politics, standards in public life and the quality of our media knows just how much the BBC matters.' On 3 February Jack Straw made a statement on the setting up of a committee to review intelligence on weapons of mass destruction, to be composed of Privy Councillors and to report before the summer recess. The Committee would be chaired by Lord Butler and would include senior Labour backbench MP Ann Taylor and senior Conservative backbench MP Michael Mates. The Liberal Democrats had declined to support the inquiry and so would not be represented. Jack Straw stated, 'The decision that the House took 10 months ago to go to war was justified given the defiance of a regime that uniquely had used weapons of mass destruction and had refused for so long to comply with obligations unanimously imposed on it by the UN Security Council ... we cannot subcontract that responsibility to any inquiry ... but I believe Lord Butler ... will be able to perform a most valuable service to the House and to the country.' Michael Ancram welcomed the inquiry but was annoyed at the delay in setting it up, 'a considerable price has been paid for the Government's obstinacy ... not only to their own reputation but to that of the dedicated intelligence personnel who serve our country with commitment and distinction.' Menzies Campbell explained the Liberal Democrat decision not to participate was due to the narrow remit which the inquiry had been given, 'why can we not have a remit with sufficient breadth to allow the members of the Committee to examine the Attorney General's advice?' In a debate on Lord Hutton's report on 4 February, Tony Blair thought 'the report itself ... is the best defence to the charges of Government whitewash.' The debate had to be suspended for 15 minutes following a disturbance by anti-war protestors in the public gallery. He concluded by addressing the close alliance with the USA, 'I think that America now understands and believes that the best and ultimate guarantee of its security is the spread of the values of freedom, democracy and rule of law. If America no longer takes an isolationist view of the world but considers that part of its job is to spread those values around the world, I for one am proud to be its friend and ally.' Michael Howard claimed that 'it is possible to support the war and to want to get at the truth' and concluded that 'the Hutton Report has been subjected to intense comment, some of it questioning, some of it critical and some of it more than a little incredulous ... unfortunately the initial opinion of the Prime Minister and his colleagues does not seem to be reflected in the more settled opinion of the public.' Charles Kennedy remained of the view that, 'given the situation at the time and for the reasons that were given, it was the wrong war, prosecuted at the wrong time for quite the wrong reason.' Father of the House and opponent of the war Tam Dalyell hoped the Butler inquiry would 'carry over into the question which many of our fellow citizens want to know: the justification of the war in the first place.'

On 24 February Jack Straw made a statement about the release of five of the nine UK detainees at Guantanamo Bay – 'our overall position remains that the detainees should either be tried in accordance with international standards or returned to the UK.' On 26 February Harriet Harman repeated a statement by the Attorney General in the House of Lords about the collapse of the prosecution of Katharine Gunn, who had been charged under Section 1 of the Official Secrets Act 1989 with passing on information about Iraq and whose defence lawyers had demanded the publication of the Attorney General's advice on the legality of the Iraq war.

On 1 April 2004 Jack Straw published a review of the Foreign and Commonwealth Office's travel advice given the threat from global terrorism, inviting comments from all interested parties. 'We all live with the threat of global terrorism. Our response must be not panic but commonsense precautions.'

Returning from the Easter Recess on 19 April, Tony Blair reported on his visit to the USA where he had discussed Iraq and the Middle East Peace Process with President George W. Bush and UN Secretary-General Kofi Annan. 'There is no doubt that the present situation in Iraq is very difficult ... but we should not lose sight of what is happening across the majority of the country.' There had been agreement that the UN should play a central role in the reconstruction of Iraq and Blair also welcomed the Israeli proposal to withdraw from Gaza and parts of the West Bank. 'All these issues need to be seen in a wider context, for they are all linked. We are firm in response to terrorism and states proliferating WMD but we must also be firm in tackling the breeding grounds of terrorism.' He did not mention his decision to hold a referendum on the proposed EU Constitutional Treaty after all (and it was rumoured that he did not consult many in his party either). Michael Howard 'welcomed this small u-turn by the Prime Minister (on UN involvement), just as we welcome his big u-turn to hold a referendum on the European constitution.' Charles Kennedy asked him to confirm or contradict the rumour that 'during the build up to the original decision to mount the war in Iraq, the Americans gave him the option of not participating.'

