Whitaker's Almanack 1978

# Living and Learning with Deafness 

#### Abstract

The British Deaf Association urgently needs money to help the deaf, to help families with communication problems, where deaf children cannot live and learn through natural speech and hearing, to help create new opportunities in place of a life of isolation.

Please send a donation now, or make a gift by Deed of Covenant (which enables us to recover tax already paid). Greater service to the deaf in years to come may be provided by way of a legacy.

If you would like to help please write to:

When you sell a man a book you don't sell him just twelve ounces of paper and ink and glue you sell him a whole new life. CHRISTOPHER MORLEY

## Live again with

 heffers: wherever you live.We post books all over the world. Write to Heffers Bookshop, 20 Trinity Street, Cambridge, England

## SO MUCH STILL TO BE DONE

for the hundreds of elderly people from all parts of the country-lonely, living in distressing circumstances-who are waiting and hoping that we can accommodate them soon in self-contained flatlets of their own.
Time for them is running out fast!
We have the skill, experience and desire to provide still more self-contained flatlets, where the elderly can live independent, secure and comfortable lives.
But tomorrow may be too late. We need your help now. Only the unceasing flow of legacies, gifts and covenants will enable us to continue to provide this vital housing need.

PLEASE REMEMBER US AND THE ELDERLY IN YOUR WILL

The Secretary (W.A.), FELLOWSHIP HOUSES TRUST,
Clock House, Byfleet, Weybridge, Surrey.
Telephone: Byfleet 43172

## FISHERMEN'S MISSION SERVING AND CARING

For shipwrecked, sick, distressed, disabled, retired and sea-going fishermen, their wives, widows and children

Patron: H.M. THE QUEEN

## THIS IS OUR BUSINESS

## Will you share in this ministry by sending a generous donation to: ROYAL NATIONAL MISSION TO DEEP SEA FISHERMEN 43 NOTTINGHAM PLACE, LONDON W1M 4BX

Chairman:
ADMIRAL SIR CHARLES MADDEN, Bt., G.C.B., D.L.

## Secretary:

J. C. LEWIS, Esq.,
O.B.E, J.P., F.C.I.S.

## PREFACE TO THE $110^{\text {TH }}$ ANNUAL VOLUME

(1978)

The year 1977, recorded in the 110th volume of "WHITAKER", was memorable for the celebration of the Silver Jubilee of the Queen's accession, and pride of place goes to the events connected with the Jubilee. The Diary of Events records in full the ceremonies at home and Her Majesty's tours overseas and this is supplemented in the section of illustrations. In addition, a special article on the Jubilee is included among Topics of the Year and provides some interesting facts and historical comparisons as well as notes about some of the less prominently publicised happenings connected with the Jubilee.

It was also a notable year for sport and this is reflected by illustrations, and descriptions elsewhere, of such outstanding events as the Centenary Test Match between England and Australia, Virginia Wade's triumph at Wimbledon, Boycott's hundredth hundred, Liverpool's victory in the European Cup and Red Rum's remarkable performance in winning the Grand National for the third time.

As well as the article on the Jubilee, the section of Topics of the Year includes a discussion of Mentmore and the controversy surrounding the dispersal of its treasures, and a report on the Scrope Davies papers, containing, among other things, Byron and Shelley manuscripts of great importance.

As usual, there are a number of new or expanded features in the Almanack to which the Editor would call attention.

The Income Tax section has been augmented in length and scope, and to it have been added two important new articles on Capital Gains Tax and Capital Transfer Tax. The effect of much recent legislation is reflected in the Legal Notes, especially in the matter of Adoption.

Opportunity has been taken to increase the Dramatic Summary and to provide a fuller description of the year's theatrical productions.

In the realm of government, changes in Mr. Callaghan's Ministry during the last twelve months are noted and the re-establishment of a separate Ministry of Transport recorded. On the statistical side, a completely new feature of figures relating to immigration has been provided. The most recently revised Post Office charges are also included.

The Editor is grateful to the authorities concerned for a thorough revision of the section on Hall Marks.

The Editor once more wishes to express his thanks to his worldwide circle of correspondents for the invaluable assistance which they give so willingly and without which the usefulness of the Almanack would be much diminished.

We are sure everyone will agree that to improve the moral standards and behaviour patterns of young people is as vital a task to-day as it has ever been in the past. Since the days of Charles Dickens this has been a major function of our organisation. We firmly believe that what is taught to young people by the older generation is of great importance to the future of our Country. The choice is simple-do we want a future generation of vandals and hooligans or a generation of thinking, caring, reasonable young adults?
Your help could enable us to carry on this vital work, which has behind it the great tradition of our Country.
Literature and Annual Report gladly sent on request.

## SOCIETY FOR THE ASSISTANCE OF LADIES IN REDUCED CIRCUMSTANCES <br> (FOUNDED BY THE LATE MISS SMALLWOOD) Patron: HER MAJESTY THE QUEEN

 This Society is entirely supported by Voluntary ContributionsInflation is the enemy of the aged, many of whom are existing on small fixed incomes. We appeal for your help to enable us to continue giving financial assistance to the many ladies aided by our Society. A Donation, Subscription or Bequest would help to relieve the distress endured by so many in these difficult times.

New Annual Subscriptions will be thankfully received. Please make cheques payable to:

S.A.L.R.C.

Lancaster House, (W) 25 Hornyold Road, Malvern, Worcestershire

## THE TOLL OF THE SEA

SHIPWRECKED Fishermen and MARINERS' Royal Benevolent SOCIETY (w.A.)
1 North Pallant, Chichester, W. Sussex PO19 1TL. Tel: (0243) 87761 PATRON: HER MAJESTY THE QUEEN
The Society's objects include:

1. Immediate financial aid to the dependants of seamen lost at sea.
2. Assistance to all seamen shipwrecked on the coasts of the British Isles.
3. Financial aid in time of need to seamen and their widows and orphans
4. Any other objects for the benefit and welfare of seafarers.

## THE MALCOLM SARGENT CANCER FUND FOR CHILDREN

Registered Office : 56 Redcliffe Square, London, SW10 9HO

The Fund gives practical help to children suffering from cancer, leukaemia or Hodgkin's disease, both in hospital and thome.

PLEASE remember - for soml child tomorrow may be too late-give with compassion; give generous/y: give quick/y.

Donations please to :

## MALCOLM SARGENT CANCER FUND FOR CHILDREN

 Miss Sylvia Darley, General Administrator, 6 Sydney Street, London, SW3 6PP Or if you live in Scotland to : Miss Venetia Fane, Joint Sec. (Admin) Committee for Scotland, Drumwhill, Mossdale, By Castle Douglas, Kirkcudbrightshire, DG7 2NL
## THE BRITISH POLIO FELLOWSHIP

(The Infantile Paralysis Fellowship, registered as a charity in accordance with the National Assistance Act 1948)

## THE NATIONAL VOLUNTARY ORGANISATION FOR THE POLIO DISABLED <br> (Patron: Lavinia, Duchess of Norfolk, C.B.E.)

- Founded in 1939, the Fellowship has helped thousands of polio victims to live a fuller life and to cope with their disabilities.
- Polio is no respecter of persons; it has stricken the physically strong of all age groups and from different walks of life.
The Fellowship's work in caring for all polio victims knows no barriers and helps all who have suffered from polio.
- $£ 215,000$ spent on welfare grants, aids, residential care, etc., during the last financial year. Can you help-by donation? covenanted gift? or by legacy? Please write to:

# THE ROYAL ASSOCIATION FOR DISABILITY AND REHABILITATION 

(an amalgamation of the British Council for Rehabilitation of the Disabled and the Central Council for the Disabled)

Patron: Her Majesty Queen Elizabeth the Queen Mother Chairman: His Grace the Duke of Buccleuch

25 Mortimer Street, London W1N 8AB Tel. 01-637-5400

The Association was formed in 1977 from two organisations which had between them served disabled people for over 100 years. It is concerned with every aspect of disability rather than with the individual problems of one crippling disease.

Disablement may mean crippling pain. It certainly means loss of mobility, a special housing need, employment problems, economic hardship, fewer holidays, being shut out from cinema, church, club, pub, toilet. Disablement often means loneliness, deprivation and a loss of human dignity. There is a lot of it about.

The Association seeks to improve the living conditions and environment of all physically disabled people. Its work must develop. Your donation would allow it to do so.

## The batille ugainst pain...

## $\square$ THE SAD SIX MILLION.

One million people, including children, suffer from Rheumatoid Arthritis; and five million, including two out of every three people over 65, are handicapped by Osteoarthrosis. For them, pain is a daily experience and it can be so severe as to be barely tolerable.
$\square$ HOW YOU CAN HELP.
Please help us overcome all this pain and disability by contributing to the $£ 1$ million needed for research every year. We rely entirely on voluntary support in the form of covenants, donations and legacies. Forms of bequest and covenant are available from the Council at the address below.

# THE ARTHRITIS AND RHEUMATISM COUNCIL FOR RESEARCH <br> IN GREAT BRITAIN AND THE COMMONWEALTH (formerly Empire Rheumatism Council) 

Patron: Her Royal Highness The Duchess of Kent
Chairman: The Rt Hon. the Lord Porritt, GCMG, GCVO, CBE, FRCP, FRCS

# THE ROYAL NATIONAL PENSION FUND FOR NURSES 

Patron: Queen Elizabeth The Queen Mother

For over 80 years The Royal National Pension Fund has helped thousands of nurses who hold policies to achieve independence in their retirement.

However, there are many nurses who failed to make provision through the fund for their retirement, and many more were unable to do so.

These nurses are helped as far as finance allows by our associated charitable organisations.

The Nurses' Memorial to King Edward VII provides subsidised residential accommodation for those no longer able to care for themselves.

The Junius S. Morgan Benevolent Fund alleviates hardship in individual cases by the payment of cash grants or annuities.

Will you help us to meet the expanding need? Both these charities will warmly welcome cash gifts, deeds of covenant or bequests at Burdett House, 15 Buckingham Street, London WC2.

## WE, THE LIMBIESS, LOOK TO YOU FOIT HELP

We come from both world wars. We come from Kenya, Malaya, Aden, Cyprus . . . and from Ulster. From keeping the peace no less than from war we limbless look to you for help. And you can help, by helping our Association. BLESMA (the British Limbless Ex-Service Men's Association) looks after the limbless from all the Services. It helps, with advice and encouragement, to overcome the shock of losing arms, or legs or an eye. It sees that red-tape, does not stand in the way of the right entitlement to pension. And, for the severely handicapped and the elderly, it provides Residential Homes where they can live in peace and dignity.
Help BLESMA, please. We need money desperately. And, we promise you, not a penny of it will be wasted.

# We need much more than luck to save this child... 

Not much wrong with him, you'd say.

A beautiful child.
But in his arms, his legs, everywhere in his body, muscular dystrophy is taking its ever-growing toll.

Last year he was unable to run.

This year he has difficulty in standing.

All too soon he will be so weakened that even the most simple of infections may prove fatal.

This is Muscular Dystrophy. As yet there is no answer. And without continuous research there naver will be.

## THE ANSWER MUST BE FOUND.

Please help us to help the utterly helpless.

# Muscular Dystrophy Group

## MONEY DOES GOOD AT GUY'S

The Endowment Fund of Guy's Hospital provides new buildings, refurbishes old ones, furnishes extra facilities for research projects, and makes it possible for doctors, nurses and other staff to have not only better working conditions, but better living conditions as well.
Guy's is a great and famous hospital. It's the people who work there who make it so. A legacy, ■ gift, or a covenant is the best way to thank them for the work they do. Please help us by showing this advertisement to your Clients. For further details, write to:
The Clerk to the Special Trustees, The Endowment Fund of Guy's Hospital, Guy's Hospital, London SE1 9RT.

# A Charitable Bequest or Donation means so much... 

It costs so little to make so many happy-to help us continue the work we began back in 1857. Today more than ever we need to think of others, and what better way than by the making of a Charitable Bequest.

Costs continue to rise yet we have been able to improve and advance the working and living standards of the blind people over the past years. Please recommend us for consideration to your clients and so assure the future.

# London Association For The Blind 

Patron HRH Princess Alexandra, the Hon Mrs Angus Ogilvy GCVO A NATIONAL CHARITY FOUNDED 1857
Registered in accordance with the National Assistance Act 1948 and as $\quad$ National Charity under the Charities Act 1960.

## THE <br> STAR AND GARTER HOME

for Disabled Sailors, Soldiers and Airmen Richmond, Surrey

## NEEDS HELP

by donation or legacy to maintain a true home with medical and nursing care for up to 200 disabled ex-servicemen of all ages and from all parts of the British Isles.
(The Home, founded in 1916, is an independent registered charity. Further information available from the Secretary. Telephone OI-940 3314.)

## FIGHT BACK AGAINST CANCER

It is good to remember that most people live their lives untouched by any form of cancer.

But as all too many are aware, cancer is something that casts its shadow far beyond those it directly affects. That is why so many people think it right to help the urgent work of the Imperial Cancer Research Fund.

From our discoveries in the past has come much of today's hope for sufferers. To go forward with our research for future alleviation, we ask your help in the present.

Donations will be most gratefully received by The Appeals Secretary, Room 179/2, P.O. Box 123, Lincoln's Inn Fields, London WC2A 3PX

and seamen aren't unique because they have problems too. But when you're away from home for nine months at a time, problems can sometimes snowball. And when they get too much to handle, that's where we come in. We can't give you histories for obvious reasons, but our chaplains are experienced counsellors, and seamen come to us because they know we care. We care because we're Christians called to serve-do you enough to help us?

## The work we're doing today could save your life tomorrow. <br> he Cancer Research Campaign is the largest single supporter of research into allf forms of cancer, including leukaemia, in the UK. <br> The research we have already supported has helped to make real forms of cancer. Today's scientists and their research will lead to further progress, not only in achieving more cures, but also in developing better, kinder methods of treatment. These are just two of our aims. The Cancer Research Campaign deserves your help to support this research, and the money you give is always put to good use. The Campaign has one of the lowestexpense-to-income ratios of any charity -and we're proud of it. Today, inflation is delaying the start of vital new research projects. Now, more than ever, we need generous donations and legacies to help us continue our work. Please help-please send us some money now,or leave us some in your will, or give some of your time to your local Committee. We'll gladly supply the address.

# Cancer Research CAMPAIGN 8 <br> Leading the fight against canter 

Remember the name: The Cancer Research Campaign (Dept.WA).
And the address: 2 Carlton House Terrace, London SWIY 5AR

# Jonathan is successful, happy-and independent. 

 He wasn't alwaysJonathan has been severely spastic since birth, and is unable to walk unsupported. He also has difficulty with speaking and writing. Queen Elizabeth's Training College taught him the basics of computer programming which enabled him to earn a living for the first time in his life. Now he is an important member of a team responsible for testing new programs in the large computer installation at United Biscuits Limited in Liverpool. Every day he drives 12 miles to work from his modern bungalow in St. Helens in his specially adapted car. He has integrated himself completely in the affairs of the office and is treated in exactly the same way as all other members of the staff. Jonathan is happy-because he knows he is leading a successful and independent life.

The Training College is one of four units run by Queen Elizabeth's Foundation: the other three provide assessment and further education for school leavers; a residential sheltered workshop, and a very special holiday and convalescent home. Nearly 1,000 disabled people look to the Foundation for help each year.

The cost of our developing programme is very great, and we urgently want to be able to help even more people.

## THAT IS WHY YOUR HELP WILL MEAN SO MUCH

Queen Elizabeth's Training College. Banstead Place. Dorincourt. Lulworth Court.

# Living and Learning with Deafness 

The British Deaf Association urgently needs money to help the deaf, to help families with communication problems, where deaf children cannot live and learn through natural speech and hearing, to help create new opportunities in place of a life of isolation.

Please send donation now, or make aift by Deed of Covenant (which enables $E$ to recover tax already paid). Greater service to the deaf in years to come may be provided by way of a legacy.

If you would like to help please write to:

## OCCURRENCES DURING PRINTING

Home Affairs. Sept. 21. House of Commons Public Accounts Committee said that there appeared no practical possibility of authorization of production of further Concordes beyond the 16 in present programmes.

Sept. 22. Sir Eric Miller, former head of Peachey Properties, was found dying at his home from gunshot wound; verdict of suicide was later returned at inquest.

Sept. 27. Mr. Justice Eveleigh was appointed Lord Justice of Appeal and Mr. W. D. T. Hodgson, Q.C., and Mr. J. K. Wood, Q.C., were appointed High Court Judges.

Sept. 29. Air Commodore the Hon. P. B. R. Vanneck was elected Lord Mayor of London for 1977-78.

Oct. 3. Labour Party Conference at Brighton passed motion calling for substantial restoration of cuts in public spending.

Oct. 5. Labour Party Conference carried motion, by $6,248,000$ votes to $9 \mathrm{r}, 000$, in favour of abolition of House of Lords, and on following day voted in favour of nationalizing major building contractors.

Oct. 8. Mr. Reginald Prentice, Labour M.P. for Newham North-East, and former Cabinet Minister, announced that he was joining Conservative Party.

Oct. 12. British Rail announced that fares would be increased by from $12 \frac{1}{2}$ to 15 per cent. in January 1978.

Oct. 17. Mass picketing was resumed at Grunwick factory in North London.
Overseas. Oct. 11. Ibrahim al-Hamdi, President of North Yemen, and his brother, were assassinated at Sana'a.

Oct. 12. English supporters at World Cup qualifying tie in Luxemburg caused widespread damage inside the stadium and in the City.

Oct. 17. Terrorists who had skyjacked airliner killed its pilot at Mogadishu airport, Somalia; on following morning West German anti-skyjack unit stormed airliner and killed three of the four terrorists.

Oct. 18. Andreas Baader and two other leaders of Baader-Meinhof terrorist organization committed suicide in Stammheim jail, Stuttgart.

Oct. 19. Body of Dr. Hanns-Martin Schleyer, West German industrialist captured by terrorists, was found in boot of parked car in Mulhouse, eastern France.
Obituary. Oct. 34. Bing Crosby, singer and actor, aged 73. Oct. 17. Sir Michael Balcon, film producer, aged 8 x .

## NORTH ATLANTIC TREATY ORGANIZATION

Headquarters: Brussels 1xxo, Belgium.
The North Atlantic Treaty was signed on April 4, 1949, by the Foreign Ministers of twelve nations. The twelve are Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and United States. Greece and Turkey acceded to the Treaty in 1952 and the Federal Republic of Germany in 1955. The North Atlantic Council is the highest authority of the Alliance and is composed of permanent representatives of the fifteen member countries. It meets at ministerial level meast twice per year. The permanent representatives head national delegations of advisers and experts.
Permanent U.K. Representative, His Excellency Sir
John Killick, K.C.M.G. (x975)
The senior military authority in NATO is the Military Committee composed of a Chief-of-Staff of each member country except France. The Military Committee, which is assisted by minternational military staff, functions in permanent session with permanent military representatives and Li responsible for higher strategic direction throughout the North Atlantic Treaty area.
Secretary-General, I. M. A. H. Luns (Netherlands). Deputy Secretary-General, P. Pansa Cedronio (Italy). Assistant Secretaries-General, Dr. E. F. Jung (Fed.

Republic of Germany) (Political Affairs); W. F. Mumford (U.K.) (Defence Planning and Policy); Dr. W. B. LaBerge (U.S.) (Defence Support); Prof. Nimet Özdas (Turkey) (Scientific Affairs).
Supreme Allied Commander, Europe, Gen. Alexander M. Haig (U.S.).

Supreme Allied Commander, Atlantic, Admiral Isaac C. Kidd (U.S.).
Allied Commander-in-Chief, Channel, Admiral Sir Henry Leach (U.K.).
Chairman, Military Committee, Gen. Herman F. Zeiner Gundersen (Norway).

## CENTRAL TREATY ORGANIZATION

 Headquarters: Ankara, Turkey.A mutual security and defence treaty was concluded between Turkey and Iraq at Baghdad on Feb. 24, 1955. Three further states, the United Kingdom, Iran, and Pakistan signed the Baghdad Pact later in the same year. The United States, although not $\quad$ full member of the Council, participates in an observer capacity, is a member of all major committees, and contributes an equal share to the international staff and budget, as well as large share of economic and military assistance. Iraq formally withdrew from the Pact on March 24. 1959, and the title Central Treaty Organization (C.E.N.T.O.) was adopted on Aug. 2I, 1959. Secretary-General, U. Haluk Bayïlken (i975).

## ASTRONOMICAL NOTES

Mercury is a morning object for the first half of the month, magnitude +0.7 to 0.0 , visible for a short while at the beginning of morning civil twilight, low in the E.S.E.

Venus is too close to the Sun for observation, superior conjunction occurring on the a2nd.

MARS is at opposition on the a2nd and thus visible throughout the hours of darkness. Mars is of magnitude $-1 \cdot I$ and is in the constellation of Cancer. On the morning of the 24 th the Full Moon passes $9^{\circ} \mathrm{S}$. of the planet.

JUPITER, magnitude $-2 \cdot 3$, is a conspicuous object, slowly retrograding on the borders of Taurus, Gemini and Orion, and still visible for most of the night. The gibbous Moon will be seen approaching Jupiter on the morning of the zist. The four Galilean satellites are readily observable with almost any small telescope or good pair of binoculars, providing they are held rigid.

SATURN, magnitude $+0^{\circ} 5$, is retrograding in Leo, and by the end of the month is visible for most of the night. The waning gibbous Moon is near the planet on the 26 th. Saturn passes $I^{\circ} \cdot 1 \mathrm{~N}$. of Regulus on the 20 th.

## ASTRONOMICAL NOTES

Mercury is unsuitably placed for observation, superior conjunction occurring on the 27 th.

Venus is too close to the Sun for observation for almost the whole of the month. On the last few evenings, however, i keen-sighted observer might be able to glimpse the planet immediately after sunset, about $5^{\circ}$ above the W.S.W. horizon.

Mars is a conspicuous object in the evening skies and even by the end of the month is still visible until about $0^{\mathrm{h}}$. Its magnitude fades during the month from $-x .0$ to -0.3 , it moves from Cancer back into Gemini, passing $3^{\circ} \mathrm{S}$ of Pollux on the morning of the 17th. Two days later it is itself overtaken by the waxing gibbous Moon which passes $9^{\circ} \mathrm{S}$. of it .

JUPITER is a conspicuous object of the evening skies, magnitude $-2 \cdot$ I. Jupiter is almost stationary in the eastern part of Taurus. The gibbous Moon will be seen near the planet on the 16 th and 17 th.

SATURN, magnitude +0.3 , is at opposition on the r6th and thus visible throughout the hours of darkness. On the 22nd the Moon, almost Full, passes $5^{\circ} \mathrm{S}$. of the planet.

ZODIACAL Light. The evening cone may be observed in the western sky after the end of twilight, from the beginning of the month to the 8th and again after the z3rd. This faint phenomenon is only visible under good conditions and in the absence of both moonlight and artificial lighting.

## ASTRONOMICAL NOTES

Mercury is an evening object, magnitude $-\mathrm{x} \cdot 0$ to $+r \cdot 0$, during the second half of the month, visible low in the western sky around the time of end of evening civil twilight. On the evening of the zath Mercury passes $x^{\circ} \cdot 3$ N. of Venus, moving eastwards, but it then slows down so that Venus passes $4^{\circ} \mathrm{S}$. of Mercury on the 28th, both planets still moving eastwards, having never been more than about $5^{\circ}$ apart during the whole month. This evening apparition of Mercury is the most favourable one of the year for observers in the northern hemisphere.

Venus is visible in the evenings, magnitude $-3 \cdot 4$, low in the western sky after sunset. On the - $\mathbf{e v e n i n g}$ of the roth the thin crescent Moon may be foc about $x 0^{\circ}$ above Venus.

Mars is a conspicuous object in the evening skies, magnitude -0.3 to +0.5 . Mars is in Gemini, south of Castor and Pollux.

JUPITER is $=$ conspicuous object in the evening skies, magnitude $-1 \cdot 9$. The Moon, around First Quarter, passes $5^{\circ} \mathrm{S}$. of the planet on the evening of the $\mathbf{1 6 t h}$.

SATURN, magnitude +0.4 , is in Leo and visible for most of the night. The waxing, gibbous Moon passes $5^{\circ} \mathrm{S}$. of Saturn on the evening of the arst.
Eclipse. A total eclipse of the Moon occurs on the 24 th, see page 148 for details.

Zodiacal Light. The evening cone may be observed in the western sky after the end of twilight from the beginning of the month to the roth and again after the 25 th.

## ASTRONOMICAL NOTES

Mercury is visible in the evenings for the first few days of the month, magnitude $+x^{\frac{1}{2}}$ but soon gets too close to the Sun to be observable, inferior conjunction occurring on the 11th.

Venus is visible in the evenings, magnitude -3.3 , low in the western sky after sunset. The thin crescent Moon will be seen near Venus on the evenings of the 8th and 9 th.

to + rio, moving eastwards in the constellation of Cancer.
JUPITER, magnitude -1.7 is still a conspicuous object in the evening skies though by the middle of the month is no longer visible after midnight. The Moon will be seen near Jupiter on the evenings of the 12 th and 13 th.

SATURN, magnitude +0.5 , is in Leo. On the evenings of the 17 th and 18 th the waxing, gibbous Moon will be seen near the planet.
Eclipse. A partial eclipse of the Sun occurs on the 7 th. See page 148 for details.

Duration of Civil (C), Nautical (N), and Astronomical (A), Twilight (in minutes)

## ASTRONOMICAL NOTES

MRRCURY is at greatest western elongation on the gth but the long duration of twilight makes observation impossible from the latitudes of the British Isles.

Venus is a magnificent object, magnitude $-3^{\prime} 4$, visible in the evenings, in the western sky, for about an hour-and-a-half after sunset. On the evening of the 5 th Venus passes $6^{\circ} \mathrm{N}$. of Aldebaran. The waxing crescent Moon will be seen near the planet on the evenings of the 8 th and 9 th. On the evening of the 28 th Venus will have approached to within about $z^{\circ}$ of Jupiter, the actual conjunction occurring after both planets have set.
MARS is visible in the evening skies, magnitude $+\mathbf{1} \cdot 0$ to $+\mathbf{1} \cdot 4$, but by the end of the month will
be too low in the west to be visible after midnight. During the month Mars moves from Cancer into Leo.

JUPITER is $\quad$ conspicuous object, magnitude $-x^{\prime} 5$, moving slowly eastwards in the constellation of Gemini. The waxing crescent Moon will be seen near Jupiter on the evenings of the roth and inth.

SATURN, magnitude $+0 \%$, is visible in the evenings, in the constellation of Leo. The Moon is near Saturn on the 14 th and 15 th.

URANUS is at opposition on the 5 th, in the constellation of Libra. It is barely visible to the naked eye as its magnitude is +5.7 but it is easily located with only small optical aid. Telescopically it shows slightly greenish disk $4^{\prime \prime}$ in diameter.

## ASTRONOMICAL NOTES

Mercury is unsuitably placed for observation, superior conjunction occurring on the 14 th.
Venus, magnitude -3.5 , is visible in the western sky in the evenings. Although it is continuing to increase its eastern elongation from the Sun the period available for observation actually decreases slightly during the month because it is moving southward in declination, and also because the Sun is setting about a quarter-of-an-hour later at the end of the month than it is at the beginning. The 3 day old Moon passes $7^{\circ}$ S. of Venus on the late evening of the 8 th.
MARS is still visible in the evening skies, though no longer the conspicuous object it was at the
beginning of the year. Its magnitude is about $+I^{\circ} 5$, slightly fainter than Regulus which Mars passes $0^{\circ} .8 \mathrm{~N}$. of on the evening of the 12 th. On the late evening of the 4 th Mars passes only $0 \cdot$ I $S$. of Saturn.
JUPITER, magnitude $-1 \cdot 4$, is only visible low in the west for a short while in the evening skies for the first part of the month. Thereafter it is too close to the Sun for observation.
SATURN, magnitude +0.8 , is visible in the evenings though by the end of the month it is too low in the west to be visible after $22^{\text {h }}$.
Neptune is at opposition on the 8 th, in the constellation of Ophiuchus. The angular diameter of Neptune is only $2 \frac{t^{\prime \prime}}{2}$. It is not visible to the naked-eye since its magnitude is about $+7 \%$.

Duration of Civil (C), Nautical (N), and Astronomical (A), Twilight (in minutes)

## ASTRONOMICAL NOTES

Mercury is at greatest eastern elongation on the aznd but the long duration of twilight makes observation impossible from the latitudes of the British Isles.

Venus, magnitude $-3 \cdot 6$, is visible low in the western sky in the evenings, after sumset. The crescent Moon will be seen near Venus on the evenings of the 8th and 9 th. During the daylight hours on the roth Venus passes only o ${ }^{\circ}$ I N. of

Saturn, and on the following day passes $x^{\circ} \cdot$ I N . of Regulus.

MARS, magnitude +17 , moves from Leo into Virgo during the month. The crescent Moon, 5 days old, passes Mars on the early evening of the roth.

JUPITER is unsuitably placed for observation, conjunction accurring on the roth.

SATURN, magnitude +0.9 , may be seen for a short while in the evenings but soon gets lost in the long evening twilight.

## MONTHLY NOTES

Aug. x. Lammas. Scottish Term Day.
5. Oyster season opens. First day of Ramadân.
7. Bank Holiday, Scotland.
12. Grouse shooting begins.
28. Bank and General Holiday, England, Wales and N. Ireland.

## PHENOMENA

August $2^{\text {d }}{ }^{14}{ }^{\text {b }}$ Jupiter in conjunction with the Moon. Jupiter $5^{\circ} \mathrm{N}$.
$4^{\text {d }} 05^{\text {h }}$ Mercury in conjunction with Saturn. Mercury $5^{\circ} \mathrm{S}$.
$5^{\mathrm{d}} 19^{\text {h }}$ Mercury in conjunction with the Moon. Mercury $z^{\circ} S$.
$5^{\mathrm{d}} 20^{\mathrm{h}}$ Saturn in conjunction with the Moon. Saturn $4^{\circ} \mathrm{N}$.
$8^{\mathrm{d}}$ oI ${ }^{\mathrm{h}}$ Venus in conjunction with the Moon. Venus $0^{\circ} \cdot{ }_{4} \mathrm{~S}$.
$8^{\mathrm{d}} \mathrm{ob}^{\mathrm{h}}$ Mars in conjunction with the Moon. Mars $0^{\circ} .004 \mathrm{~N}$.
$14^{\text {d }} 15^{\text {h }}$ Venus in conjunction with Mars. Venus $\mathrm{I}^{\circ} \cdot 2 \mathrm{~S}$.
$8^{8^{d}} 20^{\text {h }}$ Mercury in inferior conjunction.
$27^{\text {d }} 15^{\text {h }}$ Saturn in conjunction with the Sun.
$29^{\mathrm{d}} 20^{\mathrm{h}}$ Venus at greatest eastern elongation ( $46^{\circ}$ ).
$30^{\mathrm{d}} 08^{\mathrm{h}}$ Jupiter in conjunction with the Moon. Jupiter $5^{\circ} \mathrm{N}$.

## CONSTELLATIONS

The following constellations are near the meridian at
July 124 July 1623

Aug. 122 Aug. 16 EI Sept. 120 Sept. 2519

Draco, Hercules, Lyra, Cygnus, Sagitta, Ophiuchus, Serpens, Aquila and Sagittarius.

## ASTRONOMICAL NOTES

Mercury is unsuitably placed for observation for most of the month, inferior conjunction occurring on the 88 th. During the last few days of the month Mercury may be seen as $1 m$ morning star, magnitude +1 , low above the eastern horizon around the time of beginning of morning civil twilight.
VENUS is visible low in the evening skies after sunset, magnitude -3.8 . Although greatest eastern elongation occurs on the 2gth Venus is only visible for $I$ short while after sunset. On the evening of the 7th the thin crescent Moon will be seen approaching the planet. Venus overtakes Mars on the $x 4^{\text {th }}$ and the two planets will be only $z^{\circ}$ apart on the evening of that day.

MARS, now only of magnitude $+1 \%$ is only
visible for a very short while in the evenings at the beginning of the month and then gets too close to the Sun for observation. The crescent Moon will be seen close to Mars on the evenings of the 7 th and 8th.
JUPITER, magnitude -14 , becomes visible low in the east in the mornings, after the first few days of the month. Jupiter is in Gemini moving eastwards, south of Castor and Pollux. The waning crescent Moon is near Jupiter on the morning of the 3oth.

SATURN is unsuitably placed for observation, conjunction occurring on the z7th.

Meteors. The maximum of the famous Perseid meteor shower occurs on the night of the $x$ th -13 th. Meteors will be more plentiful after midnight than before, visibility being aided by the absence of moonlight.

## ASTRONOMICAL NOTES

Mercury is morning star during the first half of the month, magnitude +0.6 to $-x \cdot I$, visible low above the eastern horizon around the time of beginning of morning civil twilight. If conditions are clear on the early morning of the 1st the old crescent Moon, only si days before New, will be seen passing $z^{\circ} \mathrm{S}$. of the planet. On the morning of the 9 th Mercury passes less than $x^{\circ} \mathrm{N}$. of Regulus, whilst on the 13 th Mercury passes only $0^{\circ}$ I N . of Saturn. Mercury is then nearly two magnitudes brighter than Saturn and will thus be a useful guide to locating the latter. This morning apparition of Mercury is the most favourable one of the year for observers in northern latitudes.

VENUS is a magnificent object in the early evenings for a short while after sunset, its magnitude being $-4 \cdot 2$. Venus gets too close to the Sun for observa-
tion by the middle of the month. The crescent Moon is near the planet on the evenings of the sth and 6 th.
MARS is unsuitably placed for observation.
JUPITER, magnitude -1.5 , is visible in the east in the morning skies before dawn. The waning crescent Moon passes $5^{\circ} \mathrm{S}$. of the planet during the early hours of the 27th.

SATURN, magnitude $+\mathbf{1} \cdot \mathbf{0}$, gradually becomes visible in the mornings, low in the eastern sky before the twilight is too strong.
Eclipse. A total eclipse of the Moorl occurs on the 16 th, visible from the British Isles. See page 148 for details.
Zodiacal light. The morning cone may be seen in the eastern sky before twilight commences, from the beginning of the month until the 55 th.

## ASTRONOMICAL NOTES

Mercury is unsuitably placed for observation during the month.
Venus is unsuitably placed for observation. Although is it still $40^{\circ}$ from the Sun at the beginning of the month its low declination ( $-23^{\circ}$ ) completely nullifies this apparently favourable elongation meen from the latitudes of the British Isles.

MARS is unsuitably placed for observation.
JUPITER, magnitude $-1 \cdot 7$ is conspicuous object in the eastern skies in the mornings and by the end
of the month is visible well before midnight. Jupiter is moving eastwards in the constellation of Cancer. The waning Moon, around Last Quarter, will be seen near the planet in the 24th and 25 th.

SATURN, magnitude $+\mathrm{r} \cdot \mathrm{r}$, is visible in the morning skies, in the constellation of Leo. The waning crescent Moon will be seen near the planet om the morning of the 27 th.
Ecuipse. A partial eclipse of the Sun occurs $\boldsymbol{\pi}$ the and. See page 148 for details.

## ASTRONOMICAL NOTES

Mercury is unsuitably placed for observation, even though greatest eastern elongation occurs on the $\mathbf{~} 6$ th.

VENUS is unsuitably placed for observation at first, inferior conjunction occurring on the 7 th. However, by the middle of the month Venus has become visible low above the south-eastern horizon before dawn. Venus is of magnitude -4 . On the morning of the 28 th the waning crescent Moon passes $3^{\circ} \mathrm{N}$. of Venus.

## Mars is unsultably placed for observation.

JUPITER, magnitude - $1 \cdot 9$, is a conspicuous object, almost stationary in the constellation of Cancer. On the morning of the zrst the gibbous, waning Moon passes $4^{\circ} S$. of the planet.

SATURN, magnitude $+r \cdot x$, is in Leo and by the end of the month is visible shortly after midnight low above the eastern horizon. Titan, Saturn's largest satellite, is of magnitude $+8 \frac{1}{2}$, and visible in small telescopes. On the morning of the 24th the Moon passes $3^{\circ}$ S. of the planet.

## ASTRONOMICAL NOTES

Mercury is unsuitably placed for observation for the first ten days of the month but then becomes visible as morning star, magnitude +15 to $-0 \cdot 2$. It may be seen low above the E.S.E. horizon around the time of beginning of morning civil twilight. On the early morning of the 28 th the old crescent Moon passes $3^{\circ} \mathrm{N}$. of Mercury.

Venus is brilliant object, magnitude -4.4 , dominating the eastern sky for several hours before dawn. On the morning of the 26th the waning crescent Moon will be seen approaching Venus and observers who enjoy detecting Venus in daylight can use the Moon as a guide on that morning.

The phase of Venus changes noticeably during December, from $14 \%$ illuminated on the 1 st to $40 \%$ by the end of the month.
Mars is unsuitably placed for observation.
JUPITER, magnitude - $\mathbf{z} \cdot \mathbf{x}$, is in Cancer and by the end of the month is visible for the greater part of the night. The waning gibbous Moon is near Jupiter on the 17 th and 18 th.

SATURN, magnitude $+\mathrm{r} \cdot \mathrm{o}$, is in Leo. On the zist the Moon passes $3^{\circ}$ S. of Saturn.
Meteors. The maximum of the well-known Geminid meteor shower occurs on the rath but observations will be seriously hampered by a Full Moon.

## INTRODUCTION TO ASTRONOMICAL SECTION

## GENERAL

The astronomical data are given in $\|$ form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the Astronomical Ephemeris for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for $0^{\text {h }}$ G.M.T., or the midnight at the beginning of the day named.
(See notes on British Summer Time, p. 142).
Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's Star Atlas (Gall and Inglis, 16th edition, 1973; £4.50), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: Burlington House, Piccadilly, London, W.r.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes $52^{\circ}$ and $56^{\circ}$, are devoted to risings and settings, the range $50^{\circ}$ to $58^{\circ}$ can be covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

## PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The Fasts and Festivals in black-letter type are those so given in the Prayer Book.

Under the heading Phenomena will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.
The Constellations listed each month are those that are near the meridian at the beginning of the month at $z^{\mathrm{h}}$ local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian $4^{\text {m }}$ earlier each night or $2^{\text {h }}$ earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

Times of Minima of Algol are approximate times of the middle of the period of diminished light (see p. 153).

The Principal Phases of the Moon are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is $0^{\circ}, 90^{\circ}$, $180^{\circ}$ or $270^{\circ}$. The times of perigee and apogee are those when the Moon is nearest to, and farthest from, the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and. the inclination, whose value does not vary much from $5^{\circ}$, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The Monthly Notes are self-explanatory.

## PAGE II OF EACH MONTH

The Sun's semi-diameter, in arc, is given once a month.

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying $12^{h}$ to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. Apparent Solar Time is equal to the Mean Solar Time plus the Equation of Time. For example at noon on Aug. 8 the Equation of Time is $-5^{m} 3^{8^{5}}$ and thus at $52^{\mathrm{h}}$ Mean Time on that day the Apparent Time is $32^{\mathrm{h}}-5^{\mathrm{m}} 38^{\mathrm{s}}=11^{\mathrm{h}} 54^{\mathrm{m}} 22^{\mathrm{s}}$.

The Greenwich Sidereal Time at $o^{\text {h }}$ and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is $o^{h} \gamma$ are used for converting mean time to sidereal time and vice versa.

The G.M.T. of transit of the Sun at Greenwich may also be taken as the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of Sunrise and Sunset is that the Road Traffic Act, 1956, defines Light-ing-up Time for vehicles as being from half an hour after sunset to half m hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of Sunrise and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sealevel. Assuming the mean refraction to be $34^{\prime}$, and the Sun's semi-diameter to be $16{ }^{\prime}$, the time given is that when the true zenith distance of the Sun's centre is $90^{\circ}+34^{\prime}+16^{\prime}$ or $90^{\circ} 50^{\prime}$, or, in other words, when the depression of the Sun's
centre below the true horizon is $50^{\prime}$. The upper limb is then $34^{\prime}$ below the true horizon, but is brought there by refraction. It is true, of course, that ${ }^{\text {ma }}$ observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^{\circ} 50^{\prime}$ is a precise time dependent only $\quad$ the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way $\quad$ - definition of sunset (or sunrise) for all statutory purposes.

