The battle against pain...

ARTHRITIS RESEARCH

☐ THE SAD SITUATION

One million people suffer from Arthritis; a further 2 million people over 65 years of age experience pain which is a daily and intolerable burden.

☐ HOW YOU CAN HELP

Please help by contributing to the fund. We are entirely dependent on voluntary contributions and legacies from individuals and the Council.

THE ARTHRITIS

AN

Almanack

For the Year of Our Lord

1977

ESTABLISHED 1868

BY

JOSEPH WHITAKER, F.S.A.

CONTAINING AN ACCOUNT OF THE

ASTRONOMICAL AND OTHER PHENOMENA

AND

A vast Amount of INFORMATION respecting the
GOVERNMENT, FINANCES, POPULATION,
COMMERCE, and GENERAL STATISTICS of
the various Nations of the WORLD
with an INDEX containing

nearly 20,000

References

LONDON

OFFICE: 13, BEDFORD SQUARE

LONDON WC1B 3JE

PRINTED IN GREAT BRITAIN

PREFACE TO THE 109TH ANNUAL VOLUME (1977)

In the 109th volume of "WHITAKER", the Editor, despite increasing pressure on space, has endeavoured to preserve as many as possible of the traditional features of the Almanack, while introducing matters of particular topical interest, to which he would call attention.

The changes consequent upon Sir Harold Wilson's resignation as Prime Minister, and his succession by Mr. Callaghan, are noted, and Mr. Callaghan's subsequent reconstruction of his Ministry in September is fully recorded, with other late information, in the section of "Occurrences during Printing".

The Queen crossed the Atlantic during the summer to attend ceremonies connected with the bicentenary of American independence and to open the Olympic Games in Montreal. Both these events are dealt with in the Almanack—the bicentenary by a special article, and the Olympic Games by a number of illustrations and a complete list of gold medallists, both at Montreal and in the winter games at Innsbruck.

Another Topic of the Year, about which an authoritative article has been supplied, has been the drought of 1976. The summer was almost unprecedented for long, dry weather, though it is interesting to observe that the very first edition of the Almanack recorded that the previous summer, 1868, had been one of almost tropical heat.

The annual article on Science, Discovery and Invention has been somewhat altered in concept, and has been renamed Science, Discovery and the Environment. The intention has been to widen the scope of topical information with which it deals, and also to give additional news of astronomy, a subject with which the Almanack has always been closely connected. The most important astronomical feature of the year has been the landings on Mars, which have been fully described, and of which there is an illustration.

As an adjunct to the section detailing the recent local government changes, a map of Scotland, showing the newly designated areas, has been supplied.

In such a wonderful summer, cricket flourished exceedingly, and large crowds were attracted to the Test Matches. The West Indies' successful retention of the Wisden Trophy is suitably marked among the illustrations.

Each year, constitutional advances in different parts of the world take place. On this occasion, within the Commonwealth, the independence of the Seychelles and Papua New Guinea is recorded, and the Gilbert and Ellice Islands have become two separate countries under the names of the Gilbert Islands and Tuvalu.

The Editor wishes yet again to express his gratitude to his many correspondents. The help and information which they continue so willingly to give is of the greatest value.

TAKE UP PELMANISM

For Courage and Clear-Thinking

The Grasshopper Mind

YOU know the people with "Grasshopper Minds" as well as you know yourself. Their minds nibble at every thing and master nothing.

At home in the evening they tune in the radio or television—tire of it—then glance through a magazine—can't get interested. Finally, unable to concentrate on anything, they either go to the pictures or fall asleep in the chair. At their work they always take up the easiest job first, put it down when it gets hard and start something else. Jump from one thing to another all the time.

There are thousands of these people with "Grasshopper Minds" in the world. In fact they are the very people who do the world's most tiresome tasks—and get but a pittance for their work. They do the world's clerical work and the routine drudgery.

If you have a "Grasshopper Mind" you know that this is true. Even the blazing sun can't burn a hole in a piece of tissue-paper unless its rays are focused and concentrated on one spot! A mind that balks at sticking to one thing for more than a few minutes surely cannot be depended upon to get you anywhere in your years of life!

What Can You Do About It?

Take up Pelmanism now! A course of Pelmanism brings out the mind's latent powers and develops them to the highest point of efficiency. It develops strong, positive, vital qualities such as Optimism, Concentration, and Reliability, all qualities of the utmost value in any walk of life.

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian without translation. Write for particulars of the language that interests you, which will be sent to you free.

Pelman Languages Institute,
200 Tudor House, 9 Chiswick High Rd.,
London W4 2ND

What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

But Pelmanism does more than eliminate failings. It awakens dormant faculties. It develops powers you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops:—

—Optimism	—Observation
—Perception	—Initiative
—Judgment	—Originality
—Self-Control	—Reliability
—Concentration	—Will-Power
—Mental Energy	—Personality
—Self-Confidence	—Resourcefulness
—Reliable Memory	—Presence of Mind

Pelmanists are not left to make the applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

Remember—Everything you do is preceded by your attitude of mind

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.

Send for the Free Book

Write to-day for a free copy of "*The Science of Success*." This will give you full details of the Course, which is private, individual to each Pelmanist, and carried out by correspondence, in your spare time, at moderate fees payable—if you like—by instalments.

THE STAR AND GARTER HOME

**for Disabled Sailors, Soldiers and Airmen
Richmond, Surrey**

NEEDS HELP

*by donation or legacy to maintain a true home with
medical and nursing care for up to 200 disabled
ex-servicemen of all ages and from all parts of the
British Isles.*

*(The Home, founded in 1916, is an independent
registered charity. Further information available
from the Secretary. Telephone 01-940 3314.)*

SOCIETY FOR THE ASSISTANCE OF LADIES IN REDUCED CIRCUMSTANCES

(FOUNDED BY THE LATE MISS SMALLWOOD)

Patron: HER MAJESTY THE QUEEN

**This Society is entirely supported by Voluntary
Contributions**

Inflation is the enemy of the aged, many of whom are existing on small fixed incomes. We appeal for your help to enable us to continue giving financial assistance to the many ladies aided by our Society. A Donation, Subscription or Bequest would help to relieve the distress endured by so many in these difficult times.

New Annual Subscriptions will be thankfully received.

Please make cheques payable to:

THE TOLL OF THE SEA

Last year this Society cared for 152 survivors from 25 vessels and gave IMMEDIATE RELIEF to 25 dependants of men lost at sea during that period. 4,419 persons were assisted, of whom over half were widows and orphans of seamen and fishermen. Relief expenditure was £120,900, of which over £55,000 was expended in Scotland.

Please help with a legacy or donation

**SHIPWRECKED Fishermen and
MARINERS' Royal Benevolent
SOCIETY (W.A.)**

1 North Pallant, Chichester, W. Sussex PO19 1TL

Tel: (0243) 87761

PATRON: HER MAJESTY THE QUEEN

THE ROYAL NAVAL BENEVOLENT TRUST

FISHERMEN'S MISSION

SERVING AND CARING

Patron: H.M.
THE QUEEN

For shipwrecked, sick, distressed, disabled,
retired and sea-going fishermen, their wives,
widows and children

THIS IS OUR BUSINESS

Will you share in this ministry by sending a generous donation to:

**ROYAL NATIONAL MISSION TO DEEP SEA FISHERMEN
43 NOTTINGHAM PLACE, LONDON W1M 4BX**

Chairman:

ADMIRAL SIR CHARLES MADDEN,
Bt., G.C.B., D.L.

Secretary:

J. C. LEWIS, Esq.,
O.B.E, J.P., F.C.I.S.

**95 YEARS CONSTANT SERVICE TO FISHERMEN AND THEIR
FAMILIES**

THE ROYAL NATIONAL PENSION FUND FOR NURSES

Patron: Queen Elizabeth The Queen Mother

For over 80 years The Royal National Pension Fund has helped thousands of nurses who hold policies to achieve independence in their retirement.

However, there are many nurses who failed to make provision through the fund for their retirement, and many more were unable to do so.

These nurses are helped as far as finance allows by our associated charitable organisations.

The Nurses' Memorial to King Edward VII provides subsidised residential accommodation for those no longer able to care for themselves.

The Junius S. Morgan Benevolent Fund alleviates hardship in individual cases by the payment of cash grants or annuities.

Will you help us to meet the expanding need? Both these charities will warmly welcome cash gifts, deeds of covenant or bequests at Burdett House, 15 Buckingham Street, London WC2.

A charity which helps all the blind.

By supporting the RNIB, your clients ensure that their residuary and pecuniary bequests and annual Deeds of Covenant go towards helping not just some, but all of Britain's 120,000 blind people. Providing help through education, training, rehabilitation, residential care, braille and recorded literature, research into blindness and many other services.

RNIB

ROYAL NATIONAL INSTITUTE FOR THE BLIND

224 GREAT PORTLAND STREET, LONDON W1N 6AA

Under the Finance Act 1975, bequests to charities up to a total of
£100,000 are exempt from Capital Transfer Tax.

Registered in accordance with the National Assistance Act 1948.

They're on the right road

thanks to The Royal London Society For The Blind

Confidently Mark and Shaun start on their way through life but they face one huge obstacle: they are blind. At our Dorton House School these two boys will get the start they need, and deserve.

But their special education and training will be expensive — and we desperately need your help to ease the burden of rising costs.

Please send us a donation; it will be most gratefully received.

THE ROYAL LONDON SOCIETY FOR THE BLIND

Patron: Her Majesty The Queen

WA 105/9 Salusbury Road, London NW6 6RH

(Registered in accordance with the National Assistance Act 1948 and Charities Act 1960)

ROYAL ALFRED MERCHANT SEAMEN'S SOCIETY

Patron H.M. the Queen. Established 1865.

We need your help to keep afloat. The Royal Alfred relies on donations and legacies to continue its work for those in distress.

The Society's activities include *A Home for Retired Officers and men of the Merchant Navy and Fishing Fleets at Belvedere, Kent. *A Home for Widows of Officers and men at Eastbourne, Sussex. *Flatlets for Retired Seafarers and their Widows at Banstead, Surrey. Cash grants to Officers and men, their Widows and dependants, if in need. The Society also helps war-time serving Seamen now in need.

Please send a donation quoting ref: 'WA', General Secretary.

D. J. Lafferty, M.B.E., C.St.J., M.I.S.W. "Western Acres",
Woodmansterne Lane, Banstead, Surrey. Tel: Burgh Heath 52231/2.

On average, people leave us £10,000 a month. This is why we feel entitled to ask for more.

We have some 250 patients of all ages, all suffering from illnesses which are as yet, incurable.

It costs us a great deal of money to run our Hospital and its residential annexe at Brighton. A lot of this comes from our patients (they all pay something), their sponsors, their relatives and our investments.

The balance must come from voluntary contributions. And that includes legacies.

This is why we feel privileged to ask you to consider leaving us some money.

Research.

We refuse to accept that disabled people cannot be helped or that illnesses at present incurable will not one day be cured.

For this reason we have made special provision for research in the Development Trust for the Young Disabled. Research to help the disabled everywhere. *Research that one day will cure the incurable.*

Today our own patients may be incurable, but they refuse just to sit around. We help them lead as full a life as possible, and with us, many make remarkable progress.

Our New Wing, which is being built for younger disabled patients, will have the sort of accommodation other, luckier, young people have.

And so, we are asking you to remember us in your will. Up to £100,000 left to a charity is free of tax. Your estate and our patients could both benefit. And your money would be used for a very *hopeful* cause.

Appeals Secretary:

Air Commodore D. F. Rixson, OBE., DFC., AFC.

The Royal Hospital and Home for Incurables
(Putney and Brighton),

Sharon is happy - and independent *she wasn't always*

Sharon has had malformed limbs since birth, leaving her with very little use of her arms - a daunting prospect for a young girl. She was educated at a Special School, and then - when she was sixteen - Queen Elizabeth's Foundation for the Disabled took over, trained her and gave her a job at Dorincourt, where she is an expert tile painter, holding the brush in her mouth. She operates her own specially adapted typewriter and swims every week at the Leatherhead Leisure Centre. With special aids to help her, she is now almost totally independent. And Sharon is happy -

because she knows she is leading a useful life.

Dorincourt is one of four centres run by Queen Elizabeth's Foundation: the other three provide assessment and further education for school leavers; vocational training for employment in industry and commerce; and a very special holiday and convalescent home. Nearly 1,000 disabled people look to the Foundation for help each year.

The cost of our developing programme is very great, and we urgently want to be able to help even more people.

THAT IS WHY YOUR HELP WILL MEAN SO MUCH

Queen Elizabeth's Training College.
Banstead Place. Dorincourt. Lulworth Court.

Queen Elizabeth's Foundation for the Disabled

6 Leatherhead Court,
Leatherhead, Surrey KT22 0BN.

Pearson's Fresh Air Fund

Patron: HER MAJESTY THE QUEEN

Please help some of the thousands of needy or neglected children in Britain to be as happy as these.

£3 will ensure a week's holiday for a child in the country or at the seaside

PLEASE ALSO REMEMBER CHILDREN IN YOUR WILL

Donations to:

112 REGENCY STREET, LONDON, SW1P 4AX

We need much more than luck to save this child...

Not much wrong with him, you'd say.

A beautiful child.

But in his arms, his legs, everywhere in his body, muscular dystrophy is taking its ever-growing toll.

Last year he was unable to run.

This year he has difficulty in standing.

All too soon he will be so weakened that even the most simple of infections may prove fatal.

This is Muscular Dystrophy. As yet there is no answer. And without continuous research there never will be.

THE ANSWER MUST BE FOUND.

Please help us to help the utterly helpless.

Muscular Dystrophy Group

OF GREAT
BRITAIN.

MULTIPLE SCLEROSIS STRIKES IN YOUNG ADULT LIFE—

often at the time of maximum family commitment

and there are 46,000 sufferers in the United Kingdom

Multiple Sclerosis is the most common disease of the central nervous system. It can progressively paralyse and affect movement, speech and sight. M.S. is not hereditary, infectious or contagious but accounts for one-third of the young chronic sick, afflicting 1 in every 1,200 people in this country.

**PLEASE HELP THROUGH ANY OF OUR 269 BRANCHES,
OR BY SENDING US A DONATION FOR RESEARCH**

THE MULTIPLE SCLEROSIS SOCIETY
of Great Britain and Northern Ireland

4 Tachbrook Street, London SW1V 1SJ
Tel: 01-834 8231

KING GEORGE'S JUBILEE TRUST

Patron:
**HER MAJESTY
THE QUEEN**

The Trust exists for the benefit of young people in the United Kingdom. It makes grants to voluntary youth organisations, and aids pioneer projects for youth.

Its experience over the years ensures that funds are used to the best advantage. Since its foundation in 1935, grants of more than £3.15 million have been made.

Young people need challenge, opportunity, and leadership, to encourage a sound sense of values and responsibility. Towards these objectives the Trust devotes its funds and energies.

**Please support this constructive work by a donation,
covenant or bequest.**

PEOPLE HAVE PROBLEMS,

and seamen aren't unique because they have problems too. But when you're away from home for nine months at a time, problems can sometimes snowball. And when they get too much to handle, that's where we come in. We can't give you case histories for obvious reasons, but our chaplains are experienced counsellors, and seamen come to us because they know we care. We care because we're Christians called to serve—do you care enough to help us?

The Missions to Seamen,
St. Michael Paternoster Royal,
College Hill, London EC4R 2RL

have you a

willing

disposition?

As a result of the generosity of warm-hearted people, particularly those who have bequeathed money or property to us, 34 Methodist Homes for the Aged have been opened caring for over a thousand elderly people. There is still a continuing and growing need . . .

why not speak to
your solicitor or
ask us for our
bequest leaflet?

we can
meet the need
if you will

A Charitable Bequest or Donation means so much...

It costs so little to make so many happy—to help us continue the work we began back in 1857. Today more than ever we need to think of others, and what better way than by the making of a Charitable Bequest.

Costs continue to rise yet we have been able to improve and advance the working and living standards of the blind people over the past years. Please recommend us for consideration to your clients and so assure the future.

London Association For The Blind

Patron HRH Princess Alexandra,
the Hon Mrs Angus Ogilvy GCVO

**A NATIONAL CHARITY
FOUNDED 1857**

Registered in accordance with the
National Assistance Act 1948 and

FOR CLERGY IN RETIREMENT

The HOMES OF ST. BARNABAS provide in lovely country a really happy and secure old age for some 40 retired Anglican Clergy. Each has his comfortable quarters and full use of the fine library and common rooms. There are Chapels where those who are able to do so conduct the Services. There is an infirmary wing under a S.R.N. Few residents can pay their full share of expenses. Please help to fill the gap by

LEGACY · COVENANT · DONATION

Full particulars from: **The Warden,
Homes of St. Barnabas, Blackberry Lane,
Lingfield, Surrey, RH7 6NJ**

FIGHT BACK AGAINST CANCER

It is good to remember that most people live their lives untouched by any form of cancer.

But as all too many are aware, cancer is something that casts its shadow far beyond those it directly affects. That is why so many people think it right to help the urgent work of the Imperial Cancer Research Fund.

From our discoveries in the past has come much of today's hope for sufferers. To go forward with our research for future alleviation, we ask your help in the present.

Donations will be most gratefully received by The Appeals Secretary, Room 179/2, P.O. Box 123, Lincoln's Inn Fields, London WC2A 3PX

MONEY DOES GOOD AT GUY'S

The Endowment Fund of Guy's Hospital provides new buildings, refurbishes old ones, furnishes extra facilities for research projects, and makes it possible for doctors, nurses and other staff to have not only better working conditions, but better living conditions as well.

Guy's is a great and famous hospital. It's the people who work there who make it so. A legacy, a gift, or a covenant is the best way to thank them for the work they do. Please help us by showing this advertisement to your Clients.

For further details, write to:

**The Clerk to the Special Trustees,
The Endowment Fund of Guy's Hospital,
Guy's Hospital, London SE1 9RT.**

FRIENDS OF THE ELDERLY AND GENTLEFOLK'S HELP

(Formerly The Friends of the Poor & Gentlefolk's Help)

(Founded 1905)

42 EBURY STREET, LONDON, SW1W 0LZ

Royal Patrons :

HER MAJESTY THE QUEEN

HER MAJESTY QUEEN ELIZABETH THE QUEEN MOTHER

President :

H.R.H. THE PRINCESS MARGARET Countess of Snowdon

General Secretary :

Miss P. M. LETHBRIDGE

The work of this Society for the elderly and sick—and the administration of twelve Homes for Gentlepeople, with nursing care—depends on
GIFTS AND LEGACIES.

SO MUCH STILL TO BE DONE

for the hundreds of elderly people from all parts of the country—lonely, living in distressing circumstances—who are waiting and hoping that we can accommodate them soon in self-contained flatlets of their own.

Time for them is running out fast!

We have the skill, experience and desire to provide still more self-contained flatlets, where the elderly can live independent, secure and comfortable lives.

But tomorrow may be too late. We need your help now.

Only the unceasing flow of legacies, gifts and covenants will enable us to continue to provide this vital housing need.

PLEASE REMEMBER US AND THE ELDERLY
IN YOUR WILL

The Secretary (W.A.),

FELLOWSHIP HOUSES TRUST,

Clock House, Byfleet,
Weybridge, Surrey.

Telephone: Byfleet 43172

This Army brings hope and comfort

THE CHURCH ARMY

ALWAYS ACTIVE
IN MISSION
AND MERCY

For over 90 years this great church Society has brought hope, comfort and practical help to the unfortunate, those in desperate need, the elderly, lonely and prisoner—and in another sphere, adventure to the young through a widespread involvement in Youth work. The Church Army brings peace and purpose to those searching for a meaning to life. Today, as always, it is still active and involved in situations where society faces so many problems, with so little help available, including drug dependence, poverty and homelessness. In all branches of our work are the tasks which are exciting, urgent and costly! £600,000 is required annually! Men and Women of God are needed now to train for practical and dynamic Evangelism—remember:

PEOPLE ARE OUR CONCERN! Make them yours too!

Donations, Church Offerings, Requests for Collecting Boxes and other Enquiries to: The Financial Organizing Secretary, THE CHURCH ARMY, CSC House, North Circular Road, London NW10

HER MAJESTY THE QUEEN

HER MAJESTY QUEEN ELIZABETH THE QUEEN MOTHER

President: H.R.H. THE PRINCESS MARGARET, COUNTESS OF SNOWDON

Chairman of the Governing Body: HIS GRACE THE DUKE OF WELLINGTON, M.V.O., O.B.E., M.C.

Chairman of Central Executive Committee: VISCOUNT CHELSEA

We are sure everyone will agree that to improve the moral standards and behaviour patterns of young people is as vital a task to-day as it has ever been in the past. Since the days of Charles Dickens this has been a major function of our organisation. We firmly believe that what is taught to young people by the older generation is of great importance to the future of our Country. The choice is simple—do we want a future generation of vandals and hooligans or a generation of thinking, caring, reasonable young adults?

Your help could enable us to carry on this vital work, which has behind it the great tradition of our Country.

Literature and Annual Report gladly sent on request.

CENTRAL COUNCIL FOR THE DISABLED

(Formerly Central Council for the Care of Cripples)

**34 ECCLESTON SQUARE,
LONDON, SW1V 1PE**

TEL: 01-821-1871

The Council is unique in its service to the disabled. As an organisation which is concerned with every aspect of disability rather than with the individual problems of one crippling disease, it is the national coordinating body for all those who work for disabled people.

Disablement may mean crippling pain. It certainly means loss of mobility, a special housing need, employment problems, economic hardship, fewer holidays, being shut out from cinema, church, club, pub, toilet. Disablement often means loneliness, deprivation and a loss of human dignity. There is a lot of it about.

For more than fifty years the Central Council for the Disabled has sought to improve the living conditions and environment of all physically disabled people. Dependent on voluntary contributions, your support could enable us to do so much more.

HELP the CENTRAL CHURCH FUND *WITH A BEQUEST*

As a faithful member of the Anglican Church you may want to leave a share of your estate in order to benefit the general purposes of the Church of England, after your lifetime.

You can best give effect to this desire by including in your Will a bequest to the Central Church Fund, expressed in the following suggested form of words:—

“I give and bequeath to the Central Board of Finance of the Church of England, whose registered office is at Church House, Dean’s Yard, Westminster, London, SW1P 3NZ per cent of the residue of my estate to be credited to the Central Church Fund and to be applied both as to capital and income to such ecclesiastical charitable purposes in the Church of England as the said Board shall in its absolute discretion decide, and I declare that the receipt of the Secretary for the time being of the said Board shall be sufficient discharge to my executors for the same.”

*Annual Report with Accounts and any further information
available from The Secretary*

WE, THE LIMBLESS, LOOK TO YOU FOR HELP

We come from both world wars. We come from Kenya, Malaya, Aden, Cyprus . . . and from Ulster. From keeping the peace no less than from war we limbless look to you for help. And you *can* help, by helping our Association. BLESMA (the British Limbless Ex-Service Men's Association) looks after the limbless from all the Services. It helps, with advice and encouragement, to overcome the shock of losing arms, or legs or an eye. It sees that red-tape does not stand in the way of the right entitlement to pension. And, for the severely handicapped and the elderly, it provides Residential Homes where they can live in peace and dignity.

Help BLESMA, please. We need money desperately. And, we promise you, not a penny of it will be wasted.

*Donations and information:

**'GIVE TO THOSE
WHO GAVE — PLEASE'**

British Limbless Ex-Service Men's Association

THE BRITISH POLIO FELLOWSHIP

(The Infantile Paralysis Fellowship, registered as a charity in accordance with the National Assistance Act 1948)

THE NATIONAL VOLUNTARY ORGANISATION FOR THE POLIO DISABLED

(Patron: Lavinia, Duchess of Norfolk, C.B.E.)

- Founded in 1939, the Fellowship has helped thousands of polio victims to live a fuller life and to cope with their disabilities.
- Polio is no respecter of persons; it has stricken the physically strong of all age groups and from different walks of life.
- The Fellowship's work in caring for all polio victims knows no barriers and helps all who have suffered from polio.
- £215,000 spent on welfare grants, aids, residential care, etc., during the 1974/75 financial year. Can you help—by donation? covenanted gift? or by legacy? Please write to:

British Heart Foundation Appeal

Heart Survival Through Research

Coronary thrombosis, stroke, blood pressure and heart diseases of infants are major subjects for research programmes receiving financial support from the British Heart Foundation.

Over 590 important research projects have been undertaken. The cost is enormous, but the work is vital. Can you, will you help?

- Remember us in your will
- Send a donation
- Make an 'In Memoriam' gift.

Help the Deaf communicate

Lives are being devastated by lifelong deafness; profoundly deaf children are unable to learn speech or language normally.

Inability to share the thoughts of others through the spoken or the printed word is alienating thousands of deaf people from much that makes life meaningful. Profound deafness just does not go away — but pursues one relentlessly throughout life, within the family circle, at work, at play, always isolating, depriving, inhibiting —

Communication is surely beyond price.

The British Deaf Association relies on gifts and legacies to promote a wide programme for developing communication skills and educational facilities, deaf people everywhere appeal for awareness and understanding of their problems.

Will you help please?

The British Deaf Association

The battle against pain...

ARTHRITIS RESEARCH

☐ THE SAD SIX MILLION.

One million people, including children, suffer from Rheumatoid Arthritis; and five million, including two out of every three people over 65, are handicapped by Osteoarthritis. For them, pain is a daily experience and it can be so severe as to be barely tolerable.

☐ HOW YOU CAN HELP.

Please help us overcome all this pain and disability by contributing to the £1 million needed for research every year. We rely entirely on voluntary support in the form of covenants, donations and legacies. Forms of bequest and covenant are available from the Council at the address below.

THE ARTHRITIS AND RHEUMATISM COUNCIL FOR RESEARCH

IN GREAT BRITAIN AND THE COMMONWEALTH
(formerly Empire Rheumatism Council)

Patron: Her Royal Highness The Duchess of Kent

Chairman: The Rt Hon. the Lord Porritt, GCMG, GCVO, CBE, FRCP, FRCS

Faraday House, 8-10 Charing Cross Rd., London WC2 0HN

OCCURRENCES DURING PRINTING

Home Affairs. Sept. 27. Labour Party Conference at Blackpool passed motion rejecting cuts in spending on social services and calling on all Labour-controlled councils to defy them.

Sept. 28. Mr. Healey postponed visit to Commonwealth Finance Ministers' meeting in Hong Kong as value of pound fell further. Mr. Norman Atkinson, leading left-winger, defeated Mr. Eric Varley in contest for Labour Party treasurership. At Labour Party Conference Mr. Callaghan said that Britain had lived far too long on borrowed time, borrowed money and borrowed ideas.

Sept. 29. Mr. Healey decided to apply to International Monetary Fund for loan of £2,300 million, the whole amount that might be available. Labour Party Conference passed resolutions calling for expansion of National Health Service, reversal of cuts in its spending and implementation of massive hospital-building programme, and also abolition of all prescription, ophthalmic and dental charges and nationalization of pharmaceutical industry.

Sept. 30. Labour Party Conference carried, by 3,314,000 to 526,000, proposal to nationalize leading banks and insurance companies.

Oct. 7. Bank of England raised minimum lending rate from 13 per cent. to 15 per cent. and called for further £700,000,000 of special deposits from banks. On following day, building societies raised mortgage rates to 12½ per cent.

Oct. 8. Mr. Edward Short, deputy leader of Parliamentary Labour Party and M.P. for Newcastle Central, was appointed Chairman of Cable and Wireless (by-election pending).

Oct. 21. Mr. Michael Foot was elected deputy leader of the Labour Party with 166 votes against 128 for Mrs. Shirley Williams, the only other candidate.

Overseas. Sept. 24. Mr. Ian Smith said that Rhodesian Government accepted principle of two-year transition to Black majority rule and immediate establishment of multi-racial Council of State as interim government.

Sept. 26. Presidents of African States rejected Mr. Smith's proposals and called on Britain to convene immediate conference.

Oct. 4. Final figures in West German elections showed that Herr Schmidt's coalition Government had won 252 seats, against 244 for Christian Democrats, his majority being reduced from 46 to eight.

Oct. 6. Military *coup* in Thailand resulted in overthrow of Government and establishment of martial law.

Oct. 11. It was stated that Chiang Ching, widow of Mao Tse-Tung, had been arrested with three other radical members of Chinese Politbureau and charged with plotting a *coup d'état*: on following day it was reported that more radicals had been arrested.

Accidents. Sept. 20. Twelve men, mostly Royal Naval reservists, lost their lives when R.N.R. mine-sweeper *Fittleton* was in collision with frigate *Mermaid* during NATO exercise in North Sea.

Obituary. Sept. 21. Sir William Collins, publisher, aged 76. Oct. 6. Professor Gilbert Ryle, eminent philosopher, aged 76. Oct. 10. Most Rev. Mgr. Cyril Cowderoy, R.C. Archbishop of Southwark, aged 71. Lord Brecon, former Minister of State for Welsh affairs, aged 71. Oct. 14. Dame Edith Evans, D.B.E., distinguished actress, aged 88.

(Formed April 1976 and reconstructed Sept. 1976.)

THE CABINET

Prime Minister and First Lord of the Treasury, The Rt. Hon. LEONARD JAMES CALLAGHAN, M.P., born March 27, 1912.

Secretary of State for Foreign and Commonwealth Affairs, The Rt. Hon. Charles Anthony Raven Crosland, M.P., born Aug. 29, 1918.

Chancellor of the Exchequer, The Rt. Hon. Denis Winston Healey, M.P., born Aug. 30, 1917.

Lord High Chancellor, The Rt. Hon. Lord Elwyn-Jones, C.H., born Oct. 24, 1909.

Secretary of State for the Home Department, The Rt. Hon. Merlyn Rees, M.P., born Dec. 18, 1920.

Secretary of State for Social Services, The Rt. Hon. David Hedley Ennals, M.P., born Aug. 19, 1922.

Secretary of State for Defence, The Rt. Hon. Frederick William Mulley, M.P., born July 3, 1918.

Secretary of State for Scotland, The Rt. Hon. Bruce Millan, M.P., born Oct. 5, 1927.

Secretary of State for Employment, The Rt. Hon. Albert Edward Booth, M.P., born May 28, 1928.

Secretary of State for Education and Science, The Rt. Hon. Shirley Vivien Teresa Brittain Williams, M.P., born July 27, 1930.

Secretary of State for Wales, The Rt. Hon. John Morris, M.P., born 1931.

Secretary of State for Trade, The Rt. Hon. Edmund Emanuel Dell, M.P., born Aug. 15, 1921.

PHENOMENA

January 1^d 02^h Jupiter in conjunction with the Moon. Jupiter 0° 8' N.

3^d 10^h Perihelion 147,000,000 kilometres).

6^d 08^h Mercury in inferior conjunction.

8^d 00^h Saturn in conjunction with the Moon. Saturn 6° N.

12^d 12^h Mercury in conjunction with Mars. Mercury 4° N.

18^d 01^h Mercury in conjunction with the Moon. Mercury 2° S.

18^d 12^h Mars in conjunction with the Moon. Mars 6° S.

23^d 11^h Venus in conjunction with the Moon. Venus 3° S.

24^d 12^h Venus at greatest eastern elongation (47°).

28^d 10^h Jupiter in conjunction with the Moon. Jupiter 1° N.

29^d 00^h Mercury at greatest western elongation (25°).

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation at first, inferior conjunction occurring on the 6th. For the second half of the month it may be glimpsed as a morning star, magnitude +1.0 to +0.1, low above the south eastern horizon at about the time of beginning of morning civil twilight. Despite the fact that it is at greatest western elongation on the 29th it is not very well placed for observation because of its declination (-22°).

VENUS is a brilliant evening star, magnitude -3.9 , visible in the western sky for several hours after sunset.

MARS is unsuitably placed for observation.

JUPITER is a brilliant evening star, magnitude -2.1 , in the eastern part of the constellation of Aries. The gibbous Moon is near Jupiter on the 1st and again on the 27th-28th.

SATURN is a bright morning star, magnitude $+0.1$, moving slowly westwards in the eastern part of Cancer. By the end of the month it is visible for most of the night. The gibbous Moon passes 6° S. of the planet on the night of the 7th-8th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation throughout the month.

VENUS is a brilliant evening star, magnitude -4.2, dominating the western sky for several hours after sunset. On the early evening of the 21st the crescent Moon passes 3° S. of Venus.

MARS is unsuitably placed for observation.

JUPITER is a brilliant evening star, magnitude -1.9, moving slowly from Aries into Taurus. On the evening of the 24th the crescent Moon passes 2° S. of Jupiter. The four Galilean satellites are readily observable with almost any small telescope

or good pair of binoculars, providing that they are held rigid.

SATURN is at opposition on the 2nd and thus visible throughout the hours of darkness. Its magnitude is +0.1. Saturn is in Cancer and on the morning of the 4th the Full Moon passes 6° S. of it. Titan, Saturn's largest satellite, is of magnitude +8½, and thus visible in small telescopes.

ZODIACAL LIGHT. The evening cone may be observed in the western sky after the end of twilight, from the 5th to the 19th. This faint phenomenon is only visible under good conditions and in the absence of both moonlight and artificial lighting.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation for almost the whole month, superior conjunction occurring on the 16th. However during the last few days of March it becomes visible as an evening star, magnitude -1.2 to -0.9, low above the western horizon at the time of end of evening civil twilight. On the evening of the 27th, probably the first evening on which it may be glimpsed, Mercury passes 8° S. of Venus.

VENUS is a magnificent evening star, magnitude -4.2, attaining its greatest brilliancy on the 1st. However the period available for observation is

shortening and by the end of the month the planet sets only about an hour after the Sun.

MARS is unsuitably placed for observation.

JUPITER is a brilliant evening star, magnitude -1.7, moving slowly eastwards in the constellation of Taurus. The five day old crescent Moon is near Jupiter on the evening of the 24th.

SATURN is a bright evening star, magnitude +0.3, visible for most of the night. Saturn is in Cancer.

ZODIACAL LIGHT. The evening cone may be observed in the western sky after the end of twilight, from the 7th to the 20th.

PHENOMENA
April 4^d 04^h Partial ec-
lipse of the Moon. See p.
148 for details.

6^d 06^h Venus in inferior
conjunction
10^d 16^h Mercury at
greatest eastern elongation
(19°).

15^d 12^h Mars in conjunc-
tion with the Moon. Mars
4° S.

16^d 20^h Venus in conjunc-
tion with the Moon. Venus
5° N.

18^d 11^h Annular eclipse
of the Sun. See p. 148 for
details.

19^d 16^h Mercury in con-
junction with the Moon.
Mercury 5° N.

21^d 09^h Jupiter in con-
junction with the Moon.
Jupiter 3° N.

27^d 01^h Saturn in con-
junction with the Moon.
Saturn 6° N.

30^d 06^h Uranus at opposi-
tion.

30^d 17^h Mercury in in-
ferior conjunction.

ASTRONOMICAL NOTES

MERCURY is an evening star, magnitude -0.9 to $+2.0$, for the first three weeks of the month, low above the W.N.W. horizon at the time of end of evening civil twilight. For observers in the northern hemisphere this is the best evening apparition of Mercury during 1977. On the 10th, before sunset, the crescent Moon will have passed 5° S. of Mercury. Observers may be interested in locating the two bodies shortly after sunset, since the Moon will then be only 33 hours old.

VENUS is a brilliant morning star, visible low above the E.N.E. horizon just before sunrise. During the month its magnitude varies from -3.4 on the 1st, to -3.1 on the 7th, brightening again to -4.2 by the 30th. Although inferior conjunction occurs on the 6th it is an interesting fact that Venus is 5° high at sunrise in England on the 1st and this gives the assiduous observer the rare opportunity

of seeing Venus in the mornings before inferior conjunction, provided he has a good clear eastern horizon. Venus will be seen near the old crescent Moon on the mornings of the 16th and 17th.

MARS is unsuitably placed for observation.

JUPITER is a brilliant evening star, magnitude -1.6 .

SATURN is a bright evening star, magnitude $+0.4$.

URANUS is at opposition on the 30th, in Libra. It is barely visible to the naked eye as its magnitude is $+5.7$ but it is easily located with only small optical aid. Telescopically it shows a slightly greenish disk $4''$ in diameter.

ECLIPSE. A partial eclipse of the Moon occurs on the 4th, visible from the British Isles. See p. 148 for details.

ECLIPSE. An annular eclipse of the Sun occurs on the 18th. See p. 148 for details.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation despite the fact that it is at greatest western elongation on the 27th.

VENUS is a magnificent morning star, attaining its greatest brilliancy, magnitude -4.2 , on the 11th. However it is never visible for more than an hour before sunrise. As seen through a telescope the apparent diameter shrinks from $46''$ to $29''$ as the distance from the Earth increases. At the same time the phase increases from a thin crescent to a 41% illuminated disk by the end of the month.

MARS is unsuitably placed for observation but may be detected telescopically within a few degrees of Venus for most of May and into June.

JUPITER is a brilliant evening star, magnitude -1.5 , in the constellation of Taurus, but only visible for a short while after sunset for the first week of the month. For the remainder of the month Jupiter is too close to the Sun for observation.

SATURN is a bright evening star, magnitude $+0.6$, moving very slowly eastwards in the eastern part of Cancer. The crescent Moon is near Saturn on the evenings of the 23rd and 24th.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation, superior conjunction occurring on the 30th.

VENUS is a brilliant morning star, magnitude -3.9, reaching greatest western elongation on the 15th. At the beginning of the month Venus is less than 2° from Mars; by the end of the month Venus is about 6° east of Mars. The old crescent Moon will be seen near Venus on the mornings of the 12th and 13th.

MARS gradually becomes a morning star, magnitude +1.3, during the month, visible low above the eastern horizon during morning twilight.

Venus will be a useful aid to locating Mars (see above).

JUPITER is unsuitably placed for observation, conjunction occurring on the 4th.

SATURN is an evening star, magnitude +0.6 but gradually becomes too difficult to locate as it gets nearer to the Sun and it is lost in the long evening twilight before the end of the month.

NEPTUNE is at opposition on the 5th, in the constellation of Ophiuchus. The angular diameter of Neptune is only 2½". It is not visible to the naked eye since its magnitude is about +7.7.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is a brilliant morning star, magnitude -3.7. During the second half of the month observers with good E.N.E. horizons should be able to see it shortly before 02^h. On the morning of the 12th the old crescent Moon will be seen approaching Venus, passing 1° S. of it during daylight. On the morning of the 30th Venus passes 1° 6' S. of Jupiter. During the second week of July Venus will be seen passing between the Hyades and the Pleiades; in particular it will pass within 0° 1' of the

third magnitude star epsilon Tauri (between it and Aldebaran) on the morning of the 14th.

