 1927.  
 H.H. Maharani of Travancore, 1929.  
 Doreen Geraldine, Dowager Baroness Brabourne, 1937.  
 Eugenie Marie, Countess Wavell, 1943.  
 Florence Amery, 1945.  
 Agnes Anne, Dowager Baroness Clydesmuir, 1947.

## Baronets, Knights Grand Cross, Knights Grand Commanders Knights Commanders and Knights Bachelor

Badge of Baronets  
of England, Great Britain, U.K.,  
(and Ireland marked 1.).

Badge of Baronets  
of Scotland or Nova Scotia  
(marked s.).

### NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ( ).

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

### NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname after "Bt." if they are also baronets or in place of "Bt." if they are not. Knights Bachelor are addressed as "Sir — (first or Christian name)" and in writing as "Sir — B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

### NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knight Principal*, Sir Anthony Wagner, K.C.V.O.; *Deputy Knight Principal*, Hon. Sir George Bellew, K.C.B., K.C.V.O.; *Hon. Registrar*, Sir John Weir Russell; *Clerk*, Mrs. Rodney; *Registry and Library*, Old Buildings, Lincoln's Inn, W.C.2.

### BARONETAGE AND KNIGHTAGE

(Revised to Aug. 15, 1969).

*Peers are not included in this list.*

*A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.*

Baroneties Extinct (Since last issue)—

Brooke of Oakley (U.K. 1803); Cameron (U.K. 1893); Douglas of Springwood Park (G.B. 1786); Holt (U.K. 1916); Leicester (I. 1671); Mowat (U.K. 1932).

## Dames Grand Cross and Dames Commanders of the Order of St. Michael and St. George, the Royal Victorian Order and the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.M.G., G.C.V.O. or G.B.E.) and Dames Commanders (D.C.M.G., D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, *e.g.* "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.M.G., G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, *e.g.* "The Countess of — G.C.V.O." Peeresses in their own right, and Life Peeresses, are not included in this list. Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

### DAMES GRAND CROSS AND DAMES COMMANDERS

- |  |  |   |
|--|--|---|
| H.M. Queen Elizabeth The Queen Mother, K.G., K.T., C.L., G.M.V.O.      | Alexander of Tunis, The Countess, G.B.E.                               | Bishop, Dame (Margaret) Joyce, D.B.E.           |

THE VICTORIA CROSS, 

The ribbon is *Crimson* for all Services (until 1912 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1856.*

The  is worn before all other decorations, on the left breast, and consists of a cross-pattée of bronze,  $1\frac{1}{2}$  inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the  receive a tax-free annuity of £200, irrespective of need or other conditions. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

### THE GEORGE CROSS, G.C.—FOR GALLANTRY

The ribbon is dark blue threaded through a bar adorned with laurel leaves.

INSTITUTED September 24th, 1940 (with amendments, November 3, 1942).

The George Cross is worn before all other decorations (except the ) on the left breast and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon 1½ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger. From April 1, 1965, holders of the Cross have received a tax-free annuity of £100.

When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

**Empire Gallantry Medal.**—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939.

### THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

### THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 740, of whom 360 may belong to the Home Services, 180 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

### PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence)

Victoria Cross.—1856.—

George Cross.—1940.—G.C.

British Orders of Knighthood.

Woman's Voluntary Service Medal.

Colonial Special Constabulary Medal.

Foreign Orders, Decorations and Medals (in order of date).

### THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable". The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Right (or Rt.) Hon. —. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) —, P.C., or, less elaborately, The Lord (or Earl or Viscount) —P.C.

### THE ORDER OF ST. JOHN (1888)

*The Most Venerable Order of the Hospital of St. John of Jerusalem*

St. John's Gate, Clerkenwell, E.C.1

The Order derives from the ancient Order of Knights Hospitaller founded in Jerusalem after the successful completion of the First Crusade. Vowed to the relief of sickness and distress without distinction of race, class or creed, the Knights maintained a Hospice for the care of the sick and were an important military body within the Kingdom of Jerusalem. After the loss of the Holy Land the Order became a Sovereign body in Rhodes and later in Malta. In Britain its properties were sequestrated at the Dissolution of the Monasteries but a branch of the Order was revived in England after the Napoleonic Wars. This was granted a Royal Charter by Queen Victoria in 1888 as a separate, British, Order of St. John. The Queen is the Sovereign Head and since 1888 the Grand Prior has been a member of the Royal Family. The Badge is a white eight-pointed cross, embellished in the four principal angles with a lion and a unicorn; the riband is of black watered silk. The work of the Order consists of the maintenance of two Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882) and The St. John Ambulance Association and Brigade, 1 Grosvenor Crescent, S.W.1, which is concerned with education in First Aid and kindred subjects and provides a body of trained and uniformed volunteers for attendance on the public where the rendering of First Aid may be required.

Lord Prior, The Lord Caccia, G.C.M.G., G.C.V.O.

### CLUB AND LIBRARY EDITION OF WHITAKER, 1970

The Club and Library Edition of Whitaker's Almanack, 1970, contains 1,237 pages, including illustrations and coloured maps (The World, The British Isles, Baltic States, Russia and her neighbours, Germany and her neighbours, France and Spain, The Far East, India, Pakistan and Burma, Africa, Canada and Newfoundland, The United States, South America, Australia, New Zealand) in strong leather binding, with gilt top and silk headband. Price 45s. net.

# The British Constitution

## THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

### The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision was made for 17 Ministers of the first rank (Cabinet Ministers) and this number has been increased by later legislation. The *Ministers of the Crown (Parliamentary Secretaries) Act* (1960) laid down an aggregate limit of 33 Parliamentary Secretaries. Parts of these Acts were repealed by the *Ministers of the Crown Act* (1964) which varied the number of Parliamentary Secretaries (other than Treasury Secretaries) to 36.

### The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 100 years, was officially recognized and its holder was granted a place in the Table of Precedence.

### The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000, and in 1965 to £4,500. The present Leader of the Opposition is the Right Hon. Edward Heath.

## LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," pp. 310-311). Bills of major importance are usually sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign in the

Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

## COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's visit to Canada in 1967, the Councillors of State were the Prince of Wales, Queen Elizabeth the Queen Mother, Princess Margaret and the Duke of Gloucester. This was the first time that the Prince of Wales had been so appointed.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. Since the Prince of Wales attained the age of 18 in November 1966, the provisions of the Regency Act as to age no longer apply in the event of his accession to the throne.

## SPEAKERS OF THE COMMONS SINCE 1660

### PARLIAMENT OF ENGLAND.

1660	Sir H. Grimston.	1685	Sir John Trevor.
1661	Sir E. Turner.	1688	H. Powl.
1673	Sir J. Charlton.	1694	Paul Foley.
1673	Edwd. Seymour.	1698	Sir T. Lyttelton.
1678	Sir Robt. Sawyer.	1700	Robert Harley
1679	Serjeant William Gregory.		(Earl of Oxford and Mortimer).
1680	W. Williams.	1702	John Smith.

### PARLIAMENT OF GREAT BRITAIN.

1708	Sir Richard Onslow (Lord Onslow).	1761	Sir John Cust.
		1770	Sir F. Norton.
		1780	C. W. Cornwall.
1710	Wm. Bromley.	1788	Hon. W. Grenville (Lord Grenville).
1713	Sir Th. Hanmer.	1789	Henry Addington (Viscount Sidmouth).
1715	Spencer Compton (Earl of Wilmington).		
1727	Arthur Onslow.		

### PARLIAMENT OF UNITED KINGDOM.

1801	Sir John Mitford (Lord Redesdale).
1802	Charles Abbot (Lord Colchester).
1817	Charles M. Sutton (Viscount Canterbury).
1835	James Abercromby (Lord Dunfermline).
1839	Charles Shaw-Lefevre (Viscount Eversley).
1857	J. Evelyn Denison (Viscount Ossington).
1872	Sir Henry Brand (Viscount Hampden).
1884	Arthur Wellesley Peel (Viscount Peel).
1895	William Court Gully (Viscount Selby).
1905	James W. Lowther (Viscount Ullswater).
	John Henry Whitley.
	Hon. Edward Algernon FitzRoy.
	Col. D. Clifton Brown (Viscount Ruffside).
	William Shepherd Morrison (Viscount Dunrossil).
1959	Sir Harry Hylton-Foster.
1965	Horace Maybray King, Ph.D.

## THE HOUSES OF PARLIAMENT

Parliament emerged during the late thirteenth and early fourteenth centuries ■ ■ result of diverse forces including the general need for ■ superior court to deal with legal and administrative problems on a national basis, ambition of the baronage to influence the King's government, and the King's desire to make his government more effective by involving in it all important sections of the community. The nucleus of early Parliaments were the officers of the King's household and the King's judges, who were joined by such ecclesiastical and lay magnates as the King might summon and occasionally by the knights of the shire, burghers and proctors of the lower clergy. The Commons were summoned to all the Parliaments of Edward III and by the end of the reign ■ "House of Commons" was beginning to appear. The first known Speaker was elected in 1377.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland, except for criminal cases in Scotland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. Bills such as the Finance Bill, which imposes taxation, and the Consolidated Fund Bills, which authorize expenditure, and are commonly known as Supply Bills, must begin in the Commons and have not been amended by the Lords in any respect in modern times. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regard to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1949—(a) ■ bill which the Speaker has certified ■ a Money Bill, *i.e.* as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence: (b) any other public bill (except one to extend the life of a Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in ■ second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914-18 the duration of Parliament was extended by successive Acts from 5 to ■ years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 ■ 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 19 hrs. 16 minutes (from 2.30 p.m. to 9.46 a.m. Feb. 29-Mar. 1, 1968).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues ■ on sale throughout the country.

*Payment of Members.*—Members of the House of Lords ■ unpaid. They are entitled to re-imbursment of travelling expenses from their residence to the House in respect of regular attendance and repayment of expenses within a maximum of £4 14s. 6d. for each day of such attendance.

Since 1911 Members of the House of Commons have received payments and travelling facilities. Their salary of £400 was increased to £600 in 1937, to £1,000 in 1947, to £1,750 in 1957 and to £3,250 in October 1964; they are entitled to claim income tax relief on expenses incurred in the course of their Parliamentary duties. The Members' Pensions Act, 1965, introduced the first comprehensive pension scheme providing Members of Parliament and their dependants with a legal right to a pension. Members contribute £150 per annum and the Exchequer an amount equal to the aggregate of the Members' contributions. Members receive pensions from age 65 or on ceasing to be a Member if later, provided they have served for 10 years or more. The pension, £600 per annum for 10 years' service, increases to £900 after 15 years' service and by £24 for each further year thereafter. Members re-elected at the 1964 General Election would be able to count up to ■ years' service before that date on a non-contributory basis. Members will also continue to contribute £24 per annum and the Treasury £22,000 a year towards ■ Fund to provide annual or lump sum grants to ex-Members, their widows and children whose incomes are below certain limits. The income of the Fund in 1967-68 was £47,577 and expenditure ■ grants £34,926. The capital account stood in 1968 at £165,965.

## THE HOUSE OF LORDS

The House of Lords consists of some 1,060 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers and Peeresses by descent of England, Scotland, Great Britain or the United Kingdom, peers of new creation, Lords of Appeal in Ordinary (who are life peers), Peeresses in their own right, and Life Peers and Life Peeresses created under the Life Peerages Act, 1958. An Irish Peer not in the House of Lords is eligible for election as ■ member of the House of Commons, and unlike Peers who are members of the House of Lords, ■

vote in parliamentary Elections. Under the Peerage Act, 1963, a person inheriting a peerage may within one year (or one month in the case of ■ Member of the House of Commons) disclaim the peerage for life. The subsequent descent of the peerage after his death is not affected.

## THE HOUSE OF COMMONS

By the *Representation of the People Act* (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by a similar Act (1918) it ■ increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615, Irish

representation being reduced from 105 to 13 members. By the *Representation of the People Act* of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act, 1949*, the total membership has now been increased to 630.

### THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kept wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, originally built by Edward the Confessor (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's Chapel (first mentioned in the reign of John) was used from about 1550 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 316 feet high and contains "Big Ben," the 23-ton hour bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856. The dials of the clock are 23 feet in diameter, the hands being 9 feet and 14 feet long (including balance piece). The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

### THE LORD CHANCELLOR

The Lord High Chancellor of Great Britain is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

### PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister, No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

*Chequers*, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord

and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

### PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.  
 Earl of Wilmington, *Whig*, Feb. 16, 1742.  
 Henry Pelham, *Whig*, Aug. 25, 1743.  
 Duke of Newcastle, *Whig*, May 18, 1754.  
 Duke of Devonshire, *Whig*, Nov. 16, 1756.  
 Duke of Newcastle, *Whig*, July 2, 1757.  
 Earl of Bute, *Tory*, May 28, 1762.  
 George Grenville, *Whig*, April 15, 1763.  
 Marquess of Rockingham, *Whig*, July 10, 1765.  
 Earl of Chatham, *Whig*, Aug. 2, 1766.  
 Duke of Grafton, *Whig*, Dec. 1767.  
 Lord North, *Tory*, Feb. 6, 1770.  
 Marquess of Rockingham, *Whig*, March 27, 1782.  
 Earl of Shelburne, *Whig*, July 13, 1782.  
 Duke of Portland, *Coalition*, April 4, 1783.  
 William Pitt, *Tory*, Dec. 7, 1783.  
 Henry Addington, *Tory*, March 21, 1801.  
 William Pitt, *Tory*, May 16, 1804.  
 Lord Grenville, *Whig*, Feb. 10, 1806.  
 Duke of Portland, *Tory*, March 31, 1807.  
 Spencer Perceval, *Tory*, Dec. 6, 1809.  
 Earl of Liverpool, *Tory*, June 16, 1812.  
 George Canning, *Tory*, April 30, 1827.  
 Viscount Goderich, *Tory*, Sept. 8, 1827.  
 Duke of Wellington, *Tory*, Jan. 26, 1828.  
 Earl Grey, *Whig*, Nov. 24, 1830.  
 Viscount Melbourne, *Whig*, July 13, 1834.  
 Sir Robert Peel, *Tory*, Dec. 26, 1834.  
 Viscount Melbourne, *Whig*, March 18, 1835.  
 Sir Robert Peel, *Tory*, Sept. 6, 1841.  
 Lord John Russell, *Whig*, July 6, 1846.  
 Earl of Derby, *Tory*, Feb. 28, 1852.  
 Earl of Aberdeen, *Peelite*, Dec. 28, 1852.  
 Viscount Palmerston, *Liberal*, Feb. 10, 1855.  
 Earl of Derby, *Conservative*, Feb. 25, 1858.  
 Viscount Palmerston, *Liberal*, June 18, 1859.  
 Earl Russell, *Liberal*, Nov. 6, 1865.  
 Earl of Derby, *Conservative*, July 6, 1866.  
 Benjamin Disraeli, *Conservative*, Feb. 27, 1868.  
 W. E. Gladstone, *Liberal*, Dec. 9, 1868.  
 Benjamin Disraeli, *Conservative*, Feb. 21, 1874.  
 W. E. Gladstone, *Liberal*, April 28, 1880.  
 Marquess of Salisbury, *Conservative*, June 24, 1885.  
 W. E. Gladstone, *Liberal*, Feb. 6, 1886.  
 Marquess of Salisbury, *Conservative*, Aug. 3, 1886.  
 W. E. Gladstone, *Liberal*, Aug. 18, 1892.  
 Earl of Rosebery, *Liberal*, March 3, 1894.  
 Marquess of Salisbury, *Conservative*, July 2, 1895.  
 A. J. Balfour, *Conservative*, July 12, 1902.  
 Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.  
 H. H. Asquith, *Liberal*, April 8, 1908.  
 H. H. Asquith, *Coalition*, May 26, 1915.  
 D. Lloyd-George, *Coalition*, Dec. 7, 1916.  
 A. Bonar Law, *Conservative*, Oct. 23, 1922.  
 S. Baldwin, *Conservative*, May 22, 1923.  
 J. R. MacDonald, *Labour*, Jan. 22, 1924.  
 S. Baldwin, *Conservative*, Nov. 4, 1924.  
 J. R. MacDonald, *Labour*, June 8, 1929.  
 J. R. MacDonald, *Coalition*, Aug. 25, 1931.  
 S. Baldwin, *Coalition*, June 7, 1935.  
 N. Chamberlain, *Coalition*, May 28, 1937.  
 W. S. Churchill, *Coalition*, May 11, 1940.  
 W. S. Churchill, *Conservative*, May 23, 1945.  
 C. R. Attlee, *Labour*, July 26, 1945.  
 Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.  
 Sir A. Eden, *Conservative*, April 6, 1955.  
 H. Macmillan, *Conservative*, Jan. 13, 1957.  
 Sir A. Douglas-Home, *Conservative*, Oct. 19, 1963.  
 J. H. Wilson, *Labour*, Oct. 16, 1964.

Standing Committees, D. Scott.....	£5,325
Clerk of the Overseas Office, M. H. Lawrence.....	£5,325
Clerk of Select Committees, A. A. Birley... ..	£5,325
Deputy Principal Clerks, E. S. Taylor, Ph.D.; F. G. Allen; R. S. Lankester; K. A. Bradshaw; D. A. M. Pring, M.C.; J. H. Willcox; J. P. S. Taylor; C. A. James; H. M. Barclay; M. T. Ryle; D. McW. Millar (acting); C. J. Boulton (acting); J. F. Sweetman, T.D. (acting); A. A. Barrett (acting) . . .	£3,975 to £5,075
Senior Clerks, D. W. Limon; J. R. Rose; G. S. Ecclestone; C. B. Winniffrith; A. J. Hastings; W. R. McKay; R. J. Willoughby; S. A. L. Penton .....	each £2,600 to £3,550

Examiners of Private Bills, T. G. Odling; E. D. Graham.  
Taxing Officer, T. G. Odling.

## DEPT. OF THE SPEAKER

Speaker's Secretary, Brig. Sir Francis Reid, C.B.E.  
£2,600 to £3,550

Counsel to the Speaker, Sir Robert Speed, C.B., Q.C. .... £5,625  
Chaplain to the Speaker (vacant)  
Editor, Official Report (Hansard), L. W. Bear £4,725  
Shorthand Writer, A. R. Kennedy..... fees  
Deliverer of the Vote, P. K. Marsden £2,740 to £3,975

## DEPT. OF THE SERJEANT AT ARMS

Serjeant at Arms, Rear-Admiral A. H. C. Gordon Lennox, C.B., D.S.O. .... £5,625  
Deputy do., Lt.-Col P. F. Thorne, C.B.E. £3,975 to £5,075  
Assistant do., Cdr. D. Swanston, D.S.O., D.S.C., R.N. (ret.)..... £3,220 to £3,550  
Deputy Assistant do., Major G. V. S. Le Fanu £2,800 to £3,220

## DEPT. OF THE LIBRARY

Librarian, D. C. L. Holland..... £5,625  
Deputy Librarian, D. Menhennet, D.Phil. £3,975 to £5,075  
Assistant Librarians, D. J. T. Englefield; E. C. Thompson..... £3,975 to £4,525  
Deputy Assistant Librarians, R. F. C. Butcher, V.R.D.; H. J. Palmer; G. F. Lock £3,359 to £3,975

## ADMINISTRATION DEPT.

Clerk Administrator, H. R. M. Farmer, C.B. £5,625  
Accountant, F. J. Wilkin, O.B.E., D.F.M. £3,825 to £4,725  
Deputy Accountant, G. Powter.. £2,740 to £3,145  
Head of Establishments Section, H. McE. Allen..... £2,985 to £3,525

## NOTES ON PARLIAMENTARY PROCEDURE

**WRITS ■ ■ ■ NEW PARLIAMENT, ETC.**—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, ■ ■ ■ founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

**VACANT SEATS.**—When ■ vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during ■ session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker ■ ■ ■ issue ■ writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member ■ ■ ■ retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the *Chiltern Hundreds* and the *Manor of Northstead* as offices of profit and thus perpetuated the fiction.