On 4 May 2004 Armed Forces Minister Adam Ingram came to the House following serious allegations about the conduct of British soldiers in Iraq in the light of photographs published in the *Daily Mirror*, appearing to show mistreatment of Iraqi prisoners. An inquiry had been launched immediately by the Royal Military Police and Mr Ingram stated 'would be wrong for me to speculate about the outcome.' On 10 May Geoff Hoon brought the House up-to-date in relation to the security situation in Iraq, with British forces, coalition allies and Iraqi police facing violent attacks in the south in more than 100 engagements. He also reported that the investigations into the *Mirror* photographs gave strong indications that they were not taken in Iraq. Full investigations were being carried out into all allegations of mistreatment, 'we are determined to see through the task in Iraq according to standards of behaviour set out in the Geneva Convention and international humanitarian law.'

On 27 May Geoff Hoon announced an increase of troop levels in Iraq to about 8,900. Conservative Defence spokesman Nicholas Soames felt, 'the Government need to show that they have reclaimed a grip on the drift on their policy in Iraq and prove that they are the master of their objectives and not merely the victim of events.'

Returning after the Whitsun Recess on 7 June 2004 Jack Straw updated MPs on political and diplomatic developments related to Iraq. Full authority would transfer from the occupying powers to a sovereign interim Iraqi government in three weeks (30 June) with elections being held by 31 January 2005. A UN Resolution was being drafted. 'There will be some difficult times ahead, but the path to a free and democratic Iraq is now clear and the British Government will remain committed to helping the Iraqi Government and people to achieve that historic goal.' Michael Ancram, after paying tribute to the late President Reagan ('he challenged the inevitable march of communism and won. We have lost a champion and a

friend'), welcomed the progress but criticised 'the political incompetence of the Government and the instability that has flowed from their failure to plan adequately and early enough for the post-war reconstruction and return to democracy.'

On 14 June Tony Blair reported on the outcome of the G8 summit in Georgia the previous week. The summit had agreed that they 'will succeed in making Iraq a better place not just for Iraqis but for the wider region and the world.' On the final day six African states had joined the meeting and agreement had been reached on a new initiative to extend AIDS vaccine research and to increase the heavily indebted poor countries initiative, to break the cycle of famine and food insecurity in the Horn of Africa. He concluded 'The G8 was originally created to discuss economic issues . . . but increasingly the focus has moved towards issues of international solidarity. It is morally right that we extend democracy, cut poverty, remove the causes of conflict and instability, and bring the hope of advancement to all nations; but it is also now clearly in our enlightened self-interest. If global terrorism and the proliferation of chemical, biological and nuclear weapons are the new security threat we face, we recognise that it cannot be defeated by security measures alone. Political freedom and rising prosperity, as much as force of arms, will be our ultimate shield: this year's G8 recognised that reality. We look forward to deepening it under British chairmanship next year.'

On 30 June Tony Blair made a statement at the NATO summit in Istanbul and the special European Council in Brussels that followed immediately after. The issues of Iraq and Afghanistan had dominated the NATO meeting, 'even for those who passionately disagreed with our decision to go to war, the issues are now clear, the side we should be on without doubt, and the cause manifestly one worth winning. Succeeding in it would be a fitting way to reinvigorate the transatlantic alliance and heal its divisions.'

On 14 July 2004 Tony Blair came to the House to report on the publication of Lord Butler's report *Intelligence on Weapons of Mass Destruction*. In a very confident display he said, 'This report, the Hutton inquiry, the report of the Intelligence and Security Committee before it, and that of the Foreign Affairs Committee before that, found the same thing. No one lied. No one made up the intelligence. No one inserted things into the dossier against the advice of the intelligence services. Everyone genuinely tried to do their best in good faith for the country in circumstances of acute difficulty. That issue of good faith should now be at an end . . . for any mistakes made, as the report finds, in good faith, I of course take responsibility, but I cannot honestly say that I believe that getting rid of Saddam was a mistake at all. Iraq, the region and the wider world are better and safer places without him . . . This report will not end the arguments about the war, but in its balance and common sense, it should at least help to set them in a more rational light.' Michael Howard gave what was generally considered to be a poor performance in reply. He concluded, 'He has said that mistakes were made and he accepts responsibility, but it is not a question of responsibility, it is a question of credibility. I hope that we will not face in this country another war in the foreseeable future, but if we did and this Prime Minister identified the threat, would the country believe him?' Charles Kennedy summed up, 'Inevitably, Lord Butler and his colleagues have not been able to address the fundamental question that many of us wanted to have addressed from the start: what was the key reality of the