MARS is a morning star, magnitude +1.2, and by the end of the month is visible low in the east before 01^h. Mars moves from Aries into Taurus, passing between the Pleiades and the Hyades during the second half of the month. On the morning of the 11th the old crescent Moon will be seen near the planet.

JUPITER becomes a brilliant morning star early in the month, magnitude -1.5, visible for a short while before sunrise, above the eastern horizon.

SATURN is unsuitably placed for observation.

ASTRONOMICAL NOTES

MERCURY is not suitably placed for observation despite the fact that it is at greatest eastern elongation on the 8th.

VENUS is a brilliant morning star, magnitude — 3.5, visible in the east for several hours before sunrise. It passes south of the Twins, Castor and Pollux, on the 22nd–24th.

MARS is a morning star, magnitude + 1.1, moving eastwards in the constellation of Taurus, passing 5° N. of Aldebaran on the 1st. The old crescent Moon is near Mars on the morning of the 9th.

JUPITER is a brilliant morning star, magnitude — 1.7, moving slowly eastwards from Taurus into Gemini. The old crescent Moon is near the planet on the morning of the 10th.

SATURN is unsuitably placed for observation, conjunction occurring on the 13th.

METEORS. The maximum of the famous Perseid meteor shower occurs on the 12th. Observers will see most meteors on the nights of the 11th–12th and 12th–13th, more meteors being seen after midnight than before. Since the Moon is New on the 14th there will be no noticeable effect on the number of meteors visible.

ASTRONOMICAL NOTES

MERCURY is visible as a morning star, magnitude +1.1 to -1.0, during the second half of the month, visible low above the eastern horizon around the time of beginning of morning civil twilight. This is the most suitable morning apparition of the year for observers in the northern hemisphere.

VENUS is a brilliant morning star, magnitude -3.4. It passes close to Saturn on the 18th and only 0° 4' N. of Regulus when they rise together on the morning of the 22nd.

MARS is a morning star, magnitude +0.9, moving eastwards in the constellation of Gemini. During the night of the 4th-5th Mars passes 0° 5' N. of

Jupiter. On the morning of the 7th the old crescent Moon will be seen near Mars.

JUPITER is a brilliant morning star, magnitude -1.8 and now visible low in the east before midnight. On the morning of the 7th the Moon passes 5° S. of the planet.

SATURN gradually becomes visible as a morning star, magnitude +0.8, during the first part of the month. Saturn is in Leo, moving slowly eastwards towards Regulus.

ZODIACAL LIGHT. The morning cone may be seen in the eastern sky before twilight commences, from the 12th to the 25th. This faint phenomenon may only be detected under good conditions and in the absence of both moonlight and artificial lighting.

MONTHLY NOTES

Oct. 1. Pheasant shooting begins.

14. Michaelmas Fire Insurances must be paid.

23. Summer Time ends at 2 a.m. G.M.T.

26. Hunter's Moon.

NATIONAL DAYS.—Oct. 1, China, Nigeria; 4, Lesotho; 9, Uganda; 26, Austria, Iran.

** Centenary.

ASTRONOMICAL NOTES

MERCURY may be glimpsed as a difficult morning star, magnitude -1.0 , low above the eastern horizon at the time of beginning of morning civil twilight, but only for the first few days of the month. Thereafter it is unsuitably placed for observation, superior conjunction occurring on the 18th.

VENUS is a brilliant morning star, magnitude -3.4 . On the morning of the 17th the old crescent Moon passes 4° S. of the planet.

MARS is a morning star, magnitude $+0.7$, steadily moving eastwards from Gemini into

Cancer. On the early morning of the 6th the Moon, one day after Last Quarter, passes 6° S. of the planet. Towards the middle of the month Mars will be seen passing south of the Twins.

JUPITER is a brilliant morning star, magnitude -2.0 , almost stationary in the western part of Gemini. On the late evening of the 4th the gibbous Moon will be seen passing 5° S. of the planet.

SATURN is a morning star, magnitude $+0.8$, in the western part of Leo.

ECLIPSE. A total eclipse of the Sun occurs on the 12th. See p. 148 for details.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation.

VENUS is a conspicuous morning star, magnitude -3.4. It is drawing towards the Sun, the period available for observation shortening noticeably during the month. Venus is near Spica on the mornings of the 3rd and 4th, whilst on the morning of the 10th Venus will rise only slightly earlier than the Moon.

MARS is a bright morning star, magnitude +0.2, moving eastwards in the constellation of Cancer, passing just north of the naked-eye cluster Praesepe around the middle of the month.

JUPITER is a brilliant morning star, magnitude -2.2. It is now visible for most of the night, opposition occurring in December. The gibbous Moon passes 5° S. of the planet on the morning of the 1st and again on the morning of the 28th. Details of the eclipses and shadow transits of Jupiter's satellites are given on p. 150 for the convenience of observers with telescopes.

SATURN is a morning star, magnitude +0.8, in the constellation of Leo. At the beginning of the month it passes within a degree of Regulus. By the end of the month Saturn is visible in the eastern sky before midnight.

ASTRONOMICAL NOTES

MERCURY is unsuitably placed for observation for almost the whole of the month, inferior conjunction occurring on the 21st. However it may be glimpsed as a difficult morning star, magnitude, +1.0, low above the south-eastern horizon, around the time of beginning of morning civil twilight, for the last few days of the month.

VENUS is a morning star, magnitude -3.4, during the first two weeks of the month, visible low in the south-east for a short while before sunrise. Thereafter it is lost in the morning twilight. Venus is near Antares on the 10th-11th.

MARS is a bright morning star, its magnitude increasing during the month from -0.1 to -0.8. Mars is almost stationary in the constellation of

Cancer. The gibbous Moon will be seen near the planet on the 1st and 2nd and again on the 28th and 29th.

JUPITER is at opposition on the 23rd and thus visible throughout the hours of darkness. Its magnitude is -2.3. On the morning of the 25th the Moon passes 5° S. of Jupiter.

SATURN is a morning star, magnitude +0.7, almost stationary in Leo, not much more than one degree E.N.E. of Regulus.

METEORS. The maximum of the well known Geminid meteor shower occurs on the 14th. Observers will see most meteors on the night of the 13th-14th. The crescent Moon sets early in the evening and will not interfere with observation.

INTRODUCTION TO ASTRONOMICAL SECTION

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Astronomical Ephemeris* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0^h G.M.T., or the midnight at the beginning of the day named.

(See notes on *British Summer Time*, p. 142).

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 15th edition, 1964; £1.05), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the *British Astronomical Association Handbook*, an annual very popular among amateur astronomers. (Secretary: Burlington House, Piccadilly, London, W.1.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° can be covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

THE FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

THE CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22^h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4^m earlier each night or 2^h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of

constellations may be extended indefinitely at the rate just quoted.

Times of MINIMA OF ALGOL are approximate times of the middle of the period of diminished light (see p. 153).

THE PRINCIPAL PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from, the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

THE MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The Sun's semi-diameter, in arc, is given once a month.

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12^h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. Apparent Solar Time is equal to the Mean Solar Time plus the Equation of Time. For example at noon on Aug. 8 the Equation of Time is -5^m 36^s and thus at 12^h Mean Time on that day the Apparent Time is 12^h - 5^m 36^s = 11^h 54^m 24^s.

The Greenwich Sidereal Time at 0^h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0^h) are used for converting mean time to sidereal time and vice versa.

The G.M.T. of transit of the Sun at Greenwich may also be taken as the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34', and the Sun's semi-diameter to be 16', the time given is that when the true zenith distance of the Sun's centre is 90° + 34' + 16' or 90° 50', or, in other words, when the depression of the Sun's

centre below the true horizon is $50'$. The upper limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light reaches us before sunrise and also continues to reach us for some time after sunset. The interval between darkness and sunrise or sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin or end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

- (1) *Sunrise or Sunset*, defined as above.
- (2) *Civil twilight*, which begins or ends when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight may commence or must cease. In England it varies from about 30 to 60 minutes after sunset.
- (3) *Nautical twilight*, which begins or ends when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intent and purposes, completely dark.
- (4) *Astronomical twilight*, which begins or ends when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

To assist observers the durations of civil, nautical and astronomical twilights are given at intervals of ten days. The beginning of a particular twilight is found by subtracting the duration from the time of sunrise, while the end is found by adding the duration to the time of sunset. Thus the beginning of astronomical twilight in latitude 52° , on the Greenwich meridian, on March 11 is found as $06^h 25^m - 113^m = 04^h 32^m$ and similarly the end of civil twilight as $17^h 58^m + 34^m = 18^h 32^m$.

The letters T.A.N. are printed when twilight lasts all night.

Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading ASTRONOMICAL NOTES will be found notes describing the position and visibility of all the planets and also of other phenomena; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach 1° .

The lunar terminator is the line separating the bright from the dark part of the Moon's disk. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The selenographic longitude of the terminator is measured from the mean centre of the visible disk, which may differ from the visible centre by as much as 8° , because of libration.

Instead of the longitude of the terminator the Sun's selenographic colongitude is tabulated. It is numerically equal to the selenographic longitude of the morning terminator, measured eastward from the mean centre of the disk. Thus its value is approximately 270° at New Moon, 360° at First Quarter, 90° at Full Moon and 180° at Last Quarter.

The Position Angle of the Bright Limb is the position angle of the midpoint of the illuminated limb, measured eastward from the north point on the disk. The column PHASE shows the percentage of the area of the Moon's disk illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9''$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57'$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^\circ 50'$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes (except in high latitudes).

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and $56'$. They give Greenwich Mean Time (G.M.T.) throughout the year. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $1^\circ = 4^m$ and $15' = 1^m$.

The G.M.T. of transit of the Moon over the meridian of Greenwich is given: these times are independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary

because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^h (or 360°) of the longitude, and will be greater than 12^h (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda^\circ/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^h 05^m$ east, so $\lambda = 13^h 55^m$ and the fraction $\lambda/24$ is 0.58. The transit on the local date 1976 Oct. 11 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich.... Oct.	10	09	46
λ		13	55
$0.58 \times (10^h 36^m - 09^h 46^m)$			29
			<hr/>
G.M.T. of transit at Sydney.....	11	00	10
Corr. to N.S.W. Standard Time....		10	00
			<hr/>

Local standard time of transit..... 11 10 10
It is evident of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^h 55^m$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disk. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each

month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $3''$ less than the equatorial diameter, while that of Saturn is about $2''$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed on three occasions in 1966 and were open at their widest extent in the middle of 1973.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time, but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time scale, and this has led to the concept of Mean Solar Time in which all the days are exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

Greenwich Mean Time

The daily rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (G.M.T.) The mean solar day is divided into 24 hours and, for astronomical and other scientific purposes, these are numbered 0

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun ($1/31556925.9747$ of the Tropical Year for 1900 January 0^d 12^h. E.T.) instead of in terms of the diurnal rotation of the Earth on its axis ($1/86\,400$ of the Mean Solar Day). In many branches of scientific work other than astronomy there has been a demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mesures in 1956. The length of the unit has been

chosen to provide general agreement with U.T. throughout the 19th and 20th centuries. During 1977 the estimated difference E.T. - U.T. is 47 seconds. The precise determination of E.T. from astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, a comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with its ephemeris position. Even in this case, however, the requisite standard of accuracy can only be achieved by averaging over a number of years.

Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the revolution of the electrons in their orbits around the nuclei. The continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals; it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard.

Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. Signals by land line from the Observatory correct the Post Office Speaking Clock, TIM.

For survey and scientific purposes in which the highest accuracy is required, special signals are transmitted from the Post Office Radio Station at Rugby. The International Signals, consisting of a five-minute series of pips, one-tenth of a second long, with the pips at the minutes lengthened for identification, are radiated at 02.54-03.00, 08.54-09.00, 14.54-15.00, 20.54-21.00 from GBR (16 kHz) and associated H.F. transmitters. The seconds

pulses superposed on the MSF standard frequency transmissions, which consists of five cycles of a 1,000 c.p.s. tone, are derived from the same master control at the transmitting station, and are radiated for ten minutes in each quarter-hour on 2½, 5, and 10 MHz for 24 hours per day, and continuously on 60 kHz. The carrier frequencies of all the MSF transmissions, and of GBR, are closely controlled, and measured regularly at the National Physical Laboratory in terms of the caesium atomic resonance.

The new Coordinated Universal Time (U.T.C.) system standard frequency emissions and radio time signals are broadcast on MSF, GBR, and by other national transmitters, eg. by WWV and WWVH in the U.S.A. in conformity with the International Atomic Time Scale in which the time intervals between pips correspond exactly to the seconds defined as follows: "The second is the duration of 9 192 631 770 periods of the radiation corresponding to the transition between the 2 hyperfine levels of the ground state of the caesium 133 atom."

As the rate of rotation of the Earth is variable the time signals will be adjusted by the introduction of a leap second when necessary in order that UTC shall not depart from UT by more than 0^s.9. For convenience it has been decided to introduce leap seconds, when necessary, on the last second of a month preferably on 31 Dec. and/or 30 June. In the case of a positive leap second 23^h 59^m 60^s will be followed one second later by 0^h 00^m 00^s of the first day of the month. In the case of a negative leap second (required if the Earth were to have a sudden change of rate and begin to gain relative to UTC) 23^h 59^m 58^s will be followed one second later by 0^h 00^m 00^s of the first day of the month.

From 1972 Jan. 1 the six pips on the BBC have consisted of 5 short pips from second 55 to second 59 followed by one lengthened pip, the start of which indicates the exact minute.

SUMMER TIME

In the United Kingdom, Summer Time, one hour in advance of G.M.T. will be kept between 02^h G.M.T. on the day following the third Saturday in March and 02^h G.M.T. on the day following the fourth Saturday in October. Thus, in 1977, Summer Time will be in force between March 20 and October 23.

Variations from the standard time of some countries occurs during part of the year: they are decided annually and are usually referred to as Summer Time or Daylight Saving Time. These variations occur in:

British Commonwealth.—Parts of Albania; Bahamas; Canada; Channel Islands; Hong Kong; New Zealand.

Foreign Countries.—Albania; Argentina; Brazil; Chile; parts of China; Costa Rica; Cuba; Egypt; Formosa; France; Greece; Iceland; Israel; Italy; Macau; Malta; Morocco; Norway; Pescadores Is.; Poland; Sicily; Sudan; Syria; Tunisia; Turkey. parts of U.S.A.;

In the Dominican Republic, the Irish Republic, and Paraguay, the variation occurs in winter and is called Winter Time.

STANDARD TIME

In the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used.

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately $7\frac{1}{2}^\circ$ on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R. centred at 60°E. to 180°E.

Fast on Greenwich Time

- 12 hrs. F...Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160°E.), New Hebrides.
- 11½ „ F...Norfolk I., Nauru I.
- 11 „ F...New Caledonia, Santa Cruz and Solomon Is., Truk, Ponape, Sakhalin.
- 10 „ F...Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Islds., Caroline Islds. (west of 160°E.), Australian Capital Territory, Mariana Islds.
- 9½ „ F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area).
- 9 „ F...Japan, Schouten Islds., Kurile Islds., Manchuria, Korea, West Irian (Indonesia).
- 8½ „ F...Molucca Islds.
- 8 „ F...China (coast), Hong Kong, Philippine Is., Macau, Timor, Western Australia, Sulawesi (Celebes), Kalimantan†, Formosa, Pescadores Islds., Malaysia, Vietnam (south).
- 7½ „ F...Singapore.
- 7 „ F...Sumatra, Java, Christmas I. (Indian Ocean), Thailand, Khmer Republic, Laos, Vietnam (north).
- 6½ „ F...Burma, Cocos-Keeling Islds.
- 6 „ F...Bangladesh.
- 5½ „ F...India, Sri Lanka, Laccadive Islds., Andaman and Nicobar Islds.
- 5 „ F...Chagos Archipelago, Pakistan.
- 4 „ F...Mauritius, Seychelles, Réunion, U.S.S.R., 40°E. to $52^\circ 30'\text{E.}$
- 3½ „ F...Iran.
- 3 „ F...U.S.S.R. west of 40°E. , Iraq, Ethiopia, Yemen (Dem. Repub.), Socotra I., Somali Republic, Comoro Islds., Madagascar, Uganda, Kenya, Tanzania.
- 2 „ F...Turkey, Greece, Bulgaria, Rumania, Finland, Israel, Jordan, U.A.R., Syria, Cyprus, Rhodesia, Malawi, South Africa, Mozambique, Sudan, Burundi, Rwanda, Crete, Lebanon, Libya, Zambia, Botswana, Lesotho.
- 1 hr. F...Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France, Luxemburg, Spain, Monaco, Balearic Islds., Poland, Austria.

E. European

Central-European

Greenwich Time

Slow on Greenwich time

- 1 hr. S...Azores, Cape Verde Is., Guinea Bissau.
- 2 hrs. S...Fernando Noronha I., Scoresby Sound, South Georgia.
- 3 „ S...Greenland (excluding Scoresby Sound and Thule), Eastern Brazil, Argentina, Uruguay, French Guiana.
- 3½ „ S...Newfoundland, Dutch Guiana.
- 3½ „ S...Guyana.
- 4 „ S...Canada east of 68°W. , Greenland (Thule Area), Puerto Rico, Lesser Antilles, Central Brazil, Falkland Islds., Paraguay, Bermuda, Bolivia, Chile, Curaçao I., Venezuela, Labrador.
- 5 hrs. S...Canada from 68°W. to 85°W. (north) or 90°W. (south), Eastern States of U.S.A., Jamaica, Bahama Islds., Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Dominican Republic, Cuba.
- 6 hrs. S...Central parts of U.S.A., Canada from 85°W. to 102°W. , Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.
- 7 hrs. S...Canada from 102°W. to 120°W. , Mountain States of U.S.A., part of Mexico.
- 8 hrs. S...Canada west of 120°W. , Alaska, (south-east coast), Western States of U.S.A., part of Mexico, Yukon (east of 138°W.).
- 9 hrs. S...Alaska 137°W. to 141°W. , Yukon (west of 138°W.).
- 10 „ S...Alaska from 141°W. to 161°W. , Low Archipelago, Austral and Society Islds., Hawaii, Fanning I., Christmas Islds. (Pacific Ocean).
- 11 „ S...Aleutian Islds., Alaska (west coast), Samoa, Midway Islds.

In the Tonga Islands the time 13h fast and in Chatham Is. 12h 45m fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60°S.	180°	15°S.	$172\frac{1}{2}^\circ\text{W.}$	53°N.	170°E.
51°S.	180°	5°S.	180°	$65\frac{1}{2}^\circ\text{N.}$	169°W.
45°S.	$172\frac{1}{2}^\circ\text{W.}$	48°N.	180°	75°N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained. † Formerly Indonesian Borneo.

SUNRISE AND SUNSET

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and applying it to the time of transit given in the ephemeris for each month. The hour angle is negative for sunrise and positive for sunset. A small correction to the hour angle, which always has the effect of increasing it numerically, is necessary to allow for the Sun's semi-diameter (16') and for refraction (34'). This correction may be obtained from Table 2. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12^h fast on G.M.T.) of sunset on May 24 at Auckland. The latitude is 36° 50' south (or minus) and the longitude 11^h 39^m east. Taking the declination as +20°·7, we find

MOONRISE AND MOONSET

It is possible to calculate the times of moonrise and moonset using Table 1 though the method is more complicated because the apparent motion of the Moon is much more rapid than that of the Sun.

Table 3. Longitude Correction

24	40	45	50	55	60	65	70

Notation

- ϕ = latitude of observer
 λ = longitude of observer (measured positively towards the west)
 T_{-1} = time of transit of Moon on previous day
 T_0 = time of transit of Moon on day in question
 T_1 = time of transit of Moon on following day
 δ_0 = approximate declination of Moon
 δ_R = declination of Moon at moonrise
 δ_S = declination of Moon at moonset
 h_0 = approximate hour angle of Moon
 h_R = hour angle of Moon at moonrise
 h_S = hour angle of Moon at moonset
 t_R = time of moonrise
 t_S = time of moonset

The parallax of the Moon, about 57', is near to the sum of the semi-diameter and refraction but has the opposite effect on these times. It is thus convenient to neglect all three quantities in the method outlined below.

METHOD

- With arguments ϕ, δ_0 enter Table 1 on p. 144 to determine h_0 where h_0 is negative for moonrise and positive for moonset.
- Form approximate times from
$$t_R = T_0 + \lambda + h_0$$
$$t_S = T_0 + \lambda + h_0$$
- Determine δ_R, δ_S for times t_R, t_S respectively.
- Re-enter Table 1 on p. 144 with—
(a) arguments ϕ, δ_R to determine h_R
(b) arguments ϕ, δ_S to determine h_S
- Form
$$t_R = T_0 + \lambda + h_R + AX$$
$$t_S = T_0 + \lambda + h_S + AX$$
where $A = (\lambda + h)$
$$X = (T_0 - T_{-1}) \quad \text{if } (\lambda + h) \text{ is negative}$$
$$\text{and } X = (T_1 - T_0) \quad \text{if } (\lambda + h) \text{ is positive}$$

AX is the respondent in Table 3.
Example.—To find the times of moonrise and moonset at Vancouver ($\phi = +49^\circ, \lambda = +8^h 12^m$) on 1977 October 10. The starting data (from p. 128) are

h
 m

$T_{-1} = 8 \ 58$
 $T_0 = 9 \ 46$
 $T_1 = 10 \ 36$
 $\delta = +3^\circ 36'$

1. $h_0 = 6^h 14^m$

2. Approximate values

$$t_R = 10^d 09^h 46^m + 8^h 12^m + (-6^h 14^m)$$
$$= 10^d 11^h 44^m$$
$$t_S = 10^d 09^h 46^m + 8^h 12^m + (+6^h 14^m)$$
$$= 11^d 00^h 12^m$$
$$\delta_R = +2^\circ 9'$$
$$\delta_S = +0^\circ 8'$$
$$h_R = -6^h 14^m$$
$$h_S = +6^h 04^m$$
$$t_R = 10^d 09^h 46^m + 8^h 12^m - 6^h 14^m + 4^m$$
$$= 10^d 11^h 48^m$$
$$t_S = 10^d 09^h 46^m + 8^h 12^m + 6^h 04^m + 30^m$$
$$= 11^d 00^h 32^m$$

To get the L.M.T. of the phenomenon the longitude is subtracted from the G.M.T. thus

$$\text{Moonrise} = 10^d 11^h 48^m - 8^h 12^m = 10^d 03^h 36^m$$
$$\text{Moonset} = 11^d 00^h 32^m - 8^h 12^m = 10^d 16^h 20^m$$

The length of a sidereal day in mean time is $23^h 56^m 04^s.09$. Hence 1^h M.T. = $1^h + 9^s.86$ S.T. and 1^h S.T. = $1^h - 9^s.83$ M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these

two entries is the required acceleration or retardation. Thus the acceleration for $11^m 26^s$ (which lies between the entries $9^m 07^s$ and $15^m 13^s$) is 2^s . If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for $45^m 46^s$ is 7^s .

Example.—Convert $14^h 27^m 35^s$ from S.T. to M.T.

	h	m	s
Given S.T.	14	27	35
Retardation for 14^h		2	18
Retardation for $27^m 35^s$			5

Corresponding M.T. 14 25 12

For further explanation, see p. 141.

The refraction table is also in the form of a critical table.

THE SUMMER TIME ACTS

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Acts, 1922 to 1925*, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War the duration of Summer Time was extended and in the years 1941-45 and in 1947, Double Summer Time (2 hrs. in advance of Greenwich Mean Time) was in force. Summer Time was extended in each year from 1948

to 1952 and again in 1961-1964, by Order in Council.

The duration of Summer Time during the last few years is given in the following table.

1953 Apr. 19—Oct. 4	1961 Mar. 26—Oct. 29
1954 Apr. 11—Oct. 3	1962 Mar. 25—Oct. 28
1955 Apr. 17—Oct. 2	1963 Mar. 31—Oct. 27
1956 Apr. 22—Oct. 7	1964 Mar. 22—Oct. 25
1957 Apr. 14—Oct. 6	1965 Mar. 21—Oct. 24
1958 Apr. 20—Oct. 5	1966 Mar. 20—Oct. 23
1959 Apr. 19—Oct. 4	1967 Mar. 19—Oct. 29
1960 Apr. 10—Oct. 2	1968 Feb. 18—Oct. 27
1972 Mar. 19—Oct. 29	1973 Mar. 18—Oct. 28
1974 Mar. 17—Oct. 27	1975 Mar. 16—Oct. 26
1976 Mar. 21—Oct. 24	

(British Standard Time, also one hour ahead of G.M.T., was kept between 1968 Oct. 27-1971 Oct. 31.) In 1977 Summer Time will be in force from March 20 to October 23.

Jupiter's satellites transit across the disk from east to west, and pass behind the disk from west to east. The shadows that they cast also transit across the disk. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east

of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The list of phenomena gives most of the eclipses and shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse R = Reappearance
Sh. = Shadow transit I = Ingress
D = Disappearance E = Egress

The times given in these predictions are strictly for the centre of the satellite. Observers will appreciate that as the satellite is of considerable size the immersion and emersion phases are not instantaneous. Even when the satellite enters or leaves the shadow along a radius of the shadow the phase can last for several minutes. With satellite IV grazing phenomena can occur so that the light from the satellite may fade and brighten again without a complete eclipse taking place.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1977

ECLIPSES, 1977

There will be three eclipses during 1977, two of the Sun and one of the Moon. *Penumbral eclipses are not mentioned in this section as they are difficult to observe.*

1. A partial eclipse of the Moon on April 4, visible from western Africa, western Europe (including the British Isles), the Atlantic Ocean, South America, part of Antarctica, North America except the north-western part, and the eastern part of the Pacific Ocean. The eclipse begins at 03^h 30^m and ends at 05^h 06^m. At the time of maximum obscuration 0.20 of the Moon's diameter is obscured.

2. An annular eclipse of the Sun on April 18, visible as a partial eclipse from the north-eastern part of South America, part of Antarctica, South Atlantic Ocean, Africa except the north-western part, the extreme southern part of Asia and the Indian Ocean. The eclipse begins at 07^h 33^m and ends at 13^h 29^m. The annular phase begins in the South Atlantic Ocean, crosses the southern part of Africa and ends in the Indian Ocean.

3. A total eclipse of the Sun on October 12. The path of totality begins in the North Pacific Ocean and crosses the northern part of South America. The partial phase is visible from the extreme north-eastern part of Asia, the North Pacific Ocean, North America except the north-eastern part, and the north-western part of South America. The eclipse begins at 17^h 48^m and ends at 23^h 06^m; the total phase begins at 18^h 49^m and ends at 22^h 05^m. The maximum duration of totality is 2^m 37^s.

OCULTATION BY URANUS

Uranus will occult a ninth magnitude star on March 10. It will be difficult to observe the actual phases of the occultation since the star is so much fainter than the planet. The event will be of considerable interest to astronomers since, if it is observed successfully, it will be the first occultation by Uranus to be observed. Photoelectric observations should enable us to gain more accurate information about the size of Uranus, and its upper atmosphere. The occultation will be visible from western Australia, Indonesia, Asia (except the eastern part), and Africa and will occur between 20^h 4 and 21^h 6 G.M.T., approximately.

OCULTATIONS OF STARS

The list on the opposite page includes most of the occultations visible under favourable conditions in the British Isles. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope. The altitude limit is reduced from 10° to 2° for stars and planets brighter than magnitude 2.0 and such occultations are also predicted in daylight. The column Phase shows whether a disappearance (1) or reappearance (2) is to be observed. The column headed "El. of Moon" gives the elongation of the Moon from the Sun, in de-

grees. The elongation increases from 0° at New Moon to 180° at Full Moon and on to 360° (or 0°) at New Moon again. Times and position angles (*P*), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 30', Long. 0°) and Edinburgh (Lat. 56° 00', Long. 3° 12' west). The coefficients *a* and *b* are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a.\Delta\lambda + b.\Delta\phi$ to the given G.M.T.

As an illustration the disappearance of Z.C. 577 on January 1 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude.....	0.0	+3.2
Long. of Liverpool.....	+3.0	+3.0
$\Delta\lambda$	+3.0	-0.2
Latitude.....	+51.5	+56.0
Lat. of Liverpool.....	+53.4	+53.4
$\Delta\phi$	+1.9 h m	-2.6 h m
G.M.T.....	17 46.2	17 59.8
$a.\Delta\lambda$	-1.2	0.0
$b.\Delta\phi$	+5.3	-9.4
	17 50.3	17 50.4

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

N = star not occulted.

A = star's altitude less than 10° (2° for bright stars and planets).

S = Sun not sufficiently below the horizon.

G = occultation is of very short duration.

It will be noticed that in some cases the coefficients *a* and *b* are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

OCULTATION OBSERVATIONS

Observations of the times of these occultations are made by both professional and amateur astronomers throughout the world. Such observations are later analysed at the Royal Greenwich Observatory to yield accurate positions of the Moon: this is one method of determining the difference between ephemeris time and universal time. Occultations of stars by the Moon occur almost instantaneously and many of the observations made by amateurs are obtained with the use of a stopwatch which is compared with a time signal immediately after the observation. Thus an accuracy of about one-fifth of a second is obtainable, though the observer's personal equation may amount to one-third or one-half of a second.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3^s a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

β Centauri <i>Hadar</i>	0.9	14 02.2	-60 16	B1	
θ Centauri.....	2.3	14 05.3	-36 15	K0	The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars <i>Sirius</i> and <i>Canopus</i> , the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are <i>Polaris</i> and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's <i>Star Atlas</i> (see page 138). The stars <i>Sirius</i> and <i>Canopus</i> and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars fainter than the twentieth magnitude may be photographed by long exposures with the largest telescopes.

THE STRUCTURE OF THE UNIVERSE

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Galaxy in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Galaxy. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 300,000 kilometres a second; it takes $1\frac{1}{2}$ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Galaxy, and over 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. 1 parsec equals 3.26 light years.

THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. The 5 metre (200-inch) telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearer star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra. The distances of some double and variable stars can

be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star.

When the distance of any star has been determined and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like *Sirius*, are characterized by very strong hydrogen lines. F, G and K stars, like *Procyon*, our Sun, and *Arcturus*, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like *Betelgeuse*, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7000°; G, 5500°; K, 4500°; M, 3000°. This sequence is also one of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, -4; B, -2; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from -4 to +11, or fainter, is known as the "main se-

quence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those types O to F and few of types G to M are still brighter, with absolute magnitudes ranging from -4 to -7. The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about 0 are called giants, those of -4 to -7 are called supergiants.

The sizes of the stars have been determined mostly by theoretical calculation. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 1,392,000 kilometres in diameter. The main sequence is found to be a sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while an average M star has a radius of one-third of the Sun. The giant stars of types G to M have radii between 10 and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately even in large telescopes; their binary nature is

revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. Some spectroscopic binaries, as they are called, are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is *Algol*, or β Perseus.

VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by 10 to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye; the Pleiades, the Hyades and Praesepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude -3. There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to

dium the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulae. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulae, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulae are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulae because they are relatively bright and can be seen at large distances.

THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novae and supernovae, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulae, form part of the Galaxy. The distribution of these various objects in the Galaxy is not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some external galaxies. This structure was

first shown by studying the positions of O and B stars; these trace out spiral arms. Radio astronomers subsequently found that interstellar neutral hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation have enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 100 thousand million times the mass of the Sun.

STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

EXTERNAL GALAXIES

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral galaxies consist of a central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical galaxies and the central bulges of the spiral galaxies are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral galaxies; the presence of hydrogen gas has been proved by the observation of regions of glowing gas and by the

reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Galaxy in Andromeda, at a distance of 2,000,000 light years; this spiral galaxy is believed to be similar to our own Galaxy in size and stellar content. External galaxies frequently occur in large clusters, each containing hundreds of galaxies. Many galaxies are in rotation in a manner similar to our own Galaxy and with comparable periods.

RADIO SOURCES

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulae are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebulae. Recently several sources have been discovered which exhibit extremely regular variations in radio "brightness", with incredibly short periods (of the order of 1 second). These sources are now called "pulsars".

QUASARS

The observation of occultations of radio sources by the Moon has led to the accurate determination of the positions of these radio sources. Thus it has been possible to use large optical telescopes with

small angular fields of view and high magnifications to photograph these positions. This has led to the discovery of a new type of object called a quasar (or quasi-stellar object or QSO). On a photographic plate such objects appear almost stellar, so they are not readily identified without the help of information from the radio astronomers. Spectroscopic examination of four of them shows that, like external galaxies, they have enormous velocities of recession. Such velocities imply great distances, yet no ordinary star (or even supergiant) would be detectable at even a fraction of these distances. The answer to the question 'what are quasars?' is not yet known with any certainty but the current explanation is that they are radio sources with the shape of a star but many millions of times larger, with unusually high ultra-violet radiation and sometimes with large red shifts. Already several dozen quasars are known.

COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulae through the observable region of space. It has been found that in spite of the tendency of galaxies to cluster together, on a still larger scale the galaxies are distributed remarkably uniformly. Observations have shown that distant galaxies have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distant galaxies appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. One theory postulates a gigantic initial explosion some 5,000 million years ago. Another postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Some recent observations suggest that the latter theory is no longer tenable.

THE SOLAR SYSTEM

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the Earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about $5,700^{\circ}\text{C}$., but a relatively short distance inside the surface the temperature reaches $1,000,000^{\circ}$ and deeper in the interior, near the centre, it is believed to be in the region of $14,000,000^{\circ}$. Now the constitution of the Sun is similar to that of the Earth, as shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas"

does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling on the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed by projection through a low-power telescope the Sun presents various interesting features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40° – 50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square km., to large dark markings several thousand times as great. The largest spot ever measured (April 1947) covered 18,000 million square kilometres at its greatest, or approximately 0.7 per cent of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11.1 years.

Maxima		Minima	
1837.2	1907.0	1843.5	1913.6
1848.1	1917.6	1856.0	1923.6
1860.1	1928.4	1867.2	1933.8
1870.6	1937.4	1878.9	1944.2
1883.9	1947.5	1889.6	1954.3
1894.1	1957.9	1901.7	1964.7
	1968.9		

The 1957 sunspot maximum was unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as H α , the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence a day or two later, of a magnetic storm. A very few large flares have had associated with them, increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are

the prominences, which extend outwards from the Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered skylight is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards for several million kilometres. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked-eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in Great Britain at these times its actual distance from the Sun is near its minimum.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling it at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutin-

ized with large apertures in full daylight. Recent radar observations, which are supported by theoretical investigations, give a rotation period of 59 days. Close-up photographs from space probes show that its surface has many craters.

VENUS

Venus, next from the Sun, has a diameter only about six hundred kilometres less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47° . Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, owing to dense clouds, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 2-metre reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at $3^h 32^m, +81^\circ$, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Recent radar observations have provided the unexpected value for the period of rotation given on p. 157.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the

constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour. A Russian space probe has revealed that the lower layers are extremely dense.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 56 and 100 million kilometres. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs early in September the distance may be less than 65 million kilometres and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 15 cm. aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41½ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. Recent observations by a spacecraft orbiting the planet indicate that these polar caps contain solid carbon dioxide. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas but it is now known that there are no large sheets of open water, and some regard areas of vegetation

as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The controversy over the canal-like markings on Mars has ended with the successful close range photography of the surface by Mariner 4. The photographs show a surface covered with craters, but no "canals".

Mars has an atmosphere which is considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none has ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock revolving round the Sun. The first four, found early in the 19th century, are also the largest. Recent radiometric measures of their diameters, in kilometres, are: Ceres 1000; Pallas 530; Juno 240; Vesta 530.

The periodic times of the revolutions about the Sun vary considerably around an average of $4\frac{1}{2}$ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20° , several exceed 30° , including Pallas 35° . The highest known, 43° , is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 21 million kilometres of the Earth. This happened in 1931 when carefully planned photographic recording of the planet and the surrounding

stars enabled measurements of its distance to be made, and hence a new value of the distance of the Sun from the Earth to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, or in finding the masses of Mercury or Venus.

JUPITER

Jupiter, the largest planet, has a volume over 1000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately $9^h 50\frac{1}{2}^m$, while most of those in higher latitudes give periods between $9^h 55^m$ and $9^h 56^m$, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about $+25^\circ$; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878-80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the surface are due to minute droplets or crystals of

ammonia, the surface temperature having been found by measurement to be of the order -120°C. , which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 100 kilometres or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Eight other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Satellite I (Io) occulted a fifth magnitude star on 1971 May 14, and from the accurate photoelectric observations of this event its equatorial diameter has been determined as 3660 ± 4 km. From a similar event in 1972 the diameter of Satellite III (Ganymede) was found to be 5,270 km.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13.5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Some evidence indicates that there is a connection between the positions of the satellite Io and these radio bursts.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically, and confirmed by spectroscopic observations, that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn. The extreme thinness of the rings is illustrated every 15 years when the plane of the rings passes through the Earth; they then become almost completely invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few kilometres.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^{\text{h}} 15^{\text{m}}$, in higher latitudes $10^{\text{h}} 38^{\text{m}}$ has been found in the northern hemisphere and $10^{\text{h}} 37^{\text{m}}$ in the southern. There is thus some analogy with

Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disk is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 2-metre reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has ten satellites, of which the largest, Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phœbe, has a retrograde motion.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disk, which is quite obvious, though less than $4''$ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be 10 hours; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disk of well over $2''$ in diameter. A rotation period of 15.8 hours, inferred spectroscopically, is now generally accepted.

The planet was found in 1846 as a result of calculations made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, revolves about Neptune in a retro-

grade direction at a distance a little less than that of the Moon from the Earth.

The other satellite revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 1,300,000 to over 10 million kilometres.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respect from the facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th-15th magnitude.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18.6 years.

The Moon, whose diameter is 3,476 kilometres, rotates in the same time that it revolves ($27^d 7^h 43^m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights. Recent photographs obtained from the successful *Ranger* series of lunar probes show craters as small as a metre in diameter. On 1969 July 21, the first men (Americans) landed on the Moon and returned with samples of lunar rock and dust for subsequent laboratory analysis.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of $29\frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthward from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 100 kilometres; upward, it may extend to 500 kilometres or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25, and 1949 January 24-26), can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when its brightest parts may appear brighter than the Galaxy.