It is well known that light reaches us before sumrise and also continues to reach iv for some time after sunset. The interval between darkness and sunrise or sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin or end when the Sun's centre is $18^{\circ}$ below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of $18^{\circ}$ is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met years ago by dividing the gathering darkness into four steps.
(z) Sunrise or Sunset, defined as above.
(z) Civil twilight, which begins or ends when the Sun's centre is $6^{\circ}$ below the horizon. This marks the time when operations requiring daylight may commence or must cease. In England it varies from about 30 to 60 minutes after sunset.
(3) Nautical twilight, which begins or ends when the Sun's centre is $12^{\circ}$ below the horizon This marks the time when it is, to all intent and purposes, completely dark.
(4) Astronomical wilight, which begins or ends when the Sun's centre is $38^{\circ}$ below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.
To assist observers the durations of civil, nautical and astronomical twilights are given at intervals of ten days. The beginning of a particular twilight is found by subtracting the duration from the time of suarise, while the end is found by adding the duration to the time of sunset. Thus the beginning of astronomical twilight in latitude $52^{\circ}$, on the Greenwich meridian, on March 15 is found as $06^{\mathrm{h}} 25^{\mathrm{m}}-113^{\mathrm{m}}=04^{\mathrm{h}} \quad 32^{\mathrm{m}}$ and similarly the end of civil twilight $=17^{\mathrm{h}} 56^{\mathrm{m}}+34^{\mathrm{m}}=18^{\mathrm{h}} 30^{\mathrm{m}}$.
The letters T.A.N. are printed when twilight lasts all night.
Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.
Under the heading Astronomical Notes will be found notes describing the position and visibility of all the planets and also of other phenomena; these are intended to guide naked-eyc observers, or those using small telescopes.

## PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach $\mathrm{I}^{\circ}$.

The lunar terminator is the line separating the bright from the dark part of the Moon's disk. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The selenographic longitude of the terminator is measured from the mean centre of the visible disk, which may differ from the visible centre by as much as $8^{\circ}$, because of libration.

Instead of the longitude of the terminator the Sun's selenographic colongitude is tabulated. It is numerically equal to the selenographic longitude of the morning terminator, measured eastward from the mean centre of the disk. Thus its value is approximately $270^{\circ}$ at New Moon, $360^{\circ}$ at First Quarter, $90^{\circ}$ at Full Moon and $180^{\circ}$ at Last Quarter.

The Position Angle of the Bright Limb is the position angle of the midpoint of the illuminated limb, measured eastward from the north point on the disk. The column Phase shows the percentage of the area of the Moon's disk illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9^{\prime \prime}$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57^{\prime}$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^{\circ} 50^{\prime}$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes (except in high latitudes).
The tables have been constructed for the meridian of Greenwich, and for latitudes $52^{\circ}$ and $56^{\circ}$. They give Greenwich Mean Time (G.M.T.) throughout the year. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $x^{\circ}=4^{\mathrm{m}}$ and $15^{\prime}=I^{\mathrm{m}}$.

The G.M.T. of transit of the Moon over the meridian of Greenwich is given: these times are independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary
because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude $\lambda$ of the place. If the place is in west longitude, $\lambda$ is the ordinary west longitude; if the place is in east longitude $\lambda$ is the complement to $24^{\text {h }}$ (or $360^{\circ}$ ) of the longitude, and will be greater than $12^{h}$ (or $\mathbf{x 8 0}$ ). The correction then consists of two positive portions, namely $\lambda$ and the fraction $\lambda / 24$ (or $\lambda^{0} / 360$ ) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^{\text {h }} 05^{\mathrm{m}}$ east, so $\lambda=13^{\mathrm{h}} 55^{\mathrm{m}}$ and the fraction $\lambda / 24$ is 0.58 . The transit on the local date 1978 Oct. II is found as follows:
d $h \mathrm{~m}$
G.M.T. of transit at Greenwich.... Oct. 10 19 xz
$\lambda \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots$............................ 1355
$0.58 \times\left(20^{\mathrm{h}} 07^{\mathrm{m}}-19^{\mathrm{h}} 12^{\mathrm{m}}\right) \ldots \ldots .$.
G.M.T. of transit at Sydney.........

II 0939
Corr. to N.S.W. Standard Time. . . .
1000

Local standard time of transit....... II 1939 It is evident of course, that for any given place the quantities $\lambda$ and the correction to local standard time may be combined permanently, being here $23^{\mathrm{h}} 55^{\mathrm{m}}$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column Phase shows the illuminated percentage of the disk. In the case of the inner planets this approaches 100 at superior conjunction and o at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of $5^{\circ}$ has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way, as already described.

## PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each
month, except that, under Uranus and Neptune, times when the planet is $10^{\circ}$ high instead of $5^{\circ}$ high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $3^{\prime \prime}$ less than the equatorial diameter, while that of Saturn is about $2^{\prime \prime}$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed on three occasions in 1966 and were open at their widest extent in the middle of 1973.

## TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against $\#$ fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not = uniform time, but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in $\quad$ practical time scale, and this has led to the concept of Mean Solar Time in which all the days are exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

## Greemwich Mean Time

The daily rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky fron East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (G.M.T.) The mean solar day is divided into 24 hours and, for astronomical and other scientific purposes, these are numbered o
to 23 , commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated a.m. (before noon) and p.m. (after noon). Universal Time
Before r925 January I G.M.T. was reckoned in 24 hours commencing at noon: since that date it has been reckoned from midnight. In view of the risk of confusion in the use of the designation G.M.T. before and after 1925, the International Astronomical Union recommended in 19z8 that astronomers should, for the present, employ the term Universal Time, U.T. (or Weltzeit, W.Z.) to denote G.M.T. measured from Greenwich Mean Midnight.

In precision work it has now become necessary to take account of small variations, hitherto negligible, in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated U.T.o. Observed time corrected for the effects of the motion of the poles (giving rise to " wandering" in longitude) is designated U.T.r. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. U.T.i corrected for this effect is designated U.T. 2 and provides a time scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

## Apparent Solar Time

As has been mentioned, the time shown by sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle, but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun. The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right-angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of $23^{\circ}$ 27. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its maximum values in February ( -14 mins.) and early November ( +16 mins.). It has a zero value on four dates during the year, and it is only on these dates (approx. April 15 June 14, Sept. 1, and Dec. 25) that a sundial shows Mean Solar Time.

## Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or "star") time is perhaps a little misleading since the time scale so defined is not exactly the same as that which would be defined by successive transits of a selected star, as there is I small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length
of the sidereal day shorter than the true period of rotation by o.oo8 seconds. Superimposed on this steady precessional motion are small oscillations called nutation, giving rise to fluctuations in apparent sidereal time amounting to as much as $1 \cdot 2$ seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion of G.M.T. to Greenwich sidereal time (G.S.T.) may be performed by adding the value of the G.S.T. at $0^{\mathrm{h}}$ on the day in question (page II of each month) to the G.M.T. converted to sidereal time using the table on p. 146.
Example. To find the G.S.T. at August $8^{\mathrm{d}} \mathrm{OZ}^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}} \mathrm{II} \mathrm{I}^{\mathrm{s}}$ G.M.T. $h \mathrm{~m}$ s G.S.T. at o ${ }^{\text {h }}$ 210436 G.M.T. .. .. .. .. .. $24 I I I$ Acceleration for $2^{\text {h }}$ 20
$" \quad, 4 x^{m}$ II $^{\text {s }}$ 7

Sum=G.S.T. $=$.
$2346 \quad 14$
If the observer is not on the Greenwich meridian then his longitude, measured positively westwards from Greenwich, must be subtracted from the G.S.T. to obtain Local Sidereal Time (L.S.T.). Thus, in the above example, an observer $5^{h}$ east of Greenwich, or $19{ }^{\text {h }}$ west, would find his L.S.T. as $4^{\mathrm{h}} 4^{\mathrm{m}} 14^{\mathrm{s}}$.

## Ephemeris Time

In the study of the motions of the Sun, Moon and planets, observations taken over an extended period are used in the preparation of tables giving the apparent position of the body each day. A table of this sort is known as an ephemeris, and may be used in the comparison of current observations with tabulated positions. A detailed examination of the observations made over the past 300 years shows that the Sun, Moon and planets appear to depart from their predicted positions by amounts proportional to their mean motions. The only satisfactory explanation is that the time scale to which the observations were referred was not uniform as had been supposed. Since the time scale was based on the rotation of the Earth, it follows that this rotation is subject to irregularities. The fact that the discrepancies between the observed and ephemeris positions were proportional to the mean motions of the bodies made it possible to secure agreement by substituting a revised time scale and recomputing the ephemeris positions. The time scale which brings the ephemeris into agreement with the observations has been named Ephemeris Time (E.T.).

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun ( $1 / 31556925.9747$ of the Tropical Year for 1900 January ol $\mathrm{I}^{\mathrm{h}}$. E.T.) instead of in terms of the diurnal rotation of the Earth on its axis ( $1 / 86400$ of the Mean Solar Day). In many branches of scientific work other than astronomy there has been $\#$ demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mésures in 1956. The length of the unit has been
chosen to provide general agreement with U.T. throughout the x9th and zoth centuries. During 1978 the estimated difference E.T. - U.T. is 49 seconds. The precise determination of E.T. from astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, 1 comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with its ephemeris position. Even in this case, however, the requisite standard of accuracy can only be achieved by a veraging over a number of years.

## Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the revolution of the electrons in their orbits around the nuclei. The continuous oscillations are generated in 1 II electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals: it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard.

> Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of In national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the " 6 -pips" radio signals emitted by the British Broadcasting Corporation. Signals by land line from the Observatory correct the Post Office Speaking Clock, TIM.

For survey and scientific purposes in which the highest accuracy is required, special signals are transmitted from the Post Office Radio Station at Rugby. The International Signals, consisting of a five-minute series of pips, one-tenth of ${ }^{[ }$second long, with the pips at the minutes lengthened for identification, are radiated at $02.54-03.00,08.54^{-}$ $09.00,14.54-15.00,20.54-21.00$ from GBR ( 16 kHz ) and associated H.F. transmitters. The seconds
pulses superposed on the MSF standard frequency transmissions, which consists of five cycles of $\quad$ x,ooo c.p.s. tone, are derived from the same master control at the transmitting station, and are radiated for ten minutes in each quarter-hour on $2 \frac{1}{2}, 5$, and 10 MHz for 24 hours per day, and continuously on 60 kHz . The carrier frequencies of all the MSF transmissions, and of GBR, are closely controlled, and measured regularly at the National Physical Laboratory in terms of the caesium atomic resonance.

The new Coordinated Universal Time (U.T.C.) system standard frequency emissions and radio time signals are broadcast on MSF, GBR, and by other national transmitters, eg. by WWV and WWVH in the U.S.A. in conformity with the International Atomic Time Scale in which the time intervals between pips correspond exactly to the seconds defined as follows: "The second is the duration of $919263^{1} 770$ periods of the radiation corresponding to the transition between the $a$ hyperfine levels of the ground state of the caesium 133 atom."
As the rate of rotation of the Earth is variable the time signals will be adjusted by the introduction of a leap second when necessary in order that UTC shall not depart from UT by more than $0^{5} \cdot 9$. For convenience it has been decided to introduce leap seconds, when necessary, on the last second of a month preferably on 3 I Dec. and/or 30 June. In the case of $\square$ positive leap second $23^{\mathrm{h}} 59^{\mathrm{m}} 60^{\mathrm{s}}$ will be followed one second later by $0^{\text {h }} 0 o^{m} 0 o^{\text {s }}$ of the first day of the month. In the case of a negative leap second (required if the Earth were to have a sudden change of rate and begin to gain relative to UTC) $23^{\text {h }} 59^{m} 58^{\mathrm{s}}$ will be followed one second later by $0^{h} 00^{m} 00^{s}$ of the first day of the month.
From 1972 Jan. I the six pips on the BBC have consisted of 5 short pips from second 55 to second 59 followed by one lengthened pip, the start of which indicates the exact minute.

## SUMMER TIME

In the United Kingdom, Summer Time, one hour in advance of G.M.T. will be kept between $0 z^{\mathrm{h}}$ G.M.T. on the day following the third Saturday in March and oz $^{\text {h }}$ G.M.T. on the day following the fourth Saturday in October. Thus, in 1978, Summer Time will be in force between March ig and October 29.
Variations from the standard time of some countries occurs during part of the year: they are decided annually and are usually referred to as Summer Time or Daylight Saving Time. These variations occur in:
British Commonwealth.-Parts of Australia; Bahamas; Canada; Channel Islands; Hong Kong; New Zealand; Bermuda.
Foreign Countries.-Albania; Argentina; Brazil; Chile; parts of China; Costa Rica; Cuba; Dominican Republic; Formosa; France; Greece; Iceland; Israel; Italy; Macau; Malta; Mexico; Morocco; Norway; Pescadores Is.; Poland; Portugal; Sicily; Sudan; Syria; Tunisia; Turkey; parts of U.S.A.;
In the Dominican Republic, the Irish Republic, and Paraguay, the variation occurs in winter and is called Winter Time.

In the year $\mathbf{x 8 0}$ it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that'of Greenwich by an integral number of hours, either fast or slow, is used.
The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately $7^{\frac{13}{\circ}}$ on either side of central meridians. The important ones are given below; there are in addition zones from 5 to ${ }^{2} 3$ hours fast in the U.S.S.R. centred at $60^{\circ} \mathrm{E}$. to $180^{\circ} \mathrm{E}$.

Fast on Greenwich Time
12 hrs. F. . .Fiji, Gilbert and Tuvalu Is., New Zealand, Marshall Is., Caroline Is. (east of $150^{\circ} \mathrm{E}$.).
12 $\frac{1}{2}$, F...Norfolk I., Nauru I.
II ", F....New Caledonia, Santa Cruz and Solomon Is., Truk, Ponape, Sakhalin, New Hebrides.
so , F...Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, Admiralty Islds., Caroline Islds. (west of $150^{\circ} \mathrm{E}$.), Australian Capital Territory, Mariana Isids.
$9 \frac{1}{2}$,, F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area).
9 „, F...Japan, Schouten Islds., Kurile Islds., Manchuria, Korea, Irian Jaya.
$8 \frac{1}{2}$, $F$....Molucca Islds.
8 ", F....China (coast), Hong Kong, Philippine Is., Macau, Timor, WesternAustralia, Sulawesi (Celebes), Kalimantant, Formosa, Pescadores IsIds., Malaysia.
7 $\frac{1}{2}$, F...Singapore.
7 ", F...Sumatra, Java, Christmas I. (Indian Ocean), Thailand, Cambodia, Laos, Vietnam (north), Vietnam (south).
$6 \frac{1}{2}$, F...Burma, Cocos-Keeling Islds.
$6{ }^{2}$ ", F...Bangladesh.
$5^{\frac{1}{2}}$ ", F...India, Sri Lanka, Laccadive Islds., Andaman and Nicobar Islds.
5 "F...Chagos Archipelago, Pakistan.
4 "F...Mauritius, Seychelles, Réunion, U.S.S.R., $40^{\circ}$ E. to $52^{\circ} 30^{\prime} \mathrm{E}$.

3t , F...Iran.
3 ", F...U.S.S.R. west of $40^{\circ}$ E., Iraq, Ethiopia, Yemen (Dem. Repub.), Socotra I., Somali Republic, Comoro Islds., Madagascar, Uganda, Kenya, Tanzania.
z ., F...Turkey, Greece, Bulgaria, Rumania, Finland, Israel, Jordan, Egypt, Syria, Cyprus, Rhodesia, Malawi,
E. European South Africa, Mozambique, Sudan, Burundi, R wanda, Crete, Lebanon, Libya, Zambia, Botswana, Lesotho.
I hr. F...Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France, Luxemburg,Spain, Monaco, Balearic Islds., Poland, Austria.

[^6]Central-
European

Greenwich
Time

Hungary, Switzerland, Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, CentralAfricanRepublic, Cameroon Republic, Zaire, Angola, Spitsbergen, Algeria, Benin, Corsica, Sardinla, Portugal, Niger, Irish Republic, Gibraltar.
The United Kingdom, Faroe, Channel Is., Algeria, Morocco, Iceland, Mauritania, Sierra Leone, Ivory Coast, Ifni, Ghana, Principe I., St. Helena, Gambia, Canary Is., Ascension I., Tangier, São Tomé, Rio de Oro, Madeira, Mali, Senegal, Liberia, Guinea Bissau.

## Slow on Greenwich time

- hr. S...Azores, Cape Verde Is.
- hrs. S... Fernando Noronha I., Scoresby Sound, South Georgia.
3 "S...Greenland (excluding Scoresby Sound and Thule), EasternBrazil, Argentina, Uruguay, French Guiana, Guyana.
$3^{\frac{1}{2}}$, S...Newfoundland, Surinam.
4 "S...Canada east of $68^{\circ} \mathrm{W}$. , Greenland (Thule Area), Puerto Rico, Lesser Allantic. Antilles, Central Brazil, Falkland Islds., Paraguay, Bermuda, Bolivia, Chile, Curacao I., Venezuela. Labrador, Dominican Republic.
5 hrs. S... Canada from $68^{\circ} \mathrm{W}$. to $85^{\circ} \mathrm{W}$. (north) or $90^{\circ} \mathrm{W}$. (south), Eastern States of
Eastern. U.S.A., Jamaica, Bahama Islds., Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Cuba.
6 hrs. S... Central parts of U.S.A., Canada from $85^{\circ} \mathrm{W}$. to roz ${ }^{\circ} \mathrm{W}$., Costa Rica, Central. Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.
7 hrs. S...Canada from $102^{\circ}$ W. to $120^{\circ} \mathrm{W}$., Mountain. Mountain States of U.S.A., part of Mexico.
8 hrs. S...Canada west of $120^{\circ}$ W., Alaska, l'acific. (south-cast coast), Western States of U.S.A., part of Mexico, Yukon (east of $138^{\circ} \mathrm{W}$.).
9 hrs. S...Alaska $137^{\circ} \mathrm{W}$. to $14 \mathrm{I}^{\circ} \mathrm{W}$., Yukon (west of $13^{8^{\circ}}$ W.).
so "S...Alaska from $14 \mathrm{I}^{\circ}$ W. to $16 \mathrm{I}^{\circ}$ W., Low Archipelago. Austral and Society Islds., Hawaii, Fanning I., Christmas Islds. (Pacific Ocean).
II , S...Aleutian Islds., Alaska (west coast), Samoa, Midway Islds.
In the Tonga Islands the time $13 h$ fast and in Chatham Is. 12 h 45 m fast on Greenwich is used, as the Date line is to the East of them.

## THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180 th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Table 1. Hour Angle

| $\underset{\sim}{\dot{U}}$ | Latitude and Declination of Opposite Signs |  |  |  |  |  |  | Latitude and Declination of Same Signs |  |  |  |  |  |

## SUNRISE AND SUNSET

The local mean time of sunrise or sunset (as defined on page $\mathrm{r}_{3} 8$ ) may be found by determining the appropriate hour angle from the table above and applying it to the time of transit given in the ephemeris for each month. The hour angle is negative for sunrise and positive for sunset. A small correction to the hour angle, which always has the effect of increasing it numerically, is necessary to allow for the Sun's semi-diameter ( $16^{\prime}$ ) and for refraction ( $34^{\circ}$ ). This correction may be obtained from Table 2. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.-Required the N.Z. Mean Time ( $12^{\text {h }}$ fast on G.M.T.) of sunset on May 24 at Auckland. The latitude is $36^{\circ} 50^{\prime}$ south (or minus) and the longitude $I I^{\mathrm{h}} 39^{\mathrm{m}}$ east. Taking the declination as $+20^{\circ} \cdot 7$, we find
Tabular entry for $30^{\circ}$ Lat. and Dec. $20^{\circ}$, i m opposite signs. ..... $+5 x 1$
Proportional part for $6^{\circ} 50^{\prime}$ of Lat ..... 15
Proportional part for $0^{\circ} \cdot 7$ of Dec ..... 3

## MOONRISE AND MOONSET

It is possible to calculate the times of moonrise and moonset using Table I though the method is more complicated because the apparent motion of the Moon is much more rapid than that of the Sun.

Table 3. Longitude Correction

Notation
$\varphi$ = latitude of observer
$\lambda=$ longitude of observer (measured positively towards the west)
T-I = time of transit of Moon on previous day
$\mathrm{T}_{0}=$ time of transit of Moon on day in question
$\mathrm{T}_{\mathrm{I}}=$ time of transit of Moon on following day
$\delta_{0}=$ approximate declination of Moon
$\delta_{\mathrm{R}}=$ declination of Moon at moonrise
$\delta_{\mathrm{S}}=$ declination of Moon at moonset
$h_{0}=$ approximate hour angle of Moon
$\mathrm{h}_{\mathrm{R}}=$ hour angle of Moon at moonrise
$\mathrm{h}_{\mathrm{S}}=$ hour angle of moon at moonset
$\mathrm{t}_{\mathrm{R}}=$ time of moonrise
$\mathrm{t}_{\mathrm{s}}=$ time of moonset

The parallax of the Moon, about $57^{\prime}$, is near to the sum of the semi-diameter and refraction but has the opposite effect on these times. It is thus convenient to neglect all three quantities in the method outlined below.

## METHOD

1. With arguments $\varphi, \delta_{0}$ enter Table z on p . 144 to determine $h_{0}$ where $h_{0}$ is negative for moonrise and positive for moonset.
2. Form approximate times from

$$
\begin{aligned}
& \mathrm{t}_{\mathrm{R}}=\mathrm{T}_{0}+\lambda+\mathrm{h}_{0} \\
& \mathrm{t}_{\mathrm{S}}=\mathrm{T}_{0}+\lambda+\mathrm{h}_{0}
\end{aligned}
$$

3. Determine $\delta_{\mathrm{R}}, \delta_{\mathrm{S}}$ for times $\mathrm{t}_{\mathrm{R}}$, $\mathrm{t}_{\mathrm{S}}$ respectively.
4. Re-enter Table $x$ on p. 144 with-
(a) arguments $\varphi, \delta_{R}$ to determine $h_{R}$
(b) arguments $\varphi, \delta_{\mathrm{S}}$ to determine $\mathrm{h}_{\mathrm{S}}$
5. Form $\mathrm{t}_{\mathrm{R}}=\mathrm{T}_{\mathrm{o}}+\lambda+\mathrm{h}_{\mathrm{R}}+\mathrm{AX}$
$\mathbf{t}_{\mathbf{S}}=\mathbf{T}_{0}+\lambda+\mathbf{h}_{\mathbf{S}}+\mathbf{A X}$
where $\mathbf{A}=(\lambda+\mathbf{h})$ $\begin{array}{lll}\mathbf{X}=\left(T_{0}-T-I\right) & \text { if }(\lambda+h) & \text { is negative } \\ X=\left(T_{I}-T_{0}\right) & \text { if }(\lambda+h) & \text { is positive }\end{array}$ and $\quad X=\left(T_{1}-T_{0}\right) \quad$ if $(\lambda+h) \quad$ is positive AX is the respondent in Table 3.
Example. - To find the times of moonrise and moonset at Vancouver ( $\varphi=+49^{\circ}, \lambda=+8^{\mathrm{h}} 12^{\mathrm{m}}$ ) on 1978 October 10. The starting data (from p. 128) are

$$
\begin{aligned}
& \mathrm{T}_{-\mathrm{I}}=18 \quad \mathrm{~m} \\
& \mathrm{~T}^{\mathrm{h}} \\
& \mathrm{~T}_{0}=19 \\
& \mathrm{~T}_{\mathrm{I}}=\mathbf{1 2} \\
& \delta=\frac{07}{07}=-15^{\circ} \\
& 0=4^{\mathrm{h}} 49^{\mathrm{m}}
\end{aligned}
$$

1. $h_{0}=4^{h} 49^{m}$
2. Approximate values

$$
\begin{aligned}
& t_{\mathrm{R}}=10^{\mathrm{d}} 19^{\mathrm{h}} 12^{\mathrm{m}}+8^{\mathrm{h}} 12^{\mathrm{m}}+\left(-4^{\mathrm{h}} 4^{\mathrm{m}}\right) \\
& =10^{\mathrm{d}} 22^{\mathrm{h}} 36^{\mathrm{m}} \\
& \mathrm{t}_{\mathrm{S}}=10^{\mathrm{d}} \mathrm{I}^{\mathrm{h}} 12^{\mathrm{m}}+8^{\mathrm{h}} 12^{\mathrm{m}}+\left(+4^{\mathrm{h}} 4^{8^{m}}\right) \\
& =1 x^{\mathrm{d}} \mathrm{ob}^{\mathrm{h}} \mathrm{I}^{\mathrm{m}} \\
& \delta_{\mathrm{R}}=-14^{\circ} \cdot 5 \\
& \delta_{\mathrm{S}}=-13_{\mathrm{h}}^{\circ} \cdot 3 \\
& h_{R}=-4^{h} 5^{m} \\
& h_{S}=+4^{h_{57}}{ }^{\mathrm{m}} \\
& t_{R}=10^{d_{19}}{ }^{\mathrm{h}} 12^{\mathrm{m}}+8^{\mathrm{h}} 12^{\mathrm{m}}-4^{\mathrm{h}} 5^{\mathrm{m}}+8^{\mathrm{m}} \\
& =10^{d_{22}}{ }^{h} 4 x^{\mathrm{m}}
\end{aligned}
$$

To get the L.M.T. of the phenomenon the longitude is subtracted from the G.M.T. thus Moonrise $=10^{\mathrm{d}_{2}} 2^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}-8^{\mathrm{h}} \mathrm{h}^{2} \mathrm{~m}^{\mathrm{m}}=10^{\mathrm{d}} 4^{\mathrm{h}} 29^{\mathrm{m}}$

The length of a sidereal day in mean time is $23^{\mathrm{h}} 56^{\mathrm{m}} 04^{\text {s.0. }}$. Hence $\mathrm{I}^{\mathrm{h}}$ M.T. $=\mathrm{I}^{\mathrm{h}}+9^{\mathrm{s}} \cdot 86$ S.T. and $x^{\mathrm{h}}$ S.T. $=x^{\mathrm{h}}-9^{\mathrm{s}} .83$ M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds. separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known a Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these
two entries is the required acceleration or retardation. Thus the acceleration for $\mathrm{II}^{\mathrm{m}} 26^{5}$ (which lies between the entries $9^{\mathrm{m}} 07^{5}$ and $\mathrm{x} 5^{\mathrm{m}} 13^{\mathrm{s}}$ ) is $2^{\mathrm{s}}$. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for $45^{\mathrm{m}} 46^{\mathrm{S}}$ is $7^{\mathrm{s}}$
Example.-Convert $14^{\mathrm{h}} 27^{\mathrm{m}} 35^{\mathrm{s}}$ from S.T. to M.T.

$$
\begin{aligned}
& \text { Given S.T................... } 142735 \\
& \text { Retardation for } 14^{\mathrm{h}} \ldots \ldots \ldots \text {....... } \quad \text { x } 8 \\
& \text { Retardation for } 27^{\mathrm{m}} 35^{\mathrm{s}} \ldots \ldots \text {. } \\
& \text { Corresponding M.T......... } 142512 \\
& \text { For further explanation, see p. } 14 \text { r. }
\end{aligned}
$$

The refraction table is also in the form of a critical table.

## THE SUMMER TIME ACTS

In 1916 an Act ordained that during ${ }^{-1}$ defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the Summer Time Acts, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War the duration of Summer Time was extended and in the years 1941 45 and in 1947, Double Summer Time ( 2 hrs, in advance of Greenwich Mean Time) was in force. Summer Time was extended in each year from 1948
to 1952 and again in $1961-1964$, by Order in Council.
The duration of Summer Time during the last few years is given in the following table.
1953 Apr. 19-Oct. 4
196I Mar. 26-Oct. 29

1954 Apr. 1 1-Oct. 3 1962 Mar. 25 -Oct. 28

Jupiter's satellites transit across the disk from east to west, and pass behind the disk from west to easf. The shadows that they cast also transit across the disk. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east

of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Sateliite IV is eclipsed, both phases may be seen.

The list of phenomena gives most of the eclipses and shadow transits visible in the British Isles under favourable conditions.

$$
\begin{array}{ll}
\text { vourable conditions. } & \mathrm{R}=\text { Reappearance } \\
\begin{array}{ll}
\text { Ec. }=\text { Eclipse } & \text { Shadow transit }
\end{array} & \mathbf{E}=\text { Ingress } \\
\text { Sh. }=\text { Egress } \\
\mathrm{D}=\text { Disappearance } &
\end{array}
$$

The times given in these predictions are strictly for the centre of the satellite. Observers will appreciate that as the satellite is of considerable size the immersion and emersion phases are not instantaneous. Even when the satellite enters or leaves the shadow along a radius of the shadow the phase can last for several minutes. With satellite IV grazing phenomena can occur so that the light from the satellite may fade and brighten again without a complete eclipse taking place.

## CELESTIAL PHENOMENA FOR OBSERVATION IN 1978

## ECLIPSES, 1978

There will be four eclipses during 1978, two of the Sun and two of the Moon. Penumbral eclipses are not mentioned in this section as they are difficult to observe.
x. A total eclipse of the Moon on March 24, visible from the extreme north-western part of North America, most of the Pacific Ocean, New Zealand, Australia, part of Antarctica, Asia, the Indian Ocean, Africa (except the extreme western part) and Europe (except the western part). The eclipse begins at $14^{\mathrm{h}} 33^{\mathrm{m}}$ and ends at $18^{\mathrm{h}} 12^{\mathrm{m}}$. Totality lasts from $15^{\mathrm{h}} 37^{\mathrm{m}}$ to $17^{\mathrm{h}} 08^{\mathrm{m}}$.
2. A partial eclipse of the Sun on April 7, visible from the southern part of $S$. America, the southern part of the Atlantic Ocean, part of Antarctica and Southern Africa. The eclipse begins at $13^{\mathrm{h}} \mathbf{o z}^{\mathrm{m}}$ and ends at $x 7^{\mathrm{h}} 04^{\mathrm{m}}$. At the time of maximum eclipse 0.79 of the Sun's diameter is obscured.
3. A total eclipse of the Moon on September 16, visible from the western half of the Pacific Ocean, New Zealand, Australia, part of Antarctica, Asia, the Indian Ocean, Africa, Europe (including the British Isles), the eastern part of the Atlantic Ocean and the extreme north-eastern part of South America. The eclipse begins at $17^{\mathrm{h}} \mathbf{2 0}^{\mathrm{m}}$ and ends at $20^{\mathrm{h}} 4^{\mathrm{m}}$. Totality lasts from $18^{\mathrm{h}} 24^{\mathrm{m}}$ to $19^{\mathrm{h}} 44^{\mathrm{m}}$.
4. A partial eclipse of the Sun on October 2, visible from north-eastern Europe, the eastern half of the Arctic Ocean, Asia except the southern part and the north-western part of the Pacific Ocean. The eclipse begins at $04^{\mathrm{h}} 3^{\mathrm{m}}$ and ends at o8 $8^{\mathrm{h}} 25^{\mathrm{m}}$. At the time of maximum eclipse 0.69 of the Sun's diameter is obscured.

## OCCULTATIONS OF STARS

The list on the opposite page includes most of the occultations visible under favourable conditions in the British Isles. No occultation is included unless the star is at least $10^{\circ}$ above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope. The altitude limit is reduced from $10^{\circ}$ to $z^{\circ}$ for stars and planets brighter than magnitude $2 \cdot 0$ and such occultations are also predicted in daylight. The column Phase shows whether a disappearance ( $x$ ) or reappearance ( 2 ) is to be observed. The column headed "El. of Moon " gives the elongation of the Moon from the Sun, in degrees. The elongation increases from $0^{\circ}$ at New Moon to $180^{\circ}$ at Full Moon and on to $360^{\circ}$ (or $0^{\circ}$ ) at New Moon again. Times and position angles $(p)$, reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. $5 \mathrm{I}^{\circ} 30^{\prime}$, Long. $0^{\circ}$ ) and Edinburgh (Lat. $56^{\circ} 00^{\prime}$, Long. $3^{\circ} \mathrm{I} z^{\prime}$ west). The coefficients $a$ and $b$ are the variations in the G.M.T. for each degree of longi-
tude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about $x^{m}$ generally) to be found for any point in the British Isles. If the point of observation is $\Delta \lambda$ degrees west and $\Delta \phi$ degrees north, the approximate time is found by adding $a . \Delta \lambda+b . \Delta \phi$ to the given G.M.T.

The only bright star to be occulted during 1978 is Aldebaran (Z.C. 69z).

As an illustration the disappearance of Z.C. 8 I 4 on January 20 at Liverpool will be found from both Greenwich and Edinburgh.

|  | Greenwich | nburgh |
| :---: | :---: | :---: |
| Longitude. | 0.0 | $+3 \cdot 2$ |
| Long, of Liverpool. | $+3.0$ | $+3.0$ |
| $\Delta \lambda$. | $+3 \cdot 0$ | -0.2 |
| Latitude. | $+51.5$ | $+56 \cdot 0$ |
| Lat. of Liverpool. | +53.4 | +53.4 |
| $\Delta \phi$. | $h_{\mathrm{m}}^{+\mathbf{x} \cdot 9}$ | $\begin{gathered} -2 \cdot 6 \\ \mathrm{~h} \mathrm{~m} \end{gathered}$ |
| G.M.T. | 1807.9 | $18 \quad 18 \cdot 2$ |
| a. $\Delta \lambda$. | -2.1 | +0.1 |
| b. $\Delta \phi$. | $+4.6$ | $-7.8$ |
|  | 1810.4 | I8 10.5 |

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.
$\mathrm{N}=$ star not occulted.
$A=$ star's altitude less than $10^{\circ}$ ( $2^{\circ}$ for bright stars and planets).
$\mathrm{S}=\mathrm{Sun}$ not sufficiently below the horizon.
$\mathrm{G}=$ occultation is of very short duration.
It will be noticed that in some cases the coefficients $a$ and $b$ are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

## OCCULTATION OBSERVATIONS

Observations of the times of these occultations are made by both professional and amateur astronomers throughout the world. Such observations are later analysed at the Royal Greenwich Observatory to yield accurate positions of the Moon: this is one method of determining the difference between ephemeris time and universal time. Occultations of stars by the Moon occur almost instantapeously and many of the observations made by amateurs are obtained with the use of $\|$ stopwatch which is compared with time signal immediately after the observation. Thus an accuracy of about one-fifth of I second is obtainable, though the observer's personal equation may amount to one-third or one-half of $\underset{\sim}{\text { second. }}$

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has In slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is increase of about $3^{3}$ a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between $+20^{\prime \prime}$ and $-20^{\prime \prime}$ according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the colatitude, or complement of the latitude.

Thus in London (Lat. $5 \mathrm{I}^{\circ} 30^{\prime}$ ) the meridian altitude of Sirius is found as follows:

Altitude of equator. . . . $3^{8} \quad 3^{0}$
Declination south....... 16 4
Difference
2149
The altitude of Capella (Dec. $+45^{\circ} 59^{\prime}$ ) at lower transit is:

Altitude of pole........ 5 . 30
Polar distance of star. . . 44 or
Difference. .............. $\quad 7 \quad 29$
The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars Sivius and Canopus, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked cye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to I in brightness, Typical second magnitude stars are Polaris and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's Star Allas (see page 138). The stars Sirius and Canopus and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars fainter than the twentieth magnitude may be photographed by long exposures with the largest telescopes.

Some of the astronomical information in this AlmANACK has been taken from the Asfronomical Epheneris, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

## THE STRUCTURE OF THE UNIVERSE

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Galaxy in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Galaxy. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 300,000 kilometres a second; it takes $\mathrm{I}^{1}$ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Galaxy, and over 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. parsec equals 3.26 light years.

## THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. The 5 metre (zoo-inch) telescope, the world's largest, on Mount Palomar in California. can photograph stars of the z3rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is ro times the other, the more distant star will appear to be roo times fainter than the nearer star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in variety of wayş. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit: this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra. The distances of some double and variable stars can
be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star.

When the distance of any star has been determined and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to $=$ distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

## STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters $\mathrm{O}, \mathrm{B}, \mathrm{A}, \mathrm{F}, \mathrm{G}, \mathrm{K}, \mathrm{M}$; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like Sirius, are characterized by very strong hydrogen lines. F, G and K stars, like Procyon, our Sun, and Arcturus, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like Betelgeuse, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types $O$ to $M$ is essentially temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: $\mathrm{O}, 30,000^{\circ} ; \mathrm{B}, 18,000^{\circ} ; \mathrm{A}, \mathrm{r} 0,000^{\circ} ; \mathrm{F}, 7000^{\circ}$; G, $5500^{\circ}$; K, $4500^{\circ}$; M, $3000^{\circ}$. This sequence is also one of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence $O$ to $M$ is one of decreasing absolute brightmess. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: $\mathrm{O},-4 ; \mathrm{B},-2 ; \mathrm{A},+\mathrm{x}$; $F,+3 ; G,+5 ; K,+7 ; M,+11$. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertz-sprung-Russell Diagram (or, when colours are used instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types $O$ to M and absolute magnitude decreasing from - 4 to +Ir , or fainter, is known as the "main se-
quence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G. K and M have absolute magnitudes about o; many of those types $\Theta$ to $F$ and few of types $G$ to $M$ are still brighter, with absolute magnitudes ranging from -4 to -7 . The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about o are called giants, those of -4 to -7 are called supergiants.

The sizes of the stars have been determined mostly by theoretical calculation. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is $x, 392,000$ kilometres in diameter. The main sequence is found to be a sequence of diminishing radii; an $O$ star has a radius of about 20 times that of the Sun, while an average $M$ star has a radius of one-third of the Sun. The giant stars of types $G$ to $M$ have radii between ro and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types $O$ to $M$ and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M . Among these those classified as $R$ and $N$ stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

## DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately even in large telescopes; their binary nature is
revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. Some spectroscopic binaries, as they are called, are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is Algol, or $\beta$ Persei.

## VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by ro to 15 magnitudes in = few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernove are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

## STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Praesepe are the best known of these. The colourmagnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and $A$; red giants are present in all the clusters, and they range up to absolute magnitude - 3 . There is an additional sequence of stars with absolute magnitudes about o which is quite unlike any sequence in the diagrams for nearby stars.

## INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to
dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebula. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulæ, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulx are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebula because they are relatively bright and can be seen at large distances.

## THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novæ and supernovæ, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulx, form part of the Galaxy. The distribution of these various objects in the Galaxy is not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types $A$ to $M$ tend to be less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30.000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some external galaxies. This structure was
first shown by studying the positions of $O$ and $B$ stars; these trace out spiral arms. Radio astronomers subsequently found that interstellar neutral hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation have enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between $O$ and $B$ stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about roo thousand million times the mass of the Sun.

## STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic planc. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

## EXTERNAL GALAXIES

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral galaxies consist of a central bulge surrounded by spiral arms embedded in a diskshaped structure. The elliptical galaxies and the central bulges of the spiral galaxies are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral galaxies; the presertce of hydrogen gas has been proved by the observation of regions of glowing gas and by the

reception of radio waves on 23 centimetres wavelength. In a few of the nearer galaxies individual stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxywith diameters of roo,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about $\mathbf{1 4 0}, 000$ light years. The best known external galaxy is the Great Galaxy in Andromeda, at a distance of $2,000,000$ light years; this spiral galaxy is believed to be similar to our own Galaxy in size and stellar content. External galaxies frequently occur in large clusters, each containing hundreds of galaxies. Many galaxies are in rotation in a manner similar to our own Galaxy and with comparable periods.

## RADIO SOURCES

In addition to the ar centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulx are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebula. Recently several sources have been discovered which exhibit extremely regular variations in radio "brightness", with incredibly short periods (of the order of r second). These sources are now called "pulsars".

## QUASARS

The observation of occultations of radio sources by the Moon has led to the accurate determination of the positions of these radio sources. Thus it has been possible to use large optical telescopes with
small angular fields of view and high magnifications to photograph these positions. This has led to the discovery of a new type of object called quasar (or quasi-stellar object or QSO). On a photographic plate such objects appear almost stellar, so they are not readily identified without the help of information from the radio astronomers. Spectroscopic examination of four of them shows that, like external galaxies, they have enormous velocities of recession. Such velocities imply great distances, yet no ordinary star (or even supergiant) would be detectable at even a fraction of these distances. The answer to the question 'what are quasars?' is not yet known with any certainty but the current explanation is that they are radio sources with the shape of a star but many millions of times larger, with unusually high ultra-violet radiation and sometimes with large red shifts. Already several dozen quasars are known.

## COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulæ through the observable region of space. It has been found that in spite of the tendency of galaxies to cluster together, on a still larger scale the galaxies are distributed remarkably uniformly. Observations have shown that distant galaxies have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distaut galaxies appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. One theory postulates a gigantic initial explosion some 5,000 million years ago. Another postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Some recent observations suggest that the latter theory is no longer tenable.

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semimajor axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the Earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have at common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

## THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about $5,700^{\circ} \mathrm{C}$., but a relatively short distance inside the surface the temperature reaches $x, 000,000^{\circ}$ and deeper in the interior, near the centre, it is believed to be in the region of $\times 4,000,000^{\circ}$. Now the constitution of the Sun is similar to that of the Earth, as shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly " ionized " state the substance of the Sun acts in much the same way as a "perfect gas"
does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling on the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps $\begin{aligned} & \text { further }\end{aligned}$ ten thousand million years.

As viewed by projection through a low-power telescope the Sun presents various interesting features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of $\mid$ turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of $40^{\circ}-50^{\circ}$ north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about $7^{\circ}$ to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about $=$ million square km ., to large dark markings several thousand times as great. The largest spot ever measured (April 2947 ) covered 18,000 million square kilometres at its greatest, or approximately o 7 per cent of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from $\square$ few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots yaries in $\quad$ definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the ir-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is $\quad$ gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of $\mathrm{xr} \cdot \mathrm{x}$ years.

| Maxima |  |
| :---: | :---: |
| 工837 ${ }^{\circ}$ | $1907{ }^{\circ}$ |
| 工848. | 1917.6 |
| I860. 1 | 1928.4 |
| $1870 \cdot 6$ | 19374 |
| 1883.9 | $1947 \cdot 5$ |
| 1894' ${ }^{1}$ | 1957.9 |
|  | 1968.9 |

| Minima |  |
| :--- | :--- |
| $1843 \cdot 5$ | 1913.6 |
| 1856.0 | 1923.6 |
| $1867 \cdot 2$ | 1933.8 |
| $1878 \cdot 9$ | 1944.2 |
| 1889.6 | 1954.3 |
| $1901 \cdot 7$ | 1964.7 |

The 1957 sunspot maximum was unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as $\mathrm{H} \alpha$, the C -line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or therebouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radiocommunication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence a day or two later, of a magnetic storm. A very few large flares have had associated with them, increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are
the prominences, which extend outwards from the Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered skylight is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards for several million kilometres. When observed with radio wavelengths in the range $x 0 \mathrm{~cm}$. to 5 m . the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

## MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from $18^{\circ}$ to $28^{\circ}$. The planet is best placed for naked-eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in Great Britain at these times its actual distance from the Sun is near its minimum.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling it at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutin-

THE SATELLITES

ized with large apertures in full daylight. Recent radar observations, which are supported by theoretical investigations, give a rotation period of 59 days. Close-up photographs from space probes show that its surface has many craters.

## VENUS

Venus, next from the Sun, has a diameter only about six hundred kilometres less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as $47^{\circ}$. Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, owing to dense clouds, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the z-metre reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at $3^{\mathrm{h}} 3^{2^{\mathrm{m}}},+83^{\circ}$, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about $32^{\circ}$ to its orbit. Recent radar observations have provided the unexpected value for the period of rotation given on p. 157.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also
be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour. A Russian space probe has revealed that the lower layers are extremely dense.

## MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about $\quad$ years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 56 and soo million kilometres. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs early in September the distance may be less than 65 million kilometres and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with I telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 15 cm . aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about $4 \times \frac{1}{2}$ minutes longer than that of the Earth. The axis of rotation is inclined at about $24^{\circ}$ to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. Recent observations by a spacecraft orbiting the planet indicate that these polar caps consist of water ice. The major portion of the surface is of $\square$ featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas but it
is now known that there are no large sheets of open water. It has been claimed that changes in the tint of these areas follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of In truly seasonal character apart from the waxing and waning of the polar caps.

The controversy over the canal-like markings on Mars has ended with the successful close range photography of the surface by Mariner 4. The photographs show a surface covered with craters, but no "canals ".

Mars has an atmosphere which is considerably less dense than our own and the surface pressure has been found to be only about 5 millibars. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877 .

THE MINOR PLANETS
Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by ${ }^{\text {a }}$ central authority-now at the Cincinnati Observatory, U.S.A. At present there are over $x 600$ on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint-none has ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock revolving round the Sun. The first four, found early in the 1gth century, are also the largest. Recent radiometric measures of their diameters, in kilometres, are: Ceres rooo; Pallas 530; Juno 240; Vesta $53^{\circ}$.

The periodic times of the revolutions about the Sun vary considerably around an average of $4 \frac{1}{2}$ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than $20^{\circ}$, several exceed $30^{\circ}$, including Pallas $35^{\circ}$. The highest known, $43^{\circ}$, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 21 million kilometres of the Earth. This happened in $193{ }^{1}$ when carefully planned photographic reccrding of the planet and the surrounding stars enabled measurements of its distance to be
made, and hence $\square$ new value of the distance of the Sun from the Earth to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, or in finding the masses of Mercury or Venus.

JUPITER
Jupiter, the largest planet, has a volume over rooo times that of the Earth, but I density only onequarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.
The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about $10^{\circ}$ of the equator indicate period of approximately $9^{\text {h }} 50 \frac{2^{m}}{}{ }^{m}$, while most of those in higher latitudes give periods between $9^{\mathrm{h}} 55^{\mathrm{m}}$ and $9^{\mathrm{h}} 56^{\mathrm{m}}$, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about $+25^{\circ}$; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in $1878-80$ by its darkness and colour, is known to have existed from 183 x and the Red Spot itself may be identical with a similar object first depicted in the 17 th century and followed for many years. The physical nature of the Red Spot is $\quad$ mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1gor it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the surface are due to minute droplets or crystals of ammonia, the surface temperature having been
found by measurement to be of the order - $120^{\circ} \mathrm{C}$., which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below roo kilometres or so must be such - to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites-the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892 ; this satellite has the most rapid motion of any in the solar system. Eight other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Satellite I (Io) occulted a fifth magnitude star on I971 May 14, and from the accurate photoelectric observations of this event its equatorial diameter has been determined as $3660 \pm 4 \mathrm{~km}$. From a similar event in $197^{2}$ the diameter of Satellite III (Ganymede) was found to be $5,270 \mathrm{~km}$.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13.5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Some evidence indicates that there is connection between the positions of the satellite Io and these radio bursts.

## SATURN

This planet is unique because of its encircling ring system, which makes it II very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at $27^{\circ}$ to the planet's orbit and is sensibly that of its equator. It has been proved theoretically, and confirmed by spectroscopic observations, that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn. The extreme thinness of the rings is illustrated every $\pm 5$ years when the plane of the rings passes through the Earth; they then become almost completely invisible even in the greatest telescopes. Thus they cannot present when edgewise $\quad$ width of more than a very few kilometres.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^{\mathrm{h}} 15^{\mathrm{m}}$, in higher latitudes $10^{\mathrm{h}} 3^{8^{\mathrm{m}}}$ has been found in the northern hemisphere and $10^{\mathrm{h}} 37^{\mathrm{m}}$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disk is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the $z$-metre reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on material at very low temperatures. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has nine satellites, of which the largest, Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phoebe, has a retrograde motion.

## URANUS

This planet was discovered by William Herschel at Bath in 178 x , and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disk, which is quite obvious, though less than $4^{\prime \prime}$ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in ${ }^{1787}$; the two inner by Lassell in 1851 . Their movement is retrograde in a plane inclined $82^{\circ}$ to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be so hours; the direction is the same as that of the satellites.

Photoelectric monitoring of an occultation of a star by Uranus on 1977 March ro revealed " rings " of small satellites at distances of only $40-50,000$ kilometres from the centre of Uranus.

## NEPTUNE

This planet is I telescopic object of about the 8th magnitude, presenting 1 disk of well over $z^{\prime \prime}$ in diameter. A recent measure of its rotation period gives z2-z3 hours.

The planet was found in 1846 as a result of calculations made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near
the indicated place by Galle of the Berlin Observa-
Neptune has two satellites, of which the inner, Triton, revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite revolves in the normal direction in $\begin{gathered}\text { p period of about a year. Its orbit is remark- }\end{gathered}$ ably eccentric, and the satellite's distance from Neptune varies from $x^{\prime} 3^{-10}$ million kilometres.

## PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of $\begin{aligned} & \text { systematic search for }\end{aligned}$ a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respect from the facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth.

## THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about $5^{\circ}$ to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18.6 years.
The Moon, whose diameter is 3,476 kilometres, rotates in the same time that it revolves ( $27^{\mathrm{d}} 7^{\mathrm{h}} 43^{\mathrm{m}}$ ) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights. Recent photographs obtained from the successful Ranger series of lunar probes show craters as small as 1 metre in diameter. On 1969 July 2I, the first men (Americans) landed on the Moon and returned with samples of lunar rock and dust for subsequent laboratory analysis.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of $29 \frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such an occultation causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from $1 \times$ rather small area of the Earth.

As a result of its eastward movement among the stars the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon.

## THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a " magnetic storm ") apparently due to the action of a stream of electrified particles shot earthward from localized regions of the Sun, such as that of $=$ big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about roo kilometres; upward, it may extend to 500 kilometres or higher. Aurorae are very frequent in the so-called autoral zones (magnetic latitude about $67^{\circ}$ ); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25, and 1949 January 24-26), can be (raced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

## THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from $60^{\circ}$ to $110^{\circ}$ from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when its brightest parts may appear brighter than the Galaxy.

Occasionally, under very good conditions, an extension of the Cone may be traced right round the ecliptic. This is known as the Zodiacal Band, The Gegenschein or "Counter-glow" may also be detected as a widening of the band at the antisolar point.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micrometcorites. These probably act as centres of condensation in the formation of rain.

## METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors (" shooting-stars ") or fireballs-bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant
as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids, Perseids, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of $\begin{gathered}\text { number of extensive showers in }\end{gathered}$ daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

METEOR SHOWERS

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about ino kilometres at the beginning and about 75 kilometres at the end. The speeds vary from 15 to 80 km . per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.
Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. A number of meteorites have been found at Barwell, Leicestershire, : the result of two exploding fireballs on 1965 December 24. At the other end of the scale are the micro-meteorites which are too
small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

## COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a starlike nucleus there; and from it not infrequently extends $\square$ tail which may, in bright comets, reach a length of as much as 150 million kilometres-a fine spectacle. Most comets are found accidentally and few observers search for these objects. One of the few is G. E. D. Alcock of Peterborough, Northants, who, after seaching unsuccessfully for six years, found two new comets in August, 1959, within the space of 5 days. Two naked-eye comets which appeared in 1957 (Comet Arend-Roland in April, and Comet Mrkos in August) aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets-the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few kilometres in diameter. According to $\quad$ recent theory, the earthy material is held together by various "ices"-masses of frozen gases such as ammonia, carbon dioxide and methane -which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and m it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet whose spectacular appearances about every 75 years have been traced back over more than 2000 yearsit is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account come within reach for photographic observation every year: SchwassmannWachmann ( I ), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 52,756 kilometres, and that of the polar axis 12,714 kilometres. The mean density of the Earth is $5 \cdot 5$ times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in I lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $233^{\circ}$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is 30 kilometres a second. It makes a complete rotation on its axis in about $23^{h} 56^{\text {mi }}$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 20 metres in diameter.

## THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12 \frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^{h} 50^{\mathrm{m}}$ interval between consecutive meridian passages of the Moon. Briefly, a high tide occurs when the Moon is near the meridian because the attraction on the water is greater than on the solid earth. On the other side of the Earth the water is farther from the Moon than the solid earth and thus is less strongly attracted to the Moon and a second high tide occurs at this point. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise.and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastline and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of
past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward. (See pages 170-184.)

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2^{\frac{1}{2}}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 33 metres in the Severn Estuary and $x 6$ metres in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is increasing by about a thousandth of a second every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM
The discovery that a piece of the commonly accurring iron ore, magnetite or lodestone, is subject to a directing force causing it to take up a definite direction when freed from other restraint seems to have been made in China during the first century A.D., if not somewhat earlier. Steel needles, magnetized by rubbing with a piece of lodestone and floated on water, were being used as navigational aids by Chinese sailors before A.D. yooo. From this primitive device the Mariner's compass subsequently developed. That the direction, though roughly north to south, is by no means accurately so, was also known to the Chinese before A.D. 1000.

William Gilbert, in 1600 , demonstrated that in the proximity of the Earth magnetized needles behave much as if the Earth itself were a large magnetized sphere. It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634 , found the direction to be about $4^{\circ}$ east of north, whereas there was undoubted evidence that in 1580 it had been about $1 y^{\circ}$ east in the same neighbourhood. In 1722 , Graham, the clockmaker, found that the direction oscillated slowly through a small angle every day. In the

British Isles the movement is eastwards till about o8 ${ }^{\text {h }}$ U.T., then rather quickly westwards till about $14^{\text {h }}$ U.T., after which there is a gradual return eastwards. The amplitude may be as much as $15^{\prime}$ in the summer.

A magnetic compass points along the horizontal component of a magnetic line of force. These directions converge on the " magnetic dip-poles". At these poles a freely suspended magnetized needle would become vertical. Not only do the positions of these poles change with time, but their exact location is ill-defined, particularly so in the case of the north dip-pole where the lines of force, on the north side of it, instead of converging radially, tend to bunch into a channel. Although it is therefore unrealistic to attempt to specify the locations of the dip-poles exactly, the present adopted positions are $76^{\circ} \cdot 2 \mathrm{~N} ., 100^{\circ} \cdot 2 \mathrm{~W}$. and $65^{\circ} \cdot 8 \mathrm{~S}$., $139^{\circ} \cdot 5$ E. The two magnetic dip-poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 1,100 kilometres. The distances of the magnetic dip-poles from the north and south geographic poles-are about 1,600 and 2,700 kilometres respectively.

There is also " "magnetic equator", at all points of which the vertical force is zero and a magnetized needle remains horizontal. This line runs between $2^{\circ}$ and $10^{\circ}$ north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it recrosses the geographical cquator in mid-Pacific.
Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Secular changes differ throughout the world. Although the London observations strongly suggest a cycle of several hundred years, an exact repetition is unlikely.

$$

In order th variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonic) passing through all places at which specified values of declination will be found at the date of the chart.

In the British Isles, isogonic lines now run approximately north-east to south-west. Though there are considerable local deviations due to geological causes, a rough value of magnetic declination may be obtained by assuming that at $50^{\circ} \mathrm{N}$. on the meridian of Greenwich, the value in 1978 is $6^{\circ} 13^{\prime}$ west and allowing an increase of $x 8^{\prime}$ for each degree of latitude northwards and one of $28^{\prime}$ for each degree of longitude westwards. For example, at $53^{\circ} \mathrm{N}$., $5^{\circ}$ W., declination will be about $6^{\circ} 13^{\prime}$ $+54^{\prime}+540^{\prime}$, i.e. $9^{\circ} 27^{\prime}$ west. The average annual change at the present time is about $6^{\prime} \cdot 5$ decrease.

The number of magnetic obscrvatories now approaches zoo-widely scattered over the globe. In Great Britain three are maintained by the Government: at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands, while a fourth is maintained by Stonyhurst College, Lancashire. Some recent annual mean values of the magnetic elements for Hartland are given below.

The normal worldwide terrestrial magnetic field corresponds approximately to that of a very strong small bar magnet near the centre of the Earth but with appreciable smooth spatial departures. The origin and slow secular change of the normal field is not yet fully understood but is generally ascribed to electric currents associated with fluid motions within the Earth's core. Superposed on the normal field are local and regional anomalies whose magnitudes may in places exceed that of the normal field; these are due to the influence of mineral deposits in the Earth's crust. A small proportion of the field is of external origin, mostly associated with electric currents in the ionosphere. The configuration of the external field and the ionization of the atmosphere depend on the incident particle and radiation flux. There are, therefore, short-term and non-periodic as well as diurnal, 27 -day, seasonal and Ix-year periodic changes in the magnetic field, dependent upon the position of the Sun and the degree of solar activity.

| Year | $\begin{gathered} \text { Declina- } \\ \text { tion } \\ \text { West } \end{gathered}$ | Dip or Inclination | Horizontal Force | Vertical <br> Force |

Magnetic Storms. Occasionally-sometimes with great suddenness-the Earth's magnetic field is subject for several hours to marked disturbance. In extreme cases, departures in field intensity as much as one tenth the normal value are experienced. In many instances, such disturbances are accompanied by widespread displays of aurorae, marked changes in the incidence of cosmic rays, an increase in the reception of 'noise' from the Sun at radio frequencies together with rapid changes in the ionosphere and induced electric currents within the earth which adversely affect radio and telegraphic communications. The disturbances are generally ascribed to flux changes in the stream of neutral and ionized particles which emanates from the Sun and through which the Earth is continuously passing. Some of these changes are associated with visible eruptions on the Sun, usually in the region of sunspots. There is a marked tendency for disturbances to recur after intervals of about 27 days, the apparent period of rotation of the Sun on its axis, which is consistent with the sources being located on particular areas of the Sun.

## ARTIFICIAL SATELLITES AND SPACE PROBES

The progress of rocket research during the last war led to the development by the Germans in 1944 of the V.a rocket which, if fired vertically, attained $I$ height of $x 80 \mathrm{~km}$. Before the end of the decade the U.S. rocket engineers had increased this maximum height to 400 km by using ■ twostage rocket, the first stage being "V. 2 and the second a WAC Corporal. Plans for using multistage rockets to put artificial satellites into orbit around the earth during the International Geophysical Year (July 1957-December 1958) were announced by both the U.S. and the U.S.S.R. Such projects also called for an immense effort in establishing optical, radio, and radar tracking facilities around the world.

The historic event which heralded the Space Age occurred on 1957 October 4 when the U.S.S.R. successfully injected a "sputnik" into an orbit inclined at $65^{\circ}$ to the earth's equator. One month later "Sputnik ${ }^{\text {" " } \mathrm{m}}$ a also put into orbit, carrying 1 dog that survived the ascent trajectory and lived for several days orbiting the earth. The rate of satellite launching has increased since 2957 and by the end of 1960 the number of artificial satellites in orbit around the Earth exceeded the number of natural sateliites known to be in the Solar System. All the satellites launched up to the end of 1960 have been sent up in the same direction as the rotation of the Earth, i.e., eastwards. Thus they are able to start with the benefit of the Earth's rotational velocity at the particular launching site. This is why these satellites always appear to move in an easterly direction. However, the first satellite launching of $\mathbf{2 9 6 I}$ (Samos 2) achieved a retrograde orbit.

## Satellite Orbits

To consider the orbit of artificial satellite it is best to imagine that one is looking at the Earth from a distant point in space. The Earth would then be seen to be rotating about its axis inside the orbit described by the rapidly revolving satellite. The inclination of a satellite orbit to the Earth's equator (which generaliy remains almost constant throughout the satellite's lifetime) gives at once the maxiㅍum range of latitudes over which the satellite passes. Thus $\quad$ satellite whose orbit has an inclination of $53^{\circ}$ will pass overhead all latitudes between S. $53^{\circ}$ and N. $53^{\circ}$, but would never be seen in the zenith of any place nearer the poles than these latitudes. If we consider - particular place on the earth, whose latitude is less than the inclination of the satellite's orbit then the Earth's rotation carries this place under first the northbound part of the orbit and then, later on, under the southbound position of the orbit, these two occurrences being always less than 12 hours apart for satellites moving in direct orbits (i.e. to the east). For satellites in retrograde orbits the words " northbound" and "southbound" should be interchanged in the preceding statement. As the value of the latitude of the observer increases and approaches the value of the inclination of the orbit, so this interval gets shorter until (when the latitude
is equal to the inclination) only one overhead passage occurs each day.

## Orbital Variations

The relatively simple picture described above is unfortunately complicated by the considerable variations in the shape, orientation and size of the orbit during asatelite's lifetime. The major variations are due to the Earth's oblateness and to air-drag. A third cause, radiation pressure from the Sun, is noticeable only on large satellites of extremely low density.
The oblate shape of the Earth-the equatorial diameter is 43 km longer than the polar diameter -has two marked effects min a satellite orbit. It causes I regression of the nodes, amounting to several degrees $\quad$ day for close satellites. Thus from $=$ point in space, the whole orbit is seen to twist around the Earth, making a complete turn of $360^{\circ}$ within few months. This regression, which may also be described as the rotation of the orbital plane around the Earth's axis, is in the opposite direction to the satellite's motion, i.e. the orbit of $\square$ satellite with $\|$ direct motion regresses to the west. The actual amount of the regression depends, first, on the inclination of the orbit to the equator, being greatest at low inclinations and zero for true polar orbit (inclination $90^{\circ}$ ). It is also dependent on the distance of the satellite from the Earth, being greatest for small orbits. At the distance of the Moon the regression is only $19^{\circ}$ - year.

The orbit of Samos 2 was extremely interesting from this point of view as its regression to the east was at an almost identical rate as the movement of the Sun. Thus there was hardly any change in the area of visibility over $\quad$ long period of time.

The other effect the Earth's oblateness has on I satellite orbit is to cause a rotation of the line of apsides (i.e. the line joining the perigee and apogee points of the orbit). The rate of the rotation is dependent on the inclination of the orbit, and also on the distance of the satellite, again being greater for close satellites than for more distant ones. The value of this rotation has its greatest positive value (i.e. it moves forward along the orbit in the same direction as the satellite) at the equator and becomes zero at win inclination of $63^{\circ} \cdot 4$. As the inclination moves from $63^{\circ} \cdot 4$ to $90^{\circ}$ the value increases again numerically, but with the opposite sign, the motion of the line of apsides being backwards along the orbit.
Even at heights of several hundred kilometres there is still sufficient atmosphere to cause a retarding effect on satellites. Although air-drag will have most effect around the perigee point the actual result is to reduce the height of the apogee point with hardly any change in perigee height and thus to decrease the eccentricity of the orbit until, in the final stage of a satellite's life-time, the orbit is almost circular. Unfortunately the air density at perigee height is not constant. It alters as the perigee moves from daylight into darkness and from darkness into daylight, and also as the latitude of perigee changes

due to the rotation of the line of apsides．There is already some evidence that the atmospheric density varies with the sunspot cycle．In addition unpredictable short－period variations in the output of solar radiation may also occur and these have the effect of increasing the air density at any given height．Thus the air－drag on a satellite is by no means I constant factor and this is the reason why it is not possible to forecast accurately the position of a satellite for any considerable period of time． There 1 also some retardation due to electrified particles but this effect may be included with the air－drag．

Radiation pressure from the Sun only has any appreciable effect on large satellites of extremely low density such as the 30 metre diameter balloon， Echo x．For such satellites，however，this effect can be severe，and for heights greater than a few hundred kilometres，it can equal or even surpass that due to air－drag．The effect on the orbit is very much more complicated than that due to air－drag，and even the signs of the variations can change period－ ically with time．Thus it is possible for the eccentricity to increase rather than decrease，with mincrease in apogee height and adecrease in perigee height．

For close artificial satelites the gravitational attractions of the Sun and Moon are many thousand times weaker than that of the Earth＇s equatorial bulge and need only be considered in an extremely precise analysis of observational material．

## Height and Velocity

The mean height of a satellite above the Earth＇s surface，which is determined by its orbital velocity， is related to its period of revolution around the Earth $\square$ is shown by the table above．

As the orbit shrinks due to air－drag，both the mean height and the period decrease so that the retarding effect of air－drag actually＝u the satellite to move faster，though in a smaller orbit．

## Satellite Launchings，1957－75

Many different types of orbit have been achieved though the vast majority have had a direct motion． The majority of the Russian satellite orbits have had inclinations of $65^{\circ}$ or $49^{\circ}$ and orbits entirely below kilometres in height．An important excep－ tion was Lunik $\|$ whose original inclination was $75^{\circ}$ and initial apogee height $470,000 \mathrm{~km}$ ．This satellite orbited the Moon on its first revolution，returning with the first photographs of the other side of the Moon，which were transmitted back to the Earth when near perigee．
The American satellites have been injected into orbits of various inclinations．The early Explorers and Vanguards are in orbits of inclination about $28-35^{\circ}$ while near－polar orbits were achieved with the Discoverers．Other series of launchings such as the Transit，Tiros and Echo put satellites in orbits of intermediate inclinations．In contrast to the heavy，but short－lived，Russian satellites，a number of those launched by the U．S．have been very small and have been put in larger orbits which have given them considerably longer life－times．

A third Anglo－American satellite，Ariel 3，was launched on May 5，1967，and has been of great interest to visual observers．Sets of mirrors and highly reflective solar cells on its sides cause the observer to see a series of flashes and the observa－ tions are used to determine the direction of the axis of rotation of the satelite．
In order to monitor the Arab－Israeli war，and in particular the Egyptian battlefield，the Russians launched a number of Cosmos satelites in the first half of October 1973．The orbits were very care－

fully chosen to take the satellites, at low heights, directly over the battlefield during daylight.

The space war is hotting up-two American D.O.D. satellites were blinded by powerful infrared emissions from west Russia on October 18 I975 and November 17/18 1975. Recently the number of satellites in orbit increased markedly due to the break-up of a number of American and Russian satellites. It seems likely that 5 American and 4 Russian satellites were targets for rockets (fired from the ground) designed to prove their capabilities of destroying satellites in orbit. One of the satellites involved was the naked-eye balloon satellite Pageos A (1966-56A).

Apart from their names, e.g. Cosmos 6 Rocket or Injun 3, the satellites are also classified according to their date of launch. Thus $1961 \alpha$ refers to the launching of Samos 2 . The next satellite launching was $196 x \beta$ and so on. A number following the Greek letter is intended to indicate the relative brightness of the satellites put in orbit. From the beginning of 1963 the Greek letters are replaced by numbers and the numbers by roman letters e.g. 1963 -oIA. In this table are given the designation and names of the main objects in orbit (in the order $\mathrm{A}, \mathrm{B}, \mathrm{C} \ldots$ etc.), the launch date and some initial orbital data. These the inclination to the equator ( $i$ ). the nodal period of revolution ( $P$ ), the eccentricity, $e$, and the perigee height. The names of those satellites which have already disintegrated in the Earth's atmosphere or returned to the Earth's surface are printed in italics. A satellite which carried a human being is indicated by an asterisk.

Since the last edition of Whitaker's Almanack the following satellites launched in the years 1967-75 have disintegrated in the Earth's atmosphere:-

| $1967-72 \mathrm{C}$ | $1968-85 \mathrm{~A}$ | $1969-45 \mathrm{~B}$ | $1969-68 \mathrm{~B}$ |
| :--- | :--- | :--- | :--- |
| $1971-64 \mathrm{~A}$ | $1971-64 \mathrm{D}$ | $1971-115 \mathrm{~A}$ | $197 x-115 \mathrm{~B}$ |
| $1972-37 \mathrm{~A}$ | $1972-37 \mathrm{G}$ | $1973-07 \mathrm{~A}$ | $1973-07 \mathrm{E}$ |
| $1973-82 \mathrm{~A}$ | $1973-101 \mathrm{~A}$ | $1974-47 \mathrm{~A}$ | $1974-60 \mathrm{D}$ |
| $1974-70 \mathrm{~A}$ | $1974-76 \mathrm{~B}$ | $1974-104 \mathrm{~A}$ | $1975-67 \mathrm{~A}$ |

## Observation of Satellites

The regression of the orbit around the Earth alternate periods of visibility and invisibility, though this is of little concern to the radio or radar observer. To the visual observer the following cycle of events normally occurs (though the cycle may start in any position): invisibility, morning observations before dawn, invisibility, evening observations after dusk, invisibility, morning observations before dawn, and so on. With reasonably high satellites and for observers in high latitudes around the summer solstice the evening observations follow the morning observations without interruption as sunlight passing over the polar regions can still illuminate satellites which are passing over temperate latitudes at local midnight. At the moment all satellites rely on sunlight to make them visible though is satellite with a flashing light has been suggested for a future launching. The observer must be in darkness or twilight in order to make any useful observations and the durations of twilight and the sumrise, sunset times given on page II of each month will be a useful guide.

Some of the satellites are visible to the naked eye and much interest has been aroused by the spectacle of a bright satellite disappearing into the Earth's shadow. The event is even more fascinating telescopically as the disappearance occurs gradually as the satellite traverses the Earth's penumbral shadow, and during the last few seconds before the eclipse is complete the satellite may change colour (under suitable atmospheric conditions) from yellow to red. This is because the last rays of sunlight are refracted through the denser layers of our atmosphere before striking the satellite.

Some satellites rotate about one or more axes so that $\|$ periodic variation in brightness is observed. This was particularly noticeable in several of the U.S.S.R. satellites.

Satelite research has already provided some interesting results. Among them may be mentioned - revised value of the Earth's oblateness. $x / 298^{\circ} 2$, and the discovery of the Van Allen radiation belts.

## ROYAL OBSERVATORIES

Royal Greenwich Observatory Herstmonceux, Sussex

The Royal Observatory was established at Greenwich in 1675 by Charles II for improving methods of navigation. Latterly the growth of London, with its smoke and bright lights, seriously hampered astronomical observations there, and it was decided in 1946 to move the telescopes to Herstmonceux Castic in Sussex. The removal was completed by 1958 . The meridian of zero longitude still passes through the old site, which now houses the Department of Navigation and Astronomy of the National Maritime Museum.
At the Observatory astronomical measurements are made of the positions, motions and distances of the heavenly bodies, and of such physical characteristics tures. Two meridian instruments and six equatorially-mounted telescopes are devoted to this work, and the Isaac Newton telescope, $\quad 2.5$ metre reflector for the min of any qualified British astronomer, was completed in 1967. The Observatory is responsible for the time service of the United Kingdom and the time zones of the world based on Greenwich Mean Time.

## H.M. Nautical Almanac Office

The Nautical Almanac was first published for 1767 by the Board of Longitude. The Office is now a department of the Royal Greenwich Observatory. Annual publications-Astronomical Ephemeris, Nautical Almanac, Air Almanac, Star Almanac.

## Royal Observatory <br> Blackford Hill, Edinburgh 9

The Observatory was founded by the Astronomical Institution in $\mathbf{x 8 1 8}$ and its Royal Charter dates from 1822 . Its endowments include the Crawford Collection of historical books and manuscripts. It is now responsible for some major national astronomical facilities funded by the Science Research Council, including $\quad x \cdot 2 \mathrm{~m}$ Schmidt telescope in Australia and a 3.8 m infrared telescope in Hawaii. The Observatory specializes in the development of advanced technologies and the application of these to studies of the properties of matter in extreme environments in space. The Astronomy Department of Edinburgh University is housed in the Observatory.
Director, Astronomer Royal for Scolland and Regius Professor of Astronomy in the Universily of Edinburgh, Prof. V. C. Reddish, O.B.B., D.SC.

## TIDAL CONSTANTS

The Time of High Water at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 172, 173, etc.) and adding thereto the quantities annexed. The columns headed "Springs" and "Neaps" show the height of the tide above datum for Mean High Water Springs and Mean High Water Neaps respectively.
Tidal data is no longer available for a number of places which formerly appeared in the list below. These places (with the name of the substitute now recorded) are: Air Point (Mostyn Quay); Ardrishaig (East Loch Tarbert): Arisaig (Loch Moidart); Ayr Pt., I.o.M. (Peel); Beachy Head (Eastbourne); Beaumaris (Menai Bridge); Brieile (Scheveningen); Broughty Ferry (Newburgh); Burryport (Whiteford Lighthouse); Caen (Cayeux); Caernarvon (Llanddwyn Isld.); Dumbarton (Bowling); Dumfries (Port Carlisle); Fareham (Itchenor); Fifeness (Anstruther Easter); Glasson Dock (Tarn Pt.); Gravesend (Tilbury Dock); Greenwich (R. Albert Dock); Hythe (Totland Bay); Lancaster (Duddon Bar); Lynmouth (Porlock Bay); Nash Pt. (Chepstow); Needles Pt. (Freshwater Bay); Neath (Porthcawl); Nore Lt. (Chatham); Port Harrington (Heston Islet); Portishead (Avonmouth); St. Agnes (Coverack); St. Mary's (Sennen Cove); Start Pt. (Lulworth Cove); Stockton (Seaham); Sutton Bridge (Blacktoft); Torbay (Torquay); Wooluich (Hammersmith Br.); Worms Head (Ferryside); Honfleur Harbour (Duclair).

- Approximate figures only, owing to abnormality of tides in the
$\dagger$ ist H.W. (Springs).

## NOTES ON TIDAL PREDICTIONS

## Changes in Chart Datum

During recent years the Department of the Hydrographer of the Navy has been carrying out a survey of tidal levels. On the conclusion of each section of the survey the Department is taking the opportunity to regularize the sequence of chart datums so that eventually chart datums throughout the British Isles will approximate to the Lowest Astronomical Tide, i.e. the lowest level which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions.

In some cases the changes in chart datum will be appreciable (perhaps as much as I metre) and the resulting predictions will appear to give heights of tide quite different from those of previous years. These changes do not imply that a physical change has taken place in tidal conditions.

It will be found that, where such datum changes have been made, the relationship between Ordnance Datum and the datum of the predictions will also have been altered. In order to compare the predictions for one year with those of another year for which the datum has been altered, it is necessary to refer both years to the same datum. Ordnance Datum (Newlyn) is in convenient datum to which tidal heights may thus be referred.

Example.-In 1972, at Folkstone, the highest
predicted high water was 22.8 feet ( $=6.9$ metres) above chart datum; chart datum for that year was ro.06 feet ( 3.07 metres) below Ordnance Datum (Newlyn). In 1973 the highest predicted high water was 7.4 metres above chart datum, while chart datum for this year was altered to 3.75 metres below Ordnance Datum (Newlyn). To compare these two maximum predicted levels we must reduce both to Ordnance Datum (Newlyn) with the following results:-

$$
\begin{aligned}
& 19726 \cdot 9-3 \cdot 07=3.83 \text { metres } \\
& 1973.74-3.75=3.65 \text { metres }
\end{aligned}
$$

Thus it will be seen that the highest prediction for $x 973$ is approximately 0.2 metres lower than for 1972.

Tidal predictions for London Bridge, Liverpool, Avonmouth, Hull and Leith are computed by the Institute of Oceanographic Sciences, copyright reserved. Tidal predictions for Dún Laoghaire are based upon standard Port data computed by the Institute of Oceanographic Sciences, copyright reserved. Tidal predictions for Greenock are Crown Copyright and have been supplied by the Institute of Oceanographic Sciences with the permission of the Controller of H.M. Stationery Office and the Hydrographer of the Navy.

## Chronological Rotes

## TIME MEASURES

Kelvin ( $x 883$ ) estimated the age of the earth's crust at $20-400$ million years. Study of radioactivity has since shown cooling to have been slower. Holmes and others gave $x, 500-2,000$ million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for $\square$ period down to about 5000 million years ago.
Palatezoic (Old Animal Life) Periods include:-
Cambrian, Ordovician and Silurian rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed $\quad$ major phase of moun-tain-building, called Caledonian because studied early in Scotland, characterized by N.E.-S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.
Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about yoo million years and then there followed a major phase of mountain-building called Hercyian because widespread in W. Germany and adjacent areas. In Britain there are E.-W. lines of hills and valleys, and some $\mathrm{N} .-\mathrm{S}$.
Mesozoic (Middle Forms of Life) Perrods in-clude:-
Permian rocks, widespread in Perm district, U.S.S.R. Triassic, including New Red Sandstone. Jurassic, important in the Jura Mts. Cretaceous, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

Canozoic or Cenozoic (Recent forms of Life) Periods include:-

Eocene. A few existing genera or species. Oligocene. A minority of existing forms. Miocene. Approach to a balance of existing and extinct forms. Pliocene. A majority of existing forms. Pleistocene. A very large majority of existing forms. Holocene. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circumPacific phases of mountain building reached their climax.
During the Pleistocene period ice sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by $100-200$ metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:-
(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.
(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.
(c) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.
(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.
(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to I50 thousand years ago.
(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.
(g) The ultimate series of glaciations (probably 3. preceded perhaps by a cool phase), the Wurm of Penck's series. From about $x \times 5$ to rather more than $=$ thousand years ago.
(h) The last glacial retreat merging into the Holocene period about zo,000 or 8,000 years ago.

## MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraai have been found remains of Australopithecus, Plesianthropus and Paranthropus, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene.

Java and Peking finds began with Dubois' discovery ( $\mathbf{z 8 9 z}$ ) of imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later fiads by von Koenigswald and by Weidenreich ( $1937-4 \mathrm{x}$ ) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name Meganthropus has been used). The specimens are usually given a Middle Pleistocene age. Oppenoorth ( 1932 ) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called Sinanthropus are broadly like the Java finds; the name Pithecanthropus had better be used for all.

A jaw from Mauer, Heidelberg, found r902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or latePleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Kabwe (formerly Broken Hill), Zambia, $\quad$ related to the Neandertal group.

Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and Jaw is ended. The skull was dated by Oakley's method late Pleistocene, or later, so the old name Eoanthropus is inappropriate. The ape-like jaw ras found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the Pitecanthropus group, became extinct. Well-known specimens of Im of modern type with diversity of form have been found at Combe Capelle, CroMagnon, Chancelade and elsewhere in the later Pleistocene France and others in Czechoslovakia.

## HUMAN CULTURAL STAGES

Until about I or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand nu (Abbevillean and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.-Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated cores and shaped very skilfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palæolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave IIII improved control of shape, carpentering, weaving and other inventions. In all this development the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as I source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of rivermud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe min the one hand and N . China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses,
furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in northwest Europe. With the spread of iron, especially about 2,000 to 3,000 years ago, northwest Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters viâ Alaska may have occurred in the late Pleistocene. Probably good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

## TIME MEASUREMENT AND CALENDARS

## MEASUREMENTS OF TIME

Measurements of Time.-These mex based on the time taken by the earth to rotate on its axis (Day); by the moon to revolve round the earth (Month); and by the earth to revolve round the w (Year). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the Day, which begins midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to an at noon (when the sun crosses the meridian), and these hours are designated A.M. (ante meridiem); and again from noon up to 12 at midnight, which hours are designated P.M. (post meridiem), except when the Twenty-four Hour reckoning is employed. The 24 -hour reckoning ignores A.M. and P.M., and the hours are numbered o to 23 from midnight to midnight.

Colloquially the 24 hours are divided into day and night, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into morning, the early part of daytime, ending at noon; afternoon from noon to E.m. and evening, which may be said to extend from if p.m. until midnight. Night, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the Days-Sunday, Monday, Tuesday (Tiw = God of War), Wednesday (Woden 1 Odin), Thursday (Thor), Friday (Frig= wife of Odin), and Saturday unt derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnius).

The Week is I period of 7 days.
The Month in the ordinary calendar approximately the twelfth part of year, but the lengths of the different months vary from 28 (or 29 ) days 3x.

The Year.-The Equinoctial or Tropical Year the time that the earth takes to revolve round the sun from equinox to equinox, or $365^{\prime 2422}$ minII solar days. The Calendar Year consists of 365 days, but y year the date of which is divisible by 4, without remainder, is called bissextile (see Roman Calendar) or Leap Year and consists of 366 days, one day being added to the month February, so that - date "leaps over" day of the week. The last year of a century is not a leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.-Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 2 . Thus the Civil or Legal date 2658 March 24, was the same day 1659 March 24 Historical; and a date in that portion of the year written as:

March $24165 \%$, the lower figure showing the Historical year.

The Masonic Year.-Two dates are quoted in warrants, dispensations etc., issued by the United Grand Lodge of England, those for the current year being expressed as Anno Domini 1978-Anno Lucis 5978. This Year of Light is based on the Book of Genesis I: 3, the 4000 year difference being derived from Ussher's Notation, published in 1654, which placed the Creation of the World in 4,000 B. C.

Regnal Years.-These are the years of usovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 26 of the present Queen began on Feb. 6, 1977. The system was used for dating Acts of Parliament until 1962 . The Summer Time Act of 1925 , for example, is quoted as 15 and 16 Geo . V. c. 64 , because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in rgor, so that Acts passed in that seign are, in general, quoted with only one year number, but year io of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1920 are headed to Edw. VII. and x Geo. V.; Acts passed in 1936 were dated $x$ Edw. VIII. and © Geo. VI.; Acts passed in $195^{2}$ were dated 16 Geo. VI. and I Elizabeth II. Since 1962 Acts of Parliament have been dated by the calendar year.