political judgments that led us to this war? When the Prime Minister now says that the outcome was desirable, albeit arrived at by insufficient conclusions and methodology, surely that is not a satisfactory way to proceed.' Labour backbench critics such as former Foreign Secretary Robin Cook stated, 'I welcome the Prime Minister's frank acceptance that there were no stockpiles of weapons of mass destruction at the time of war. He is entitled to argue that that does not mean that there was no justification for the war, but it does surely mean that there was no urgent necessity for the war, because there was no imminent threat. Will he now recognise that there was time for Hans Blix to finish his job and to confirm through the process of UN weapons inspections that Saddam had no weapons of mass destruction and that, had he done so, we might have been spared the unavoidable conclusion from the content of the Butler report that we committed British troops to action on the basis of false intelligence, overheated analysis and unreliable sources?'

## EUROPE

On 9 September 2003 Jack Straw made a statement to MPs on the publication of a White Paper on a New Constitutional Treaty for the European Union, prior to the October European Union Intergovernmental Conference in Rome to discuss the issue. 'To turn our backs on the Union at this historic time would not only betray our national interest but mark a profound lack of confidence in Britain and everything we stand for,' he said. Michael Ancram called it 'not so much a white paper as a white flag and the Government's docile surrender to the concept of a politically united Europe is a betrayal of trust.' He also criticised the Government's refusal to hold a referendum on the issue. Menzies Campbell agreed, feeling that 'a Government confident of its own position would be comfortable in seeking the endorsement of the people of the United Kingdom.'

Returning after the Conference Recess on 20 October 2003, Jack Straw reported back to the House on the outcome of the European Council meeting in Brussels the previous week. At this meeting the first substantive discussion of the draft constitutional treaty had taken place, 'the European constitutional treaty has to be based on independent sovereign nation states co-operating not on some federal super state.' Michael Ancram again demanded a referendum on the issue, 'why are the Government so frightened of the British people?'

On 15 December 2003 Tony Blair reported on the outcome of the European Council IGC meeting in Brussels, which had also discussed Iraq, following the capture of Saddam Hussein. The European leaders had discussed the imminent enlargement, the future of European defence and the draft constitutional treaty. Final agreement had not been possible over the issue of the relative weight of votes that member states would have in the enlarged Union but 'the negotiation was living proof that the European Union is and will remain an organisation of sovereign member states . . . we can either be on the touchline shouting our criticism or on the field as an active and successful player.' Michael Howard pressed again for a referendum on any future European Constitution insisting Government should 'trust the people', and Charles Kennedy reiterated Liberal Democrat support for such a constitution.

On 11 February 2004 Jack Straw made a statement on the Government's plans for enhancing the role of Parliament in European Union matters. Firstly the

Government would produce a White Paper every January looking a year ahead at the EU's legislative and other activities, setting out the Government's priorities and each July it would produce a Command Paper taking stock of progress. Secondly they would recommend the setting up of a new Committee system to cover the whole of the EU's work. Planning for the British EU presidency in the second half of 2005 was well underway.

Returning from the half-term recess on 23 February David Blunkett made a statement on the Government's approach to the free movement of workers from the ten accession countries to the European Union from 1 May 2004, announcing measures 'that will ensure that those who come here . . . but do not work will not be able to claim benefits' with a new workers registration scheme to replace work permits for accession nationals. David Davies thought the Government had 'come up with a bureaucratic solution that carries unnecessary risk.'

On 29 March 2004 Tony Blair reported back on the outcome of the European Council in Brussels over the weekend, in the aftermath of the Madrid bombing, and his visit to Libya on 25 March. On Libya he felt, 'if the change in Libya is real, we should support it.' On the Council which had negotiated a new constitutional treaty for the EU he commented, 'Britain will ensure that we keep control over our tax and social security systems, over our own criminal justice system and over defence and foreign policy as we said we would. Provided we do so, this treaty is right for Europe and right for Britain.' Michael Howard felt 'any proposal for a new constitution must be put to the British people. At least seven other member states of the EU are giving their people a say . . . the Prime Minister says, trust him; we say, trust the people.' Charles Kennedy thought, 'a referendum would be the right way to go.'