Occasionally, under very good conditions, an extension of the Cone may be traced right round the ecliptic. This is known as the Zodiacal Band. The *Gegenschein* or "Counter-glow" may also be detected as a widening of the band at the anti-solar point.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micro-meteorites. These probably act as centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors ("shooting-stars") or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant

as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids, Perselds, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 110 kilometres at the beginning and about 75 kilometres at the end. The speeds vary from 15 to 80 km. per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. A number of meteorites have been found at Barwell, Leicestershire, as the result of two exploding fireballs on 1965 December 24. At the other end of the scale are the micro-meteorites which are too

small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perselds, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 150 million kilometres—a fine spectacle. Most comets are found accidentally and few observers search for these objects. One of the few is G. E. D. Alcock of Peterborough, Northants, who, after searching unsuccessfully for six years, found two new comets in August, 1959, within the space of 5 days. Two naked-eye comets which appeared in 1957 (Comet Arend-Roland in April, and Comet Mrkos in August) aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few kilometres in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 12,756 kilometres, and that of the polar axis 12,714 kilometres. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}^{\circ}$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is 30 kilometres a second. It makes a complete rotation on its axis in about $23^{\text{h}} 56^{\text{m}}$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 20 metres in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^{\text{h}} 50^{\text{m}}$ interval between consecutive meridian passages of the Moon. Briefly, a high tide occurs when the Moon is near the meridian because the attraction on the water is greater than on the solid earth. On the other side of the Earth the water is farther from the Moon than the solid earth and thus is less strongly attracted to the Moon and a second high tide occurs at this point. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastline and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of

past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward. (See pages 170-184.)

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 13 metres in the Severn Estuary and 16 metres in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is increasing by about a thousandth of a second every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

The discovery that a piece of the commonly occurring iron ore, magnetite or lodestone, is subject to a directing force causing it to take up a definite direction when freed from other restraint seems to have been made in China during the first century A.D., if not somewhat earlier. Steel needles, magnetized by rubbing with a piece of lodestone and floated on water, were being used as navigational aids by Chinese sailors before A.D. 1000. From this primitive device the Mariner's compass subsequently developed. That the direction, though roughly north to south, is by no means accurately so, was also known to the Chinese before A.D. 1000.

William Gilbert, in 1600, demonstrated that in the proximity of the Earth magnetized needles behave much as if the Earth itself were a large magnetized sphere. It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634, found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillated slowly through a small angle every day. In the

British Isles the movement is eastwards till about 08^h U.T., then rather quickly westwards till about 14^h U.T., after which there is a gradual return eastwards. The amplitude may be as much as 15' in the summer.

A magnetic compass points along the horizontal component of a magnetic line of force. These directions converge on the "magnetic dip-poles". At these poles a freely suspended magnetized needle would become vertical. Not only do the positions of these poles change with time, but their exact location is ill-defined, particularly so in the case of the north dip-pole where the lines of force, on the north side of it, instead of converging radially, tend to bunch into a channel. Although it is therefore unrealistic to attempt to specify the locations of the dip-poles exactly, the present adopted positions are 76°·2 N., 100°·2 W. and 65°·8 S., 139°·5 E. The two magnetic dip-poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 1,100 kilometres. The distances of the magnetic dip-poles from the north and south geographic poles are about 1,600 and 2,700 kilometres respectively.

There is also a "magnetic equator", at all points of which the vertical force is zero and a magnetized needle remains horizontal. This line runs between 2° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Secular changes differ throughout the world. Although the London observations strongly suggest a cycle of several hundred years, an exact repetition is unlikely.

London		Greenwich	
1580	11° 15' E.	1850	22° 24' W.
1622	5 56 E.	1900	16 29 W.
1665	1 22 W.	1925	13 10 W.
1730	13 00 W.	1950	9 07 W.
1773	21 09 W.	1975	6 47 W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonic) passing through all places at which specified values of declination will be found at the date of the chart.

In the British Isles, isogonic lines now run approximately north-east to south-west. Though there are considerable local deviations due to geological causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1977 is 6° 20' west and allowing an increase of 18' for each degree of latitude northwards and one of 28' for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 6° 20' + 54' + 140', i.e. 9° 34' west. The average annual change at the present time is about 6'·5 decrease.

The number of magnetic observatories now approaches 200—widely scattered over the globe. In Great Britain three are maintained by the Government: at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands, while a fourth is maintained by Stonyhurst College, Lancashire. Some recent annual mean values of the magnetic elements for Hartland are given below.

The normal worldwide terrestrial magnetic field corresponds approximately to that of a very strong small bar magnet near the centre of the Earth but with appreciable smooth spatial departures. The origin and slow secular change of the normal field is not yet fully understood but is generally ascribed to electric currents associated with fluid motions within the Earth's core. Superposed on the normal field are local and regional anomalies whose magnitudes may in places exceed that of the normal field; these are due to the influence of mineral deposits in the Earth's crust. A small proportion of the field is of external origin, mostly associated with electric currents in the ionosphere. The configuration of the external field and the ionization of the atmosphere depend on the incident particle and radiation flux. There are, therefore, short-term and non-periodic as well as diurnal, 27-day, seasonal and 11-year periodic changes in the magnetic field, dependent upon the position of the Sun and the degree of solar activity.

Year	Declination West	Dip or Inclination	Horizontal Force	Vertical Force
	°	°	oersted	oersted
1945	11 46	66 55	0·1843	0·4326
1950	11 06	66 54	0·1848	0·4334
1955	10 30	66 49	0·1859	0·4340
1960	9 59	66 44	0·1871	0·4350
1965	9 30	66 34	0·1887	0·4354
1970	9 06	66 26	0·1903	0·4364
1975	8 32	66 17	0·1921	0·4373

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's magnetic field is subject for several hours to marked disturbance. In extreme cases, departures in field intensity as much as one tenth the normal value are experienced. In many instances, such disturbances are accompanied by widespread displays of aurorae, marked changes in the incidence of cosmic rays, an increase in the reception of 'noise' from the Sun at radio frequencies together with rapid changes in the ionosphere and induced electric currents within the earth which adversely affect radio and telegraphic communications. The disturbances are generally ascribed to flux changes in the stream of neutral and ionized particles which emanates from the Sun and through which the Earth is continuously passing. Some of these changes are associated with visible eruptions on the Sun, usually in the region of sunspots. There is a marked tendency for disturbances to recur after intervals of about 27 days, the apparent period of rotation of the Sun on its axis, which is consistent with the sources being located on particular areas of the Sun.

ARTIFICIAL SATELLITES AND SPACE PROBES

The progress of rocket research during the last war led to the development by the Germans in 1944 of the V.2 rocket which, if fired vertically, attained a height of 180 km. Before the end of the decade the U.S. rocket engineers had increased this maximum height to 400 km by using a two-stage rocket, the first stage being a V.2 and the second a WAC Corporal. Plans for using multi-stage rockets to put artificial satellites into orbit around the earth during the International Geophysical Year (July 1957–December 1958) were announced by both the U.S. and the U.S.S.R. Such projects also called for an immense effort in establishing optical, radio, and radar tracking facilities around the world.

The historic event which heralded the Space Age occurred on 1957 October 4 when the U.S.S.R. successfully injected a "sputnik" into an orbit inclined at 65° to the earth's equator. One month later "Sputnik 2" was also put into orbit, carrying a dog that survived the ascent trajectory and lived for several days orbiting the earth. The rate of satellite launching has increased since 1957 and by the end of 1960 the number of artificial satellites in orbit around the Earth exceeded the number of natural satellites known to be in the Solar System. All the satellites launched up to the end of 1960 have been sent up in the same direction as the rotation of the Earth, i.e., eastwards. Thus they are able to start with the benefit of the Earth's rotational velocity at the particular launching site. This is why these satellites always appear to move in an easterly direction. However, the first satellite launching of 1961 (*Samos 2*) achieved a retrograde orbit.

Satellite Orbits

To consider the orbit of an artificial satellite it is best to imagine that one is looking at the Earth from a distant point in space. The Earth would then be seen to be rotating about its axis inside the orbit described by the rapidly revolving satellite. The inclination of a satellite orbit to the Earth's equator (which generally remains almost constant throughout the satellite's lifetime) gives at once the maximum range of latitudes over which the satellite passes. Thus a satellite whose orbit has an inclination of 53° will pass overhead all latitudes between S. 53° and N. 53° , but would never be seen in the zenith of any place nearer the poles than these latitudes. If we consider a particular place on the earth, whose latitude is less than the inclination of the satellite's orbit then the Earth's rotation carries this place under first the north-bound part of the orbit and then, later on, under the south-bound position of the orbit, these two occurrences being always less than 12 hours apart for satellites moving in direct orbits (i.e. to the east). For satellites in retrograde orbits the words "north-bound" and "south-bound" should be interchanged in the preceding statement. As the value of the latitude of the observer increases and approaches the value of the inclination of the orbit, so this interval gets shorter until (when the latitude

is equal to the inclination) only one overhead passage occurs each day.

Orbital Variations

The relatively simple picture described above is unfortunately complicated by the considerable variations in the shape, orientation and size of the orbit during a satellite's lifetime. The major variations are due to the Earth's oblateness and to air-drag. A third cause, radiation pressure from the Sun, is noticeable only on large satellites of extremely low density.

The oblate shape of the Earth—the equatorial diameter is 43 km longer than the polar diameter—has two marked effects on a satellite orbit. It causes a regression of the nodes, amounting to several degrees a day for close satellites. Thus from a point in space, the whole orbit is seen to twist around the Earth, making a complete turn of 360° within a few months. This regression, which may also be described as the rotation of the orbital plane around the Earth's axis, is in the opposite direction to the satellite's motion, i.e. the orbit of a satellite with a direct motion regresses to the west. The actual amount of the regression depends, first, on the inclination of the orbit to the equator, being greatest at low inclinations and zero for a true polar orbit (inclination 90°). It is also dependent on the distance of the satellite from the Earth, being greatest for small orbits. At the distance of the Moon the regression is only 19° a year.

The orbit of *Samos 2* was extremely interesting from this point of view as its regression to the east was at an almost identical rate as the movement of the Sun. Thus there was hardly any change in the area of visibility over a long period of time.

The other effect the Earth's oblateness has on a satellite orbit is to cause a rotation of the line of apsides (i.e. the line joining the perigee and apogee points of the orbit). The rate of the rotation is dependent on the inclination of the orbit, and also on the distance of the satellite, again being greater for close satellites than for more distant ones. The value of this rotation has its greatest positive value (i.e. it moves forward along the orbit in the same direction as the satellite) at the equator and becomes zero at an inclination of $63^\circ.4$. As the inclination moves from $63^\circ.4$ to 90° the value increases again numerically, but with the opposite sign, the motion of the line of apsides being backwards along the orbit.

Even at heights of several hundred kilometres there is still sufficient atmosphere to cause a retarding effect on satellites. Although air-drag will have most effect around the perigee point the actual result is to reduce the height of the apogee point with hardly any change in perigee height and thus to decrease the eccentricity of the orbit until, in the final stage of a satellite's life-time, the orbit is almost circular. Unfortunately the air density at perigee height is not constant. It alters as the perigee moves from daylight into darkness and from darkness into daylight, and also as the latitude of perigee changes

SATELLITE HEIGHTS AND VELOCITIES

Period		Height, kilometres	Velocity, km per hour	Period		Height, kilometres	Velocity, km per hour

3	20	4,958	21,354	24	00	35,871	11,059
3	30	5,332	21,010				

due to the rotation of the line of apsides. There is already some evidence that the atmospheric density varies with the sunspot cycle. In addition unpredictable short-period variations in the output of solar radiation may also occur and these have the effect of increasing the air density at any given height. Thus the air-drag on a satellite is by no means a constant factor and this is the reason why it is not possible to forecast accurately the position of a satellite for any considerable period of time. There is also some retardation due to electrified particles but this effect may be included with the air-drag.

Radiation pressure from the Sun only has any appreciable effect on large satellites of extremely low density such as the 30 metre diameter balloon, *Echo 1*. For such satellites, however, this effect can be severe, and for heights greater than a few hundred kilometres, it can equal or even surpass that due to air-drag. The effect on the orbit is very much more complicated than that due to air-drag, and even the signs of the variations can change periodically with time. Thus it is possible for the eccentricity to increase rather than decrease, with an increase in apogee height and a decrease in perigee height.

For close artificial satellites the gravitational attractions of the Sun and Moon are many thousand times weaker than that of the Earth's equatorial bulge and need only be considered in an extremely precise analysis of observational material.

Height and Velocity

The mean height of a satellite above the Earth's surface, which is determined by its orbital velocity, is related to its period of revolution around the Earth as is shown by the table above.

As the orbit shrinks due to air-drag, both the mean height and the period decrease so that the retarding effect of air-drag actually causes the satellite to move faster, though in a smaller orbit.

Satellite Launchings, 1957-75

Many different types of orbit have been achieved though the vast majority have had a direct motion. The majority of the Russian satellite orbits have had inclinations of 65° or 49° and orbits entirely below 2000 kilometres in height. An important exception was Lunik 3 whose original inclination was 75° and initial apogee height 470,000 km. This satellite orbited the Moon on its first revolution, returning with the first photographs of the other side of the Moon, which were transmitted back to the Earth when near perigee.

The American satellites have been injected into orbits of various inclinations. The early Explorers and Vanguard are in orbits of inclination about $28-35^\circ$ while near-polar orbits were achieved with the Discoverers. Other series of launchings such as the Transit, Tiros and Echo put satellites in orbits of intermediate inclinations. In contrast to the heavy, but short-lived, Russian satellites, a number of those launched by the U.S. have been very small and have been put in larger orbits which have given them considerably longer life-times.

A third Anglo-American satellite, Ariel 3, was launched on May 5, 1967, and has been of great interest to visual observers. Sets of mirrors and highly reflective solar cells on its sides cause the observer to see a series of flashes and the observations are used to determine the direction of the axis of rotation of the satellite.

In order to monitor the Arab-Israeli war, and in particular the Egyptian battlefield, the Russians launched a number of Cosmos satellites in the first half of October 1973. The orbits were very care-

[continued on p. 169]

fully chosen to take the satellites, at low heights, directly over the battlefield during daylight.

The space war is hotting up—two American D.O.D. satellites were blinded by powerful infrared emissions from west Russia on October 18 1975 and November 17/18 1975. Recently the number of satellites in orbit increased markedly due to the break-up of a number of American and Russian satellites. It seems likely that 5 American and 4 Russian satellites were targets for rockets (fired from the ground) designed to prove their capabilities of destroying satellites in orbit. One of the satellites involved was the naked-eye balloon satellite Pageos A (1966-56A).

Apart from their names, e.g. Cosmos 6 Rocket or Injun 3, the satellites are also classified according to their date of launch. Thus 1961 α refers to the launching of Samos 2. The next satellite launching was 1961 β and so on. A number following the Greek letter is intended to indicate the relative brightness of the satellites put in orbit. From the beginning of 1963 the Greek letters are replaced by numbers and the numbers by roman letters e.g. 1963-01A. In this table are given the designation and names of the main objects in orbit (in the order A, B, C... etc.), the launch date and some initial orbital data. These are the inclination to the equator (i), the nodal period of revolution (P), the eccentricity, e , and the perigee height. The names of those satellites which have already disintegrated in the Earth's atmosphere or returned to the Earth's surface are printed in *italics*. A satellite which carried a human being is indicated by an asterisk.

Since the last edition of *Whitaker's Almanack* the following satellites launched in the years 1964-75 have disintegrated in the Earth's atmosphere:—

1962-01	1968-109A	1970-49A	1970-49D
1970-77A	1970-101A	1970-101D	1971-18B
1971-58B	1971-76B	1972-95A	1973-99A
1974-09A	1974-47B	1974-60D	1974-102C
1975-03A	1975-06A		

ROYAL OBSERVATORIES

Royal Greenwich Observatory Herstmonceux, Sussex

The Royal Observatory was established at Greenwich in 1675 by Charles II for improving methods of navigation. Latterly the growth of London, with its smoke and bright lights, seriously hampered astronomical observations there, and it was decided in 1946 to move the telescopes to Herstmonceux Castle in Sussex. The removal was completed by 1958. The meridian of zero longitude still passes through the old site, which now houses the Department of Navigation and Astronomy of the National Maritime Museum.

At the Observatory astronomical measurements are made of the positions, motions and distances of the heavenly bodies, and of such physical characteristics as their luminosities, masses and temperatures. Two meridian instruments and six equatorially-mounted telescopes are devoted to this work, and the Isaac Newton telescope, a 2.5 metre reflector for the use of any qualified British astronomer, was completed in 1967. The Observatory is responsible for the time service of the United Kingdom and the time zones of the world are based on Greenwich Mean Time.

Observation of Satellites

The regression of the orbit around the Earth causes alternate periods of visibility and invisibility, though this is of little concern to the radio or radar observer. To the visual observer the following cycle of events normally occurs (though the cycle may start in any position): invisibility, morning observations before dawn, invisibility, evening observations after dusk, invisibility, morning observations before dawn, and so on. With reasonably high satellites and for observers in high latitudes around the summer solstice the evening observations follow the morning observations without interruption as sunlight passing over the polar regions can still illuminate satellites which are passing over temperate latitudes at local midnight. At the moment all satellites rely on sunlight to make them visible though a satellite with a flashing light has been suggested for a future launching. The observer must be in darkness or twilight in order to make any useful observations and the durations of twilight and the sunrise, sunset times given on page II of each month will be a useful guide.

Some of the satellites are visible to the naked eye and much interest has been aroused by the spectacle of a bright satellite disappearing into the Earth's shadow. The event is even more fascinating telescopically as the disappearance occurs gradually as the satellite traverses the Earth's penumbral shadow, and during the last few seconds before the eclipse is complete the satellite may change colour (under suitable atmospheric conditions) from yellow to red. This is because the last rays of sunlight are reflected through the denser layers of our atmosphere before striking the satellite.

Some satellites rotate about one or more axes so that a periodic variation in brightness is observed. This was particularly noticeable in several of the U.S.S.R. satellites.

Satellite research has already provided some interesting results. Among them may be mentioned a revised value of the Earth's oblateness. 1/298.2, and the discovery of the Van Allen radiation belts.

H.M. Nautical Almanac Office

The *Nautical Almanac* was first published for 1767 by the Board of Longitude. The Office is now a department of the Royal Greenwich Observatory. Annual publications—Astronomical Ephemeris, Nautical Almanac, Air Almanac, Star Almanac.

Royal Observatory Blackford Hill, Edinburgh 9

The Observatory, founded by the Astronomical Institution in 1818 on Calton Hill, was moved to its present site in 1896. Its work, which is closely linked with that of the Astronomy Department of Edinburgh University, is concerned with the physics of stars and interstellar matter and the structure and evolution of our galaxy and external galaxies. Observational data are secured with various telescopes in Edinburgh and in Monte Porzio, Italy, where the Observatory operates an outstation. The Observatory has specialized in the design and construction of advanced data processing equipment.

Astronomer Royal for Scotland and Regius Professor of Astronomy in the University of Edinburgh, Prof. V. C. Reddish O.B.E., Ph.D., D.Sc.

TIDAL CONSTANTS

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 172, 173, etc.) and adding thereto the quantities annexed. The columns headed "Springs" and "Neaps" show the height of the tide above datum for Mean High Water Springs and Mean High Water Neaps respectively.

Tidal data is no longer available for a number of places which formerly appeared in the list below. These places (with the name of the substitute now recorded) are: *Air Point* (Mostyn Quay); *Ardyshaig* (East Loch Tarbert); *Arisaig* (Loch Moidart); *Ayr Pt., I.o.M.* (Peel); *Beachy Head* (Eastbourne); *Beaumaris* (Menai Bridge); *Brielle* (Scheveningen); *Broughy Ferry* (Newburgh); *Burryport* (Whiteford Lighthouse); *Caen* (Cayeux); *Caernarvon* (Llanddwyn Isld.); *Dumbarton* (Bowling); *Dumfries* (Port Carlisle); *Fareham* (Itchenor); *Fifeness* (Anstruther Easter); *Glasson Dock* (Tarn Pt.); *Gravesend* (Tilbury Dock); *Greenwich* (R. Albert Dock); *Hythe* (Totland Bay); *Lancaster* (Duddon Bar); *Lymouth* (Porlock Bay); *Nash Pt.* (Chepstow); *Needles Pt.* (Freshwater Bay); *Neath* (Porthcawl); *Nore Lt.* (Chatham); *Port Harrington* (Heston Islet); *Portishead* (Avonmouth); *St. Agnes* (Coverack); *St. Mary's* (Sennen Cove); *Start Pt.* (Lulworth Cove); *Stockton* (Seaham); *Sutton Bridge* (Blacktoft); *Torbay* (Torquay); *Woolwich* (Hammersmith Br.); *Worms Head* (Ferry-side); *Honfleur Harbour* (Duclair).

* Approximate figures only, owing to abnormality of tides in area.

The Standard Ports referred to in the heading are given in *italic*.

EXAMPLE.—Required times of high water at Stranraer on January 10, 1977:—

(a) Morning Tide.

Appropriate time of high
water at Greenock..... 0324 hrs. (Jan. 10)
Tidal difference..... -0020 hrs

H.W. at Stranraer... 0304 hrs.

† 1st H.W. (Springs) †† 1st H.W.
— No data available — Entrance.

(b) Afternoon Tide.

Appropriate time of high
water at Greenock..... 1517 hrs. (Jan. 10).
Tidal difference..... -0020 hrs.

H.W. at Stranraer... 1497 hrs.

JANUARY, 1977

NOTES ON TIDAL PREDICTIONS

Changes in Chart Datum

During recent years the Department of the Hydrographer of the Navy has been carrying out a survey of tidal levels. On the conclusion of each section of the survey the Department is taking the opportunity to regularize the sequence of chart datums so that eventually chart datums throughout the British Isles will approximate to the Lowest Astronomical Tide, i.e. the lowest level which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions.

In some cases the changes in chart datum will be appreciable (perhaps as much as 1 metre) and the resulting predictions will appear to give heights of tide quite different from those of previous years. These changes do not imply that a physical change has taken place in tidal conditions.

It will be found that, where such datum changes have been made, the relationship between Ordnance Datum and the datum of the predictions will also have been altered. In order to compare the predictions for one year with those of another year for which the datum has been altered, it is necessary to refer both years to the same datum. Ordnance Datum (Newlyn) is a convenient datum to which tidal heights may thus be referred.

Example.—In 1972, at Folkstone, the highest

predicted high water was 22.8 feet (=6.9 metres) above chart datum; chart datum for that year was 10.06 feet (3.07 metres) below Ordnance Datum (Newlyn). In 1973 the highest predicted high water was 7.4 metres above chart datum, while chart datum for this year was altered to 3.75 metres below Ordnance Datum (Newlyn). To compare these two maximum predicted levels we must reduce both to Ordnance Datum (Newlyn) with the following results:—

1972 $6.9 - 3.07 = 3.83$ metres

1973 $7.4 - 3.75 = 3.65$ metres

Thus it will be seen that the highest prediction for 1973 is approximately 0.2 metres lower than for 1972.

Tidal predictions for London Bridge, Liverpool, Bristol, Hull and Leith are computed by the Institute of Oceanographic Sciences, copyright reserved. Tidal predictions for Dún Laoghaire are based upon standard Port data computed by the Institute of Oceanographic Sciences, copyright reserved. Tidal predictions for Greenock are Crown Copyright and have been supplied by the Institute of Oceanographic Sciences with the permission of the Controller of H.M. Stationery Office and the Hydrographer of the Navy.

Chronological Notes

TIME MEASURES

Keivin (1883) estimated the age of the earth's crust at 20–400 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500–2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 5000 million years ago.

PALEOZOIC (Old Animal Life) PERIODS include:—

Cambrian, *Ordovician* and *Silurian* rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.–S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.–W. lines of hills and valleys, and some N.–S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R. *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of Life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period ice sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100–200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraal have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenoorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late-Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Kabwe (formerly Broken Hill), Zambia, are related to the Neandertal group.

Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull was dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw was found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the *Pithecanthropus* group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cromagnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 8 or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillian and Acheullan) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. In many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Ologesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skilfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palæolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses,

furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, north-west Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnus).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial* or *Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not a leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as:

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

March 24 1658, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in warrants, dispensations etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini* 1976—*Anno Lucis* 5976. This *Year of Light* is based on the Book of Genesis I: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 24 of the present Queen began on Feb. 6, 1975. The system was used for dating Acts of Parliament until 1962. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI. and 1 Elizabeth II. Since 1962 Acts of Parliament have been dated by the calendar year.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, and Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which

a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is $365\frac{1}{4}$ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar. For the remainder of this century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses. In the year 2000 the Summer Solstice reaches its earliest date for 100 years, i.e., June 21^d 02^h.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. For the remainder of this century the shortest day will fall on Dec. 21 in two years of four and on Dec. 22 in the remaining two years. In the year 2000 the Winter Solstice reaches its earliest date, Dec. i.e., 21^d 13^h. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combinations causes the date of earliest sunset to be Dec. 12 or 13 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The Lord Mayor of London was previously elected on the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. The Lord Mayor is now presented to the Lord Chief

Justice at the Royal Courts of Justice, on the second Saturday in November to make the final declaration of office, having been sworn in at Guildhall on the preceding day.

Dog Days.—The days about the hellacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) Cycle.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same day of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon, diminished by one day, on January 1, in the ecclesiastical lunar calendar.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign of Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June, July and August, Midsummer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e., about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*,

Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain*

the season is popularly held to comprise the months of November, December and January, mid-winter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nicaea, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 186). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583; Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1918, by Yugoslavia and Rumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Rumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The *Dominical Letter* is one of the letters A–G which are used to denote the Sundays in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of exceptional importance from the time of the Council of Nicaea (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (when palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maundy Thursday, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real Moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the

lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days—(March 22–April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Efforts have been made recently by the World Council of Churches to secure a unanimous choice of date for Easter by its 239 member Churches. Press reports suggested the second Sunday in April as their most likely choice.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saint's Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 225) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325,

and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as Public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds".

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptized. But other derivations have been suggested.

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost".

Thomas Becket, called by his contemporaries Thomas of London (born 1118; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*) there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or April 14, the year being a leap year.

A TABLE OF THE MOVABLE FEASTS FOR 10 YEARS—1974–83

Year	Ash Wednesday	Easter	Ascension	Whit Sunday	Sundays after Trinity	Advent
1974.....	Feb. 27	April 14	May 23	June 2	xxiv	Dec. 1
1975.....	Feb. 12	March 30	May 8	May 18	xxvi	Nov. 30
1976.....	March 3	April 18	May 27	June 6	xxviii	Nov. 28
1977.....	Feb. 23	April 10	May 19	May 29	xxiv	Nov. 27
1978.....	Feb. 8	March 26	May 4	May 14	xxvii	Dec. 3
1979.....	Feb. 28	April 15	May 24	June 3	xxiv	Dec. 2
1980.....	Feb. 19	April 6	May 15	May 25	xxv	Nov. 30
1981.....	Mar. 4	April 19	May 28	June 7	xxlii	Nov. 29
1982.....	Feb. 24	April 11	May 20	May 30	xxiv	Nov. 28
1983.....	Feb. 16	April 3	May 12	May 22	xxv	Nov. 27

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first Day in *Lent*) can fall at earliest on February 4 and at latest on March 10.

Easter Day can fall at earliest on March 22 and at latest on April 25.

Ascension Day can fall at earliest on April 30 and at latest on June 3.

Whit Sunday can fall at earliest on May 10 and at latest on June 13.

Rogation Sunday is the Sunday next before *Holy Thursday* (Ascension Day).

Trinity Sunday is the Sunday next after *Whit Sunday*.

Corpus Christi falls on the Thursday next after *Trinity Sunday*.

There are not less than xxii and not more than xxvii *Sundays after Trinity*.

Advent Sunday is the Sunday nearest to November 30.

PUBLIC HOLIDAYS

BANK HOLIDAYS IN ENGLAND, WALES, NORTHERN IRELAND AND THE CHANNEL ISLANDS ARE (1977):—New Year (January 3), Easter Monday (April 11), Spring Holiday and Silver Jubilee (June 6 and 7), August Bank Holiday (August 29); December 26 and 27; (1978) Jan. 2; March 27; May 1 and 29; Aug. 28; Dec. 26.

Liberation Day (May 9) is a bank and public holiday in the Channel Islands.

Banks are also closed on Good Friday and Christmas Day and on all Saturdays.

The Stock Exchange is closed on Bank Holidays, Good Friday, Christmas Day and New Year's Day; and on Saturdays throughout the year.

Custom House and Docks, as Banks; with the Queen's Birthday (when decreed).

Excise and Stamp Offices, as Banks; with Whit Tuesday and Coronation Day, if and when decreed.

Law Offices.—Good Friday, Easter Monday and Tuesday, Spring Bank Holiday (see col. 1), Christmas Day, and first week-day after Christmas.

BANK HOLIDAYS IN SCOTLAND ARE (1977) Jan. 3 and 4; April 8; May 2; Aug. 1; and Dec. 26; (1978) Jan. 2 and 3; Mar. 24; May 1; Aug. 7; and Dec. 25.

Banks in Scotland are also closed on Good Friday, Christmas Day and on Saturdays.

Scotland has special Term (Quarter) Days:—Candlemas, Feb. 2; Whitsunday, May 15 (Fixed date); Lammas, Aug. 1; and Martinmas, Nov. 11; the Removal Terms are May 28 and Nov. 28.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their original numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of Abib as the month when the Israelites came out from Egypt and Abib was to be the first month of

the year. In the first Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II, a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the

tropical year as found by Hipparchus (*Circ.* 120 B.C.) which differ little from those adopted at the present day. The year 5737 A.D. (1976-77) is the 18th year of the 302nd *Metonic* (Minor or Lunar) Cycle of 19 years and the 25th year of the 205th *Solar* (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Teku ah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new moon and the next is reckoned as 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of the month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not

fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is 2h. 21m. in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

A.M. 5737 (known as 737 in the short system) is a Common Deficient Year of 12 months, 51 Sabbaths and 353 days. A.M. 5738 (738) is an Embolismic Regular year of 13 months, 55 Sabbaths and 384 days. A.M. 5739 (739) is a Common Abundant year of 12 months, 50 Sabbaths and 355 days.

Jewish Fasts and Festivals

Tishri	1	Rosh Hoshanah (New Year).	Tebet	10	Fast of Tebet.
"	3	*Fast of Gedaliah.	Adar	13	*Fast of Esther.
"	10	Yom Kippur (Day of Atonement).	"	14	Purim.
"	15-22	Succoth (Feast of Tabernacles).	"	15	Shushan Purim.
"	21	Hoshana Rabba.	Nisan	15-21	Passover.
"	22	Solemn Assembly.	Sivan 6 and 7		Shavuot (Pentecost or Feast of Weeks).
"	23	Rejoicing of the Law.	Tammuz	17	*Fast of Tammuz.
Kislev	25	Dedication of the Temple.	Ab	9	*Fast of Ab.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day.

§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

THE ROMAN CALENDAR

Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year 1977 is 2730 A.U.C. (MMDCCXXX). The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Caesar, who was then Pontifex

Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days *before* the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the table below. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissexthus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty-eight days, and in Leap Year twenty-nine

A bar placed over a numeral has the effect of multiplying the number by 1,000, e.g.:
6,000=VI; 16,000=XVI; 160,000=CLX; 666,000=̄DCLXVI.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Julian Calendar. Hejira years are used principally in Iran, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the Hejira. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the Hejira year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a Hejira year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle. If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1397 gives a quotient of 46 with remainder 17 and is a common year. A.H. 1398 (remainder 18) is *kabishah*. A.H. 1399 (remainder 19) is common.

Hejira Years 1397 and 1398

Name and Length of Month	A.H. 1397	A.H. 1398
Muharram (30).....	1976 Dec. 23	1977 Dec. 12

Rabia II (29).....	Mar. 22	Mar. 11
Jumâda I (30).....	April 20	April 9
Jumâda II (29).....	May 20	May 9
Rajab (30).....	June 18	June 7
Shaaban (29).....	July 18	July 7
Ramadan (30).....	Aug. 16	Aug. 5
Shawwal (29).....	Sept. 15	Sept. 4
Dhû 'l-Qa'da (30)...	Oct. 14	Oct. 3
Dhû 'l-Hijja (29 or 30).....	Nov. 13	Nov. 2

NOTE—A.H. 1399 (common year of 354 days) begins on December 2, 1978.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet, Hong Kong, Singapore, Malaysia and elsewhere in South-East Asia.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap year and in these years there are 6 complementary days.

The Intercalary year of the Coptic Calendar immediately precedes the Leap year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1977 is, therefore, the year 2034 of the Vikrama Era.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1977 is 1899 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the former British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31
 „ Taishō „ 1912 Aug. 1 to 1926 Dec. 25
 „ Shōwa „ 1926 Dec. 26

Hence the year Shōwa 52 begins 1977 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suifyōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

The World

The *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901·8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION

The total population of the world in June, 1972, was estimated by the *United Nations Statistical Office* at 3,782,000,000 compared with 3,003,000,000 in 1960 and 2,070,000,000 in 1930. Figures of areas in the following table are of land area and inland water, but exclude uninhabited polar regions and some uninhabited islands. Figures for Europe and Asia exclude U.S.S.R. which is shown separately. Figures for Oceania exclude Hawaii which is included with North America, being the 50th State of U.S.A.

Continent, etc.	Area		Estimated Population, 1971
	Sq. miles '000	Sq. km. '000	
Europe.....	1,903	4,929	466,000,000
Asia*.....	10,661	27,611	2,104,000,000
U.S.S.R.....	8,649	22,402	245,000,000
Africa.....	11,683	30,258	354,000,000
America.....	16,241	42,063	522,000,000
Oceania.....	3,286	8,510	19,800,000
Total...	52,422	135,773	3,711,000,000

* Excludes U.S.S.R. (shown separately); includes European and Asiatic Turkey.

A United Nations report (*The Future Growth of World Population*) in 1958, pointed out that the population of the world had increased since the beginning of the 20th Century at an unprecedented rate: in 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:—

Continent	1975		2000	
	Estimated Population	Per cent.	Estimated Population	Per cent.
Europe†...	751	19·6	947	15·1
Asia*.....	2,210	57·7	3,870	61·8
Africa.....	303	7·9	517	8·2
N.America.	240	6·3	312	5·0
Latin America†...	303	7·9	592	9·4
Oceania....	21	0·5	29	0·5
World.....	3,828	100	6,267	100

* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

THE CONTINENTS

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe.

Its length from the North Cape, 71° 12' N., to Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

The appended tables of area and population are based on such information as is immediately available.

With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases where later information becomes available during printing the new figures are given in the overseas sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 2,700 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.—Adjoining Nebuchadnezzar's palace, 60 miles south of Baghdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHESUS.—Ionic temple erected about 350 B.C. in honour of the goddess and burned by the Goths in A.D. 262.
- V. THE COLOSSUS OF RHODES.—A bronze statue of Apollo, set up about 280 B.C. According to legend it stood at the harbour entrance of the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 36,198 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans		
Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific.....	63,986,000	Mariana Trench, 36,198
Atlantic.....	31,530,000	Puerto Rico Trench, 27,498
Indian.....	28,350,000	Diamantina, 26,400
Arctic.....	5,541,600 17,850

Seas		
Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Malay.....	3,137,000	Kei Trench, 21,342
Caribbean.....	1,770,170	Cayman, 23,000
Mediterranean.....	1,145,000	Matapan, 14,435
Bering.....	878,000	Buldir Trough, 13,422
Okhotsk.....	582,000	Kurile Trough, 11,154
East China.....	480,000	about 10,500
Hudson Bay.....	472,000	about 1,500
Japan.....	405,000	about 10,200
Andaman.....	305,000	about 11,000
North Sea.....	221,000	Skaggerak, 1,998
Red Sea.....	178,000	20° N., 7,254
Baltic.....	158,000	about 1,300

PRINCIPAL LAND AREAS OF THE WORLD BELOW SEA LEVEL

(With approx. greatest depth in feet below Mean Sea Level.)

Europe: Netherlands coastal areas (15).
 Asia: Jordan Valley, Dead Sea (1290).
 China: Sinkiang, Turfan Basin (980).
 U.S.S.R.—Iran: Caspian Sea (85).
 Arabia: Trucial Oman-Qatar (70).
 Africa: Libyan Desert Depressions:—
 Qattara (440), Faiyum (150).
 Wadi Ryan (140), Sittira (110).

Africa: Libyan Desert Depressions (continued)—
 Areg (80), Wadi Natrun (75).
 Melfa (60), Siwa (55), Bahrain (50).
 Eritrea: Salt Plains depression (385).
 Algeria-Tunisia: Shott Melghir and El

* See paragraph 2, p. 199. U.S.A.—Populations of the largest cities are those of the standard metropolitan statistical areas at the Census of 1970.

THE CINQUE PORTS

As their name implies the Cinque Ports were originally 5 in number, Hastings, New Romney, Hythe, Dover and Sandwich. They were in existence before the Norman Conquest and were the Anglo-Saxon successors to the Roman system of coast defence organized from the Wash to Spithead to resist Saxon onslaughts. William the Conqueror reconstituted them and granted peculiar jurisdiction, most of which was abolished in 1855. Only jurisdiction in Admiralty still survives.

At some time after the Conquest the "antient towns" of Winchelsea and Rye were added with equal privileges. The other members of the Confederation, known as Limbs, are:—Lydd, Faversham, Folkestone, Deal, Tenterden, Margate and Ramsgate.

The Barons of the Cinque Ports have the ancient

privilege of attending the Coronation Ceremony and are allotted special places in Westminster Abbey.

Lord Warden, Rt. Hon. Sir Robert Menzies, K.T., C.H., Q.C.

Judge, Court of Admiralty, Sir Henry Barnard.

Registrar, James A. Johnson, New Bridge House, Dover.

Lord Wardens since 1904

SOME FAMOUS BRIDGES

Among the outstanding *suspension bridges* of the World are the Verrazano Narrows Bridge, New York (main span, 4,260 ft.); the Golden Gate Bridge, San Francisco (4,200 ft.); Mackinac Bridge, Michigan (3,800 ft.); Bosphorus, Turkey (3,523 ft.); George Washington Bridge, New York (3,500 ft.);

the Ponte Salazar (Tagus Bridge), Portugal (3,323 ft.); Forth Road Bridge, Scotland (3,300 ft.); Severn Bridge, England and Wales (3,240 ft.); Tacoma Bridge, Washington, U.S.A. (2,800 ft.); Orinoco Bridge, Venezuela (2,336 ft.) and the Kanmon Bridge, Japan (2,336 ft.). Lengths shown above are all those of the main or longest span.

The Transbay Bridge (*suspension and cantilever*), crossing San Francisco Bay from Oakland to San Francisco is $7\frac{1}{2}$ miles long, with spans of 2,310 ft. each.