New Year's Day-In England in the seventh century, and as late m the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice al adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (excusive of Scotland), $=$ opposed to the Historical, which already began on Jan. I, began with "Lady Day" until $x 75$ I. But in and since 1752 the civil year has begun with Jan. x. Certain dividends are still paid by the Bank of England an dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament ( 39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. $\mathcal{I}$ in 1600 . On the Continent of Europe Jan. I was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in $\times 556$, Prussia, Denmark and Sweden in 1559 , France 5564, Lorraine 2579 , Protestant Netherlands $\mathbf{~} 583$, Russia 1725, and Tuscany 1751.

The Longest Day.-The longest day measured from sunrise to sunset at any place is the day on Which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place in the northern or southern hemisphere; in other words, it is the day of the Calendar
a Soistice falls. If a Solstice falls on June ar late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only In second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 23 will be the longest day there and at places in Eastern longitudes.
But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is $365 \frac{1}{2}$ days less about 12 minutes, and therefore, if a Solstice happens late on June 31 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back day in the Calendar. For the remainder of this century the longest day will fall each year ou June $2 x$.
Because of the 13 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier the century progresses. In the year the Summer Solstice reaches its earliest date for 100 years, i.e., June $2 \mathbf{x}^{\mathrm{d}} 02^{\text {h }}$.

To remedy this the last year of a century is in most cases not I Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year $\begin{aligned} & \text { Leap Year. }\end{aligned}$

The Shortest Day.-Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. For the remainder of this century the shortest day will fall on Dec. ax in two years of four and on Dec. - in the remaining two years. In the year 2000 the Winter Solstice reaches its earliest date, Dec. i.e.o, $2 \mathrm{I}^{\mathrm{d}} \mathrm{z} 3^{\mathrm{h}}$. The difference due to locality also prevails in the ine sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which w- the time of Apparent noon to be continuously later, day by day, and so in lur aire counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combinations causes the date of earliest sunset to be Dec. 82 or 13 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sumset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day. - The Lord Mayor of London was previously elected on the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be $I$ Sunday.
The day of election was altered to Oct. 16 in s346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. il and 29 respectively until 1753. In 2753. when Sept. 3 was reckoned $=$ Sept. $x 4$ at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. The Lord Mayor now presented to the Lord Chief

Justice at the Royal Courts of Justice, on the second Saturday in November to make the final declaration of office, having been sworn in at Guildhall on the preceding day.

Dog Days.-The days about the heliacal rising of the Dog Star, noted from ancient times the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July to August 15.

Metonic (Lunar, or Minor) Cycle. - In the year 432 B.C. Meton, an Athenian astronomer, found that 335 Lunations are very nearly, though not exactly equal in duration to 89 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the umin days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of a year in the Cycle is called the Golden Number of that year.
Solar (or Major) Cycle.-A period of twentyeight years, in any corresponding year of which the days of the week recur on the nim day of the month.

Julian Period.-Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year $47 \times 3$ B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indication ( $28 \times 19 \times 15$ ).
Roman Indication.-A period of fifteen years, instituted for fiscal purposes about A.D. 300.
Epact. - The age of the calendar Moon, diminished by one day, on January $x$, in the ecclesiastical lunar calendar.

## THE FOUR SEASONS

Spring, the first season of the year, is defined astronomically to begin in the Northern Hemisphere at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 2I) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In Great Britain, Spring in popular parlance comprises the months of February, March and April; in North America the months of March, April and May. In the Southern Hemisphere Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign of Cancer (about June 22). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June in or 22 ). Summer terminates at the Autumnal Equinox. In popular parlance Summer in Great Britain includes the months of May, June, July and August, Midsummer Day being June 24. In North America the season includes the months of June, July and August.
AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e., about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In Great Britain it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. $\mathbf{z 8}$ ) and is known -1 "St. Luke's Summer." In North America,

Autumn, $=$ "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the Southern Hemisphere it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 2x) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In Great Britain
the manum is popularly held to comprise the months of November, December and January, mid-winter being marked by the Shortest Day. A wint period sometimes occurs round about Martinmas (Nov.ri) and is known as "St. Martin's Summer." In North America the season includes the months of December, January and February. In the Southern Hemisphere it corresponds with Summer of the Northern Hemisphere.

## THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (Ante Christum), and A.D. (Annus Domini). The correlative dates of the epoch are the $4^{\text {th }}$ year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 376 I (Jewish Chronology), and the $47 \times 4$ th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used aili nil centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. $8 \times 6$. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.-In the Julian Calendar all the centennial years were Leap Years, and for this uII towards the close of the sixteenth century there was a difference of $=$ days between the tropical and calendar years; or, in other words, the equinox fell on March in of the Calendar, whereas is the time of the Council of Nicaea, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 186). This change adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders IJan. 1,1583 , Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700 , Sweden (gradually) by the omission of eleven leap days, x700-1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 24). This Gregorian Calendar was adopted by Japan in 1872 , China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in xgr8, by Yugoslavia and Rumania in 19x9, and by Greece in February, 1923. The Russian, Greek, Serbian and Rumanian Churches did not abandou the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles x800, and has been 13 days since 1900 . It happened that - change of the beginning of the year from March 25 to January I ww made in England in 1752 , the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a which is not strictly correct, but is nevertheless expressive.

The Dominical Letter is one of the letters A-G which moused to denote the Sundays in successive years. If the first day of the year is a Sunday the letter is $\mathbf{A}$; if the second, $\mathbf{B}$; the third, C ; and so on. Leap year requires two letters, the first for Jan. 1-Feb. 39, the second for March z-Dec. 3z.

Epiphany.-The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of exceptional importance from the time of the Council of Nicaea (A.D. 325) the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain a it influenced dates, ecclesiastical and lay, e.g. Plow Monday, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.
Lent.-The Teutonic word Lent, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from AngloSaxon times, at least, it has been used as the equivalent of the more significant Latin term Quad ragesima, meaning the "Forty Days" or, more literally, the fortieth day. As early a the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. Ash Wednesday is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.-It has been suggested that the unmeaning application of the names Sexagesima and Septuagesima to the second and third Sundays before Lent was made by analogy with the names Quadragesima and Quinquagesima. Another less likely conjecture is that Septuagesima means the seventieth day before the Octave of Easter. It is not certain whether the name Quinquagesima is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of Quadragesima (New English Dictionary).

Palm Surday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (when palm is not available) by branches of willow gathered for usi in the decoration of churches on that day.

Maundy Thursday, the day before Good Friday, the name itself being a corruption of dies mandati (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full mooc which happens upon, or next after, the zxst day of March; and if the full mimill happens upon I Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament ( 24 Geo . II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points min given in the early pages of the Book of Common Prayer. The Moon referred to is not the real Moon of the heavens, but a hypothetical Moon on whose Full " the date of Easter depends, and the
lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the Paschal Full Moon.
A Fixed Easter.-As at present ordained, Easter falls $=$ one of 35 days-(March 22-April 25). On June 15,1928 , the House of Commons agreed to - motion for the third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday afler the second Saturday in April. Easter would thus fall between April 9 and 85 , both inclusive-that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Efforts have been made recently by the World Council of Churches to secure a unanimous choice of date for Easter by its 239 member Churches. Press reports suggested the second Sunday in April as their most likely choice.
Holy Days and Saints Days were the normal factors in early times for setting the dates of future and recurrent appointments, e.g. the Quarter Days in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Hoty Angels, white Term Days in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). Law Sittings in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73 , but (with the exception of All Saint's Day) "days" are appointed only for those whose names are mentioned in Scripture. Red Letter Days (see also p. 225) were Holy Days and Saints Days indicated in carly ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325,
and spectal services are set apart for them in the Book of Common Prayer.
Rogation Days.- These are the Monday, Tuesday and Wednessay preceding Ascension Day, "Holy Thursday ", and in the fifth century were ordered by the Church to be observed as Public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds ".

Ember Days.-The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after ( $x$ ) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13 .
Whit Sunday.-It it generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptized. But other derivations have been suggested.
Trinity Sunday.- The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England = "after Trinity") in the Roman Catholic" Church Sundays are reckoned "after Pentecost ".
Thomas Becket, called by his contemporaries Thomas of London (born 1118 ; murdered Dec. 29, x170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.
Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27 th after Trinity if Easter falls on one of the days, March 22-26 inclusive. It is the zznd after Trinity when Easter Day is on April 24 or 25 . If the date of Easter were determined as proposed (see Fixed Easter) there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9 . With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be fifth Sunday when Easter Day fell o o Aprill 55 or April $\times 4$, the year being i leap year.

A TABLE OF THE MOVABLE FEASTS FOR 10 YEARS-1975-84

## Notes Concerning Table of Movable feasts

Ash Wednesday (first Day in Lent) can fall at earliest on February 4 and at latest on March 10.
Easter Day can fall at earliest on March 22 and at latest on April 25.
Ascension Day can fall at carliest on April 30 and at latest on June 3 .
Whit Sunday can fall at earliest on May so and at latest on June $\mathbf{3}$.
Rogation Sunday is the Sunday next before Holy Thursday (Ascension Day).
Trinity Sunday is the Sunday next after Whit Sunday.
Corpus Christi falls on the Thursday next after Trinity Sunday.
There are not less than xxil and not more than xxvii Sundays after Trinity.
Advent Sunday is the Sunday nearest to November 30.

## PUBLIC HOLIDAYS

Bank Holidays in England, Wales, Northern Ireland and The Channel Islands are (s978):Jan. 2; March 27; May x and 29; Aug. 28; Dec. 26.
Liberation Day (May 9) is bank and public holiday in the Channel Islands.
Banks are also closed on Good Friday and Christmas Day and ou all Saturdays.

The Stock Exchange is closed on Bank Holidays, Good Friday, Christmas Day and New Year's Day; and III Saturdays throughout the year.

Custom House and Docks, as Banks; with the Queen's Birthday (when decreed).
Excise and Stamp Offices, as Banks; with Whit

Tuesday and Coronation Day, if and when decreed. Law Offices.-Good Friday, Easter Monday and Tuesday, Spring Bank Holiday (see col. x), Christmas Day, and first week-day after Christmas.

Bank Holidays in Scotland are (1978) Jan. 2 and 3; Mar. 24; May 1; Aug. 7; and Dec. 25. Banks in Scotland are also closed on Good Friday, Christmas Day and Saturdays.
Scotland has special Term (Quarter) Days:Candıemas, Feb. 2; Whitsunday, May 15 (Fixed date); Lammas, Aug. 3; and Martinmas, Nov. 3x; the Removal Terms are May 28 and Nov. 28.

## THE JEWISH CALENDAR

Origin.-The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that min the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of lunation. There is other mention of months by their original numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of $A b i b$ ㄷ the month when the Israelites came out from Egypt and Abib was to be the first month of
the year. In the first Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not nime now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar used to-day, which, it is sald by some, was done in A.D. 358 by Rabbi Hillel II, - descendant of Gamaliel -though some assert that it did not happen until much later. This calendar is luni-solar, and is based on El lengths of the lunation and of $\square$
troplcal year as found by Hipparchus (Circ. 120 B.C.) which differ little from those adopted at the present day. The year $573^{8}$ A.D. ( $9977-78$ ) is the 19th year of the zoand Metonic (Minor or Lunar) Cycle of 19 years and the 26th year of the $205^{\text {th }}$ Solar (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. ( 954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7 . 376 x B.C. At the beginning of each Solar Cycle the Teku ah of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into ro80 minims and the month between one new moon and the next is reckoned as 29 days, 22 hours, 793 minims. The normal calendar year, called Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of the month Tishri), or the penultimate month of the Ecclesiastical (which commences om the first day of month Nisan), the years when this happens being called Embolismic. Of the 19 years that form Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers $3,6,8,21,14$, ${ }^{17}, 19$, these places being chosen so that the accumulated excesses of the solar years should be $n$ small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally 1 difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed $I$ day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not
fall mu Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri $x$, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient ( 353 days), Common Regular ( 354 days), Common Abundant ( 355 days), Embolismic Deficient ( 383 days), Embolismic Regular ( 384 days), or Embolismic Abundant ( 385 days).
The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 3o. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar $\Pi$., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is ah. 21m. in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

Jewish Calendar 5738-5740

A.M. 5738 (known as 738 in the short system) is an Embolismic Regular Year of $\mathrm{r}_{3}$ months, 55 Sabbaths and 384 days. A.M. 5739 (739) is a Common Abundant year of 12 months, 50 Sabbaths and 355 days. A.M. 5740 is a Common Abundant Year of 12 months, 5 I Sabbaths and 355 days.

Jewish Fasts and Festivals

$$

$\mathbb{S}$ This fast is observed on Adar 12 (or Ve-Adar 21 in Embolismic years) if Adar is falls on a Sabbath.

Roman historians adopted an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.u.C. (Ab Urbe Condita), so that the year 1978 is 273 I A.U.C. (MMDCCXXX1). The Calendar that we know has developed from one established by Romulus, who is said to have used 1 year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of months of 30 and 29 days alternately, with -11 additional day so that the total was 355. It is also said that Numa ordered mintercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Casar, who was then Pontifex

Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption ( 45 B.C.) of the Julian Calendar, and, by slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the Year of Confusion. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were ( 1 ) the Kalends; ( 2 ) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the table below. The year containing 366 days was called bissextilis annus, as it had a doubled sixth day (bissextus dies) before the March Kalends on Feb. 24 -ante diem sextum Kalendas Martias, or VI Kal. Mart.

## THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the Hejira, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Julian Calendar. Hejira years are used principally in Iran, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the Hejira. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the rath month at stated intervalis in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and $1 x$ are intercalary ( 355 days), the latter being called kabishah.

The mean length of the Hejira year is 354 days, - hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a Hejira year is common or kabishah divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle. If the remainder is $2,5,7,10,13,16,18,21,24$, 26 or 29 the year is kabishah and consists of 355 days.

Hejira year 1398 gives $\quad$ quotient of 46 with remainder 18 and is a kabishah year. A.H. r399 (remainder Ig) $^{\text {) is common. A.H. } 1400 \text { (remainder 20) }}$ is common.

| Hejira Years 1398 and 1399 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

| Dhî '1-Hijia (29 |  |  |  |  |

Note.-A.H. 1400 (common year of 354 days) begins on November 21, 1979.

## OTHER EPOCHS AND CALENDARS

China.-Until the year A.D. IgII a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with years, is still in use in Tibet, Hong Kong, Singapore, Malaysia and elsewhere in South-East Asia.

Ethiopia.-In the Coptic Calendar, which is used by part of the population of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap year and in these years there are 6 complementary days.

The Intercalary year of the Coptic Calendar immediately precedes the Leap year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece- - Ancient Greek chronology was reckoned in Olympiads, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.
India.-In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the Kaliyuga Era, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the Vikrama Samvat Era, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1978 is, therefore, the year 2035 of the Vikrama Era.
The Saka Era of Southern India dating from March 3, A.D. $7^{8}$, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new Saka Era begins at the spring equinox, with five successive months of $3^{x}$ days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. $197^{8}$ is 1900 of the revised Saka Era.

In the Hills, the Saptarshi Era dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The Buddhists reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the Jains was the death of Vardhamana, the founder of their taith, in 527 B.C.

Iran. - The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The Zoroastrian Calendar was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June $\mathbf{x} 6$.