**HOURS OF MEETING, ETC.**—The House of Lords normally meets during the Session at 2.30 p.m. ■ ■ ■ Tuesday and Wednesday, and at 3 p.m. ■ ■ ■ Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. Morning sittings on Monday and Wednesday were held from February–July, 1967 and occasionally during 1968 and 1969. *Strangers* are present during the debates of both Houses ■ ■ ■ sufferance, and may be excluded at ■ ■ ■ time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers ■ ■ ■ both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within four minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

**PROROGATION AND DISSOLUTION.**—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (see p. 307).

**ELECTION PETITIONS.**—The right of a member of the House of Commons to sit in Parliament can be challenged by petition ■ ■ ■ several grounds, e.g.

ineligibility to sit owing to his bribery or ■ ■ ■ ruption of the electors. Such petitions were originally decided by the House itself, but ■ ■ ■ party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

**STANDING ORDERS.**—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

**GENERAL PROCEDURE.**—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described ■ ■ ■ *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, ■ member may not, except in Committee, speak more than once to ■ question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; ■ member may not speak after ■ question has been put, except ■ ■ ■ a point of order, and then he must address the Speaker "*seated and covered*." He must bow to the Speaker on entering and leaving the House.

**QUESTION TIME.**—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the Clerk of the House of Commons, the senior official of the House, who presides over it in the brief interval between the first assembly of a ■ ■ ■ Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the Clerk of the Parliaments. Members of the House may put ■ ■ ■ unlimited number of questions to Ministers, but not more than two demanding an oral answer may be made in any one day to the same Minister. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of ■ ■ ■ Minister's answer.

**COMMITTEES.**—On the Assembly of a ■ ■ ■ Parliament, after the election of the Speaker, the House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed

for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing *exclusively* with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh members automatically members thereof. One of the most important Committees of the whole House of Commons is the *Committee of Supply*, which votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

**CLOSURE AND THE GUILLOTINE.**—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made that the question be now put. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the *Closure*. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

**THE PREVIOUS QUESTION.**—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

**MOTION FOR ADJOURNMENT.**—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving for the purpose of discussing a specific and important matter that should have urgent consideration. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

**PRIVILEGES OF PARLIAMENT.**—There are certain rights and jurisdictions peculiar to each House of Parliament, but privileges in their accepted meaning common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege

is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

**THE SPEAKER.**—The *Speaker of the House of Commons* is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a member is to *Name* him. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion that *the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes (except when the voting is equal). A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

## GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679-80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until *Whig* was changed to *Liberal* and *Tory* to *Conservative*.

Before the reign of William and Mary (1688-1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The accession of George I, who was unfamiliar with the English language, led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 35 years and 326 days.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 22 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951, 1953 and 1959 Elections. It is now 13.

Soon after the change from *Whig* to *Liberal* the *Tory* Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a

separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

*The Labour Party*.—Labour candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." At the General Election of 1895 the number of successful candidates fell to 22, with 11 further fall to 11 at the election of 1900.

In 1900 the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and its readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

## Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a three-lined whip, headed "Most important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,750; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant do.*) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £2,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

*The House of Lords*

*The Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (Lord Beswick), the Captain of the Queen's Bodyguard of the Yeomen of the Guard (Lord Bowles) and the (Political) Lords in Waiting.

*The Conservative Whips* are: Earl St. Aldwyn; Visct. Goschen; Lord Denham; Lord Belstead; Lord Mowbray; Lord Sandford.

*The Liberal Whips* are Lord Amulree and Lord Henley.

*The House of Commons*

*The Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* are also usually appointed.

*The Conservative Whips* are: The Rt. Hon. W. S. I. Whitelaw, M.C. (*Chief Whip*); F. L. Pym (*Deputy Chief Whip*); R. W. Elliott; J. More; R. E. Eyre; J. A. Grant; H. S. P. Monro; T. P. G. Kitson; B. B. Weatherill; A. H. R. Royle; H. E. Atkins.

*The Liberal Whip* is E. R. Lubbock.

## THE CABINET

- Prime Minister and First Lord of the Treasury, THE RT. HON. JAMES HAROLD WILSON, O.B.E., M.P., born 1916.  
 Secretary of State for Foreign and Commonwealth Affairs, The Rt. Hon. Robert Maitland Michael Stewart, C.H., M.P., born 1906.  
 Chancellor of the Exchequer, The Rt. Hon. Roy Harris Jenkins, M.P., born 1920.  
 First Secretary of State and Secretary of State for Employment and Productivity, The Rt. Hon. Barbara Anne Castle, M.P., born 1911.  
 Lord High Chancellor, The Rt. Hon. Lord Gardiner, born 1900.  
 Secretary of State for Health and Social Security, The Rt. Hon. Richard Crossman, O.B.E., M.P., born 1907.  
 Secretary of State for Defence, The Rt. Hon. Denis Winston Healey, M.B.E., M.P., born 1917.  
 Secretary of State for the Home Department, The Rt. Hon. Leonard James Callaghan, M.P., born 1912.  
 Secretary of State for Scotland, The Rt. Hon. William Ross, M.B.E., M.P., born 1911.  
 Secretary of State for Education and Science, The Rt. Hon. Edward Watson Short, M.P., born 1912.  
 Secretary of State for Wales, The Rt. Hon. Thomas George Thomas, M.P., born 1909.  
 Secretary of State for Economic Affairs, The Rt. Hon. Peter David Shore, M.P., born 1924.  
 Lord President of the Council and Leader of the House of Commons, The Rt. Hon. Thomas Frederick Peart, M.P., born 1914.  
 Lord Privy Seal and Leader of the House of Lords, The Rt. Hon. Lord Shackleton, O.B.E., born 1911.  
 President of the Board of Trade, The Rt. Hon. Charles Anthony Raven Crosland, M.P., born 1918.  
 Minister of Power, The Rt. Hon. Roy Mason, M.P., born 1924.  
 Minister of Housing and Local Government, The Rt. Hon. Anthony Greenwood, M.P., born 1911.  
 Minister of Agriculture, Fisheries and Food, The Rt. Hon. Cledwyn Hughes, M.P., born 1916.  
 Minister of Transport, The Rt. Hon. Richard William Marsh, M.P., born 1928.  
 Minister of Technology, The Rt. Hon. Anthony Neil Wedgwood Benn, M.P., born 1925.  
 Minister without Portfolio, The Rt. Hon. George Morgan Thomson, M.P., born 1921.  
 Paymaster-General, The Rt. Hon. Judith Constance Mary Hart, M.P., born 1924.  
 Chief Secretary to the Treasury, The Rt. Hon. John Diamond, M.P., born 1907.

## MINISTERS NOT IN THE CABINET

- Chancellor of the Duchy of Lancaster, The Rt. Hon. Frederick Lee, M.P., born 1906.  
 Minister of Overseas Development, The Rt. Hon. Reginald Ernest Prentice, M.P., born 1923.  
 Minister of Public Building and Works, The Rt. Hon. John Ernest Silkin, M.P., born 1923.  
 Postmaster-General, The Rt. Hon. John Thomas Stonehouse, M.P., born 1925.  
 Minister for Planning and Land (Housing and Local Government), The Rt. Hon. Kenneth Robinson, M.P., born 1911.  
 Minister of Defence (Equipment), John Morris, M.P., born 1931.  
 Minister of Defence (Administration), Roy Sydney George Hattersley, born 1932.  
 Ministers of State (Foreign and Commonwealth Office), The Lord Chalfont, P.C., O.B.E., M.C., born 1919; The Lord Caradon, P.C., G.C.M.G., K.C.V.O., O.B.E., born 1907; The Rt. Hon. Frederick William Mulley, M.P., born 1918; The Rt. Hon. Goronwy Owen Roberts, M.P., born 1913; The Lord Shepherd, P.C. (Deputy Leader of the House of Lords), born 1918.  
 Minister of State (Home Office), The Lord Stonham, O.B.E., born 1903.  
 Ministers of State (Department of Education and Science), Rt. Hon. Alice Martha Bacon, C.B.E., M.P.; Mrs. Shirley Williams, M.P., born 1930; Rt. Hon. Jennie Lee, M.P., born 1904.  
 Minister of State (Scottish Office), Dr. Dickson Mabon, M.P., born 1925.  
 Ministers of State (Board of Trade), The Lord Brown, M.B.E., born 1908; Edmund Dell, M.P. born 1921; William Thomas Rodgers, M.P., born 1928.  
 Minister of State (Welsh Office), Mrs. Eirene Lloyd White, M.P., born 1909.  
 Minister of State (Technology), Joseph Percival William Mallalieu, born 1908.  
 Minister of State (Treasury), Dick Taverne, Q.C., M.P., born 1928.  
 Minister of State (Department of Economic Affairs) Thomas William Unwin, M.P., born 1912.  
 Ministers of State (Health and Social Security), David Hedley Ennals, M.P., born 1922; The Baroness Scrota, born 1919.

## PARLIAMENTARY UNDER SECRETARIES, ETC.

- Attorney-General, Rt. Hon. Sir Elwyn Jones, Q.C., M.P.  
 Solicitor-General, Sir Arthur Irvine, Q.C., M.P.  
 Lord Advocate, The Lord Wilson of Langside, P.C., Q.C.  
 Solicitor-General for Scotland, E. G. F. Stewart, M.C., Q.C.  
 Agriculture and Fisheries, J. Mackie, M.P.; Rt. Hon. J. H. Hoy, M.P.  
 Defence, D. A. L. Owen, M.P. (Royal Navy); H. J. Boyden, M.P. (Army); The Lord Winterbottom (R.A.F.).  
 Economic Affairs, A. J. Williams, M.P.  
 Education and Science, D. H. Howell, M.P.  
 Employment and Productivity, E. Fernyhough, M.P.; H. Walker, M.P.  
 Foreign and Commonwealth Affairs, M. A. Foley, M.P.; W. C. Whitlock, M.P.  
 Health and Social Security, J. W. Snow, M.P.; N. Pentland, M.P.  
 Home, D. E. Morgan, M.P.; M. Rees, M.P.  
 Housing and Local Govt., J. E. MacColl, M.P.; The Lord Kennet; A. M. Skeffington, M.P.  
 Overseas Development, A. E. Oram, M.P.  
 Post Office (Asst. P.M.G.), J. Slater, B.E.M., M.P.  
 Power, R. Freeson, M.P.  
 Public Building and Works, C. W. Loughlin, M.P.  
 Scottish Office, The Lord Hughes, C.B.E.; B. Millan, M.P.; N. F. Buchan, M.P.  
 Technology, Dr. J. W. Bray, M.P.; G. T. Fowler, M.P.  
 Trade, Mrs. G. P. Dunwoody, M.P.  
 Transport, N. G. Carmichael, M.P.; R. C. Brown, M.P.  
 Treasury, Rt. Hon. R. J. Mellish, M.P. (Deputy Leader of the House of Commons)  
 (do.) Financial Secretary, Rt. Hon. N. H. Lever, M.P.  
 Junior Lords, B. K. O'Malley, M.P.; E. A. Fitch, M.P.; J. Harper, M.P.; J. McCann, C.B.E., M.P.; W. Harrison, M.P.  
 Asst. Whips, N. McBride, M.P.; E. Armstrong, M.P.; E. G. Perry, M.P.; J. D. Concannon, M.P.; M. S. Miller, M.P.  
 Welsh Office, I. Davies, M.P.

## MINISTRIES SINCE 1937

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a Speaker's Conference of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the Parliament (Qualification of Women) Act con-

taining the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. At the General Election of 1966, 26 women members (19 Labour and 7 Conservatives) were returned. Since that date one woman member (Dame Megan Lloyd George) has died, and two new women members (Mrs. Winifred Ewing and Miss Bernadette Devlin) have been elected; the total therefore is now 27.

VOTES CAST AT THE GENERAL ELECTIONS, 1950-66  
AND AT BY-ELECTIONS SINCE 1951

#### POLLING FIGURES AND FORFEITED DEPOSITS

The total electorate at the 1966 general election was 35,964,684; votes cast were 27,263,606.

Candidates at parliamentary elections who fail to obtain more than one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge.

Deposits forfeited at the 1966 election totalled 237, 50 more than in 1964. Deposits were lost by 104 Liberal candidates (51 more than in 1964), 9 Conservatives, 3 Labour, 57 Communists, 18 Plaid Cymru, 10 Scottish Nationalists and 36 others. In 1950 the record number of 443 deposits was lost.

#### SMALL MAJORITIES

Sir H. Nicholls (C.), Peterborough . . . . .	3
N. R. Wylie (C.), Edinburgh, Pentlands . . . . .	44

## PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1968-69

Parliament was recalled for a two-day emergency sitting during the Summer recess of 1968, in consequence of the entry of Soviet and allied forces into Czechoslovakia and the continuing civil war in Nigeria. At its meeting on Aug. 26 the Prime Minister said that if Parliament could do no more than register ■ protest against the Soviet action, that in itself was important, and was their duty. Mr. Heath said that sanctions against the Soviet Union would be unwise, and urged reference to the United Nations. Mr. Stewart, Foreign Secretary, said he had cancelled projected visits to Hungary and Bulgaria, and had arranged for cancellation of an advertised visit of the Red Army Choir. Before the House adjourned, it was agreed to sit next day from 11 a.m. to 4 p.m. to debate the Nigerian situation. In the House of Lords many peers expressed abhorrence of the Soviet action. The Earl of Avon urged the need for a new look at western defences, and Lord Harlech foresaw an increasing threat to Berlin. The debate on Nigeria (Aug. 27) in both Houses was mainly directed to the reports of the frustration of efforts to succour the civilian population of Biafra, and the Government's continuing policy of supplying arms to the Federal side but denying them to the Biafran side. This policy was defended, against criticism from all parties, by Mr. Thomson and his under-secretary, Mr. Whitlock. When it became evident that the government intended to "talk out" the debate and avoid ■ division there was rising indignation on the floor of the House, and noisy protests from the public galleries which led to the ejection of some spectators. Amid noisy interruptions, Mr. Whitlock continued speaking until four o'clock, when the Speaker adjourned the sitting without question put. In the other House the debate continued almost an hour longer, with the Government's arms policy being both criticized and supported from all quarters. Lady Asquith of Yarnbury described the policy as "inhuman" but Lord Shepherd, for the Government, said their policy, "though distasteful, was the only one that could be pursued".

The House of Commons, resuming its normal sittings after the recess on Oct. 14, debated ■ White Paper on electoral reform which involved a proposal to lower the voting age to 18. The House of Lords, returning a week earlier, took two days to complete the report stage of the long and complicated Transport Bill, during which several amendments were carried against the Government. In one division there was ■ tie (49-49) and the Lord Chancellor declared the amendment disagreed to. On another amendment, aimed at confirming the public right to navigate on all waterways, Lord Gardiner said there was such a right on rivers, but no one knew what the law was about canals because it was contained in about 600 old Acts of Parliament, which nearly all differed. One object of this Bill was to sweep them all away. The Lords gave the Bill its third reading on Oct. 14. When the Lords' amendments were considered in the other House, Mr. Marsh said (Oct. 16) that the Lords had made 258 amendments to the Bill, and the Government objected to only 20 of them. Mr. Edward Taylor (C) remarked that altogether 750 amendments to the Bill had been accepted, proving it was badly drafted. Further talks on the Rhodesian situation which had taken place between Mr. Wilson and Mr. Ian Smith on board H.M.S. *Fearless* off Gibraltar during the recess were the subject of a statement by the Prime Minister on Oct. 15 and a full debate on Oct. 22. A Labour back-bench motion opposing the Government's Rhodesian policy was defeated by 177-56, the Conservative opposition abstaining.

**CHANGES IN GOVERNMENT ORGANIZATION.**—On Oct. 16 Mr. Wilson announced three changes in government organization: the merger of the Foreign and the Commonwealth offices to form the Foreign and Commonwealth Affairs Office, with effect from the next day; the merger of the Ministries of Health and Social Security into ■ Department of Social Services; and creation of a Civil Service Department by the transfer of some functions from the Treasury—these two changes to become effective from Nov. 1. The Prime Minister would be the Minister for the Civil Service, with the Paymaster General responsible under him for the day-to-day work. These changes involved ■ series

of ministerial moves announced by Mr. Wilson the next day.

On Oct. 23 the House of Commons agreed to ■ Lords' amendment to the Justices of the Peace Bill which would allow aldermen of the City of London to continue to sit as *ex officio* justices; the Bill abolished all other *ex officio* magistracies. This Bill and the Transport Bill, with 12 other Acts, received the Royal Assent on Oct. 25, on which date Parliament was prorogued.

**THE NEW SESSION.**—The Queen, opening the new Session in State on Oct. 30, said the Government would press forward their policies for strengthening the economy so as to achieve a continuing and substantial balance of payment surplus, and would work closely with other governments to maintain the smooth working of the international monetary system. At home there would be policies to make fuller use of regional resources, legislation to convert the Post Office into ■ public corporation, and measures to integrate London Transport under local government control, to establish ■ central system of vehicle registration and licensing, to help develop tourism, and to effect the change to decimal currency. There would be Bills to help the fishing and the shipping industries, proposals for action on the report of the Royal Commission on trade unions and employers' associations, and legislation on the composition and powers of the House of Lords. The Government would begin talks on a commission on the constitution, and would bring in Bills to reform the electoral law and to lower the age of majority and of voting to 18. An earnings-related national insurance scheme, improvement of pensions, health and welfare services, Scottish town planning and education, further legal reforms, and an increase in government expenditure on the National Theatre were also referred to in the Speech.

In the House of Lords the address in reply was moved by Lord Delacourt-Smith, who said that in the aftermath of Empire Britain's role should be to aim at ■ society based on the dignity and development of the individual. Seconding, Lord Sainsbury said that most people would agree that some reform of their House was desirable.