Among important *steel arch* bridges are the Bayonne Bridge, from New Jersey to Staten Island, U.S.A. (1,652 ft.); Sydney Harbour Bridge, Australia (1,650 ft.); the Runcorn-Widnes Bridge, England (1,082 ft.); and the Glen Canyon Bridge over the Colorado River, U.S.A. (1,028 ft.). Major *concrete trestle* bridges include the Lake Portchartrain Causeway, U.S.A. of 2,170 spans extending 24 miles and the Oosterscheldebrug, Netherlands, 31 miles long. Gladesville Bridge, Sydney, Australia, is a *concrete arch* bridge of 1,000 ft. span The Tay Road Bridge in Scotland is a *steel box girder* bridge supported on twin piers (42 spans), 7,365 ft. long.

The Chesapeake Bay Bridge-Tunnel (17.6 miles long) joining Cape Charles, Virginia, to Chesapeake Beach has 12.5 miles of *concrete trestle* bridge.

DISTANCE OF THE HORIZON

The limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of		the range is		At a height of		the range is		At a height of		the range is	
5 ft.....		2.9 miles		500 ft.....	29.5 miles			4,000 ft.....	83.3 miles		
20 „.....	5'9 „		1,000 „	41.6 „				5,000 „.....	93.1 „		
50 „.....	9.3 „		2,000 „	58.9 „				20,000 „.....	186.2 „

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfillment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958. He was invested at Caernarvon on July 1, 1969.

INDEPENDENT PRINCES, A.D. 844 to 1282

Rhodri the Great.....	844-878

Younger Sons of the younger Sons of Peers.
Baronets' younger Sons.
Younger Sons of Knights in the same order as their Fathers.
Naval, Military, Air, and other Esquires by Office.

WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross, see pp. 300-301.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly (normally) the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the Mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—See Index.

The Queen's Household

Lord Chamberlain, The Lord Maclean, P.C., K.T., G.C.V.O., K.B.E.

Gilloran, *Specialist in Community Medicine, Lothian Health Board*; C. W. Gordon, T.D., *Regional Medical Officer, West Midlands Regional Health Authority*.

THE QUEEN'S BIRTHDAY, 1977

The date for the observance of the Queen's Birthday in 1977 both at home and abroad will be Saturday, June 11.

ROYAL SALUTES

On the Anniversaries of the Birth, Accession and Coronation of the Sovereign a salute of 62 guns is fired on the wharf at the Tower of London.

On extraordinary and triumphal occasions, such as on the occasion of the Sovereign opening,

proroguing or dissolving Parliament in Person, or when passing through London in procession, except when otherwise ordered, 41 guns only are fired.

On the occasion of the birth of a Royal infant, a salute of 41 guns is fired from the two Saluting Stations in London, i.e. Hyde Park and the Tower of London.

Constable of the Royal Palace and Fortress of London, Field-Marshal Sir Geoffrey Baker, G.C.B., C.M.G., C.B.E., M.C. (1975).

Lieutenant of the Tower of London, Lieut.-Gen. Sir Napier Crookenden, K.C.B., D.S.O., O.B.E.

Major, Resident Governor and Keeper of the Jewel House, Maj.-Gen. W. D. M. Raeburn, C.B., D.S.O., M.B.E.

Master Gunner of St. James's Park, Field-Marshal Sir Geoffrey Baker, G.C.B., C.M.G., C.B.E., M.C. (1970).
Master Gunner within the Tower (vacant).

THE ROYAL ARMS

QUARTERLY.—1st and 4th *gules*, three lions passant guardant in pale or (*England*); 2nd or, a lion rampant within a double tressure flory counterflory *gules* (*Scotland*); 3rd *azure*, a harp or, stringed *argent* (*Ireland*); the whole encircled with the Garter.

SUPPORTERS.—*Dexter*: a lion rampant guardant or, imperially crowned. *Sinister*: a unicorn *argent*, armed crined and unguled or, gorged with a coronet composed of crosses patées and fleurs de lis, a chain affixed passing between the forelegs and reflexed over the back.

BADGES.—The red and white rose united (*England*), a thistle (*Scotland*); a harp or, the strings *argent*, with a shamrock leaf *vert* (*Ireland*); upon a mount *vert*, a dragon passant wings elevated *gules* (*Wales*).

THE UNION JACK

The national flag of the United Kingdom is the Union Flag, generally known as the Union Jack, the name deriving from the use of the Union Flag on the jack-staff of naval vessels. It is a combination of the cross of the patron saint of England, St. George (*cross gules in a field argent*), the cross of the patron saint of Scotland, St. Andrew (*saltire argent in a field azure*) and a cross similar to that of St. Patrick, patron saint of Ireland (*saltire gules in a field argent*). The Union Flag was first introduced in 1606 after the union of England and Scotland, the cross of St. Patrick being added in 1801.

ANNUITIES TO THE ROYAL FAMILY

The annuity payable to Her Majesty is known as the Civil List, and is payable out of the Consolidated Fund under the authority of a Civil List Act following the recommendation of a Parliamentary Select Committee. The amount of the Civil List was fixed in the Civil List Act 1952 at £475,000 and was increased from January 1, 1972, under the Civil List Act 1972 to £980,000, and in 1975 to £1,400,000.

The Civil List Acts also provide separate annuities payable from the Consolidated Fund to other members of the Royal Family. The amounts payable under the Acts of 1910, 1937, 1952 and 1972 are as follows:—

Queen Elizabeth The Queen Mother	£95,000
The Duke of Edinburgh	65,000
The Princess Anne	35,000
The Princess Margaret	35,000
Princess Alice, Duchess of Gloucester	20,000

In addition a sum of £60,000 a year is payable from the Consolidated Fund to the Royal Trustees (The Prime Minister, the Chancellor of the Exchequer and the Keeper of the Privy Purse) for contributions towards expenses incurred in undertaking Royal duties by other members of the Royal Family not in receipt of an annuity.

THE FLYING OF FLAGS

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

February 19 (1960).—Birthday of the Prince Andrew.

March 1.—St. David's Day (in Wales only).

March 10 (1964).—Birthday of the Prince Edward.

April 21 (1926).—Birthday of Her Majesty the Queen.

April 23.—St. George's Day (in England only).

Where a building has two or more flagstaffs the Cross of St. George may be flown in addition to the Union Jack but not in a superior position.

June 2 (1953).—Coronation Day.

June 10 (1921).—Birthday of the Duke of Edinburgh.

June 11.—Queen's Official Birthday, 1977.

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 21 (1930).—Birthday of the Princess Margaret.

Nov. 12.—Remembrance Sunday, 1977.

Nov. 14 (1948).—Birthday of the Prince of Wales.

Nov. 20 (1947).—Her Majesty's Wedding Day.

Nov. 30.—St. Andrew's Day (in Scotland only).

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Department of the Environment by Her Majesty's command and communicated by the Ministry to the other Departments. The list

applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, e.g. on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of the United Kingdom.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days* at the sittings of a Criminal Court or of the Court of Appeal (Criminal Divn.) and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1976.

Jan. 25. Conversion of St. Paul.	May 1. St. Philip and St. James.	Aug. 4. Birthday of Queen Elizabeth the Queen Mother.

	July 25. St. James.	" 30. St. Andrew.
		Dec. 21. St. Thomas.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and Statutes were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet tail-coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, Ministry of Defence, Army Dept.

Governor, Maj.-Gen. Sir Edmund Hakewill Smith, K.C.V.O., C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel R. F. Squibb, M.C.; Brigadier W. P. A. Robinson, M.C.; Brigadier A. A. Crook, D.S.O.; Lt.-Colonel R. J. L. Penfold; Lt.-Colonel L. W. Gilles, O.B.E., M.C.; Colonel H. G. Duncombe, D.S.O.; Lt.-Colonel R. W. Dobbin, O.B.E.; Major H. Smith, M.B.E.; Lt.-Colonel A. R. Clark, M.C.; Lt.-Colonel C. A. Harvey; Lt.-Col. A. J. Spratley, M.B.E., M.M.; Major A. E. Wollaston

The Peerage

THE PEERAGE AND ITS DEGREES

The rules which govern the creation and succession of Peerages are extremely complicated. There were separate Peerages of England, of Scotland, and of Ireland, until the unions of the three countries: of England and Scotland, forming Great Britain, in 1707; and of Great Britain and Ireland, forming the United Kingdom, in 1801. Some Scottish Peers received additional Peerages of Great Britain or of the United Kingdom, since 1707; and some Irish Peers additional Peerages of the United Kingdom since 1801.

All Peers of England, Scotland, Great Britain, or the United Kingdom who are of full age and of British nationality are entitled to seats in the House of Lords. But Peers of Ireland who have no additional United Kingdom Peerage are not entitled to sit, although they are eligible for election to the House of Commons and to vote (if of voting age) in Parliamentary elections (which other Peers are not). The two Archbishops and 24 of the 41 diocesan Bishops of the Church of England also have seats in the House of Lords.

Certain ancient Peerages pass on death to the nearest heir, male or female, and several are now held by women who are thus Peeresses in their own Right. They are entitled to sit in the House of Lords if they are of full age and British nationality.

Since 1876 the Crown has conferred non-hereditary or Life Peerages in the degree of Baron on eminent judges to enable them to carry out the judicial function of the House of Lords. They are known as Law Lords. Under an Act passed in 1958 the Crown may confer Life Peerages on men and women giving them, in the degree of Baron or Baroness, seats in the House of Lords.

In 1963 an Act was passed enabling Peers to disclaim their Peerages for life: living Peers, within 12 months after the passing of the Act (July 31, 1963), future Peers within 12 months (one month if an M.P.) after the date of their succession, or of attaining their majority if later.

No fees for Dignities have been payable since 1937. No hereditary Peerages have been created since 1965.

PEERAGES EXTINCT SINCE THE LAST ISSUE

BARONIES.—Cozens-Hardy (*cr.* 1914); Godber (*cr.* 1956); Lyle of Westbourne (*cr.* 1945); Tucker (*cr.* 1950) (Law Life Peerage);

DISCLAIMER OF PEERAGES

The following peers have disclaimed their peerages under the Peerage Act, 1963: Earl of Durham; Earl of Home; Earl of Sandwich; Viscount Hailsham; Viscount Stansgate; Lord Altrincham; Lord Beaverbrook; Lord Fraser of Allander; Lord Monkswell; Lord Reith; Lord Sanderson of Ayot; Lord Silkin; Lord Southampton; Lord Archibald.

PEERS WHO ARE MINORS

(As at Jan. 1, 1977)

MARQUESS (1): Milford Haven (*b.* 1961). **BARONS (2):** Fairfax of Cameron (*b.* 1956); Londesborough (*b.* 1959).
EARLS (3): Craven (*b.* 1957); Hardwicke (*b.* 1971); Woolton (*b.* 1958).

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—S. or I. appended to the date of creation denotes a *Scottish* or *Irish* title, the further addition of a * implies that the Peer in question holds also an *Imperial* title, which is specified (after the name) by its more definite description as *Engl., Brit.,* or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. The mark ° signifies that there is no "of" in the Marquessate or Earldom so designated; *b.* signifies born; *s.*, succeeded; *m.*, married; *w.*, widow or widow; *M.*, minor.

Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

COUNTESSES IN THEIR OWN RIGHT.—Style, The Countess of — Addressed as, My Lady.

Created.	Title, Name, etc.	Eldest Son or Heir.
1643 S.	Dysart, Rosamund Agnes Greaves, b. 1914, s. 1975.	Lady Katherine Grant, b. 1918.

Young—Kenneit
Younger—Y. of Leckie

* Life Peers created under Life Peerages Act, 1958

Courtesy Titles (in actual existence in 1976)

Holders of Courtesy Titles are addressed in the same manner as holders of substantive titles.

From this list it will be seen that, for example, the "Marquess of Blandford" is heir to the Dukedom of Marlborough, and "Viscount Althorp" to the Earldom of Spencer. Titles of second heirs are also given, and the Courtesy Title of the father of a second heir is indicated by *; e.g., Earl of Burlington, eldest son of *Marquess of Hartington.

In addition, the heir, and sometimes the second heir, to some Scottish peerages is usually styled "The Master of—"; e.g., "The Master of Falkland" heir to Viscount Falkland; and "The Master of Lindsay" is eldest son of *Lord Balmiel, heir to the Earl of Crawford and Balcarres. Users of this style are not included here.

Marquesses.

Blandford—Marlborough
Douro—Welling
*Graham—Montrose
Granby—Rutland
*Hamilton—Abercorn
*Hartington—Devonshire
Kildare—Leinster

THE PRIVY COUNCIL

The Privy Council consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Counsellors, and they principally form the active Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, *e.g.*, the Judicial Committee.

Clerk of the Council, N. E. Leigh, C.V.O.

Deputy Clerk of the Council, C. E. S. Horsford.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable". The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A privy Councillor who is not a Peer should be addressed as the Right (or Rt.) Hon.—. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as the Right (or Rt.) Hon. the Lord (or Earl or Viscount)—, P.C., or, less elaborately, The Lord (or Earl or Viscount)—P.C.

Orders of Chivalry

Women became eligible for the Order from Jan. 1, 1971.

THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

This Order is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves.

O.M.Mil. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

THE SOVEREIGN.

THE IMPERIAL SERVICE ORDER (1902)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Appointment of Companion of this Order shall be open to those members of the Civil Services whose eligibility shall be determined by the grade held by such persons. The Order consists of the SOVEREIGN and Companions (not exclusively male) to a number not exceeding 1425 of whom 850 may belong to the Home Civil Services and 575 to Overseas Civil Services. *Secretary*, the Permanent Secretary to the Civil Service Department. *Registrar*, The Secretary of the Central Chancery of the Orders of Knighthood, St. James's Palace, S.W.1.

Baronets, Knights Grand Cross, Knights Grand Commanders Knights Commanders and Knights Bachelor

Badge of Baronets
of England, Great Britain, U.K.,
(and Ireland marked I.)

Badge of Baronets
of Scotland or Nova Scotia
(marked S.).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A—, Bt." Baronet's wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname after "Bt." if they are also baronets or in place of "Bt." if they are not. Knights Bachelor are addressed as "Sir — (first or Christian name)" and in writing as "Sir — B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary

Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight Bachelor. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above; in 1974 a neck badge and miniature were added. The Officers of the Society are:—*Knight Principal*, Sir Anthony Wagner, K.C.V.O., *Deputy Knight Principal*, Sir Gilbert Ingfield, G.B.E., T.D.; *Prelate*, The Bishop of London; *Hon. Registrar*, Sir John Weir Russell; *Hon. Treasurer*, Sir John Howard; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.2.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 17, 1976)

Peers are not included in this list.

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Baronetcies Extinct (Since last issue).—Charles (U.K., 1928); Cunningham (U.K., 1963); Dixie (E., 1660); Dunn (U.K., 1921); Hawkey (U.K., 1945); Williams-Drummond (U.K., 1828).

Dames Grand Cross and Dames Commanders of the Order of the Bath, the Order of St. Michael and St. George, the Royal Victorian Order and the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.B., G.C.M.G., G.C.V.O. or G.B.E.) and Dames Commanders (D.C.B., D.C.M.G., D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith" after receiving the honour would be addressed as "Dame Florence", and in writing as "Dame Florence Smith, G. (or D.) C.B., G. (or D.) C.M.G., G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of — G.C.V.O." Peeresses in their own right, and Life Peeresses, are not included in this list. Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

Peeresses are not included in this list.

DAMES GRAND CROSS AND DAMES COMMANDERS

- H.M. Queen Elizabeth The Queen Mother, K.G., K.T., C.I., G.M.V.O.

 Younghusband, Dame Eileen
 Louise, D.B.E.

THE VICTORIA CROSS, FOR CONSPICUOUS BRAVERY.

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).

Instituted on January 29, 1856, the Victoria Cross was awarded retrospectively to 1854, the first being held by Lieut. C. D. Lucas, R.N. for bravery in the Baltic Sea on June 21, 1854 (gazetted Feb. 24, 1857). The first 62 Crosses were presented by Queen Victoria in Hyde Park, London, on June 26, 1857.

The  is worn before all other decorations, on the left breast, and consists of a cross-pattée of bronze, 1½ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the  receive a tax-free annuity of £100, irrespective of need or other conditions. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military, or Air Forces of the Crown.

THE GEORGE CROSS, G.C.—FOR GALLANTRY

The ribbon is dark blue threaded through a bar adorned with laurel leaves.

INSTITUTED September 24th, 1940 (with amendments, November 3rd, 1942).

The George Cross is worn before all other decorations (except the ) on the left breast and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon $\frac{1}{2}$ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger. From April 1, 1965, holders of the Cross have received a tax-free annuity of £100.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Orders of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939.

In October 1971 all surviving holders of the Albert Medal and the Edward Medal exchanged those decorations for the George Cross.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence)

- Victoria Cross.—1856.—*V.C.*
 George Cross.—1940.—G.C.
 British Orders of Knighthood.

THE ORDER OF ST. JOHN

The Most Venerable Order of the Hospital of St. John of Jerusalem

St. John's Gate, Clerkenwell, E.C.1

Grand Prior, H.R.H. The Duke of Gloucester, G.C.V.O.

Lord Prior. The Lord Caccia, G.C.M.G., G.C.V.O. Chancellor, Sir Gilbert Inglefield, G.B.E., T.D.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision was made for 17 Ministers of the first rank (Cabinet Ministers) and this number has been increased by later legislation. The *Ministers of the Crown (Parliamentary Secretaries) Act* (1960) laid down an aggregate limit of 33 Parliamentary Secretaries. Parts of these Acts were repealed by the *Ministers of the Crown Act* (1964) which varied the number of Parliamentary Secretaries (other than Treasury Secretaries) to 36.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000, in 1965 to £4,500, and in 1972 to £9,500. The present Leader of the Opposition is the Right Hon. Margaret Thatcher.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," p. 311). Bills of major importance are usually sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the

Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since, 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the Monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family among those remaining in the United Kingdom. For instance, during the Queen's visit to Canada in 1967, the Councillors of State were the Prince of Wales, Queen Elizabeth the Queen Mother, Princess Margaret and the Duke of Gloucester.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. Since the Prince of Wales attained the age of 18 in November 1966, the provisions of the Regency Act as to age no longer apply in the event of his accession to the throne.

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND

1660	Sir H. Grimston.	1685	Sir John Trevor.
1661	Sir E. Turner.	1688	H. Powle.
1673	Sir J. Charlton.	1694	Paul Foley.
1673	Edwd. Seymour.	1698	Sir T. Lyttelton.
1678	Sir Robt. Sawyer.	1700	Robert Harley
1679	Serjeant William Gregory.		(Earl of Oxford and Mortimer).
1680	W. Williams.	1702	John Smith.

PARLIAMENT OF GREAT BRITAIN

1708	Sir Richard Onslow (Lord Onslow).	1761	Sir John Cust.
		1770	Sir F. Norton.
1710	Wm. Bromley.	1780	C.W. Cornwall.
1713	Sir Th. Hammer.	1788	Hon. W. Grenville
1715	Spencer Compton		(Lord Grenville).
	(Earl of Wilmington).	1789	Henry Addington
1727	Arthur Onslow.		(Viscount Sidmouth).

PARLIAMENT OF UNITED KINGDOM

1801	Sir John Mitford (Lord Redesdale).
1802	Charles Abbot (Lord Colchester).
1817	Charles M. Sutton (Viscount Canterbury).
1835	James Abercromby (Lord Dunfermline).
1839	Charles Shaw-Lefevre (Viscount Eversley).
1857	J. Evelyn Denison (Viscount Ossington).
1872	Sir Henry Brand (Viscount Hampden).
1884	Arthur Wellesley Peel (Viscount Peel).
1895	William Court Gully (Viscount Selby).
1905	James W. Lowther (Viscount Ullswater).
1921	John Henry Whitley.
1928	Hon. Edward Algernon FitzRoy.
1943	Col. D. Clifton Brown (Viscount Ruffside).
1951	William Shepherd Morrison (Viscount Dumrosill).
1959	Sir Harry Hyton-Foster.
1965	Horace Maybray King, Ph.D. (Lord Maybray-King).
1971	(John) Selwyn (Brooke) Lloyd (Lord Selwyn-Lloyd).
1976	(Thomas) George Thomas.

THE HOUSES OF PARLIAMENT

Parliament emerged during the late thirteenth and early fourteenth centuries as a result of diverse forces including the general need for a superior court to deal with legal and administrative problems on a national basis, the financial needs of the Crown, ambition of the baronage to influence the King's government, and the King's desire to make his government more effective by involving in it all important sections of the community. The nucleus of early Parliaments were the officers of the King's household and the King's judges, who were joined by such ecclesiastical and lay magnates as the King might summon and occasionally by the knights of the shire, burgesses and proctors of the lower clergy. The Commons were summoned to all the Parliaments of Edward III and by the end of the reign a "House of Commons" was beginning to appear. The first known Speaker was elected in 1377. The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland, except for criminal cases in Scotland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. Bills such as the Finance Bill, which imposes taxation, and the Consolidated Fund Bills, which authorize expenditure, and are commonly known as Supply Bills, must begin in the Commons and have not been amended by the Lords in any respect in modern times. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regard to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1949—(a) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (b) any other public bill (except one to extend the life of a Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914–18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803–1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members—Members of the House of Lords are unpaid. They are entitled to reimbursement of travelling expenses from their residence to the House in respect of regular attendance and repayment of expenses within a maximum of £8.50 for each day of such attendance.

Since 1911 Members of the House of Commons have received payments and travelling facilities. Their salary of £400 was increased to £600 in 1937, to £1,000 in 1947, to £1,750 in 1957, to £3,250 in 1964, to £4,500 in January 1972 and £5,750 from June 1975; they are entitled to claim income tax relief on expenses incurred in the course of their Parliamentary duties. In October 1969 Members were allowed to claim up to £500 a year for secretarial expenses; the allowance was increased to £1,000 a year from January 1972, to £1,750 a year from August 1, 1974 and to £3,200 a year from June 1975. Also since January 1972, Members can claim reimbursement, within a limit of £750 a year for the additional cost of staying overnight away from their main residence while on Parliamentary business. This limit was increased to £1,050 a year in August 1974 and to £1,814 a year from July 1975. The cost of travel allowances for 1975–76 was stated in May 1976 to be £1,006,000 (car mileage claims £682,000, rail travel £217,000 and air travel £107,000). The Members' Pension Act, 1965, introduced the first comprehensive pension scheme providing Members of Parliament and their dependants with a legal right to a pension. Under the Parliamentary and Other Pensions Act 1972 the pension scheme was modified to include provision for Ministers and other office holders. The pension scheme is funded by an Exchequer contribution of approximately three times the contribution of a participant which is 5 per cent. of salary per annum (currently 5 per cent. of £5,750, or £287.50 per annum). Members receive pensions from age 65, or on ceasing to be a Member if later, provided they have served for 4 years or more. Pensions are based on one sixtieth of salary for each year of reckonable service. Members also continue to contribute £24 per annum and the Treasury up to £22,000 a year towards a Fund to provide annual or lump sum grants to ex-Members, their widows and children whose incomes are below certain limits. The income of the Fund in 1974–75 was £45,629 and expenditure on grants £32,735. The capital account stood in 1975 at £239,083.

THE HOUSE OF LORDS

The House of Lords consists of Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers and Peeresses in their own right by descent of England, Scotland, Great Britain or the United Kingdom, hereditary peers of new creation, Lords of Appeal in Ordinary and retired Lords of Appeal in Ordinary (who are life peers), and Life Peers and Life Peeresses created under the Life Peerages Act, 1958. Under the Peerage

Act, 1963, a person inheriting a peerage may within one year (or one month in the case of a Member of the House of Commons) disclaim the peerage for life. The subsequent descent of the peerage after his death is not affected.

THE HOUSE OF COMMONS

By the *Representation of the People Act* (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by a similar Act (1918) it was increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615. Irish

representation being reduced from 105 to 13 members. By the *Representation of the People Act of 1945* 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act, 1949*, the total membership was increased to 630 and under the same Act provision was made in 1970 for further increase to 635.

THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or keptid wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, originally built by Edward the Confessor (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's Chapel (first mentioned in the reign of John) was used from about 1550 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 316 feet high and contains "Big Ben," the 13½-ton hour bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856. The dials of the clock are 23 feet in diameter, the hands being 9 feet and 14 feet long (including balance piece). The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

THE LORD CHANCELLOR

The *Lord High Chancellor of Great Britain* is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister. No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Farnham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime

Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
 Earl of Wilmington, *Whig*, Feb. 16, 1742.
 Henry Pelham, *Whig*, Aug. 25, 1743.
 Duke of Newcastle, *Whig*, May 18, 1754.
 Duke of Devonshire, *Whig*, Nov. 16, 1756.
 Duke of Newcastle, *Whig*, July 2, 1757.
 Earl of Bute, *Tory*, May 28, 1762.
 George Grenville, *Whig*, April 15, 1763.
 Marquess of Rockingham, *Whig*, July 10, 1765.
 Earl of Chatham, *Whig*, Aug. 2, 1766.
 Duke of Grafton, *Whig*, Dec. 1767.
 Lord North, *Tory*, Feb. 6, 1770.
 Marquess of Rockingham, *Whig*, March 27, 1782.
 Earl of Shelburne, *Whig*, July 13, 1782.
 Duke of Portland, *Coalition*, April 4, 1783.
 William Pitt, *Tory*, Dec. 7, 1783.
 Henry Addington, *Tory*, March 21, 1801.
 William Pitt, *Tory*, May 16, 1804.
 Lord Grenville, *Whig*, Feb. 10, 1806.
 Duke of Portland, *Tory*, March 31, 1807.
 Spencer Perceval, *Tory*, Dec. 6, 1809.
 Earl of Liverpool, *Tory*, June 16, 1812.
 George Canning, *Tory*, April 30, 1827.
 Viscount Goderich, *Tory*, Sept. 8, 1827.
 Duke of Wellington, *Tory*, Jan. 26, 1828.
 Earl Grey, *Whig*, Nov. 24, 1830.
 Viscount Melbourne, *Whig*, July 13, 1834.
 Sir Robert Peel, *Tory*, Dec. 26, 1834.
 Viscount Melbourne, *Whig*, March 18, 1835.
 Sir Robert Peel, *Tory*, Sept. 6, 1841.
 Lord John Russell, *Whig*, July 6, 1846.
 Earl of Derby, *Tory*, Feb. 28, 1852.
 Earl of Aberdeen, *Peelite*, Dec. 28, 1852.
 Viscount Palmerston, *Liberal*, Feb. 10, 1855.
 Earl of Derby, *Conservative*, Feb. 25, 1858.
 Viscount Palmerston, *Liberal*, June 18, 1859.
 Earl Russell, *Liberal*, Nov. 6, 1865.
 Earl of Derby, *Conservative*, July 6, 1866.
 Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
 W. E. Gladstone, *Liberal*, Dec. 9, 1868.
 Benjamin Disraeli, *Conservative*, Feb. 21, 1874.
 W. E. Gladstone, *Liberal*, April 28, 1880.
 Marquess of Salisbury, *Conservative*, June 24, 1885.
 W. E. Gladstone, *Liberal*, Feb. 6, 1886.
 Marquess of Salisbury, *Conservative*, Aug. 3, 1886.
 W. E. Gladstone, *Liberal*, Aug. 18, 1892.
 Earl of Rosebery, *Liberal*, March 3, 1894.
 Marquess of Salisbury, *Conservative*, July 2, 1895.
 A. J. Balfour, *Conservative*, July 12, 1902.
 Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
 H. H. Asquith, *Liberal*, April 8, 1908.
 H. H. Asquith, *Coalition*, May 26, 1915.
 D. Lloyd-George, *Coalition*, Dec. 7, 1916.
 A. Bonar Law, *Conservative*, Oct. 23, 1922.
 S. Baldwin, *Conservative*, May 22, 1923.
 J. R. MacDonald, *Labour*, Jan. 22, 1924.
 S. Baldwin, *Conservative*, Nov. 4, 1924.
 J. R. MacDonald, *Labour*, June 8, 1929.
 J. R. MacDonald, *Coalition*, Aug. 25, 1931.
 S. Baldwin, *Coalition*, June 7, 1935.
 N. Chamberlain, *Coalition*, May 28, 1937.
 W. S. Churchill, *Coalition*, May 11, 1940.
 W. S. Churchill, *Conservative*, May 23, 1945.
 C. R. Attlee, *Labour*, July 26, 1945.
 Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
 Sir A. Eden, *Conservative*, April 6, 1955.
 H. Macmillan, *Conservative*, Jan. 13, 1957.
 Sir A. Douglas-Home, *Conservative*, Oct. 19, 1963.
 J. H. Wilson, *Labour*, Oct. 16, 1964.
 E. R. G. Heath, *Conservative*, June 19, 1970.
 J. H. Wilson, *Labour*, March 4, 1974.
 L. J. Callaghan, *Labour*, April 5, 1976.

OFFICERS OF THE HOUSE OF LORDS

<i>Speaker</i> , The Rt. Hon. Frederick Elwyn-Jones, C.H., Lord Elwyn-Jones, (+ £17,500 as <i>Lord Chancellor</i>)	£2,500

Assistant Accountants, A. J. Lewis; G. P.

Brown; F. W. Brewer..... £5,365 to £7,090

Head of Establishments Section, H. McE.

Allen..... £9,115 to £10,865

Deputy Head of Establishments Section, D. J.

Mouat..... £5,345 to £6,840

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the *Chiltern Hundreds* and the *Manor of Northstead* as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. In the latter part of the Session, the House usually sits also on Mondays at 2.30 p.m., and occasionally on Fridays at 11 a.m. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. Morning sittings on Monday and Wednesday were held from February–July, 1967 and occasionally during 1968 and 1969. *Strangers* are present during the debates of both Houses on sufferance, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time fewer than forty members are present, the division bells are rung, and if forty members have not appeared within four minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (*see p. 307*).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g. ineligibility to sit owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed, and are frequently suspended or dispensed with. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker. A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak. Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill. A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered*." He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the Clerk of the House of Commons, the senior official of the House, who presides over it in the brief interval between the first assembly of a new

Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the *Clerk of the Parliaments*. Members of the House may put an unlimited number of questions to Ministers, but not more than two demanding an oral answer may be made in any one day to the same Minister. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer. In the House of Lords up to four questions for oral answer may be asked on each sitting day.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing exclusively with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh members are automatically members thereof.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "the Gag") was brought into effect on Nov. 10, 1882. A motion may be made that the question be now put. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the Closure. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day." In the House of Lords the Previous Question has been replaced by the Next Business Motion—"That the House do proceed to the next business."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving the adjournment for the purpose of discussing a specific and important matter that should have urgent consideration. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of

Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The Speaker of the House of Commons is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscounty. The Speaker's most severe disciplinary measure against a member is to Name him. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes (except when the voting is equal). A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

The Lord Chancellor is *Speaker of the House of Lords*. Being a member of the Government, he has none of the powers to maintain order that the Speaker of the House of Commons has. (These powers, in the Lords, are exercised by the House as a whole.) A panel of Deputy Speakers is appointed by Royal Commission. The Chairman of Com-

mittees is a salaried officer of the House who takes the chair in Committee of the Whole House and in some Select Committees. He is assisted by a panel of Deputy Chairmen, headed by the salaried Principal Deputy Chairman of Committees, who is also Chairman of the European Communities Committee of the House.

GOVERNMENT BY PARTY

Before the reign of William and Mary the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The accession of George I, who was unfamiliar with the English language, led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election. The number is now 13.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the

Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

In 1900 the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which might be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a three-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party. Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £5,625; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant do.*) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £3,000; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

The House of Lords

The *Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Baroness Llewelyn-Davies of Hastoe), the Captain of the Queen's Bodyguard of the Yeomen of the Guard (Lord Strabolgi) and the (Political) Lords in Waiting.

The *Conservative Whips* are: Earl St. Aldwyn (*Chief Whip*); Lord Mowbray and Stourton; Lord Sandys; Lord Lyell; Viscount Long; Lord Redesdale; Lord Newell.

The *Liberal Whip* is Lord Amulree.

The House of Commons

The *Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* are also usually appointed.

The *Conservative Whips* are: The Rt. Hon. H. E. Atkins (*Chief Whip*); B. B. Weatherill (*Deputy Chief Whip*); J. S. Thomas; C. E. Parkinson; S. Le Marchant; M. H. A. Roberts; W. R. Benyon; F. J. Silverster; Hon. Anthony Berry; D. C. M. Mather; J. T. Lester; J. A. Corrie.

The *Liberal Whip* is A. J. Beith.

(Formed April 1976)

THE CABINET

Prime Minister and First Lord of the Treasury, The Rt. Hon. LEONARD JAMES CALLAGHAN, M.P., born March 27, 1912.

Secretary of State for Foreign and Commonwealth Affairs, The Rt. Hon. Charles Anthony Raven Crosland, M.P., born Aug. 29, 1918.

Chancellor of the Exchequer, The Rt. Hon. Denis Winston Healey, M.P., born Aug. 30, 1917.

Lord High Chancellor, The Rt. Hon. Lord Elwyn-Jones, C.H., born Oct. 24, 1909.

Secretary of State for the Home Department, The Rt. Hon. Roy Harris Jenkins, M.P., born Nov. 11, 1920.

Secretary of State for Social Services, The Rt. Hon. David Hedley Ennals, M.P., born Aug. 19, 1922.

Secretary of State for Defence, The Rt. Hon. Roy Mason, M.P., born April 18, 1924.

Secretary of State for Scotland, The Rt. Hon. Bruce Millan, M.P., born Oct. 5, 1927.

Secretary of State for Employment, The Rt. Hon. Albert Edward Booth, M.P., born May 28, 1928.

Secretary of State for Education and Science, The Rt. Hon. Frederick William Mulley, M.P., born July 3, 1918.

Secretary of State for Wales, The Rt. Hon. John Morris, M.P., born 1931.

Secretary of State for Trade, The Rt. Hon. Edmund Emanuel Dell, M.P., born Aug. 15, 1921.

Secretary of State for Industry, The Rt. Hon. Eric Graham Varley, M.P., born Aug. 11, 1932.

Secretary of State for the Environment, The Rt. Hon. Peter David Shore, M.P., born May 20, 1924.

Secretary of State for Northern Ireland, The Rt. Hon. Merlyn Rees, M.P., born Dec. 18, 1920.

Secretary of State for Energy, The Rt. Hon. Anthony Neil Wedgwood Benn, M.P., born April 3, 1925.

Secretary of State for Prices and Consumer Protection and Paymaster-General, The Rt. Hon. Shirley Vivien Teresa Brittain Williams, M.P., born July 27, 1930.

Lord President of the Council and Leader of the House of Commons, The Rt. Hon. Michael Mackintosh Foot, M.P., born July 23, 1913.

Lord Privy Seal and Leader of the House of Lords, The Rt. Hon. Lord Shepherd, born Sept. 27, 1918.

Chancellor of the Duchy of Lancaster, The Rt. Hon. Norman Harold Lever, born Jan. 15, 1914.

Minister of Agriculture and Fisheries, The Rt. Hon. Thomas Frederick Peart, M.P., born April 30, 1914.

Minister for Overseas Development, The Rt. Hon. Reginald Ernest Prentice, M.P., born July 16, 1923.

MINISTERS NOT IN THE CABINET

Minister for Housing and Construction, The Rt. Hon. Reginald Yarnitz Freeson, M.P., born 1926.

Minister for Transport, John William Gilbert, Ph.D., M.P., born 1927.

Minister for Planning and Local Government, The Rt. Hon. John Ernest Silkin, M.P., born 1923.

Attorney-General, The Rt. Hon. Samuel Charles Silkin, Q.C., M.P., born 1918.

Lord Advocate, The Rt. Hon. Ronald King Murray, Q.C., M.P., born 1922.

Solicitor-General, Peter Kingsley Archer, Q.C., M.P., born 1926.

Solicitor-General for Scotland, John Herbert McCluskey, Q.C., born 1929.

Chief Secretary to the Treasury, The Rt. Hon. Joel Barnett, M.P., born 1922.

Parliamentary Secretary to the Treasury, The Rt. Hon. Michael Francis Lovell Cocks, M.P., born 1929.

Financial Secretary to the Treasury, Robert Edward Sheldon, M.P., born 1923.

Ministers of State (Foreign and Commonwealth Office), The Rt. Hon. Roy Sydney George Hattersley, M.P., born 1932; The Lord Goronwy-Roberts, P.C., born 1913; Edward Rowlands, M.P., born 1940.

Ministers of State (Home Office), The Lord Harris of Greenwich, born 1930; Brynmor Thomas John, M.P., born 1934.

Ministers of State (Scottish Office), The Lord Kirkhill, born 1930; (James) Gregor Mackenzie, M.P., born 1916.

Ministers of State (Health and Social Security), The Rt. Hon. Stanley Orme, M.P., born 1923; The Rt. Hon. David Anthony Llewelyn Owen, born 1938.

Minister of State (Employment), Harold Walker, M.P., born 1927.

Minister of State (Defence), The Rt. Hon. William Thomas Rodgers, M.P., born 1928.

Ministers of State (Northern Ireland), Roland Dunstan Moyle, M.P., born 1928; John Dennis Concannon, M.P., born 1930.

Minister of State (Agriculture and Fisheries), Edward Stanley Bishop, M.P., born 1920.

Minister of State (Treasury), (David John) Denzil Davies, born 1938.

Minister of State (Privy Council Office), John Smith, M.P., born 1938.

Minister of State (Energy), (Jesse) Dickson Mabon, M.P., born 1925.

Minister of State (Environment), The Rt. Hon. Denis Herbert Howell, M.P., born 1923 (Sport).

Ministers of State (Industry), Gerald Bernard Kaufman, M.P., born 1930; Alan John Williams, M.P., born 1930.

Minister of State (Civil Service Department), Charles Richard Morris, M.P., born 1926.

Ministers of State (Education and Science), Gerald Teasdale Fowler, M.P., born 1935; The Lord Donaldson of Kingsbridge, born 1907.

Minister of State (Prices and Consumer Protection), John Denis Fraser, M.P., born 1934.

PARLIAMENTARY UNDER SECRETARIES, ETC.

Agriculture and Fisheries, G. S. Strang, M.P.

Civil Service Department, J. D. Grant, M.P.

Defence, A. E. P. Duffy, M.P. (Royal Navy); R. C. Brown, M.P. (Army); A. J. Wellbeloved, M.P. (Royal Air Force).

Education and Science, Miss M. M. Jackson, M.P.

Employment, J. Golding, M.P.; J. Grant, M.P.

Energy, A. Eadie, M.P.; G. J. Oakes, M.P.

Environment, The Baroness Birk; E. Armstrong, M.P.; K. Marks, M.P.; N. G. Barnett, M.P.