Japan.-The Japanese Calendar is the Gregorian, and is essentially the same - that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on $\quad$ system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the former British system of Regnal years, but differing from it in the particular that each year of aperiod closes on Dec. 3I. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:-
Epoch Meiji from $x 868$ Oct. 13 to 1912 July 3 I
"Taishō - 1912 Aug. It 1926 Dec. 25
"Shōwa " 1926 Dec. 26
Hence the year Showa 53 begins 1978 Jan. 1. The months are not named. They are known as First Month, Second Month, etc. first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiyobi (Waterday), Mokuyōbi (Wood-day), Kinyobi (Metalday), Doyōbi (Earth-day).

```

The Superficial Area of the Earth is estimated to be $196,836,000$ square miles, of which $55,786,000$ square miles are Land and 141,050,000 square miles Water. The Diameter of the Earth at the Equator is $7,926 \frac{1}{2}$ English miles, and at the Poles 7,900 English miles. The Equatorial Circumference is 24,901.8 English miles, divided into 360 Degrees of Longitude, each of $69 \cdot 17$ English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180 th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to $90^{\circ}$ at the Poles.

The velocity of given point of the Earth's surface at the Equator exceeds $x, 000$ miles an hour ( $24,90 x \cdot 8$ miles in 24 hours) ; the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour ( $584,000,000$ miles in 365 d days). The Earth is distant from the Sun $93,000,000$ miles, on the average.

## AREA AND POPULATION

The total population of the world in mid-1975, estimated by the United Nations Statistical Office at $3,967,000,000$ compared with $3,003,000,000$ in $x 960$ and $2,070,000,000$ in 1930. Figures of areas in the following table are of land area and inland water, but exclude uninhabited polar regions and some uninhabited islands. Figures for Europe and Asia exclude U.S.S.R. which is shown separately. Figures for Oceania exclude Hawail which is included with North America, being the soth State of U.S.A.

| Continent, etc. | Area |  | $\begin{aligned} & \text { Estimated } \\ & \text { Population, } \end{aligned}$$1975$ |
| :---: | :---: | :---: | :---: |
|  | Sq. miles '000 | Sq. km. '000 |  |
| Europe. | 1,903 | 4,929 | 473,000,000 |
| Asia*. | 10,66x | 37,6xI | 2,256,000,000 |
| U.S.S. | 8,649 | 22,402 | 255,000,000 |
| Africa. | ${ }^{21,683}$ | 30,258 | 401,000,000 |

|  |  |  |  |
| Total... | 52,422 | 135.773 | 3,967,000,000 |

[^10]A United Nations report (The Future Growth of World Population) in 1958, pointed out that the population of the world had increased since the beginning of the zoth Century at in unprecedented rate: in 1850 it was estimated at $x, 094,000,000$ and in 1060 at $x, 550,000,000$, an increase of 42 per cent. in 50 years. By 3925 it had risen to x,907,000,000- 23 per cent. in 25 years-and by r950 it had reached $2,500,000,000$, $i n$ increase of 3 x per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the year 2000 were:-

| Continent | [millions] |  |
| :---: | :---: | :---: |
|  | 2000 |  |
|  | Estimated Population | Per cent. |
| Europe (including U.S.S.R.).... |  |  |
| Asia (excluding U.S.S.R.). | 3,870 | $15 \cdot \mathrm{x}$ $6 \mathrm{r} \cdot 8$ |
| Africa.. | 517 | $8 \cdot 2$ |
| N. America.. | 312 | 5.0 |
| Latin Americat | 592 | 9.4 |
| World. . | 6,267 | 100 |

[^11]THE CONTINENTS
Europe (including European Russia) forms about one-fourteenth of the land surface of the globe.

Its length from the North Cape, $7 x^{\circ} 1 z^{\prime} \mathrm{N}_{\text {e, }}$, to Cape Matapan, in the south of Greece, $36^{\circ} 23^{\prime \prime} \mathrm{N}$., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3.300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor ( $26^{\circ} \mathrm{E}$.) and the East Cape ( $170^{\circ} \mathrm{W}$. ), is 6,000 miles. The extreme latitudes, Cape Chelyuskin ( $78^{\circ} 30^{\prime \prime} \mathrm{N}$.) and Cape Bulus ( 76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.
Africa is about three times the area of Europe. Its extreme longitudes are $\Sigma 7^{\circ} \mathrm{W}$. at Cape Verde and $51^{\circ} 27^{\prime} 52^{\prime \prime} \mathrm{E}$. at Ras Hafun. The extreme latitudes are Cape Blanco in $37^{\circ} \mathrm{N}$. and Cape Agulhas in $35^{\circ} \mathrm{S}$., at I distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of $370^{\circ} \mathrm{W}$. to $52 \frac{1}{2}^{\circ} \mathrm{W}$. in the east of Newfoundland, and its extreme latitudes from about $80^{\circ} \mathrm{N}$. lat. to $35^{\circ} \mathrm{N}$. lat. in the south of Mexico. It is surrounded by on all sides except in the south, where it joins the Isthmian States of Central America, which have an area of about 200,000 square miles. The area of the West Indies is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about $27^{\circ} \mathrm{N}$. latitude to $10^{\circ} \mathrm{N}$. latitude.

South America is I little more than $13{ }^{3}$ times the size of Europe. The extreme longitudes are Cape Branco $35^{\circ} \mathrm{W}$. and Punta Parina $8 \mathrm{I}^{\circ} \mathrm{W}$, and the extreme latitudes, Punta Gallinas, $12 \frac{1}{2}^{\circ} \mathrm{N}$. and Cape Horn $56^{\circ} \mathrm{S}$. South America is surrounded by the ocean, except where it is joined to Centrat America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area $\frac{1}{2}$ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawail) in the north.

The appended, tables of area and population are based on such information - is immediately available. With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases where later information becomes available during printing the new figures are given in the overseas sections of the AlmaNack. What has been said about the survey of many of the world's countries applies equally to the question of census. AFRICA

AMERICA

ASIA
The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:Near East (Turkey to Iran) $25^{\circ}-60^{\circ}$ E. long., Middle East (Baluchistan to Burma) $60^{\circ}-100^{\circ}$ E. long., Far East (Thailand to Japan) $100^{\circ}-160^{\circ}$ E. long.

## THE SEVEN WONDERS OF THE WORLD

I. The Pyramids of Egypt. - From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 2,700 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 48 x ft . in height and $756 \times 756 \mathrm{ft}$. at the base.
II. The Hanging Gardens of Babylon.-Adjoining Nebuchadnezzar's palace, 60 miles south of Baghdad. Terraced gardens, ranging from 75 to 300 ft . above ground level, watered from storage tanks on the highest terrace.
III. The Tomb of Mausolus.-At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
IV. Thi Temple of Diana at Ephesus.-lonic temple erected about 350 b.c. in honour of the goddess and burned by the Goths in A.D. 262.
V. The Colossus of Rhodes.-A bronze statue of Apollo, set up about 280 B.C. According to legend it stood at the harbour entrance of the seaport of Rhodes.
VI. The Statue of Jupiter Olxmpus.- At Olympia in the plain of Ellis, constructed of mardie iniaid with ivory and gold by the sculptor Phidias, about 430 B.C.
VII. The Pharos of Alexandria.-A marble watch tower and lighthouse
harbour of Alexandria.

## OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 36,198 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds $x 2,000$ feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:-

Seas

| Name | Area of Basin <br> (sq. miles) | Greatest Depth <br> (feet) |
| :--- | :---: | :--- |
| M, |  |  |

## PRINCIPAL LAND AREAS OF THE WORLD BELOW SEA LEVEL

(With approx. greatest depth in feet below Mean Sea Level.)

Europe: Netherlands coastal areas ( $I_{5}$ ). Asia: Jordan Valley, Dead Sea (1290).*

China: Sinkiang, Turfan Basin ( 980 ).
U.S.S.R.-Iran: Caspian Sea (85).*

Arabia: Trucial Oman-Qatar (70). Africa: Libyan Desert Depressions:Qattara (440), Faiyum ( 550 ).
Wadi Ryan (z40), Sittra (ix0).

Africa: Libyan Desert Depressions (continued)Areg (80), Wadi Natrun (75).
Melfa (60), Siwa (55), Bahrain (50). Eritrea: Salt Plains depression ( 385 ).
Algeria-Tunisia: Shott Melghir and El Gharsa (90).*
America: Death Valley (275), Salton Sea (245). Australia: Lake Eyre (40).

## THE LARGEST CITIES OF THE WORLD

## THE CINQUE PORTS

As their amn implies the Cinque Ports were originally 5 in number, Hastings, New Romney, Hythe, Dover and Sandwich. They were in existence before the Norman Conquest and were the Anglo-Saxon successors to the Roman system of coast defence organized from the Wash to Spithead to resist Saxon onslaughts. William the Conqueror reconstituted them and granted peculiar jurisdiction, most of which was abolished in 1855 . Only
jurisdiction in Admiralty still survives.

At some time after the Conquest the "antient towns "of Winchelsea and Rye were added with equal privileges. The other members of the Confederation, known as Limbs, are:-Lydd, Faversham, Folkestone, Deal, Tenterden, Margate and Ramsgate.

The Barons of the Cinque Ports have the ancient
privilege of attending the Coronation Ceremony and are allotted. special places in Westminster Abbey.
Lord Warden, Rt. Hon. Sir Robert Menzies, к.T., C.F., Q.C.

Judge, Court of Admiralty, Sir Henry Barnard.
Registrar, James A. Johnson, New Bridge House, Dover.

## SOME FAMOUS BRIDGES

Among the outstanding suspension bridges of the World are the Verrazano Narrows Bridge, New York (main span, $4,260 \mathrm{ft}$.); the Golden Gate Bridge, San Francisco ( $4,200 \mathrm{ft}$.) ; Mackinac Bridge, Michigan ( $3,800 \mathrm{ft}$ ); Bosporus, Turkey ( 3.523 ft ); George Washington Bridge, New York ( $3,500 \mathrm{ft}$.);
the Ponte Salazar (Tagus Bridge), Portugal ( 3,323 ft.); Forth Road Bridge, Scotland (3,300 ft.); Severn Bridge, England ( $3,240 \mathrm{ft}$.) ; Tacoma Bridge, Washington, U.S.A. ( $2,800 \mathrm{ft}$ ) ; Orinoco Bridge, Venezuela ( $2,336 \mathrm{ft}$.) and the Kanmon Bridge, Japan ( $2,336 \mathrm{ft}$ ). Lengths shown above are all those of the main or longest span.

The Transbay Bridge (suspension and cantilever), crossing San Francisco Bay from Oaklands to San Francisco is $7 \frac{1}{2}$ miles long, with spans of $2,310 \mathrm{ft}$. each.

Among important steel arch bridges are the Bayonne Bridge, from New Jersey to Staten Island, U.S.A. ( $\mathrm{I}, 652 \mathrm{ft}$ ): Sydney Harbour Bridge, Australia ( $\mathbf{x}, 650 \mathrm{ft}$ ) ; the Runcorn-Widnes Bridge, England ( $\mathrm{r}, 082 \mathrm{ft}$.); and the Glen Canyon Bridge over the Colorado River, U.S.A. ( $\mathrm{r}, 028 \mathrm{ft}$.). Major concrete trestle bridges include the Lake Portchartain Causeway, U.S.A. of 2,170 spans extending 24 miles and the Oosterscheldebrug, Netherlands, $3 \frac{1}{8}$ miles long. Gladesville Bridge, Sydney, Australia, is a concrete arch bridge of $\mathrm{r}, 000 \mathrm{ft}$. span The Tay Road Bridge in Scotland is a steel box girder bridge supported on twin piers ( 42 spans), $7,365 \mathrm{ft}$. long.

The Chesapeake Bay Bridge-Tunnel ( 17.6 miles long) joining Cape Charles, Virginia, to Chesapeake Beach has $\mathbf{x 2} 5$ miles of concrete trestle bridge.

## DISTANCE OF THE HORIZON

The limit of distance to which one can see varies with the height of the spectator. The greatest distance at which min object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the wim level is nearly 3 miles. At height of 20 feet the range is increased to nearly 6 miles, and a approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by $\boldsymbol{I}$ third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

| At a height of | the range is 2.9 miles |  | At a height of | the range is.29 .5 miles | At a height of | the range is |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## CONTROL OF IMMIGRATION STATISTICS 1976

The following tables show the number of Foreign nationals (Table x) and Commonwealth citizens (Table a) accepted for settlement in the United Kingdom during 1976. The figures relate to people subject to immigration control under the Immigration Act r97r, including certain holders of United Kingdom passports; they do not include people who are patrial under Section - of the Act.

## WELSH SOVEREIGNS AND PRINCES

Wales was ruled by Sovereign Princes from the "earliest times " until the death of Llywelyn in 2282, The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of E promise that they should have a Prince who "could not speak m word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, x301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958. He was invested at Caernarvon on July x, 2969.

Companions and Commanders e.g. C.B.; CaS.I.; C.M.G.; C.I.E.; C.V.O.; C.B.E.; D.S.O.; M.V.O. (4th) ; O.B.E. I.S.O.
Thil an of maners Sons of Pcers.

Baronets' eldest Sons.
Eldest Sons of Knights in the order - their Fathers.
M.V.O. (5th) ; M.B.E.

Younger Sons of the younger Sons of Peers.
Baronets' younger Sons.
Younger Sons of Knights in the same order as their Fathers. Naval, Military, Air, and other Esquires by Office.

## WOMEN

Women take the same rank their husbands or as their eldest brothers; but the daughter of Peer marrying a Commoner rePow her title Lity or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree $\square$ thit same order of precedency as of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only while her sisters married to commoners retain their rank $\begin{aligned} & \text { III } \\ & \text { take precedence of the }\end{aligned}$ Baroness. Merely nflill rank Hu the husband's part does not give env similar precedence to the wife.

For Dames Grand Cross, see pp. 300-301.

## LOCAL PRECEDENCE

England and Wales.-No written code of county or city order of precedence has been promulgated, but Counties the Lord Lieutenant stands first, and secondly (normally) Sherif. and therefore in Cities and Boroughs the Lord Lleutenant has social precedence over the Mayor: but at City or Borough functions the Lord Mayor Mayor will preside. At Oxford and Cambridge the High Gwall Hew precedence of the ViceChancellor.
SCOTLAND.-See Index.

Badges.- The red and white rose united (England), a thistle (Scolland); a harp or, the strings argent, with shamrock leaf vert (Ireland); upon a mount vert, dragon passant wings elevated gules (Wales).

## THE UNION JACK

The national flag of the United Kingdom is the Union Flag, generally known as the Union Jack, the name deriving from the use of the Union Flag on the jack-staff of naval vessels. It is a combination of the cross of the patron saint of England, St. George (cross gules in field argent), the cross of the patron saint of Scotland, St. Andrew (saltire argent in a field azure) and a cross similar to that of St. Patrick, patron saint of Ireland (saltire gules in a field argent). The Union Flag was first introduced in 1606 after the union of England ab Scotland, the cross of St. Patrick being added in $\mathbf{3} 80$ I

## ANNUITIES TO THE ROYAL FAMILY

The annuity payable to Her Majesty is known as ae Civil List, and is payable out of the Consolidated und under the authority of a Civil List Act ollowing the recommendation of a Parliamentary
elect Committee. The amount of the Civil elect Committee. The amount of the Civil List
las fixed in the Civil List Act 1952 at $£ 475,000$ as fixed in the Civil List Act 1952 at , $_{475,000}$ ad was increased from January $\mathrm{x}, 1972$, under the ivil List Act 1972 to $\mathrm{C} 980,000$, and in 1975 to
The Civll List Acts also provide separate annuies payable from the Consolidated Fund to other embers of the Royal Family. The amounts $1 y a b l e ~ u n d e r ~ t h e ~ A c t s ~ o f ~ 1910, ~ 1937, ~ 1952 ~ a n d ~$
72 are as follows:-

In addition $n$ nimi of $£ 60,000$ year is payable from the Consolidated Fund to the Royal Trustees (The Prime Minister, the Chancellor of the Exchequer and the Keeper of the Privy Purse) for contributions towards expenses incurred in undertaking Royal duties by other members of the Royal Family not in receipt of annuity.

## THE FLYING OF FLAGS

Days for hoisting the Union Flag $\quad$ Government and Public Buildings (from ■ A.M. to sunset).
February 6 (1952).-Her Majesty's Accession.
February 39 ( $\mathbf{x} 960$ ).-Birthday of the Prince Andrew.
March r.-St. David's Day (in Wales only).
March 10(1964).-Birthday of the PrinceEdward.
April 3 ( 1926 ).-Birthday of Her Majesty the Queen.
April 23.-St. George's Day (in England only). Where a building has two or more flagstaffs the Cross of St. George may be flown in addition to the Union Jack but not in II superior position.
June I (z953).-Coronation Day.
June so (29ar). -Birthday of the Duke of Edinbusi.
June 10.-Queen's Official Birthday, 3978.
Aug. 4 ( 1900 ).-Birthday of Her Majesty Queen Elizabeth the Queen Mother.
Aug. 15 (x950).-Birthday of the Princess Anne.
Aug. 21 (1930),-Birthday of the Princess Margaret.
Nov. 1 I.-Remembrance Sunday, 1978.
Nov. 14 ( 2948 ).-Birthday of the Prince of Wales.
Nov. 20 (1947).-Her Majesty's Wedding Day.
Nov. 30.-St. Andrew's Day (in Scotland only). And the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Department of the Environment by Her Majesty's command and communicated by the Ministry to the other Departments. The list
applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, e.g. an some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:-
(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right wie from is a.m. to sunset.
(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.
(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.
(d) The funerals of Prime Ministers and exPrime Ministers of the United Kingdom.
(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at $\quad$ Government Office the flag may fly at hult mant that office until the body has left (provided it is a day on which the flag would fiy) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The Royal Standard is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

Scarlet Robes worn by the Judges of the Queen's Bench Division on Red-Letter Days $\begin{aligned} & \text { w } \\ & \text { the sittings }\end{aligned}$ of a Criminal Court and on all State Occasions.

## THE MLLITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of wiv Garter later in the nuw year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 36 to correspond with win number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and Statutes were drawn up by Queen Elizabeth I.
In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of ncarlet tail-coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges wo the Shield of St. George and the Star of the Order of the Garter. The Knights receive in small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel I representatives of the Knights of the Garter.
Applications for appointment should be made to The Military Secretary, Ministry of Defence, Army Dept.
Governor, Maj.-Gen. Sir Edmund Hakewill Smith, K.C.V.O., C.B., C.B.B., M.C.
Military Knights, Brigadier W. P. A. Robinson, M.C.; Brigadier A. A. Crook, D.s.o.; Lt-Colonel R. J. L.
Penfold: Colonel H. G. Duncombe, D.S.O.; Lt.-Colonel R. W. Dobbin, O.B.E.; Major H. Smith, M.B.B.;
Lt.-Colonel A. R. Clark, M.C.; Lt.-Colonel C. A. Harvey; Lt.-Colonel A. J. Spratley, M.B.E., M.M.; Major
A. E. Wollaston.

## The pacerage

## THE PEERAGE AND ITS DEGREES

The rules which govern the creation and succession of Peerages are extremely complicated. There were separate Peerages of England, of Scotland, and of Ireland, until the unions of the three countries: of England 1 Scotland, forming Great Britain, in 1707; and of Great Britain and Ireland, forming the United Kingdom, in 1801 . Some Scottish Peers received additional Peerages of Great Britain ry of the United Kingdom, since 1707; and some Irish Peers additional Peerages of the United Kingdom since $\mathbf{2 8 0 1}$.
All Peers of England, Scotland, Great Britain, or the United Kingdom who $\quad$, of full age and of British nationality are entitled to seats in the House of Lords. But Peers of Ireland who have additional United Kingdom Peerage are poc entitled to sit, although they are eligible for election to the House of Commons and to vote (if of voting age) in Parliamentary elections (which other Peers are not). The two Archbishops and 34 of the 4 I diocesan Bishops of the Church of England also have seats in the House of Lords.

Certain ancient Peerages pass me death to the nearest heir, male or female, and several mow held by women who inI thus Peeresses in their men Right. They are entitled to sit in the House of Lords if they are of full am and British nationality.
Since 1876 the Crown has conferred non-hereditary or Life Peerages in the degree of Baron on eminent judges to enable them to carry out the judicial function of the House of Lords. They are known as Law Lords. Under an Act passed in Ig58 the Crown may confer Life Peerages on men and women giving them, in the degree of Baron or Baroness, seats in the House of Lords.
In 1963 an Act was passed enabling Peers to disclaim their Peerages for life: Hiving Peers, within 12 months after the passing of the Act (July 3x, 1963), future Peers within 12 months (one month if an M.P.) after the date of their succession, or of attaining their majority if later.
No fees for Dignities have been payable since 1937. No hereditary Peerages have been created since r965.

## PEERAGES EXTINCT SINCE THE LAST ISSUE

EARLDOM.-Stamford (cr. 1628).
Viscountcy.-Radcliffe (cr. 196z).
Baronies.-Brecon (cr. 1958); Cohen of Birkenhead (cr. 1956).

## DISCLAIMER OF PEERAGES

The following peers have disclaimed their peerages under the Peerage Act, 1963: Earl of Durham; Earl of Home; Earl of Sandwich; Viscount Hailsham; Viscount Stansgate; Lord Altrincham; Lord Beaverbrook; Lord Fraser of Allander; Lord Merthyr; Lord Monkswell; Lord Reith; Lord Sanderson of Ayot; Lord Silkin; Lord Southampton; Lord Archibald.

## PEERS WHO ARE MINORS

## (As at Jan. x, 1978)

MARQUESS ( x ): Milford Haven (b. 1961).
EARLS (3): Craven (b. 1957); Hardwicke (b. 1971); Woolton (b. 2958).
Viscount ( $x$ ): Goschen (b. 1965).

## CONTRACTIONS AND SYMBOLS

Contractions and Symbols.-S. or I. appended to the date of creation denotes a Scottish or Irish title, the further addition of a implies that the Peer in question holds also Imperial title, which is specified (after the name) by II more definite description as Engl., Brit., or U.K. When both titles are alike, as in the of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. The mark ${ }^{\circ}$ signifies that there is no " of "in the Marquessate or Earldom so designated; b. signifies born; s., succeeded; $m$., married; $w_{\text {., }}$ widower ne widow; M., minor.

## Peeresses in Their ©un Right

Pecrages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any titte or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

Countesses in their Own Riget.-Style, The Countess of Addressed as, My Lady.

## Courtesu Titles (in actual existence in 1977)

Holders of Courtesy Titles are addressed in the same manner as holders of substantive titles.
From this list it will be seen that, for example, the "Marquess of Blandford" is heir to the Dukedom of Marlborough, and "Viscount Althorp" to the Earldom of Spencer. Titles of second heirs are also given, and the Courtesy Title of the father of a second heir is indicated by ${ }^{*}$; e.g., Earl of Burlington, eldest son of * Marquess of Hartington.

## THE PRIVY COUNCIL

The Privy Council consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Counsellors, and they principally form the active Privy Council. The Council is summoned as such to act " with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g. the Judicial Committee.

## THE PREFIX RIGHT HONOURABLE

"Right Honourable."-By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, "Prince of the Blood admitted a Privy "Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable". The style of all other Peers, whether Privy Councillors or not, is "Right Honourstyles, although it is more usual to describe them with the prefix "The ", omitting the more elaborate Peer below the rank of Marquess who is Per should be addressed as the Right (or Rt.) Hon.- A Hon. the Lord (or Earl or Viscount)-, P.C., or, less elaborately, The Lord (or Earl or Viscount)-P.C.

Clerk of the Council, N. E. Leigh, c.v.o.

# Baronets, $\mathbb{R}$ nights Grand Cross, Kinights Grand Commanders Rinights Commanders and 隹nights 1Bachelor 

Badge of Baronets
of England, Great Britain, U.K., (and Ireland marked I.).

Badge of Baronets of Scotland or Nova Scotia (marked S.).

## NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, $\mathbf{x} \mathbf{1 0}$, ordains as follows:-" That no person whose name is not entered upon the Official Roll shall be received as E Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk ( $\dagger$ ) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing as " Sir Robert A-,Bt." Baronet's wives are addressed (formally) as "Your Ladyship" or "Lady $A$-", without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A-"; if daughter of a Viscount or Baron "The Hon. Lady A-."

## NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (q.v.), but in writing the appropriate initials (G.C.B., K.C.B., \&.c.) are appended to surname after "Bt." if they are also baronets or in place of "Bt." if they are not. Knights Bachelor are addressed as "Sir - (first or Christian name) " and in writing as "Sir B B B." The wife of Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

## NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the r7th century, lapsed, and in rgo8 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor "by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight Bachelor. In $x 926$ \# design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above; in 1974 a neck badge and miniature were added. The Officers of the Society are:Knight Principal, Sir Anthony Wagner, K.C.v.O., Deputy Knight Principal, Sir Gilbert Inglefield, G.B.E., T.D.; Prelate, The Bishop of London; Hon. Registrar, Sir John Weir Russell; Hon. Treasurer, Sir John Howard; Registry and Library, 2 I Old Buildings, Lincoln's Inn, W.C.z.

## BARONETAGE AND KNIGHTAGE <br> (Revised to Aug. 16, 1977) <br> Peers are not included in this list.

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

## THE VICTORIA CROSS, ZUC for Conspicuous Bravery.

Instituted on January 29, 1856, the Victoria Cross was awarded retrospectively to $\mathbf{1 8 5 4}$, the first being held by Lieut. C. D. Lucas, R.N. for bravery in the Baltic Sea on June 21, 1854 (gazetted Feb. 24, 1857). The first 62 Crosses were presented by Quecn Victoria in Hyde Park, London, on June 26, 1857.

The GUE is worn before all other decorations, on the left breast, and consists of a cross-pattée of bronze, $\frac{1}{2}$ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the F̧厄 receive a tax-free annuity of £xoo, irrespective of need or other conditions. In 19xI, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military, or Air Forces of the Crown.

## THE GEORGE CROSS, G.C.-For Gallantry

The ribbon is dark blue threaded through a bar adorned with laurel leaves.
INSTITUTED September 24th, 1940 (with amendments, November 3rd, 1942).
The George Cross is worn before all other decorations (except the $\mathcal{F}(\mathbb{C})$ on the left breast $\$$ and consists of a plain silver cross with four equal limbs, the cross having in the centre $I$ circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by ring from $\square$ bar adorned with laurel leaves on dark blue ribbon $\frac{13}{2}$ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger. From April $\mathbf{y}$, 1965, holders of the Cross have received a tax-free annuity of $£ x 00$.
$\$$ When worn by woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.
Empire Gallantry Medal. - The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Orders of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939.
In October 1972 all surviving holders of the Albert Medal and the Edward Medal exchanged those decorations for the George Cross.

## THE DISTINGUISHED SERVICE ORDER (1886)-D.S.O.

Rtbbon, Red, with Blue Edges.
Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

Foreign Orders, Decorations and Medals (in order of date).

## THE ORDER OF ST. JOHN

The Most Venerable Order of the Hospital of St. John of Jerusalem
St. John's Gate, Clerkenwell, E.C.I
Grand Prior, H.R.H. The Duke of Gloucester, G.C.v.O.
Lord Prior. The Lord Caccia, G.C.M.G., G.C.V.O. Chancellor, Sir Gibbert Inglefield, G.B.E., T.D.

## THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

## The Cabinet

The Cabinet has no corporate existence, but under the Ministers of the Crown Act (1937), provision was made for 17 Ministers of the first rank (Cabinet Ministers) and this number has been increased by later legislation. The Ministers of the Crown (Parliamentary Sectetaries) Act ( 1960 ) laid down an aggregate limit of 33 Parliamentary Secretaries. Parts of these Acts were repealed by the Ministers of the Crown Act ( $\mathbf{1 9 6 4}$ ) which varied the number of Parliamentary Secretaries (other than Treasury Secretaries) to 36.

## The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly - years, was officially recognized and its holder was granted alace in the Table of Precedence.

## The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of $£ 2,000$ per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since rgo6. In 1957 the salary was increased to $£ 3,000$, in 1965 to $£ 4,500$, and in 1972 to C 9,500 . The present Leader of the Opposition is the Right Hon. Margaret Thatcher.

## LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its First Reading, after which it is printed and circulated to members. The next stage is the Second Reading, in the debate on which the broad issues raised are discussed. If passed it reaches the Committee Stage and is referred to Committee (of the whole House, Select, or Standing-see "Committees," p. 3Ix). Bills of major importance are usually sent to a Committee of the whole House. In committee, $\quad$ Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a Select Committee, and if opposed, witnessess may be called and counsel heard by the Committee. The next step is the, Report Stage, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its Third Reading (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an Act of Parliament, on receiving the Royal Assent, which is signified by the Sovereign on the

Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the Royal Veto) resides in the Sovereign, but has not been exercised in the United Kingdom since, 1707 , in the reign of Queen Anne.

## COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the Monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family among those remaining in the United Kingdom. For instance, during the Queen's visit to Canada in 1967 , the Councillors of State were the Prince of Wales, Queen Elizabeth the Qucen Mother, Princess Margaret and the Duke of Gloucester.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. Since the Prince of Wales attained the age of 18 in November 1966, the provisions of the Regency Act as to age no longer apply in the event of his accession to the throne.

## SPEAKERS OF THE COMMONS SINCE 1660

Parliament of England
1660 Sir H. Grimston. 1685 Sir John Trevor.
$166 x$ Sir E. Turner.
1673 Sir J. Charlton.

1943 Col. D. Clifton Brown (Viscount Ruffide).
195 William Shepherd Morrison (Viscount Dutrossil).
1959 Sir Harry Hylton-Foster.
I965 Horace Maybray King, Ph.D. (Lord Maybray-King).
I97 (John) Selwyn (Brooke) Lloyd (Lord SelwynLloyd).
1976 (Thomas) George Thomas.

## THE HOUSES OF PARLIAMENT

Parliament emerged during the late thirteenth and early fourteenth centuries as a result of diverse forces including the general need for a superior court to deal with legal and administrative problems on a national basis, the financial needs of the Crown, ambition of the baronage to influence the King's government, and the King's desire to make his government more cffective by involving in it all important sections of the community. The nucleus of early Parliaments were the officers of the King's household and the King's judges, who were joined by such ecclesiastical and lay magnates as the King might summon and occasionally by the knights of the shire, burgesses and proctors of the lower clergy. The Commons were summoned to all the Parliaments of Edward III and by the end of the reign a "House of Commons "was beginning to appear. The first known Speaker was elected in 1377 . The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland, except for criminal cases in Scotland. The Lords surrendered the ancient right of peers to be tricd for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. Bills such as the Finance Bill, which imposes taxation, and the Consolidated Fund Bills, which authorize expenditure, and are commonly known as Supply Bills, must begin in the Commons and have not been amended by the Lords in any respect in modern times. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regard to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1949 -(a) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (b) any other public bill (except one to extend the life of $\equiv$ Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1915 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of $1914-18$ the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 3x, 191I, was dissolved on Nov. 25, x918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Patliament which first met on Nov. 26, 1935, was not dissolved until June 15,1945 .

Since $x 803$ reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as Hansard's Parliamentary Debates, and in 1943 the word "Hansard "was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members -Members of the House of Lords are unpaid. They are entitled to reimbursement of travelling expenses from their residence to the House and repayment of expenses within a maximum of $£_{13} \cdot 50$ for each day of such attendance, or $£_{1} 6.50$ in the case of members incurring expense of overnight accommodation in London.

Since 1 gry Members of the House of Commons have received payments and travelling facilities. Their salary of $£ 400$ was increased to $£ 600$ in 1937, to $£ 1,000$ in 1947 , to $£_{01,750}$ in 1957, to $£_{3}, 250$ in 1964, to $£ 4,500$ in January 1972 and $£ 5,750$ in June 1975 and to $£ 6,062$ in June 1976 and $\mathcal{£} 6,270$ in July x977; they are entitled to claim income tax relief on expenses incurred in the course of their Parliamentary duties. In October 1969 Members were allowed to claim up to $£ 500$ a year for secretarial expenses; the allowance was increased to $£ 1,000 \|$ year from January 1972, to $£ 1,750$ a year from August $\mathrm{x}, 1974$, to $£_{3}, 200$ a year from June 1975 and to $£ 3,512$ - year from June 1976. Also since January 1972, Members can claim reimbursement, within a limit of $£ 750$ a year for the additional cost of staying overnight away from their main residence while on Parliamentary business. This limit was increased to $\mathcal{L}_{1,050}$ a year in August 1974, to $£_{1,814}=$ year from July 1975 and to $£ 2,038$ a year from July 1976 . The cost of travel allowances for 1976/7 Was stated in June 1977 to be $£ 1,243,000$ (car mileage claims $£ 852,000$, rail travel $£ 239,000$ and air travel £152,000). The Members' Pension Act, 1965 , introduced the first comprehensive pension scheme providing Members of Parliament and their dependants with a legal right to a pension. Under the Parliamentary and Other Pensions Act 1972 the pension scheme was modified to include provision for Ministers and other office holders. The Scheme was further amended in 1976 under the terms of the Parliamentary and other Pensions and Salaries Act 1976 to provide for pensions to be based on a notional pensionable salary of $£ 8,000$ notwithstanding that a lower rate of salary was actually authorised for payment. The pension scheme is funded by an Exchequer contribution of approximately three and 1 half times the contributions paid by, or on behalf of, a participant which is 5 per cent. of salary per annum (currently 5 per cent. of $£ 8,000$, or $£ 400$ per annum). Members receive pensions from age 65 , or on ceasing to be Member if later, provided they have served for 4 years or more. Pensions are based bu one sixtieth of salary for each year of reckonable service. Members also continue to contribute £ 24 per annum and the Treasury up to $£ 22,000$ a year towards a Fund to provide annual or lump sum grants to ex-Members, their widows and children whose incomes are below certain limits. The income of the Fund in $1975-76$ was $£ 52,203$ and expenditure on grants $£ 34,497$. The capital account stood in 1976 at $£ 252,806$.

THE HOUSE OF LORDS
The House of Lords consists of Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the $2 x$ senior Bishops from the remaining English sees. The Lords Temporal are: Peers and Peeresses in their own right by descent of England, Scotland, Great Britain or
the United Kingdom, hereditary peers of new creation, Lords of Appeal in Ordinary and retired Lords of Appeal in Ordinary (who are life peers), and Life Peers and Life Peeresses created under the Life Peerages Act, $\mathbf{1 9 5 8}$. Under the Peerage Act, 1963 , $=$ person inheriting a peerage may within one year (or one month in the case of a Member of the House of Commons) disclaim the peerage for
life. The subsequent descent of the peerage after his death is not affected.

> THE HOUSE OF COMMONS

By the Representation of the People $\mathrm{Act}(\mathrm{x} 885)$ membership was increased from 658 (at which it had stood since r8or through the Act of Union with Ireland) to 670 , and by a similar Act (r918) it was increased to 707. By the Government of Ireland Act (1920) and the Irish Free State Agreement Act (x922) membership was decreased to $6 \times 5$. Irish representation being reduced from $x 05$ to 13 members. By the Representation of the People Act of 194525 new constituencies were created, making the total 640 ; and by a similar Act of 1948 the total membership was reduced to 625 . As the result of Orders in Council made in 1955 under the House of Cor:mons (Redistribution of Seats) Act, 1949, the total membership was increased to 630 and under the same Act provision was made in 1970 for further increase to 635 .

THE PALACE OF WESTMINSTER
An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kepid wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, originally built by Edward the Confessor (Westminster Hall being added by William Rufus) was the normal place of Parliament from about $\times 340$. St. Stephen's Chapel (first mentioned in the reign of John) was used from about 1550 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867 , at a cost of $£_{2,198,000 \text {. }}$

The Chamber of the House of Commons was destroyed by enemy action in r94x and the foundation stone of new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flagstaff. The clock tower of the House of Commons is 3 . 6 feet high and contains "Big Ben," the ${ }^{3} 3^{\frac{1}{2}}$-ton hour bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856 . The dials of the clock are 23 feet in diameter, the hands being 9 feet and $\mathrm{i}_{4}$ feet long (including balance piece). The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

## THE LORD CHANCELLOR

The Lord High Chancellor of Great Britain is (although not addressed as such) the Speaker of the House of Lords. Unike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the Woolsacks, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE
Number ro, Downing Street, S.W.r, is the
official town residence of the Prime Minister, No. II of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684 .

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. $x$, I921, $=$ a country residence for the Prime Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS SINCE $x 770$
Lord North, Tory, Feb. 6, 1770.
Marquess of Rockingham, Whig, March 27, 1782.
Earl of Shelburne, Whig, July 13, 1782.
Duke of Portland, Coalition, April 4, 1783. William Pitt, Tory, Dec. 7, 1783.

## NOTES ON PARLIAMENTARY PROCEDURE

Writs for a New Parliament, etc. - Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. A newlycreated Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.
Vacant Seats.- When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during $\begin{aligned} & \text { | session of Parliament, }\end{aligned}$ by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue writ, should two members certify to him that seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the Chiltern Hundreds, or Steward of the Manor of Northstead, I iegal fiction which enables member to retire from the House, for it has long been established that $\square$ member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the Chiltern Hundreds and the Manor of Northstead as offices of profit and thus perpetuated the fiction.
hours of Meeting, etc. - The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. In the latter part of the Session, the House usually sits also on Mondays at 2.30 p.m., and occasionally on Fridays at ir a.m. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at xx. Morning sittings on Monday and Wednesday were held from February-July, 1967 and occasionally during 1968 and 1969. Strangers are present during the debates of both Houses on sufferance, and may be excluded at any time; this applies equally to the Press Gallery. Time has modified what was once a rigid exclusion and strangers have in recent years geaerally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The Quorum of the House of Commons is forty members, including the Speaker, and should member point out to the Speaker at any time fewer than forty members are present, the division bells are rung. and if forty members have oot anveared within four minutes, the House is said to be Counted Out, and the sitting is adjourned. The Quorum of the Lords is three.
prorogation and Dissolution.-A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or
the expiration of the term of 5 years for which it was elected.
Election Petitions.-The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g. ineligibility to sit owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

Standing Orders.-These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed, and are frequently suspended or dispensed with. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. Sessional Orders are applicable only to the session in which they are passed.

General Procedure.-There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Cummons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker. A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as having caught the Speaker's eye. In the House of Lords in similar circumstances, the House itself decides who shall speak. Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill. A member may address the House from notes but must not read his speech, $d$ distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters sub judice must not be discussed; offensive words or epithets must not be used; a member may not speak after question has been put, except on $\quad$ point of order, and then he must address the Speaker "seated and covered." He must bow to the Speaker on entering and leaving the House.
Question Time.-After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30 . Two days' notice of questions must be given to the Clerk of the House of Commons, the senior official of the House, whose counterpart in the House of Lords is the Clerk of the Parliaments. Members of the House may put an unlimited number of questions to Ministers, but not more than two demanding an oral answer may be made in any one day to the same Minister. Supplementary questions may be
put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer. In the House of Lords up to four questions for oral answer may be asked at the beginning of business on each sitting day.

Committees.-On the Assembly of a new Parliament, after the election of the Speaker, the House of Commons deals with the subject of Committees, which are of three kinds:-Committees of the Whole House, Select Committees (appointed for a specific purpose) and the Standing Committees which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing exclusively with Scotland or with Wales and Monmouthshire is referred to Standing Committee, in the first place all Scottish, and in the second, all Welsh members are automatically members thereof.

Closure and the Guillotine.-To prevent deliberate waste of Parliamentary time, a procedure known as the Closure (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made that the question be now put. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The Guillotine represents $\quad$ more rigorous and systematic application of the Closure. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887 , after prolonged debates on the Crimes Bill.

The Previous Question,--When the House is disinclined to give decision on particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put " or "That the House do now proceed to the Orders of the Day.". In the House of Lords the Previous Question has been replaced by the Next Business Motion-"" That the House do proceed to the next business."

Motion for Adjournment.-Adjournment ends the sitting of either House and takes place either under the provisions of $a$ Standing Order or through an ad hoc resolution. In the Commons method of obtaining immediate discussion of a matter of urgency is by moving the adjournment for the purpose of discussing a specific and important matter that should have urgent consideration. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. On that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion That the Chairman report Progress. This brings the Speaker back to the House and the Committee seeks permission to sit on $1-$ future date.

Privileges of Parliament.-There are certain rights and jurisdictions peculiar to each House of Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege
is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict $\quad$ fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish - member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

The Spearer.-The Syeaker of the House of Commons is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally partisan but throughout I century of development between Speaker Onslow ( $\mathbf{1 7 2 8}^{28}$ ) and Speaker Shaw-Lefevre ( $\mathrm{I}_{3} 39$ ), the theory of the nonpartisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a nember is to Name him. When - member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for ..." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House í always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the Chairman of Committees, officially the Chairman of Ways and Means, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion that the Speaker do now leave the Chair. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of committee neither speaks in debate nor votes (except when the voting is equal). A Deputy Chairman of Ways and Means is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committecs.

The Lord Chancellor is Speaker of the House of Lords. He is a member of the Government, and has none of the powers to maintain order that the

Speaker of the House of Commons has. (These powers, in the Lords, are exercised by the House as a whole.) A panel of Deputy Spcakers is appointed by Royal Commission. The Chairman of Committees is a salaried officer of the House who takes the chair in Committee of the Whole House and in
some Select Committees. He is assisted by a panel of Deputy Chairmen, headed by the salaried Principal Deputy Chairman of Committees, who is also Chairman of the European Communities Committee of the House.

## GOVERNMENT BY PARTY

Before the reign of William and Mary the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the Junto and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the Cabinet and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of personnel or resignation of the whole body of Ministers.

The accession of George $I$, who was unfamiliar with the English language, led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a Prime Minister, II position first acquired by Robert Walpole in $172 x$ and retained without interruption for 20 years and 326 days.

In 8828 the old party of the Whigs became known as Liberals, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 186 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of $=$ conference at Birmingham in x 877 I National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886 , which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after $=$ further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with further fall to 12 (excluding National Liberals) after the 1945 Election. The number is now 13 .
Soon after the change from Whig to Liberal the Tory Party became known - Conservative, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generaily adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into compact with the Conservatives, under which the latter undertook not to contest their seats, but separate Liberal Unionist organization was maintained until r912, when it was united with the Conservatives under the title of National Unionist

Association of Conservative and Liberal Unionist Organizations, the members of which became known as Unionists.

The Labour Party.-Labour candidates for Parliament made their first appearance at the General Election of 1892 , when there were 27 standing as "Labour" or "Liberal-Labour." At the General Election of 1895 the number of successful candidates fell to 12 , with a further fall to 18 at the election of $1 g 00$.

In 1900 the Labour Representative Committee was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which might be engaged in promoting legislation in the direct interest of labour. In I906 the L.R.C. became known - The Labour Party.

## Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, Whips (originally known as "Whippersin ") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a " whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to "three-lined whip, headed " Most lmportant," is tantamount to secession (at any rate temporarily) from the party. Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (Chief Whip in the Commons) receiving $£_{13,000}$ while $r$ member of the Cabinet; the Captain of the Gentlemen-at-Arms (Chief Whip in the Lords) \&6,500, the Captain of the Yeomen of the Guard (Assistant do.) and the first of the Junior Lords of the Treasury (Deputy Chief Whip in the Commons), each $£ 5,000$; the (Political) Lords in Waiting $£ 4,500$ and the remaining junior Lords of the Treasury, each $£ 4,000$.

## The House of Lords

The Government Whips are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Baroness Llewelyn-Davies of Hastoe), the Captain of the Queen's Bodyguard of the Yeomen of the Guard (Lord Strabolgi) and the (Political) Lords in Waiting.

The Conservative Whips are: Earl St. Aldwyn (Chief Whip); Lord Mowbray and Stourton; Lord Sandys; Lord Lyell; Viscount Long; Lord Redesdale; Lord Newall.
The Liberal Whip is Lord Wigoder.

## The House of Commons

The Government Whips are: The Parliamentary (Patronage) Secretary to the Treasury (Chief Whip) and the Junior Lords of the Treasury. Assistant Whips are also usually appointed.
The Conservative Whips are: The Rt. Hon. H. E. Atkins (Chief Whip); B. B. Weatherill (Deputy Chief Whip); J. S. Thomas; S. Le Marchant; M. H. A. Roberts; Hon. Anthony Berry; D. C. M. Mather; J. T. Lester; N. Lawson; Hon. P. H. Morrison: Sir George Young, Bt.; Lord James DouglasHamilton.
The Liberal Whip is A. J. Beith.

Prime Minister and First Lord of the Treasury, The RT. Hon. Leonard James Callaghan, M.p., born March 27, 1912.
Secretary of State for Foreign and Commonwealth Affairs, The Rt. Hon. David Anthony Llewellyn Owen, M.P., born July 2, 1938.
Chancellor of the Exchequer, The Rt. Hon. Denis Winston Healey, M.P., born Aug. 30, 1917. Lord High Chancellor, The Rt. Hon. Lord Elwyn-Jones, C.H., born Oct. 24, 1909.
Secretary of State for the Home Department, The Rt, Hon. Merlyn Rees, M.P., born Dec. 18, 1920.
Secretary of State for Social Services, The Rt. Hon. David Hedley Ennals, M.P., born Aug. 19, 1922.
Secretary of State for Defence, The Rt. Hon. Frederick William Mulley, M.p., born July 3, 1918.
Secretary of State for Scotland, The Rt. Hon. Bruce Millan, M.P., born Oct. 5, 1927.
Secretary of State for Employment, The Rt. Hon. Albert Edward Booth, M.P., born May 28, 1928.
Secretary of State for Education and Science, The Rt. Hon. Shirley Vivien Teresa Brittain Williams, M.P., born July $27,1930$.
Secretary of State for Wales, The Rt. Hon. John Morris, M.P., born 193 I.
Secretary of State for Trade, The Rt. Hon. Edmund Emanuel Dell, M.P., born Aug. 15, 1921.
Secretary of State for Industry, The Rt. Hon. Eric Graham Varley, M.P., born Aug. II, 1932.
Secretary of State for the Environment, The Rt. Hon. Peter David Shore, M.P., born May zo, 1924.
Secretary of State for Northern Ireland, The Rt. Hon. Roy Mason, M.P., born April $18,1924$.
Secretary of State for Energy, The Rt. Hon. Anthony Neil Wedgwood Benn, M.P., born April 3, 1925.
Secretary of State for Prices and Consumer Protection, The Rt. Hon. Roy Sydney George Hattersley, born Dec. 28, $193^{2 .}$
Secretary of State for Transport, The Rt. Hon. William Thomas Rodgers, M.P., born Oct. 28, 1928.
Lord President of the Council and Leader of the House of Commons, The Rt. Hon. Michael Mackintosh Foot, M.P. born July 23, 1913.
Lord Privy Seal and Leader of the House of Lords, The Rt. Hon. Lord Peart, born April 30, 1914.
Chancellor of the Duchy of Lancaster, The Rt. Hon. Norman Harold Lever, born Jan. 15, 1914.
Minister of Agriculture and Fisheries, The Rt. Hon. John Ernest Silkin, M.P., born March 18, 1923.
Minister for Social Security, The Rt. Hon. Stanley Orme, M.P., born April 5, 1923.
Secretary Chief to the Treasury, The Rt. Hon. Joel Barnett, M.P., born Oct. I4, 1923.

## MINISTERS NOT IN THE CABINET

Minister for Housing and Construction, The Rt. Hon. Reginald Yarnitz Freeson, M.P., born 1926.
Attorney-General, The Rt. Hon. Samuel Charles Silkin, Q.C., M.P., bom 1918.
Lord Advocate, The Rt. Hon. Ronald King Murray, Q.C., M.P., born 1922.
Solicitor-General, The Rt. Hon. Peter Kingsley Archer, Q.C., M.P., born 1926.
Solicitor-General for Scotland, The Lord McCluskey, Q.C., born 1929.
Parliamentary Secretary to the Treasury, The Rt. Hon. Michael Francis Lovell Cocks, M.P., born $192 g$.
Financial Secretary to the Treasury, The Rt. Hon. Robert Edward Şheldon, M.P., born 1923.
Ministers of State (Foreign and Commonwealth Office), The Lord Goronwy-Roberts, P.C., born $\times 9 \times 3$; Edward Rowlands, M.P., born 1940; Frank Ashcroft Judd, M.P., born 1935.
Ministers of State (Home Office), The Lord Harris of Greenwich, born 1930; Brynmor Thomas John, M.P., born 1934.
Ministers of State (Scottish Office), The Lord Kirkhill, born 1930; The Rt. Hon. (James) Gregor Mackenzie, M.P., born 1916.

Minister of State (Health and Social Security), Roland Dunstan Moyle, M.P., bom 1928.
Minister of State (Employment), Harold Walker, M.P., born 1927.
Minister of State (Defence), John William Gilbert, Ph.D., M.P., born 1927.
Ministers of State (Northern Ireland), John Dennis Concannon, M.P., born 1930; The Lord Melchett, born 1948.
Minister of State (Agriculture and Fisheries), The Rt. Hon. Edward Stanley Bishop, M.P., born 1920.
Minister of State (Agriculture and Fisheries), Edward Stanley Bishop, M.P., born $19 z 0$.
Minister of State (Treasury), (David John) Denzil Davies, born 1938.
Minister of State (Privy Courcil Office), John Smith, M.P., born 1938.
Minister of State (Energy), The Rt. Hon. (Jesse) Dickson Mabon, M.P., born 1925.
Minister of State (Environment), The Rt. Hon. Denis Herbert Howell,' M.P., born 1923 (Sport).
Ministers of State (Industry), Gerald Bernard Kaufman, M.P., born I930; The Rt. Hon. Alan John Williams, M.R., born 1930.

Minister of State (Civil Service Department), Charles Richard Morris, M.P., born 1926.
Ministers of State (Education and Science), The Lord Donaldson of Kingsbridge, born roo7; Gordon James Oakes, M.P., born 1931.