In the Commons, the motion for an address in reply to the Speech was briefly moved by Mr. Donald Chapman and seconded by Mr. A. R. Probert. Opening the debate, Mr. Heath said the year since the last Queen's Speech had been one of disaster for Britain: a year of the toughest Budget ever imposed in peace-time, a year in which two senior members of the Cabinet resigned "because they could not stand the Prime Minister any longer". The Speech contained no fresh incentives. Mr. Wilson, replying, said the theme of the Speech was continuing action to speed the long overdue modernization of Britain, and in the fore-

front he put the reform of the Parliamentary system. The proposals for relating insurance benefits and pensions to earnings would (he said) "make the session historic in social welfare". The debates continued on three further days in the House of Lords' and four in the Commons, ranging over a variety of subjects. In the Commons an Opposition motion critical of the newly-introduced two-tier postal system was stoutly fought by Mr. Stonehouse, who was the third Postmaster General to have held that office within the space of 12 months, and the amendment was rejected by 302-242. Another Opposition motion, regretting that the Government's policies "had little relevance to its declared intention of strengthening the economy" introduced a long and at times heated debate, which ended with the rejection of the motion by 310-247. The motions for an address were agreed to in the House of Lords on Nov. 6 and in the House of Commons on Nov. 5.

**LORDS REFORM.**—A debate on a motion to approve proposals for the reform of the House of Lords was opened in that House on Nov. 19 and occupied three days, on two of which the House sat until after midnight. The Lord Chancellor said they would be "getting rid of enormous powers we cannot use and substituting for them sensible powers which we intend to use". Earl Jellicoe (C), expressing qualified approval, said any reform should not come into effect until the end of the present Parliament to which members of the existing House had received their writs of summons. Lord Wade (L) saw no point in delay, but thought it would be foolish to dispense forthwith with hereditary peers. The Bishop of Chester thought it reasonable that in a House of reduced size the number of bishops should be reduced as proposed, from 26 to 16. The strong dissenters to the White Paper were headed by the Marquess of Salisbury, who said that without some hereditary peers there would be no young members of the House, which would tend to become "an armchair for the old". Lord Silkin (Lab.) suggested that the Commons were much more "in need of a face-lift" than the Lords. Lord Conesford (C) objected that the proposed "two-tier" system—some peers to speak but not vote—would introduce two classes of members. And Lady Asquith of Yarnbury said no legislative chamber should have first class and second class citizens. Everything now seemed to be so labelled, from peers to postage stamps. She would cast her vote in the last ditch against becoming a fourpenny stamp. The motion approving the proposals set out in the White Paper was carried by 251 votes to 56. A similar motion introduced in the House of Commons by Mr. Crossman on Nov. 19 led to a two-day debate and was agreed to after an amendment, moved by Mr. W. Hamilton, to reject the White Paper had been defeated by 270-159.

The Government's proposals were embodied in the Parliament (No. 2) Bill which was introduced in the House of Commons on Dec. 19. Mr. Wilson, moving the second reading on Feb. 3, said it was a major constitutional measure which would implement the White Paper's proposals. It did not affect the Royal Prerogative in the creation of peers, or the judicial function of the House of Lords. It would exclude from the reformed House all hereditary peers who would succeed in the future, but existing members would attend for the rest of their lives. The reformed House would be divided into a two-tier structure of voting and non-voting peers. Voting peers would have to attend at least one-third of the sittings. No created peer over 72 years of age would be allowed to vote,

except Ministers and holders of high judicial office. The chamber's delaying power would be reduced to six months. At first there would be no salary for peers, other than the present tax-free attendance expenses, but the form of payment could be considered later. He added that the Government still felt it would be best to bring the reforms into effect during the present Parliament.

**BILL DROPPED.**—For the Opposition Mr. Maudling said they were opposed to the introduction of the reforms during the present Parliament. He was disturbed that Government spokesmen had assumed that, if the revised upper chamber voted against the Government more than once, the whole situation would be re-examined. "It would be a complete swindle" if the new House used its powers and then the Government brought in a further reform curbing those powers. Mr. Callaghan thought the reformed chamber would be chary of using its powers, because no government would tolerate an unelected chamber consistently overturning their legislation. Amid Opposition protests Mr. Maudling said that was a serious statement. If the new chamber was entitled to use its powers only on sufferance of the majority in the House of Commons, they would have to look at the proposals again. The Government view was muddled. Mr. M. Foot (Lab) said the proposed new chamber was an absurd institution proposed by collusion between the two front benches, and it would be a laughing-stock. Mr. Thorpe (L), describing the two-tier system as "a humane killer", said the Bill was a temporary measure, because a change to a federal system of government was bound to come. Sir Alec Douglas-Home (formerly a member of the House of Lords) said the Opposition would certainly vote against the Bill if the reforms were to be brought in before a general election; but he thought the time for reform had come and he would vote for the second reading. After further debate the Bill was read the second time by 285-135 and was committed to a committee of the whole House, in which it had a long and stormy passage.

It occupied the House for more than 80 hours on eleven separate days, including four morning sittings, spread over three months, during which only the preamble and the first five clauses were debated. Meanwhile, Parliament dealt with many other matters, but important Government business was piling up, including especially the Industrial Relations Bill and the Merchant Shipping Bill, by which the Government set great store. At last the Government decided to drop the Parliament (No. 2) Bill, and Mr. Wilson, announcing this decision on April 17, said it was now clear that the legislative priorities governing the Parliamentary time-table must be recast. The Government, he said, had decided not to proceed further with the Bill during the rest of the session. The announcement was received with cheers; but there were expressions of regret in the House of Lords, where the Prime Minister's statement was repeated by Lord Shackleton. Lord Carrington (C) said he was disappointed and sad because an opportunity to reform their House had been wasted; and Lord Byers (L) said it was a bad and weak decision by the Government. So ended the first sustained effort to reform Parliament for nearly 60 years.

**ROAD TAX RUMOUR.**—A curious interruption of the flow of legislation arose out of a rumour, first circulating outside Parliament, that the Chancellor of the Exchequer intended in the Budget to increase the road licence duty on private cars from £25 to £35. The matter came before the House of Commons on Feb. 3 after a Member of the

House, Sir Gerald Nabarro, was reported in the Press to have said that he had seen ■ new licence application form bearing the figure £35. Mr. Dickens (*Lab*) asked if the Chancellor would institute an inquiry into this "disclosure of secret information". Mr. Jenkins replied that the allegations made by Sir G. Nabarro included charges of grave misconduct against officials and commercial printers employed by the Government. He (the Chancellor) assured the House that the story was without foundation; that whenever Budget changes were made no printing of new rates was undertaken until within four weeks of Budget Day; and that no such printing was carried out by private printers. During the sometimes warm discussion that followed, Mr. Jenkins added that the Minister of Transport had told him that the licences never carried any sum printed on them. Responding to further requests for an inquiry, the Prime Minister announced next day that a Select Committee of the House would be set up to investigate the allegations that had been made. Sir Gerald, welcoming this announcement, said he would require that the proceedings be held in public, but Mr. Wilson said that would be for the committee to decide.

There was ■ further debate on Feb. 10, when the Leader of the House moved, although with expressed reluctance, that the Select Committee of 11 Members be appointed. After more debate Mr. Peart, having vainly urged Sir Gerald to accept fully the Chancellor's earlier statement and to withdraw his allegation of a Budget leak, put the motion, which was carried by 221-65. The Select Committee, with Mr. G. R. Strauss ■ chairman, held nine meetings and questioned 12 witnesses, including Sir G. Nabarro and Treasury, Transport and Stationery Office officials. In its report issued on Mar. 24, the Committee affirmed that there had been no foundation for Sir Gerald's allegations. No officials had given him any information, no licence discs showing ■ new duty rate had been printed, no authentic licence forms with the figure of £35 had been printed—"and any forms which Sir Gerald may have seen were forgeries"—and there was no substance in the allegation that type for the printing of forms had been taken apart on Treasury instructions.

**TAXATION CHANGES.**—Continuing turbulence in the international money and gold markets, fluctuating exchange rates, devaluation rumours abroad, and mounting imports were among the considerations that led the Government to take further fiscal action early in the new session. Mr. Jenkins, presenting what some called ■ "mini-Budget" on Nov. 22, said the policies followed since devaluation were showing results, especially in exports, but movement into ■ balance of payments surplus was too slow. This was because of continuing high consumer spending, and rapid build-up of stocks. We needed to curb demand, particularly for imports. He was therefore taking action of two kinds: in tax and in credit. By using the Customs and Excise regulator, the Treasury had made an order putting an immediate surcharge of 10 per cent. on the duties on beer, wines, spirits, petrol, pure methylated spirits, and all rates of purchase tax. This would raise the price of beer by 1d. a pint, whisky by 4s. ■ bottle, petrol by 5d. ■ gallon, and up to 5d. on 20 cigarettes. The four rates of purchase tax would become 13½, 22, 36½, and 55 per cent. The surcharge would increase the revenue by about £250,000,000 in ■ full year. The additional duty on petrol and derv would be refunded to bus operators.

For a further tightening on credit he would look

to the banks, which would be asked to bring their lending in the private and overseas sectors by March 1969 to below ■ ceiling of 98 per cent. of the level of Nov. 1967, except for export and ship-building credits. The reduction in lending should total about £100,000,000. There would also be a scheme of import deposits. Importers would be required to pay to the Customs ■ deposit of 50 per cent. of the value of all goods imported before the goods would be released, the deposits to be repayable to the importer 180 days after the date of deposit. Excluded from the scheme would be basic food and feeding stuffs, fuel, raw materials, and certain imports from developing countries. The scheme, subject to the passing of a Ways and Means order, would become effective on Nov. 27; and the necessary Bill would be in force for one year or less, and would provide for the rate of deposit to be reduced, but not increased, by order. He estimated that import deposits would involve payments of about £100,000,000 a month in each of the next six months, after which the total would not rise further. The banks would have to provide any credits required within the 98 per cent. ceiling.

During the ensuing debate Mr. Maudling said the new restrictions would be ■ "immense shock" to all who had been assured that no new credit freeze was on the way. Mr. Thorpe questioned the effect of taking £350,000,000 out of the economy on employment, the cost of living and house purchase. Mr. Jenkins replied that the immediate effect of the regulator on the cost of living would be a rise of about one per cent., unemployment had been falling, and there were signs of improvement in the economy.

A debate on economic affairs was initiated by the Opposition on Nov. 25 during which the Chancellor's dealings with the E.F.T.A. countries in relation to the imports deposits scheme were warmly criticized and firmly defended. The sitting was continued on the following morning, when the resolution implementing the scheme was agreed to, and the Customs (Import Duties) Bill was introduced. Answering a question on that day, Mr. Jenkins said the total amount of our overseas debts incurred since Oct. 1964 was £1,923,000,000. Of this £585,000,000 had been repaid, and the amount outstanding was £1,452,000,000. The Bill received its second reading on November 28 after an Opposition amendment for rejection had been defeated 304-243, and passed its remaining stages on Dec. 4. The Bill passed through all stages in the House of Lords and received the Royal Assent next day.

**MORE IN THE BUDGET.**—Further taxation was imposed by Mr. Jenkins in his second annual Budget, which he introduced on April 15, totalling this time about £340,000,000. While making ■ number of minor tax concessions helpful to the smaller taxpayer, it included several proposals for heavier taxation in various fields. These ranged from an increase of Corporation tax to 45 per cent., yielding £120,000,000 in a full year, and ■ rise of 28 per cent. in Selective Employment Tax to produce £130,000,000 more, to the imposition of Purchase Tax on potato crisps and salted peanuts, calculated to bring in £22,000,000. In his opening survey, Mr. Jenkins said that in the past year our share of world markets had declined only slightly. Consumption by public authorities declined by 0.4 per cent. instead of rising as forecast by 3 per cent.; but private consumption went up by 1.2 per cent. compared with a forecast fall of 1.9 per cent. Further measures to restrain consumption were therefore necessary. Imports had risen in volume by ■ per cent. against ■ forecast rise of only 0.5 per

cent., which meant that the post-devaluation tendency to import had been underestimated. The imports deposits scheme and credit tightening measures of last November had had little effect on the monetary out-turn for the year, and during 1968 the money supply rose by £986,000,000 (6.5 per cent.) despite an adverse balance of payments of nearly £460,000,000. They could not allow credit to be supplied on such a scale in the coming year, and he would have to consider early action to reinforce the pressure on the banks. Prospects for the gilt-edged market were much better, primarily because the public sector would be repaying debt, so he proposed immediately to relieve disposals of Government and public corporation marketable securities of payment of long-term capital gains tax or corporation tax.

On income tax and family allowances the Chancellor said the £36 reduction in allowances per child which applied last year would become £42 this year. In view of the intention to reduce the age of majority to 18, the age limit for aggregation of children's unearned income with their parents' income would be reduced from 21 to 18, except for covenants, settlements or gifts by parents for their children's benefit. Certain other items would be excluded from aggregation.

CLOSING LOOPHOLES.—He would bring artists and sculptors into line with authors by enabling them to spread the tax on the payment received for completed work over the period during which it was being made. Mr. Jenkins said the Finance Bill would contain provisions to counter tax avoidance in regard to: profits arising from land dealings; the practice prevalent, especially in the entertainment world, of selling future income for a capital sum; and the purchase of the shares of a company to get the benefit of accumulated trading losses. He also proposed to raise from April 19 the rate of interest charged on unpaid taxes from 4 per cent. to 6 per cent.; to limit to business use the farmer's allowance on farmhouse expenses; and to counter "the manoeuvres of some wealthy individuals" who sent their assets abroad (to "tax havens") though retaining control of the money here. He would increase the levy on the independent television companies' advertising revenues from July to yield about £3,000,000 more in a full year. Next, the Chancellor announced that from November 1969, the weekly basic rates of retirement pension would be increased from 90s. to £5 for a single person, and from £7 6s. to £8 2s. for a married couple. These changes would restore the value of the pension to a level about 20 per cent. higher in real terms than in 1964, at a cost to National Insurance Funds of a further £250,000,000 in a full year. In addition, account must be taken of the imbalance of the fund and the continuing increase in the number of pensioners. The burden of the higher contributions would be shared among the contributors "as fairly as possible", but he refused, despite Opposition protests, to say how much they would be. After reaffirming the principle of the much criticized Betterment Levy, Mr. Jenkins said he would exempt from it cases where the market value of the land was under £1,500. But as owner-occupiers were exempt many small cases would escape altogether. With other minor changes, including allowance of professional fees as a deduction, these measures would cost about £3,500,000.

ESTATE DUTY.—For his major taxation proposals the Chancellor said he had chosen first to reform Estate Duty. The existing charge on settled property would be replaced by a charge levied on the death of anyone who, in the seven years before

the death, was entitled to a beneficial interest in the property. The present freedom from duty on the death of a beneficiary under a discretionary trust would end, and there would be a charge on the trust capital on the death of any beneficiary. These changes, affecting existing settlements but not income from a trust which arose more than six years ago, would yield about £10,000,000. To lighten the burden of duty in the smaller cases, the exemption level would be lifted from £5,000 to £10,000, taking out about 40,000 estates (55 per cent. of the total) a year. In a full year this concession would cost about £8,000,000. The scales of duty would be changed from the present "slab" system (a rate on the whole estate depending on the total value) to a "slice" system (increasing rates on successive slices of the estate). There would also be a change in the method of levying estate duty on works of art, to make less worth while "the pursuit of art for loophole's sake".

Mr. Jenkins said he would not increase the betting duty, but he would introduce a supplementary duty—an annual licence duty of three times the ratable value of all off-course betting premises; yield £7,000,000 a year. He would replace the existing licence duty on bingo, which was unfair, by a duty of 2½ per cent. of the stakes, with exemption for small-scale bingo. The larger casinos (exceeding £1,500 ratable value) would have their rates of duty raised by one-third from Oct. 1. Licence duty on sixpenny gaming machines would go up from £75 to £100 for the first and to £300 for each additional machine in the same club. Those in amusement arcades and elsewhere, offering prizes, would be taxed at £25 for the first and £150 for each other machine on the same site. Rates for machines, gaming and amusement, charging 3d. or less, would be half the new rates; all the increases would operate from Oct. 1; yielding £4,000,000 more a year.

WINE AND NUTS.—The regulator surcharges imposed in November on tobacco, spirits and beer duties would be incorporated into the standard rates, and he imposed no additional levy. But wine consumption had grown remarkably—imports had doubled since 1960—and he would replace the surcharge from today by an all-round increase of 9s. a gallon, adding 1s. 1d. a bottle to table wines and 9d. a bottle to heavy wines (e.g. sherry) and yielding about £10,000,000. On Purchase Tax, he would not alter the four rates, although the surcharge (incorporated in the standard rates) left them with awkward fractions for two rates. But to round these down would cost £23,000,000 of revenue, and he rejected the idea of rounding upward. So he had decided to broaden the base of the tax by applying it to certain goods now untaxed which were analogous to others now taxed. Therefore purchase tax at 13½ per cent. would henceforth apply to plastic wall-coverings, household textiles and cloth, knitting wool, sewing and dressmaking requisites, and paper handkerchiefs and tableware. To confectionary, soft drinks and ice cream, taxed at 22 per cent. he would add salted and roasted nuts, potato crisps, and also prepared pet foods—"widely advertised, no doubt appreciated, but not an essential means of feeding a pet". These measures would operate from May 27 and yield £52,000,000 in a full year.

He would not alter the vehicle excise duties, said Mr. Jenkins, adding, in reference to the "leak" allegations rejected by the Select Committee, that he knew then that no such leak had occurred. Almost the first firm decision he took about the Budget was not to increase car duties and he communicated his decision to the Treasury in a minute

dated Dec. 31, 1968 (Sir G. Nabarro's allegations were first raised in Parliament on Feb. 3, 1969). But he intended to raise at once the duty on petrol and heavy oil used in road vehicles from the present 4s. 3<sup>7</sup>/<sub>8</sub>d. a gallon including the surcharge to 4s. 6d. He hoped garages which had rounded up the previous figure to 4s. 4d. would round down this increase of 2<sup>3</sup>/<sub>8</sub>d. to 2d. The yield would be an added £45,000,000. Bus operators would be relieved of paying the increase. The present level of duty and surcharge on heavy oils not used in vehicles of 2<sup>4</sup>/<sub>8</sub>d. a gallon would be reduced "with a view to decimalization" to 2<sup>4</sup>/<sub>8</sub>d. After announcing the corporation tax increase to 45 per cent., he said there should be special consideration for close companies, and in future their directors' salaries would not attract corporation tax; cost, £20,000,000.

But he still needed to find £100,000,000 more and there were only three possible sources. He rejected increasing income tax, and indirect taxation, and preferred a further tax on services. He proposed to raise the rate of Selective Employment Tax for adult male employees from 37s. 6d. to 48s. a week (28 per cent. increase) from July 7, and the other rates in proportion. The effect on the retail price index would be about one-third of the effect of raising the equivalent revenue from more purchase tax or excise duties. But he would try to deal with borderline cases. Milk processing, for example, was now classified as a manufacturing activity; and scrap metal and waste paper processors would be relieved of the tax.