* Excluding Northern Ireland

PARLIAMENTARY ASSOCIATIONS

COMMONWEALTH PARLIAMENTARY
ASSOCIATION (1911)

The Commonwealth Parliamentary Association consists of 30 main branches in Parliaments of the self-governing countries of the Commonwealth and 26 auxiliary branches in countries or territories which are not yet self-governing. There are also branches in State and Provincial Legislatures, in Australia, Canada, India and Malaysia making a total of 102 branches. Commonwealth Parliamentary conferences and general meetings are held every year in different countries of the Commonwealth. President, Hon. Sir Radhamahun Gajadhur, C.M.G. (Mauritius).

Secretary-General, Sir Robin Vanderfelt, K.B.E., Houses of Parliament, S.W.1.

Secretary, United Kingdom Branch, P. G. Molloy, O.B.E., M.C., Westminster Hall, Houses of Parliament, S.W.1.

THE INTER-PARLIAMENTARY UNION

Place du Petit-Saconnex 1209, Geneva, Switzerland.

The Inter-Parliamentary Union has been in

existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects.

BRITISH GROUP.

Hon. Presidents, The Lord Chancellor; Mr. Speaker. President, The Rt. Hon. L. J. Callaghan, M.P.

Vice-Presidents, The Lord Home of the Hirsle, P.C., K.T.; The Lord Butler of Saffron Walden. K.G., P.C., C.H.; The Rt. Hon. R. M. M. Stewart, C.H., M.P.; The Rt. Hon. E. R. G. Heath, M.B.E., M.P.; The Rt. Hon. Margaret Thatcher, M.P.; The Rt. Hon. Sir Harold Wilson, K.G., O.B.E., M.P.

Chairman, Sir Thomas Williams, Q.C., M.P.

Secretary, Brigadier P. S. Ward, C.B.E.

ALPHABETICAL LIST OF MEMBERS OF THE HOUSE OF COMMONS

(Elected October 10, 1974)

For abbreviations, see page 322. The number before the name of each constituency is for easy reference and corresponds to the number of that constituency given on pp. 322-45.

		R. Corbett (<i>Lab.</i>), Hemel Hempstead.....	485

WOMEN MEMBERS OF PARLIAMENT

Six new Women Members of Parliament were elected in October 1974. Five were Labour Candidates (Miss M. M. Jackson, Lincoln; Mrs. H. V. H. Hayman, Welwyn and Hatfield; Miss V. J. Maynard, Sheffield, Brightside; Mrs. M. Miller, Ilford, North; Mrs. W. A. Taylor, Bolton, West). The sixth was a Scottish Nationalist, Mrs. M. A. Bain, Dunbartonshire, E.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1975-76

A backlog of business compelled the Government to extend the last session of Parliament which resumed on October 19, 1975, after the summer recess for four weeks and this overspill period enabled all priority legislative work to be cleared for Prorogation on November 12 in readiness for the Royal opening of the new session on November 19.

END OF 1975 SESSION.—The Government's Community Land Bill was given a third reading in the Commons on October 14 by a 15 vote majority. Voting for the Bill, which enabled local authorities to take over and manage development land, was 279 to 264. The Conservative spokesman (Mr. Hugh Rossi) warned that the Tories would ultimately "do away with" the Bill. Moving the third reading Mr. John Silkin attacked the Opposition for party political scaremongering intended not to assist but only to destroy. This kind of propaganda had been used "without any justification."

On October 15, MPs rejected peers' proposals on press freedom under the Trades Union and Labour Relations (Amendment) Bill. In successive votes the Government had substantial majorities for changes to the "Goodman amendment" to the Government's "closed shop" measure. The charter proposals put forward by Lord Goodman were rejected by the Government, who wanted a charter for journalists and editors—but without legal back up powers.

Five days later, on October 20, the issue was again joined over the closed shop and its effect on the news media, with two Government defeats in the Lords. One Labour minister forecast a "ping-pong" match when Mr. Foot's own plan for a code of practice on a voluntary basis was rejected by a vote of 188 to 77, a majority of 111 against the Government. Lord Goodman introduced his revised version of the "Goodman amendment" retaining the idea of a voluntary charter to give practical guidance. Despite Government objections, this was approved by a massive 120 majority—188 to 68.

On October 22, the Commons threw back at the Lords their rejection of part of the Industry Bill which allowed the National Enterprise Board to establish industrial undertakings. By a majority of 12 votes—265 to 253—the Commons disagreed with the Lords' amendment. On another amendment the Government's majority fell to seven. This change to the Bill, made by the Lords, aimed to prevent the National Enterprise Board from extending public ownership into profitable areas of manufacturing.

The Lords agreed to drop their insistence on surcharges and disqualification from office for councillors who defied the Tory Housing Finance Act by refusing to raise rents. As peers debated Commons reasons for rejecting their amendments to the Housing Finance Special Provisions Bill, which indemnified 400 "rebel" councillors, there were warnings about the threat to democracy contained in such legislation. The 400 councillors were not criminals who sought financial gain, but people who, technically, had not observed the law, said the Leader of the House (Lord Shepherd). He said the Lords' new clause could be looked upon as exacting punishment, but the Government's approach was to give a local community a second chance. Unlike the Clay Cross councillors these 400 had eventually complied with the law. Lord Hailsham declared that the Bill passed responsibility for the financial consequences of councillors' misdeeds to the ratepayers instead of the rent payers who had gained by those misdeeds. That struck at the very roots of democracy and the rule of law. Lord Wigoder, Liberal spokesman on

Home Affairs, said, in the circumstances it might be well to write *finis* to "this unhappy Bill and to one of the sorrier chapters in British Parliamentary history." The Leader of the Opposition (Lord Carrington) warned that if a feeling grew up in the country that Acts of Parliament could be disregarded because they had been passed by one's political opponents and one did not like them, the consequence would be that no orderly Government would be possible in Britain.

An Opposition move to overturn government regulations ending direct grants to grammar schools was defeated in the Commons on October 27 by 292 votes to 249—government majority 43. The abolition of direct grant schools would mean some sort of political victory for the government, but a major defeat for education, the shadow education secretary (Mr. Norman St. John-Stevás) declared. He warned that the Government's policy would be a major setback to the cause of maintaining and raising the quality of education at a time when there had never been greater anxiety among parents and teachers about what the educational system was achieving, and where it was heading. Mr. St. John-Stevás said that the next Conservative government would re-open the direct grant school list, and restore these schools on a statutory basis so that they were safeguarded. Mr. Mulley said that when a system of non-selective education for secondary education was being devised it was not sensible to provide for the direct grant schools, which were a particular form of grammar school.

On October 27, in an acrimonious debate, the Government fought off an Opposition attack on the social services secretary (Mrs. Castle) by a move to cut her £13,000 salary in half. This was defeated by 287 votes to 267. The shadow social services secretary (Mr. Norman Fowler) pinpointed Mrs. Castle's pay beds policy as being at the heart of the dispute with the medical profession. He was accused by Mrs. Castle of being a "contemptible coward" for not condemning the doctors' action as a breach of the £6 pay limit. After protests about unparliamentary language, Mrs. Castle substituted the term "unattractive timidity." Mrs. Castle attacked an "orchestrated" press campaign about the collapse of the health service. Winding up for the Opposition, Dr. Gerard Vaughan (C), said that there was outstanding evidence of mismanagement in the health service, but the Minister of State, Health and Social Services (Dr. David Owen) accused the Opposition spokesman of having "led a petty, personalised propagandising attack on Mrs. Castle."

The Lords rose shortly before 8 a.m. on October 29 after nearly 17 hours detailed consideration of the controversial Community Land Bill. The sitting was the longest since May, 1971. Peers were faced with more than 270 amendments to the Bill which empowered council take-over of development land. Most of the sitting dealt with technical changes, but of the series of Government defeats during the night several restricted take-over powers or forced concessions. A series of Government amendments made clear that owners of plots of land up to one acre in areas scheduled for development need not notify the local authority of an intention to sell.

Both Houses of Parliament approved on October 31 the continuation of sanctions against Rhodesia for another year—the 11th since they were first imposed. The official Opposition, though critical of both the principle and effectiveness of sanctions did not oppose the decision, arguing that to do so would disrupt the present delicate balance in southern Africa which it was felt could lead to a peaceful settlement.

Peers challenged the Government on November 3 by carrying an amendment putting the power of the courts behind a Press freedom Charter. The amendment, carried by 162 votes to 73, a government defeat by 89 votes, was moved by Lord Hallsham and laid down that any decision should be enforceable in the same way as an award resulting from an arbitration agreement under the Arbitration Act. Opposing, Lord Elwyn-Jones said: "The Government are concerned with setting up a body within the newspaper industry which will overlook the terms of the charter and see it lived with in the industry". The amendment could "wreck the running of Fleet Street and would damage the Press itself by its implications and consequences." The report of the Royal Commission on the Press, which would have the opportunity to study all the factors affecting Press freedom far more fully than had been possible within the context of this Bill, should be awaited. The Government was again defeated on an amendment by Lord Goodman that any breach of the charter should be deemed contrary to public policy, and that nothing in the charter should be taken as restricting any right in statute or common law. This was approved by 138 to 58, a majority against the Government of 80. It was moved as an addition to a Commons amendment which had made the charter admissible in evidence, before tribunals or courts in which its provisions were relevant. The Commons amendment in the changed form was then approved. The Lords' vote meant the Bill was dead in that session of Parliament.

On November 4 peers forced a further major exemption for charity land from the provisions of the Government's Community Land Bill. They carried by 154 votes to 55—majority against the Government 99—an amendment which would remove the duty of a local authority to take over development land acquired by churches and charities. The exemption was already extended for such land owned before September 12, 1974. Moving the amendment, the Bishop of London, Dr. Gerald Ellison, had described Government concessions to the churches and charities as "meagre and dry crumbs". Dr. Ellison said the amendment meant that, although local authorities would still have a power to acquire such land as was necessary in the exercise of their ordinary statutory powers, they would not be under a duty to do so. Dr. Ellison rejected the Government's contention at an earlier stage of the Bill that this amendment would lead to the establishment of a particularly privileged class of landowners. The Bill was taking away from the churches and charities the means of doing their work. For four centuries charity land had been protected by law. There were two Government defeats over further concessions to churches and charities. A Government amendment setting out the conditions on which the cessation of prevailing use value would apply after the appointed day was defeated by 128 votes to 60 (majority 68 votes). Then an amendment moved by the Bishop of London which set out alternative conditions for compensation for the sale of charity land was carried by 127 votes to 59 (majority 68). The fourth Government defeat of the day came when an amendment from Lord Colville, to

exclude a development consisting of a single house, was approved by 118 votes to 50 (majority 68). Lord Colville said that because of changes in the Bill such a plot came within its ambit. The Government was also defeated on an Opposition amendment which sought to define land which Councils could acquire under the Bill as "development land". Voting was 47 to 18—a majority against the Government of 29.

Government regulations compelling motorists to use headlights at night in town and country were withdrawn in the Commons on November 5 by Transport Minister, Dr. John Gilbert, who had been under fire on the count that there had been insufficient consultations before the change making head lamp use mandatory would have come into force, and use of head lamps in built-up, well lit towns and cities could prove a safety hazard and could lead to dazzle accidents to motorists and pedestrians. Dr. Gilbert, in the late night Commons debate, still favoured the dipped head lights scheme and told MPs that the Transport Road Research Laboratory supported the adoption of mandatory dipped headlights everywhere, in advance of a better system. But he said that he recognised that MPs would prefer further discussions. He promised further talks with interested parties and said that he hoped to bring the regulations back early in the next session.

The Commons on November 5 rejected a Lords bid to prevent the Government using its North Sea oil licensing powers to achieve a State stake in oil operations. They reversed a Lords amendment to the Petroleum and Sub-marine Pipelines Bill by 272 votes to 228, a Government majority of 44. Mr. Anthony Wedgwood Benn had said that the amendment would have prevented the Government implementing a policy which lay at the heart of its objectives. But his Opposition "shadow", Mr. Patrick Jenkin, alleged: "The suspicion has grown up that the Government is using its powers to blackmail the firms into surrendering 51 per cent. to the BNOC. It is absolute nonsense to regard these as voluntary negotiations." Mr. Jenkin protested: "No single act of the Government is doing greater damage to our offshore prospects than this continuing demand for 51 per cent. participation."

On November 10, the Northern Ireland Secretary, Mr. Merlyn Rees, told MPs that he had received the report of the Northern Ireland Constitutional Convention. He did not elaborate on details of the report, but he stressed: "The British Army is under the control of this Parliament only, and the sovereignty of the Queen in the Parliament of the U.K. rests also at Westminster." During questions following his statement, Mr. Rees said that the Government and Parliament would examine the report carefully, and added: "Meanwhile Northern Ireland will continue to be governed by and from this Parliament." Mr. Rees said that until Parliament decided otherwise, all functions of Government would be exercised by him (Mr. Rees) with the help of other Ministers. The report would be published as soon as possible in the new session of Parliament. "I wish to make it clear again that the Convention is not—cannot be—an advisory body to me," he said. No decision had been taken whether or not to recall it for its constitutional purposes. The report dealt with a number of fundamental issues affecting the future government of Northern Ireland, including the form of that government, its powers and functions, its legal authority, questions of constitutional rights, and its relationship with Parliament. It also covered financial assistance and taxation and responsibility for law and order and the use of the

Army. The Opposition front bench spokesman on Northern Ireland, Mr. Alrcy Neave, welcomed Mr. Rces's comments on the control of the Army and the sovereignty of the Queen, adding "this is undeniable, and has full support on this side of the House." Mr. James Molyncux (U.U.U.) said that the future structure of the Government in Northern Ireland could not meaningfully be considered in isolation from forthcoming discussions on devolution in the U.K. as a whole. Amid cheers, Mr. Alan Belth (L.) declared that anyone who thought the Commons would be intimidated by violence against its members, or the British public in general, was sadly mistaken.

Peers opposed to the Government on the "press freedom" issue were told by the Leader of the House, Lord Shepherd, on November 11, that the Government would invoke the Parliament Act to get its proposals through. Despite a last minute bid by Lord Goodman for agreement in overnight talks, the warning came as peers debated the Commons rejection of changes to the Trade Union and Labour Relations (Amendment) Bill. Lord Shepherd said that it was a time for reconciliation not confrontation. "To force a clash between the two Houses of Parliament could place the growing cooperation which has developed between us in the gravest jeopardy." Describing his late night talks with the Government Lord Goodman (Ind.) said that the breakdown of negotiations had stemmed from the Government's refusal to accept that the charter should include provisions setting out rights of journalists not to be arbitrarily or unreasonably excluded or expelled from a trade union. "If the Government decide to make a constitutional issue on this matter, the fault is theirs." The Liberal leader, Lord Byers advised peers not to be put off by threats from the House of Commons. "These are not wrecking tactics. It is a sincere attempt to uphold the protection of a fundamental freedom by bringing it within the law." Peers voted 186 to 86—a majority of 100 against the Government—to reject the Commons alternative proposals on the charter and to retain Lord Goodman's formula. The Opposition did not press its amendment in the name of Lord Hailsham, which would have given the supervisory body the power to award compensation for breaches of the charter. But it insisted by 168 votes to 80, a majority against the Government of 88, on retaining legal backing for the charter.

But the next day, November 12, both Houses of Parliament were informed that the Bill which allowed the closed shop and failed to become law because of the Lords' insistence on a legally backed press charter was to be reintroduced in the next session. There were Commons protests from Conservative and Liberal spokesmen that the peers were not acting undemocratically, although Mr. Michael Foot urged M.P.s to condemn the peers for challenging democracy over their treatment of the Bill. There were Labour cheers when Mr. Foot told M.P.s: "The Lords have intervened and used their residual power to prevent us placing on the Statute Book a measure for which we have a good majority in this House and a mandate at two elections. The Government has every intention of reintroducing this Bill in the next session." Mr. James Prior said that Mr. Foot's statement was "a classic example of misrepresentation and hypocrisy." Expressing similar views in the Lords, the Leader of the Opposition (Lord Carrington) stressed that peers were using rights given them under the 1949 Parliament Act. That made it plain that after a stated period the will of the Commons would prevail.

Parliament finished its session on November 12 on a low key with a Commons debate on Wales before prorogation.

THE QUEEN'S SPEECH

The Queen opened the new session on November 19 and in her speech, setting out the Labour Government's legislative programme, said:

"My Government will maintain their firm support for the United Nations and the principles of its Charter, and for the Commonwealth with its tradition of concern for the equitable distribution of the world's resources and the promotion of mutual international understanding and co-operation. They will vigorously pursue their initiative for better order in world trade in commodities which they launched at the recent meeting of Commonwealth Heads of Government, and which has made an important contribution to subsequent international discussion. They recognize the special needs of the poorest developing countries, and will in particular seek to assist rural development and food production.

"My Government will play their full part in the European Economic Community, devoting particular attention to the achievement of a common approach to the world's political and economic problems. My Government will also maintain their full support of international efforts to restore economic activity, and to reduce inflation and imbalances of payments. They intend to ratify the Organization for Economic Co-operation and Development Financial Support Fund Agreement.

"My Government will continue to work for international agreement on general disarmament and on preventing the spread of nuclear weapons. They will sustain their support for the North Atlantic Alliance as an instrument of *détente* as well as defence, fostering the fullest possible co-operation amongst its members, not least in the procurement of defence equipment. They will continue to play their full part in the negotiations on force reductions in Central Europe.

"My Ministers will continue also to place great value on further *détente* between East and West, including the strengthening of economic links, and on full implementation of the Final Act of the Conference on Security and Co-operation in Europe. My Ministers will continue to support the search for a comprehensive peace settlement in the Middle East, and to develop our ties with the countries of the area. They will continue to co-operate in seeking a lasting settlement in Cyprus.

"My Government will actively protect the interests of the fishing industry and will play their full part in international conservation measures and in the development of the Common Fisheries Policy. They are seeking renewed arrangements for British fishing with the Government of Iceland to replace those which have just expired.

"My Government will continue to strive for a constitutional solution to the problems of Northern Ireland. They will maintain determined efforts to eliminate terrorism, and attach particular importance to dealing through the courts with all those responsible for violence. A Bill to promote equality of opportunity in employment between people of different religious beliefs will be reintroduced, and legislative provision will be made to assist industrial development by enlarging the role of the Northern Ireland Finance Corporation.

"My Government will continue to give the highest priority to the attack on inflation and unemployment. Success for the wide range of anti-

inflation measures introduced in July is essential for the future health of our economy and our society. In particular, success in these measures is required for the achievement of a satisfactory level of productive investment and to assist in the reduction of the present unacceptable level of unemployment. It is also a necessary condition for the fulfilment of many of My Government's other economic and social objectives. The present price controls will continue to be vigorously enforced, and the programme of price display and unit pricing will be accelerated. A programme of price stabilisation of more essential goods will be introduced once cost increases decline. My Ministers will continue to work closely with the Trades Union Congress, the Confederation of British Industry and with the British people as a whole on a continuing programme to control domestic inflation and to prevent its resurgence.

"The National Enterprise Board and the Scottish and Welsh Development Agencies will be major instruments in My Government's policy of industrial regeneration. My Government will also embark on a series of Planning Agreements with large companies in selected key sectors of industry, as an important step towards the identification and achievement of agreed national objectives. The Bill to bring the aircraft and shipbuilding industries into public ownership will be reintroduced early in the Session.

"Following their review of civil aviation, My Government will present proposals to implement the necessary policy changes. My Government will reintroduce legislation to remove the remaining unsatisfactory features of the Industrial Relations Act 1971.

"My Ministers will continue to encourage the development of industrial democracy in both public and private sectors. Both sides of industry will have full opportunity to express their views to the inquiry, which My Government have announced their intention to establish, to consider how industrial democracy in the private sector can best be extended. A Bill will be introduced to ensure comprehensive employment safeguards for dockworkers.

"My Government will play their full part in the development and improvement of the Common Agricultural Policy and will continue to encourage the maximum economic production of food at home in the interests of producers and consumers. Legislation will be introduced to meet the United Kingdom's obligations under the Agreement on an international Energy Programme; to control energy supplies during any shortage; and to implement energy conservation policies. My Government will continue to seek to secure the orderly development of the United Kingdom's off-shore oil and gas resources in the interests of the nation. They intend to invite applications for further licences for the exploration and development of off-shore oil and gas.

"My Government will bring forward legislative proposals for the establishment of Scottish and Welsh Assemblies to exercise wide governmental responsibilities within the framework of the United Kingdom. Proposals will be put forward for a major review of the practice and procedure of Parliament. An opportunity will be provided to decide on a permanent system for the sound broadcasting of the proceedings of Parliament.

"My Ministers will pursue vigorously their programmes of social reform by legislative and other means, within available resources. They will take energetic action to encourage the provision of more houses in both public and private sectors;

and following from a comprehensive review they will bring forward recommendations for future housing finance policy. Legislation will be brought forward to enable housing to be transferred from New Town Development Corporations and the New Towns Commission to elected local authorities. Legislation for the abolition of the agricultural tied cottage system in England and Wales will be laid before you.

"In furtherance of My Government's comprehensive policy for development land, legislation will be introduced for a development land tax. Legislation will be introduced in the course of the session to phase out private practice from National Health Service hospitals. Consultations will continue on My Government's proposals to strengthen and extend existing powers to regulate nursing homes and hospitals outside the National Health Service. Pensions and other social security benefits will be increased to protect the living standards of the most vulnerable members of the community.

"In education, My Government will seek to consolidate the improvements they have made to statutory school system. Within available resources, they will give priority to children with special needs and to the vocational preparation of young people aged 16 to 19. A Bill will be introduced to require local education authorities in England and Wales who have not already done so to make plans for the abolition of selection in secondary education, and to deal with certain other matters.

"Legislation will be laid before you to extend and improve Post Office banking services, and to reform the Trustee Savings Banks and enable them to offer a wider range of personal banking services, including personal loans to depositors. A Bill will be introduced to strengthen the law on racial discrimination. Proposals will be prepared to amend the Official Secrets Acts and to liberalise the practice relating to official information. A Bill will be introduced to provide an effective independent element in the procedure for handling complaints by members of the public against the police. My Government will give early consideration to the report, when received, of the Law Commission on the law of conspiracy in England and Wales, with a view to preparing legislation for the comprehensive reform of this branch of the law.

"My Government will persevere with efforts to improve the law and the administration of justice, and will pay continued attention to the need to reduce the number of persons in prison, especially those awaiting trial or sentence. Proposals will be placed before you to provide a Public Lending Right for authors.

Measures will be introduced relating to Scotland, including reforms in the law on crofting and on liquor licensing, and proposals for improving public access to freshwater fishing. A Bill will be introduced to establish a Development Board for Rural Wales."

M.P.s began the new session to warnings from Mr. Wilson of a challenging time for them and a difficult winter for the nation. "Our debates will be dominated by economic realities," he warned. This was the first of five days of debate on the Queen's speech. Dealing with devolution, one of the central issues in a heavy workload, Mr. Wilson promised M.P.s two Bills: one as soon as possible after the White Paper, and if that was not completed, another at the beginning of the next session. Mr. Wilson believed that the House and the country understood that Parliament needed to make the Government's policies effective in human terms, in family terms, in terms of prices in the shops and

household budgets. "To secure success in the anti-inflation policy it is a necessary pre-condition to bring down the present unacceptable level of unemployment, and move towards full employment," he added. "I believe the nation, which in the previous session has given the Government backing in its policies to master the problems, will continue to look to this House to sustain the Government in its endeavours." Mrs. Margaret Thatcher warned that devolution must not come to mean more government but a dispersal of some powers to areas which should be less remote. On unemployment she hoped government estimates were right that figures would reach a peak of 1.2 million and then level out and reduce. But she wondered whether it was advisable to raise people's hopes falsely, for, with present levels of inflation and our difficulties in borrowing finance for public spending, she feared that the future year would be worse than that one. Attacking "out of control" public spending she said "our record borrowing is now bequeathing to posterity an interest repayment level that will bedevil national finance quite apart from the enormous burden of debt repayment it will put on future generations." Mrs. Thatcher also urged "moderate" Labour M.P.s to stand up and be counted "and make sure their will prevails." Mr. Jeremy Thorpe welcomed the Government's encouragement of further discussions on advancing industrial democracy. Mr. Thorpe urged the Government to consider giving grants to local authorities for "certain projects in the national interest." He called for the setting up of a "pre-legislation select committee" to consider devolution. Mr. Douglas Crawford (S.N.P.) described the Government's "backsliding" on the Scottish and Welsh Assemblies as "shocking". "The only way we can stop the appalling economic slide in Scotland is to establish a Scottish assembly with full economic powers," he declared, amid jeers from Labour backbenchers. Mr. Dafydd Wigley (Plaid Cymru) said the news that the Government's constitutional proposals were going to be delayed yet further had shocked the people of Wales. "There will be a day of reckoning when the next general election comes" he warned, and said they would welcome a referendum on the issue, giving all the options.

The five day debate on the Queen's Speech ended on November 25 with a Government majority of 14 on an Opposition amendment attacking the Government's economic policies. The Government's majority dropped to 6 on a Liberal amendment criticizing the inclusion of proposals to extend the areas covered by the National Dock Labour Scheme which, it was claimed, would lead to further unemployment and strangulation of the ports, the vote being 294-288 in favour of the Government. Then Scottish Nationalist M.P.s forced a vote as a protest over what they claimed to be Government delay in setting up an elected Scottish assembly, although technically they voted against a motion to allow a separate vote at the end of the debate on the Liberal amendment. This challenge was preemptorily rejected by 377 votes to 11, a Government majority of 326.

On November 26, the Home Secretary (Mr. Roy Jenkins) rejected any new tough action against I.R.A. terrorism in Britain or security measures which he said could tie up much of the life of the country. In introducing the Government's Prevention of Terrorism (Temporary Provisions) Bill which continued the law to combat the bombers and gunmen, by exclusion orders and other methods, Mr. Jenkins did not refer to hanging.

Against the background of strong pressures from

Tory M.P.s for the reintroduction of the death sentence for killer terrorists, the Home secretary said: "I understand the strong feelings about penalties." He warned: "The object of the bombers is to panic the British Government, if not into a change of policy, at least into an ill-judged response which would provide them with further opportunities for violence." However, Mr. Jenkins promised that he would not hesitate to introduce any measures in future which would make a practical and significant contribution to defeating the terrorists.

The Opposition backed the second reading of the Bill, but a number of Conservatives felt strongly that hanging should be a weapon in the Government's armoury.

From the Tory front bench, Mr. Ian Gilmour made clear that he personally was against the death penalty; it would do more harm than good.

The Trade Union and Labour Relations (Amendment) Bill, rejected by the Lords at the end of the last Parliamentary session, was reintroduced in the Commons on November 26 and given a formal first reading. The Bill's main purpose was to repeal or amend the Conservative Industrial Relations Act. It failed last session when the Lords refused to back down on proposals for a Press charter. The Government was now using the provisions of the Parliament Act to get the Bill re-introduced.

On December 2, the Industry Secretary (Mr. Eric Varley) introduced into the Commons the first major item of nationalization—the State take-over of most of Britain's aircraft and shipbuilding industries. Moving the second reading of the Aircraft and Shipbuilding Industries Bill, Mr. Varley declared: "We are taking these industries into public ownership at a time when they both face very considerable difficulties." The Shadow Industry Secretary (Mr. Michael Heseltine) condemned the measure and said that nationalized industries had shown historically that far from solving problems, the transferring of ownership to the State actually worsened the situation. The Liberal industry spokesman (Mr. Richard Wainwright) said that Liberals would vote against the Bill, which was an insult to democracy. The Bill received a second reading by 280 votes to 275, a Government majority of 5.

Sixteen M.P.s on December 4 opposed new arrangements for paying the Royal Household bill in a vote forced by Mr. William Hamilton (Lab.). However 247 ministers and M.P.s supported the second reading of the Civil List Bill to give the Government a 231 majority for the measure which introduced for the first time an annual review of the Queen's salary bill. Under the Bill, the Civil List provided only for the Sovereign, the Consort, the Children of the Sovereign, and for the widows of those children. Mr. Wilson, moving the second reading, emphasized that it involved no changes or additions to public expenditure and announced that the Queen had agreed to make an annual contribution to pay the allowances of the Duke of Kent, Princess Alexandra, the Duke of Gloucester, and Princess Alice which would initially save about £120,000, and which he described as "a generous gesture." Mr. Hamilton however thought the intention was clear—"protection for every member of the Royal Household against inflation." Mr. Enoch Powell (U.U.U.) objected to the Bill for a different reason; he supported those who objected to the annual involvement of Parliament and the exposure of the Royal Family to political debate. The Prime Minister declared that Mr. Hamilton's anti-monarchist views were "burned into his soul."

On December 5, Mr. Jenkins sought approval in

the Commons for his proposal to set up a new independent board to investigate complaints against police in England and Wales, but provoked considerable criticism with protests headed by the Shadow Home Secretary (Mr. Ian Gilmour) who considered the new legislation "grotesquely ill-timed" when the police were fighting a desperate battle to maintain law and order. Moving the second reading of the Police Bill, Mr. Jenkins said there was general agreement that a change was necessary because the handling of complaints against the police was largely in the hands of the police themselves. The police could be seen to be judge and jury in their own courts. Mr. Eldon Griffiths (C.) complained that the House was devoting its time to a Bill "to increase the ability of malicious defamers of the police service to complain against them." Dr. Shirley Summerskill said that fairness and balance must be seen to exist in the handling of complaints. The Bill was given an unopposed second reading.

An Opposition attack on the Government's offshore oil policy was defeated in the Commons on December 8 by 293-275 votes, a Government majority of 18. Mr. Patrick Jenkin blamed the "sadly deteriorating oil scene" on what he said was the misbegotten and doctrinal nationalizing of 51 per cent. of offshore oil licences, and claimed the Government saw offshore oil as a magic to transform their future. Mr. Anthony Wedgwood Benn denied that he had seen offshore oil as solving all their problems although it could help to transform their prospects. Every country except the U.S. had adopted the objective of a national oil company.

The Government had a majority of 30 in the Commons on December 9 on the second reading of the Trade Union and Labour Relations (Amendment) Bill to permit closed shops, the voting figures being 306-276. Mr. Michael Foot said that the Bill repealed that part of the Conservative's Trade Union and Labour Relations Act which gave legal backing to complaints against unions alleged arbitrarily or unreasonably to have expelled or excluded workers. The Shadow Employment Secretary (Mr. James Prior) warned that there would be no easy passage for it and said that Conservative opposition had hardened.

M.P.s were told on December 9 that people who took out overlapping TV licences to beat the increase in fee and then had to pay the extra £6 after all were to receive back their money. The Home Secretary (Mr. Jenkins) said that he had decided not to appeal against the recent Appeal Court decision which resulted in a victory for the holders of overlapping licences, remarking "it is time this unhappy affair, for some aspects of which I have already apologized, was ended." Licence holders would be asked to ignore the revocation letters they had received and arrangements would be made to refund the extra £6 paid. The Shadow Home Secretary (Mr. Gilmour) said it was entirely fitting that the Government, which had shown such contempt for the law and the rights of the individual, should now fall foul of the courts.

THE DEATH PENALTY.—On December 4, the Prime Minister rejected a request by Mr. Michael McNair-Wilson (C) for a referendum on capital punishment. Answering Commons questions, he said the use of the referendum on continued membership of the Common Market was "a wholly exceptional process for a unique occasion." He considered M.P.s were quite capable of either representing their constituents in this matter or of representing fully in debates and in the division lobbies their own considered judgment. Mr. McNair-Wilson said he himself was opposed to

hanging but would like to see the public express their view.

On a free vote on December 11, M.P.s opposed a demand to restore the death penalty by 361 votes to 232, a majority against of 129. But the number of abolitionists fell from the total of a year before when in the wake of the Birmingham pub bombings M.P.s voted by 369-217, a majority against of 152, against the reintroduction of capital punishment. Mr. Jenkins said that there could be few things more humiliating and counter-productive than to introduce a much proclaimed deterrent which promptly proceeded to break in their hands and warned: "There will be no amnesty. I recognize no political excuses for cold-blooded crimes of murder or maiming. Those who have committed them will serve for decades; in some cases until the end of their lives." The Commons was debating a motion by Mr. Ivan Lawrence (C.) calling for capital punishment for terrorist offences causing death. Mr. Hugh Fraser (C.), who had been the target of a terrorist bomb, said that the State should take back the power of the penalty of death.

DEAL WITH CHRYSLER.—A £162.5 million deal with the Chrysler Corporation to prevent 25,000 sackings was announced in the Commons on December 16 by the Industry Secretary (Mr. Varley) who said however that there would be thousands of redundancies. The key element in the proposals was the transfer of Avenger cars from Ryton to Linwood in Scotland, a "streamlining" operation as Mr. Varley described it. Mr. Varley said that the Government had been faced with a fearsome choice: to lose all 25,000 jobs or keep 17,000 by making the transfer. He stated the £100 million deal with Iran would be safeguarded. Detailing the agreement, Mr. Varley said that £72.5 million had been committed over the next four years, there would be a Government loan of £55 million for capital expenditure, London and Scottish clearing banks had agreed in principle to provide a medium term loan of up to £35 million, making a total of £162.5 million. The Opposition spokesman (Mr. Heseltine) observed: "Having heard of the enormity of the commitment, the whole House will understand why Mr. Varley threatened to resign. He would have been well-advised to do so." He said that the Minister had abandoned the whole of the recommendations of the Central Policy Review Staff report which made it clear he should have gone in a totally different direction to the one announced. Mr. Varley replied that the announcement was in no way contrary to the Government's overall policy towards the car industry and did not detract from industrial strategy. Mr. Richard Wainwright (L.) wondered how the Government reconciled the deal with Chrysler's declaration of intent particularly concerning expansion. Mr. Varley said that funds for capital investment would be provided as a loan to Chrysler from the Government. This was secured on the assets of the Chrysler Corporation and not on Chrysler U.K. The Government had a majority of 25 at the end of the debate on the motor industry which followed later the same day. M.P.s voted 285 to 260 on a procedural motion after discussing the Chrysler rescue, British Leyland, and various reports on the industry. Mr. Varley said that the Chrysler deal represented a new starting point and the Government was prepared to make sure of success for the motor industry as a whole. Mr. Patrick Duffy, chairman of the influential Trade and Industry Sub-Committee and Labour M.P. for Attercliffe, Sheffield, gave notice that they wanted to conduct a thorough investigation, particularly to see if there was value for money in the Chrysler agreement. Next day,

December 17, the Government was given approval for the Chrysler rescue by a majority of 21 votes, M.P.s voting 287-266 for the formal order authorizing payment, on guarantee, of up to £162.5 million, the total commitment estimated by the Industry Secretary. The Tory spokesman (Mr. Heseltine) claimed that the plan would cost £218 million over the next four years and both he and the Liberal spokesman (Mr. Wainwright) forecast that Chrysler would be back for more money in the next 18 months or two years. Eight Labour backbenchers abstained but 10 Scottish Nationalists and three Plaid Cymru M.P.s voted with the Government.

When Parliament reassembled after the Christmas Recess on January 12, there was a fullscale debate on the Northern Ireland Convention which ended without a division after the Minister of State, Northern Ireland (Mr. Stanley Orme) challenged those who did not agree with the Government's policy to vote against it, otherwise it indicated "tacit support for it." Mr. Edward Heath, the former Tory prime minister, called for ruthless steps to deal with terrorism in South Armagh and along the border, and advocated the use of rockets by the Army to counter terrorist rockets and the possible mining of border roads, with suitable warnings to the general public. The Northern Ireland Secretary (Mr. Merlyn Rees) said that the Convention, which had been seeking a form of government for Ulster, should meet again on February 3, and try once more to agree proposals which would command widespread support in the community. Rejecting the Convention's original report, which opposed power-sharing with the Catholic minority, Mr. Rees demanded proposals which would give opportunities to both communities for "partnership and participation." Ways must be found of involving both communities. When the Minister of State (Mr. Orme) asked Mr. Molyneux, leader of the Ulster Unionists, if he would recommend his colleagues to attend the recalled Convention, Mr. Molyneux replied that he would urge them to "operate the democratic process and make full use of it."

DEVOLUTION.—On January 13 there began a four-day debate on the Government proposals for devolution to Scotland and Wales which Mrs. Thatcher saw as likely to lead to the maximum conflict, friction and argument between assemblies, Government and Parliament. She doubted if the Government scheme which was based on elected Scottish and Welsh assemblies with wide-ranging powers, would stand the test of time. The Conservatives' test of a devolutionary system was that it should genuinely improve the machinery of government and lead to a devolution and not a confusion of power. Mr. Wilson said that the legislative proposals would embody the most fundamental constitutional development of this century. There was no go-slow by the Government; it was Parliament's duty to get the proposals right and to get the widest possible acceptance North and South of the border and East and West of the Dyke. The Scottish National party and Plaid Cymru wanted independence for Scotland and Wales. The Kilbrandon report rejected that approach and so did the Government. They also rejected the separation into independent political units of the countries that made up the U.K. The legislation they were preparing would confer power over a very wide area but the ultimate responsibility and sovereignty must remain with the U.K. as a whole. Mr. Thorpe supported a federal system and believed Britain should have a federal Parliament of 200-300 members. The Labour Party's attitude indicated that a degree of

reserved cynicism over the Government's intentions was not misplaced. Mr. Donald Stewart, leader of the Scottish Nationalists, said that S.N.P. recognized that no nation could benefit by isolation, and they intended no break up of the U.K. Their aim was to be part of the Commonwealth. Mr. Gwynfor Evans (Plaid Cymru) said that Parliament would ignore the resurgence of Welsh nationhood at its peril. The Welsh were in a position of servitude and could not make a single decision in the life of Wales.

On January 14, on the resumed debate, Mr. Edward Short, Leader of the House, declared that rejection in Parliament of the devolution proposals would be the death warrant of the U.K. Public opinion in Scotland and Wales meant that sensible devolution could not be withheld. The Government visualized the first assembly elections being held possibly at the end of 1977 but more realistically in the following spring. Mr. Buchanan-Smith, Shadow Scottish Secretary, objected to the single-chamber system of the type proposed; it was better to have an assembly working within the U.K. legislative framework and with only one executive. On January 15 Mr. John Morris, Secretary of State, Wales, said that those who asked for a referendum tended not to recognise the practical difficulties. The Labour Party in Wales had made it clear there was no going back. The *status quo* was not an alternative. The basic case for the Assembly was the need for more democracy in Wales. The Assembly would have real and effective powers of policy making and execution. The debate concluded on January 19 with three divisions. The first vote was on an Opposition amendment affirming the need for an assembly in Scotland but claiming the Government's proposals for Scotland and Wales would lead to confusion and conflict and would threaten the unity of the U.K., but it was defeated by 315-244, a Government majority of 71. In the second division, a Nationalist amendment regretting the Government's plans gave the assemblies no meaningful control over Scottish and Welsh economies was rejected by 304-27, a Government majority of 277. The third vote was on a Government motion to "take note" of the White Paper on devolution and was carried by 295-37, Government majority of 258. Mr. William Ross, Secretary of State, Scotland, accused the Scottish Nationalist Party of "a propaganda of greed over oil" and said the commitment to devolution had been there for a long time. Mr. Edward Heath said that the growth of national feeling in Scotland was deeply-rooted and substantial. Parliament could only ignore it at its peril. The Union was in danger. It was not because of the Government putting forward proposals. He believed the proposals were tardy. The House must put at the top of their priorities the problems of devolution. Mr. William Whitelaw, Deputy Leader of the Opposition and the Conservatives' spokesman on devolution, said that he was very unhappy about the proposals for Scotland and believed that those for Wales were wrong and unnecessary. The weakening of the U.K. would be very serious for their standing and bargaining power in international affairs and that would certainly happen if they were to split up into two or three smaller nations.