Minister of State (Prices and Consumer Protection), John Denis Fraser, M.P., born 1934.
Minister of State (Overseas Development), The Rt. Hon. Judith Constance Mary Hart, M.P., borm 1924. PARLIAMENTARY UNDER SECRETARIES, ETC.

Agriculture and Fisheries, G. S. Strang, M.P.
Civil Service Department, J. D. Grant, M.P.
Defence, A. E. P. Duffy, M.P. (Royal Navy); R. C.
Brown, M.P. (Army); A. J. Wellbeloved, M.P. (Royal Air Force).
Education and Science, Miss M. M. Jackson, M.P.
Employment, J. Golding, M.P.; J. Grant, M.P.
Energy, A. Eadie, M.P., ; J. A. Cunningham, M.P.
Environment, The Baroness Birk; E. Armstrong, M.P.; K. Marks, M.P.; N. G. Barnett, M.P.

Foreign and Commonwealth Affairs, J. E. Armstrong, M.P.; D. E. T. Luard, M.P.

FORFEITED DEPOSITS AT THE GENERAL ELECTION, OCTOBER 1974

Candidates at parliamentary elections who fail to obtain one-eighth of the total votes cast in their constituencies forfeit the deposit of $£ 350$ which all candidates must lodge.

Deposits forfeited at the 1974 October election
totalled 453, 132 more than in Feb. 1974. Deposits were lost by 15 Labour candidates, 130 Liberals, 30 Conservatives, 29 Communists, 26 Plaid Cymru, 90 National Front and 133 others. In 1950 the previous record number of 443 deposits was lost.

# PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1976-77 

THE 1976 SESSION

Because of the serious back-log of legislation, especially on five highly controversial bills, Parliament had $\square$ shorter summer recess than usual, the House of Lords resuming as early as Sept. 27 and the House of Commons on October 11, 1976, the overspill period lasting until November 22 when prorogation took place, the new session of Parliament being opened by the Queen two days later on November 24.

By this time, the most contentious measures-the Dock Work Regulation Bill, the Rent (Agriculture) Bill, better known as the Tied Cottage Bill, the Health Services Bill, the Aircraft and Shipbuilding Industries Bill, and the Education Billhad been shuttlecocked to and from both Houses because of what was claimed to be a record number of amendments made in the Lords to each piece of egislation, culminating in the rejection by the Commons of most but not all of them, there being compromise amendments on the Dock Work Regulation Bill.

The Lords versus Commons battle, $\quad$ a these procedures were eventually labelled, ended with prospects of a serious confrontation when the Lords deliberately and decisively threw out the whole Aircraft and Shipbuilding Bill mainly because of the Government's insistence on retaining the shiprepairing nationalisation clauses. The Government reacted by invoking the Parliament Act. Three times the Lords insisted that ship-repairing should be deleted and thrice the Commons disagreed, the final vote occurring in the Commons on November in when the Government again rejected the Lords' amendment by $276-268$ votes, a majority of 8. The same day nonetheless the Lords again insisted on this amendment by 197-90 votes, majority of ro7 against the Government.

It was the ultimate chapter to probably the fiercest and most heated session in post-war years, during which peers and MPs were engaged in five-day-a-week tussles for months on end and involving almost continual late sittings of both Houses with an abnormal number of all-night sittings in both Chambers also.
In the Lords on Sept. 28, during the second reading of the Aircraft \& Shipbuilding Industries Bill, Lord Carr of Hadley, the former Tory Home Secretary, said that nationalisation was one cause of the disastrous fall in the value of sterling. It had already led to unemployment. The track record of nationalisation was appalling. Lord Kirkhill, Minister of State, Scottish Office, said that the Bill would provide - favourable climate for industrial democracy to develop naturally, and in due course yield substantial benefits. Public ownership would mean reorganisation and should lead to a more effective use of resources.

On Sept. 30, peers gave unopposed second reading to further controversial measure, the

Dock Work Regulation Bill, which was severely criticized by Tories and Liberals. Opening the debate Lord Jacques, || Government employment spokesman, justified the Bill because of the fundamental changes in the last decade through containerisation and roll-on-roll-off loading methods. These had reduced the dock labour force by half. Under the new dock labour scheme, the cargohandling zone would be defined as within five miles of the or a major waterway open to the sea.

Lord Mansfield, Opposition employment spokesman, considered the Government's motives as murky and said that the Bill created privileged class of citizens.

The Lords staged a full-scale debate on the economy on Oct. 4 when Lord Peart, Lord Privy Seal and Leader of the Lords, emphasized that Britain was not applying to the I.M.F. to finance any sort of consumer boom. Credit would be used to finance investment and industrial regeneration. "But we are going to them in the confidence of shared objectives, of the wish to see Britain paying her way and prospering again." The solution would not be easy or quick. What Britain looked for was an economic miracle, but he suspected such miracles, like genius, were 99 per cent. perspiration.

Balancing the whole economy while expansion and regeneration got under way was no easy task. We could afford to sway but not fall off the wire, for underneath lay unemployment at still higher level and cuts in living standards. In real sense it was our last chance to get it right and in getting it right the Government must work with industry and the T.U.C., for it was a joint balancing act and one party disrupting it could bring down the whole.

Lord Thorneycroft, former Tory Chancellor of the Exchequer, said what was needed was a policy of realistic restraint and commonsense, in which mixed economy could flourish. We had to try fairly quickly to live within our means. But if steps were not taken to safeguard the currency, keeping an adequate standard of living in this country would become intolerably difficult. There could be rationing and other controls. It was not that there was danger of dictatorship if we abandoned present policies, but there was a real danger of something like it if we kept them. We could not go borrowing money. One possible solution was a 10 per cent. all round cut in public spending which would halve the present deficit. Taxes were affecting efficiency at the top and right across the scale. "We have reached a point where it is beginning to pay people to stay in bed rather than go to work." Lord Byers, leader of the Liberal peers, called for national support and national decisions to meet the gravity of the crisis.

The decision to press on with aircraft and shipbuilding nationalization was proof that the Government had lost its perspective, and the new dock labour plans were another indication that the Government was suffering from ieath wish. The Earl of Cromer, former Governor of the Bank of England, said our improvidence and imprudence was "like the last throw of the compulsive gambler, waiting to see ace turn up-or is it North Sea oil?" Lord Allen of Fallowfield, chairman of the T.U.C. Economic Committee, said the trade union movement was as determined now to make success of the policies that were being followed as it was when the social contract was first begun. "We shall not lose our nerve and I am confident that the Government will not lose theirs." Viscount Amory, another former Conservative Chancellor of the Exchequer, said the current Government legislative programme involved more Government expenditure and was at best irrelevant and at worst highly counter-productive. Lord Harmar-Nicholls (C.) said Government of National Recovery should be formed for a limited period. Lord Cullen of Ashbourne (C.) suggested five years of coalition government. The present Labour Government was in more disagreement with its own left wing than with the Conservative party. Lord Carrington, Opposition leader, said if the British people were given leadership by a united Government and the facts were stated bluntly and inescapably they would rise to the challenge. Replying, the Lord Chancellor, Lord Elwyn-Jones, said the Government believed it was tackling the problems on the right lines. "The people of our country will rally to its support, bitter as much of the medicine the Prime Minister so frankly prescribed, was."

On Oct. 6, the Lords carried an Opposition amendment to the Education Bill, by 14 I votes to 59 , majority of 82 , which meant that education authorities could keep or revert to grammar schools.

Moved by Lord Elton, an Opposition spokesman on education, it restated the part of the 1944 Education Act setting out general principle that pupils were to be educated in accord with parental wishes. The amendment also stressed education authorities' duty to provide secondary schools offering pupils "such variety of instruction and training may be desirable in view of their different ages, abilities and aptitudes." Lord Elton said the Tory party's quarrel with the Bill was not with the comprehensive system as such but with the prospect of blindly doctrinaire and universal enforcement of it. The interests of children, parents and elected local authorities should take precedence in that order, and the over-riding concern of Parliament and local authorities must be the welfare of the children. Lord Donaldson, Government spokesman, said that his objection to selection was that it made proper comprehensive education impossible. Baroness Emmet of Amber-
ley (C) said the Bill Education the Bill would make the Minister of gave Liberal support for the amendment "to affirm the possibility of parental choice." Viscount Eccles, Education Minister in two Conservative Governments, said that instead of aiming gradually for universal system of non-selective schools, the Bill promised a surgical operation which would further damage parts of the education system which were by no means satisfactory today. Baroness Lee of Asheridge (Lab.), former Minister for the Arts, said there was nothing in a good grammar school which could not be given in a good comprehensive,
but we was we had to stop down-grading the child who was going to be an artisan or craftsman. Lord
Alexander of Potterhill supported the amendment,
which he sald would reject the principle of allability grouping, a concept which went back to the village schools of the last century. Later the Opposition again defeated the Government-this time by 37 votes-to admit an element of "partial selection ${ }^{\text {² }}$ in school admissions. The Conservative motion was approved by 112 votes to 75. The Government was defeated further, by 56 votes to 54, majority $z$, on an amendment moved by Lord Beaumont of Whitley (Lib.) to widen the exceptions already given to schools for music and dance.

By the time the House of Commons reassembled on Oct. II, the Lords had carried amendment after amendment to the Race Relations Bill and the Education Bill on committee stage, but on Oct. 12 the Government had a majority of 13 in the Commons after an Opposition attack on its handling of the economy, voting on a formal motion to adjourn being 301 to 288 .

Opening the debate, Mr. Healey said that Britain was no longer bottom of the inflation league, but was still at the wrong end of the second of the three divisions. Sharp rises in commodity prices and the rapid depreciation of the pound meant that the original target of single figure inflation by the end of the year was now out of reach.

Evidence since July suggested that the economy was developing in line with the Government's strategic objectives. Mr. Healey announced a new National Savings certificate for small savers with I value of $£ 5$ rising to $£ 7$ over four years. The certificate would be on sale for a limited period from its issue in December to the end of March, and the maximum holding would be limited to $£ x, 500$. Rates of interest paid on National Savings Bank accounts would also be increased from Jan. 1, 1977. The rate on ordinary accounts would be increased from four to five per cent., and on investment accounts from nine to 10 per cent. In the 1977 Finance Bill he would introduce provisions to make a corresponding increase in the amount of tax-free interest on National Savings Bank ordinary accounts and Trustee Savings Bank ordinary departments from the first $£ 40$ to the first $£ 50$.

The Government believed it prudent to make application to the I.M.F. for the remaining tranche of credit available to Britain in order to ensure that drawings on the June stand-by could be repaid and the external deficit financed in the coming year without undue strain on the reserves. There was no alternative to the course on which the Government was set. It was a "long and painful road."

Sir Geoffrey Howe, Shadow Chancellor, said that if Mr . Callaghan was unable to take necessary action in the interests of the nation, it was time for him to make way for $\quad$ Government which would. The Chancellor's speech had been totally inadequate and had been - combination of complacency about his own disastrous record and "unspeakable impertinence" towards anyone who had ever criticized him. Time and again the Opposition had warned that public spending was too high and should be reduced, but the Government had argued that this could not be done because it would destroy jobs. Yet failure to cut public expenditure was creating unemployment. "The Chancellor who has spent the last two-and-a-half years wandering around the world with a begging bowl in his hands ought now to drop the begging bowl and carry the can instead." Mr. John Pardoe, Liberal Treasury spokesman, said that any strategy to halt our decline would need to be pursued for at least ten years. It was certain that the correct strategy would have harsh effects in the early years and would be very unpopular. "We are faced with $=$ situation in which what is economically necessary is politically impossible." Mr. Enoch Powell (UUU, Down S) said that we must
bring total intake and total output of resources and money by the Government much more nearly into balance and it had to be done with greater urgency than ever. Winding up for the Opposition, Mrs. Thatcher said "I believe capitalism and democracy are inseparable. I believe you do not get one without the other. Unless we do something, not only to cut public expenditure but later to change taxation levels, we shall have no chance whatever of having istandard of living anything like our competitors." The Prime Minister had talked about the long march ahead. "We are on the long march but we are on the wrong road. The Chancellor has presided over the worst economic decline we have seen in the post-war period." The Prime Minister replied that Britain's economy was not suffering from terminal illness. "We must pursue our policies steadily. We must pursue the social contract, the incomes policy and we must build up manufacturing industry. We must keep public expenditure in bounds. Above all we have to try to preserve the social cohesion of the country." Mr. Callaghan said that inflation was down, the new pay agreements had already been accepted by $1 \frac{1}{2}$ million people, public expenditure had levelled off, savings were high, and manufacturing investment intentions-before the increase in the minimum lending rate-were estimated at between 15 and 20 per cent in 1977. The Government would be making a profound mistake if it attempted - surgical operation to cut £ro billion off the public sector borrowing requirement. The policy was to reduce the public sector borrowing requirement as a percentage of Gross Domestic Product over the next two or three years. "There is no reason to depart from the overall objectives that the Government has set itself. The indicators today are all pointing in the right direction. We have got to move along that path."

The Government's plan, in its Dock Work Regulation Bill, to give dockers a monopoly of cargo-handling within five miles of every port and waterway was rejected by the Lords on October 13 , when by 72 votes to 34 , a majority against the Government of 38 , Opposition peers carried an amendment to restrict the scheme to places within half a mile of a major harbour. Three Labour exCabinet Ministers supported an Opposition amendment requiring the National Dock Labour Board to consider the public interest as well as the limited interests detailed in the Bill. Lord Oram, spokesman for the Government, opposed the Opposition plan initially but agreed to reconsider the question of public interest. Lord Shinwell said that the Bill was a cock-eyed piece of legislation. Its purpose was to provide dockers, who had hitherto perhaps been unemployed but had been receiving all the remuneration to which they were not entitled, with an opportunity to be engaged in operations about five miles away from the scene of their existing operations. Lord George-Brown said that "public interest" was neither imprecise nor unnecessary. The Bill was conceived to satisfy one particular interest which could and might well be contrary to that of the general public. Lord Wigg said that as it stood the clause in the Bill was a very dangerous provision indeed. Following Lord Oram's promise to reconsider, Lord Lyell, who moved the Opposition amendment, withdrew it. The question of who should be consulted before the Employment Secretary made some of the appointments to the reconstituted National Dock Labour Board brought the first defeat for the Government. By $137-69$ votes, a majority of 68 against the Government, the House opened the way for wider consultation than the Bill proposed. Opposition peers carried ill amendment by $x \leq 6$ votes to $54-\mathrm{a}$ Government
defeat by 6 votes-to make it a duty on the Employment Secretary to hold ${ }^{-1}$ public inquiry if anyone affected by the scheme maintained objection. The fourth change forced by the Opposition-by 59-27 votes-prevented the application of the new dock labour scheme to small harbours or places which were within $n$ half mile of them but not within half a mile of a major harbour.

On October 19 the Government suffered further major committee stage defeat over the Dock Work Regulation Bill in the Lords when Opposition peers altered a definition of "dockwork ". Under the original Bill goods due to be or which had been loaded as cargo in a ship would remain cargo at all times while within a cargohandling zone. By 54 votes to 37 , $n$ majority of 17 against the Government, this was changed so that they became "cargo" when physically received by the stevedore, wharfinger or lighterman from the sender or his agent.

A further amendment, carried without a vote, ensured that goods loaded in a ship as cargo ceased to be so when physically handed over to the receiver or his agent. The amendments reduced the number of jobs allocated to the dockers. The final Government defeat of the day, by 55 votes to 30 , was on an Opposition amendment to include the National Freight Corporation, which was originally to be excluded in classifying dock work.

Earlier the same day, the Lords rose at 7.55 a.m. after I sitting lasting more than 17 hours, much of it spent on amendments to the controversial Bill to nationalise the aircraft and shipbuilding industries. The Government suffered five defeats. In one defeat, Conservative amendment to postpone until after the next general election the date on which nationalisation of the aircraft industry would take effect was carried by 60 votes to 32 . Another Conservative amendment to limit the power of the Minister to intervene in the day-to-day management of the new corporations after the corporate plan had been drawn up was carried by $67-29$, majority of 38 .

A Lords amendment to the Race Relations Bill, removing the need for a person against whom discrimination was alleged to show that his action was justifiable, was reversed in the Commons on Oct. 27 by 213 votes to $\mathbf{x 6 0}$, a Government majority of 53 . Conservatives declared that the burden of proof was being shifted from the complainant to the respondent. MPs later rejected a Lords amendment which the Government said cut the protection against victimisation the Bill gave to persons who asserted their rights to bring complaints. They voted 198 to 150 against the Lords proposal.

Mr. Boris Ponomarev, leader of the Soviet Communist party delegation which was on a six-day visit to Britain as guests of Labour's national executive committee, was in the Strangers' Gallery of the Commons on Oct. 28 when MPs heatedly denounced his visit. He departed with eight other men and a woman during a division on the motion that "strangers withdraw"-a procedure for clearing both the Press and public galleries and a dramatic method to demonstrate disapproval. The motion was defeated by 192 votes to 80 , a Government majority of xxz , but before the result was known the Russians had departed because Mr. Ponomarev had an appointment with the Prime Minister. The motion to clear the galleries was sought by Mr. Nicholas Ridley (C, Cirencester and Tewkesbury) "in view of the presence of a man who holds this free Parliament in contempt..." Mr. Ridley shouted the customary words "I spy strangers," making it plain his move for the division was directed at Mr. Ponomarev and his party. Most of the time Mr. Ponomarev and the rest of the dele-
gation spent in the gallery was taken up with angry protests to the Prime Minister about the visit. Mrs. Thatcher said that it was I major diplomatic blunder and particularly insensitive for the Prime Minister to receive Mr. Ponomarev during the zoth anniversary of the Hungarian uprising. Mrs. Thatcher told Mr. Callaghan: "What you do as leader of the Labour party in your desire to support the invitation of your own Left is not a matter for us, but what you do as Prime Minister of Great Britain is a matter for us. We condemn your decision to invite Mr. Ponomarev to see you and to receive him-totally." Mr. Callaghan said that if Mrs. Thatcher was enunciating the doctrine that if she ever became Prime Minister she never intended to meet a member of the Politburo, she had better make it clear now. Mr. Grimond (Lib., Orkney and Shetland) said that a lot of people felt that whatever the Labour party did the Prime Minister was making a mistake in meeting Mr. Ponomarev.

On Nov. I the Commons decided that their select committee which was to investigate the involvement of M.P.s in the Poulson affair should sit in private. A Liberal amendment allowing the committee to sit in public if it considered this was necessary to meet "the requirements of justice or of the public interest," was defeated by 219-63. A Labour Left-Wing amendment that the committee must sit in public was defeated by $256-35$. Mr. Rees, Home Secretary, urged M.P.s to allow the committee to examine the allegations in private and then reach a decision when the committee published a full report of its proceedings. "It will not be a report which is a cover-up," he declared. "It will only leave out the scurrilous and the information I am sure members in all parts would not wish to see published." The Government's decision that the committee should sit in private was backed by the Conservatives. Mr. Callaghan said that as there was prospect of further prosecutions in regard to the bankruptcy proceedings of Mr. Poulson the time had come for the House to consider again the fact that the names of some members had been made public in connection with these proceedings. "The House has a duty to protect the innocent as we have uduty to punish misdemeanour. Those in public life, as we are, are particularly vulnerable to slander and false allegations." Mrs. Thatcher, Leader of the Opposition, said that because of the inquisitorial nature of i select committee, they must take special care to protect those who were innocent. Because allegations emerged Ine inquiry went on, it rendered it specially liable to hurt the innocent person.

The same day, by a majority of three votes, a Liberal amendment in the House of Lords designed to take nationalisation of the aerospace industry out of the Aircraft and Shipbuilding Industries Bill was lost by $65-62$ votes. Lord Carr of Hadley, from the Front Opposition Bench, reluctantly advised Conservatives not to vote on the issue for fear of creating "a Lords v Commons smokescreen with which the Government would wish to blow up an emotional volcano." But many Conservative and cross-bench peers joined Liberal peers in the lobby. The House also voted so exclude ship repairing firms from the Bill. Voting was 73 to 34 .

The Government succeeded by one vote in the Commons on Nov. in guillotining consideration of changes made by the Lords to the Bill to nationalise the aircraft and shipbuilding industries. A motion to restrict debate on the Bill was carried by 311-310. In another vote the Government had Lojority of three on a motion to curtail debate on Lords amendments to the Bills to phase out pay beds from Health Service hospitals umi to extend
the dock labour scheme. Voting $\quad 3$ 30-307. A third timetable motion to limit debate on Lords' amendments to the Bills to end the system of agricultural tied cottages and enforce comprehersive eduction was carried by 312-296. In the Lords almost simultaneously, with nearly the whole Opposition side and liberal peers abstaining, the Government easily rejected a move which would have delayed its Dock Work Regulation Bill at least for the session. By 87 votes to 16 , the Government threw out Viscount St. Davids' motion to postpone the third reading for six months. Then came three more defeats with majorities against the Government of 16,39 and 41 during discussion of third reading amendments moved by Opposition peers. By 104 votes to 88 , peers carried num Opposition amendment to prevent the National Dock Labour Board from recommending that work done in substitution for that by registered dock workers, on the same premises or elsewhere, should be classified - dock work. The Government was defeated again when an Opposition amendment to exclude cold stores not near docks from the Bill's operations was carried by $116-77$ votes.
The Government won a nerve-racking division on the Bill to extend the dock labour scheme in the Commons on Nov. so on the casting vote of Sir Myer Galpern, a Deputy Speaker. Voting was 309309 on $\quad$ motion to reject a Lords amendment providing for public inquiries to be held before new dock labour schemes, which extend the scope of work to be done only by registered dockers, were introduced. Sir Myer, who was in the chair, followed precedent by casting his vote in favour of the Bill as it left the Common for the Lords, and in favour of the Government.

Following a series of close votes in the Commons on Nov. ix, the Government deleted all the amendments made by the Lords to its Bill nationalising the aircraft and shipbuilding industries. The Government was successful in restoring the Bill to its original provisions despite a series of single figure majorities and one division where Ministers were saved again by 1 casting vote.

The Lords ended the committee stage of the Health Service Bill to phase out pay beds from the National Health Service at $6.54 \mathrm{a} . \mathrm{m}$. after almost ${ }^{5} 5$ hours of discussion, and a succession of Government defeats.

Compromise amendments agreed between Government and Opposition since the Government defeat in the Commons on the Dock Work Regulation Bill were accepted in the Lords on Nov. 15. These amendments followed the Commons vote supporting $\quad$ Lords amendment which cut the area over which jobs done in warehouses, depots and cold stores could be taken over by dockers as registered dock work. In the Commons, by 312 votes to 308 , majority against the Government of 3 , the range of the Bill was cut back from a five mile radius from coast and waterways to a half mile from an existing port. Lord Peart, Leader of the House, announced that the Government would not be re-introducing the Bill under the Parliament Act. The amendments they were putting forward would substitute throughout the Bill a complete concept of a definable dock area, as the Lords decided, for the cargo handling zone. Lord Sandford, Opposition Front Bench spokesman on the Bill, accepted that the amendments now to be made were $\quad$ way of making the changed Bill operate satisfactorily. Mr. Albert Booth, Employment Secretary, made it clear in the Commons that the Government had accepted the two Lords amendments to the Dock Work Regulation Bill, which were upheld in the Commons. But he was not committing the Government " not
to introduce amending legisiation on future occasion." Mr. James Prior, Shadow Employment Secretary, welcomed the Government's acceptance "of the clear will of the House of Commons." He said: "We welcome the fact that the five mile socalled dockers corridor is dead. We consider this a victory for common sense and a relief to MPs in all parts of the House."

On November 16 the Lords remained firm in their earlier decision to exclude ship-repairing from nationalisation जmen al in the Aircraft and Shipbuilding Industries Bill. By 173-65 votes on an amendment to one of the compensation clauses in the Bill, they substituted a new amendment replacing ame rejected by the Commons, and by I44-5I votes they insisted that three further amendments on shipbuilding, thrown out by the Commons, should remain in the Bill.

Two days later, on November 18, the Government succeeded by two votes in the Commons in again restoring ship repairing to the Bill to nationalise the aircraft and shipbuilding industries. The Lords' amendment to exclude es ship repair companies was rejected by 280 votes to 278 . Mr. Varley, Industry Secretary, said that the Lords would be blamed for any consequences of delay, and that it was the Government's firm policy that the nine privately-owned and three publiclyowned ship repair companies named in the Bill should vest in British Shipbuilders. Mr. Heseltine, Shadow Industry Secretary, said that in industrial terms the Government's policy added up to humbug. It contributed nothing to the prosperity of British industry and investment. The Bill to nationalise the aircraft and shipbuilding industries failed on November 22 in the Lords after final vote in the Commons which the Government won by 276-268, majority 8. The Commons' reason for insisting on including ship repairing was conveyed to the Lords but the Government took no further action and shortly afterwards the Parliamentary session ended with prorogation. Mr. Varley, Industry Secretary, was firm that ship repairing must be included with shipbuilding and aircraft in the nationalisation measure. He accused Tory peers of "arrogance" and "effrontery" and said that they would be to blame for the "catastrophic" effects further delay in implementing the Bill would have. Mr. Varley said the reintroduced Bill in the next session would contain no improvement in compensation terms, and the safeguarding provisions would remain the same with the same effective dates. The last episode of the bitter battle began in the Lords earlier when ship repairing was again voted from the Bill by $197-90$. Mr. Varley declared: "The Tory peers in the House of Lords are now taking it upon themselves to tell the Government what policies they will allow us to pursue. They, and they alone, have the arrogance and effrontery to tell the House of Commons what policies they will permit us to implement." Mr. Tom King, an Opposition spokesman on aircraft and shipbuilding, described Mr. Varley's speech a nauseating mixture of threat and blackmail. It was not just Conservative peers who that morning again voted against nationalisation of ship repairing. They were joined by 16 Liberal peers, 27 crossbenchers and Lord Shinwell. Previously in the Lords, Lord Carrington, Opposition leader, said that there would be no point in a second chamber which gave way to blackmail and threats to save its existence or for the Lords not to use powers it had in order to reserve them for a future occasion when it would not dare to use them either.

Tory opposition to the Government's plan to phase out pay beds ended in the Lords on November 11 when peers accepted the decision of the

Commons to throw out over 60 changes they had made to the Health Services Bill. Parliament was then prorogued.

## THE QUEEN'S SPEECH

The Queen opened the new session of Parliament on Nov. 24 when, in announcing the Government's legislative programme, she said:-
" My Government will introduce legislation to provide for the election of United Kingdom members of the European Assembly.
My Government will continue to strive for $\begin{aligned} & \text { just }\end{aligned}$ solution to the problems of Northern Ireland and for the improvement of economic and social conditions. They are determined to combat terrorism and to maintain the rule of law. Legislative provision will be made to introduce independent element into consideration of complaints against the police on lines already adopted in England and Wales.
My Government will re-introduce the Bill to bring into public ownership the aircraft and guided weapons, shipbuilding, ship-repairing and marine engine building industries.

Further opportunities for the exploration and development of the nation's valuable petroleum resources will arise from the grant of further licences following the very satisfactory response to the recent round of offshore licensing.

Legisiation will be introduced to provide for the addition to the employers' national insurance contribution and to give effect to other measures which were announced in July.

My Government will continue to encourage the expansion of home food production in the interests of consumers, processors and producers, and will seek further improvements in the operation of the Common Agricultural Policy. Legislation will be laid before you for the purpose of enabling the United Kingdom to extend fishing limits to 200 miles at the beginning of 1977. My Government are seeking adaptation of the Common Fisheries Policy to new circumstances. They will aim to secure conditions in which the British fishing industry can plan ahead and make its proper contribution to the food supplies and economy of the nation.

My Government attach great importance to strengthening the democratic processes of our society. A Bill will be introduced for the establishment of Assemblies to give the Scottish and Welsh people direct and wide-ranging responsibilities for their domestic affairs within the economic and political framework of the United Kingdom.

Legislative proposals for the extension of industrial democracy in the private and public sectors of the economy will be brought forward as soon as possible after the Committee on Industrial Democracy has reported and the necessary consultations have taken place.

Legislation will be introduced to give effect to the job release scheme, and My Government will not hesitate to add as necessary to this and other manpower measures already introduced for the reduction of unemployment. They will continue to promote the development of industrial training.

My Ministers will also pay special attention to housing and the needs of inner city areas. Proposals arising from My Government's review of housing policy will be brought before you.
There will be annual increase in pensions and other social security benefits in order to protect the living standards of the most vulnerable members of the community.

A Bill will be introduced to restrict the payment of unemployment benefit for certain occupational pensioners; to determine the level of carnings at which retirement pension is affected; and to adjust the national insurance scheme in certain other respects.

Legislation will be introduced to remove unnecessary restrictions on the powers of the local authorities to undertake construction work by direct labour.

Legislation will be introduced to provide for greater equality in average charges for unmeasured water supply between different water authorities in England and Wales. Proposals will be brought before you for strengthening the national organisation of the water industry.

A Bill will be introduced to amend the criminal law, particularly in relation to conspiracy, and to improve its administration.

A Bill will be introduced to provide a comprehensive reform of patent law and enable ratification of international agreements, including the European Patent Convention.

Measures will be introduced relating to Scotland, including housing subsidies, reform of the law on marriage, and the introduction of an independent element in the procedure for handling complaints against the police."

A five day debate on the Queen's speech was opened by Mrs. Thatcher, who said it would not be legislation which would dominate the lives of people this year, but how successfully they managed to cope with the deficit and public expenditure and taxation. We believe that at the moment Britain has lost credibility and that the sooner we regain it by sound financial policies the better. The Chancellor has continued to talk big but his actions in fact have made Britain look very, very small." Once again, though the Prime Minister paid lip service to the mixed economy, he produced programmes which made it less and less mixed. "Our purpose in opposition will be to further those policies which lead to confidence in our economy and industrial future, revitailise the wealth-creating sections of the mixed economy, ensure that the individual counts in society, and to try to see that constitutional changes are carried out in accordance with the traditions and achievements of the United Kingdom a a whole. "

Mr. Callaghan said that the Government hoped shortly to announce further measures under the Industry Act to assist the textile industry. Attacking the House of Lords, he said: "It was sul un-elected, in-built anti-Labour majority in the House of Lords which abrogated to itself the right to refuse to accept the repeated decisions of this House "Mr. Callaghan stressed that the changes under devolution must be made within the secure framework of the continuing unity of the United Kingdom. "The Government does ask Parliament to place this Bill min the Statute Book by the end of the session we are now beginning. The people of Scotland and Wales are entitled to a decision these matters during this session." On the economic situation, Mr . Callaghan said that world economic growth had slackened since the first quarter of the year. In most countries including Britain, inflation remained too high. It was still an open question as to the continuing strength of upturn in world trade. The Government's estimate was that on present policies there was more prospect of the downturn going on than too fast expansion. The prospect in that case was that unemployment would continue to rise in Britain and many other countries. On present
prospects $I$ do not see the rate of infation declining during the next few months. This is bad from every point of view-employment, exports, investment and for consumers, especially large and poor families. We must ask the country to adhere to existing policies, hard though this may appear to families who see the necessities of life costing more each month. This will include the geed for a further voluntary agreement on income levels for $1977-$ 78. " The Government's strategy for a successful United Kingdom economy was based sustained and substantial improvement in industrial performance. Nothing else would give lasting full employment and rising standards.
Mr. Grimond said that devolution for Scotland and Wales was the main legislative proposal for the coming year, but it was mistake to deal with Scotland and Wales in in single Bill. He personally had the gravest reservations about the powers of the Scottish Assembly and the method of election to it.
The five day debate ended in the Commons on November 30 with the Government defeating an Opposition motion regretting that the Queen's speech provided no grounds for confidence in the Government's economic policies by 276 votes to 266.

The Government had a majority of 18 in the Commons on December a in a move to secure swift passage for its re-introduced Bill nationalising the aircraft and shipbuilding industries, when a motion seeking to smooth the Bill's progress through the Commons, introduced by Mr. Foot, Leader of the House, was carried by 286-268.

The motion set aside any likelihood of the Bill being dealt with in the Commons under the procedure for hybrid Bills, and also dispensed with anything but a formal committee stage. Mr. Foot said that the purpose was to allow the Commons to assert its supremacy over the " non-elected, irresponsible "Lords and to do so quickly and firmly. Mr. Pym, Shadow Leader of the House, described the motion - a double-headed guillotine. It was seeking to suspend Standing Orders for two quite different purposes, and was - "monster" never before seen. Accusing Mr. Foot of setting aside the procedures for his own deliberate purposes, Mr. Pym declared: "This motion is uw abuse of our procedures, an abuse of our democracy, an abuse of our Standing Orders." Mr. Foot was breaking the rules, and was not acting well guardian of the liberties and responsibilities of the House of Commons. Mr. Richard Wainwright, Liberal spokesman, said: "This is most unworthy attempt to abandon i traditional and most important arrangement whereby private interests are entitled to be properly heard by a committee of this House." Nearly 30 Labour backbenchers rebelled against the Government December by voting against a Bill which curb social security benefits at a saving in public expenditure of $£ 75,000,000$. The Social Services (Miscellaneous Provisions) Bill was given I second reading by 158 votes to 43 . Mr. Ennals, Social Services Secretary, moving the second reading, said that action should be taken to ensure that benefits were not made available where the need and justification for them was manifestly not established. The proposal to stop students claiming supplementary benefits in the Christmas and Easter holidays would not make any material difference to most students. A hardship scheme would be introduced to cover contingencies such madents with inescapable rent commitments during the short vacations. Otherwise they must look to their maintenance grants, which were recently increased. Entitlement to supplementary benefit in the long vacation would continue in the normal way. Mr.

Ennals agreed that the proposals on the unemployment benefit paid to occupational pensioners were "highly controversial". Occupational pensioners aged 60 and over would have their unemployment benefit reduced by 5 p for every 5 p their occupational pension exceeded 25 week. Unemployment benefit would cease to be paid altogether only where the occupational pension was $£ 58 \cdot 10$ or more for married man and $£ 50 \cdot 10$ for a single man. Mr. Patrick Jenkin, Shadow Social Services Secretary, said that the Tories were opposed to the clause reducing unemployment benefit for occupational pensioners, and would try to remove it from the Bill. They would not vote against the Bill on second reading, however, because it contained some welcome measures. Mr. Cyril Smith, for the Liberals, attacked the Bill as "silly and ill-conceived". Mr. William Molloy (Lab., Ealing N.) said that the clause wanemployment benefit for occupational pensioners was ${ }^{-1}$ "complete abomination", and "could bust the social contract ". The Government had majority of 146 in a division forced by Liberal MPs on their attempt to refuse the Bill second reading because it would " make small savings in public expenditure at the expense of increased hardship for m already disadvantaged section of society ". Voting was 172-26.

There was a majority of a for the Government in the Commons on December 6 on the second reading of a Bill to increase employers' National Insurance contributions by two per cent, voting for the National Insurance Surcharge Bill being 280278. The surcharge, which took effect in April 1977 and was expected to yield $£ 950,000,000$ in $1977-78$, was announced by the Chancellor of the Exchequer in his economic package in July $\mathbf{\text { r }}$ 6. Mr. Sheldon, Financial Secretary, Treasury, said that it was necessary to help to reduce the public sector borrowing requirement. He argued that to achieve the required reduction by increasing VAT would have - greater impact on unemployment and prices. Mr. David Howell, Opposition Treasury spokesman, said that the Bill raised taxes when taxable capacity was almost at its limit. "It is part of the Government's job destruction programme," he added. The Government had majority of II in the Commons on December 8 when the Bill was given a third reading by 244 votes to 233. Earlier that day the Government succeeded by a majority of 16 in defeating $m$ Opposition amendment seeking to halve the surcharge.

## DEVOLUTION

On December 13 , MPs mustered for a four day debate on the second reading of the Scotland and Wales Bill to devolve power to directly-elected Scottish and Welsh assemblies. Mr Callaghan said that while the block grant from Westminster would remain the main source of revenue for the assemblies, the Government did not have I closed mind ou giving them power to raise extra taxes. The Commons was being called on to make a bold judgement. The Bill would seek to encourage diversity in the British Isles, while maintaining our unity. The dissatisfaction with the existing relationship between Scotland, Wales and the rest of the United Kingdom, and a demand for an even greater measure of self-government for the first two countries, was not isolated in the United Kingdom. Now that the Government had placed the Bill before Parliament, Scotland and Wales were entitled to a clear verdict and not just an "interminable and never ending flow of argument". Many MPs on both sides wanted to see the final scheme made the subject of referendum. Al though the Government had considered this
question, it had not yet reached a final conclusion. The kind of issues that would be devolved to the assemblies would include matters like housing, education, health, aspects of local government and social services, and in the case of Scotland, many law functions. There would however be safeguards to enable the Government and Parliament to restrain divergence where its practice could harm other parts of the United Kingdom, and damage our unity. The theme that ran through the Bill was the common authority of Parliament at Westminster. Overall industrial and regional policies would continue to be settled by Parliament, and the devolution Bill rejected separatism and federalism. Mrs. Thatcher questioned what the Prime Minister had said about the possibility of having referenda before the Bill took effect and said that the capital cost of the Welsh assembly was $£_{3,800,000}$ and the Scottish assembly $£ 4,000,000$. For the Scottish assembly an estimated 14,000 staff would be taken on by 1978 and 2,720 for the Welsh. "It makes the EEC Commission which has $7,8 \mathrm{xo}$ look very economical by comparison." She added: "The Bill is bad because it is wrong to have Scotland and Wales in the same Bill. This has been done because the Government knows that Wales would not get through otherwise. The Government has chosen a completely wrong approach and structure for the Scottish assembly. They have chosen to make it separate but supervised. It will satisfy no one and will lead to the discord and confict it is our purpose to avoid. It will be used as a basis of agitation and eventually to fragment the unity of the Kingdom." The unity of the Kingdom and the authority of Parliament would not be maintained by starting off on the course upon which the Government had embarked with the Bill. They would be endangered. The structure which the Government had chosen would have a far-reaching effect on the United Kingdom Parliament, and would cause increasing confict. "This is a bad Bill and the thing to do with a bad Bill is to say so fearlessly, which I have done, and vote accordingly, which $\dot{I}$ shall do." Mr. Steel, Leader of the Liberal party, said that the Government's Bill was in I mess. It proceeded from no discernible fundamental principle. Liberals wanted $=$ federal United Kingdom eventually. He warned that the Government would run into hot water for not having provided any revenue-raising powers. Representation without taxation was a recipe for conflict. There were no proposals which would lead him to believe there would be a reduction in the scale of Government. Mr. Donald Stewart, Leader of the Scottish Nationalists, said that the Government had faced the reality of Scottish intentions and what the effect of excluding them would be. But he said that the Bill was "anaemic". Describing talk of break-up of the United Kingdom as a red herring, he said that the United Kingdom had been united in $\times 603$, with the union of the two crowns. There would be no change in that. "It is the aim of my party to remain in the Commonwealth, recognising the monarchy," he said. Mr. Gwynfor Evans, Leader of Plaid Cymru, said that once nationalism was as deep-rooted as it was in Wales it did not go away. As the self-confidence and the sense of loyalty of the Welsh to their nation increased, so too would nationalism grow until it became irrepressible. The Welsh Nationalists saw Wales a member of closely knit family of nations, co-operating closely as $\quad$ member of a British confederation," he said. On the last day of the debate, Mr. Francis Pym, Shadow Leader of the House, said that the Bill had high party-political motivation. "It is an attempt by the Labour party to save seats they fear they
would lose." He stressed that the Tories were agreed that the preservation and strength of the United Kingdom was the over-riding necessity for our future prosperity. There was "a fluid and evolving situation" in Parliament and in Scotland. To jeers from all sides of the House, he said that in such circumstances "it would be impossible and irresponsible to say at this stage exactly what would happen with a change of Government". Mr. Foot, Leader of the House, replying, said that there was a genuine fear that the provisions in the Bill would destroy the unity of the United Kingdom. But there were many MPs who supported the Bill for precisely the reason that they believed it was the best way-in certain circumstances the only wayto sustain that unity. The Bill received I second reading by $292-247$ votes, maiority of 45 - Mr. Heath and $3^{2}$ other Conservative MPs ignored Mrs Thatcher's three-line whip. He was one of 27 Tories who abstained. Five Conservatives voted with the Government. Twenty-nine Labour MPs abstained and yo others voted with the Tories.

## DEFENCE ESTIMATES

On Dec. 14, more than 50 Labour MPs voted in the Commons to reduce the defence supplementary estimates by over half. An amendment moved by Mr. Ron Thomas, new chairman of the Tribune Group, to cut the $£_{513}$ million estimates by nearly £a73 million was defeated by $299-5 x$, Government majority 248 . Dr Gilbert, Minister of State, Defence, said: "There is nobody on either side who could not find better things to spend public money on than defence if we could justify it. But it would be irresponsible for any Government of this country to go in for major cuts in defence spending outside the context of mutually balanced force reductions." Mr Gilmour, Opposition spokesman on defence, said it was strange that Tribune group MPs seemed to welcome unemployment in the defence sphere. Many of the signatories of the amendment were seeking to put their own constituents out of work.

## THE ECONOMIC SITUATION

On Dec. 15 Mr . Healey made Istatement about the economic situation. He said: "The immediate objective of the measures I announcing is to reduce the public sector borrowing requirement to about $£ 8.7$ billion in $1977 / 78$ and to somewhat less in the following year-on present forecasts expect 1 figure of some $£ 8.6$ billion. Expressed as percentage of GDP, the PSBR will fall steadily from 9 per cent. in the current year to about 6 per cent. in 1977/78 and rather over 5 per cent. in 1978/79.
"To achieve these objectives, the Government are proposing adjustments to current plans amounting to $£ x \frac{1}{2}$ billion in 1977/78 and $£^{2}$ billion in $197^{8 / 79 .}$ I am therefore announcing specific measures which amount to some $\mathrm{fx}_{2}^{2}$ billion in each year. In addition, the Government will make further fiscal adjustment of about $£ \frac{1}{2}$ billion in 1978/79.
"If the forecasts at the time show the economy growing from the beginning of 1978 to the end of r979 at a rate of more than $3 \frac{1}{2}$ per cent. a year, the Government intend to make a further fiscal adjustment in the $197^{8}$ Budget-of between $£ \frac{1}{\frac{1}{2}}$ billion and fx billion, depending mi the buoyancy of demand and the state of the world economy at that time- to ensure that with those higher growth rates domestic conditions do not prevent us from giving the necessary priority to exports and investment."

On expenditure or taxation, the Chancellor said: "The fiscal adjustment in both years will come mainly from savings in public expenditure rather than increases in taxation".

In accordance with their medium term strategy for public expenditure, they were holding expenditure in this financial year within the planned level by the rigiorous application of cash limits, by new arrangements for regular consultation with the local authorities, and by refusing to accept new commitments which would breach the contingency reserve. In carrying out the 1976 public expenditure survey they had already made certain adjustments so - to keep within the February White Paper plan for each year, as modified by the measures announced in July.

In order to achieve the new PSBR targets, Mr. Healey had decided to reduce public expenditure programmes further by $£ x$ billion in $1977-7^{8}$ and fx $\frac{1}{2}$ billion in 1978 -79 at 1976 survey prices. Mr. Healey continued: "So far the Civil Service is concerned, we intend in addition to the economies already announced, to obtain further economies of some $£ 30,000,000$ next year and $£ 10,000,000$ in 1978-79. Local Authority current expenditure is now more strictly influenced by the central Government through the recent reduction of the main Rate Support Grant for England and Wales from $65 \frac{1}{2}$ per cent. to $6 x$ per cent. in $1977-78$ and the corresponding reduction for Scotland. We are not re-opening those settlements. But there will be reduction in housing capital programmes. Without these adjustments there would have been substantial overspend on housing. The reduction now decided will offset most of the likely excess next year and will contribute saving of $£_{300,000,000}$ in the following year. New construction will be suspended or curtailed in several other central and local government programmes, including roads, other environmental services, school building, Government accommodation, and capital spending by the Water Authorities. This will save about $£ 270,000,000$ next year and over $\mathcal{L}_{300,000,000}$ in $197^{8 / 79}$.
"Borrowing approvals will be reduced to achieve a slower build-up of land acquisitions under the Community Land Act, producing savings of $£_{35,000,000}$ in each year, although the total amount to spend will still rise substantially. The planned programme for phasing out the Government's food subsidies will be accelerated and will be completed in $1977 / 78$, saving $£ 160,000,000$ in that year and about $£ 60,000,000$ in the following year. This will add less than \& per cent. to the Retail Price Index over 1977/78.
"Besides reductions in school building, the programme for current expenditure on education will be reduced by economies in the administration of school meals, by deferring the operation of Section 9 of the Education Act 1976 dealing with school milk, and by other minor savings, making 1 total of $£ 20,000,000$ in $1977 / 78$ and $£ 30,000,000$ in 1978/79.