**CONTRACTUAL SAVINGS.**—Turning to savings, the Chancellor announced that the limit on holdings of current issue national savings certificates would be raised from £1,000 to £1,500, and on post office and trustee savings banks deposits from £5,000 to £10,000. New issue British Savings Bonds would be available from April 28 carrying 7 per cent. interest (instead of 6 per cent.) and 2 per cent. tax-free maturity bonus. He went on to introduce a contractual savings scheme—for which he said he was glad to appropriate (from the Conservatives) the title "Save As You Earn." Everyone over 16 would be able to contract to save regular monthly amounts up to a maximum of £10 a month over a 5-year period. The reward for a completed 5-year "contract" would be a terminal tax-free bonus of £12 for every £60 saved. If the saver left his savings in for two more years without adding to them, the bonus would be £24. The 5-year bonus was comparable to a grossed-up rate of return of 12 per cent. a year. Withdrawals after one year but before five years would be made plus 2½ per cent. tax-free interest. But it was also necessary, Mr. Jenkins continued, to discourage people from spending money they had not earned or even did not possess, so in future interest on bank overdrafts and comparable personal borrowings would be disallowed as a charge against income tax. Interest which was a proper business expense would still qualify for relief, as would the owner-occupier's mortgage and interest on borrowings for purchase or improvement of land or buildings; and existing loans would continue to qualify for relief until April 5, 1970. Tax yield here would be £25,000,000.

Summing up, the Chancellor said the increase in revenue provided for in his Budget was considerable: about £340,000,000 in a full year, £270,000,000 in 1969-70. This should make the central government a net repayer of debt in this fiscal year to the extent of £807,000,000. But that result, though beneficial, was incidental. The main purpose of his Budget was to improve the

balance of payments, compatibly with economic growth and social justice. It continued the squeeze on consumption and the shift of resources into exports, and laid its burdens fairly, giving concessions to the less well-off while not impairing incentives. It would raise the cost of living by about 0.5 per cent., encourage saving and discourage spending, and thereby it offered the prospect of lower taxation in the future.

**PENSIONS COST.**—Mr. Heath welcomed some of the changes announced, particularly the new savings scheme for which Mr. Jenkins had even taken the title the Opposition had proposed. But how could he come to the House and make the pensions announcement, and be unable to say what was involved in contributions? Again the Government had adopted the attitude of "cheer now and pay later". He strongly attacked the Chancellor for not having told "the real story" of 1968; economically the worst year in Britain's history, with highest unemployment since 1940; and higher bank rate for the longest time, the largest visible trade deficit, the largest overseas debt—now estimated at £3,700,000,000—and the highest rise in taxation, in history. When Mr. Heath sat down his supporters gave him a standing ovation. Mr. Pavitt (*Lab*) said the further increase in SET would cripple the whole of the distributive and service industries; and in the debate, which continued for three more days, there were some angry exchanges, many of them related to the cost of the increased retirement pensions. Mr. Peart had said he thought a statement should be made on this, but on the last day (*April 22*) Mr. Diamond raised a fresh storm with his admission that when the Chancellor announced the pensions increases no details had been worked out on costs. Mr. Maudling roundly condemned this as "a swindle". But Mr. Jenkins, winding up the debate, stone-walled all questions. The Opposition forced five divisions at the end of the debate. On the first four (dealing with the National Debt, petrol, purchase tax and corporation tax) the Government had majorities of 69, 66, 66, and 67. But their majority fell to 28 on SET, several Labour members remaining in their seats during the division. The Finance Bill was then introduced and read the first time.

**FINANCE BILL.**—Moving the 2nd reading (of the Finance Bill) on *May 6* Mr. Diamond defended the Selective Employment Tax as being cheaper than other taxes to collect, and as making less impact on the cost of living. It produced over £600m. a year, and if it were abolished the alternative would be either to increase Income Tax to 10s. in the £ or to increase Purchase Tax by more than 50 per cent. On the Budget proposals to disallow tax relief on interest on loans he said there would still be relief for house purchase and improvement, for purchase of a caravan on which rates were paid, and on bridging loans. Mr. Macleod said that, rather than alter an established principle of income tax by disallowing relief on loan interest, the Conservatives would prefer to reduce the level of personal direct taxation. Mr. Grimond said it would be hard to find two taxes more punishing to many of the development areas than the increases in SET and petrol tax; and Mr. Haseldine (*Lab*) said that in the coming year the housewife would have to pay through SET £60m. more to get the same sort of goods and services as now. The Bill was read a 2nd time by 298-249.

During the following weeks the Bill was closely debated and a number of concessions were made. On the report stage Mr. Diamond moved new clauses and other amendments to meet objections

to the proposals concerning taxation of interest, overdrafts, estate duty and the difficulties of borrowings by partnerships, close companies and sole traders. He said the Government was proposing to move into a new system under which interest on a private loan or overdraft was to be treated (with certain exceptions) as part of one's personal and disposable income, as distinguished from a business expense incurred in running a business.

Another Government amendment extended to April 5, 1975 (instead of 1970) the period during which interest paid on a loan incurred before Budget Day 1969 should continue to be allowable for tax relief. But Opposition amendments to exempt from stamp duty gifts under settlement of works of art, books and scientific collections to museums and universities, and property purchases by charities, were defeated. After further debate on SET, during which the Chancellor said he had not yet heard of a better alternative tax, the Government's majority on the motion that the tax clause stand part of the Bill fell to 29 (263-234), showing that about 30 Labour members had abstained. Among the Labour critics of SET were Sir Dingle Foot, who said the country had never experienced such an unpopular tax; Mr. Pavitt, who described it as "the housewife's tax" and the Government's action as nonsense; and Mr. W. T. Williams, chairman of the Co-operative group, who said the tax increased the cost of living by raising the cost of essential foods and fuels. Mr. Lever referred to suggestions in the Press that the Spastics Society, a charity, might have to pay up to £900,000 in tax as a result of a legal ruling. He said the litigation had in fact been between the Customs and a firm of commercial pool promoters, not the Society itself, which was and would remain free from pool betting duty. He made a concession in favour of gaming machines by introducing a new "holiday season licence" valid from Mar. 1 to Oct. 31 for penny machines. The duty would be £15 for each machine, instead of the full £75 licence for the whole year. Just before the conclusion of the report stage the Chancellor moved an amendment to exclude milk roundsmen from SET by making milk processors and distributors eligible for refund of the tax. He said the concession would cost £7m. to £8m. a year. The Bill was read the third time on July 18, passed rapidly through the Lords, and received the Royal Assent on July 25.

**BOUNDARIES CONTROVERSY.**—A new clash between Commons and Lords occurred shortly before Parliament rose for the summer recess over a Bill to amend constituency boundaries. Difficulty and disagreement arose first in the Commons when the Home Secretary stated, on June 19, that the Boundary Commission had proposed to alter 410 of the existing 630 constituencies, and had to complete their report by November, 1969; and the Redcliffe-Maud Commission on local government reorganization had proposed sweeping changes in the local government boundaries (except in the Greater London area) which could not be implemented until much later. Mr. Callaghan said the Government were opposed to having one upheaval now in the parliamentary constituencies, and another in a few years' time when the local government boundaries had to be adjusted, since they thought it desirable that the constituency boundaries should coincide with those of the local government areas as far as possible. Therefore he would introduce immediately a Bill that would enable the Greater London Council elections in April, 1970, to be held for new single-member areas which would be continuous with the new parliamentary constituency areas. The Bill would also deal with four pairs of

abnormally large constituencies outside London, dividing each pair into three constituencies; and would divide the Cheadle constituency, which now had more than 100,000 voters, into two. Other constituencies would stay as they were until the local government reorganization had been completed. The Bill would require the Home Secretary to make a draft Order to reactivate the Boundary Commission for any part of the United Kingdom whenever the local reorganization would permit constituency changes to be made.

Mr. Callaghan's statement produced many protests from the Opposition benches, which were renewed on July 1 when he moved the 2nd reading of the House of Commons (Redistribution of Seats) (No. 2) Bill. Mr. Hogg said that the 1949 Act required the Home Secretary "as soon as may be" after the Boundary Commission had reported to lay that report before Parliament, with a draft Order giving effect to the recommendations. This had not been done, and the Government was breaking the law. In reply, Mr. Callaghan maintained that Parliament was free to act on Boundary Commissions' reports as it thought fit; and the Attorney General gave it as his opinion that the Home Secretary had not breached his statutory duties, and had properly exercised his constitutional power. During the committee stage the Government applied the closure to debate on the first Opposition amendment. When the debate had been adjourned and a Conservative member was about to speak, he was interrupted by the Leader of the House, who announced that the rest of the committee stage would be subjected to a timetable ("guillotine") motion. Considerable uproar was provoked by these steps, during which Mr. Rippon was seen to be tearing up Order papers and throwing the pieces at the Government front bench. The Bill was read the third time on July 14 by 287-234, and was introduced in the House of Lords the next day.

**PEERS USE POWERS.**—During the Bill's passage through the Commons Mr. Callaghan had said it would be a serious matter if the Tory majority in the Lords interfered with this Bill, which dealt with the constitution of the House of Commons; and Mr. Foot hinted that the Government might have to resort to "the Tory trick of 1711" and create peers to pass it through the Upper House. When the 2nd reading of the Bill was proposed in the Lords on July 17, Lord Carrington, the Opposition leader, said that if the House of Lords, being an unelected chamber, had no right to discuss legislation that concerned the electorate, and if their House was to be at the discretion of the temporary majority in the other House, they would have single-chamber government. What the Government were doing was of grave constitutional concern, and it was fortunate that a second chamber existed which still had some powers. The Bill was given a 2nd reading without a division. In the committee stage on July 21 Lord Brooke of Cumnor moved an amendment which, he said, would not destroy the Bill. But it would give the Government time to consider their policy further in view of "the almost universal criticism" and it also would indemnify the Home Secretary where he was thought by many to be in breach of the law. The Bill as it stood, Lord Brooke said, suspended action completely and for all time on the recommendations of Boundary Commissions; so he moved another amendment to make this suspension last only to the end of the present session.

For the Government, Lord Stonham disagreed about suspension "for all time" and declared that the Home Secretary needed no indemnity. After debate the first amendment was carried against the

Government by 270 votes to 96 (majority 174), and other amendments were agreed to without a division. The Bill passed its remaining stages, and was read the third time on July 23, but the amendments had not been considered by the Commons before Parliament rose for the summer recess. Although the peers' action, in effect, only gave the Bill's sponsors time for further consideration, it was described by one Labour M.P. as "impertinent" and by others as possibly leading to abolition of the Lords' delaying power—although any new Bill to effect this could equally be subject to about a year's delay. Some Government supporters also attributed the majority against the Government in the Lords to the votes of "backwoodsmen" peers—hereditary peers seldom seen in the House. But the division lists showed that if the votes of life peers and peers of first creation only were counted, the Opposition amendment would have been lost by no more than eight votes.

**AGE OF MAJORITY.**—A Bill to reduce the age of majority from 21 to 18 was introduced in the House of Lords and Lady Serota, moving the 2nd reading on Nov. 26, of the Family Law Reform Bill, said it would enable people from the age of 18 to hold property and make binding contracts. To keep responsibility from young people was more likely to make them irresponsible. Lord Denning, Master of the Rolls, thought the case for such a drastic change had not been backed by a solid demand from society, and he preferred the view of the General Council of the Bar, that all people under 21 should be treated as minors but relieved of such disabilities and deprived of such advantages as might be thought necessary at specified ages. The Lord Chancellor said there were 2,265,000 people between 18 and 21, nearly all of whom had been earning their own living for two or three years, many away from home. They should not all be judged by the behaviour of a minority of the 100,000 university students. The Bill was read a 2nd time. When it was considered in committee on Dec. 17 Lord Brooke of Cumnor moved an amendment to reduce the age for marriage (in England and Wales) without parental consent from 21 to 20 instead of 18 as in the Bill. He said there was deep division of view on this matter and little evidence that those most affected wanted the lower age. And in Scotland, where the age of consent was 16, there were markedly more divorces among people under 25. If 18 were accepted it would be impossible to change it later, but the choice of 20 would enable the point to be tested. After debate, the amendment was carried by 77 votes to 71. The Bill was read the 3rd time on Jan. 28.

But when it came before the Commons for 2nd reading on Feb. 17 the Attorney General said the Government intended to restore the age for marriage without parental consent to 18 because it was illogical to have this age differing from legal capacity in other respects. Mr. Abse (*Lab.*) described the Lords' amendment as "bizarre" because it would give people under 21 the right to buy a house or obtain a mortgage and yet refuse them the right to marry. Sir Elwyn Jones also said the Bill provided that an illegitimate child and his parents would have the same right to share in each other's estate in intestacy as if the child were legitimate; and illegitimate children would have the same right to apply to the courts for provision out of their parents' estate as if they were legitimate. Sir Peter Rawlinson objected that this could lead to blackmail, and spurious claims, unless a father had acknowledged or recorded an illegitimate child during his lifetime. And Sir Hugh Munro-Lucas-Tooth said it would make a man's widow

and legitimate children pay for his wild oats. The Bill was given a 2nd reading, and after further debate and amendment it was read the 3rd time on July 23 and received the Royal Assent on July 25.

**INDUSTRIAL RELATIONS.**—The appearance of the report of the Royal Commission on Trade Unions and Employers' Associations—the Donovan Commission—and the publication of the Government's White Paper "In Place of Strife" provided material for debates in both Houses, and ultimately the postponement of promised legislation to deal with unofficial strikes. In the Commons on Mar. 3 Mrs. Castle, proposing a motion to approve the White Paper, said that day marked the start of work by the Commission for Industrial Relations, which had been set up with the approval of the Trades Union Congress and the Confederation of British Industry. Its job was to promote clear, precise and comprehensive agreements. But nothing in the White Paper weakened the unions' bargaining power, of which the right to strike was an integral part. Most strikes were unofficial, and the Government agreed with the Donovan report that the right way to deal with them was to remove their causes and provide proper disputes procedures. She explained and defended the proposals in the White Paper for a 28-day conciliation pause before any strike began, and for penal clauses proposing fines for non-compliance with an order not to strike, with provision for "attachment" of wages to secure payment of penalties. It was curious, she thought, that the attachment proposal had caused most heart burning among Labour MPs, because the Government's intention in proposing it was to ensure that no trade unionist was imprisoned for non-payment. It was the method now used for maintenance orders and the collection of criminal fines, and in Scotland for collecting civil debts.

For the Opposition, Mr. Carr welcomed the Government's acceptance of the need for reform of industrial relations and for a new Bill, but disagreed with much of the White Paper. They were convinced that, while voluntary action to solve problems of human relations was essential, it would succeed only when the Government provided a new legal framework within which industrial relations were conducted. The main purpose must be to make unions stronger, not weaker, to reinforce their official leaderships' authority over unofficial elements. Legally binding agreements were not enough on their own, but they formed a vital element. The Opposition supported the Government on ballots before strikes, but they should also consider ballots to end strikes, on occasions. Mr. Pannell (*Lab.*) said many people supporting the Government would object to the attachment orders; such legislation would not work. Mr. Orme (*Lab.*) rejected the philosophy of intervention, and said the major unions had already come out against the proposals. Dr. Winstanley (*L.*) said agreements should be brought within the scope of the restrictive trade practices legislation. The Government motion was carried 224-62.

**DOUBTS ON SANCTIONS.**—Lord Donovan, speaking in a similar debate on Mar. 18 which kept the House of Lords sitting until after midnight, said his Commission did not doubt the propriety of the White Paper's conciliation proposal—that unofficial strikers should be ordered back to work for 28 days—but he doubted its efficacy. How did one make, say, 7,000 dockers on unofficial strike return to work if they did not want to? The White Paper's answer was that the industrial board would inflict fines, presumably after hearing the defence; but a man might say he was not striking, but was ill. If fines were to be deducted from

pay (the "attachment" procedure) was an employer to be under compulsion to deduct them. Lord Donovan saw further difficulties in the proposal for compulsory ballots. He regretted the White Paper did not include his Commission's recommendation that unions should receive corporate status. Lord Drumalbyn said the withdrawal of labour when the employer and the public needed it most should be heavily penalized. Lord Wright of Ashton-under-Lyne, a former T.U.C. president, said where workers and unions were convinced there was injustice, no sanctions and penalties short of shooting would be any use. But they had to find a way to curb wildcat strikes, and he was surprised that some union officials were apparently fighting to preserve their members' right to engage in them. Another former president of the T.U.C., Lord Geddes of Epsom, said the use of strikes as part of negotiations would eventually destroy the consultative machine. He believed the avowed intention of the Communists to take over the trade union movement was succeeding. Lord Milford (*Comm.*) said the proposed cooling-off period seemed to favour the employers, and a ballot was a cumbersome business.

The Lords' debate was concluded without a division. But mounting controversy inside and outside Parliament during the following weeks, and continuing talks between Government and union leaders, culminated in a statement by the Prime Minister in the Commons on June 19 in which he announced that no Industrial Relations Bill would be introduced in the current session. Mr. Wilson said that after discussions with the T.U.C. General Council on ways of dealing with unconstitutional strikes, the council had agreed to "a solemn and binding undertaking" which set out the lines on which the Council would intervene in serious stoppages. There were cheers from the Labour benches when he said that in these circumstances the Government had decided not to proceed with proposals for legislation involving financial penalties for those involved in inter-union and unconstitutional disputes.

Pressed by Mr. Heath to say what would happen when unofficial strikers ignored their union leaders' advice and went on striking, Mr. Wilson said the T.U.C. would place an obligation on the unions concerned to get the men back to work, and it would then be the duty of the union to do this, including, where appropriate, use of the union's rule book. There was now an obligation to use the rules, including fines, suspension, and expulsion. He added that he accepted the sincerity and determination of the T.U.C. General Council.

The Prime Minister's statement was repeated by Lord Shackleton in the House of Lords the same day. Lord Carrington, the Conservative leader, commented that no one would be surprised that the Government had not stood firm; their surrender had been predictable. Lord Byers (*L.*) welcomed the dropping of the idea of coercion and penalties, and urged the need for better communications between workers and union officials. Lord Alport (*C.*) asked whether the Government had reserved the possibility of introducing legislative sanctions

later if necessary; but Lord Shackleton said a great responsibility rested on the unions and they should hope to see no legislation.

**CENSURE MOTION.**—The Government's decision not to introduce a Bill to deal with industrial relations was further debated at length on an Opposition censure motion on July 4, moved by Mr. Carr. He said the Opposition hoped that more active involvement of the T.U.C. in solving industrial relations problems might do good, but they did not believe the T.U.C. alone could match the scale and urgency of the needs. The Opposition censured the Government for running away from doing what they had declared was necessary in the national interest. The commitment of the T.U.C., however valuable, was not the equivalent of the legislative measures which the Government had promised. The only sanction to which the T.U.C. Council had committed itself against a member union that failed to act as directed was to report it to the T.U.C., and how could the T.U.C. sit in judgment, especially on their biggest members, without breaking themselves to pieces. Another weakness in the formula was the position of unions not affiliated to the T.U.C. The problems of human relations in industry could only be solved by responsible voluntary action, but it must be within a framework of law, as was the case in other countries, where it was required that collective agreements must be legally binding.