THE CLOSED SHOP.—The Government successfully beat off new efforts to put teeth into a Press Charter to protect editors from closed shop provisions permitted in the Trade Union and Labour Relations (Amendment) Bill on January 21. A Tory amendment for rights for journalists not to be unreasonably excluded or expelled from unions, the right to choice of union, and freedom for

editors not to join was defeated by 299-240 votes, a Government majority of 59. A Liberal amendment to make decisions on complaints binding was also defeated by 294-240 votes, Government majority of 54, while another Conservative amendment that anything contrary to the charter should be deemed contrary to public policy and that nothing in it should restrict or abridge statute or common law rights was rejected by 298-253 votes, a Government majority of 45. Mr. Foot's proposals for a voluntary Press freedom charter were approved. These proposals meant that if 12 months after the Bill became law the newspaper industry had not been able to agree on a charter the Minister would produce his own scheme to be approved by Parliament.

On January 27, the Trade Union and Labour Relations (Amendment) Bill received a third reading in the Commons by 285-249 votes, a Government majority of 36, after M.P.s had spent two lengthy days discussing "suggested amendments" from the Opposition parties. These amendments, all of which were rejected, were "suggested" because under the Parliament Act the Bill had to be sent to the Lords in the same form as at the beginning of last year.

ANTI-TERROR MEASURES.—Tougher anti-terror measures were approved in the Commons on January 28 when M.P.s debated changes to the law which had already introduced exclusion orders, and other anti-terrorism measures. The Commons approved:

An increase in penalties for publicly supporting proscribed organizations; the exclusion of U.K. citizens from Northern Ireland—as well as Great Britain—when they are suspected of terrorism; the banning of fund raising for acts of terrorism in Northern Ireland; the creation of an offence of failing to disclose information which would help to prevent terrorist activity or help in arrests or convictions. These were among changes made to the Prevention of Terrorism (Temporary Provisions) Bill which continued and altered existing anti-terror measures, including the banning of the I.R.A. On a vote the Government's disclosure proposals were carried, with Opposition support, by 196 to 24, Government majority 172. The proposal to increase penalties for support for proscribed organizations increased fines from a maximum of £200 to £400 and prison from three months to six. The Government resisted, with Opposition support, a Labour back-bench demand to delete the section giving the Home Secretary power to make exclusion orders. Voting was 140 to 21, Government majority 119. Left wing M.P.s forced a vote on the Bill's third reading, but this was approved by 118 votes to 11, a Government majority of 107.

UNEMPLOYMENT AND INDUSTRY.—On January 29 a sizeable group of Labour Leftwingers remained seated for the vote in the Commons on a Government motion expressing deep concern at the continuing rise in unemployment. The motion additionally expressed the Government's determination to take all possible effective measures to reduce unemployment, and it was approved by 234 votes to 25, a Government majority of 209. An Opposition amendment regretting that unemployment would be higher and would last longer because of the Government's failure to take early and decisive action against inflation was defeated by 299 votes to 250, a Government majority of 49. Mr. Healey said that the signs were multiplying that Britain's recession might be coming to an end and he indicated that further steps would soon be taken to help to preserve or create jobs.

The Government sustained its first defeat in the Commons on February 11 by 5 votes after a censure debate on Industry Secretary (Mr. Varley) over handling of the motor industry. M.P.s voted 214-209 to reduce Mr. Varley's salary by £1,000 which is the traditional parliamentary method of straitjacketing a minister. This shock result occurred after an earlier division muddle in which there was a miscount and immediately the Government Chief Whip (Mr. Bob Mellish) declared to angered Tories that the Government did not accept the decision. This provoked a general rumpus which was resolved when the Speaker called the next business. Six days later on February 17 a Government motion to disregard the expression of opinion that the Industry Secretary's salary should be reduced was carried by 296 votes to 280, a Government majority of 16.

On February 12, Mr. Healey announced in a Commons statement that the Government would provide a further sum of £55 million for modernization schemes under section 8 of the Industry Act. Some £15-£20 million would be spent in the next fiscal year and there would be £1 million more allocated for the building of small factories in rural areas. The National Enterprise Board would discuss finance for stock piling of machine tools with the industry and the Government would provide £50 million for public sector housing improvement. The maximum period of entitlement to temporary employment subsidy was to be extended from 6 to 12 months, and the minimum size of firms qualifying for redundancy was to be reduced from 25 to 10 workers. The Chancellor said that the school-leaver recruitment subsidy would be extended to those who left at Christmas, 1975, and that the job creation scheme would receive a further allocation of £30 million, his estimation being that between 20,000 to 25,000 extra temporary jobs would be created. Proposals to provide from next August 30,000-35,000 extra training places in industry would cost about £55 million and the total estimated cost of all these measures was about £220 million of which less than £140 million would be spent during 1976-77. Altogether the measures were likely to provide about 140,000 jobs or training places though not all these would last as long as a year and some might be at the expense of other jobs. The Shadow Chancellor (Sir Geoffrey Howe) commended Mr. Healey for having resisted demands to move towards a general reflation of the economy and hoped he would sustain his will in this respect through the long and testing times still to come. Mr. Norman Atkinson (Lab.), a prominent Left-winger, described the Chancellor's statement as "puff-like, will-o-the-wisp" and claimed that it would go no way towards the job "you are misleading the House you have undertaken."

SEAT BELTS.—On a free vote, a second reading was given to the Road Traffic (Seat Belts) Bill in the Commons on March 3 when the figures were 249-139. Dr. John Gilbert, Minister of Transport, moving the second reading of the Bill, which would enable the Environment Secretary to make regulations for the compulsory wearing of prescribed types of seat belts for drivers and front-seat passengers, said that vehicles covered would be cars registered since January 1965, light vans up to 30-cwt registered since April, 1967, and certain three-wheelers first used on or after September, 1970. The offence of not wearing a seatbelt would not mean licence endorsement and was not subject to disqualification from driving. But on the outcome of the vote the lives of thousands of citizens would depend. The bill would save 1,000 lives and 11,000 serious injuries each year and save £60

million in health service costs, police time and production costs.

NORTHERN IRELAND.—The Northern Ireland Secretary (Mr. Rees) announced to the Commons on March 3 that the Northern Ireland Convention would be dissolved from midnight that night, adding that it was clearly not possible "at this time to make progress towards a devolved system of government for Northern Ireland." That still remained the Government's aim but it did not contemplate any major new initiative for some time. Direct rule would be positive and would provide a firm, fair and resolute government for Northern Ireland. The shadow Ulster spokesman, Mr. Airey Neave, said that the Opposition shared the Government's profound regret that there had been no agreement, but warned of the "very great danger" that by dissolving the Convention the Secretary of State was creating a political vacuum. Mr. Gerry Fitt (S.D.L.P.) declared that the man responsible for the downfall of this Convention was none other than "a member of this House, the Rev. Ian Paisley."

MR. WILSON'S RESIGNATION.—Left-wing abstentions led to an embarrassing Government defeat in the Commons on March 10 by 28 votes over Mr. Healey's plans to curb public spending by £3,000 million. The voting was 284-256 against a Government motion supporting the "levelling off" of total public expenditure from April, 1977. An earlier vote on the Conservative attack on the proposals resulted in a victory for the Government by 304-274 votes, a Government majority of 30. But on the substantive motion to support the proposals, the Labour Left-wingers stayed in their seats while Liberals, the Nationalists, and the Tories joined forces in opposing the Government on the second vote. Mrs. Thatcher demanded that the Government should resign or seek a vote of confidence, declaring that such a defeat was unprecedented in modern times. Mr. Edward Short, Leader of the House, promised that the Prime Minister would consider the situation and announce his intention in due course. Pandemonium ensued but the Speaker insisted that the House was then on the motion to adjourn. It transpired that 37 Left-wing Labour M.P.s abstained, causing the heaviest Government defeat within living memory. The following day, March 11, a debate on a vote of confidence after the disastrous Government defeat ended in scenes of uproar but the Government won the day by 297 votes to 280, a majority of 17. Earlier Mr. Wilson, on his 60th birthday, attacked the "unholy alliance" the night before between his Left-wing and the Tories.

On March 16 the Prime Minister announced his resignation in a bombshell statement which took nearly every politician of all parties by total surprise, but the Chamber was buzzing to greet Mr. Wilson who was due to answer his usual Tuesday round of oral questions. When the Prime Minister appeared amid a flurry of cheers and counter-cheers, Mrs. Thatcher graciously observed: "In spite of the political battles we wish you well personally in your retirement," and significantly added: "The best way to resolve the uncertainty and give the new Prime Minister the authority required would be to put the matter to the people for their vote." With appropriate aplomb, Mr. Wilson acknowledged but added that he was not so sure that Mrs. Thatcher was all that keen on a general election either! Mr. Jeremy Thorpe said that every prime minister worth his salt generated controversy and Mr. Wilson had been no exception. Mr. Edward Heath commented: "Any man who has been able to lead his Party as successfully as you have for 13 years, to be prime minister for 8

years, having won 4 elections, deserves the fullest tributes for his achievements."

A Conservative attempt to censure the Government for its defence cuts failed in the Commons on April 4 when their attack was defeated by 309 votes to 263, a Government majority of 46. The Tory amendment to the Government's motion to approve its own policy declared that the U.K.'s defences had already been reduced to "absolute bed-rock." In view of the growth of the Soviet military strength and unfavourable balance between NATO and the Warsaw Pact, the Tories condemned the proposals to reduce the U.K.'s defences for the third time in a year. The Government's motion, approved by 305 votes to 275, called for support for its cuts on support services rather than front line forces, thus maintaining Britain's contribution to NATO, the security and territorial integrity of the U.K. and Northern Ireland. The Shadow Foreign Secretary (Mr. Reginald Maudling) said that the uncalled amendment signed by more than 80 Left-wing Labour M.P.s was a formidable roll-call of political support against the Government. The Minister of State, Defence (Mr. William Rodgers) replied that while the cuts were acceptable, he did not see any room for further similar cuts in the foreseeable future, and that "for me, at least, enough is enough."

The new Prime Minister (Mr. James Callaghan) made his debut at the Commons despatch box on April 4 to a crescendo of cheers and friendly partisanship and less than 24 hours in office confronted M.P.s for the twice-weekly performance of questions to the Prime Minister. He received a kindly and warm welcome from Mrs. Thatcher and commented that he expected his "honeymoon" to last "at least 10 days." Congratulations emanated from the other minority party leaders and Mr. Callaghan in most diplomatic terms replied that the Government had a long-term economic policy and however long that parliament might continue the country would benefit from its policies if they could be carried on with general agreement.

THE BUDGET.—The Chancellor of the Exchequer (Mr. Denis Healey) presented his Budget on April 6 and described it as "likely to prove the most crucial of the present Parliament". The aim was to consolidate and extend the gains made in the last year, and to prescribe the course for the fastest possible return of Britain to full employment and external balance, in a period of acknowledged world recovery. He observed: "This is above all a Budget about jobs and about inflation, which is the main threat to jobs in Britain today."

In his economic review, the Chancellor said world recession had been very deep, but recovery developed strongly in the second half of 1975, and should be sustained through 1976. The U.K. recession had also been very severe, the fall in exports and destocking being prominent in the decline. Unemployment rose rapidly in consequence, reaching 1.2 millions at the beginning of 1976. Towards the end of 1975, however, a moderate recovery started, with exports doing well and destocking falling back. But the outlook for unemployment seemed distinctly brighter, with marked deceleration in the monthly rate of increase. The lags between recovery in output and a fall in unemployment were long. "If we judge solely by the movement of GDP in the last few months, it may still be too soon to expect the trend in unemployment to be reversed but some of the indicators suggest that a rapid improvement may be under way." But it was wise to wait some months longer before reaching a firm conclusion on the basic trend.

The current account deficit on the balance of

payments in 1975 was £1,700 million, under half the total for 1974. The improvement was due, in part, to the fact that import volume fell more than export volume, and in part to an improvement in the terms of trade, which now seemed to have levelled out. "I believe that we will be able to hold on to this improvement in 1976, despite the upswing in home demand." On the capital account of the balance of payments there should be no difficulty in meeting external financing needs this year. But that depended upon success in fighting inflation and in maintaining confidence in our ability to pay our way.

The public sector borrowing requirement for 1975-76 was estimated to have been about £10½ billion; this was significantly below the figures put forward by many commentators, the difference reflecting in part the unexpected depth of recession, but mainly an under-estimate of the effect of inflation on public expenditure. Growth in money supply had been firmly contained.

For the future the stance of monetary policy remained unchanged. Industrial requirements for finance must not be crowded out by demands of other sectors, nor must money supply be allowed to fuel inflation. The aim was that growth of money supply should be consistent with plans for the growth of demand expressed in current prices. If that aim were not being achieved then the Chancellor would "be ready to use the appropriate mix of policies—not just monetary policy—to redress the situation". The most encouraging developments had been on inflation. The £6 policy represented "an act of great responsibility by the whole trade union movement, sustained with impressive unanimity". Everyone had benefited. The rate of inflation through the second half of 1975 was 14 per cent annual rate compared to 38 per cent. in the first half. But the U.K. was still well out of line with other countries. "We cannot relax our efforts. Further progress depends crucially on the pay limit for the next pay round."

The balance of payments constraint had only one answer, expansion based on exports and import substitution and not a general reflation of domestic demand. The constraint could only reliably be removed by better performance in manufacturing industry. Recent trends of exports and imports had been encouraging and they must be competitive in the widest sense as well as in terms of prices. Some people had argued that manufactured imports would rise rapidly, much more rapidly than exports in the recovery. That, despite the contrary opinion of some economists, was unlikely to happen so long as the economy was not run at too high a pressure of demand. General import controls were rejected on domestic and international grounds. They were no answer to the nation's problems; such controls would conflict with their international obligations and could lead to a trade war from which all would lose.

Selective import controls on the other hand might have a valuable role in protecting industries whose survival was threatened by excessive imports. Several had been introduced recently, and the Government remained alert for other cases where they might be appropriate.

Mr. Healey declared: "The key to correcting the balance of payments, however, lies in making industry more efficient in the widest sense. The depreciation of sterling in recent weeks has reflected our high inflation rate relative to our competitors. But depreciation of sterling adds to prices and is not the answer to our problems. It is only by reducing industrial costs through higher productivity and a lower growth of incomes that

we can find a lasting solution to the balance of payments constraint on economic growth."

Before settling out the Budget measures, a view of the economy on the assumption of present tax rates, present expenditure plans, and present rate of pay increases would be useful. On that basis total output would grow about 3½ per cent. In the next 12 months with exports of goods and services rising 9 per cent. and private fixed investment 6-7 per cent. Private consumption would rise 1½ per cent., public expenditure on goods and services would be approximately unchanged. That was the pattern needed; there was no intention in the Budget to alter it materially. In particular because the growth was beginning to approach the rate set as the objective for 1977-1979 it was not right to add much to aggregate demand. They needed a steady and gentle acceleration, not a sudden spurt. The Budget therefore had two overriding objectives: to create the conditions in which output and productivity were most likely to recover, and secondly in which wages and costs could be kept as low as possible without unnecessarily reducing the real value of the workers' take-home pay.

The Chancellor said: "Recent achievements have been encouraging, but this Budget must also tackle the problems of the medium-term and lay the foundations for a strategy which will enable Britain to enter the 80s with full employment, stable prices and an economy in balance both at home and abroad". There were important differences between the coming recovery in world trade and previous upswings. Inflation was worse and many countries faced balance of payments deficits as domestic demand rose. The industrialized world generally would find it more difficult to reconcile the objectives of full employment, stable prices and external balance. Britain was not immune from those trends and could only solve its problems if our trading partners solved theirs. "Beggars my neighbour" policies risked a slump like the 1930s. That was why the U.K. had taken the lead, in the EEC, the Commonwealth and elsewhere, in organizing collective international discussion of their common problems. Britain's problems were of the same kind as other countries, but they were far bigger in scale. We had high inflation and a large balance of payments deficit even before the oil price rise cut real national income by 5 per cent. To achieve full employment and external balance, Britain needed a big shift in the use of her resources away from private and public consumption towards exports and investment.

In the longer run that meant, above all, reversing the decline of manufacturing industry. That was the aim of the industrial policies, and of public expenditure policy. In the last analysis, however, the problem could only be solved at the level of the individual company and plant.

"The target which the Government has set itself is to get unemployment down to 3 per cent. in 1979. This requires 5½ per cent. a year GDP growth, and 8½ per cent. growth of manufacturing output, between 1976 and 1979. Given the present low level of capacity use such growth rates are not impossible. But they require a rapid improvement in industrial performance in every field and at every level. Britain has the qualities needed to do this. There are two constraints on growth—temporary shortages (bottlenecks) and the balance of payments. The Government has acted on the former by selective assistance to industries like ferrous foundries; by doubling spending on industrial training; and by the NEDC studies of key sectors under the industrial strategy. Various measures in the industrial field will help with the first; on the second two sets of measures are proposed. One to

take effect immediately, and the other to take effect when the TUC has made its recommendation on the new pay limit."

Mr. Healey continued: "The Budget proposals for industry are intended to help efficiency in manufacturing industry and its ability to meet the coming upturn in demand. The Government is pledged to provide "an appropriate fiscal and economic environment for manufacturing industry so that it can finance the necessary increase in investment and obtain the manpower it will need during the recovery".

CORPORATION TAX.—The maintenance of a stable framework for business was necessary if industrial planning was not to be disrupted. Action was accordingly being taken to strengthen stability of the tax environment.

There were three areas for action on Corporation Tax:—

(1) **Stock Relief:** Stock relief would continue and become permanent. There would be consultations about the best form for a permanent change in the tax system covering stock relief. Meanwhile the present system would continue in substantially its present form for 1975-76 and 1976-77. However, to help firms investing in fixed assets, calculation of profits would for stock relief purposes be net of capital allowances. To meet the full year cost of £65 million involved in that, the profits deduction would rise from 10 to 15 per cent.

(2) **Capital Allowances:** The main structure of the present system of capital allowances for fixed investment would continue in its existing form (excluding any necessary minor changes). On grounds of cost there would be no extension to commercial buildings.

(3) **Corporation Tax:** No change was proposed in the structure or in rate of corporation tax, excepting an increase in the profit level at which smaller companies qualify for preferential rate. But "the continuation of stock relief and the present system of capital allowances means that substantially the whole of any profits which a manufacturing company re-invests in its business, whether in fixed or in working capital, will effectively be relieved from corporation tax".

FINANCE FOR INVESTMENT.—The Government were also concerned to ensure a sufficient and appropriate supply of investment finance for the recovery. There were five principal areas in which action was proposed:—

(1) **Stamp Duty:** The debenture market might again become a source of new finance as interest rates fell, following a successful second stage counter-inflation policy, but transfer stamp duty might inhibit the revival. Stamp duty on transfers of fixed interest stocks, excluding convertible stocks, would be abolished from 1 May, at a full year cost of £10 million.

(2) **Medium-Term Bank Finance:** The clearing banks still had medium-term funds available for commitment, but conceivably in the longer term their availability might be limited by prudential considerations. The Bank of England and the London and Scottish Clearing Banks were to explore that prospect, how much of a problem it was likely to be, and possible means of alleviating it such as by providing refinancing facilities.

(3) **Counter-cyclical Investment:** Studies of the feasibility of counter-cyclical schemes would be undertaken immediately by the new NEDC Committee on Finance for Investment. Counter-cyclical schemes had their difficulties, and finance was in any case not the most important factor in investment; but if an effective counter-

cyclical scheme could be devised then it could be an important element in the longer term strategy.

(4) **Investment Schemes:** A total of £285 million had been allocated to accelerated projects and industry schemes under Section 8 of the Industry Act. A further £40 million would now be allocated for industry schemes, with drawings likely to start early in 1977.

(5) **Price Code:** The existing Price Code would expire at the end of July. Discussions would take place on changes in the Code. The Government would take full account of the needs of industry, and in particular, of the need to allow a sufficient recovery of profits to encourage the new investment and related new jobs.

MANPOWER POLICIES.—The Government had already taken action in that field, but two further measures were proposed:—

(i) **Temporary Employment Subsidy:** To save more jobs for the upturn, the Temporary Employment Subsidy of £10 a week per head, would be doubled, as proposed by the T.U.C. in their Economic Review, with immediate effect for new applications, and with effect from the next 3-monthly renewal for existing cases. The scheme would be open for new applications to the end of 1976. Another 60,000 jobs should be preserved, at a gross cost of £95 million (£30 million net).

(ii) **Community Industry:** The extra places made available last December would be continued, if needed, beyond March. The scheme would be brought more closely in line with the Job Creation Scheme. Total cost, £2.3 million in full year.

TAXATION AFFECTING PARTICULAR INDUSTRIAL SECTORS.—There were a number of tax instruments which affected particular sectors of industry. Giving priority to manufacturing industry might involve forgoing changes which might otherwise have been desirable, if they were likely to damage the prospects of big sectors.

(i) **Vehicle Excise Duty:** The idea of abolishing Vehicle Excise Duty on passenger cars and raising petrol tax correspondingly, had looked increasingly attractive. But the switch to smaller cars that that would encourage would create problems for the domestic car industry, and would further stimulate imports, with consequential loss of jobs. Vehicle Excise Duty would therefore be retained.

(ii) **Hire Purchase restrictions on cars:** Dropping the hire purchase restrictions on cars would also stimulate imports. Restrictions would remain in force; for motor caravans in particular those objections did not hold, and hire purchase restrictions were accordingly abolished.

(iii) **Higher rate VAT:** Under existing circumstances the 25 per cent. rate was too high. But big revenue loss which would result from complete abolition of the higher rate would have to be covered by a rise in standard rate, which would put up prices of many everyday items purchased by ordinary working people and pensioners. The higher rate would be reduced to 12½ per cent., at full year cost of £175 million (excluding petrol). This would give help to some hard pressed sectors of industry including many small businesses, e.g., those servicing electrical appliances. The arithmetic for retailers would be based on a simple fraction, one-ninth of the tax-inclusive price.

(iv) **Petrol Tax:** Since petrol bore higher rate VAT its price to the motorist would drop with the reduction in the rate. To prevent that, and to increase further the incentive for fuel economy,

hydrocarbon oil duty on road fuel would rise by 7½p a gallon, implying about 1p more on a gallon of petrol. The tax on derv would also rise 7½p a gallon. These changes brought in a net £265 million in a full year.

The Chancellor said: "In recent years the emphasis of the tax system has tilted away from indirect tax. Some measures are now needed which lean in the other direction, and help to raise revenue." There would therefore be modest increases in excise duties on alcoholic drink and tobacco; because of the inflation the impact of these specific duties had been falling as a proportion of selling price. With the consequential VAT, beer would rise about 1p a pint, spirits would go up 32p on a standard bottle of whisky or gin, fortified wine up to 12p a bottle, 6p a bottle of table wine and for bottles of most made-wine. Cider and perry would be taxed for the first time, at 22p a gallon, equivalent (with VAT) to 3p a pint. Small farm producers would be exempt from the new duty. The combined revenue effect of these measures, including 8 per cent. VAT, was £165 million in a full year. The case for increases in taxation of tobacco was strong both on revenue and health grounds. There would be some increase in the level of taxation, and a first step in restructuring the duty system to fit in with EEC obligations. As a result the total tax burden on most popular sizes of cigarettes would rise 3p or 3½p a packet of 20. Tax on cigars and hand-rolling tobacco would rise in line with cigarettes. There would be no increase in the average tax burden on pipe tobacco. These changes were effective from May 10. The yield, including VAT, would be £115 million in a full year. The combined price effect of the increased tax on drink and tobacco would be about ½ per cent. on R.P.I.

A number of miscellaneous tax changes would also be introduced:—The Inland Revenue would be given additional powers to enable them to uncover evasion more effectively. Powers to require production of documents for inspection would be strengthened. Where artificial leasing arrangements were entered into for tax avoidance purposes by certain kinds of partnership the 100 per cent. first year allowance for capital investment would not apply. Relief would be allowable only against the rental income. Following a review of legislation on fringe benefits a number of changes would be made, applying for the time being only to directors and to employers earning over £5,000 a year. A new scale system of assessing the benefit derived by use of company cars for non-business purposes would be introduced from 1977-78, and be phased in over two years. The benefit of low interest, or interest free, loans would be taxable, except where the interest would be eligible for tax relief. For example, loans for share purchases, or for school fees, would be taxable to the full extent of remission of interest. These, and other changes, would in general take effect from 1977-78.

Three minor tax changes would be made: Firstly the aggregation of the income of a newly-married couple would not occur until the first full tax year of marriage (yield, £60 million). Secondly new administrative arrangements would be made for allowing tax relief on life assurance premiums, beginning 1979-80. Thirdly the limit of relief on premia for self-employed persons' retirement annuities would be raised from £1,500 to £2,250.

Capital transfer tax was becoming accepted as a fair tax. It had been reviewed, as promised last year. A number of changes would be made, many

with retrospective effect. Amongst them would be a new business relief, applying from that day, reducing the value transferred by 30 per cent. for transfer of a sole proprietor or partnership business, or controlling shareholding in an unquoted company. Dealers in land and shares would be excluded; farmers were included, but a full-time working farmer would still be able to claim instead the special relief in respect of his land, if that was advantageous. The new business relief would substantially lighten the burden on transfer of businesses, particularly for small firms, and help to generate confidence for expansion. The present multiplier relief for full-time working farmers would be changed to an equivalent 50 per cent. reduction analogous to the new business relief. The annual amount which could be given away in life tax free after using up other exemptions would be increased from £1,000 to £2,000.

The exemption on death for works of art, historic houses and other property of national heritage value would be extended, subject to conditions, to lifetime gifts and to property held on discretionary trusts. New provisions would be introduced governing the treatment of property passing under survivorship clauses in wills.

Indexation of capital gains tax would provide an insulation against inflation for people facing capital gains tax which had not been enjoyed by income tax payers. There would, therefore, be no change in the structure of the tax, but the total disposals which could be made annually without charge would rise by £500 to £1,000, with effect from 1975-76, at a cost of £¼ million in a full year. There had been suggestions that company exchange losses on foreign currency loans should rank for tax relief. A decision would be announced in the 1977 Budget, after consultations.

On public expenditure, Mr. Healey stated: "The need to leave room in the economy for export and investment growth means limiting the demands of the public sector. The public expenditure White Paper showed that over the medium term the Government aims to stabilize total public expenditure at about the level reached in this financial year. This means painful decisions but the Government is determined to stick to them; the extension of cash limits will help it do so." The cost of the new industrial measures and of the social security provisions would be met within the planned public expenditure White Paper totals for 1976-77 and subsequent years. Social security benefits would be raised in November: pensions by over 15 per cent.—by £3·20 to £24·50 a week for married couples and by £2 to £15·30 for a single pensioner. Short-term benefits would also be raised. Income limits for Family Income Supplement would also go up in July by £7·50 for a one-child family and £4·50 for each subsequent child. The full year cost of these increases was over £1,360 million in total, including pensions, £1,070 million. From April 1977 family allowances and child tax allowances would be replaced by the Child Benefit Scheme. The rates of benefit under this would be announced separately after Easter.

Dealing with his proposals for carrying forward the attack on inflation and for encouraging the greatest possible reduction in the growth of wage costs, the Chancellor said that he hoped to achieve them through relating tax concessions to a lower limit on earnings during the next pay round. The experience of the last twelve months had brought it home to all sections of the community that inflation was the great enemy of full employment. If wages had continued to rise at the rate they were rising in the summer of 1975, the collapse of

foreign confidence in Britain would have brought the collapse of our economy. The agreement with the unions saved the situation. "The progress we can expect to make this year in the fight against inflation depends above all on the pay limit devised last summer by the trade union movement itself in full knowledge and acceptance of the nation's economic needs. We need a similar voluntary policy for incomes when the £6 limit expires at the end of July. In their Economic Review for 1976, the T.U.C. have suggested a target which the Government fully endorses. It is to reduce the rate of inflation next year to a figure well below 10 per cent. A major contribution must also be made through policies for prices, taxation and public finance. But in my view, the key to achieving a rate of inflation which is well below 10 per cent. by the end of 1977 is to relate our tax policy in the coming year to the next policy for incomes."

"I am prepared to use my powers as Chancellor of the Exchequer to help the T.U.C. to get the next pay limit as low as possible by reducing the amount of income tax which is taken from the pay packet. I intend to guarantee that the working population as a whole does not suffer by accepting a lower pay limit rather than a higher one; indeed, I would ensure that a lower pay limit leaves those who most need help—families with children—a good deal better off."

"It is clear that the next pay limit will need to be well below this year's limit of £6 a week. If we want to end next year with an inflation rate at least in line with our foreign competitors we must aim at a further halving of our inflation rate by December 1977. Since we are likely to face higher import prices, partly because our earlier inflation has caused our exchange rate to depreciate, this would require that in the next pay round the nation's money wage bill should rise by under half as much as it is likely to rise in this pay round. The proposals for income tax reliefs which I will now set out show how this result could be achieved. Part of the reliefs would have to be conditional on a low pay limit. If in the end the T.U.C. found they were unable to agree to a figure as low as that on which these tax reliefs are based I would have to reduce the amount of the reliefs accordingly. If, on the other hand, they could go lower still, I would more than compensate with still greater tax reliefs and the nation as a whole would benefit still more. I have based the tax reliefs on the assumption that the pay limit in the next wage round will be in the area of 3 per cent. My proposals are in two parts: it is intended primarily to help sections of the population, like the old and children, who are not going to be involved in the coming negotiations on incomes policy. The second part must be conditional upon agreeing—I hope at the latest by early June—a pay limit which is consistent with a further halving of our inflation rate in the coming year. Besides the increase in pensions I have announced, I propose to increase the age allowance for single people by £60 to £1,010 and for married people by £130 to £1,555 and also to raise the ceiling for the allowance by £250 to £3,250. These increased allowances will be substantially above the rates of retirement pension which will be payable after the uprating in November and this will enable old people to continue to supplement their pension without paying tax."

"I propose to increase child tax allowances by £60 so that they will become £300 for children under 11, £335 for children between 11 and 16 and £395 for children over 16. This improvement will cost £300 million in a full year. In the confidence that we shall achieve a low limit I

propose to include it in the first part of the package and give effect to it immediately. I propose to improve the personal allowances for single and married people and as part of my policy to give as much relief as possible to families, I propose to give a greater increase this year to the married than to single persons. Among the married for this purpose I include single parents. I propose, once the low pay limit is agreed, to increase the single person's allowance and the allowance for wives' earnings by £60 to £735, the married persons allowance by £130 to £1,085 and the additional personal allowance by £70 to £350. These increases in allowances, if the pay limit enabled me to implement them, would keep 670,000 out of tax altogether and would help to reduce the administrative cost of collecting taxes. The single allowance is given to widows as well as single women pensioners under the age of 65."

Coming to the higher rate tax structure, Mr. Healey explained: "The threshold for higher rate tax has been eroded by inflation so that it now lies between 1½ times and twice average earnings. Unless I adjust it this year, the numbers subject to higher rate tax will rise from 1.3 million in 1975/76 to 1.9 million in 1976/77, including very large numbers of skilled workers."

"The counterpart of action on fringe benefits must be some reduction in the income tax burden, particularly on middle managers in industry who have seen their net pay severely reduced in real terms over recent years by inflation and the incomes policy of successive Governments. I have decided that the second, conditional, stage of the income tax package should also include an increase of £500 in the higher rate threshold and a similar increase of £500 in the next four thresholds up to a taxable income of £8,500 a year. The starting point for the higher rate at 40 per cent. would therefore be £5,000 instead of £4,500 and so on; but the 65 per cent rate would continue to start at £10,000. The total cost of these income tax reliefs, if both stages are fully implemented, would be about £1,300 million in a full year. Of this, £370 million is included unconditionally in the first part and the balance will be held over to the second part, since it is conditional on the low pay limit. The revenue from the increased duties on alcoholic drink, tobacco and petrol will broadly cover the cost of the unconditional £370 million which is concentrated on the old and children."

"In addition to the direct advantage in real take-home pay produced by the lower pay limit, it would also generate more jobs by improving the ability of our industry to compete, by stimulating investment and by improving confidence in Britain both at home and abroad."

The Chancellor said: "The Budget is an almost neutral one. Given implementation of the conditional part of the tax measures the outlook is for GDP to grow about 4 per cent. and manufacturing output over 8 per cent. in the year to mid-1977. Manufacturing investment could rise around 15 per cent. over the same period, with private investment half as fast."

"It is, however, too soon to say whether we have already reached the peak of unemployment, hence the further selective labour market measures. Given the low pay limit the additional tax reliefs are estimated to provide about 100,000 jobs over the next 18 months. On prices I believe that we can still achieve our target of under 10 per cent. next winter. The prospect for 1977 depends crucially on achieving the low pay limit. We have already halved our rate of inflation, and if we can achieve the low limit for the next round we can halve it again by the end of 1977."

The prompt reaction of Mrs. Thatcher was that this was a big horrorers' hudget from a soft options Chancellor and that Mr. Healey's unprecedented proposal of offering tax relief in return for pay restraint was "putting the decision about taxation levels of the majority of the people over to a body which consisted of the minority of the people." This was taxation without representation. Until the Chancellor brought down the underlying rate of expenditure he could not do very much more than shuffle the taxes around from one taxpayer to another and one set of goods to another. He was treating the economy as if it was a patient suffering from two diseases. The current recession could be compared with an attack of influenza while the underlying deficit was like a cancer. The Chancellor was treating the influenza but ignoring the cancer by not doing anything about the structural growth which if left untouched would destroy them. Mr. Jeremy Thorpe thought that the hudget was a gamble to get agreement and if it did not succeed Parliament would have to introduce some very tough measures.

Next day, April 7, increases totalling nearly £1,400 million in pensions and social security benefits, with more help towards heating costs for people on supplementary pensions and allowances, were announced in Parliament by Mrs. Barbara Castle, the increases being paid from the week beginning 15 November, 1976. Long-term benefits went up by over 15 per cent., which meant that retired couples would get £24.50 a week, an increase of £3.30, and single pensioners would get £15.30 a week, a rise of £2. Single people drawing sickness and unemployment benefit would receive increases of £1.80 a week—16 per cent. more. People receiving supplementary benefit received similar increases. There was to be an increase of over 25 per cent. in heating additions paid with supplementary benefit, and from July the limits for family income supplement were to be greatly increased. Mrs. Castle said that the increases for pensioners would more than compensate for the expected movement in earnings and prices between the last uprating and the date of implementing this one. The proportionately larger increases in short-term benefits for sickness and unemployment would more than take account of the expected movement in prices over the same period and also would narrow the gap between short-term and long-term rates. Speaking about pensions, she said: "We are confident that the proposed increases of 15 per cent. will be considerably larger than the actual and likely movement of earnings and prices from the time of the last uprating to November." Turning to short-term benefits, Mrs. Castle said that they "will be increased to take account of the actual and likely movement in prices from last November to this November, again with a comfortable margin to spare, but on this occasion we have decided in addition to make a proportionately bigger improvement in the short-term rates—compared with the long-term ones—thus narrowing the gap between them."

On April 8, the third day of the debate, the Industry Secretary (Mr. Varley) announced that he planned to introduce a scheme under which a Government guarantee could be given that stage payments would be refunded to an owner ordering a vessel at a British yard which was to be nationalized if that yard should fail before nationalization. After nationalization, the contract would be honoured by British Shipbuilders. He also intended to extend the cost escalation insurance scheme, now available only for ships built for export, to vessels ordered by British shipowners, and also announced

that he had decided that projects up to 12,500 square feet in the South East planning region and 15,000 square feet in the rest of the non-assisted areas should be free from the need to get industrial development certificates.

On the final day's debate, on April 12, Mr. Healey's 3 per cent. pay rise and tax concessions proposals linked to T.U.C. support received approval by 295 votes to 274, a Government majority of 21, while the main motion covering the hudget proposals was similarly supported. A division forced by Scottish Nationalists against the proposal to increase duty on spirits by 32p per bottle was defeated by 295 votes to 19, Government majority 276, and another division pressed by the S.N.P. on the motion to raise petrol duty was also defeated by 284 votes to 22, Government majority 262. The remaining Budget resolutions were approved without a vote.

The Chancellor of the Exchequer told the Commons on May 5 that the full conditional tax reliefs promised in his Budget would be given as a result of that day's agreement between himself and the T.U.C. over a 4½ per cent. average voluntary pay rise limit. He reported the details of the agreement and said that the 5p increase in school meal charges proposed for September, 1976, would be scrapped at a cost of £35 million. Additionally, he announced that the Government would allocate an extra £15 million for training and job creation. Mr. Healey explained that there was no question of consolidating pay increases under the £6 policy into basic rates; this alone could have added as much as 2 per cent. to the total pay bill, and no special exemptions were proposed for productivity hargains. Any increase would take the form of a supplement to an individual's pay subject to a floor of £2.50 and a ceiling of £4 which would apply to incomes at all levels above £80 a week. Price controls on both profits and costs must continue but the price control régime must be so modified as to encourage investment and jobs in the economy. The Shadow Chancellor (Sir Geoffrey Howe) said that these figures introduced a far greater sense of realism than prevailed in the disastrous year of the social contract when the entire nation was taken for a ride, and Labour hackhencers reacted noisily when Sir Geoffrey asked for "a candid assurance that you have entered into no kind of undisclosed or secret undertakings with the T.U.C., which might restrict your freedom and your duty to the country to take whatever steps may be necessary still further to reduce public spending in the year ahead." Mr. Healey retorted that he had made no undisclosed commitments with anybody; the limits set provided for negotiation, not entitlement. The effect on demand of the total package, including tax reliefs, as outlined in the Budget, would be to add about one-third of 1 per cent. on the Gross Domestic Product. The Liberal economic affairs spokesman (Mr. John Pardoe) urged the Chancellor to state clearly that however satisfactory 4½ per cent. might be, it was unfortunately 4½ per cent. more than the country could actually afford. Mr. Healey replied that the effect on the rate of inflation was that the increases would add to the RPI by the end of next year about 2 per cent.