"Under the new treatment of the nationalised industries, we shall in future be including in public expenditure only Government finance for these industries, rather than their investment programmes as such. We intend to agree with the nationalised industries action which will reduce the level of Government financing by firo,000,000 and f, $33^{0,000,000}$ in the next two years. As well as economies in spending there will be increases in revenue, notably 1 gas price increase which the Government are asking the British Gas Corporation to effect from April 1977.
" As I told the House in July, the Government want to move progressively towards more selective approach to assistance for industry. It is doubtful whether the regional employment premium now fulfils the original purpose of attracting
employment to the regions. We therefore believe that it should now give way to more selective nill alres and it will be withdrawn by Statutory Order early in the New Year, saving $£ 150,000,000$ next year and $£_{0} 70,000,000$ in the year after.
"In an exercise of this magnitude, spending in support of our external policies must inevitably play its part. Despite the big cuts which we have already made in defence expenditure, we cannot achieve the necessary reductions in public expenditure and the P.S.B.R. without a contribution from the Defence Budget. We are looking to defence for further savings of $£ 100,000,000$ in x977/78 and $£ 200,000,000$ in $197^{8 / 79}$. There will be reductions in the provision for overseas aid which, until now, has been almost entirely protected from expenditure savings. The savings will be $£ 50,000,000$ in survey prices in each year.

The refinancing by the Government of fixed rate credit for exports and ship-building imposes a major charge on public expenditure and the P.S.B.R. which threatens to exceed previous forecasts. Partly to deal with this, I have asked the clearing banks to finance from their own resources an additional $£ 100,000,000$ of fixed rate sterling business in each of the next two years and they have agreed to do so. There will be an increase in the resources of the National Enterprise Board and the Scottish and Welsh Development Agencies. A mim selective investment scheme will be introduced to follow up the very successful Accelerated Projects Scheme. It will give help to manufacturing companies for major projects designed to improve capacity and performance. I will allocate $£$ x00,000,000 to this scheme in the first instance. There will be an increase of $£ 120,000,000$ in $1977-7^{8}$ in spending on measures to reduce unemployment. New applications for the Temporary Employment Subsidy ane to close at the end of this month and for the Job Creation Programme shortly after. We have decided to extend these two schemes to the end of April, and then to review their future along with the other new schemes which the Government has recently introduced.
"To finance this additional expenditure on investment and employment, i must look for some contribution from the specific revenue duties, which are fixed in money terms and are therefore continually eroded by inflation. I have decided to my regulator powers to increase by zo per cent. all the revenue duties charged on tobacco and alcoholic drinks. The increases will come into force for the customs duties on imported tobacco at midnight tonight, and for the duties on tobacco products and drinks on ist January. They will have no effect on prices during the Christmas and New Year holidays. If fully passed on, these duty increases, taking into account the consequential increase in VAT, will add rather over $\frac{1}{2}$ per cent. to the Retail Price Index. They will raise the tax charge on I pint of beer of average strength by a little under ip., and on a standard bottle of spirits by about 31p. They will increase the charge on a standard bottle of table wine by about 5p., and on a bottle of fortified wine such as sherry by about 7 p . The tax on $\boldsymbol{\text { packet of }} 20$ filter cigarettes of average size will be increased by about 4 p . The additional revenue raised will be $£ 50,000,000$ in the remainder of this financial year and $£ 280,000,000$ in 1977/78."
"There is one further step which we propose to take to reduce the public sector borrowing requirement in $1977-78$. Two years ago the Government rescued the Burmah Oil Company from severe financial difficulties, and as part of a package of support the Bank of England bought

Burmah's holding of shares in the British Petroleum Company. We now propose that the Bank should sell enough of Burmah's former shareholding in BP to leave the total of the Government's and the Bank's holdings at 5 per cent $\begin{aligned} & \text { against the } 48 \text { per }\end{aligned}$ cent. held by the Government before the acquisition of the Burmah BP shares."

The Chancellor went on: "I hope that the IMF agreement and the measures I have announced will enable - to see interest rates fall from their present exceptional levels while keeping control of the monetary aggregates. The Government's measures amount to $\overline{1}$ total fiscal adjustment of £x $_{\frac{1}{2}}$ billion in 1977/78 and $£ 2$ billion in 2978/79."

Sir Geoffrey Howe, Shadow Chancellor, said: "I speak for the whole House when I say we min deeply anxious that with this attempt, for the sake of the nation $n=$ whole, he has indeed got it right." It seemed that a Labour Government could only be prevented from steering the economy towards disaster when it was under the firm survelllance of the IMF. He told Mr. Healey: "We welcome this further evidence of your conversion, however relunctant and belated, to the views we have been putting forward for the last two and a half years on the importance of the money supply and of achieving substantial reductions in public spending." Sir. Geoffrey welcomed signs from the Chancellor that new jobs and prosperity could only come from renewing confidence in the private sector. The private sector on which recovery depended would continue to languish until effective action was taken to restore incentives at every level. " Today's dose of bitter medicine is the direct result of his reckless and incompetent mismanagement of the economy during his three wasted years at the Treasury."

## PENSIONS AND DEFENCE

The Government's proposal to reduce unemployment pay to mem over 60 with occupational pensions of more than £30 a week was defeated in a Commons standing committee on Jan. Ix when three Labour M.P.s voted with the Conservatives. The proposal-in the Social Security (Miscellaneous Provisions) Bill-had been introduced part of the Government's economy measures. Mr. Orme, Minister for Social Security, who had appealed to the committee not to delete the clause, said that his department would ume have to look for alternative savings, and these might be "painful."

In the Commons on Jan. 32, 77 Labour M.P.s voted for Left-wing amendment describing the recent $£ 300 m$ defence cuts as inadequate. A Conservative attack on Mr. Mulley, Defence Secretary, on the grounds that the defence cuts in the mini-Budget before Christmas had imperilled Britain's security, was defeated by $288-265$. The Conservatives abstained on the amendment moved by Mr. Frank Allaun (Lab., Salford E.) calling for more cuts, and it was defeated by 214-77. Mr. Ian Gilmour, Opposition spokesman on Defence, was cheered by Conservative M.P.s when he condemned Mr. Mulley for his failure to resign in protest at the $£ 300,000,000$ cut. It was the duty of Mr. Mulley to resign. "He be no further good, for all his amiability. In $\quad$ very weak Government he is now a total passenger," he declared. Mr. Mulley said that the Chiefs of Staff would like to spend more on defence, and could make a strong case in military terms. But they must accept political decisions made by ministers and Parliament. Mr. Alan Lee Williams (Hornchurch), chairman of the Parliamentary Labour Party's defence group, suggested in view of the latest defence cuts that the time had now come for is fundamental review of
the kind of weapons systems which the Chiefs of Staff were recommending to the Defence Secretary. It was also time for a serious reappraisal of the role of the Royal Air Force, which had given up its strategic role and was basically now a tactical force in aid of the army in the forward position in the central front of N.A.T.O.

## DEVOLUTION AGAIN

On Jan. I3, detailed consideration of the Scotland and Wales Bill was delayed by a three-hour argument about what M.P.s would or would not be able to discuss. Members on both sides, mostly opposed to devolution, expressed the view that the long title of the Bill, "To Provide for Changes in the Government of Scotland and Wales," would restrict debate, in particular on matters affecting government in other parts of the United Kingdom. Finally, Government motion on the order in which the Bill w 咅 to be considered was agreed without a division.

The Government's proposals for devolving power to a Welsh Assembly were fundamentally unsound and would not work, Mr. Nicholas Edwards, Shadow Welsh Secretary, said in the Commons on Jan. 18. He said that the Government were proposing " a second government" with sufficient power to render totally ineffective the intentions of the United Kingdom Parliament but with insufficient power to improve the economic health of Wales. He observed: "It seems to me a recipe for disaster, frustration and bitterness, particularly when the Nationalist party is itching to exploit the opportunity."

An attempt to adopt proportional representation for the Scottish and Welsh Assemblies w. made by Mr. John Mackintosh (Lab., Berwick) on Jan. 25. Mr. Mackintosh moved an amendment for usystem of proportional representation for the first elections to the new assemblies, modelled on the West German system. After 12 hour debate ending at 4.30 a.m. on Jan. 26, the amendment was defeated by $244-62$ votes.

A Liberal move to call the elected bodies proposed for Edinburgh and Cardiff under the Devolution Bill Parliaments instead of Assemblies was defeated in the Commons on Jan. 26. An amendment moved by Mr. Steel, Liberal leader, on the resumed committee stage of the Bill was rejected by 156 votes to 24. After another all-night sitting a major Opposition amendment calling for a Speaker's Conference to decide how many Scottish and Welsh MPs should sit at Westminster after devolution was defeated by $277-199$ votes.

The Cabinet on Feb. 3 retreated from an early guillotine on the Devolution Bill and announced referenda for Scotland and Wales. The polls-to be decided by a simple majority-for people living in Scotland and Wales would seek $\begin{aligned} & \text { a straight yes or }\end{aligned}$ no answer to the question: Do you agree that the provisions of Scotland and Wales Act, x977, should be put into effect? The future government of Scotland and Wales would be decided by people living in those countries, if they were the electoral register. Exiled Scots and Welsh would not be entitled to vate although Servicemen might as long as they were the electoral register. The polls would be along the lines of the E.E.C. referendum, on I regional and island basis in Scotland and on a county basis in Wales. Conservatives were not advised to vote against the proposal, which was carried by 23 I votes to 24. Although the dissentients were Conservative M.P.s, there had been a general welcome for announcement by Mr. Foot, Leader of the House,
resumed committee stage of the Bill, that the Government had decided that the referenda should be consultative and not legally binding on M.P.s. The Scots Nationalists however challenged the change, on the grounds that their countrymen might vote for devolution in a referendum, but that the "English majority" in the Commons might override that result. "Parliament will now have the last word," Mr. Foot declared, but he made it clear that he expected the Government and all M.P.s to be bound by the referendum result. Mr. Foot made another concession to anti-devolution M.P.s when he announced a change in the wording of the referendum question. The electorate would be asked if they "want" Scottish and Welsh Assemblies and the other proposals in the Bill, not if they "agree" with them. Mr. Foot said that the Government recognised the unease that the referendum should be mandatory. "We envisage after the referendums, and whatever the outcome may be in respect of Scotland and Wales separately, that there should be - positive Parliamentary process before the Act $\quad$ eu be implemented or repealed." After anmouncing the change in the referendum question, Mr. Foot said that the Government proposed that the reference to the continuance of the United Kingdom in the explanatory preamble should be quite explicit that this was $n$ factual statement about the provisions of the Act and not I general political prediction of the future. Mr. Stecl, leader of the Liberals, supporting the Government's change of mind, referred to the wishes of some M.P.s that the electorate should also be asked if they were in favour of independence for Scotland and Wales. Now the referendum was to be an opinion poll, the Government could be more flexible about the questions it was prepared to put. Mr. Foot replied that the Government believed that the referendum should be put in as clear terms possible, and they should stick to the single question. Mr. Enoch Powell (U.U.U., Down S.) said the proposition of a referendum only arose when a party was unable to resolve its internal differences on a matter of major importance.

On Feb. 16 debate on the Devolution Bill ended in uproar with M.P.s from both the Nationalist parties repeatedly accusing the Chair of bias. Scottish Nationalists were angry when none of their Members was called to speak to a Government motion to adjourn debate for the day, and Mr. Wigley (Plaid Cymru, Caernarvon) accused Sir Myer Galpern, who was in the Chair, of "the most blatant example of bias." The matter ended when Mr. Gordon Wilson (Scot. Nat., Dundee E.) said that his party had tabled motion of "No confidence" in the Chair, and were prepared to withdraw the allegations. The motion to adjourn the debate was carried by 215 votes to 80 , Government majority 135. The flare-up came after an attempt to extend the referenda on devolution to the whole of the United Kingdom. was rejected by 249 votes to 69 , Government majority 880 .

The Commons was in pandemonium again on Feb. 17 as Mr. Foot, Leader of the House, announced guillotine motion on the Devolution Bill. Mrs. Thatcher, said: "This is the most discreditable and disgraceful use of the guillotine we have yet man in this House." The Devolution Bill raised constitutional matters that had not been discussed in the Commons for 50 years. Mr. Foot was suppressing discussion on matters of supreme importance to everyone in the United Kingdom and was thoroughly debasing the standard and standing of Parliament. The Government's motion to guillotine the Devolution Bill and thereby restrict debate was defeated by 29 votes in the Commons biI

Feb. 22, voting being 3 22-283, Labour M.P.s voting against the Government and another 20 abstaining.
Mr. Pym, Opposition Spokesman, pleaded with the Government to "think again"' before proceeding with the Bill at all, and repeated his suggestion that they should instead hold an allparty convention on the future of Scotland and Wales. Mr. Pym disagreed with those who predicted dire and dangerous consequences if the measure was not passed. There was no genuine majority in the Commons for the Bill. Mr. Foot said that it would be dangerous for the House and the country if the Commons were to deny the legitimate claims of Scotland and Wales. Moving the timetable motion, Mr. Foot emphasised that he was not making accusations of filibustering in the debates so far on the bill. Mr. David Steel, the Liberal leader, said that part of the trouble was that Ministers as a whole were not committed to devolution.

The result of the guillotine vote had not been a defeat for the Government but I victory for representative parliamentary democracy, Mr. Pardoe (Lib., Cornwall N) said in the Commons on Feb. 23 when moving $\quad$ Liberal motion calling for proportional representation in the resumed committee stage of the Bill. A Government should accept this kind of defeat not as a disaster but as part and parcel of the job of a representative chamber. The Liberals did not press the motion to a vote. Mr. Reginald Prentice (Lab., Newham NE) said that the Government defeat on the guillotine motion had been a victory for Parliament, and commented: "We were emphasising the point that no Government of this country can govern without the consent of Parliament. In addition we were striking a blow for Parliament and democracy." Mr. Francis Pym, Opposition spokesman on devolution, welcomed in the Commons on Feb. 24 the Government proposals for talks with other parties to try to reach wider agreement on devolution following the Government defeat on the guillotine motion on the Scotland and Wales Bill. Mr. Foot told him that the Government still believed the general outline of the Bill was the best way forward. It did not necessarily accept that an all-party convention on the lines proposed earlier by Mr. Pym would achieve the desired result. Mr. Steel, the Liberal leader, promised that the Liberals would join the discussions in a constructive way, but Mr. Dafydd Thomas (Plaid Cymru, Merioneth) said that his party would not be prepared to take part without an assurance that the Government intended to get a Bill through during the lifetime of this Parliament. Mr. Gordon Wilson (Scot. Nat., Dundee E.) attacked Mr. Foot's statement as " meaningless nonsense." Mr. Foot replied that there would be no time wasting on the Government's part. In his statement the Leader of the House said that the Government were not only willing to explain their proposals further but also to consider how they might be improved "so that what finally reaches the Statute Book shall reflect the widest possible agreement in Parliament." In general the working out of legislative proposals was best conducted by the normal processes of the House of Commons. "We are however ready in the exceptional circumstances of devolution to supplement these processes by special discussions. The aim of these discussions will be to explore how we may achieve, if it is possible, $I$ wider agreement in the House" Mr. Foot proposed that the initial discussions should be on a bilateral basis, but the Government would be fully prepared to consider suggestions to place substantive talks on a wider basis if the initial talks suggested this would be useful. "At this stage, the Government would not
wish to rule out any particular method that might prove $\quad$ fruitful method of carrying matters forward. " The Government remained committed to the principle of devolution, both to satisfy the aspirations of the Scottish and Welsh and to preserve the unity of the United Kingdom. Mr. Yym told Mr. Foot: "This statement sounds like second thoughts on your perhaps too hasty rejection of my proposals for a convention. As an initial reaction on the Government's part to Tuesday's very significant vote, we welcome it. We will respond to that invitation to bilateral talks, but I must make it clear that we see them as un more than a preliminary to discussions on that wider basis that we have proposed." After some further discussion on the committee stage, debate was adjourned in view of developing events.

## NATIONALISATION OF AIRCRAFT AND SHIPBUILDING

Mr. Varley, Industry Secretary, announced in the Commons on March 2 that ship repairing was being dropped from the Bill to nationalise the aircraft and shipbuilding industries. Deletion of the 12 ship repairing companies listed in the Bill was made necessary because of the findings of examiners that the Bill was hybrid. Mr. Varley said that the Government had decided on this course in view of the grave industrial consequences of further delay to the measure. Consultations had taken place with the Opposition, who agreed that the Bill should proceed to Royal Assent as a public Bill in its present form, apart from deletion of the repair companies. Sir Keith Joseph, Shadow Industry Secretary, said: "Although we deplore this Bill and think it thoroughly bad for the country and the industries concerned, we welcome the Government's belated acceptance of the implications of the rules of procedure and natural justice." Sir Keith gave notice that a Conservative Government would seek to return the nationalised companies to private ownership.

The Bill concluded its final stage in the Commons, on March 15, in nineteen minutes. The Commons agreed, without a vote, to amendments made by the Lords deleting the 12 ship repairing companies.

## REDUNDANCY REBATES

The Government won at the second attempt the second reading vote on a Bill reducing the redundancy rebates paid to employers, in the Commons on March 2x. When the Bill came before the House on February 7 it was defeated by one vote, the first time a Government had lost a second reading vote since 1888 , but on this occasion the Government won by $220-183$. Mr. Barney Hayhoe, Opposition spokesman on Employment, said that the Government was "divided, demoralised and discredited. "The fact that it insisted on giving priority to such an "insignificant irrelevance of $\quad$ Bill" demonstrated its " manifest unfittedness to remain in charge of the nation's affairs." Because the Bill and the 40 per cent had been rejected by the previous month's vote, Mr. Walker, Minister of State, Employment, explained that the new one permitted any one of ten different percentages to be introduced from 35 per cent to 80 per cent. The Government would in fact introduce, by order, a rate of 4 I per cent. rebate to employers. At no time would it be possible to bring in $\begin{gathered}\text { figure }\end{gathered}$ of 40 per cent., adding: "We must respect the view of the House." Mr. Douglas Henderson (Scot. Nat., Aberdeenshire E.) alleged that the Government brought back the Bill in "I sneaky and backdoor way."

## PUBLIC EXPENDITURE

At the end of the debate in the Commons on March 37 on its public expenditure White Paper, the Government, realising it would be defeated on a vote, did not contest the division on I technical motion for the adjournment of the House on which their economic policy was attacked, and allowed the Conservatives and the other opposition parties a clear field so that the motion was carried by 293 votes to nil. Labour M.P.S abstained on the vote forced by the Scottish Nationalists against the Tories merely to ensure a division to put the Government on the mat, and the next day (March 18) Mrs. Thatcher, still angry at the Government's tactics, announced that the Opposition was tabling - motion of no confidence in the Government. On March 23 the troops were fully mustered for the onslaught on the Government. Mrs. Thatcher accused the Prime Minister of wheeling and dealing and of trying to cling to office by political cunning. Mr. Callaghan counter-attacked by commending the Government's industrial and financial strategy and explained that he had beerr conducting conversations to see how best their policies could be continued. He then described the agreement which he called an experiment between the Liberals and the Government which would last until the end of the present session which would give the Government the opportunity to maintain the stable position it needed to carry through its economic and social policies. The terms of the experiment evoked all kinds of adjectival accusations and counter arguments from both sides of the Chamber, and as the debate neared its decisive end Tory M.P.s crowded on to the bench normally occupied by Liberals and some Liberals retaliated by listening to the closing speeches from the Opposition Front Bench and some Tory back-benches. As expected in the circumstances, the Government easily survived the Conservative no confidence motion by 322 votes to 298.

## THE BUDGET

The Chancellor of the Exchequer presented his Budget statement on March 29 and made the following main points:

Immediate changes were: $£ \frac{3}{3}$ billion increase in indirect tax, 年住 billion cut in income tax.

Later changes would occur when satisfactory pay agreements were reached with an extra $6 x$ billion cut in income tax.

Taxes on spending had not risen with inflation m much as taxes on incomes. But a big rise in indirect tax was not right now because of effect on prices. His proposals were: Cigarettes-up 4 p on a packet of 20 ( $£ 150$ million); Petrol and dervduty up 5 p i gallon (no extra cost to bus companies) ( 6300 million); Heating oil-duty up from sp to ${ }_{2} \frac{1}{2} p$ gallon (£i50 million); Car tax-up £ro from $£ 40$ to $\mathcal{C} 50$ ( $\mathcal{L} 50$ million); Lorry tax heavier pay more according to size ( $£ 60$ million).

Income Tax cuts now would be: Personal allow-ances-Single up £70 to £805; Married up £ 840 to $£ x, 225$; Head of one-parent family up also to £ $x, 225$, with same tax cuts for over-65s (who already had higher tax starting points).

The effects were that some 850,000 people would stop (or not start) paying any income tax.

Regarding higher-rate taxpayers, the Chancellor pointed out that at present, after allowances, people started paying tax at 40 per cent. on any income over $\mathrm{f} 5,000$, and higher rates went up on each slice of income up to $£ 20,000$. The Budget proposals were: 40 per cent. rate to start ${ }^{(66,000}$ instead of $£ 5,000,45$ per cent. rate to start at
£7,000 instead of $£ 5.500,50$ per cent. rate to start at $£ 8,000$ instead of $£ 6,500$, with further increases right up the scale.

The effect was to help to keep skilled workers out of higher rates and to adjust differentials among middle-managers, professional people and others, who had had very little or no increase in take-home pay in the last two years. More than 500,000 people would not now have to pay the higher rate of tax for the first time.

The total number of people taken out of basic rate of higher rate tax was over $\mathbf{x , 5 0 0 , 0 0 0}$.

On incomes from investment for people under 65 , the starting point for mer cent. surcharge (on top of the 35 per cent. or higher rate on pay) was up from $£ \mathrm{I}, 000$ to $£ \mathrm{I}, 500$ but the starting point for 55 per cent. surcharge stayed at $£ 2,000$. For people over 65 , the starting point for so per cent. surcharge was up from $£ 1,500$ to $£ 2,000$, and the starting point for 15 per cent. surcharge up from $£ 2,000$ to $£ 2,500$. The main aim was to help elderly people living on income from savings. Total cost to revenue of cuts was $£ x \frac{1}{2}$ billion.
Income Tax cuts later would be made when pay agreement assured continuing fall in inflation rate.

For all income tax payers the basic rate of tax was down from 35 per cent. to 33 per cent. at I cost to revenue of $£$ I billion.

On business and other taxes, the Chancellor announced: new tax reliefs for exporters and others working abroad; and two-year continuation of present stock relief scheme.

Self-employed: More tax relief on retirement annuity.

Churches and Charities: exempted from $\pm$ per cent. National Income Surcharge.

Small Companies: Additional relief from corporation tax.
Construction: $£=00,000,000$ programme for inner city areas.

The total effect on jobs should be that the expenditure measures would increase employment by over 150,000, and tax measures would also increase employment by about 100,000 .
Other Budget measures included two changes in capital gains tax on businesses, a clamp-down on some forms of tax avoidance, possible changes in oil companies' tax relief and a decision not to compensate firms for exchange losses in repaying overseas loans.

Mrs. Thatcher, pronouncing the Opposition's verdict on the proposals, declared that looked at a whole, the Budget was still a " take away " rather than a "give away " Budget. The Chancellor had said that much of it was dependent on a satisfactory pay policy, but he had made no attempt to describe what such - policy was. "Many of us," she commented, " are worried that we are practically near the peak of $I$ very temporary recovery, and we are in danger of going into a minor recession. It is not a revival Budget for Britain at all; it appears to be survival Budget for the Labour Government."

When the Budget debate was resumed on March 30, Mr. Joel Barnett, Chief Secretary, Treasury, spoke of the need to conclude successfully an agreement with the unions on the third phase of the incomes policy. The alternative would be a pay explosion that would destroy all hope of cutting the rate of price increases and the level of unemployment. Mr. Barnett said he confident that union leaders and, more important, their members, would recognise how essential it w. to reach agreement.
"We mav have a golden opportunity of seeing the end of stagnation and moving to new nof moderate but real wage increases, bringing about lower price increases, more jobs and a steady improvement in living standards." Sir Geoffrey Howe, Shadow Chancellor, said that the detailed regulation of pay bargaining could not be maintained indefinitely, although there would have to be $\quad$ period of transition. He emphasised the need for restraint in pay bargaining, pointing out that the alternative must be higher unemployment. The total sum available to finance higher pay had to be strictly limited. After the four-day Budget debate finished on April 4, the Government's Budget proposal to raise petrol tax by 5 tp wiw approved by 290-28r, the Liberals abstaining. The Labour Left voted against the Chancellor's tax reliefs for those earning over $£ 6,000$, but were defeated by 369-54.
The Government w defeated in the Commons Gn April I by $203-185$ votes, when the Opposition forced a vote at the end of a debate on teacher training colleges in Scotland.

Scottish Nationalists voted with the Conservatives in formal motion to adjourn the House, and the defeat forced the postponement of the second reading debate on the Greater London Council (General Powers) Bill which whe to have been discussed under the usual procedure for private business. The Opposition wn protesting \# Government plans to close down some of the ten Scottish teacher training colleges.

## EUROPEAN PARLIAMENT

At the start of a two-day debate the White Paper on direct elections to the European Parliament in the Commons on April 20, Mr. Edward Heath, former Tory Prime Minister, proposed that directly elected British M.P.s should also have the right to sit and speak in the House of Commons, but not the right to vote. Mr. Heath said that this would be meffective way of ensuring that European M.P.s knew the view of the House, and could speak on the actions taken in the European Assembly.

Mr. Heath declared his opposition to $=$ first past the post election system which would be unrepresentative and unacceptable, and could not be in the long term interest of democracy. Opening the debate, Dr David Owen, Forelgn Secretary, said that the views expressed would be of great importance to the Government in consldering what form of electoral process to recommend to Parliament. The Government were not announcing decisions now, but wanted to listen and note the arguments put forward. The principle of a directly elected Parliament Nu incorporated in the Treaty of Rome 20 years ago. When the Government, in honouring their treaty obligation, came to introduce their Bill it would be for Parliament to decide. Dr Owen said that the issue of federalism lay behind - lot of the anxieties about a European Parliament. "A directly-elected European Parliament will be mim indispensable and practical step in the construction of in more cohesive and democratic Europe." Mr. John Davies, Shadow Foreign Secretary, said that the House could be drawn into cul-de-sac if it were not given an opportunity to decide the issues raised in the White Paper before second reading of the Bili. Mr. Davies ill that the electoral method decided upon was of secondary importance to attaining direct elections. "I ma perfectly content to abide by the majority decision of the House as to what electoral decision they desire," he added.

Mr. Jeremy Thorpe, Liberal Foreign Affairs spokesman, gave three criteria. He hoped ill M.P.s would agree to in - Bill direct elections: fairness, the ease and speed with which a system could be introduced, and the need to avoid distorting the political balance in the Assembly. Il would make I mockery to have a first past the post system. The problems facing the European Parliament were regional and not individual constituency n= The single transferable vote system 18 the best devised as fair, logical and simple.

Next day, April 3x, during question time, the Prime Minister warned the Commons that it would be "very ill-advised" to overturn the decision to hold direct elections to the European Parliament. The repercussions could go beyond the Community. "It is for that reason among others that I shall my best endeavours to see that in Bill is produced for consideration by the House."
On April 25, the second day of the direct elections debate ended without division. Mr. Enoch Powell said they would reach the same conclusion on this as they had on the Devolution Bill. That was that the Commons and another directly elected assembly drawn from the will electorate could not co-exist. One must yield to the other. Mr. Whitelaw, Shadow Home Secretary, winding up for the Opposition, said that the Commons would be taking very grave responsibility if it denied the Prime Minister the opportunity of meeting the target date of May/June 1978 , for the first European elections. "We shall have given our friends in Europe grounds for despair and our enemies the chance to proclaim once more the dangers of working with perfidious Alblon." Mr. Whitelaw said that he had decided that, provided there time to meet the target date, the first past the post system was the simplest way of having direct elections now. That would leave open an alternative method for subsequent elections. Mr. Rees, the Home Secretary, replying, said that there were serious constitutional difficulties in the issue. They would be creating Inew breed, the European elected person.
"We are making $\quad$ break in the tradition of centuries that the most important elected person in each area is the M.P. There wil time for the Boundary Commission to undertake determination of single member constituencies to meet the May/ June deadiline."

## UNEMPLOYMENT

The Bill seeking to strengthen control over price increases was given a second reading in the Commons on April $2 \eta$ after a Conservative amendment had been defeated by 279 votes to 267 .
The allocation of a further $£ 30,000,000$ to reduce unemployment in the construction industry was announced by Mr. Freeson, Minister for Housing, in the Commons oc May z. The money would to local authorities and housing associations for improvement and renovation of substandard housing. Mr. Freeson said that this was made possible by the fall in interest rates, enabling the Government to budget for I somewhat smaller provision for housing subsidies this year. The Conservative environment spokesman, Mr. Keith Speed, said that Government policies nof "knocked the construction industry for six." In three years of Socialism none had been clobbered more. Mr. Rossi, Opposition spokesman on Housing and Land, said that the Minister seemed not to realise IIEil the construction industry was in the gravest recession for I century. Aa Opposition motion ix
the Government's handling of the industry was defeated by 295 votes to 286.

## PETROL TAX

F the Commons on May 9, the Government removed the extra $5 \$ p$ on petrol tax with effect from August 5 .

Mr. Barnett, Chief Secretary, Treasury, said that because the increase was not being taken off immediately, the Government would have time to consider "the nature and extent " of recouping the lost money -" or indeed whether there needs to be recoupment." Mr. Barnett, moving the amendment during the committee stage of the Finance Bill, said that the Government would act if petrol suppliers failed fully to pass on to motorists lle was reduction. Sir Geoffrey Howe, Shadow Chancellor, welcomed the Government's change of mind, but objected that they were persisting with the increase on derv and industrial fuels. A Conservative motion to extend the cancellation to derv defeated by 275 votes to 250 . The Government amendment removing the $5 \frac{1}{\mathrm{p}} \mathrm{p}$ increase on petrol approved without a division.

THE PRICE COMMISSION
An Opposition move to have the Price Commission wound up by $\mathbf{~ g} 80$ at the latest m - defeated by 250 votes to 238 , Government majority 20 , in the Commons on June $2 x$.

An amendment moved by Mrs. Sally Oppenheim, Shadow Prices Secretary, of the report stage of the Price Commission Bill, also provided for the Commission's existence to be reviewed and ended before the three years wirs up. The Bill, which sought to strengthen control over price increases, would give the Price Commission power to investigate price increases and would authorise the freezing of individual prices for up to a year. Mrs. Oppenheim gave $\quad$ warning of the danger to busiM: confidence and investment if the powers of the Commission were prolonged beyond the date she proposed. Mr. Fraser, Minister of State, Prices and Consumer Protection, replied that to give the commission and its powers 1 temporary life would undermine the confidence of industry, which wanted certainty and security. The Government 10 majority of 23 in another division when they defeated proposal from the Scottish National party to allow the Minister of Agriculture, Fisheries and Food to retain the right to appoint in of the Commission members, and a suggestion that the Scottish Secretary, too, should be able to appoint members, voting being 254 to 23x. The Commons continued its debate on June in on the Bill after an all-night sitting. Business for June 23 was theoretically lost when the sitting passed the 24 hour mark. Wednesday, June 22, will never appear in tha Parliamentary records in is sitting day. "We shall go straight from the zrst to the azrd," said the Speaker, Mr. George Thomas. The Bill completed all remaining stages and the House rose at 9.33 p.m. after $I$ sitting of $3^{z}$ hours 3 minutes, the longest for -1 years.

## SCOTTISH PEERAGE CLAIMS

The House of Lords on June a7 accepted the recommendation of its committee of privileges to revive the old Scottish Viscountcy of Oxfuird and to recognise the claim of Sir John Makgill, the rzth baronet, to succeed the second viscount who died $27^{2}$ years ago. Lord Molson (C) suggested that the Lords should appoint - committee to consider whether the whole F part of the archaic peerage law of Scotland should be repealed. Lord Keith of Kinkel, 1 Lord of Appeal, argued in the Erom
succession law was not arcanc. Lord Fraser of Tullybelton, a Lord of Appeal, said that there w no question of repealing the law and to change it in a retrospective way seemed a dangerous procedure. The Earl of Dundee said that the whole subject rested the execution of justice. Viscount Dilhorne said that further consideration should be given to whether there should be future claims of this character. Lord McCluskey, Solicitor General for Scotland, said the proposal looked like in sledgehammer designed to crack $=$ nut. But Ministers would study ways to reduce the waste of time and expense involved in considering such matters.

## SCOTLAND AND WALES

On July 4, a Scottish and Welsh Nationalist urmwe motion on the Prime Minister was defeated in the Commons without difficulty though supported by the Conservative party. The motion, to reduce the Prime Minister's salary by haif, wai rejected by 300-27I. government majority 29. Mr. John Morris, Welsh Secretary, winding up the debate, described the Conservatives' decision to back the Nationalists n "the biggest political misjudgment of all time." Opening the debate, Mr. Donald Stewart, leader of the Scottish Nationalists, sald that Mr. Callaghan should not base his hopes for all optimistic economic future men the oil reserves in the Scottish sector of the North Sea. "He cannot blind the Scottish people to the enormous resources in their area and at the same time tell them there are nin resources to deal with deprivations in Scotland," he said. "That bluff cannot continue indefinitely," Mr. Bruce Millan, Scottish Secretary, said that the Scottish seasonally adjusted unemployment figure was $7 \% 7$ per cent. That was far too high, but it compared with 9.4 per cent in Belgium and the Irish figure of 12 per cent. North Sea oll activities had created 56,000 to 65,000 jobs already in Scotland. Mr. Gwynfor Evans, leader of the Welsh Nationalists, said: "No policy decisions are made in Wales or for Wales. Much power over Wales has been transferred outside the United Kingdom to Brussels, but none has been transferred to Wales. " Mr. Teddy Taylor, for the Conservatives, said: = While we will be voting for the Nationalists' motion, I wish to make it clear that this does not muan that we support in any way the economic policies proposed by the Nationalists, which we believe would make a serious situation II great deal worse."

## EUROPEAN ASSEMBLY ELECTIONS

A two-day debate opened on July 6 on the European Assembly Elections Bill, which provided for a choice between the existing simple majority system and Iform of proportional representation, the regional list. Mr. Callaghan intervened to declare that if the simple majority system wa adopted it might not be possible for the Boundary Commissioners to determine the new constituencies in time to meet the target date. "It will not be the end of the world if it is not 1978 ," he said. "I have always said to my colleagues i. the continent that it might have to be 1979 if the procedures vate to be proper." The Home Secretary, Mr. Rees, moving the second reading, declared the Government's commitment to try to meet the target date of MayJune, 1977, for the first direct election. "The Government accepts Britain's membership of the European Community in endorsed by the British electorate in the decisive referendum of 1975.0 The Bill would enable $\square$ clear choice between two electoral systems, the regional list system, and the traditional " irst-past-the-post " system. The Government would be recommending the House to accept tmin reglonal list system. =Whil I acknow-
ledge that support for such a system is an important step in favour of proportionality, I emphasise that support for this system of election can only be extended to this particular election to this particular body." An argument for the regionalist system was that it was likely to produce $\quad$ British delegation to the Assembly which was more representative of electoral opinion than would be the case with the simple majority system. "Without the use of I proportional representation system it might be that there would be such - wide divergence between the balance of power at Westminster and the composition of the British delegation at the Assembly that there would be $I$ real danger of friction between the Government and our representatives in Europe. " Mr.- John Davies, Opposition spokesman, urged them to respond to the major issue of principle with mositive "Yes" despite deep and understandable misgivings about the content of the Bill. "There is a need for a vast majority of the House to express itself profoundly in favour of the purposes of the Bill because direct elections to a European Parliament are the next step in the evolution of in truly democratic community." The past 18 months had been - period of procrastination, deferment and evasion by the Government. The Opposition had consistently put pressure on Ministers to produce the Bill to give effect to international undertaking. Mr. Callaghan said that there were peculiar difficulties about the British Parliament which did not exist for parliaments among their neighbours. " Because they do not have this system of first past the post and because they are constitutionally used to voting for the party and not the individual, in most cases their problems are far less than ours," he added. Mr. David Steel, the Liberal leader, said that European elections were very important indeed in the development of the EEC towards - more democractic and less bureaucratic institution. It was important to try to keep to the May-June ' 78 deadline. It would be a pity if this country were to be the one member to put the brake on the movement of Europe towards democratic processes. The regional list system in the Bill would produce $n$ much fairer result than the first past the post, and would avoid a distortion of the political balance in Europe. The Bill was given a second reading by $394-347$, although over 100 Labour MPs, 6 Cabinet Ministers and 26 junior ministers voted against on a free vote.

## COUNTER-INFLATION

In the Commons on July 15 , the Chancellor of the Exchequer made a statement on further measures which the Government proposed to take in the fight against inflation and unemployment in the light of discussions it had held with representatives of the T.U.C., and of the revised prospects for the economy. The Government and T.U.C. had recognised that the period after July 1977 must bring an orderly return to normal collective bargaining and that there must be mo free-for-all or pay explosion.

On June 22, the T.U.C. General Council made a major contribution towards these objectives by publishing guidance on the strict maintenance of settlements made under the current policy. The General Council said that negotiators should not re-open settlements made under the current policy after July $3^{I}$ in breach of the $=$ months rule; and should not defer settlements due before July $3^{x}$ in the hope of securing $-u$ advantage by doing so. Provided this guidance was observed by all concerned with pay determination in both the private and public sectors, it would go far to prevent a wage explosion from developing after July 1977.
the keystome for $=$ orderly return to collective bargaining. It meant that the Phase $\square$ policy would continue to affect the level of the nation's earnings until the last settlement made under it expired at the end of July 2978.

The effect was to facliltate a phased return to normal collective bargaining. For most people the next settlement would not come until the first half of 1978 . By that time there was 1 good chance that, thanks to the strict adherence to the T.U.C. pay policy in the past year, the rate of inflation would be approaching, or would have reached, that of our major competitors. That would provide a better climate for settlements, which could be reinforced by any assistance which the Government was able to give.

Mr. Healey stated: "The T.U.C. do not think it practicable for them to give general guidance on the level of pay settlements in the next round when the twelve months has expired for the bargaining group concerned. Since the Government has a responsibility for the economy as whole and for the management of the public sector, it has a duty to the British people to state its position on this matter.
"The Government has a clear duty to urge all concerned to base their approach to pay negotiations on getting inflation into single figures. It must therefore urge that the general level of pay settlements should be moderate enough to secure that the national earnings increase is no more than in per cent. In a period which must mark an orderly return to normal collective bargaining the Government agrees with the T.U.C. that it is not possible to stipulate I specific figure at which individual negotiators should invariably settle, but it must seek to ensure that the national target is achieved. This means that the general level of settlements must be well within single figures."

On Government measures to maintain living standards, the Chancellor said:
"Tax Relief.-I propose that the reduction already agreed in petrol duty should take effect from 6.00 p.m. on 8 August. I do not intend to look for offsetting tax increases elsewhere.
"The Government also accepts the principle expressed in certain amendments made at Committee Stage of the Finance Bill that the income tax personal allowances should be increased further. However, the Government wishes to concentrate relief this year particularly on families. By contrast, the Committee Stage amendments would tilt the balance in favour of the single personal allowance. I shall therefore be proposing at Report Stage of the Finance Bill to substitute an amendment which will increase the allowances, but restore the balance of my original proposal in favour of families. It will increase the single personal allowance by $£ 40$ and the married person's allowance by $£ 70$ as compared with the increase in these allowances which I originally proposed in my Budget Speech, at a cost of some $£ 490$ million; and there will be corresponding increases in other allowances. At the same time, I will propose $\begin{aligned} & \text { reduction in the basic rate of }\end{aligned}$ income tax by mp from 35 p to 34 p , at a cost of some $£ 470$ million. The total full year costs of the income tax reliefs in this year's Finance Bill will thus come to some £at billion-closely in line with my original intention in the Budget.
"Cmid Benerit.-The Government has also decided to increase family support in 1978-79 by a substantial improvement in the rates of child benefit part of the further phasing in of the child benefit scheme. From April $197^{8}$ child benefit rates will be increased from the present fI for the first child and $\mathcal{L} \times 50$ for subsequent children to $£ 2 \cdot 30$ for all
children, together with a doubling of the present premium for the first child of one-parent families to 6x, at a net Exchequer cost in 1978-79 which will be over $£_{300}$ million. The new rates will result in part from $\quad$ further step in the phasing out of child tax allowances, the basic level of which will be reduced to $£$ roo.
"Price Reductions.-The Government has decided to prevent certain increases in the cost of living which would otherwise take effect before the end of this year and which are particularly burdensome for people on low incomes or with family commitments. The Government has decided to increase the milk subsidy so as to prevent an immediate further price rise of $x \frac{1}{2} p=$ pint and to keep the price of milk unchanged until the end of the year. The cost will be about frro million falling in the financial year 1977-78. The Govermment has also decided to raise the income limits for eligibility for free school meals. This will provide over half a million more children with free school meals and increase the number benefiting to about one quarter of those children who take school meals. School meals will now be free for a family with two children having earnings up to over $£ 60$ a week, and for 1 family with four children up to over $£ 75$ a week. The cost will be £ 18 million in $1977-78$ and $£ 28$ million in a full year. The electricity discount scheme will be operated again this winter, in order to relieve households receiving Family Income Supplement or Supplementary Benefit of 35 per cent of one quarter's bill.
"Additional Jobs and the Industrial StraTEGY. -The Government has also decided to approve up to a further $£$ roo,000,000 for construction in the current financial year, so as to assist employment in the construction industry. The Government has also reviewed the requirements for additional expenditure in support of the industrial strategy. As $\quad$ result, a further cash sum of $\mathcal{L} 0,000,000$ will be provided, to be drawn down over the next few years for schemes in the ferrous foundry and machine tools industries and for a new product and process development scheme.
"The total cost of all the measures just announced is fx billion in the current financial year, rising to £x $\frac{1}{2}$ billion next year. The resulting stimulus to demand in the economy will in itself generate substantial additional employment.
" Cash Limits.-For $1977-78$ the cash limits have already been fixed. No general changes are planned in the limits. For $197^{8-79}$ the assumptions used will refiect the Government's policy on pay. Spending authorities will not be able to rely on supplementary provision beyond the cash limits."
Sir Geoffrey Howe, Shadow Chancellor, declared: "The failure of the Government to reach a satisfactory agreement on pay with the trade unions, let alone to publish $\quad$ White Paper embodying it, means that the economic strategy which was at the heart of the letter to the International Monetary Fund and at the heart of the last Budget statement has now entirely collapsed." In the eyes of almost everyone, the continued pursuit of social contract policies involving the extension of trade union power, high taxation and the destruction of differentials, had done very great damage to the economy. "We shed no tears whatsoever at the death of the social contract. But we regret that the Government has failed to cut public spending further; has failed to face the need for higher indirect taxation, if necessary, and is not going to give skilled workers and managers the full benefit of the tax cuts originally promised, which essential to the restoration of incentives in our economy." The Chancellor sald that he had assured the T.U.C.
representatives that if prices appeared to be rising to an extent which would not maintain living standards, and pay increases had been held within the general guidance he had stated, he would consider with them what fiscal action would be most appropriate to correct the situation. He had the assurance of T.U.C. representatives, including the leaders of the more important unions, that they intended to maintain and to recommend to Congress the guidance they had given about the 12 month rule.

After $\begin{aligned} \text { debate on July 21, technically on a motion }\end{aligned}$ to adjourn the House but in reality on the Government's mini-budget of July $\mathrm{I}_{5}$ and its economic record, the Government secured majority of 30 , voting figures being 3 12-282. The Prime Minister (Mr. Callaghan), opening the debate, said that now there was not to be I national pay increase to apply throughout the country, it was the Government's job to offer advice and guidelines to employers and trade unions. It would be a tragedy if, against an unusually improving background, wage settlements were to take off and offset the improvements. It was the Government's judgment that if national earnings did not exceed a so per cent increase, that would give the best overall improvement for our people. Everybody in the country would find that would be the best buy. Where the Government itself controlled wage settlements, it would negotiate on the basis of the Chancellor's guidelines. In the public sector the Government would rightly be expected to give a lead in observing the ten per cent guideline, and must make its influence felt in the nationalised industries. The Government intended to maintain control of public expenditure, and settlements in the public sector must have regard to this. Excessive settlements in the public sector might result in $\mathbb{E}$ reduction in the level of services, or in other cases in increased prices. There might be areas where genuinely self financed productivity deals might be worked out provided they were genuine. The T.U.C.'s declaration that settlements must last for 12 months, and that other settlements must not be deferred until after July 3x, was invaluable. Mrs. Thatcher said that it would be a very long struggle and they must not be satisfied even when inflation went into single figures. She also agreed that they did not want a deferential society. But neither did they want a society where might was right and where in wage-bargaining the money went to the strong and was taken from the weak. She disagreed that Britain was now in better shape. Production had not risen for three years, and their inflation record was one of the worst of any country. Everyone was experiencing a decline in their standard of living, and the Government's record on unemployment was a failure. One of the fundamental difficulties about the social contract lay in the wages differential factor, and as they now returned to free collective bargaining it would cause great trouble. Mr. Reg Prentice (Lab., Newham N.E.) said that if the analysis that the country was facing $\quad$ watershed was accepted, then something much stronger than the Chancellor's statement last week was needed. The danger of confrontation was far less than the danger of a series of retreats based upon $\quad$ fear of confrontation.