Tony Blair returned to the Commons on 20 April 2004 to make a statement on the forthcoming negotiation over the new European treaty, with the Foreign Secretary publishing a White Paper on Europe at the same time. 'Provided that the treaty embodies the essential British positions, we shall agree to it as a Government. Once agreed . . . Parliament should debate it in detail and decide upon it. Then, let the people have the final say.' Michael Howard 'welcomed the fact that the Prime Minister has, at long last, seen sense and decided to give the British people their say on a question of such fundamental importance, even though he could not bring himself to utter the word 'referendum'.' Charles Kennedy welcomed the 'confirmation that in due course there will be a referendum of the British people' and hoped, 'it will be based on an unloaded, unbiased question which will be subject to confirmation by the Electoral Commission, and that it is best decided after due Parliamentary consideration.'

On 21 June 2004 Tony Blair reported on the outcome of the European Council meeting in Brussels on 17/18 June, the first with 25 member states. They had agreed a new treaty for Europe setting out for the first time, in one single treaty, the powers, rights and duties of the European Union. 'Not a single Government of a single nation – either those in Europe now or those wanting to join – opposed this treaty. All welcomed it. All want it to work. In the end, the final say will be with the British people in a referendum. But in that debate, we will argue that this constitutional treaty represents a success for the new Europe that is taking shape, is a success for Britain.' Michael Howard opined, 'this constitution is bad for our democracy, bad for jobs and bad for Britain. The Prime

Minister has said that we must separate myth from reality. The Prime Minister has hailed this constitution as a great success for Britain. In fact, only 27 of the 275 amendments submitted by the Government to the European Convention have been included in the final draft. That is one in 10 . . . the Prime Minister knows that he has no mandate whatever for this constitution. There was nothing in his manifesto on the constitution and the British people rejected it at the polls only 10 days ago.' Charles Kennedy welcomed the treaty but was concerned about the referendum, 'Will he (Tony Blair) acknowledge that a referendum campaign that is seen by the public in this country to be spun from No. 10 Downing street would not be won?'

#### HIGHER EDUCATION BILL

Although the Government faced many defeats in the Lords over its legislative programme, opposition to the Higher Education Bill was the most widespread, even among traditional loyal backbench MPs. The Bill, which would introduce variable top-up fees of £3,000 per annum, was announced in the Queen's Speech on 26 November 2003. The fifth day of debate on the Speech (3 December) concentrated on education and the Government was reminded of the struggle it was to face. Education Secretary Charles Clarke defended the Bill saying 'the arguments rest on three pillars. Firstly that universities need more money; secondly that it is reasonable that graduates should make a contribution towards the education from which they benefit; thirdly that that contribution should be levied and repaid in a fair way.' Conservative spokesman Tim Yeo tabled an amendment 'regretting the violation of the Government's 2001 manifesto pledge not to introduce top-up fees.' Liberal Democrat spokesperson Phil Willis said the Government 'did not produce a shred of evidence to show how we will encourage students from less traditional backgrounds to aspire to university by charging the poorest students and by increasing the debt burden to mortgage-style amounts.' But it was from Labour's own backbenches that the most damning criticism came. Eric Illsley (Barnsley Central) said, 'I plead with my Government to think again. The cost of higher education should be spread more broadly. Everyone should pay for it and the cost should not just be dumped on future students.' Martin Caton (Gower) commented, 'I fear that top-up fees will act as a deterrent for people from lower and middle income families when they consider what courses to take and at what university.'