Mr. Wilson moved an amendment to the Opposition's motion, which expressed approval of the Government's action and welcomed the T.U.C. General Council's undertaking. He stressed the importance of the undertaking, and the fact that the T.U.C. had equipped itself with powers to take firm action. These steps had persuaded the Government not to include penal sanctions in the legislation that would be introduced during the lifetime of the present Parliament. But no one pretended that the T.U.C. could end or avoid all unconstitutional stoppages, most of which lasted less than two or three days and had little effect on exports and employment. He said the Conservative proposals would give employers the right to sue employees and unions refusing to end an unofficial strike, but he thought no employer would do so; they knew reprisals would not work.

In the subsequent debate Mr. Mawby (*C.*) said there were no sanctions to deal with unions that would have nothing to do with the T.U.C. arrangements. Mr. Houghton (*Lab.*) said it was unwise to under-rate the T.U.C., and wrong to claim that courts, committal orders and bailiffs could do better. Dr. Winstanley (*L.*) said his party could not support either motion or amendment. The sooner people stopped pretending they had policies to stop strikes, the better. He sided with those who wanted constructive steps to improve industrial relations and get rid of the causes of strikes. The Government amendment was carried 301-242, and the amended motion by 297-242.

During the period from the opening of the session to July 25, when Parliament rose for the summer recess, 89 Acts and other Measures received the Royal Assent.

## PUBLIC ACTS OF PARLIAMENT 1968-69

The list commences with notes on thirteen Public Acts of Parliament which received the Royal Assent before September 1968, twelve of which were mentioned briefly in the last summary. Those Public Acts which follow received the Royal Assent after August 1968. The date stated after each Act is the date on which it came into operation.

**ADMINISTRATION OF JUSTICE ACT 1968** (February 15, 1968) makes provision with respect to the maximum numbers of Lords of Appeal in Ordinary and certain other judges.

**PRICES AND INCOMES ACT 1968** (July 10, 1968) extends and supplements the Acts of 1966 and 1967, for example by extending the maximum period for which standstills in prices and charges or terms and conditions of employment may be enforced under the powers of those Acts. It also limits rent increases and mitigates certain past rent increases for dwelling-houses, and enables rents of local authority housing to be changed without notice to quit being given. The Act also provides for connected purposes.

**APPROPRIATION ACT 1968** (July 26, 1968) applies a sum out of the Consolidated Fund to the service of the year ending March 31, 1969 and appropriates the supplies granted in this session of Parliament.

**HEALTH SERVICES AND PUBLIC HEALTH ACT 1968** (various dates) amends and supplements existing legislation so as to promote miscellaneous improvements in the health and welfare services and the public health services, e.g. by enabling local authorities to accommodate the elderly and handicapped in registered homes run for profit and by redefining notifiable disease as including cholera, plague, relapsing fever, smallpox and typhus (and gives local authorities powers to extend this category).

**SEWERAGE (SCOTLAND) ACT 1968** (day to be appointed) makes new provision as respects sewerage in Scotland and for connected purposes.

**INTERNATIONAL ORGANISATIONS ACT 1968** (July 26, 1968) makes new provisions as to privileges, immunities and facilities to be accorded in respect of certain international organisations and of persons connected with such organisations and other persons; and for purposes connected therewith (the Act replaces the International Organisations (Immunities and Privileges) Act 1950 and the European Coal and Steel Community Act 1950).

**SOCIAL WORK (SCOTLAND) ACT 1968** (day to be appointed) makes further provision for promoting social welfare in Scotland and consolidates with amendments certain enactments relating to the care and protection of children and for various connected purposes (thus implementing the policies outlined in the White Paper "Social Work and the Community" (Cmd. 3065) and the Report on Children and Young Persons, Scotland. (Cmd. 2306)).

**HEARING AID COUNCIL ACT 1968** (day to be appointed) provides for the establishment of a Hearing Aid Council and makes various provisions relating to the trade of supplying hearing aids.

**CARAVAN SITES ACT 1968** (August 26, 1968) restricts the eviction from caravan sites of occupiers of caravans and makes other provision for the benefit of such occupiers, secures the establishment of such sites by local authorities for the use of gipsies and other persons of nomadic habit and controls in certain areas the unauthorised occupation of land by such persons and provides for connected purposes.

**ADOPTION ACT 1968** (various dates) implements the Hague Convention on the adoption of children by extending the powers of the Courts in the United Kingdom with respect to the adoption of children and enables effect to be given in the United Kingdom to adoptions effected in other countries

and to determinations of authorities in other countries with respect to adoptions; and for connected purposes (see Legal Notes).

**THEATRES ACT 1968** (various dates), abolishes the censorship of the theatre and amends the law in respect of theatres and theatrical performances.

**FRIENDLY AND INDUSTRIAL AND PROVIDENT SOCIETIES ACT 1968** (July 26, 1968) makes further provision with respect to the accounts of friendly societies and industrial and provident societies and the auditing of those accounts, and with respect to the rules and valuations of friendly societies.

**OVERSEAS AID ACT 1968** (July 26, 1968) extends the powers of the Minister of Overseas Development and makes various amendments to the Act of 1966.

**CIVIL AVIATION ACT 1968** (October 25, 1968) amends the law relating to aerodromes, aircraft and civil aviation.

**CLEAN AIR ACT 1968** (day or days to be appointed) extends and revises the Act of 1956 by making further provision for abating the pollution of the air e.g. by prohibiting the emission of dark smoke from industrial and trade premises.

**DOMESTIC AND APPELLATE PROCEEDINGS (RESTRICTION OF PUBLICITY) ACT 1968** (October 25, 1968) makes further provision for enabling courts to sit in private and for preventing or restricting publicity for certain proceedings.

**CIVIL EVIDENCE ACT 1968** (various dates) amends the law of evidence in relation to civil proceedings, and in respect of the privilege against self-incrimination makes corresponding amendments in relation to statutory powers of inspection or investigation.

**GAMING ACT 1968** (various dates) makes further provision with respect to gaming and for purposes connected therewith.

**RESTRICTIVE TRADE PRACTICES ACT 1968** (November 25, 1968) amends Part I of the Act of 1956 and makes further provision as to agreements conflicting with Free Trade agreements.

**MEDICINES ACT 1968** (most sections on October 25, 1968, the remainder on a day or days to be appointed) makes new provision with respect to medicinal products and related matters, and for purposes connected therewith.

**DESIGN COPYRIGHT ACT 1968** (October 25, 1968) amends the law relating to the copyright of the design of certain manufactured articles, and for connected purposes.

**JUSTICES OF THE PEACE ACT 1968** (day or days to be appointed) makes further provision for confining the office of justice of the peace to persons selected for it, and terminating the appointment of stipendiary magistrates under Local Acts, and makes various other provisions for connected purposes e.g. reducing (by stages) the retiring age of justices from seventy-five to seventy years of age.

**LAW REFORM (MISCELLANEOUS PROVISIONS) (SCOTLAND) ACT 1968** (ss. 10-15 on a day or days to be appointed, the rest on November 25, 1968) amends the law of Scotland relating to succession to the property of deceased persons in cases of illegitimacy (see Legal Notes) and extends the provisions of the Succession (Scotland) Act 1964 to tenancies of crofts (see Legal Notes) and alters and amends Scottish law on many other matters.

**RACE RELATIONS ACT 1968** (November 25, 1968) makes fresh provision with respect to discrimination on racial grounds and with respect to relations between people of different social origins.

**TOWN AND COUNTRY PLANNING ACT 1968** (day or days to be appointed) amends the law relating to town and country planning, the compulsory acquisition of land and disposal of land by public authorities and makes various other provisions for connected purposes.

**TRANSPORT ACT 1968** (various dates) makes further provision with respect to transport and related matters, e.g. by establishing the Freight Corporation which will deal with the integration of freight transport services and designates Passenger Transport Areas each with its own Authority and Executive with powers, *inter alia*, to reorganize passenger transport.

**CUSTOMS (IMPORT DEPOSITS) ACT 1968** (November 27, 1968) imposes an additional customs duty (to be known as "import deposit") on imported goods, the duty being repayable after 180 days.

**MISCELLANEOUS FINANCIAL PROVISIONS ACT 1968** (December 18, 1968) provides for increasing the capital of the Civil Contingencies Fund; for making payments to the Governments of Northern Ireland and the Isle of Man in respect of revenue from the continental shelf; and enables the Industrial Re-organisation Corporation to borrow in currencies other than sterling.

**EXPIRING LAWS CONTINUANCE ACT 1968** (December 18, 1968) continues in force certain laws which would otherwise expire.

**SEA FISHERIES ACT 1968** (various dates) makes further provision with respect to the subsidies payable to, and the levies which may be imposed on, the white fish and herring industries; makes further provision for the regulation of sea fishing, makes provision with respect to fishing boats and gear lost or abandoned at sea; and for connected purposes.

**ELECTRICITY (SCOTLAND) ACT 1969** (January 30, 1969) raises the statutory limits on the amounts which the Scottish Electricity Boards may borrow and amends the law on the authentication of the seals of those Boards.

**LOCAL GOVERNMENT GRANTS (SOCIAL NEED) ACT 1969** (January 30, 1969) authorizes the payment to local authorities in Great Britain of grants towards expenditure incurred by reason of special social needs in urban areas.

**CONSOLIDATED FUND ACT 1969** (February 12, 1969) applies a sum out of the Consolidated Fund to the service of the year ending March 31, 1969.

**NATIONAL INSURANCE & C. ACT 1969** (March 6 1969) postpones the coming into force of the provision made by the National Insurance Act 1966, s. 3 (1) entitling suspended workers to unemployment benefit and makes further provisions as to periods of limitation governing the payment of benefit under the enactments relating to social security.

**NEW TOWNS ACT 1969** (March 6, 1969) raises the limit on advances imposed by s. 43 of the 1965 Act, as amended by subsequent enactments.

**SHIPBUILDING INDUSTRY ACT 1969** (March 6, 1969) amends s. 7 of the 1967 Act by increasing the amount up to which the Minister of Technology may assume liability by giving guarantees under the section.

**PENSIONS (INCREASE) ACT 1969** (March 6, 1969) provides for increases or supplements to certain public service pensions, payable from April 1, 1969.

**REDUNDANCY REBATES ACT 1969** (March 6, 1969) reduces the rebates payable under s. 30 of the Redundancy Payments Act 1965.

**CONSOLIDATED FUND (NO. 2) ACT 1969** (March 27, 1969) applies certain sums out of the Consolidated Fund to the service of the years ending March 31, 1968, 1969 and 1970.

**MINES AND QUARRIES (TIPS) ACT 1969** (day or days to be appointed) makes further provision in relation to tips associated with mines and quarries; to prevent disused tips constituting a danger to members of the public; and for purposes connected therewith.

**NATIONAL THEATRE ACT 1969** (March 27, 1969) raises the limit imposed by s. 1 of the 1949 Act on the contributions which may be made under that section.

**GENOCIDE ACT 1969** (March 27, 1969) gives effect to the Convention on the Prevention and Punishment of the Crime of Genocide.

**LICENSING (SCOTLAND) ACT 1969** (March 27, 1969) amends the 1959 Act so as to make provision for the establishment of licensing courts for new small burghs formed under the Local Government (Scotland) Act 1947, s. 133, and for purposes connected therewith.

**HORSE RACE BETTING LEVY ACT 1969** (March 27, 1969) makes further provision as to contributions to be made under Part I of the Betting Gaming and Lotteries Act 1963 by bookmakers and the Totalisator Board to the Horserace Betting Levy Board; and amends s. 24 of the said 1963 Act as to the appointment and removal of members of the Horserace Betting Levy Board.

**REPRESENTATION OF THE PEOPLE ACT 1969** (day or days to be appointed) amends the law about the qualification of electors at elections to the Parliament of the United Kingdom or at local government elections in Great Britain and the qualifications for election to and membership of local authorities in England and Wales, and provides for various other connected matters. *Inter alia* the Act reduces the voting age from 21 years to 18 years at the date of the poll.

**CUSTOMS DUTIES (DUMPING AND SUBSIDIES) ACT 1969** (beginning of May 1969) consolidates the Customs Duties (Dumping and Subsidies) Acts, 1957 and 1968 and related enactments.

**BETTING GAMING AND LOTTERIES (AMENDMENT) ACT 1969** (May 16, 1969) amends the provisions of the Betting Gaming and Lotteries Act 1963 in relation to the maximum percentage which may be deducted by the operator from amounts staked on the totalisator.

**NUCLEAR INSTALLATIONS ACT 1969** (May 16, 1969) makes certain amendments necessary to bring the 1965 Act into conformity with international agreements.

**DECIMAL CURRENCY ACT 1969** (part on May 16, 1969, part on February 15, 1971)—makes further provision in connection with the introduction of a decimal currency and imposes restrictions on the melting or breaking of metal coins.

**FOREIGN COMPENSATION ACT 1969** (May 16, 1969) makes provision for certain property (including the proceeds thereof and any income or property therefrom) of persons formerly resident or carrying on business in Estonia, Latvia, Lithuania or a part of Czechoslovakia, Finland, Poland or Rumania which has been ceded to the Union of Soviet Socialist Republics; and amends the Foreign Compensation Act 1950.

**IMMIGRATION APPEALS ACT 1969** (day or days to be appointed) confers on persons within sections 1 and 6 of the Commonwealth Immigrants Act 1962 (*i.e.* Commonwealth citizens entering or being deported from the United Kingdom) a right of appeal against the exercise of powers of admission into and removal from the United Kingdom by the Secretary of State and officers acting under his instructions. Corresponding rights may be conferred by Order in Council on aliens. The Act also makes provision for many connected matters.

**REDUNDANT CHURCHES AND OTHER RELIGIOUS**

**BUILDINGS ACT 1969** (May 16, 1969) authorizes the making of grants to the Redundant Churches Fund and makes various other provisions for connected purposes.

**ARMY RESERVE ACT 1969** (May 16, 1969) extends the period during which certain national servicemen or national service volunteers are liable to serve in the Army Reserve.

**TATTOOING OF MINORS ACT 1969** (June 16, 1969) prohibits the tattooing of persons under the age of 18 years.

**PUBLIC HEALTH (RECURRING NUISANCES) ACT 1969** (July 25, 1969) enables local authorities to deal more effectively with recurring nuisances.

**AGRICULTURE (SPRING TRAPS) (SCOTLAND) ACT 1969** (June 25, 1969) makes provision with respect to the termination of the power to authorize the use of spring traps other than approved traps in Scotland.

**VEHICLE AND DRIVING LICENCES ACT 1969** (day or days to be appointed) provides further, in relation to mechanically propelled vehicles, for the licensing, registration and marking of vehicles, the payment of excise duty, the licensing of drivers, offences and the provisions of copies of test certificates; and for purposes connected therewith.

**PONIES ACT 1969** (January 1, 1970) improves the conditions under which ponies are to be exported; prohibits or restricts the export of certain ponies; and provides for connected purposes. (A pony is a horse of not more than 14½ hands in height except a foal travelling with its dam if the dam is over 14½ hands).

**TANZANIA ACT 1969** (June 25, 1969) provides for the modification of the law in consequence of the Union of Tanganyika and Zanzibar.

**TOWN AND COUNTRY PLANNING (SCOTLAND) ACT 1969** (day or days to be appointed) amends the law of Scotland relating to town and country planning.

**FINANCE ACT 1969** (July 25, 1969) grants certain duties, alters other duties and amends the law relating to the National Debt and the Public Revenue; and makes further provision in connection with Finance, for example by reducing the age of majority for tax purposes to 18 years of age; and introduces a sliding scale for calculating the amount of Estate Duty (*see* Legal Notes).

**EMPLOYER'S LIABILITY (DEFECTIVE EQUIPMENT) ACT 1969** (October 25, 1969) makes further provision as to the liability of an employer for injury to his employee which is attributable to any defect in equipment provided by the employer for the purposes of the employer's business.

**FAMILY LAW REFORM ACT 1969** (day or days to be appointed) reduces the age of majority from 21 years to 18 years; amends the law relating to the property rights of illegitimate children and of other persons whose relationship is traced through an illegitimate link; makes provision for the use of blood tests to determine the paternity of any person in civil proceedings; makes provision as to the evidence required to rebut ■ presumption of legitimacy or illegitimacy; makes further provision, in connection with the birth of an illegitimate child, for entering the name of the father; and for connected purposes.

**APPROPRIATION ACT 1969; HOUSING ACT 1969; HOUSING (SCOTLAND) ACT 1969; TRANSPORT (LONDON) ACT 1969; OVERSEAS RESOURCES DEVELOPMENT ACT 1969; SHARING OF CHURCH BUILDINGS ACT 1969; AGE OF MAJORITY (SCOTLAND) ACT 1969; MEDICAL ACT 1969; NATIONAL MOD (SCOTLAND) ACT 1969; ARCHITECTS REGISTRATION (AMENDMENT) ACT 1969; AIR CORPORATIONS ACT 1969; NATIONAL INSURANCE (No. 2) ACT 1969; IRON AND STEEL ACT 1969; NURSES ACT 1969; POST OFFICE ACT 1969; EDUCATION (SCOTLAND) ACT 1969; TRUSTEE SAVINGS BANK ACT 1969; DEVELOPMENT OF TOURISM ACT 1969.**

## PARLIAMENTARY ASSOCIATIONS

### THE INTER-PARLIAMENTARY UNION

Place du Petit-Saconnex, Geneva 19, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

#### BRITISH GROUP.

*Hon. Presidents*, The Lord Chancellor; Mr. Speaker. *President*, Rt. Hon. J. H. Wilson, O.B.E., M.P.

*Vice-Presidents*, The Marquess of Salisbury, K.G.; The

Rt. Hon. Sir Alec Douglas-Home, K.T. M.P.;

The Rt. Hon. E. R. G. Heath, M.B.E. M.P.;

The Rt. Hon. J. S. B. Lloyd, C.H., C.B.E., T.D.,

Q.C., M.P.;

The Lord Butler of Saffron Walden,

P.C., C.H.;

The Rt. Hon. R. M. M. Stewart,

M.P.;

The Rt. Hon. G. A. Brown, M.P.

*Chairman*, A. Roberts, M.P.

*Secretary*, Brigadier M. J. A. Paterson, D.S.O.

### COMMONWEALTH PARLIAMENTARY ASSOCIATION (1911)

The Commonwealth Parliamentary Association exists to promote understanding and co-operation among those persons engaged in and those formerly associated with Parliaments and Legislatures in the countries of the Commonwealth by the exchange of information and visits, and by conferences of Members of such Parliaments and Legislatures; similarly to promote understanding and co-operation with legislators of countries outside the Commonwealth having close historical and parliamentary associations with it.

The Association now consists of 24 main branches in Parliaments of the self-governing countries of the Commonwealth and 5 auxiliary branches. There are also branches in State, Provincial and Territorial Legislatures, as well ■ in the Parliaments of Northern Ireland, the Isle of Man, and the States of Jersey. In addition, there are 12 affiliated branches in Legislatures of those Commonwealth countries which are not completely self-governing, and 9 subsidiary branches in colonial territories making a total of 87 branches. Commonwealth Parliamentary conferences and general meetings are held every year in different countries of the Commonwealth.