## DEVOLUTION

On July 26, the Lord President of the Council (Mr. Foot), in another statement on devolution, said: "In the light of the debates in the House and other representations, the Government have decided that new proposals should be brought forward for devolution. The Government will introduce two Bills next session to provide, respectively, for devolution to Scotland and to Wales. For any question
relating to the interpretation or application of the devolution statutes, we will now propose that the Judicial Committee of the Privy Council should be the final court of reference, $\quad$ well as undertaking the pre-assent scrutiny of Scottish Assembly Bills. The Judicial Committee will thereby finally be the sole court determining questions on vires. We will propose that the Government's general reserve powers should be available only in cases where a matter is prejudiced for which there is no devolved responsibility. The powers will remain $n$ essential safeguard to protect matters which are not to be devolved, for example defence, trade, the economy and industrial relations. As for the Assemblies themselves, we have concluded that they should be left much freer to arrange and to conduct their busine and we will accordingly omit a number of the provisions in Part II of the Scotland and Wales Bill. On reconsideration, we believe that members of the Scottish Executive should have the title of Secretary and the head of the Executive the title of First Secretary. We will also propose a power of premature dissolution for the Scottish Assembly dependent on 1 vote of at least two-thirds of its members. We no longer propose the creation of Assembly Commissioners for the investigation of complaints against the $=w$ administrations and their officials and will propose that the Scottish Assembly should be able to legislate on this matter. Given the expressed concerns about the structure of local government in Wales, we will propose that the Welsh Assembly should have $I$ statutory duty to review the structure of local government. The Government are continuing to develop these and other proposals for inclusion in new legislation for introduction next session. In our review we have paid particular attention to the arrangements for financing the devolved services. We shall propose to the devolved administrations the possibility of setting up $\mathrm{u}^{-1}$ independent advisory board with the task of improving the information base for financial discussions. We shall propose new approach for settling levels of devolved expenditure. We have not identified any satisfactory form of independent revenue raising power for the devolved administrations. But if the new administrations wish to put forward proposals for a tax power to supplement the block fund within the conditions set out in the White Paper and the administrations were prepared to meet the costs, the Government will consider such proposals sympathetically. Additionally, on the establishment of the new administrations, it is the Government's intention to seek their agreement to the establishment of Joint Councils for Scotland and for Wales, on which representatives of the Government and the new administrations could consult as necessary on matters of common concern. In relation to England, consultations are continuing on the basis of our consultative document 'Devolution: The English Dimension,' which the Government published at the end of last year. The Government believe that the changes now proposed will result in simpler and more clear cut arrangements for devolution and firmly secure the interests of the people of the United Kingdom as $\quad$ whole."

## THE LORDS AND THE TRADE UNIONS

The Lords debated the role of the trade unions in relation to press and broadcasting freedom May

Ix when Lord Orr-Ewing (Con.) declared that a powerful group in the National Union of Journalists was pressing for $=$ rigid closed shop and trying to exert political censorship. He said that over the past years pressure groups had continued efforts to limit Press freedom; if the militants gained their goals, broadcasting was bound to be the next main area to come under attack. Lord Jacobson, $\quad$ life member of the N.U.J., said there was - growing reaction within the union against extremism. This reaction was strong in Fleet Street. N.U.J. members could be left to sort it out. Lord Goodman, former chairman of the Newspaper Publishers' Association, said censorship was an abomination. The only way to have $\quad$ free Press was to have enough newspapers, each able to interpret and comment on what the others said. Lord Rochester (Lib.) said that any Press Charter should give adequate protection to the rights of individual journalists, editors and outside contributors, and also the rights of the Institute of Journalists to maintain $\quad$ separate existence. Lord Gibson, Chairman of the Financial Times and former Westminster Press director, said the bargaining power of the N.U.I. should not be underestimated, but to concede the closed shop principle would make ${ }^{1}$ union card amount to licence to write in the Press. "It would be licensed press with the N.U.J. issuing the licences." No management with which he was connected would ever concede the principle. Lord RitchieCalder, I journalist, said newspapers were being degraded, not by journalists but by those who commercialized the Press. It would be futile for the Government to try to work out a press charter. Lord Trefgarne, Conservative Front Bench spokesman, said they had not reached the point where unions exercised totally unreasonable control. But the N.U.J. influenced, if not controlled, the selection of those who contributed to the press and this was unhealthy. For the Government, Lord Wallace of Coslany said Parliament had agreed that a press charter was the most suitable way of meeting concern about press freedom. Mr. Booth, the Employment Secretary, would now have to draft a charter. He would consult with the newspaper industry and others to see what could be agreed.

A Conservative censure motion on Mr. John Silkin, Minister of Agriculture, on the grounds that he had failed to protect the interests of British farmers in the recent E.E.C. food price negotiations was defeated by two votes in the Commons May 1r. The motion to reduce the sum voted for the salaries of Mr. Silkin and his two junior Ministers by 66,500 , was defeated by $273-271$. The Liberals voted with the Conservatives.

A Government amendment to raise the threshold for registration for V.A.T. from $£_{5,000}$ to $£ 7,500$ was accepted by the Commons on May 12 without a vote. A Conservative motion to double it to $£$ ro,000 was defeated on the resumed committee stage of the Finance Bill by $\mathbf{x} 6$ votes to 146 , Government majority 21. Mr. Robert Sheldon, Financial Secretary, Treasury, said the Government amendment would enable about 50,000 traders to deregister, but it was not possible to forecast exactly how many would do so. The revenue reduction because of the change, which would take effect from October $\mathbf{x}$, was estimated at between $\propto 5$ million and $£$ ro million.

## PUBLIC ACTS OF PARLIAMENT 1976-1977

This list of Public Acts commences with \| Public Acts which received the Royal Assent before September 1976. Those Public Acts which follow received the Royal Assent after August 1976. The date stated after each Act is the date on which it came into operation.

Lotteries and AMUSEMENTS ACT 1976 (May $x$. 1977) consolidates certain enactments relating to lotteries, prize competitions and amusements with prizes.

Restrictive Trade Practices Act 1976 (December 15, 1977) consolidates the enactments relating to restrictive trade practices.

Iron and Steei (Amendment) Act 1976 (July 29, 1976) increases the borrowing powers of the British Steel Corporation and the publicly-owned companies and provides for connected purposes.

Weights and Measures \&c. Act 1976 (various dates) amends certain enactments relating to weights and measures; and provides for the alleviation of shortages of food and other goods.

Industrial Common Ownership Act 1976 (November 22, 1976) furthers the development of enterprises controlled by people working in them and for purposes connected therewith.

Dock Work Regulation Act 1976 (various dates) reconstitutes the National Dock Labour Board and makes further provision for regulating the allocation and performance of the work of cargo-handling in and about the ports of Great Britain.

Rent (Agriculture) Act 1976 (January 1, 1977) affords security of tenure for agricultural workers housed by their employers, and their successors; makes further provision $=$ to the rents and other conditions of tenure of such persons, including amendments of the Rent Act 1968; imposes duties on housing authorities as respects agricultural workers and their successors; and for connected purposes.

Education Act 1976 (section 10 on day to be appointed, the remainder of the Act on November 22,1976 ) amends the law relating to education. The Act is mainly concerned with the establishment of comprehensive secondary education.

Sexual Offences (Amendment) Act 1976 (various dates) amends the law relating to rape, for example leave of the relevant court must be obtained for the defence in $I$ rape trial to introduce matters relating to the sexual experience of the complainant with persons other than the defendant.

Health Services Act 1976 (part on November 22, 1976, the remainder on January 22,1977 ) makes further provision with respect to the use or acquisition by private patients and others of facilities and supplies available under the National Health Service Acts 1946 to 1973 or the National Health Service (Scotland) Acts 1947 to 1973; controls hospital building outside the National Health Service and provides for the amendment of enactments under which registration is $\begin{aligned} & \text { prerequisite for carrying on }\end{aligned}$ In nursing home or private hospital; and for those purposes to establish $\begin{aligned} & \text { - Health Services Board. }\end{aligned}$

CONSOLIDATED FUND (No. z) ACT 1976 (December 22, 1976) applies certain sums out of the Consolidated Fund to the service of the years ending :March 3x, 1977 and 5978.

National Insurance Surcharge Act 1976 (December 22, 1976) imposes a surcharge of two per cent. payable into the Consolidated Fund, on secondary Class I contributions under the Social Security Act 1975 and the Social Security (Northern Ireland) Act 1975.

Fishery Limits Act 1976 (January x, 1977) extends British fishery limits and makes further pro-
vision in connection with the regulation of sea fishing.
CONSOLIDATED FUND ACT 1977 (March 17, 1977) applies certain sums out of the Consolidated Fund to the service of the years ending on March 35, 1976 and 1977.

Covent Garden Market (Financial Provisions) Act 1977 (March 17, 1977) makes fresh provision in relation to the finances and the financial duties of the Covent Garden Market Aughority and for related purposes, for example it provides for the reduction of certain outstanding liabilities of the Authority.

Aircraft and Shipbuilding Industries Act 1977 (March 17, 1977) provides for the establishment of two bodies corporate: British Aerospace and British Shipbuilders and provides for the vesting in them of securities of certain companies engaged in the manufacture of aircraft and guided weapons and in ship building and for connected purposes.

Roe Deer (Close Seasons) Act 1977 (November I, 1977) amends the Deer Act 3963 with respect to close seasons for roe deer as follows: "Buck ... November 8 to March 38 inclusive".

Social Security (Miscellaneous Provisions) ACT 1977 (various dates) amends the law relating to social security and regulates the manner of providing for certain benefits connected with service in the armed forces. For example, the Act alters the earnings rule and provides for mobility allowances.

International Finance, Trade and Aid Act 1977 (March 30, 1977) makes provision for the payment of further subscriptions to the International Monetary Fund and for raising the limit on loans under the International Monetary Fund Act 1962; amends the Export Guarantees Act 1975 ; makes further provision about the finances of the Commonwealth Development Corporation; amends section $\quad$ of the Overseas Aid Act 1968; and for connected purposes.

Nuclear Industry (Finance) Act 1977 (March 30, 1977) makes further financial provision for and in respect of British Nuclear Fuels Limited, The Radiochemical Centre Limited and the National Nuclear Corporation Limited.

Job Release Act 1977 (March 30, 1977) provides finance for job release schemes and for a connected purpose.

Representation of the People Act 1977 (March 30, 1977) increases the limits on candidates* election expenses at local government elections in the United Kingdom.

Town and Country Planning (Scotland) ACT 1977 (March 30, 1977) amends the Town and Country Planning (Scotland) Act 1972 in relation to the preparation and adoption of local plans and stop notices; amends part IX of the Local Government (Scotland) Act 1973 to provide for appeals against decisions of regional planning authorities on applications for planning permission referred to them; and for connected purposes.
General Rate (Public Utilities) Act 1977 (March 30, 1977) makes retrospective provision as respects orders made or having effect under section 35 of the General Rate Act 1967, and as respects the rateable value of hereditaments for the year 2976-77, grants indemnity for acts done in conformity with provision so made, and makes consequential and minor amendments of the law relating to the rating of public utilities and other bodies.

Agricultural Holdings (Notices to Quit) Act 1977 (day to be appointed) consolidates sections

23 to 33 of the Agricultural Holdings Act 1948 and certain other enactments relating to notices to quit agricultural holdings in England and Wales and related notices.

British Airiways Board Act 1977 (April 30, 1977 consolidates Part III and Schedule 8 of the Civil Aviation Act 197x and certain enactments in Part IV of that Act and the Air Corporations Act 1967 and certain provisions of the Air Corporations (Dissolution) Order 1973 with corrections and minor improvements.

Returning Officers (Scotland) Act 1977 (August 1, 1977) makes provision as respects Scotland regarding returning officers for parliamentary elections, the staff of such officers, and for connected purposes.

Marriage (Scotland) Act 1977 (January i, 1978) makes new provision for Scotland as respects the law relating to the constitution of marriage and for connected purposes.

New Towns (Scotland) Act 1977 (May 26, 1977) makes provision as respects the revocation or variation of orders made under section $x, 2$ or $5(x)$ of the New Towns (Scotland) Act 1968 and for connected purposes.

Rent (Agriculture) Amendment Act 1977 (January 9, 1977) imposes time limits on the duty of housing authorities to notify their decisions on applications under section 27 of the Rent (Agriculture) Act 1976.

Statute Law (Repeals) Act 1977 (June 16, 1977) promotes the reform of the statute law by the repeal, in accordance with recommendations of the Law Commission and the Scottish Law Commission, of certain enactments which (except in so far as their effect is preserved) are no longer of practical utility; and facilitates the citation of statutes.

Restrictive Trade Practices Act 1977 (June 30, 1977) provides for the disregard of certain matters in determining whether an agreement is one to which the Restrictive Trade Practices Act 1976 applies; and for connected purposes.
Transport (Financlal Provisions) Act 1977 (June 30, 1977) provides for grants to the British Railways Board and the National Freight Corporation; increases the borrowing powers of the British Waterways Board: and for connected purposes.
passenger Vehicles (Experimental Areas) Act 1977 (July 22, 1977) enables the requirements of Part III of the Road Traffic Act 1960 and other requirements applying to or in connection with public service vehicles to be modified in relation to areas designated as experimental areas by the Secretary of State.
NEW TOWNS ACT 1977 (July 22, 1977) increases the limit on borrowing by development corporations and the Commission for New Towns.
Merchant Shipping (Safety Convention) Act 1977 (day to be appointed) enables effect to be given to the International Convention for the Safety of Life at Sea signed in London on November x, 1974 and for purposes connected therwith.
Minibus Act 1977 (October 22, 1977) makes provision for the use of certain motor vehicles by bodies concerned with education, with religion, with social welfare or with other activities for the benefit of the community; and for purposes connected therewith.

Licensing (Amendment) Act 1977 (July 22, 1977) amends section 186 of the Licensing Act 1964 .

Control of Food Premises (Scotland) Act 1977 (day to be appointed) prohibits as respects Scotland the sale etc. of food in circumstances where there is alikely danger to health.
town and Country planning (Amendmbnt) ACT 1977 (August 22, 1977) amends the Act of 1971 as respects stop notices and the provision of information to the Secretary of State and local authorities; and for connected purposes.

Rentcharges Act $x 977$ (various dates) prohibits the creation and provides for the extinguishment, apportionment and redemption of certain rent charges.

TORTS (INTERPERENCE WITH GOODS) ACT 1977 (day to be appointed) amends the law concerning conversion and other torts affecting goods.

Coal Industry Act 1977 (August 29, 1977) increases the limit on the borrowing powers of the National Coal Board, provides for grants by the Secretary of State to the Board and other persons, extends the Board's powers and the power to provide pensions and other benefits under the Coal Industry Nationalisation Act 1946.

Water Charges Equalisation Act 9977 (October 29, 1977) provides for the payment of equalisation levies and payments by and to statutory water undertakers in England and Wales and for purposes connected therewith.

Protrction rwa Eviction Act 1977 (August 29, 1977) consolidates section 16 of the Rent Act

1957 and Part II of the Rent Act $\times 965$ and related enactments.

POST OFFICE ACT 1977 (July 29, 1977) increases the maximum number of members of the Post Office.

Local Authortirs (Restoration of Works PowERS) ACT 2977 (July 29, 1977) amends provisions of certain orders made by virtue of section 254 of the Local Government Act 1972 so as to restore the powers conferred by those provisions certain district councils.

Administration of Justice Act 1977.
Appropriation Act 1977.
CONTROL OF OfFice Development Act 1977.
Criminal Law Act 1977.
Farriers (Registration) (Amendment) Act 1977.

FINANCE ACT 1977.
Housing (Homeless Persons) Act 1977.
insurance Brokers (Registration) Act 1977.
National Hearth Service Act 1977.
Northern Ireland (Emergency Provisions) (Amendment) Act 1977.

Patents ACT 1977.
Presumption or Death (Scotland) Act 1977. Price Commission Act 1977.
Redundancy Rebates Act 1977.
Rent Act 1977.

## NATIONAL HEALTH SERVICE <br> (and Local Authority Personal Social Services)

The National Health Service came into being on July $5, \mathbf{x 9 4 8}$, a result of the National Health Service Act 1946. The Act placed a duty on the Secretary of State for Social Services to promote the establishment in England of a comprehensive Health Service designed to secure improvement in the mental and physical health of the people and the prevention, diagnosis and treatment of illness. The Secretary of State for Wales administers the National Health Service in Wales. There are separate Acts for Scotland and Northern Ireland, where the Health Services are rim very similar lines. The Secretaries of State are responsible to Parliament for seeing that Health Services of all kinds of the highest possible quality are available to all who need them. They are advised by the Personal Social Services Council and the Central Health Services Council (and certain Standing Advisory Committees), appointed after consultation with the various interested bodies.

The National Health Service covers a comprehensive range of hospital, specialist, general practitioner (medical, dental, ophthalmic and pharmaceutical), artificial limb and appliance, ambulance, and community health services. Everyone normally resident in this country is entitled to use any of these services, there are no contribution conditions and the charges made (except those for amenity beds) are reduced or waived in of hardship. In addition the Secretary of State for Social Services is responsible under the Local Authority Social Services Act 1970 for the provision by local authorities of social services for the elderly, the handicapped, the disabled and also for families and children. Most of the cost of running the service is met from the Consolidated Fund-that is, from taxes. Other sources of finance are: ( x ) the weekly National Health Service contributions (since September 1957), which are estimated to produce about £46x million. (For convenience these are collected with the National Insurance contribution in in single combined weekly contribution); (a) local taxation, excluding Consolidated Fund grant to local authorities personal social services; (3) partial charges to patients for drugs and dressings, spectacles, dentures and dental treatment and amenity beds in hospital. The cost of the Health and Personal Social Services in England and Wales rose from $£ 860$ million in $1960-6 \mathrm{r}$ to a total of $£ 5.736$ million in $\mathbf{1 9 7 5 - 7 6}$. In Scotland the cost of Health and Social Services rose from £ $£ 32$ million in $1974-75$ to $£ 705$ million in $1975-76$.

The NHS Reorganization Act 1973 placed 1 duty on the Secretary of State to provide an ambulance service to meet all reasonable requirements. As from April 1974 the ambulance service, which was formerly provided by the local authorities in England and Wales, was transferred to the control of the new Health Authorities and organized in England as 6 Metropolitan Services administered direct by Regional Health Authorities, whose areas were co-terminous with those of the Metropolitan Counties; $3^{8}$ Area Services administered by Area Health Authorities and the London Ambulance Service. The NHS Ambulance Service operates approximately 6,000 vehicles, employs about 16,000 , mainly uniformed, staff and
carries over million passengers annually carries over million passengers annually.

## THE HEALTH SERVICES

## Family Doctor Service

In England and Wales the Family Doctor Service is organized by 98 Family Practitioner Committees which also organize the General Dental, Pharmaceutical and Ophthalmic Services for their areas. There is $\quad$ Family Practitioner Committee for
each Area Health Authority; members, who serve voluntarily, are appointed by local doctors, dentists, pharmacists and opticians ( $\mathrm{x}_{5}$ ), the Local Authority (4) and the Area Health Authority (xI). Any doctor may take part in the Family Doctor Scheme, provided the in which he wishes to practise has not already adequate number of doctors, and about 23.000 general practitioners do
so. They may at the same time have private feepaying patients. Family doctors in paid for their Health Service work in accordance with a scheme of remuneration which includes inter alia a basic practice allowance, capitation fees, reimbursement of certain practice expenses and payments for ${ }^{\text {" }}$ out of hours " work.

Everyone aged 16 or over an choose his doctor (parents or guardians choose for children under 16) and the doctor is also free to accept 1 person or not he chooses. A person may change his doctor if he wishes, either at once if he has changed his address or obtained permission of the doctor on Whose list he is, or by informing the Family Practitioners Committee (in which case 14 days must elapse before the other doctor sul accept him). When people are away from home they can still use the Family Doctor Service if they ask to be treated as " temporary residents", and in memergency, if a person's own doctor is not available, any doctor in the service will give treatment and advice.

Patients are treated either in the Doctor's surgery or, when necessary, at home. Doctors may prescribe for their patients all drugs and medicines which are medically necessary for their treatment and also a certain number of surgical appliances (the more elaborate being provided through the hospitals).

## Dental Service

Dentists, like doctors, may take part in the Service and may also have private patients. About $x 2,000$ of the dentists available for general practice in England have joined the National Health Service. They are responsible to the Family Practitioners Committee in whose areas they provide services.

Patients are free to go to any dentist taking part in the Service and willing to accept them, and cannot register with any particular dentist. Dentists receive payment for items of treatment for individual patients, instead of the capitation fee received by doctors. There is mo need for the patient to obtain $n$ recommendation before seeking dental treatment. The dentist is able to carry out at once all normal conservative treatment (e.g. fillings), extractiens from patients over 18 years of age, provision of dentures in some cases, emergency treatment and ordinary denture repairs; he seeks prior approval from the Dental Estimates Board before undertaking treatment when it involves the extraction of teeth and the provision of dentures (in some cases); extensive and prolonged treatment of the gums; inlays and crowns (in some cases) ; special appliances and oral surgery and certain other items.
A dentist may, with the approval of the Dental Estimates Board, charge his patients prescribed sum for such types of treatment a crowns, inlays or metal dentures where these are not clinically necessary, if the patient wishes to have them. Where identure supplied under the Service has to be replaced because of loss or damage the whole or part of the cost may be charged to the patient if he has been careless. In May, 1951, charges were introduced for dentures; these were increased in May. 196I, to $\nless 255 .-£ 2$ 15s. for the supply of mem denture or up to $\mathcal{L}_{5}$ for a set. In June, 1952, charge of $£ \mathrm{~K}$, or the full cost of any treatment if less than $f x$, was introduced. This charge increased to fi xos. from May $x$, 1968 . From Aug. $x x_{0} 1969$, the charge for a set of dentures was increased to 5655 ., with proportionate increases for partial dentures. From April x, 197x, the system of charges was changed so that patients became liable for a proportion of the cost of treatment, including the supply of dentures, if required, up to 1 maximum charge of $£$ io for one course of treatment, unless they were exempt from charges or
entitled to remission mi income grounds. A revised system of charges was introduced on January $x, 1976$, so that the patient paid the full cost of each item of treatment (excluding dentures) up to - maximum charge of $£_{3} \cdot 50$ for one course of treatment. A further revision of charges was introduced on April x, 1977. They are as follows:-
د. For a denture or a bridge-

> Synthetic Metal or
(a) $x, 2$ or 3 teeth resin Porcelain
(b) $4^{-8}$ teeth
(c) More than It teeth $£ 5$ 6xO Maximum for more than one denture (or bridge)
2. For crowns, inlays, pinlays and gold fillings (a) per tooth restored £xo inclusive of any other restorations, in the same tooth, apart from root fillings
(b) maximum for more than 3 teeth restored $\Varangle 3^{\circ}$
3. For other treatment-

The full cost for each item of treatment up to maximum of $£ 5$.
The maximum charge for any combination of the above treatments is $\mathcal{E}_{3}$.

No charge is made for clinical examination of a patient's mouth. Expectant mothers or mothers who have had I child during the preceding twelve months, children under 56 , or 16 or over, but still in full-time attendance at school, do not pay charges. Other patients between 56 and 2x years of age pay the statutory charge for dentures and for alterations and additions to them. Full remission of charges is automatically available to people in receipt of supplementary benefit or P.I.S., and those entitled to free prescriptions and milk and vitamins. Full or partial remission may also be available to those with incomes somewhat above supplementary benefits if they claim.

## Pharmaceutical Service

Patients may obtain drugs, medicines, appliances and oral contraceptives prescribed under the NHS from any pharmacy whose owner has entered into arrangements with the Family Practitioner Committee to provide this service. Almost all pharmacy owners have done so and display notices that they dispense under the NHS: the number of these pharmacies in England and Wales at the end of 1976 was about $\mathbf{x o , 0 0 0}$. There are also some appliance suppliers who only provide special appliances. In country areas where access to pharmacy may be difficult patients may be able to obtain drugs etc. from their doctor.
Except for contraceptives (for which there is no charge), charge of 20 p is payable for each item supplied (25p or 50 p for each piece of elastic hosiery) unless the patient is exempt and the declaration on the back of the prescription form is completed. Exemptions cover children under 16 , people of pension age, expectant mothers and mothers of a child under one year of age, people suffering from certain medical conditions, people on low income, and war pensioners for their accepted disablements. In addition prepayment certificates may be purchased by those patients not entitled to exemption who require frequent prescriptions. Further information about the exemption arrangements is given on the back of the prescription form.

## General Ophthalmic Service

General Ophthalmic Services, which are administered by Family Practitioner Committees, form
part of the ophthalmic services available under the National Health Service and provide for the testing of sight and supply of glasses to meet more normal needs only. Diagnosis and specialist treatment of eye conditions is available through the Hospital Eye Service as well as the provision of glasses of a special type. Testing of sight may be carried out by any ophthalmic medical practitioner or ophthalmic optician, and glasses supplied by any ophthalmic optician or dispensing optician taking part in the Services.

Sight testing is free. The charges for lenses are on a flat rate basis and are $\{2.90$ for each singlevision lens and $£ 5.50$ or $£ 6.15$ for each bifocal lens, according to type. The cost of the frame must also be paid. Children up to the age of 16 or older children attending school full-time may be supplied free of charge with standard lenses in children's standard frames. Additionally, school-children aged ro years or over may be supplied with standard lenses without charge if any other type of NHS frame is used. The charge for the frame must then be paid.

## Hospitals and Other Services

On July 5, x948, ownership of 2,688 out of 3,040 voluntary and municipal hospitals in England and Wales was vested in the Minister of Health (now Secretary of State for Social Services). The Secretary of State has duty to provide, to such extent as he/she considers necessary to meet all reasonable requirements, hospital and other accommodation; medical, dental, nursing and ambulance services; other facilities for the care of expectant and nursing mothers and young children, facilities for the prevention of illness, and the care and after-care of persons suffering from illness and such other services as are required for the diagnosis and treatment of illness. Rehabilitation services (occupational therapy, physiotherapy and special therapy) may also be provided for those who need it and surgical and medical appliances are supplied in appropriate cases.

Specialists and consultants who take part in the Service (and most of them do so) hold hospital appointments en whole or part-time basis. Those who have part-time appointments can engage in private practice, including the treatment of their private patients in N.H.S. hospitals.
In a number of hospitals accommodation is available for the treatment of private in-patients who undertake to pay full hospital maintenance costs and (usually) separate medical fees to is specialist as well. The amount of these fees is matter for agreement between doctor and patient.

Hospital charges for private resident patients are determined annually, on $\|$ national basis for classes of hospitals, by the Secretary of State in accordance with the Health Services and Public Health Act 1968. These charges are revised annually from April - each year to reflect the average cost for each class of hospital, which it is estimated will be incurred during the current financial year in the treatment of in-patients. They may also include a contribution towards capital costs.
For in-patients paying specialists' fees separately, the hospital daily charges from April $x$, 1977 for
accommodation and services in each class of hospital are follows:
Class A. Long stay hospitals (other than hospitals in classes D and E).

Single Room \& $22 \cdot 30$

## Other Accommodation £20.30

Class B. Psychiatric hospitals (other than hospitals in classes D and E)

Single Room $\mathcal{E}^{15}$.10

Other Accommodation C13.80
Class C. Acute and other hospitals (other than hospitals in Classes D and E)

Single Room
Other Accommodation £4r-30 £ $37 \%$
Class $D_{\text {. }}$ London Teaching hospitals as at $x / 4 / 77$. Single Room
Class E. Provincial teaching hospitals and University hospitals as at $1 / 4 / 77$.

Single Room
Other Accommodation $\underset{\sim}{68} 50$ C44:40
Class F. London Postgraduate Boards of Governors hospitals.

$$
\begin{array}{ll}
\text { Single Room } \quad \text { Other Accommodation } \\
\text { £63.60 } & \text { E8.xo }
\end{array}
$$

Under the provisions of the Health Services Act 1976 facilities for private patients in NHS hospitals are to be progressively withdrawn.
Certain hospitals have accommodation in single rooms or small wards which, if not required for patients who need privacy for medical reasons, may be made available to patients who desire it as an amenity. Amenity bed charges are at present $£ 3$ per day in single rooms and £x.50 per day in smail wards. In such cases the patients are treated in every other respect as National Health patients. There is no charge for drugs supplied to National Health hospital in-patients but out-patients pay 20 per item unless they are exempt.

With certain exceptions, hospital out-patients have to pay fixed charges for dentures and glasses. The charge for glasses will be related to the type of lens prescribed; and for dentures will be up to f6.60 per denture, subject to overall maximum charge of $£ 12.00$.

Local Authority Personal Social Services
Local authorities are responsible for the organization, management and administration of the personal social services and each authority has a Director of Social Services and - Social Services Committee responsible for the social services functions placed upon them by the Local Authority Social Services Act 1970. The "personal social services" are broadly speaking as follows: The services for children, including the care of children and young persons received into care, the provision of treatment for young offenders and adoption: family services, including the day care of pre-school children in day nurseries and by child minders, the care of unsupported mothers both in the community and in mother and baby homes, and the home help and meals on wheels services; services for the elderly and physically handicapped, including day centres, luncheon clubs and residential accommodation; services for the mentally ill and mentally handicapped, including day centres, clubs, adult training centres, workshops and residential accommodation.

CERTAIN APPOINTMENTS NOTED IN THE FOLLOWING PAGES HAVE BEEN SUPERSEDED BY THE MINISTERIAL CHANGES MADE IN SEPT. 1976. A FULL LIST OF THE RECONSTRUCTED MINISTRY WILL BE FOUND ON PAGE 82.

NOTE-The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is siven.

## ADVISORY CONCHLIATION AND ARBITRATION SERVICE <br> Cleland House, Page Street, S.W.I

 [0ㅍ-222 4383]The Advisory Conciliation and Arbitration Service is an independent organisation set up under the Employment Protection Act, 1975, under the management of Council appointed by the Secretary of State for Employment. The functions of the Service - to provide facilities for conciliation, mediation and arbitration as a means of avoiding and resolving industrial disputes; to provide advisory services to industry on industrial relations matters; and to undertake inquiries aimed at promoting the improvement and extension of collective bargaining.
Chairman, J. E. Mortimer.
Secretary, D. R. F. Turner.
Chief Conciliation Officer, A. S. Kerr, C.B.E.

> MINISTRY OF AGRICULTURE, FISHERIES AND FOOD
> Whitehall Place, LOndon, S.W.in Min-839 7711$]$

The Ministry of Agriculture, Fisheries and Food is responsible in England and Wales for administering government policy for agriculture, horticulture and fishing industries. In association with the Intervention Board for Agricultural Produce and the other Agricultural Departments in the United Kingdom it responsible for the administration of the EEC common agricultural and fisheries policy and for various national support schemes. It also administers schemes for the control and eradication of animal and plant diseases and the improvement and drainage of agricultural land. The Ministry sponsors the food and drink manufacturing industries and distribution trades. It is concerned with the quality of food, food compositional standards, hygiene and labeling and advertising. It acts agent for the Department of Prices nin Consumer Protection in administering and operating food subsidies. It has certain responsibilities for ensuring public health standards in manufacture, preparation and distribution of basic foods. Some functions relating to agriculture and fisheries in Wales are the joint responsibility of the Minister and the Secretary of State for Wales, and nme of the Ministry's responsibilities for animal health extend to Scotland. The Ministry maintains relations with overseas countries and participates in [0ww activities of certain international organizations concerned with agriculture, fisheries and food. The Ministry is also responsible for the Royal Botanic Gardens, Kew.
$\dagger$ Unless otherwise stated, thil is the main address of Divisions of the Ministry.

## EXECUTIVE COUNCLL OF THE COMMONWEALTH AGRICULTURAL BUREAUX

 Farnham House, Farnham Royal, Slough, Berks. [Farnham Common: 228x]The Commonwealth Agricultural Bureaux, founded in 1929, consist of four Institutes and ten Bureaux, under the control of an Executive Council, comprising representatives of the Commonwealth countries which contribute to its funds. Each Institute and Bureau is concerned with its own particular branch of agricultural science and acts as a clearing house for the dissemination of information of value to research workers throughout the world. They deal respectively with entomology, mycology, helminthology and nematology, biological control, agricultural economics, animal breeding and genetics, animal health, nutrition, dairy scifence and technology, forestry, horticulture and plantation crops, pastures and field crops, plant breeding and genetics, and soils and fertilizers. The information published in journals which
have I monthly criculation of 32,000 in 150 countries. The abstract journals produced by computer-assisted processes, and the whole data base is being consolidated and made available in machine-readable form. Review articles, books, maps, monographs and annotated bibliographies on particular subjects also issued.
Chaiman, Mrs. J. George (Trinidad \& Tobago).
Vice-Chairman, A. Jayasinha (Sri Lanka).
Secretary, E. A. Runacres.

Plant Breeding and Genetics, Department of Applied Biology, Downing Street, Cambridge.-Director, R. H. Richens, ph.D.
Soils, Rothamsted Experimental Station, Harpenden, Herts,-Director, B. Butters.

## ©OLLEGE OF ARMS OR HERALDS COLLEGE <br> Queen Victoria Street, E.C. 4 [OX-248 2.762]

The College of Arms is open daily from 10-4 (Saturdays, ro-x, by appointment) when an Officer of Arms is in attendance to deal with enquiries by the public, though such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.
There IIE 13 officers of the College, 3 Kings of Arms, 5 Heralds and 4 Pursuivants, who specialize in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.
Armas have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein me being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk C.Be, C.B.E., M.C.

## COURT OF THE LORD LYON <br> H.M. New Register House, Edinburgh [03x-556 7255] <br> The Scottish Court of Chivalry, including the

 genealogical jurisdiction of the Ri-Semnachie of Scotland's Celtic Kings, adjudicates rights to arms and administration of The Scottish Public Register of All Arms and Bearings (under $167^{2}$ cap. 47) and Public Register of All Genealogies. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees also established by decrees of Lyon Court, and by Letters Patent. As Royal Commissioner in Armory, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving " Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birthbrieves. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour patents and matriculations are payable to H.M. Exchequer.Lord Lyon King of Arms, Sir James Monteith Grant, K.C.V.O., W.S., F.S.A. Scot.

## CHURCH COMMISSIONERS צ Millbank, Westminster, S.W. 3 [01-930 5444]

The Church Commissioners were established on April x, 1948 , by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836). The Commissioners' main task is to improve the stipends and housing of the Church of England clergy and to provide them and their widows with adequate pensions. They also carry out administrative duties in connection with pastoral reorganisation and redundant churches, and have been designated by the General Synod as the central stipendiary authority of the Church of England.

The Commissioners' income for the year ended March 3I, 1977, was derived from the following sources:-

| Stock exchange inv | £ $16,724,000$ |
| :---: | :---: |
| Land and property. | 17,126,000 |
| Mortgages and loans | 3,049,000 |
| Money received for particular beneficiaries. | 5,438,000 |
|  | ¢42,337,000 |

This income was used as follows:-
Clergy stipends and pensions
$\mathcal{C l}_{32,818,000}$
Clergy houses (maintenance, outgoings, provision and improvements)
$5.413,000$
Other church property
3,85 1,000
Added to capital to improve future income.

1,368,000
31,000
Administrative costs of Commissioners' office.

2,845,000
Administrative costs of Church of England Pensions Board and Advisory Board for Redundant Churches

299,000
Less withdrawn from reserves. . . .

## CROWN ESTATE COMMISSIONERS

13/85 Carlton House Terrace, S.W.I [oI-214 6000]
Mount Lane, Bracknell, Berks. [0344 203 ]
The CROWN ESTATR (formerly The Crown Lands). -The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760 , when George 111 surrendered them and received a fixed annual payment or Civil List. At the time of the surrender the gross revenues amounted to about $\mathcal{K} 89,000$ and the net return to about fir 1,000 .

In the year ended March 31, 1977, the total Receipts by the Commissioners were $\mathrm{C}, 12,650,000$. The Expenditure was $£ 7,650,000$. The sum of $65,000,000$ was paid to the Exchequer in 1975-76 as Surplus Revenue, being a net sum from which no deductions have been made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 18zo; from April 1 , 2923, regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scolland wise transferred to the Commissioners in 1833 .

## DEPARTMENT OF EDUCATION AND SCIENCE

Elizabeth House, York Road, S.E. I
[or-928 9222]
The Government Department of Education was, until the establishment of a separate office, I Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by parliament since 1834 . The Act of 1899 established the Board of Education,
with President and Parliamentary Secretary, and created Consultative Committee. The Education Act of 1944 established the Ministry of Education. In April 1964 the office of the Minister of Science was combined with the Ministry to form the Department of Education and Science. The cost of administration for the financial year $1977-78$ was estimated at $£ \times 6,932,000$.
Secretary of State for Education and Science, THE RT. Hon. Mrs. Shirley Williams, M.p.

## DEPARTMENT OF EMPLOYMENT <br> - St. James's Square. S.W.I [0x-214 6000]

The Department of Employment is responsible for Government policies affecting the working life of the country's population and the needs of potential workers.

These policies include the promotion of good industrial relations, pay, measures to deal with unemployment and redundancy and regional employment problems.

The Department is also responsible for producing and publishing a wide range of statistics, including the figures for retail prices, earnings, employment and unemployment and industrial disputes.

Many of the Department's executive functions and services have been transferred to a number of new bodies, operating independently, but reporting to the Secretary of State for Employment.

## EXCHEQUER AND AUDIT DEPARTMENT

 Audit House, Victoria Embankment, E.C. 4 [or-353-8901]This is the Department of the Comptroller and Auditor General, an office created by the Act 29 830 Vict. c. 39 ( $\mathbf{1 8 6 6 \text { ) to replace, with extended }}$ powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer,
he authorizes all issues from the Consolidated and National Loans Funds after satisfying himself that Parliament has given authority for them. He examines the accounts of the Consolidated and National Loans Funds and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of funds provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of this examination of those accounts are reported to the House of Commons. He is also the auditor by agreement of the accounts of many bodies, generaily in receipt of public moneys, and of certain international organizations; he reports, when required to do so, to the governing bodies concerned.
Comptroller and Auditor General, Sir Douglas Henley,

Secretary, J. F. T. Cheetham.

## EXPORT CREDITS GUARANTEE DEPARTMENT

P.O. Box 272, Aldermanbury House, Aldermanbury, E.C. 2 [ 0 r-606-6699]
The Export Credits Guarantee Department is responsible to the Secretary of State for Trade. The export Guarantees Act, 1975 , as amended by the International Finance Trade and Aid Act 1977, enables E.G.C.D. to encourage U.K. exports by making available export credit insurance to British firms engaged in selling overseas, to guarantee repayment to British banks providing finance for export credit and, in clearly defined circumstances, to refinance a proportion of banks' medium and refinance a proportion of banks' medium and longterm export credit advances. Guarantees under Section I of the 1975 Act are given after consultation with an Advisory Council of businessmen.

The Overseas Investment and Export Guarantees Act 1972 empowers E.C.G.D. to insure British private investment overseas against political risks, such as war, expropriation and restrictions on remittances.

## OFFICE OF FAIR TRADING <br> Field House, Bream's Buildings, E.C. 4 [ox-242 2858]

The Office of Fair Trading is a government department responsible for the administration of the Fair Trading Act, r973, the Consumer Credit Act, 1974 and the Restrictive Trade Practices Act, 1976. Under the supervision of the Director General of Fair Trading the office keeps under review commercial activities in the United Kingdom and aims to protect the consumer against unfair practices and to encourage competition. The work of the office is divided between four main areas: consumer affairs, consumer credit, monopolies and mergers and restrictive trade practices.
Director General, G. Borrie.

## FOREIGN AND COMMONWEALTH OFFICE

On the recommendations of the Committee on Representational Services Overseas appointed by the Prime Minister under the Chairmanship of Lord Plowden in 1962, H.M. Diplomatic Service was created on Jan, $x$, I965, by the amalgamation of the Foreign Service, the Commonwealth Service, and the Trade Commission Service, and is now responsible for the manning of the overseas posts of these three former services. On Aug. I, Ig66, the Colonial Office was merged into the Commonwealth Relations Office to form the Commonwealth Office. The Foreign Office and Commonwealth Office combined on Oct. $1,1968$.

In November 1970 overseas development became the ultimate responsibility of the Secretary of State for Foreign and Commonwealth Affairs, although it remained in the day-to-day charge of the Minister for Overseas Development, except for the period from March 1974 to June 1975 when the Ministry of Overseas Development reverted to its independent status.

## DEPARTMENT OF HEALTH AND SOCIAL SECURITY

Alexander Fleming House, Elephant and Castle, S.E.I
[ox-407-5522]
The Department of Health and Social Security was created on November $x$, I 968 , from the Ministry of Health and Ministry of Social Security. The new Department performs the functions of the two former Ministries.

The Department is responsible for the administration of the National Health Service in England and for the personal social services run by local authorities in England for children, the elderly, infirm, handicapped and other persons in need. It has functions relating to food hygiene and welfare foods. The Department is also concerned with the medical and surgical treatment of war pensioners in England, the Channel Isles, Isle of Man or living in the Irish R Republic, and is responsible for the ambulance and first aid services in emergency, under the Civil Defence Act, $1944^{8}$. The Department represents the United Kingdom on the World Health Organization of the United Nations. Responsibility for the administration of the Health Services in Wales was transferred to the Welsh Office on April I, 196.. The Department is responsible for the social security services in England, Scotland and Wales. These services comprise schemes for war pensions, nationalinsurance, child benefit, industrial injuries, attendance allowances, mobility allowances and supplementary benefits. Within the Department, the Supplementary Benefits Commission is responsible, subject to regulations made by the Secretary of State for Social Services, for guiding the scheme of supplementary benefits.

## NATIONAL INSURANCE ADVISORY COMMITTEE <br> Keysign House, 429 Oxford Street, W.I [OI-499-4040] <br> The National Insurance Advisory Committee

 is constituted under the Social Security Act 1975 to give advice and assistance to the Secretary of State in connection with the discharge of his (or her) functions under the Act, and to perform any other duties allotted to it under the Act. These other duties include the consideration of preliminary drafts of regulations to be made under the Social Security Act, and of representations received thereon. When the regulations are laid before Parliament, the Committee's Report on the preliminary draft is laid with them, together with a statement by the Secretary of State showing what amendments to the preliminary draft have been made, what effect has been given to the Committee's recommendations, and, if effect has not been given to any recommendation, the reasons for not adopting it. The Secretary of State may also refer to the Committee for consideration and advice any questions relating to the operation of the Act (including questions as to the advisability of amending it). Chairman, Prof. D. S. Lees.Members, Dr. R. J. Donaldson, O.B.E.; Miss N. Edwards, M.B.E.: Prof. J. A. Faris; P. R. A. Jacques; P. M. Madders; H. K. Mitchell; Miss A. M. Patrick.

Secretary, K. Edwards.

## NATIONAL HEALTH SERVICE

## REGIONAL HEALTH AUTHORITIES

England is divided between 14 Regional Health Authorities, each with at least one university medical school within its boundaries. Each Region contains a number of Area Health Authorities (which are the operational NHS authorities, responsible for assessing meeds in their areas, for planning, organising and administering area health services to meet them). The Area Health Authorities are generally coterminous with the local authorities which provide complementary personal social services. At the moment the 12 post-graduate teaching hospitals in London continue to be administered by Boards of Governors. The Chairmen, and members of Regional Health Authorities and Boards of Governors, and the Chairmen of Area Health Authorities are appointed by the Secretary of State for Social Services.

## Regions

## HIGHLANDS AND ISLANDS DEVELOPMENT BOARD <br> Bridge House, Bank Street, Inverness.

The Board, a grant-aided body, responsible to the Secretary of State for Scotland, has two broad objectives. These are ( $x$ ) to assist the people of the Highlands and Islands to improve their economic and social conditions; (2) to enable the Highlands and Islands to play more effective part in the economic and social development of the nation. To this end the Board will concert, promote, assist or undertake measures for economic and social development.
Secretary, J. A. Mackaskill.

## HISTORIC BUILDINGS COUN゚CILS

Under the Historic Buildings and Ancient Monuments Act, 1953, - since amended, these councils advise the Secretary of State for the Environment and the Secretaries of State for Scotland and Wales on the exercise of the powers contained in the Act to make grants and loans towards the repair or maintenance of buildings of outstanding historic or architectural interest, their contents and adjoining land, and, where necessary, to acquire such buildings or to assist the National Trusts or local authorities to acquire them.

Also under the Town and Country Planning (Amendment) Act 1972, to advise the Secretaries of State on their powers to make grants or loans towards the cost incurred in the promotion, preservation or enhancement of the character or
appearance of outstanding conservation areas. In $1977-78$ ㅇ,2,990,000 is available for repair grants in England, $x 107,500$ in Wales and $£ 225,000$ in Scotland. In addition, the amounts available for conservation grants are $£ x, 655,000$ in England, $£_{50,000 \text { in } W \text { ales and } £ \text { roo,ooo in Scotland, Where }}$ there is a further allocation of froo,000 for the Edinburgh New Town Conservation Area.

## ROYAL COMMISSION ON HISTORICAL

 MONUMENTS [ENGLAND] Fortress House, 23 Savile Row, W.I [0I-734-6010]The Royal Commission on Historical Monuments (England) was appointed in 2908 to survey and publish in inventory form an account of every building, earthwork or stone construction up to the year 17x4. A new Royal Warrant in 1943 abolished the date limit and the Commissioners then set themselves limit of $\mathbf{3 8 5}$, but with discretion to record later buildings of outstanding significance The Commission has purbished up to present date inventories covering in whole or in part eleven counties, four cities, Roman York and Roman London. It is a purely recording body and though the Commissioners may recommend that certain. structures should be preserved, they have no power to implement their recommendations. The Commission is also responsible for the direction of the National Monuments Record, created in 2964 , which includes the National Buildings Record begun in 194x, of which the Commissioners are the managing trustees.
Chairman, The Lord Adeane, P.C., G.C.B., G.C.V.O.

Commissioners, A. J. Taylor, C.B.E., P.B.A.,P.S.A. ; Prof. W. F. Grimes, C.B.E.,F.S.A. ; Prof.S.S. Frere,F.S.A.; Prof. R. J. C. Atkinson, F.s.A.; Prof. H. C. Darby, O.B.E., P.B.A.; Prof. G. Zarnecki, C.B.E., F.B.A., F.S.A.; H.M. Taylor, C.B.E., T.D., F.S.A.; Prof, J. K. S. St. Joseph, O.B.E., Ph.D., F.S.A.; A. R. Dufty, C.B.E., F.S.A.; P. Ashbee, P.S.A.; M. Girouard, PhD.; Prof. C. N.