PAY BEDS.—The Government bill to phase out National Health "pay beds" was given a second reading in the Commons on April 27 by 289 votes to 269, Government majority 20, after the Social Services Secretary (Mr. Ennals), during the debate on the Health Service Bill, appealed to doctors and others to "stop tilting at windmills" by threatening industrial action. He insisted that it was not Government policy to abolish private medicine but

to separate it and declared it was time to recognize that a fair compromise had been reached. The Conservatives, on the other hand, maintained their outright opposition to the measure and the Shadow Social Services Secretary (Mr. Patrick Jenkin) said that it failed to put patients before politics and was a nasty, misbegotten piece of socialist legislation. The Liberals also opposed the second reading because of the "extreme bureaucracy" involved.

HOUSING.—On May 18, the Commons rejected by 287 votes to 257, a Government majority of 30, a Conservative motion to encourage local authorities to let council tenants buy their own homes and decided that sales policy should be fixed by each council after considering the particular area's needs. The approved Government motion stated that they encouraged the widest possible housing choice, including owner-occupation, equity sharing, cooperative ventures, and renting. The Opposition also called for an end to the ban on New Town authorities selling their houses, but the Local Government and Planning Minister (Mr. John Silkin) said that he would be having talks on that matter with the New Towns chairman. The Shadow Environment Secretary (Mr. Timothy Raison) said that in adding to the stock of human happiness the sale of council houses did not diminish the overall housing stock and another Conservative spokesman (Mr. Hugh Rossi) commented that it was wrong that there should be a monopoly ownership of other people's homes, whether it were in the hands of private individuals or the State.

DEVOLUTION AGAIN.—The Leader of the Commons (Mr. Michael Foot) made it clear on May 25 that the Government's aim was to pass the devolution measure for Scotland and Wales in the next Parliamentary session and said that there would be a single combined bill and that the Government had ruled out holding a referendum on the proposals. There would be a major change in the U.K. reserve powers but their form would be subject to direct and specific control of Parliament. Mr. Whitelaw described the decision not to have separate bills for Scotland and Wales as wrong; it did not make sense as each country had its own problems. Mr. Foot answered that the proposals would not add to the financial burden on Scotland and Wales and defended the single bill on the grounds that devolution meant that there could be different developments in Scotland, Wales, and England. Mr. Enoch Powell considered that that might be a suitable opportunity for increasing the number of Northern Ireland M.P.s, as there was no reduction in representation for Scotland and Wales at Westminster and Mr. Neil Kinnock (Lab.) remarked: "A great debate without a referendum at the end of it is like a horse race without a winning post." Mr. Foot did not accept that the proposals constituted a substantial degree of separatism of which there was not the slightest element and said there would be great difficulty in putting proposals in the form of a referendum. Mr. Eric Heffer (Lab.) called the statement a further retreat in the face of nationalist pressure and considered the tail was now wagging the dog. Mr. George Reid (S.N.P.) complained that the new Scottish Assembly would not have sufficient power to regenerate the Scottish economy or end the cycle of deprivation, but Mr. Foot said that Scottish Nationalists believed in separatism, which the Government repudiated. Mr. Jim Sillars (Lab.) said that the Labour Party had failed to fulfil pledges given in the election of October, 1974, to provide industrial power to the Assembly and Mr. Gwynfor Evans (Plaid Cymru) said that injustice was being

done to Wales, as it would not have equal powers with Scotland to deal with unemployment, depopulation and emigration. But Mr. Iain Sproat (C.) believed that most people would see the statement as nothing but "shameful appeasement." Mr. Foot agreed that people had a right to express their views and doubtless would continue to do so through their M.P.s. The Commons was the best place to pass final judgment.

CHILD BENEFIT SCHEME.—There was a major Government back-bench rebellion in the Commons on May 25 after the Social Services Secretary (Mr. Ennals) announced postponement of the planned child benefit scheme. Labour M.P.s severely criticized the proposal to implement only part of the scheme as an "insult" and an abandonment of one of the Party's main reforms. Mr. Ennals denied that there had been any abandonment and assured the House that the whole scheme would be introduced in its entirety in time but said that its application immediately would have imposed excessive strain on the pay policy and cut workers' take-home pay. Instead he announced a new system of child allowances, including the first child, to operate from April, 1977, and said that the Government had decided that the new increased child tax allowances given in the budget would remain unchanged, the new benefit being £1 for the first child and £1.50 for other children. The Opposition Social Security spokesman (Mr. Patrick Jenkin) considered the statement was "a final collapse of the Government's strategy for family support." Mrs. Barbara Castle, former Social Services Secretary, said that the announcement would be greeted with dismay by Labour M.P.s and that it looked like the abandonment of one of the Party's major reforms.

NATIONALIZATION PLANS.—There was a storm in the Commons on May 26 when the Government announced plans to press on with its nationalization of the shipbuilding and aircraft industries and shouts of "cheat," "Fascist," and "Leader of the Reichstag" were hurled against the Leader of the House (Mr. Foot), who defended the decision to hasten the passage of the nationalization measure provided the Commons' vote next day gave the "green light." Mrs. Thatcher angrily declared that if Mr. Foot was proposing to set aside the rules of the House at 24 hours' notice, he was signalling the end of Parliamentary democracy and the beginning of arbitrary government. The Speaker had ruled that Mr. Robin Maxwell-Hyslop (C.) had produced a *prima facie* case that the Shipbuilding and Aircraft Industries Bill was a hybrid measure whereupon Mr. Foot informed M.P.s of the Government move to circumvent this dilemma by tabling a special motion, which unleashed 1½ hours of nonstop fury. The Liberal Party acting Leader (Mr. Jo Grimond) told Mr. Foot: "You have been posturing around this place for years and years as a champion of this House but you are now introducing a motion to get around the Speaker's ruling." Next day, May 27, the issue was rejoined when the Commons debated the motion—in the eyes of the Opposition parties—to set aside rules which at least could delay the Bill. There was an electric atmosphere throughout the long debate which ended with charges and counter-charges and highly emotional scenes when the Opposition motion on the rules change resulted in a dead heat of 303-303. The Speaker in accord with the rules of the House gave his casting vote for the Government and the House then divided on the Government's own motion which was carried by 304-303 without the need for the Speaker to intervene. It was immediately following the second division that almost unprecedented chaos ensued. Labour

M.P.s in their jubilation sang "The Red Flag," shouted, and waved order papers in the air when suddenly the Conservative shadow industry spokesman (Mr. Heseltine) seized the Mace, the symbol of parliamentary authority, from its place on the Clerks' table and advanced towards the Government benches, holding it aloft. His Tory front-bench colleague, Mr. James Prior, restrained him and replaced the Mace while simultaneously other M.P.s were involved in blttery angry exchanges, punches being thrown as they milled around the Bar to the Chamber, pushing and shoving, until the Speaker suspended the sitting for 20 minutes. When the Speaker returned, he gravely said: "There have been scenes of great disorder here tonight and I adjourn the House until tomorrow." M.P.s on all sides were stunned into silence and gradually dispersed but not without some taunts. On May 28, the episodes of the previous night had had an apparent cooling and sobering effect on all M.P.s and straight way Mr. Heseltine made an unreserved apology for removing the Mace and when exchanges again began to raise the temperature, the Speaker expressed the hope that "M.P.s will remember that anything that undermines the dignity of this House, undermines its authority both here and outside." Mrs. Thatcher proposed peace talks through the "usual channels" over the dispute over pairing in the Government's one-vote majority division. But she insisted that any talks should involve the Prime Minister and herself personally, to which Mr Foot agreed. After disposing of the day's business, the House seemed to heave a sign of all-round relief and adjourned for the Whitsun Recess.

On June 29 the Government won the "replay" vote on the shipbuilding and aircraft industries nationalization bill in the Commons with 311 votes to 297, a majority of 14, the margin difference being provided by the abstention of the Scottish National Party. The Tories had sought to send the bill to a select committee, and were supported by Liberals and Ulster Unionists. But Mr. Gordon Wilson (S.N.P.) warned that if the Government did not bring in the goods by providing a shipbuilding organization in Scotland his Party would vote against it on third reading.

THE POSITION OF STERLING.—Mr. Healey announced in the Commons on June 7 that the Government had obtained 5,000 million dollars of standby credit from America, the Central Banks, and the Bank for International Settlement which, he declared, showed unprecedented support for sterling against unjustified market pressure. Mr. Healey, in his statement, said: "There is no economic justification for the fall in the value of the pound. This is not a situation in which any responsible British Government can allow itself to be pushed into hasty and ill-considered changes of policy on public expenditure." There was no economic case for changing public expenditure plans for the current year but they were determined to ensure that the planned total of expenditure was not exceeded. The Government had made it clear to local authorities that they must bring their spending estimates for the current year within the figures given in the White Paper on Public Expenditure. The Bank of England was that day announcing the issue of £800 million worth of new long-dated 13½ per cent. Exchequer Stock 1996 which would yield over 14 per cent. on redemption. The Chancellor said that any drawings on the standby credit would be only temporary though the Government would seek further drawings from the I.M.F. if it was thought necessary. The Opposition Shadow Chancellor (Sir Geoffrey Howe) was concerned that the only significant new announcements

involved significant additions to the Government's borrowing requirements both at home and overseas. The Chancellor should announce clear financial targets; the country wanted a Government which would take the difficult decisions in the interests of the nation as a whole. But Mr. Healey replied that this was a massive international endorsement of sterling. The Liberal spokesman (Mr. John Pardoe) said that all who were not totally overcome by party political passion would welcome the Chancellor's determination not to indulge in panic cuts in public expenditure. Later, the Chancellor said that he expected inflation to be halved again by the end of 1977.

On June 9 Mrs. Thatcher moved a motion of "no confidence in the Government", but despite the summoning of Tory M.P.s from the four points of the world in an all-out effort to defeat it, the Government won the division by 309 votes to 290, a Government majority of 19. Mrs. Thatcher accused the Government of drift, debt, and decay and declared that the people had the will and courage to do anything required of them so long as they believed it would lead to the rebirth of Britain. The Prime Minister (Mr. Callaghan) suggested that "all this clamour and clangour" had been to satisfy an impatient and imperious vanity.

The Opposition Shadow Chancellor (Sir Geoffrey Howe) opined that "we have ended up with a pattern of half-baked socialism. We have found socialist governments destroying the dynamic of a free society and not putting in its place the discipline of Marxist control, giving us the worst of both worlds." The Chancellor himself however suspected that Mrs. Thatcher had been committed to this "folly" of a no-confidence vote by an over-excited Chief Whip who thought there might be a chance of exploiting a national difficulty for party advantage. The 4½ per cent. pay limit was recognized throughout the world as likely to give the U.K. the lowest rate of wage settlements of any industrialized country over the next pay round.

The same day the Lords also discussed the economic situation and Lord Aldington declared that public expenditure cuts would not be "a sadistic act to satisfy heathen gods" but measures needed to strengthen the British economy. Such cuts were urgently necessary. The Leader of the House (Lord Shepherd) said that public expenditure was expected to fall back to about 53 per cent. of the gross national product by 1979 but hasty cuts in this direction would have had serious consequences for employment and would have affected the poorest people. For the Liberals, Baroness Seear congratulated the Government on keeping its nerve during the sterling crisis and agreed that it would have been unwise to take ill-thought out action by slashing public expenditure. Lord Cromer, former Governor of the Bank of England, reminded them that the pound in the pocket today was worth 35p compared with its 1963 value and said that the level of Government expenditure was almost certainly the most dangerous element in the debasement of the pound at home and abroad because of the inflationary manner of part of the financing of Government requirements. Lord Thorneycroft, former Tory Chancellor of the Exchequer, remarked that the point had come where they had faltered to a level where some of the old disciplines would have to be re-introduced, and another Tory ex-Chancellor, Viscount Amory, took the view that further cuts in public expenditure were bound to come and when they did it was only by re-sorting priorities that it would be possible to safeguard the more essential public services from danger. Lord Cobbold, another former Bank of England Governor, said

that they must fairly soon reach a more stable international monetary arrangement with sensible policies being followed by countries in deficit and in surplus. Lord Balogh, one-time economic adviser to the Government, congratulated the Chancellor for his steadfastness in the face of the "gambling excesses" with the pound and stock exchange prices and called for an immediate reconsideration of exchange regulations.

CABINET DOCUMENTS.—On June 28 the Government had a majority of 27 in the Commons after a debate on the "leak" of Cabinet documents on the decision to postpone payment of child benefits to mothers, voting being 294 to 267. The Conservatives initiated the debate after the Government had refused to make an interim statement on the inquiry into the leak conducted by Sir Douglas Allen, Head of the Civil Service. The Leader of the House (Mr. Foot) criticized the Official Secrets Act, saying that it was like an unruly elderdown which flopped over everything. The leak was not only a conflict between right and wrong but between the need for ministers to talk in confidence and newspapers' pressure for open government. A way to reconcile these points was to ensure the Official Secrets Act was reformed. Mr. Edward Heath said that the whole machinery of government was too secretive and he called for government to be "on the record." But on July 1, Mr. Callaghan told M.P.s that the police were to investigate the leak and reported that Sir Douglas Allen had been unable to discover its source, adding that the author of the article concerned which disclosed the Cabinet documents was not to be prosecuted.

USE OF WATER.—On July 2, the Local Government and Planning Minister (Mr. John Silkin) announced legislation to give new powers of control over water use to be applied for limited periods in specific areas where the water supply situation warranted it. He added: "I do not want to exaggerate the problems. Over much of the country water supplies should be adequate to see us through without difficulty until the winter rains come but the Bill should be introduced urgently. The existing shortage and the abnormally hot and dry summer in the southern half of the country presented potentially severe problems in a number of areas." The new powers would strengthen existing powers to make drought orders. Welcoming the statement, the Opposition spokesman (Mr. Arthur Jones) promised cooperation from the Opposition. Sir Geoffrey de Freitas (Lab.) suggested a national water grid to take supplies to dry areas and for the Liberals Mr. Clement Freud, also pledging support, said that it was clear any action would be cosmetic rather than fundamental. The Minister replied that they must give precedence to production in agriculture and industry and described the drought in the south of England at least as the worst for 250 years.

PAY AND PRICES.—The Chancellor of the Exchequer (Mr. Healey) said in the Commons on July 6, at the start of a two-day debate on pay and prices policy, that the increase in gross domestic product over the coming year was likely to be 5 per cent. compared with the 4 per cent. forecast in the budget. The increase in industrial output should be 9 per cent. against the 8 per cent. in the budget. He also said that the rate of inflation in other countries might move past Britain's in the coming winter. The most important aspect of the agreement with the unions was that the U.K. would be one of the few countries in the world which could look forward to a rapid rate of economic recovery over the next 18 months. Without a pay agreement, their problems would be insoluble. Exports

were also growing faster than expected and unemployment should be lower while the public sector borrowing requirement should be less than forecast in the budget. It was unlikely that the rate of inflation would be brought down to the previous year's target of under 10 per cent., but the rate of growth was faster and consistent with getting unemployment down to 3 per cent. in 1979.

The Shadow Chancellor (Sir Geoffrey Howe) declared that Mr. Healey had told them "precisely nothing" and suggested that some Labour Left-wingers wanted to go beyond the iron curtain for an economic system. While accepting the need for a pay policy, he said that it would not cure inflation and in the end would make the cure far harder and divert attention from the essential policies. Mr. Richard Wainwright, for the Liberals, accused the Chancellor of dangerous complacency and said that while they might achieve single digit inflation by the end of 1977, he believed that it would rise again to about 12 per cent. early in 1978. Mr. Douglas Crawford, for the S.N.P., said that the U.K. ship of state was awash with borrowed money and there was no reason why a thrifty Scotland should suffer from the excesses of a spendthrift England. On the second day's debate, Mrs. Shirley Williams said that the private sector of industry might not survive if rates of return on capital continued to fall. The country was placed on yet another tightrope, that of achieving the short-term aim of defeating inflation without jeopardizing the medium term aim—the need for industrial recovery and much higher levels of industrial investment. There would have to be a rate of return to the public and private sectors to enable them to survive, invest and expand and that was one reason they had decided that a limited relaxation of the price code was necessary. For the Opposition, Mrs. Sally Oppenheim said that the Government's options had almost all run out and they were faced with the double irony of restraining pay and relaxing price controls at the same time. Mr. Edward Heath fully supported the agreement reached with the trade unions on pay restraint but said that the real test was whether the Government would say that the unions should behave in the same way towards any democratically-elected government. Winding-up, the Employment Secretary (Mr. Albert Booth) described the unemployment forecast as "bleak", but stressed that the Government was considering new proposals to cushion the effects, particularly on young people. Industrial strategy called for a far greater readiness to change jobs. The Government had a majority of 35 on an Opposition motion deploring the absence of a convincing strategy for economic recovery based on a prosperous private sector and the reduction of State spending and borrowing, the figures being 286 votes to 251. When Scottish Nationalists forced a division on the inflation and price code White Papers, they were defeated by 279 votes to 13, a Government majority of 266, and Government Orders giving effect to pay limits and extending existing prices legislation were approved without a vote.

An all-party backbench revolt in the Commons on July 14 reduced the tax on widows' pensions when M.P.s voted 190 to 170, a majority against the Government of 20, to free the first 50 per cent. of their pensions from tax. The Government defeat occurred during the report stage of the Finance Bill when the successful amendment was moved by Mr. Robert Kilroy-Silk (Lab.), who said that the concession would help 25,000 widows from the first world war and 65,000 from the second, the cost of this exemption amounting to £3½ million a year at the most. Mr. John Nott,

Conservative spokesman on Treasury affairs, pointed out that the tax threshold had fallen so dramatically that war widows, who received one third of the average national wage, were having to pay tax. The Financial Secretary (Mr. Robert Sheldon) admitted that the "emotional case" for the war widows was justifiable but said that the way to help them was by increasing benefits rather than adjusting tax allowances and exemptions. He estimated this concession would cost up to £10 million.

There was further uproar in the Commons on July 15 when the Leader of the House (Mr. Foot) announced Government intentions to "guillotine" debate on five major controversial bills in one day, with frequent calls of "Cbeat" from the Tory benches in an hour-long verbal fracas. Mrs. Thatcher accused Mr. Foot of unprecedented contempt for Parliament and declared that Conservative M.P.s would not want to pair to allow ministers to represent "such a dictatorial Government overseas." The measures to be "guillotined" were the Aircraft & Shipbuilding Industries Bill, Dock Work Regulation Bill, Education Bill, Health Services Bill, and Rent (Agriculture) Bill. Mr. Foot repudiated the Opposition charges and denied that free speech was being curtailed, but Mr. John Peyton, shadow Leader of the House, angrily said that Mr. Foot had blown to pieces the last shreds of his reputation as a parliamentarian. Mr. Foot insisted that there had been previous occasions when governments had used five time-table (guillotine) motions in a single session although he conceded not on a single day. Tories stood in their places and shouted "Resign" at Mr. Foot, who however declined to accept any charge from the Opposition about his side being opposed to the proper operation of Parliament because of the introduction of guillotine motions. On July 20, after 10 hours of non-stop debate, the Government secured their motions to time-table debates on these bills in six divisions by majorities ranging from 6 to 23.

MR. HEALEY'S STATEMENT.—On July 22, the Chancellor of the Exchequer, Mr. Healey, made a statement in the Commons about measures which the Government had decided to take to secure its social and economic objectives. The Chancellor declared: "Our overriding priority is to restore the prosperity of the British economy through the regeneration of our industry and to provide the essential conditions to bring down, and to keep down, the intolerable level of unemployment. To do this we must ensure that manufacturing industry has sufficient resources available to take advantage of the exceptional opportunities open to us in the export field; we have to get our rate of inflation down to the level of our competitors' and hold it there; and we have got to do both in a way which will protect the poorest and weakest of our people and retain the social consensus on which the success of all our policies depends."

"In my Budget speech last April I said that I expected our gross domestic product, which fell during 1975, to grow by about 4 per cent., and manufacturing output to grow by about 8 per cent., in the year to mid 1977. The increase in demand would come largely from exports and stock-building; little from consumption. In fact, the recovery has proceeded faster than I then expected, led by a vigorous growth in exports. On present policies I would expect GDP to increase over the 18 months from the first half of 1976 to an annual rate of 5 per cent. and exports of goods and services by 11 per cent. This could imply a very rapid rate of increase in manufacturing production, perhaps as much as 9 per cent. We must as usual expect a

lag before these developments affect the present unacceptable figures of unemployment; but on current prospects I would expect unemployment to start falling before the end of the year. Money supply has grown well within the guidelines I set at the time of the Budget."

"The balance of payments on current account, however, remains in substantial deficit. The 12 per cent. depreciation of sterling since March will inevitably worsen the balance of payments in the short term, and make it more necessary than ever for us to maintain the confidence of those from whom we may have to borrow to finance our external deficit. On the other hand the increase in our exports and in import substitution deriving from our increased competitiveness will later bring a massive improvement. In fact we have a unique opportunity for export-led growth, something we have sought in vain ever since the Second World War."

"The Prime Minister and I have said many times that the Government stands ready to take whatever action may be necessary to make room for the growth in exports and productive investment on which this country's future depends. It remains my considered judgment that there is no call for major action in the current financial year. Firm action to break into the tendency for public expenditure to exceed planned levels has already been taken. In particular, our new techniques of control, notably cash limits, will ensure that expenditure in 1976/77 is strictly contained within the limits which the Government have published. But there is no economic or financial case for further reduction in public expenditure or the PSBR this year, which I now estimate will be about £11½ billion, about £1½ billion less than the Budget estimate."

"It has been right for us, like other countries, to run a large fiscal deficit in the depths of the recession so as to keep unemployment lower than it would otherwise have been. It would however be wrong to do this through the period of recovery which is now beginning. Unless the deficit falls steadily over the next 3 years as expansion proceeds, the financing of the public sector will pre-empt private savings which productive industry is likely to require on a substantial scale to finance stockbuilding and investment; or it will lead to an excessive growth of the money supply which would refuel inflation. Given the economic prospect as we now see it, we intend that the PSBR for 1977/78 shall be reduced to £9 billion or less. Next year the recovery of the economy is likely by itself to reduce the PSBR only by something like £1 billion to about £10½ billion. This alone will not be enough. Fiscal action is needed in addition to achieve the objective which the Government set. I believe that it would be wrong in present conditions to load on to taxation anything approaching the whole burden of adjustment. In particular, a major increase in the burden of personal taxation would have unacceptable consequences for take home pay. It could wreck our counter inflation policy in the coming year."

"I must therefore look to public expenditure for a major contribution and I am announcing now, public expenditure reductions of £1 billion at 1976 Survey prices for 1977/78, which will be the crucial year for recovery. In deciding where the reductions of £1 billion should fall the Government have avoided mechanical cuts across the board. We have deliberately decided to maintain the main social security benefits like pensions so as to provide the maximum support to those in need here at home. We have also decided to maintain, untouched, our aid programme to the Third World."

The main purpose of our measures is to allow manufacturing industry to take the maximum advantage of the opportunities now presented to it. Because of the priority which the Government are giving to the Industrial strategy, we have been concerned to avoid damaging the trade, industry and employment programmes. We intend to move towards putting emphasis on selective, as against general, assistance to industry. We plan therefore to increase significantly the resources available for selective assistance to industry through the N.E.B. and the Scottish and Welsh Development Agencies, as well as from the Government direct, so as to support the work on the industrial strategy now under way in N.E.D.C. Our experience shows that this is the most cost-effective way of helping to achieve the reversal of our post-war industrial decline. As part of this policy of selective support for industry, the Government will also watch vigilantly the need for any extension of its existing selective import restraints to provide temporary protection to viable industries faced with unfair foreign competition. We have already taken action and we are anxious to discuss with both sides of industry the need for further action of this kind. In some areas we have already increased provision for public expenditure, especially for the Department of Employment's programme, including funds provided to the Manpower Services Commission for training. In addition, we are prepared to make provision, within the revised programme, for a possible Government contribution in 1977/78 to the collective funding of any scheme of apprentice training which may emerge from the public discussion of our recent Consultative Document on that subject. This shift of emphasis towards selective assistance to industry will require savings in expenditure of three kinds. First, Regional Employment Premium is at present £3 for men and £1.50 for women; in future it will be at a single rate of £2 for both. Second, we will introduce legislation to reduce the employer's rebate from the Redundancy Fund from 50 per cent. to 40 per cent. Third, savings will be obtained on regional development grants by imposing a delay of some 3 months in payment of approved claims. We also propose to concentrate these grants in future on manufacturing investment by withdrawing eligibility from the construction and private mining industries. Apart from further selective action still to be decided, the net effect of all these measures will be to reduce the trade, industry and employment programmes in 1977/78 by £105 million.

"Net savings of £157 million will be made on the capital investment programmes of the nationalized industries other than B.N.O.C. These savings are spread between the Industries and should not affect the main industrial objectives of any of them. We believe the time has come to review the treatment of the nationalized industry programmes generally in our public expenditure figures so as to bring our practice more closely into line with that of other countries. There will be net savings of £87 million on roads and related expenditure. Net savings of £25 million will be obtained on existing agricultural and forestry programmes, largely by deferring the payment of capital grants, and ending the Ilme subsidy.

"Our existing plans envisaged that food subsidies would be largely phased out by 1978-79. This process will be accelerated, to save £80 million in 1977-78. The effect of this acceleration on the RPI will be only about 0.1 per cent. The Government have decided to save £5 million on overseas services other than aid in 1977/78. The planned Defence Budget for 1977/78 will be cut by

£100 million. This will be achieved by rephrasing the works programme and some deferrals.

"Approvals for new housebuilding by local authorities are running at a substantially higher level than allowed for in the estimates in the last Public Expenditure White Paper. It is therefore necessary to reintroduce control over this programme and to limit the rate of approvals so that over-spending is avoided. Reductions will not be imposed in areas where housing needs are greatest. In addition, net savings of £146 million will be achieved, principally by reductions in local authority mortgage lending. The building societies have expressed their willingness to help fill this gap in mortgage lending. Net savings of £81 million will be obtained on existing programmes for other environmental services. For 1976-77 we have agreed to postpone the 5p increase in the charge for school meals that was due this September, but if the charge were kept at 15p in 1977-78, that would add £43 million to net expenditure on school meals in that year. We propose to limit this addition to £15 million by raising the charge by 10p in the autumn of 1977. We shall save £45 million on the rest of the education programme, mainly by curtailing capital expenditure on the universities and other educational building and reducing the budgets for science and the arts. The total net saving on this programme will therefore be £30 million."

The Chancellor continued: "We have given high priority to the poorer members of our society and particularly to old age pensioners. We shall continue to honour our commitments to uprate the main social security benefits regularly and we shall maintain general social security expenditure in 1977/78. Furthermore, we propose to increase the rate of the new mobility allowance in November 1977. But we shall be introducing legislation to restrict the unemployment benefit entitlement of those with substantial occupational pensions; and non-contributory invalidity benefit for housewives will now be introduced in November 1977. Taking into account the increase in mobility allowance, these measures will save about £21 million net in 1977/78. Reductions of £70 million will be made in 1977/78 in the health and personal social services programme as a whole but there will be no cuts in services for patients in the N.H.S. This will consist of £20 million on capital expenditure on the N.H.S. and on local authority personal social services; £20 million by way of extra receipts from increases in dental and ophthalmic charges and £10 million from savings on overheads and measures to curb the drugs bill; and it is proposed to save a further £20 million in 1977/78 (£40 million in a full year) by legislation to recoup mainly from insurance companies the full cost to the N.H.S. of treating road accident cases.

"A reduction of £10 million will be made mainly in expenditure on Government accommodation. A reduction of £35 million will be made in Northern Ireland. Some £3 million of this is the result of the new equalized rate of regional employment premium. The remainder of the cuts will be spread widely over the different Northern Ireland programmes.

"Together with the saving of £60 million on debt interest which results in 1977/78 from the measures I am announcing, the total public expenditure saving will be £1,012 million. This will reduce the PSBR in 1977/78 by about £80 million."

Turning to taxation, the Chancellor explained: "In addition to the public expenditure measures which I have announced, further action in the tax

field is needed to reduce the P.S.B.R. to £9 billion. A massive increase in income tax or indirect taxation would be disastrous for our counter-inflation policy, particularly since the effects would be felt immediately in the middle of the next pay round. The Government have therefore decided instead to make an addition of 2 percentage points to the employers' national insurance contribution. The Government will be introducing legislation early in the new Session, so that the addition can take effect from 6 April 1977. It will yield about £910 million in 1977/78 and about £1,030 million in a full year. Less than half of this will come from manufacturing industry. This sum will further reduce the P.S.B.R. in 1977/78 by about £700 million. The addition, like the existing contributions, will be an allowable cost for purposes of the Price Code and corporation tax. The Government's decision on the Price Code to come into effect on 1 August will include a rate of 50 per cent for investment instead of 35 per cent, proposed in the consultative document and an adjustment factor of 1.4 for depreciation instead of the earlier proposal of 1.3. These further changes should contribute to industrial expansion and in themselves make little difference to prices. The total estimated effect of the public expenditure and tax measures I have announced is to increase the price level by about 1 per cent. by March 1978, nearly 2 years from now. On current forecasts these measures will suffice to achieve the Government's objective of getting P.S.B.R. down to £9 billion in 1977/78. The measures will reduce the General Government Deficit from just under 6 per cent. of G.D.P. this year to 3 per cent. G.D.P. next year—a reduction of nearly half. If inflation and output move as forecast I would expect the growth in money supply to be lower next year than this. There remains a risk that, even after the reduction in the P.S.B.R., the necessary restraint in the growth of the money supply might result in industry being denied essential finance. I intend to ensure that that does not happen. It is essential that any increase in bank lending should be directed to priority borrowing in particular for exports, import saving, and investment and working capital for productive industry.

"As a result of these measures I expect G.D.P. to increase over the 18 months from the first half of 1976 at an annual rate of about $4\frac{1}{2}$ per cent. and manufacturing production at a rate of about $8\frac{1}{2}$ per cent. Unemployment in early 1978 will still be lower than expected, even though the measures may by then have reduced the fall in unemployment by about 60,000.

"The measures I have announced have one overriding purpose—to make certain that this recovery can be sustained until full employment is achieved. I believe these measures will enable both sides of industry to work closely together with the Government to achieve our common aim with full confidence that the remaining obstacles to our success are removed," Mr. Healey concluded.

The Shadow Chancellor (Sir Geoffrey Howe) welcomed the significant step in the right direction although the announcement was simply the first step along the long, hard stony road which would have to be followed to restore the balance and health of the economy. Mr. Norman Atkinson (Lab.) said that the cuts might mean some 60,000–70,000 men

and women in the non-manufacturing workforce losing their jobs by the end of 1977 and if that was the case the Chancellor might have the confidence of the international creditors but he would have certainly lost the confidence of the Labour movement. Mr. Healey regretted that it had been necessary to take measures which would affect employment but a failure to do so would have consequences for sterling, the balance of payments and in the paralysis of the economy which would have completely excluded the chance of a steady and sustained return to full employment.

The Commons sat until 10.45 p.m. on July 23, a total of 11 hours 45 minutes, the longest Friday sitting since the war and probably this century. Normally Friday business terminates at 4.30 p.m. starting at 11 a.m. but on this occasion Northern Ireland M.P.s staged a full and time-exempted debate on the affairs of Ulster when the Appropriation (Northern Ireland) Order was discussed.

DEVOLUTION PROPOSALS.—Also on August 3, the Leader of the House (Mr. Foot) announced a series of changes in plans for devolved assemblies in Scotland and Wales which Mr. William Whitelaw described as welcome but of limited value. He added that the opportunity for conflict and the inevitable increase in bureaucracy contained in the original proposals remained and they were as objectionable as ever. Mr. Foot said that far from proposing to increase bureaucracy they were proposing to increase democracy. His view was that the best way of proceeding with proposals for devolution of the English regions would be to publish a document on the subject about the same time as the Government introduced its devolution bill. Mr. David Steel welcomed the improvements, particularly those which Liberals had requested in removing the so-called "Governor-General" powers of the Scottish Secretary. Mr. George Reid (S.N.P.) said that access to Scotland's own natural resources was needed, and power in fiscal areas and trade, but Mr. Foot replied that what S.N.P. wanted was separatism and there was no element of that in their proposals. Mr. Donald Anderson (Lab.) remarked that Mr. Foot was building constitutional castles in the air and said that the people of Wales and Scotland should be given a chance to express their view in a referendum. Mr. Iain Sproat (C.) described the Devolution Bill as "a dead duck even before you start." Appeasement would lend even greater strength to the opinion that a Scottish parliament would be "a start down the slippery slope to separatism." But Mr. Foot answered that far from being injurious to the U.K., the way the Government proposed to proceed was the only way the U.K. could effectively be kept together. Mr. William Hamilton (Lab.) said that the more powers given to the assembly, the less defensible it became to have 71 Scottish M.P.s at Westminster.

Three more days of less controversial business elapsed before an overworked and weary House of Commons rose for the summer recess on August 6, the House of Lords having adjourned a week earlier on July 29. The Lords however reassembled on September 27 to get to grips with the highly-contentious legislation completed with considerable difficulty by the Commons, which itself decided to return on October 11 to cope with the overspill of unfinished work.

PUBLIC ACTS OF PARLIAMENT 1975-1976

This list of Public Acts commences with 17 Public Acts which received the Royal Assent before September 1975. Those Public Acts which follow received the Royal Assent after August 1975. The date stated after each Act is the date on which it came into operation.

HEARING AID COUNCIL (EXTENSION) ACT 1975 (December 29, 1975) extends the Hearing Aid Council Act 1968 to Northern Ireland.

NEW TOWNS ACT 1975 (July 3, 1975) raises the limits imposed on amounts which may be borrowed by development corporations and the Commission for the New Towns and provides for the payment of pensions to chairmen of development corporations and remuneration and allowances to members of committees conducting business for the Commission.

BRITISH LEYLAND ACT 1975 (July 3, 1975) authorises the acquisition of shares by the Secretary of State in British Leyland Motor Corporation Ltd. and provides for expenditure incurred.

APPROPRIATION ACT 1975 (August 1, 1975) applies a sum out of the Consolidated Fund to the service of the year ending on March 31, 1976 and appropriates supplies granted in this Session of Parliament and repeals certain Consolidated Fund and Appropriation Acts.

FINANCE (No. 2) ACT 1975 (August 1, 1975) grants certain duties alters others and amends the law relating to the National Debt and the Public Revenue, and makes further provision in connection with Finance.

CONSERVATION OF WILD CREATURES AND WILD PLANTS ACT 1975 (August 1, 1975) provides for the protection and conservation of wild creatures and wild plants and amends the Badgers Act 1973; for example it makes it an offence to uproot any wild plant save in the circumstances provided by the Act.

GUARD DOGS ACT 1975 (various dates) regulates the keeping and use of guard dogs; and for connected purposes.

SALMON AND FRESHWATER FISHERIES ACT 1975 (August 1, 1975) consolidates the Salmon and Freshwater Fisheries Act 1923 and certain other enactments relating to salmon and freshwater fisheries, and repeals obsolete enactments.

LIMITATION ACT 1975 (September 1, 1975) amends the law about the limitation of actions and other proceedings. The Act implements the recommendations of the Law Reform Committee's Interim Report on Limitation of Actions: Personal Injury Claims (Cmnd. 5630).

STATUTORY CORPORATIONS (FINANCIAL PROVISIONS) ACT 1975 (August 1, 1975) makes further provision for compensating nationalised industries for losses due to price restraint; and provides with respect to finance and administration in the public sector.

COAL INDUSTRY ACT 1975 (September 1, 1975) provides for grants to the NCB to meet expenditure under a scheme providing for compensation for pneumoconiosis; enables the Board to withdraw support to enable coal to be worked and to work coal in former copyhold land; provides further for opencast operations; and for connected purposes.

REMUNERATION, CHARGES AND GRANTS ACT 1975 (August 1, 1975) provides for the counter-inflationary policy set out in the White Paper ("The Attack on Inflation" Cmnd. 6151); including provision for reduction of grants to local authorities and for increases in housing subsidies.

LOTTERIES ACT 1975 (various dates) makes further provision with regard to lotteries promoted on behalf of societies or as incidents of entertain-

ments and authorises local authorities to promote lotteries; and for connected purposes.

CRIMINAL JURISDICTION ACT 1975 (various dates) creates extra-territorial offences under the law of Northern Ireland, amends the criminal law of Northern Ireland, provides for obtaining evidence in Northern Ireland for the trial of offences in the Republic of Ireland. The Act implements the recommendations contained in the Report of the Law Enforcement Commission (Cmnd. 5627).

SOCIAL SECURITY PENSIONS ACT 1975 (various dates) provides for social security pensions and other related benefits to consist of a basic element and an additional component related to higher earnings; and makes various other provisions in relation to pensions.

CHILD BENEFIT ACT 1975 (August 7, 1975) replaces family allowances with child benefit and, pending introduction of that benefit, provides for an interim benefit for unmarried or separated parents with children; and provides for connected purposes.

NORTHERN IRELAND (EMERGENCY PROVISIONS) (AMENDMENT) ACT 1975 (August 21, 1975) amends the Act of 1973 and makes further provision with respect to criminal proceedings in Northern Ireland; and for connected purposes.

INHERITANCE (PROVISION FOR FAMILY AND DEPENDANTS) ACT 1975 (April 1, 1976) makes fresh provision for empowering the court to make orders for the making out of the estate of a deceased person of provision for the spouse former spouse, child, child of the family or dependant of that person; and for connected purposes.

IRON AND STEEL ACT 1975 (December 12, 1975) consolidates certain enactments relating to the British Steel Corporation and the iron and steel industry.

SEX DISCRIMINATION ACT 1975 (various dates) makes unlawful certain kinds of sex discrimination and discrimination on the ground of marriage, and establishes a Commission with the function of working towards the elimination of such discrimination and promoting equality of opportunity between men and women generally; and for related purposes.

RECESS ELECTIONS ACT 1975 (December 12, 1975) consolidates the enactments relating to the issue of warrants for by-elections when the House of Commons is in recess and repeals section 106(2) of the Bankruptcy Act 1914.

HOUSING FINANCE (SPECIAL PROVISIONS) ACT 1975 (November 12, 1975) prevents surcharges under the Local Government Act 1933 arising out of the Housing Finance Act 1972 and substitutes other means of making good losses or deficiencies in respect of which such surcharges would fall to be made; and for connected purposes.

INDUSTRY ACT 1975 (November 20, 1975) establishes a National Enterprise Board; confers powers on the Secretary of State to prohibit the passing to persons not resident in the U.K. of control of undertakings engaged in manufacturing industry and to acquire compulsorily the capital or assets of such undertakings where control has passed to such persons and makes various other provisions with respect to industry.