*Chairman of the General Council*, Hon. A. G. Montano (Trinidad and Tobago).

*Secretary-General*, R. V. Vanderfelt, O.B.E., Houses of Parliament, S.W.1.

*Secretary, United Kingdom Branch*, P. G. Molloy, M.C., Westminster Hall, Houses of Parliament, S.W.1.

# Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, e.g. the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Waterguard.

NOTE.—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

## MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, S.W.1. †

[01-839-7711]

The Ministry of Agriculture, Fisheries and Food was established in April 1955 and assumed responsibilities previously discharged by the Ministry of Agriculture and Fisheries and the Ministry of Food.

The Ministry has a general responsibility for food supplies, both home produced and imported, and for food manufacture, distribution and storage.

The Ministry provides financial assistance and free technical advice to the agricultural (including horticultural) and fishing industries in England and Wales. Financial assistance under the Agriculture Acts of 1947 to 1967 includes deficiency payments in respect of most of the main agricultural products to ensure a fair return to the producer, and a number of production grants and subsidies to promote improved farming efficiency. Free advice is available on farm management, and the technical aspects of agricultural production, including farm buildings and fixed equipment, land drainage, and crop and animal husbandry.

The Ministry is also responsible for schemes designed to improve the quality of livestock and of other agricultural products through the dissemination of the results of research carried out by the Agricultural Research Council and other institutions and through the control and eradication of animal and plant disease and of pests. It is also concerned with the safety, health, welfare and wages of agricultural workers.

The Ministry is also concerned with agricultural co-operation, the welfare of livestock, food prices and the development of the fishing industry in England and Wales, including the processing and distributive trades, whaling and research.

The Ministry has primary responsibility for administering part of the food and drugs legislation, in particular the composition, labelling and advertising of food; for slaughterhouses and meat inspection, and for the quality and cleanliness of milk; the Ministry maintains relations with Commonwealth and other countries and participates in the work of a number of international bodies, concerned with agriculture, fisheries and food.

The Ministry is also responsible for the Royal Botanic Gardens, Kew.

Minister of Agriculture, Fisheries and Food, THE RT. HON. CLEDWYN HUGHES, M.P. . . . . . £8,500

Private Sec., D. F. Williamson

Assistant Private Secs., A. R. Cruickshank; Miss J. E. Wheeler.

Parliamentary Private Secretary, W. H. Edwards, M.P.

Parliamentary Clerk, M. F. Grant . . . . . £2,220 to £2,720

Parliamentary Secretaries, The Rt. Hon. J. H. Hoy, M.P.; J. Mackie, M.P. . . . . . £3,750

Permanent Secretary, Sir Basil Engholm, K.C.B. . . . . . £9,800

† Unless otherwise stated, Divisions of the Ministry are at this address.

Private Secretary, M. T. Haddon  
Deputy Secretaries, D. J. Mitchell, C.B., C.V.O. (Group A); W. C. Tamme, C.B. (Group B)  
R. G. R. Wall, C.B. (Group C) . . . . . £7,100  
Chief Agricultural Adviser, W. Emrys Jones . . . £5,725  
Liaison Officers, F. K. Abbey; Sir Richard Boughey, Bt.; J. Brocklebank, C.B.E.; W. E. Cave; The Lord de Ramsey, T.D.; Prof. A. N. Duckham, C.B.E.; E. M. Howard, C.B.E.; J. Gwyn Jones; Lt.-Col. G. W. F. Luttrell, M.C.; D. C. B. Riviere; Col. N. V. Stopford Sackville, C.B.E., T.D.; H. G. Spencer, O.B.E.; Lt.-Col. Sir Richard Verdin, O.B.E., T.D.; Lt.-Col. Sir Watkin Williams-Wynn, Bt., C.B.E. . . . . . Unpaid

## ESTABLISHMENTS DEPARTMENT

Great Westminster House, Horseferry Road, S.W.1.

[01-834-8511]

Under Secretary (Director of Establishments), C. H. A. Duke . . . . . £6,000

### Management Services Division I

Assistant Secretary, W. G. Boss, O.B.E. . . . . £4,045 to £5,200

Chief Executive Officers, R. Dickeson; L. H. Glassberg; G. E. Howell; D. W. Peddie . . . . . £3,003 to £3,570

Senior Executive Officers, M. H. Butcher; J. N. Diserens; R. C. Francis; Mrs K. M. Harry; Miss A. D. Haynes; R. E. Hughes; L. Lewis; D. F. Reed; W. E. Rivers; D. S. Stephenson . . . . . £2,331 to £2,856

### Personnel Division I

Principal Executive Officer, I. P. M. MacDonald . . . . . £4,400 to £4,950

Principal, W. R. Small . . . . . £2,599 to £3,596

Chief Executive Officers, E. A. Airriess; K. P. Stones . . . . . £3,003 to £3,570

Senior Executive Officers, F. C. Coleman; H. L. G. Copeman; G. A. Millington; G. Reay (Chief Investigation Officer), D. A. Stevens; J. Weston . . . . . £2,331 to £2,856

### Personnel Division II

Assistant Secretary, G. L. Wilde . . . . . £4,045 to £5,200

Principal, A. F. Longworth . . . . . £2,599 to £3,596

Chief Executive Officers, A. W. Bunn; J. H. Maslen . . . . . £3,003 to £3,570

Senior Executive Officers, C. W. Chapman; T. Hetherington; V. A. Hopkins; J. Mason . . . . . £2,331 to £2,856

### Office Services Division

Principal Executive Officer, B. Dennis (Office Controller) . . . . . £4,045 to £5,200

Chief Executive Officers, H. M. Allix; G. B. Hopley, G. Wilson . . . . . £3,003 to £3,570

Senior Executive Officers, S. A. Botelle; E. G. Chibnall; J. A. Davies; Miss D. C. Dixson (Chief Welfare Officer); A. F. Mitson; S. O. B. Powell (Chief Registrar); J. Weston . . . . . £2,331 to £2,856

### Management Services Division II

Assistant Secretary, G. E. Myers . . . . . £4,045 to £5,200

Principal, Miss M. Hooley . . . . . £2,599 to £3,596

Chief Executive Officer, W. A. Files . . . . . £3,003 to £3,570

Senior Executive Officer, P. F. Williams, M.B.E. . . . . £2,331 to £2,856

## Administrative Departments

### GROUP A

Under Secretary, J. H. Perrin . . . . . £6,000

**GENERAL AGRICULTURAL POLICY DIVISION II**

Assistant Secretary, A. K. H. Atkinson  
*£4,045 to £5,200*  
 Principal, W. E. Mason ..... *£2,599 to £3,596*  
 Senior Executive Officer, M. J. Griffiths  
*£2,331 to £2,856*

Under-Secretary, H. C. Sparks ..... *£6,000*  
**INFORMATION DIVISION**  
 Chief Information Officer, J. W. Miller, M.B.E.

*£4,045 to £5,200*  
 Chief Executive Officers, T. J. B. Dawes (Chief Press Officer); J. A. Walker ..... *£3,003 to £3,570*  
 Senior Executive Officers, R. G. K. Burgess; E. J. Mayhew; G. E. Winter ..... *£2,331 to £2,856*  
 Librarian (Grade 1), F. C. Hirst ..... *£2,860 to £3,400*  
 Director of Economics and Statistics, L. Napolitan  
*£6,000*  
 Deputy Director, K. Dexter ..... *£5,550*

**ECONOMICS DIVISIONS I AND II**

Senior Principal Agricultural Economists, C. W. Capstick; G. Sharp ..... *£4,045 to £5,200*  
 Principal Agricultural Economists, A. M. Cowland; J. A. Evans; Miss S. M. Lloyd; P. A. Power  
*£2,599 to £3,596*  
 Senior Executive Officers, D. W. McCall; P. M. Reason, M.B.E.; A. Rigby; B. Vernon  
*£2,331 to £2,856*

Under Secretary, M. D. M. Franklin ..... *£6,000*

**STATISTICS DIVISIONS I AND II**

Senior Principal Agricultural Economist, E. L. Snowden ..... *£4,045 to £5,200*  
 Principal Agricultural Economist, G. H. Wollen  
*£2,599 to £3,596*

Chief Statistician, A. H. J. Baines ..... *£4,045 to £5,200*  
 Statisticians, S. Clayton; D. D. Fitness; J. E. Outlaw; W. N. T. Roberts ..... *£2,599 to £3,596*  
 Chief Executive Officers, K. W. Batrick; P. G. Horscroft; K. T. Wasley ..... *£3,003 to £3,570*  
 Senior Executive Officers, L. J. Angel; N. E. Brooker; R. G. Bruce; R. G. Carter; Miss H. J. Morey  
*£2,331 to £2,856*

**HOME-GROWN CEREALS, EGGS AND POULTRY DIVISION**

Assistant Secretary, J. A. Barrah ..... *£4,045 to £5,200*  
 Principals, J. A. Anderson; Mrs. H. I. Pinkerton  
*£2,599 to £3,596*  
 Chief Executive Officer, J. A. Bamford  
*£2,860 to £3,400*

Senior Executive Officers, W. E. H. Charnley; M. Ring ..... *£2,331 to £2,856*

**INTERNATIONAL CEREALS DIVISION**

Assistant Secretary, R. J. E. Taylor  
*£4,045 to £5,200*  
 Principal, G. P. Jue ..... *£2,599 to £3,596*  
 Chief Executive Officer, D. Hall ..... *£3,003 to £3,570*  
 Senior Executive Officers, A. V. Bryant, M.B.E.; Miss S. E. Kitchen ..... *£2,331 to £2,856*

Under Secretary, A. Propper, C.M.G., M.B.E. *£6,000*  
**GENERAL FOOD POLICY DIVISIONS I AND II**

Assistant Secretaries, Mrs. J. M. Archer; N. E. D. Burton ..... *£4,045 to £5,200*  
 Principals, W. T. Barker; Miss B. M. Shedden; E. S. Virgo ..... *£2,599 to £3,596*  
 Chief Executive Officers, Mrs. P. E. Holloway; G. Seymour ..... *£3,003 to £3,570*  
 Senior Executive Officers, G. F. Buxton; A. N. Downing; P. B. C. Stray; C. W. Tranter; C. J. Young ..... *£2,331 to £2,856*

**FOOD STANDARDS, SCIENCE AND SAFETY DIVISION**

Great Westminster House, Horseferry Road, S.W.1  
*[01-834-8511]*  
 Assistant Secretary, R. F. Giles ..... *£4,045 to £5,200*  
 Principal, J. A. Brown ..... *£2,599 to £3,596*  
 Chief Executive Officers, J. H. S. Baker; L. G. Hanson ..... *£3,003 to £3,570*

Senior Executive Officers, N. K. S. Baker; H. M. Goodall ..... *£2,331 to £2,856*  
 Senior Principal Scientific Officer, W. T. L. Neal  
*£4,400 to £4,620*  
 Senior Grade, Works Group, J. A. Carr  
*£2,771 to £3,260*

Principal Scientific Officers, T. J. Coomes; R. E. J. Goodman; J. P. Greaves; J. F. Hearne; Miss D. F. Hollingsworth, O.B.E.; D. J. McWeeny; R. B. Wilson ..... *£2,599 to £3,596*

**Safety Inspectorate:**  
 Chief Inspector, J. C. Weekes ..... *£3,550 to £4,200*  
 Deputy Chief Inspectors, T. J. Rowe; J. R. Whitaker ..... *£3,003 to £3,580*

Under Secretary, J. R. Moss ..... *£6,000*

**GENERAL AGRICULTURAL POLICY DIVISION I**

Assistant Secretary, M. M. A. Gray ..... *£4,045 to £5,200*  
 Principals, B. H. B. Dickinson; P. N. M. Moore, D.S.O., M.C. .... *£2,599 to £3,596*  
 Senior Executive Officer, M. J. Griffiths  
*£2,331 to £2,856*

**CROP IMPROVEMENT DIVISION**

Great Westminster House, Horseferry Road, S.W.1  
*[01-834-8511]*

Principal Executive Officer, G. H. B. King  
*£4,620 to £5,200*  
 Principal, D. M. L. MacGregor ..... *£2,599 to £3,596*  
 Chief Executive Officers, R. G. Butterworth; H. S. Newman; D. Salton ..... *£3,003 to £3,570*  
 Senior Executive Officers, G. S. Johnson; F. E. Kenny; G. L. Little ..... *£2,331 to £2,856*  
 Chief Technical Officer, G. L. Gray  
*£3,128 to £3,465*

Under Secretary, H. Gardner ..... *£6,000*

**HORTICULTURE DIVISIONS I AND II**

Great Westminster House, Horseferry Road, M. S.W.1  
*[01-834-8511]*  
 Assistant Secretaries: R. V. Allen; O. A. Robertson  
*£4,045 to £5,200*  
 Principals, B. L. Faux; K. W. Wilkes  
*£2,599 to £3,596*

Chief Executive Officers, F. S. Anderson; H. Pease; Miss G. D. McElnea ..... *£3,003 to £3,570*  
 Senior Executive Officers, D. Armstrong; J. N. Jackson; A. R. Pierce; I. V. Wells  
*£2,331 to £2,856*  
 Chief Horticultural Marketing Inspector, F. J. Goldsmith ..... *£3,550 to £4,200*  
 Deputy Chief Horticultural Marketing Inspectors, A. F. Gardner; W. E. H. Spencer ..... *£3,003 to £3,570*

**PLANT HEALTH AND SEEDS INSPECTORATE**

Chief Inspector, J. P. Cleary ..... *£3,550 to £4,000*  
 Deputy Chief Inspector, D. Page ..... *£3,003 to £3,570*  
 Regional Plant Health and Seeds Inspectors, P. R. Boughey; C. Crompton; J. A. Hewitt; A. R. Martin; F. W. Munnings; T. Parish; R. Varley  
*£2,331 to £2,856*

**CO-OPERATION AND LABOUR DIVISION**

Great Westminster House, Horseferry Road, S.W.1  
*[01-834-8511]*  
 Assistant Secretary, E. H. Doling ..... *£4,045 to £5,200*  
 Principal, S. H. Moore ..... *£2,599 to £3,596*  
 Chief Executive Officers, J. A. Covell; L. W. Hogg  
*£3,003 to £3,570*  
 Senior Executive Officers, K. R. Aunger; H. Smeeth; A. D. Thomas ..... *£2,331 to £2,856*

**GROUP B**

**ADVISORY SERVICE AND LIVESTOCK IMPROVEMENT DIVISION**

Great Westminster House, Horseferry Road, S.W.1  
*[01-834-8511]*  
 Assistant Secretary, W. F. Darke ..... *£4,045 to £5,200*

*Principals*, Mrs J. J. Tait; P. J. L. Walder  
 £2,599 to £3,596  
*Chief Executive Officers*, V. G. Codd; L. C. Gaskell  
 £3,003 to £3,570  
*Senior Executive Officer*, R. D. Rider  
 £2,331 to £2,856

### NATIONAL AGRICULTURAL ADVISORY SERVICE

*Director*, W. R. Smith ..... £6,000  
*Deputy Director*, A. J. Davies ..... £5,410  
*Senior Advisers*, P. J. Macfarlan; N. H. Pizer, C.B.E.;  
 F. W. Shepperd ..... £5,200  
*Chief Farm Management Adviser*, B. Peart  
 £4,120 to £4,600  
*Director of Experiments*, R. Gardner  
 £4,120 to £4,600  
*Chief Dairy Husbandry Adviser*, J. Gibbons  
 £4,120 to £4,600  
*Chief Livestock Husbandry Adviser*, W. Longrigg  
 £4,120 to £4,600  
*Deputy Chief Livestock Husbandry Adviser*, G. A.  
 Mansfield ..... (+allice) £2,913 to £3,683  
*Chief Poultry Husbandry Adviser*, R. Coles  
 £4,120 to £4,600  
*Chief Mechanisation Adviser*, C. Culpin, O.B.E.  
 £4,120 to £4,600  
*Regional Directors*, S. Culpin; R. B. Ferro; E.  
 Griffiths; S. L. Huthnance; N. F. McCann;  
 W. S. Rayfield; J. R. Stubbs; M. Whalley  
 Taylor, M.B.E. .... £4,600 to £4,830  
*Deputy Regional Directors*, M. Barker; P. M. Bolam;  
 E. R. Bullen; J. Butt-Evans; E. S. Carter; H. E.  
 Crossall; H. Edmunds; W. M. R. Evans; H. C.  
 Gough; P. M. T. Jones; L. W. Osborne  
 (+allice) £3,683 to £3,867

*County Agricultural Advisers, Grade I*, D. C. Barber;  
 R. E. Blake; W. J. Brimacombe; N. E. Chittenden;  
 G. J. Clarke; V. Cory; D. S. Downey; G. A.  
 Dows; J. R. Duncan; R. A. Engledow; E. J.  
 Evans; J. V. Evans; A. H. Fitton; A. T. Haesler;  
 P. Holmes; R. Hope; J. S. Hopkins; G. H.  
 Hughes; I. W. Jones; J. R. Judson; J. B. Kerr;  
 I. E. Ketteringham; J. R. Keyworth; A. L.  
 Lewis; L. J. McHardy; A. W. Mardon; P. W.  
 Milligan; P. A. Naylor; K. M. Pearman; J.  
 Penderbury; G. Precious; A. W. Prowell; A. J.  
 B. Ratcliffe; E. Shaw; H. E. Shaw; K. W.  
 Silverthorne, M.B.E.; J. A. M. Sutherland; W.  
 E. H. Telford; W. Bowen-Thomas; F. J.  
 Thomas; P. J. O. Trist, O.B.E.; S. E. Turner;  
 T. E. Wathan; L. M. Waud; J. Wilkie; H.  
 M. Williams; J. A. Wyatt ..... £3,683 to £3,867

#### Grade I Advisers:

*Special Duties*, D. M. Bryant; I. Kinlock; K.  
 Macleod; J. A. Rudderham; Miss B. Thorn-  
 borrow (+allice) ..... £3,683 to £3,867  
*Bacteriologists*, J. W. Egdell; J. Harrison; J. J. Panes  
 £3,683 to £3,867

*Crop Husbandry*, D. W. Beesley; W. Q. Connold;  
 S. A. Evans; R. G. Hughes; H. Jackson; J. J.  
 North; J. B. Page; E. I. Prytherch

£3,683 to £3,867  
*Dairy Husbandry*, W. H. Alexander, M.B.E.;  
 J. Beever; Miss J. Bidc; H. J. Brooks; W. E.  
 Buck; J. Hutchison; Miss M. Jones; T. I. Jones;  
 Miss K. D. Maddever, O.B.E.; A. H. Moseley;  
 G. J. Peters; Miss D. M. Phillips, O.B.E.  
 £3,683 to £3,867

*Entomologists*, E. B. Brown; B. A. Cooper; J. H.  
 Fidler; R. Gair; B. D. Moreton; S. W. H. Rolfe;  
 L. E. W. Stone; J. D. Thomas; J. H. White  
 £3,683 to £3,867

*Farm Management*, R. S. Boyer; R. W. Helme;  
 W. H. Helme; K. B. Mossell; T. W. Nicol;  
 G. D. Salmon; T. W. D. Theophilus; H. A.  
 Thomas; W. C. Weston ..... £3,683 to £3,867

*Grassland Husbandry*, S. Campbell; J. Davies; T. H.  
 Davies; R. M. Deakins; G. P. Hughes; J. Jones;  
 J. F. Ormrod; C. D. Price £3,683 to £3,867  
*Horticulture*, C. I. Chapman; J. B. Duggan; W. S.  
 English; J. W. Ewan; D. J. Fuller; E. C. Herwin;  
 Miss H. M. Hughes; W. G. Hume; E. R.

Keighley; H. G. Kingham; T. Laffin; P. D. Lees;  
 D. Mellard; P. S. Milne; A. Moore; T. W.  
 Pringle; F. A. Roach; R. C. Round; C. D.  
 Walker; E. G. Williams; G. C. Williams

£3,683 to £3,867  
*Livestock Husbandry*, G. H. Beard; J. E. Campion;  
 E. G. Clifton; T. J. C. David; F. K. Deeble; F. J.  
 Fullbrook; E. L. Jones; J. R. Noble; S. A. C.  
 Oliver; C. G. Pointer; G. H. Proffitt, M.M.; B. M.  
 Scott; A. T. G. Trew; T. Tweddle

£3,683 to £3,867  
*Mechanisation Advisers*, D. P. Evans; F. L. Gammon;  
 M. N. S. Henderson; W. S. Shattock; G. R.  
 Shipway; G. Smith; H. R. Smith; G. B. H. Spear  
 £3,683 to £3,867

*Nutrition Chemists*, G. Alderman; S. M. Boden; A.  
 Eden; J. R. Griffiths; D. J. C. Jones; W. Lewis;  
 J. R. Lloyd; N. Trinder ..... £3,683 to £3,867

*Plant Pathologists*, W. Campbell; D. L. G. Davies;  
 H. H. Glasscock; J. E. E. Jenkins; E. Lester; J. F.  
 Storey; R. E. Taylor; A. G. Walker; H. J.  
 Wilcox ..... £3,683 to £3,867

*Poultry Husbandry*, A. E. Beer; J. A. Calvert; F.  
 Carter; R. F. Hall; C. M. Hann; A. W. Jones;  
 Miss B. Lang; W. J. Lintin; Capt. M. C. Morgan;  
 J. B. Morrison; E. Owen-Jones; C. T. Riley; J.  
 Shemtov ..... £3,683 to £3,867

*Soil Scientists*, W. Dermott; L. J. Hooper; R. C.  
 Little; J. B. E. Patterson; E. Roberts; R. D.  
 Russell; K. Shaw; J. Webber; B. Wilkinson  
 £3,683 to £3,867

### EXPERIMENTAL HUSBANDRY FARMS

*Directors*, R. Bee; G. P. Chater; P. N. Harvey; P. J.  
 Jones; S. P. McClean; R. B. Mair; C. H. Mudd;  
 M. Roberts; F. E. Shotton; J. R. Thompson; R.  
 Wickens; J. C. Wilcox; J. M. Willcock  
 £3,683 to £3,867

### EXPERIMENTAL HORTICULTURE STATIONS

*Directors*, P. G. Allen; G. Baines; A. J. Bedding;  
 A. R. Carter; S. P. Craze; H. J. Eaton; J. M. S.  
 Potter, O.B.E.; F. G. Smith; E. G. Williams  
 £3,683 to £3,867

### PLANT PATHOLOGY LABORATORY

Hatching Green, Harpenden  
 [Harpenden: 5241]

*Deputy Chief Scientific Officer (Director)*, M. Cohen,  
 Ph.D. .... £5,000 to £5,330  
*Senior Principal Scientific Officers*, R. de B. Ash-  
 worth; I. W. Prentice; A. H. Strickland; H. L. G.  
 Stroyan ..... £4,400 to £4,620  
*Principal Scientific Officers*, P. Aitkenhead; C. R. B.  
 Baker; J. J. Baker; J. A. R. Bates; R. H. Cam-  
 mack; K. S. George; K. G. Gosdick; D. F. Lee;

(Cheshire); A. Watson (Yorks. (W. Riding)).

## AGRICULTURAL RESEARCH COUNCIL

160 Great Portland Street, W.1

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931, in accordance with the provisions of the *Agricultural Research Act, 1956*, the Council is charged with the organization and development of agricultural and food research and may, in particular, establish or develop institutions or departments of institutions and make grants for investigation and research relating to the advance of agriculture. The Council is financed from the Parliamentary vote of the Department of Education and Science.

*Council*, The Hon. J. J. Astor, M.B.E. (*Chairman*); The Hon. J. Addington; Prof. F. W. R. Brambell, C.B.E., D.Sc., Ph.D., F.R.S.; Prof. P. W. Brian, Sc.D., F.R.S.; Major J. E. M. Dugdale, T.D.; A. C. Frazer, C.B.E., M.D., D.Sc., Ph.D.; Prof. H. Harris, D.Phil., F.R.S.; Prof. O. V. S. Heath, D.Sc., F.R.S.; W. E. Jones; Prof. B. Katz, M.D., Ph.D., Sc.D., F.R.S.; J. S. Martin; Prof. C. L. Oakley, M.D., D.Sc., F.R.S.; J. Reid, C.B.; Sir John Ritchie, C.B., F.R.S.E.; J. I. Smith; Prof. A. R. Ubbelohde, C.B.E., D.Sc., F.R.S.; R. H. Watherston, C.B.E.

*Secretary*, Sir Gordon Cox, K.B.E., T.D., D.Sc., F.R.S.  
*Deputy Secretary*, W. G. Alexander, C.B.E., F.R.S.E.  
*Assistant Secretaries*, W. E. Berry, C.B.E., Ph.D.; D. J. Parkinson, O.B.E.; F. J. S. Culley.

*Scientific Advisers to the Secretary*, K. N. Burns; D. L. Gunn, C.B.E., D.Sc., Ph.D.; D. Rudd Jones, Ph.D.; R. Scarisbrick, Ph.D.; K. L. Robinson, D.Sc.; G. C. Stevenson; C. C. Webster, C.M.G., Ph.D.

*Principal*, L. S. Porter, O.B.E.  
*Senior Chief Executive Officer*, J. H. Shimwell.  
*Chief Executive Officers*, F. V. Bird, O.B.E.; K. H. J. Clarke; M. R. Beauchamp; P. Ramsden.

*Senior Executive Officers*, E. S. Coltman; F. F. Gilliland; C. Mason.

For the Research Institutes under the control of the Council, see *Index*.

## EXECUTIVE COUNCIL OF THE COMMONWEALTH AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by Executive Council composed of nominees of the various Commonwealth Governments, including one for the dependent territories, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from

a common fund provided by the Governments of the Commonwealth and the Republic of Ireland. The Governments of the Commonwealth and Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. A Commonwealth Bureau of Agricultural Economics has since been established and an International Food Information Service inaugurated. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.  
*Chairman*, M. K. A. Agyeman.  
*Vice-Chairman*, E. Seignoret.  
*Secretary*, Sir Thomas Scrivenor, C.M.G.

### Institutes

*Commonwealth Institute of Entomology*, Natural History Museum, S.W.7. *Director*, R. G. Fennah, Sc.D.

*Commonwealth Mycological Institute*, Ferry Lane, Kew, Surrey. *Director*, A. Johnston.

*Commonwealth Institute of Biological Control*, Gordon Street, Curepe, Trinidad. *Director*, F. J. Simmonds, Ph.D., D.Sc.

### Bureaux

*Agricultural Economics*, 31a St. Giles, Oxford.—*Director*, J. Owen Jones.

*Animal Breeding and Genetics*, Animal Breeding Research Organization, King's Buildings, West Mains Road, Edinburgh 9, Scotland.—*Director*, J. P. Maule.

*Animal Health*, Central Veterinary Laboratory, New Haw, Weybridge, Surrey.—*Director*, M. R. Dhanda.

*Animal Nutrition*, Rowett Research Institute, Bucksburn, Aberdeen, Scotland.—*Director*, Miss D. L. Duncan, Ph.D.

*Dairy Science and Technology*, National Institute for Research in Dairying, Shinfield, nr. Reading.—*Director*, E. J. Mann.

*Forestry*, Commonwealth Forestry Institute, South Parks Road, Oxford.—*Director*, C. Swaby, C.M.G.

*Helminthology*, The White House, 103 St. Peter's Street, St. Albans, Herts.—*Director*, Miss S. M. Willmott, Ph.D.

*Horticulture and Plantation Crops*, East Malling Research Station, East Malling, nr. Maidstone, Kent.—*Director*, G. E. Tidbury.

*Pastures and Field Crops*, Hurley, nr. Maidenhead, Berks. *Director*, C. L. Skidmore.

*Plant Breeding and Genetics*, School of Agriculture, Downing Street, Cambridge.—*Director*, R. H. Richens, Ph.D.

*Soils*, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, W. D. Brind.

## AIR REGISTRATION BOARD

Brabazon House, Redhill, Surrey

[Redhill: 65966]

Set up on Feb. 26, 1937, under the *Companies Act*, the Board is an autonomous non-profit making limited company. Delegated to the Board are certain powers relating to the design, construction and maintenance of civil aircraft; investigation by surveyors of aircraft and associated equipment for the purpose of recommending to the Minister concerning issues and renewals of certificates of airworthiness. The Board also conducts technical examinations for licences of aircraft maintenance engineers, flight engineers and commercial pilots.  
*Chairman*, The Lord Kings Norton, Ph.D.

*Chief Executive*, W. Tye, C.B.E.

## AIR TRANSPORT LICENSING BOARD

Gaywood House, Great Peter Street, S.W.1.

[01-222-7231]

Established by the *Civil Aviation (Licensing) Act, 1960*, to license air services (with certain exceptions). The Board considers representations in relation to air transport services by U.K. registered aircraft, or to facilities, tariffs or charges in connection therewith, reporting their conclusions and recommendations to the Board of Trade.

*Chairman*, Sir Daniel Jack, C.B.E. . . . . £5,750  
*Deputy Chairman*, J. H. Lawrie. . . . . £4,000  
*Members*, Sir Roy Allen, C.B.E.; E. Baldry, O.B.E.;  
 J. M. Drummond; Sir John Evans, K.B.E., C.B.;  
 C. J. Highton; Sir Friston How, C.B.; J. J. Taylor,  
 O.B.E. . . . . each 18 gns. per session  
*Secretary*, C. R. F. Lark. . . . . £3,850 to £4,950

COLLEGE OF ARMS OR HERALDS  
COLLEGE

Queen Victoria Street, E.C.4

[City: 2762]

The College of Arms is open daily from 10-4 (Saturdays, 10-1) when an Officer of Arms is in attendance to deal with enquiries by the public, though such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

*Earl Marshal*, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., G.B.E., Royal Victorian Chain.

## Kings of Arms

*Garter*, Sir Anthony Richard Wagner, K.C.V.O. D.Litt., F.S.A.

*Clarenceux*, John Riddell Bromhead Walker, M.V.O., M.C.

*Norroy and Ulster*, Richard Preston Graham-Vivian, M.V.O., M.C.

## Heralds

*Chester*, Walter John George Verco, M.V.O. (*Earl Marshal's Secretary*).

*Windsor (and Registrar)*, Alexander Colin Cole, F.S.A.

*Richmond*, John Philip Brooke Brooke-Little, F.S.A.

*Somerset*, Lt.-Col. Rodney Onslow Denny, O.B.E.

F.S.A.  
*York*, Conrad Marshall John Fisher Swan, Ph.D.

*Lancaster* (vacant).

## Pursuivants

*Rouge Croix* (vacant).

*Rouge Dragon* (vacant).

*Bluemantle* (vacant).

*Portcullis* (vacant).

## COURT OF THE LORD LYON

H.M. Register House, Edinburgh

[031-556-7255]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Sennachie* of Scotland's Celtic Kings, adjudicates rights to

arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birth-briefs. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£84) and matriculations (£22) are payable to H.M. Exchequer.

*Lord Lyon King of Arms*, Sir James Monteith Grant, K.C.V.O., W.S.

## Heralds

*Rothsay*, Lt.-Col. H. A. B. Lawson, M.V.O., F.S.A. Scot.

*Marchmont*, Sir Thomas Innes of Learney, G.C.V.O., LL.D., F.S.A. Scot., Advocate.

*Albany*, Sir Iain Moncreiffe of that ilk, Bt., Ph.D., Advocate.

## Pursuivants

*Kintyre*, Charles Eliot launicy of Tullichettle, O.C. Carrick, Malcolm Rognvald Innes of Edingight, W.S., F.S.A., Scot.

*Unicorn*, John Inglis Drever Pottinger.

*Falkland (Pursuivant Extraordinary)*, Major David Maitland Maitland-Titterton, T.D.

*Lyon Clerk and Keeper of Records*, Malcolm Rognvald Innes of Edingight, W.S., F.S.A. Scot.

*Procurator-Fiscal*, Ivor Reginald Guild, W.S.

*Herald Painter*, Mrs. Katherine Chart.

*Macer*, Thomas C. Gray.

## ART GALLERIES, ETC.

## ROYAL FINE ART COMMISSION

■ Carlton Gardens, S.W.1

[Whitehall: 3935]

Appointed in May, 1924. "to enquire into such questions of public amenity or of artistic importance ■ may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, ■ Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places ■ you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

**Chairman**, Sir Colin Anderson, K.B.E.  
**Commissioners**, The Marquess of Anglesey, F.S.A.;  
 Sir John Betleman, C.B.E.; Sir Hugh Casson, A.R.A.,  
 F.R.I.B.A.; Howard Colvin, C.B.E.; Ralph Freeman,  
 C.V.O., C.B.E.; Sir Gilbert Ingelfield, C.B.E., T.D.;  
 The Lord Llewelyn-Davies, F.R.I.B.A.; Raymond  
 Erith, R.A. F.R.I.B.A.; The Lord Esher, R.I.B.A.; Sir  
 Frederick Gibberd, C.B.E., A.R.A., F.R.I.B.A.; Sir  
 Leslie Martin, C.B.E.; Henry Moore, O.M., C.H.;  
 Prof. Sir Nikolaus Pevsner, C.B.E., Ph.D., F.S.A.;  
 John Piper; Peter Shephard, F.R.I.B.A.; Sir Basil  
 Spence, O.M., O.B.E., T.D., R.A., F.R.I.B.A.  
**Secretary**, Prof. F. Fielden, F.R.I.B.A.

### ROYAL FINE ART COMMISSION FOR SCOTLAND

22 Melville Street,  
 Edinburgh 3

[Edinburgh 225-5334]

**Commissioners**, The Lord Johnston, T.D. (*Chairman*);  
 J. A. Coia, C.B.E., R.S.A., F.R.I.B.A.; Sir Charles  
 Connell; W. A. Fairhurst, C.B.E.; N. Johnston,  
 R.S.A., F.R.I.B.A.; C. L. Mathew, F.R.I.B.A.; Prof.  
 Sir Robert Matthew, C.B.E., A.R.S.A., F.R.I.B.A.;  
 R. Philipson, R.S.A.; A. Reich, O.B.E., F.R.I.B.A.;  
 Mrs. Murray Usher; H. A. Wheeler, A.R.S.A.

### NATIONAL GALLERY

Trafalgar Square, W.C.2  
 [Whitehall: 7618-9]

*Hours of opening*.—Weekdays 10 to 6 (June-Sept.  
 Tuesdays and Thursdays 10 to 9), Sundays and  
 Boxing Day 2 to 6. Admission free. Closed on  
 Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parlia-  
 mentary grant of £60,000 in 1824 for the purchase  
 and exhibition of the Angerstein collection of  
 pictures, the present building being opened in 1838  
 and enlarged in 1876, 1887, 1911, 1928, 1930, 1937  
 and 1961. Expenses for 1968-69 were estimated at  
 £442,000.

#### TRUSTEES

Sir John Witt (*Chairman*); Henry Moore, O.M.,  
 C.B.; W. J. Keswick; Denis Mahon, C.B.E.; Prof.  
 W. V. Mayneord, C.B.E., F.R.S.; Andrew Forge;  
 John Piper; The Lord Robbins, C.B.; Sir Edward  
 Playfair, K.C.B.; Dame Veronica Wedgwood,  
 D.B.E.; Miss Mary Woodall, C.B.E., D.Litt, F.S.A.

#### OFFICERS

*Director*, Martin Davies, C.B.E. . . . . £5,625  
*Keeper*, M. V. Levey, M.V.O. . . . . £3,975 to £4,525  
*Deputy Keeper*, C. H. M. Gould £3,351 to £3,975  
*Assistant Keepers I*, G. Martin; A. Brahm

*Scientific Adviser to the Trustees*, R. H. G. Thomson  
 £2,146 to £3,490  
 £3,359 to £3,975

*Chief Restorer*, A. W. Lucas, O.B.E. . . . . £3,975  
*Administration*, G. Fox. . . . . £3,128 to £3,695

*Finance and Establishments*, R. H. Mitchem  
 £2,456 to £2,981

### NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2  
 [01-930-8511]

Open Monday to Friday 10 to 5. Saturday 10  
 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a  
 gallery of the portraits of the most eminent persons  
 in British history, the collections being successively  
 housed in Great George Street, Westminster, in  
 South Kensington, and in Bethnal Green. The  
 present building was opened in 1896, £80,000  
 being contributed to its cost by Mr. W. H.  
 Alexander; an extension erected at the expense of  
 Lord Duveen was opened in 1933. The amount  
 for salaries and expenses, including a grant of  
 £123,000 for purchase of portraits, was estimated at  
 £111,000 for 1969-70.

**Chairman**, The Lord Kenyon.

**Trustees**, The Lord President of the Council; The  
 President of the Royal Academy of Arts; Field-  
 Marshal Sir Gerald Templer, K.G., G.C.B.,

G.C.M.G., K.B.E., D.S.O.; R. W. Ketton-Cremer,  
 F.B.A., F.S.A.; Lawrence Gowing, C.B.E.; The Earl  
 of Euston, F.S.A.; J. H. Plumb, Ph.D., Litt.D.,  
 F.B.A., F.S.A.; A. D. Powell, C.B.E.; The Very Rev.  
 S. J. A. Evans, F.S.A.; Sir Gyles Isham, Bt., F.S.A.;  
 The Viscount de l'Isle, P.C., K.G., P.C., G.C.M.G.,  
 G.C.V.O.; Sir John Summerson, C.B.E., F.B.A.,  
 F.S.A.; Dame Helen Gardner, D.B.E., F.B.A.; C. S.  
 Cockerell, C.B.E.; The Countess of Longford.  
*Director, Keeper and Secretary*, R. C. Strong, Ph.D.,  
 F.S.A. . . . . £4,830  
*Assistant Keepers (I)*, J. F. Kerslake, F.S.A.; R. L.  
 Ormond. . . . . £2,000 to £3,330

### TATE GALLERY

Millbank, S.W.1

[01-828-4444]

*Hours of opening*.—Weekdays 10 to 6. Sundays  
 and Boxing Day 2 to 6. Admission free, except to  
 temporary exhibitions. Closed on Good Friday,  
 Christmas Eve, and Christmas Day.