SCOTTISH DEVELOPMENT AGENCY ACT 1975 (day to be appointed) establishes a Scottish Development Agency; provides for the appointment of a Scottish

Industrial Development Advisory Board; makes provision for assistance in connection with air services serving the Highlands and Islands; and for connected purposes.

WELSH DEVELOPMENT AGENCY ACT 1975 (January 1, 1976) establishes a Welsh Development Agency and a Welsh Industrial Development Advisory Board; and for connected purposes.

EMPLOYMENT PROTECTION ACT 1975 (various dates) establishes machinery for promoting the improvement of industrial relations; amends the law relating to workers, employers, trade unions and employers' associations; provides for the establishment of a Maternity Pay Fund and for the extension of the jurisdiction of industrial tribunals; and provides for many other matters connected with employment.

CHILDREN ACT 1975 (various dates) makes further provision for children with particular reference to adoption, fostering, custody and care.

CINEMATOGRAPH FILMS ACT 1975 (November 12, 1975) provides for payments by the British Film Fund Agency to the National Film Finance Corporation and for the application of those payments by that Corporation.

PETROLEUM AND SUBMARINE PIPE-LINES ACT 1975 (January 1, 1976) establishes the British National Oil Corporation and provides for its functions; provides for licences to search for and get petroleum and for submarine pipe-lines and refineries; authorises loans and guarantees in connection with development of petroleum resources of the U.K.; and for connected purposes.

POLICYHOLDERS PROTECTION ACT 1975 (November 12, 1975) provides for the indemnification (in whole or in part) of policyholders and others who have been or may be prejudiced in consequence of the inability of authorised insurance companies carrying on business in the U.K. to meet their liabilities, and for the imposition of levies on the insurance industry to finance the protection; and for connected purposes.

LOCAL LAND CHARGES ACT 1975 (various dates) makes new provision for the keeping of local land charges registers and the registration of matters therein.

COMMUNITY LAND ACT 1975 (various dates) enables local authorities and certain other authorities to acquire, manage and deal with land suitable for development and makes provision for and in connection with the public ownership of land; amends planning law and the rules for assessing the value of land where compensation is payable; provides for the acquisition of unoccupied office premises and establishes a Land Authority for Wales.

AIRPORTS AUTHORITY ACT 1975 (December 12, 1975) consolidates the 1965 Act and certain related enactments.

CONSOLIDATED FUND (No. 3) ACT 1975 (December 19, 1975) applies certain sums out of the Consolidated Fund to the service of the years ending on March 31, 1976 and 1977.

OECD SUPPORT FUND ACT 1975 (December 19, 1975) establishes a financial support fund for the Organization for Economic Co-operation and Development.

MONEYLENDERS (CROWN AGENTS) ACT 1975 (December 19, 1975) makes provision as to the application to the Crown Agents for Overseas Governments and Administrations of the Moneylenders Acts 1900 to 1927 and the Moneylenders Acts (Northern Ireland) 1900 to 1969.

CIVIL LIST ACT 1975 (December 19, 1975) provides for supplementing out of moneys provided by Parliament the sums mentioned in the Civil List Act 1972.

NORTHERN IRELAND (LOANS) ACT 1975 (December 19, 1975) makes further provision with regard to making loans to the Northern Ireland Consolidated Fund.

NATIONAL COAL BOARD (FINANCE) ACT 1976 (March 4, 1976) increases the limit on the borrowing powers of the NCB; provides for payment to the Board out of public money towards mine-workers' pension scheme deficiency and provides for the costs of stock-piling coal and coke.

CONSOLIDATED FUND ACT 1976 (March 25, 1976) applies certain sums out of the Consolidated Fund to the service of the years ending on March 31, 1975 and 1976.

ROAD TRAFFIC (DRIVERS' AGES AND HOURS OF WORK) ACT 1976 (various dates) amends the Road Traffic Act 1972 insofar as it relates to drivers' licences and the minimum age for driving certain classes of vehicles; amends Part VI of the Transport Act 1968 relating to drivers' hours; and for connected purposes.

TRUSTEE SAVINGS BANKS ACT 1976 (various dates) establishes a Trustee Savings Banks Central Board; confers wider powers on trustee savings banks and provides for miscellaneous other connected provisions.

EDUCATION (SCHOOL-LEAVING DATES) ACT 1976 (part on March 25, 1976 the remainder on April 6, 1976) makes further provision with respect to school-leaving dates (by altering the summer leaving date); and for connected purposes.

SOLICITORS (SCOTLAND) ACT 1976 (March 25, 1976) makes provision as to the powers of the Law Society of Scotland to intervene in the professional practice and conduct of solicitors; provides for the appointment of a lay observer to examine the Society's treatment of complaints about solicitors and of lay members to the Scottish Solicitors Discipline Tribunal; provides for the indemnity of solicitors against professional liability; and for connected matters.

TRADE UNION AND LABOUR RELATIONS (AMENDMENT) ACT 1976 (March 25, 1976) repeals replaces or amends part of the Act of 1974 and provides for a charter on freedom of the Press.

PREVENTION OF TERRORISM (TEMPORARY PROVISIONS) ACT 1976 (March 25, 1976) repeals and re-enacts with amendments the provisions of the Act of 1974.

WATER CHARGES ACT 1976 (March 25, 1976) provides for the refund by water authorities in England and Wales of charges imposed on properties not connected to public sewers which were levied in 1974-75 and 1975-76.

POST OFFICE (BANKING SERVICES) ACT 1976 (March 25, 1976) extends the banking services provided by the Post Office and provides capital for those services; reduces the capital debt of the Post Office; and for connected purposes.

HOUSING (AMENDMENT) (SCOTLAND) ACT 1976 (April 13, 1976) increases the limit on the amount of advances to the Scottish Special Housing Association.

STATUTE LAW REVISION (NORTHERN IRELAND) ACT 1976 (April 13, 1976) revises the statute law of Northern Ireland by repealing obsolete enactments.

DAMAGES (SCOTLAND) ACT 1976 (May 13, 1976) amends the law of Scotland relating to the damages recoverable in respect of deaths caused by personal injuries and for patrimonial loss caused by personal injuries which reduce expectation of life; abolishes the right of assythment and provides for various connected purposes.

FATAL ACCIDENTS AND SUDDEN DEATHS INQUIRY (SCOTLAND) ACT 1976 (day to be appointed) provides in Scotland for the holding of public inquiries in respect of fatal accidents, deaths of

persons in legal custody, sudden, suspicious and unexplained deaths and deaths occurring in circumstances giving rise to serious public concern.

RATING (CARAVAN SITES) ACT 1976 (April 13, 1976) allows for the valuation and rating of caravan sites or portions of caravan sites inclusive of parts separately occupied by caravanners and of their caravans; and for connected purposes.

STATUTE LAW (REPEALS) ACT 1976 (May 27, 1976) promotes the reform of the statute law by the repeal of certain enactments which (except in so far as their effect is preserved) are no longer of practical utility and makes other provision in connection therewith.

LAND DRAINAGE (AMENDMENT) ACT 1976 (day to be appointed) amends the Acts of 1930 and 1961, the Agriculture (Miscellaneous Provisions) Act 1968 and related enactments.

LICENSING (AMENDMENT) ACT 1976 (May 27, 1976) amends the law relating to premises for which special hours certificates may be granted under the Act of 1964.

SEYCHELLES ACT 1976 (May 27, 1976) makes provision for and in connection with the attainment by Seychelles of fully responsible status as a Republic within the Commonwealth.

EDUCATION (SCOTLAND) ACT 1976 (various dates) makes provision with respect to school commencement and leaving dates and the supply of milk in schools; provides for the remuneration of members of Independent Schools Tribunals; provides as to the construction of educational endowment schemes and for connected purposes.

CROFTING REFORM (SCOTLAND) ACT 1976 (June 10, 1976) confers new rights on crofters and cottars to acquire subjects tenanted or occupied by them; confers rights on crofters to share in the value of land resumed by landlords or taken possession of compulsorily; protects the interests of crofters and cottars from planning blight; provides financial assistance for crofters, cottars and certain owner-occupiers; amends the law with respect to common grazings and provides for miscellaneous other connected purposes.

FRESHWATER AND SALMON FISHERIES (SCOTLAND) ACT 1976 (June 10, 1976) makes new provision with respect to freshwater and salmon fisheries in Scotland and for connected purposes.

ATOMIC ENERGY AUTHORITY (SPECIAL CONSTABLES) ACT 1976 (June 10, 1976) extends the powers relating to firearms of special constables appointed on the nomination of the United Kingdom Atomic Energy Authority; extends the property in respect of which, and the places where, they may exercise those and their other powers; and provides for connected purposes.

DEVELOPMENT LAND TAX ACT 1976 (August 1, 1976) imposes a new tax on the realization of the development value of land; provides for the termination of the charges on capital gains from land imposed by Chapters I and II of Part III of the Finance Act 1974; and for connected purposes. The rate of tax is to be 80 per cent. although there are provisions for reduced rates and exemptions.

FAIR EMPLOYMENT (NORTHERN IRELAND) ACT 1976 (part on September 1, 1976, the remainder on December 1, 1976) establishes an agency with the duties of promoting equality of opportunity in employments and occupations in Northern Ireland between people of different religious beliefs and of the working for the elimination of discrimination which is unlawful by virtue of the Act; makes unlawful in connection with such employments and occupations certain kinds of discrimination on the ground of religious belief or political opinion; and for connected purposes.

EXPLOSIVES (AGE OF PURCHASE etc.) ACT 1976

(July 22, 1976) restricts the sale to young persons of explosive substances, including fireworks, who are apparently under the age of sixteen, and increases the penalties provided by sections 31 and 80 of the Explosives Act 1875 to £200.

THEATRES TRUST ACT 1976 (day or days to be appointed but no later than January 22, 1977) establishes a Theatres Trust for the better protection of theatres; and for connected purposes.

CONGENITAL DISABILITIES (CIVIL LIABILITY) ACT 1976 (July 22, 1976) makes provision (which binds the Crown) as to civil liability in the case of children born disabled in consequence of some person's fault; and extends the Nuclear Installations Act 1965, so that children so born in consequence of a breach of duty under that Act may claim compensation. *Inter alia* the Act imposes a duty of care for the safety of her unborn child on a pregnant woman who knows she is pregnant whilst she is driving a motor vehicle.

REPRESENTATION OF THE PEOPLE (ARMED FORCES) ACT 1976 (day to be appointed) makes provision for the registration for electoral purposes of members of the armed forces and the wives and husbands of such members.

FATAL ACCIDENTS ACT 1976 (September 1, 1976) consolidates the Fatal Accidents Acts.

LEGITIMACY ACT 1976 (August 22, 1976) consolidates certain enactments relating to legitimacy.

RESTRICTIVE PRACTICES COURT ACT 1976 (day to be appointed) consolidates certain enactments relating to the Restrictive Practices Court.

POLICE PENSIONS ACT 1976 (July 22, 1976) consolidates the Police Pensions Act 1948 and certain other enactments relating to the pensions to be paid to and in respect of members of police forces.

ADOPTION ACT 1976 (day or days to be appointed) consolidates the enactments having effect in England and Wales in relation to adoption.

FOOD AND DRUGS (CONTROL OF FOOD PREMISES) ACT 1976 (September 22, 1976) amends the Food and Drugs Act 1955 by prohibiting the sale, etc., of food in certain circumstances.

DANGEROUS WILD ANIMALS ACT 1976 (October 22, 1976) regulates the keeping of certain kinds of dangerous wild animals. Under normal circumstances a licence will now be required to keep a dangerous wild animal, the licence being obtainable from the local authority—this does not apply, *inter alia*, to zoos, circuses and pet shops.

DIVORCE (SCOTLAND) ACT 1976 (section 8 on September 1, 1976 the rest on January 1, 1977) amends the law of Scotland relating to divorce and separation; facilitates reconciliation of the parties in consistorial causes; amends the court's powers to make orders relating to financial provision and aliment; abolishes the oath of calumny; and for connected purposes.

FINANCE ACT 1976 (July 29, 1976) grants certain duties, alters other duties and amends the law relating to the National Debt and the Public Revenue and makes further provision in connection with Finance: for example, it reduces the higher rate of VAT to 12½ per cent. and brings in new rules relating to the taxation of benefits derived from employment by company directors and others in higher paid employment.

PROTECTION OF BIRDS (AMENDMENT) ACT 1976 (July 29, 1976) amends further the Act of 1954.

LOTTERIES AND AMUSEMENTS ACT 1976

RESTRICTIVE TRADE PRACTICES ACT 1976.

IRON AND STEEL (AMENDMENT) ACT 1976.

BRITISH RAILWAYS ACT 1976.

APPROPRIATION ACT 1976.

DROUGHT ACT 1976.

RATING (CHARITY SHOPS) ACT 1976.

POLICE ACT 1976.

Government and Public Offices

CERTAIN APPOINTMENTS NOTED IN THE FOLLOWING PAGES HAVE BEEN SUPERSEDED BY THE MINISTERIAL CHANGES MADE IN SEPT. 1976. A FULL LIST OF THE RECONSTRUCTED MINISTRY WILL BE FOUND ON PAGE 82.

NOTE—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, London, S.W.1†

[01-839 7711]

The Ministry of Agriculture, Fisheries and Food is responsible in England and Wales for administering government policy for agriculture, horticulture and fishing industries. In association with the Intervention Board for Agricultural Produce and the other Agricultural Departments in the United Kingdom it is responsible for the administration of the EEC common agricultural and fisheries policy and for various national support schemes. It also administers schemes for the control and eradication of animal and plant diseases and the improvement and drainage of agricultural land. The Ministry sponsors the food and drink manufacturing industries and distribution trades. It is concerned with the quality of food, food compositional standards, hygiene and labelling and advertising. It acts as agent for the Department of Prices and Consumer Protection in administering and operating food subsidies. It has certain responsibilities for ensuring public health standards in the manufacture, preparation and distribution of basic foods. Some functions relating to agriculture and fisheries in Wales are the joint responsibility of the Minister and the Secretary of State for Wales, and some of the Ministry's responsibilities for animal health extend to Scotland. The Ministry maintains relations with overseas countries and participates in some activities of certain international organizations concerned with agriculture, fisheries and food. The Ministry is also responsible for the Royal Botanic Gardens, Kew.

†Unless otherwise stated, this is the main address of Divisions of the Ministry.

AGRICULTURAL RESEARCH COUNCIL

160 Great Portland Street, W.1

The Agricultural Research Council was in-

corporated by Royal Charter on July 23, 1931.

The *Science and Technology Act*, 1965, transferred

responsibility for the Research Council to the Secre-

tary of State for Education and Science and a new

Charter received Royal approval in 1967. The

Council is charged with the organization and de-

velopment of agricultural and food research and

may, in particular, establish or develop institutions

or departments of institutions and make grants for

investigation and research relating to the advance

of agriculture. The Council is financed jointly

from the Parliamentary vote of the Department of

Education and Science and the Ministry of Agri-

culture, Fisheries and Food.

* At Great Westminster House, Horseferry, Road

S.W.1 [01-216 6311].

EXECUTIVE COUNCIL OF THE

COMMONWEALTH

AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Slough, Berks.

[Farnham Common: 2281]

The Commonwealth Agricultural Bureaux,

founded in 1929, consist of four Institutes and ten

Bureaux, under the control of an Executive Council,

comprising representatives of the Commonwealth

countries which contribute to its funds. Each

Institute and Bureau is concerned with its own

particular branch of agricultural science and acts as

a clearing house for the dissemination of informa-

tion of value to research workers throughout the

world. They deal respectively with entomology,

mycology, helminthology and nematology, bio-

logical control, agricultural economics, animal

breeding and genetics, animal health, nutrition,

dairy science and technology, forestry, horticulture

and plantation crops, pastures and field crops, plant

breeding and genetics, and soils and fertilizers.

The information is published in journals which

have a monthly circulation of 32,000 in 150 coun-

tries. The abstract journals are produced by

computer-assisted processes, and the whole data

base is being consolidated and made available in

machine-readable form. Review articles, books,

maps, monographs and annotated bibliographies on

particular subjects are also issued.

Chairman, J. W. Greenwood (Canada).

Vice-Chairman, Mrs. J. George (Trinidad & Tobago).

Secretary, E. A. Runacres.

Institutes

Commonwealth Institute of Entomology, 56 Queen's

Gate, S.W.7. *Director*, A. H. Parker, Ph.D.

Horticulture and Plantation Crops, East Malling Research Station, Maidstone, Kent.—*Director*, G. E. Tidbury.
Nutrition, Rowett Research Institute, Bucksburn, Aberdeen, Scotland.—*Director*, Miss D. L. Duncan, Ph.D.
Pastures and Field Crops, Hurley, Maidenhead, Berks.—*Director*, P. J. Boyle.
Plant Breeding and Genetics, Department of Applied Biology, Downing Street, Cambridge.—*Director*, R. H. Richens, Ph.D.
Soils, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, B. Butters.

COLLEGE OF ARMS OR HERALDS

COLLEGE

Queen Victoria Street, E.C.4

[01-248 2762]

The College of Arms is open daily from 10-4 (Saturdays, 10-1, by appointment) when an Officer of Arms is in attendance to deal with enquiries by the public, though such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who specialize in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, C.B., C.B.E., M.C.

Kings of Arms

COURT OF THE LORD LYON

H.M. New Register House, Edinburgh

[031-556 7255]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Sennachie* of

Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chieftship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birth-briefs. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents and matriculations are payable to H.M. Exchequer.
Lord Lyon King of Arms, Sir James Monteith Grant, K.C.V.O., W.S., F.S.A. Scot.

Heralds

Rothsay, Lt.-Col. Harold Andrew Balvaire

Lawson, C.V.O.

Albany, Sir Iain Moncreiffe of that Ilk, Bt., Ph.D.,

Advocate.

Marchmont, Malcolm Rognvald Innes of Edingight, W.S., F.S.A. Scot.

Pursuivants

Unicorn, John Inglis Drever Pottinger.

Ormond, Major David Maitland Maitland-Titterton T.D., F.S.A. Scot.

Carrick, John A. Spens, R.D.

Lyon Clerk and Keeper of Records, Malcolm Rognvald Innes of Edingight, W.S., F.S.A. Scot.

Procurator-Fiscal, Ivor Reginald Guild, W.S.

Herald Painter, Miss J. M. Mitchell.

Macer, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

2 Carlton Gardens, S.W.1

[01-930 3935]

Appointed in May, 1924, "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

"We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, The Lord James of Rusholme.

Commissioners, The Countess of Airlie; Sir Hugh

Casson, R.A.; Miss Elizabeth Chesterton; A. W.

Cox, C.B.E.; P. M. Dowson, C.B.E.; Sir Ralph

Freeman, C.V.O., C.B.E.; Miss Elizabeth Frink.; Mark Girouard, Ph.D.; A. J. Gordon, C.B.E.; The Duke of Grafton, K.G.; Prof. Bernard Meadows; David Piper, C.B.E., F.S.A.; John Piper, C.H.; Sir Philip Powell, O.B.E., A.R.A.; Sir Paul Reilly; E. F. Ward, C.B.E.; W. Whitfield, C.B.E.; Sir Hugh Wilson, O.B.E.

Secretary, Prof. F. Fielden.

ROYAL FINE ART COMMISSION FOR SCOTLAND

22 Melville Street,
Edinburgh 3
[031-225 5434]

NATIONAL GALLERY

Trafalgar Square, W.C.2
[01-839 3321]

Hours of opening.—Weekdays 10 to 6 (June–Sept. Tuesdays and Thursdays 10 to 9), Sundays 2 to 6. Closed on Good Friday, Christmas Eve, Christmas Day, Boxing Day and New Year's Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and exhibition of the Angerstein collection of pictures. The present site was first occupied in 1838 and enlarged and improved at various times throughout the years. A substantial extension to the north of the building with a public entrance in Orange Street was opened in 1975. Expenses for 1975–76 were estimated at £1,083,000.

TRUSTEES

Prof. J. Haie, F.S.A. (Chairman); John Piper; Sir Gordon Sutherland, F.R.S.; Prof. M. Froy; The Lord Poole, P.C., C.B.E., T.D.; H. Hodgkin; Prof. B. Yamey, C.B.E.; Sir Isaiah Berlin, O.M., C.B.E., F.B.A.; Mrs. Heather Brigstocke; The Hon. J. D. Sainsbury.

Finance and Establishments, R. H. Mitchem
£5,365 to £6,365

NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2
[01-930 8511]

Open Monday to Friday 10 to 5. Saturday 10 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a gallery of the portraits of the most eminent persons in British history, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896, £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933.

Chairman, The Lord Kenyon, C.B.E., F.S.A.

Trustees, The Lord President of the Council; The President of the Royal Academy of Arts; Prof. Lawrence Gowing, C.B.E.; The Duke of Grafton, K.G., F.S.A.; Prof. J. H. Plumb, Ph.D., Litt.D., F.B.A., F.S.A.; Prof. Dame Helen Gardner, D.B.E., F.B.A.; Sir Christopher Cockerell, C.B.E., F.R.S.; The Countess of Longford, C.B.E.; Sir Philip Magnus-Allicroft, Bt., C.B.E.; Rev. Prof. J. McManners; J. P. Ehrman, F.B.A., F.S.A.; The Viscount Cobham, K.G., P.C., G.C.M.G., G.C.V.O.; Sir Oliver

Miliar, K.C.V.O., F.S.A., F.B.A.; Sir Anthony Wagner, K.C.V.O., F.S.A.; Sir Huw Wheldon.
Director, Keeper, and Secretary, J. T. Hayes, Ph.D., F.S.A. £11,000
Deputy Keeper, R. L. Ormond. £7,151 to £8,750
Assistant Keepers, C. J. Ford; J. F. Kerslake, F.S.A.; R. W. Gibson; M. Rogers. £4,404 to £7,109

TATE GALLERY

Millbank, S.W.1
[01-828 1212]

Hours of opening.—Weekdays 10 to 6. Sundays 2 to 6. Closed on New Year's Day, Good Friday, Christmas Eve, Christmas Day and Boxing Day.

The Tate Gallery comprises two national art collections: (a) British painting, from the 16th century to the present day, including works by Turner, Blake, Constable and the Pre-Raphaelites; (b) Modern Foreign Painting, from the Impressionists, and Modern Sculpture, British and foreign. There is an almost continuous programme of temporary exhibitions within the field of the collection. The Gallery was opened in 1897, the cost of erection (£80,000) being defrayed by Sir Henry Tate, who also contributed the nucleus of the present collection. The Turner Wing, built at the expense of Sir Joseph Duveen was opened in 1920. Lord Duveen defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. Expenses for 1975–76 are estimated at £1,714,000
Director, Sir Norman Reid. £12,000
Trustees, The Lord Bullock, F.B.A. (Chairman); Sir Richard Attenborough, C.B.E.; S. De Ferranti; Prof. M. Froy; F. L. T. Graham-Harrison, C.B.; The Lord Harlech, P.C., K.C.M.G.; H. Hodgkin; P. Huxley; N. MacDermot, O.B.E., Q.C.; Prof. C. St. J. Wilson, F.R.I.B.A.

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

[01-930 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of *Queen Anne's Bounty* (established 1704) and the *Ecclesiastical Commissioners* (established 1836). The Commissioners have three main tasks:—

(1) the management of their capital assets so that they may earn income;

(2) the proper distribution of that income; and

(3) the discharge of a large number of administrative duties conferred on them by Acts of Parliament and Measures of the General Synod (former Church Assembly).

The Commissioners' income for the year ended March 31, 1976, was derived from the following sources:—

Stock exchange investments.....	£15,665,000
Land and property.....	14,468,000
Mortgages and loans.....	3,490,000
Money received for particular beneficiaries.....	3,852,000
	<u>£37,475,000</u>

This income was used as follows:—

Clergy stipends and pensions	£29,015,000
Clergy houses (maintenance, outgoings, provision and improvements).....	3,975,000
Other church property.....	654,000
Added to capital to improve future income.....	68,000
Professional fees.....	277,000
Administrative costs of Commissioners' office.....	2,511,000
Administrative costs of Church of England Pensions Board and Advisory Board for Redundant Churches.....	255,000
For allocation after April 1, 1976	720,000
	<u>£37,475,000</u>

Constitution

The 2 Archbishops, the 41 diocesan Bishops, 5 deans, 10 other clerks and 10 laymen appointed by the General Synod; 4 laymen nominated by the Queen; 4 persons nominated by the Archbishop of Canterbury; The Lord Chancellor; The Lord President of the Council; the First Lord of the Treasury; The Chancellor of the Exchequer; The Secretary of State for the Home Dept.; The Speaker of the House of Commons; The Lord Chief Justice; The Master of the Rolls; The Attorney-General; The Solicitor-General; The Lord Mayor and two Aldermen of the City of London; The Lord Mayor of York and one representative from each of the Universities of Oxford and Cambridge.

CIVIL AVIATION AUTHORITY

Space House, 43-59 Kingsway, W.C.2

[01-379 7311]

The Civil Aviation Authority is a statutory body established by the *Civil Aviation Act 1971*, responsible for economic, technical and safety regulation, and for the operation of the National Air Traffic Services. It is the government's adviser on civil aviation matters, including airport planning; and it is responsible for general aviation, civil aviation statistics, research, consumer interest, and the running of the Scottish Highlands and Islands airports.

Chairman, The Lord Boyd-Carpenter, P.C.

Deputy Chairman, R. R. Goodison, C.B.

Secretary, A. W. G. Kean.

CIVIL SERVICE DEPARTMENT

Whitehall, S.W.1 (01-276 3000)

The Civil Service Department is under the control of the Prime Minister as Minister for the Civil Service, with responsibility for the day-to-day work of the Department delegated to the Lord Privy Seal. The Permanent Secretary is also the official head of the Home Civil Service. The Department's primary functions are recruitment and selection for permanent appointments; the pay and management of the Civil Service and the co-ordination of government policy on pay and pensions throughout the public sector. It also has central responsibility for personnel management, including recruitment planning and policy, training and career management; manpower requirements and the development and dissemination of administrative and managerial techniques including computing, and is concerned with the organization of the machinery of government.

The Prime Minister.

The Lord Privy Seal.

COMMONWEALTH DEVELOPMENT CORPORATION

33 Hill Street, W.1

[01-629 8484]

The Corporation was formerly known as the
 Colonial Development Corporation. The change
 of name was effected by the Commonwealth
 Development Act, 1963, which also restored the
 Corporation's full powers of operation in all
 those countries which had achieved independence
 within the Commonwealth since 1948. The Over-
 seas Resources Development Act, 1969, empowered
 the Corporation, with Ministerial approval, to
 engage in operations in any developing country in
 or out of the Commonwealth. The Corporation
 is authorized to borrow up to £260,000,000 on
 long or medium term and £10,000,000 on short
 term.

Chairman (part-time), Sir Eric Griffith-Jones, K.B.E.,
 C.M.G., C.C.

Deputy Chairman (part-time), The Lord Grey of
 Naunton, G.C.M.G., G.C.V.O., O.B.E.

Members (part-time), W. J. M. Borthwick, D.S.C.;
 The Lord Campbell of Eskan; J. M. Clay;

J. K. Dick, C.B.E.; The Lord Greenwood of
 Rossendale, P.C.; J. M. H. Millington-Drake;

Prof. Edith Penrose; G. F. Smith, C.B.E.; The
 Lord Walston.

General Manager, P. Meinertzhagen, C.M.G.

Secretary, C. H. Bates.

CROWN AGENTS FOR OVERSEA GOVERNMENTS AND ADMINISTRATIONS

4 Millbank, S.W.1

[01-222 7730]

The Crown Agents act as financial, commercial and professional agents for almost 100 governments and over 200 public authorities and international bodies. Their services are available to any govern-

ment and to any organisation in the public sector, they are a public service and do not act for individuals or for commercial concerns in the private sector.

The Crown Agents also act for the United Nations and as authorised agents for projects financed by the International Bank for Reconstruction and Development (The World Bank), the International Development Association and the Asian Development Bank.

Chairman, J. G. Cuckney.

CROWN ESTATE COMMISSIONERS

13/15 Carlton House Terrace, S.W.1

[01-214 6000]

Mount Lane, Bracknell, Berks.

[0344 20321]

THE CROWN ESTATE (formerly The Crown Lands).—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III surrendered them and received a fixed annual payment or *Civil List*. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1976, the total Receipts by the Commissioners were £10,350,000. The Expenditure was £5,150,000. The sum of £5,300,000 was paid to the Exchequer in 1975-76 as *Surplus Revenue*, being a net sum from which no deductions have been made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

First Commissioner and Chairman (part-time), The Earl of Perth, P.C.

Second Commissioner (and Secretary), W. A. Wood, C.B. £14,000

DEPARTMENT OF EDUCATION AND SCIENCE

Elizabeth House, York Road, S.E.1

[01-928 9222]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. In April 1964 the office of the Minister of Science was combined with the Ministry to form the Department of Education and Science. The cost of administration for the financial year 1976-77 was estimated at £15,989,000.

Secretary of State for Education and Science, THE RT.

HON. FREDERICK WILLIAM MULLEY, M.P.

Private Sec., C. Booth.

DEPARTMENT OF EMPLOYMENT

8 St. James's Square, S.W.1

[01-214 6000]

The Department of Employment is responsible for Government policies affecting the working life of the country's population and the needs of potential workers.

These policies include the promotion of good industrial relations, pay, measures to deal with unemployment and redundancy and regional employment problems.

The Department is also responsible for producing and publishing a wide range of statistics, including the figures for retail prices, earnings, employment and unemployment and industrial disputes.

Many of the Department's executive functions and services have been transferred to a number of new bodies, operating independently, but reporting to the Secretary of State for Employment.

EQUAL OPPORTUNITIES COMMISSION

Overseas House, Quay Street, Manchester
 [061-833 9244]

Established on December 29, 1975 under the Sex Discrimination Act 1975, the duties of the Commission are (a) to work towards the elimination of discrimination; (b) to promote equality of opportunity between men and women generally; and (c) to keep under review the working of the Sex Discrimination Act and the Equal Pay Act. In addition, the Commission has a specific duty to keep under review, in consultation with the Health and Safety Commission, those provisions in legislation dealing with health and safety at work, which requires different treatment for men and women.

Chairman, Miss Betty Lockwood.
Deputy Chairman, Lady Howe.

Members, Miss M. Allen; The Lord Allen of Fallowfield, C.B.E.; J. Beale; Miss E. Chiphcase, M.B.E.; Mrs. S. Denman; Miss A. Mackie; A. Nicol, C.B.E.; Miss A. Patrick; Mrs. M. Patterson; E. Robinson; Mrs. C. Woodroffe; P. Jones.
Chief Officer, D. Dolton £12,000

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4
 [01-353-8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer

and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Consolidated and National Loans Funds after satisfying himself that Parliament has given authority for them. He examines the accounts of the Consolidated and National Loans Funds and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of funds provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of this examination of those accounts are reported to the House of Commons. He is also the auditor by agreement of the accounts of many bodies, generally in receipt of public moneys, and of certain international organizations; he reports, when required to do so, to the governing bodies concerned.

Comptroller and Auditor General, Sir Douglas Henley, K.C.B......£18,675

EXPORT CREDITS GUARANTEE DEPARTMENT

P.O. Box 272, Aldermanbury House,
Aldermanbury, E.C.2
(01-606-6699)

The Export Credits Guarantee Department is responsible to the Secretary of State for Trade. The export Guarantees Act, 1975, enables E.G.C.D. to encourage U.K. exports by making available export credit insurance to British firms engaged in selling overseas, to guarantee repayment to British banks providing finance for export credit and, in clearly defined circumstances, to refinance a proportion of banks' medium and long-term export credit advances. Guarantees under Section 1 of the 1975 Act are given after consultation with an Advisory Council of businessmen.

The Overseas Investment and Export Guarantees Act 1972 empowers E.G.C.D. to insure British private investment overseas against political risks, such as war, expropriation and restrictions on remittances.

Secretary, K. Taylor, C.B......£14,000

FOREIGN AND COMMONWEALTH OFFICE

On the recommendations of the Committee on Representational Services Overseas appointed by the Prime Minister under the Chairmanship of Lord Plowden in 1962, H.M. Diplomatic Service was created on Jan. 1, 1965, by the amalgamation of the Foreign Service, the Commonwealth Service, and the Trade Commission Service, and is now responsible for the manning of the overseas posts of these three former services. On Aug. 1, 1966, the Colonial Office was merged into the Commonwealth Relations Office to form the Commonwealth Office. The Foreign Office and Commonwealth Office combined on Oct. 1, 1968.

In November 1970 overseas development became the ultimate responsibility of the Secretary of State for Foreign and Commonwealth Affairs, although it remained in the day-to-day charge of the Minister for Overseas Development, except for the period from March 1974 to June 1975 when the Ministry of Overseas Development reverted to its independent status.

FORESTRY COMMISSION

231 Corstorphine Road, Edinburgh
 [031-334-0303]

The Forestry Commissioners are charged with the general duty of promoting the interests of forestry, the development of afforestation, the production and supply of timber and the maintenance of reserves of growing trees in Great Britain. Including the former Crown Woods, transferred to it in 1924, the Commission has acquired about 3,000,000 acres of land (75 per cent. being plant-

able), of which about 2,000,000 acres are under plantations. Under various grant schemes, financial assistance is given to private owners and local authorities in respect of approved works of afforestation.

NATIONAL FREIGHT CORPORATION

Argosy House, 215 Great Portland Street, W.1
 [01-636-8688]

The National Freight Corporation is a statutory corporation set up under the Transport Act, 1968, to provide integrated road and rail freight services in Great Britain and in so doing to make the maximum economic use of rail, with due regard to the needs of the person for whom the goods are being carried, and the requirements of the goods themselves. On January 1, 1969, it inherited the securities, rights and liabilities of the Road Haulage and Shipping Subsidiaries of the Transport Holding Company. It also acquired from the British Railways Board, National Carriers Ltd. and a 51 per cent. interest in Freightliners Ltd. (formerly the "Sundries" and "Freightliner" Divisions respectively of the Railways Board).

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER

17 North Audley Street, W.1
 [01-629-7001]

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trustee Savings Banks and National Savings Bank Acts, the Loan Societies Act, the Shop Clubs Acts and the Superannuation and other Trust Funds (Validation) Act. Under the Industrial Assurance Acts and the Insurance Companies Acts, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

DEPARTMENT OF HEALTH AND SOCIAL SECURITY

Alexander Fleming House, Elephant and Castle, S.E.1

[01-407-5522]

The Department of Health and Social Security was created on November 1, 1968, from the Ministry of Health and Ministry of Social Security. The new Department performs the functions of the two former Ministries.

The Department is responsible for the administration of the National Health Service in England and for the personal social services run by local authorities in England for children, the elderly, in-

firm, handicapped and other persons in need. It has functions relating to food hygiene and welfare foods. The Department is also concerned with the medical and surgical treatment of war pensioners in England, the Channel Isles, Isle of Man or living in the Irish Republic, and is responsible for the ambulance and first aid services in emergency, under the Civil Defence Act, 1948. The Department represents the United Kingdom on the World Health Organization of the United Nations. Responsibility for the administration of the Health Services in Wales was transferred to the Welsh Office on April 1, 1969. The Department is responsible for the social security services in England, Scotland and Wales. These services comprise schemes for war pensions, national insurance, family allowances and supplementary benefits. Within the Department, the Supplementary Benefits Commission is responsible, subject to regulations made by the Secretary of State for Social Services, for guiding the scheme of supplementary benefits.

NATIONAL INSURANCE ADVISORY COMMITTEE

Keysign House, 429 Oxford Street, W.1
 [01-499-4040]

The National Insurance Advisory Committee is constituted under the Social Security Act 1975 to give advice and assistance to the Secretary of State in connection with the discharge of his (or her) functions under the Act, and to perform any other duties allotted to it under the Act. These other duties include the consideration of preliminary drafts of regulations to be made under the Social Security Act, and of representations received thereon. When the regulations are laid before Parliament, the Committee's Report on the preliminary draft is laid with them, together with a statement by the Secretary of State showing what amendments to the preliminary draft have been made, what effect has been given to the Committee's recommendations, and, if effect has not been given to any recommendation, the reasons for not adopting it. The Secretary of State may also refer to the Committee for consideration and advice any questions relating to the operation of the Act (including questions as to the advisability of amending it).

Chairman, Prof. D. S. Lees.

Members, Dr. R. J. Donaldson, O.B.E.; Prof. J. A. Farls; Dr. G. Harry; P. R. A. Jacques; P. M. Madders; H. K. Mitchell; Miss A. M. Patrick. *Secretary*, K. Edwards.

INDUSTRIAL INJURIES ADVISORY COUNCIL

Keysign House, 421-429 Oxford Street, W.1.
 [01-499-4040]

The Industrial Injuries Advisory Council is a statutory body under the Social Security Act, 1975, which considers and advises the Secretary of State for Social Services on Regulations and other questions, as the Secretary of State thinks fit, relating to industrial injuries benefit or its administration.

Chairman, Prof. D. S. Lees.

Members, Prof. T. Anderson, C.B.E.; Dr. P. L. Bidstrup; R. W. Buckton; Dr. R. J. Donaldson, O.B.E.; R. G. Hitchcock; P. R. A. Jacques; Prof. C. R. Lowe; J. L. I. McQuitty, Q.C.; J. C. Milligan, O.B.E.; T. Parry, O.B.E.; Mrs. C. M. Patterson, O.B.E.; D. M. Rea; I. G. Reid; S. J. Stanbrook; Dr. Alice M. Stewart; Dr. J. Watkins-Pitchford, C.B.

Secretary, D. M. Woolley.

 New Malden, Surrey

[01-942-8949]

Registrar, J. D. Hiscocks.

Deputy Registrar, Miss R. Shipley.

NATIONAL HEALTH SERVICE REGIONAL HEALTH AUTHORITIES

England is divided between 14 Regional Health Authorities, each with at least one university medical school within its boundaries. Each Region contains a number of Area Health Authorities (which are the operational NHS authorities, responsible for assessing needs in their areas, for planning, organising and administering area health services to meet them). The Area Health Authorities are generally coterminous with the local authorities which provide complementary personal social

services. At the moment the 12 post-graduate teaching hospitals in London continue to be administered by Boards of Governors. The Chairmen, and members of Regional Health Authorities and Boards of Governors, and the Chairmen of Area Health Authorities are appointed by the Secretary of State for Social Services.

Regions

Northern, Benfield Road, Walker Gate, Newcastle upon Tyne. *Chairman*, Colonel Sir William Lee, O.B.E., T.D. *Regional Administrator*, A. B. Baker. **Yorkshire**, Park Parade, Harrogate. *Chairman*, W. Tweedle, C.B.E., T.D. *Regional Administrator*, H. Inman.