The Tate Gallery comprises two national art  
 collections: (a) British painting, from the 16th  
 century to the present day, including works by  
 Turner, Blake, Constable and the Pre-Raphaelites;  
 (b) Modern Foreign Painting, from the Impres-  
 sionists, and Modern Sculpture, British and  
 foreign. There is an almost continuous pro-  
 gramme of temporary exhibitions within the field  
 of the collection. The Gallery was opened in  
 1897, the cost of erection (£80,000) being de-  
 frayed by Sir Henry Tate, who also contrib-  
 uted the nucleus of the present collection. The  
 Turner Wing, built at the expense of Sir  
 Joseph Duveen and his son, Lord Duveen, was  
 opened in 1920. Lord Duveen also defrayed the  
 cost of galleries to contain the collection of modern  
 foreign painting, completed in 1926, and a new  
 sculpture hall, completed in 1937. Expenses for  
 1968-69 were estimated at £322,000.

*Director*, N. R. Reid. . . . . £5,080

*Keeper of the British Collection*, M. R. F. Butlin  
 £3,850 to £4,400

*Keeper of the Modern Collection*, R. E. Alley  
 £3,850 to £4,400

*Keeper of Conservation*, S. Slabczynski. . . . . £3,850

*Deputy Keeper*, Mrs. J. Jeffreys. . . . . £3,234 to £3,850

*Assistant Keepers (Class I)*, M. G. Compton; R.  
 E. Morphet; L. A. Parris. . . . . £2,021 to £3,365

*Establishment Officer*, M. B. G. Botley  
 £2,331 to £2,856

### WALLACE COLLECTION

Hertford House, Manchester Square, W.1

[01-935-0687]

Admission free. Open on weekdays 10 a.m. to  
 5 p.m.; Sundays a.p.m. to 5 p.m. Closed on Good  
 Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the  
 nation by the widow of Sir Richard Wallace, Bt.,  
 K.C.B., M.P., on her death in 1897, and Hertford  
 House was subsequently acquired by the Govern-  
 ment. The collection includes pictures, drawings  
 and miniatures, French furniture, sculpture, bronzes,  
 porcelain, armour and miscellaneous *objets d'art*.  
 The total net expenses were estimated at £83,000 in  
 1968-69.

*Director*, F. J. B. Watson, C.V.O., F.S.A. . . . . £4,400

*Assistant Directors*, R. A. Cecil; A. V. B. Norman,  
 F.S.A.(Scot.). . . . . £2,011 to £3,205

### NATIONAL GALLERIES OF SCOTLAND

Mound, Edinburgh

[031-225-6824]

*Comprising*—

*National Gallery of Scotland*, Mound, Edinburgh, 1.  
*Scottish National Portrait Gallery*, Queen Street,  
 Edinburgh 2.

*Scottish National Gallery of Modern Art*, Inverleith

House, Royal Botanic Gardens, Edinburgh, 4.

*Director of the National Galleries of Scotland*, David K.  
 Baxandall, C.B.E. . . . . £4,950

Chief Restorer, H. R. H. Woolford	£3,16 <sup>n</sup> to £3,706
Keeper of Paintings, C. E. Thompson	£3,234 to £3,850
Keeper of Prints and Drawings, K. K. Andrews	£3,234 to £3,850
Keeper, Scottish National Portrait Gallery, Robert E. Hutchison. (+ allee. £250)	£2,021 to £3,365
Assistant Keeper, Scottish National Portrait Gallery, D. Thomson	£2,021 to £3,365
Keeper, Scottish National Gallery of Modern Art, W. D. Hall. (+ allee. £250)	£2,021 to £3,365
Secretary Accountant and Establishment Officer, I. F. Hunter	£2,331 to £2,856

(For other British Art Galleries, see Index.)

### UNITED KINGDOM ATOMIC ENERGY AUTHORITY

ix Charles II Street, S.W.1  
[10-930-6262]

Established by the Atomic Energy Authority Act, 1954, the Authority took over, on August 1, 1954, the control of atomic energy research and development. The Minister of Technology is responsible to Parliament for general atomic energy policy and for money provided for the Authority.

The Authority is organized in groups, as shown below:—

(a) *the Research Group.* The Research Establishment at Harwell, Berks., conducts fundamental research into nuclear physics and atomic energy and provides information to the other establishments. It includes the Education and Training Centre. Thermonuclear research is now concentrated at Culham. New uses of radioisotopes are investigated at Wantage.

(b) *the Weapons Group.* Research work on atomic weapons is carried on at the Research Establishment, Aldermaston, Berks.

(c) *the Reactor Group.* Responsible for the design, construction and development of nuclear power reactors, and controls the Dounreay Experimental Reactor Establishment in Caithness and the Atomic Energy Establishment at Winfrith, Dorset. It also acts as engineering consultant for the Electricity Boards, overseas organizations and the British Consortia formed for the building of nuclear power stations. Headquarters are at Risley, Lancs.

(d) *the Production Group.* Responsible for the operation of the nuclear reactors at Calder Hall and Chapelcross and for management of the uranium and plutonium production factories at Springfields in Lancashire, Windscale in Cumberland, and Capenhurst in Cheshire.

Chairman, Sir John Hill, Ph.D. . . . . £11,000  
Deputy Chairman, Sir Charles Cunningham, K.C.B., K.B.E., C.V.O. . . . . £10,000  
Members (Full-time), Dr. H. Kronberger, C.B.E. F.R.S. (Reactors); Air Chief Marshal Sir Denis Barnett, G.C.B., C.B.E., D.F.C. (Weapons)

each £7,000 to £9,500  
(Part-time) Sir Frank Kearton, O.B.E., F.R.S.; S. J. Pears; The Lord Carron. each £1,000;  
J. C. Duckworth; E. S. Booth, F.R.S. (unpaid).

Secretary, D. E. H. Peirson, C.B.E.

### BRITISH AIRPORTS AUTHORITY

### BRITISH OVERSEAS AIRWAYS CORPORATION

Speedbird House, Heathrow Airport,

Hounslow, Middlesex

[01-759-3511]

Established in 1939, British Overseas Airways

Corporation acquired, on April 1, 1940, the air

transport undertakings of Imperial Airways and

British Airways, which had been at the disposal of

the Secretary of State for Air since the outbreak

of war.

B.O.A.C. is the larger of the two Government

Corporations which are charged with the task of

developing and operating British scheduled air transport services under the provisions of the Air Corporations Act, 1967. It operates round-the-world services and services to Africa, the Middle and Far East, Australia and New Zealand, and North and South America.

The members of the Corporation are appointed by the President of the Board of Trade.

*Chairman, C. E. M. Hardie, C.B.E. (part-time)* £5,500

Peel; Miss J. Stanton; C. E. Plant; G. Duffet;

S. H. Way . . . . . £2,345 to £2,845

## CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

[or-930-5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836). The Commissioners have three main tasks:—

(1) the management of their capital assets so that they may earn income;

(2) the proper distribution of that income; and

(3) the discharge of a large number of administrative duties conferred on them by Acts of Parliament and Measures of the Church Assembly.

The Commissioners' income for the year ended March 31, 1969, was derived from the following sources:—

Stock exchange investments . . . . .	£12,416,590
Land and property . . . . .	6,392,206
Mortgages and loans . . . . .	2,994,934
Money received for particular beneficiaries . . . . .	1,476,229
	<hr/>
	£23,279,959

This income was used as follows:—

Clergy stipends and pensions . . . . .	£16,703,802
Clergy houses (maintenance, outgoings, provision and improvement) . . . . .	2,625,421
Other church property . . . . .	553,177
Other grant schemes . . . . .	132,687
Added to capital to improve future income . . . . .	1,244,640
Administration . . . . .	1,093,062
General reserve (to be used for major schemes) . . . . .	927,170
	<hr/>
	£23,279,959

## Constitution

The 2 Archbishops, the 41 diocesan Bishops, 5 deans, 10 other clerics and 10 laymen appointed by the Church Assembly; 4 laymen nominated by the Queen; 4 persons nominated by the Archbishop of Canterbury; The Lord Chancellor; The Lord President of the Council; the First Lord of the Treasury; The Chancellor of the Exchequer; The Secretary of State for the Home Dept.; The Speaker of the House of Commons; The Lord Chief Justice; The Master of the Rolls; The Attorney-General; The Solicitor-General; The Lord Mayor and two Aldermen of the City of London; The Lord Mayor of York and one representative from each of the Universities of Oxford and Cambridge.

Messrs. Clutton, 5 Great College Street, Westminster, S.W.1; Messrs. Smiths Gore, Dean's Court, Minster Precincts, Peterborough; Messrs. Chesterton & Sons, 116 Kensington High Street, W.8.

CIVIL SERVICE DEPARTMENT

Whitehall, S.W.1 (01-839-7733)
The Civil Service Department was set up on November 1, 1968 and took over from the Treasury responsibilities for the management of the Civil Service. The department is headed by the Prime Minister, who is Minister for the Civil Service, and under him the Lord Privy Seal controls the day to day management of the Department. The Civil Service Department's primary functions are the pay and management of the Civil Service and the co-ordination of government policy on pay and pensions throughout the public sector. In particular the Department has central responsibility for personnel management, including training and career management; manpower requirements and the development and dissemination of administrative and managerial techniques. The Civil Service Commission (which was first constituted by Order in Council in 1855) now forms part of the Department but retains its independence and impartiality in the selection of recruits for posts in the Civil Service.

COMMONWEALTH DEVELOPMENT CORPORATION

33 Hill Street, W.1 [01-629-8484]

The Corporation was formerly known as the Colonial Development Corporation. The change of name was effected by the Commonwealth Development Act, 1963, which also restored the Corporation's full powers of operation in all those countries which had achieved independence within the Commonwealth since 1948.

Under the original Overseas Resources Development Act of 1948 the Corporation was charged with securing development in dependent Commonwealth territories at that date with a view to increasing their general productive capacity and trade. It is authorised to borrow up to £160,000,000.

- Chairman (part-time), The Lord Howick of Glendale, G.C.M.G., K.C.V.O. .... £6,500

[01-935-5533]

The Countryside Commission was set up under the Countryside Act, 1968. It has absorbed the National Parks Commission, taking over the duties of that body under the National Parks and Access to the Countryside Act, 1949, and having in addition a wider range of advisory and executive functions relating to the whole of the countryside and coast. Members of the Commission are appointed by the Minister of Housing and Local Government and the Secretary of State for Wales acting jointly. The Commission reports annually to the Ministers and the report is laid before Parliament.

The Countryside Commission is entrusted with the task of designating National Parks and areas of outstanding natural beauty in England and Wales. The former must be extensive tracts of country affording facilities for open-air recreation. The Parks are administered by Local Planning Authorities, subject to general supervision by the Parks Commission. Ten National Parks, covering in all some 5,258 square miles and, 25 areas of outstanding natural beauty have been established. For main article, see Index.

The Commission is also required to report to the Minister of Housing and Local Government or the Secretary of State for Wales on long-distance footpaths or bridleways, along which there will be continuous right of way for walkers and riders, e.g., the Pennine Way and the Cleveland Way; to make representations to Ministers or Local Planning Authorities on any proposed development likely to be prejudicial to the natural beauty of any area in England and Wales; and to provide information services for the public.

Under the new Act the Commission keeps under review all matters relating to the provision and improvement of facilities for the enjoyment of the countryside, the conservation and enhancement of its natural beauty and amenity and the need to secure public access for open-air recreation.

Chairman (vacant) .....	£2,500

Director, J. Foster.

Secretary, M. Holton.

Asst. Directors, T. Huxley (Resource Management); D. Aldridge (Information and Conservation Education)

## COVENT GARDEN MARKET AUTHORITY

Bedford Chambers, Covent Garden, W.C.2.

[01-240-2311]

The Covent Garden Market Authority is constituted under the Covent Garden Market Acts, 1961 to 1969, the members being appointed by the Ministry of Agriculture, Fisheries and Food. The Authority owns 6½ acres of land at Covent Garden comprising five central market buildings used for wholesale trading in horticultural produce; and other property including five blocks of offices. It is charged with the duty of building a new market on a site of about 60 acres at Nine Elms in the Boroughs of Wandsworth and Lambeth, and of securing the expeditious and economic development or disposal of its Covent Garden lands. The Authority is empowered to borrow capital up to £45,000,000.

Chairman, Sir Henry Hardman, K.C.B.

Members, W. M. Balch; R. G. E. Jarvis; J. W. Rodden, C.B.E.; Sir Harold Samuel; Sir Alex Samuels, C.B.E. (Nominated by the Minister of Transport); W. J. Tudor.

General Manager, C. M. G. Allen.

Assistant General Manager, L. T. G. Sully, C.B.E.

Secretary, C. H. Bates.

CROWN AGENTS FOR OVERSEA  
GOVERNMENTS AND ADMINISTRATIONS

4 Millbank, S.W.7

[01-222-7730]

The Crown Agents are the officially appointed business and financial agents of a large number of Governments and public authorities. These include independent Governments such as Bahrain, Brunei, Ceylon, Cyprus, Gambia, Guyana, Jamaica, Jordan, Kenya, Libya, Malaysia, Malta, Mauritius, Nigeria, Sierra Leone, Singapore, Tanzania, Trinidad, Uganda, Western Samoa and Zambia and all the territories overseas under British administration or trusteeship. Other authorities for whom they act include the United Nations, many railway, transport, broadcasting, telecommunications and electrical undertakings, port commissions, universities, currency boards and local government authorities, in addition to many development and research bodies. The office is not a Department of the United Kingdom Government, and no vote for it comes before the United Kingdom Parliament. It is self-supporting, its funds being derived from fees charged to its principals from whom instructions are received direct. The Crown Agents do not act for private individuals or commercial concerns.

The work of the Crown Agents' office includes the purchase, inspection, shipment and insurance of engineering plant and equipment and of stores of all kinds; the design of engineering structures; the issue and management of loans and the investment of funds; the payment of salaries to officers on leave; the engagement of staff for certain oversea Government appointments; the booking of passages for Government officers and their families; and many other functions.

Chairman, C. J. Hayes, C.M.G.

Crown Agent, E. A. Morris, C.M.G., O.B.E.

## CROWN ESTATE COMMISSIONERS

Whitehall, S.W.1

[01-839-2211]

Mount Lane, Bracknell, Berks.

[0844 20321]

THE CROWN ESTATE (formerly The Crown Lands).—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III surrendered them and received a fixed annual payment or *Civil List*. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1969, the total Receipts by the Commissioners were £5,992,843. The Expenditure was £1,980,052. The sum of £4,050,000 was paid to the Exchequer in 1968-69 as *Surplus Revenue*, being a net sum from which no deductions have to be made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, ■ regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

## BOARD OF CUSTOMS AND EXCISE

King's Beam House, Mark Lane, E.C.3

[01-626-1515]

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" in the Custom House, Lower Thames Street, E.C.3, replacing that built by Charles II and rebuilt after destruction by fire in 1718 and 1814. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on April 1, 1909.

Deputy Receiver, G. A. Briggs.

Sheriff (1969-70), B. E. Penrose.

#### THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.2

[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1265. Edward III. erected Lancashire into a County Palatine in 1351.

Chancellor of the Duchy of Lancaster, THE RT. HON.

FREDERICK LEE, M.P. .... £9,750

Parliamentary Private Secretary, W. W. Small, M.P.

Private Secretary, C. L. L. Braun.

Attorney-General and Attorney and Serjeant within

the County Palatine of Lancaster, Sir Milner

Holland, K.C.V.O., C.B.E., Q.C.

Clerk of Council and Keeper of Records, Sir Robert Somerville, K.C.V.O.  
 Solicitor, C. R. Crockett.  
 Chief Clerk, E. R. Wheeler, C.V.O., M.B.E.  
 Registrar, Lancashire Chancery Court, R. A. Forrester, C.V.O.

**COURT OF CHANCERY OF THE COUNTY PALATINE OF DURHAM**

Registrar's Chambers, Saddler Street, Durham  
 It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I., in reorganizing his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Norham and Islandshire (roughly the northern quarter of Northumberland) and Bedlingtonshire. Palatine rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of co-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers on behalf of the Crown.  
 Chancellor, H. E. Francis, Q.C.  
 Attorney-General, R. Lyons, Q.C.  
 Solicitor-General (vacant).  
 Registrar of Chancery Court, H. Curry, D.R.C.

**DEPARTMENT OF ECONOMIC AFFAIRS**

Storey's Gate, S.W.1  
 [01-839-7848]

Assistant Secretary, E. Pendlebury £4,045 to £5,200  
 Information  
 Chief Information Officer, K. D. McDowall £4,045 to £4,950

**DEPARTMENT OF EDUCATION AND SCIENCE**

Curzon Street, W.1  
 [01-493-7070]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. In April 1964 the office of the Minister of Science was combined with the Ministry to form the Department of Education and Science. The cost of administration for the financial year 1969-70 was estimated at £8,720,000.

Secretary of State for Education and Science, THE RT. HON. EDWARD WATSON SHORT, M.P. .... £8,500

Secretary, D. L. McDonald.	

### DEPARTMENT OF EMPLOYMENT AND PRODUCTIVITY

8 St. James's Square, S.W.1.

[01-930-6200]

The Department of Employment and Productivity was created in April 1968. It provides a free service, through a national network of employment exchanges, for employers seeking labour and for

workers who are unemployed or wish to change their jobs. The exchanges also act as agencies for other Government Departments in such matters as the payment of unemployment benefit and the issue of passports.

The Department is responsible for the administration of the *Redundancy Payments Act, 1965*, the *Industrial Training Act, 1964* and the *Selective Employment Payments Act, 1966*. In Government Training Centres, courses are provided to help persons in need of training and retraining, and to reduce shortages of skilled labour. Through its 22 Industrial Rehabilitation Units, the department helps disabled and handicapped men and women to regain working fitness. It is also responsible for the central, and some local, administration of the Youth Employment Service; the promotion of safety, health and welfare amongst workpeople in offices, shops, some railway premises, and in factories, etc.; the enforcement of statutory minimum wages, holidays and hours of work laid down by Wages Councils; and the collection and publication of statistics about manpower, wages, hours of work, and the index of retail prices.

The department, through its advisory and conciliation services, assists in the prevention or settlement of industrial disputes and the promotion of good management/employee practices and increased security at work. Its activities overseas include the maintenance of labour attachés in certain foreign countries and liaison with the International Labour Organisation.

First Secretary of State and Secretary of State for Employment and Productivity, THE RT. HON. BARBARA ANNE CASTLE, M.P. .... £8,500