In an attempt to diffuse the situation, on the day the Bill was introduced in the Commons on 8 January 2004, Charles Clarke made a statement on the related matter of student support, promising an independent report on the new proposed system after three years, a vote on any proposal to increase the £3,000 limit, improved fee support, a grant for part-time students, and a promise to write off any student loan debts after 25 years. Tim Yeo thought, 'the Government are destroying the independence of universities, burdening future students with huge debts and wasting more taxpayers' money.' By the time of the second reading in the Commons on 27 January, there had been days of intense campaigning by Ministers (with Tony Blair staking his authority on winning the vote) and a great deal of arm twisting had been exerted by the Government Whips but the backbench opposition remained. Introducing the debate Charles Clarke promised to produce a report next year on the fees' impact on middle income homes and promised

extra money. Although few Labour backbench objectors were called to speak in the debate, former Cabinet Minister Nick Brown, one of the unofficial leaders of campaign to scrap the fees, had four objections, 'the increase in the level of debt for graduates; the difficulties with regard to the current proposals for meeting the universities' funding gap; . . . the manifesto pledge and the potential introduction of a marketplace in higher education.' He had, however, been persuaded to switch his allegiance by the concessions offered by the Government. The vote on Second Reading was carried by 316 votes to 311, a majority for the Government reduced to just five (rather than the usual 161). 72 Labour MPs voted against the Government but with Nick Brown having been persuaded to switch his vote at the eleventh hour, former Higher Education Minister Robert Jackson voting with the Government and two others, Ian Taylor (Essex & Walton) and Scottish MP Peter Duncan abstaining, the Government scraped home.

The Government came in for further criticism when the nominations for the Standing Committee to carry out the detailed examination of the bill was announced and seemed not to reflect the close vote in the House – of the 16 Labour MPs on the 27-person committee, only one, George Mudie (Leeds East) voted against the government, with fellow MP Anne Campbell (Cambridge) abstaining. The Bill was not amended in Committee and returned to the Commons on 31 March. Rebel Labour MPs (organised by Ian Gibson) put down an amendment to stop universities introducing top-up fees – wanting to retain the rest of the legislation, ending up-front fees and bringing in a regulator to improve university access for poorer students but Ministers warned that they would withdraw the bill if the rebel amendment was passed. In the event, the amendment was defeated by 316 votes to 288, a majority of 28, with 57 Labour rebels voting against the Government and the Bill was then sent to the Lords.

Second reading in the Lords was on 19 April 2004 and whilst many peers spoke against the measure, by convention a major piece of legislation passed by the Commons is not put to the vote at Second Reading. Also many peers representing universities spoke in favour of the measure, such as Labour peer Baroness Warwick of Undercliffe, Chief Executive of Universities UK, who said 'it is I believe, a good piece of legislation . . . and is essential for the future health and strength of our universities.' On the first day of Report Stage on 8 June the House of Lords inflicted three defeats on the Government – by voting to defer the fees for those on gap years in 2005 (moved by Conservative peer Lord Forsyth of Drumlean, by 143 votes to 132), to limit fees to the first three years of a degree (moved by Conservative peer Lord Skelmersdale, by 156 votes to 139), and that state funding should not be cut (moved by Liberal Democrat peer Lord Phillips of Sudbury, by 98 votes to 88). On the second and final day of Report Stage, peers also inflicted a defeat on the Government when an amendment over the appointment of the Director of Fair Access to Higher Education moved by Conservative Baroness Perry of Southwark, was passed by 142 votes to 122.

The Government accepted that gap-year students would not be penalised and tabled their own amendments to that effect when the Commons considered the Lords' amendments on 23 June 2004. The other defeats were overturned and the Bill went on to get Royal Assent on 1 July.

## OTHER ISSUES

Education Secretary Charles Clarke published the Children's Green Paper on 8 September 2003, 'to protect children and young people and to ensure that each child has the opportunity to fulfil their potential.' The Green Paper was published alongside the Government's detailed response to the Victoria Climbié inquiry report.

On 11 September the House of Commons agreed to suspend Labour MP Clive Betts from the House for seven days following a report into the circumstances in which he had employed a Brazilian national to work for him.

On 17 September Trade and Industry Secretary Patricia Hewitt made a statement about the fifth World Trade Organisation Ministerial Conference in Cancun saying, 'We are determined to do all we can to help to deliver a development round in line with the promises that we made at Doha.'

On 18 September the Minister for Constitutional Affairs Christopher Leslie made a statement about reforms of the House of Lords and the repeal of the Office of Lord Chancellor, which led to a major row over the lack of consultation, with Conservative spokesman Bill Cash saying 'anyone would think that the constitution of this country was the personal chattel of the Prime Minister and his cronies.'

On 21 October 2003 the Commons took the second reading of the European Parliament and Local Elections Bill in the Commons, which included plans for all-postal ballots in four regions in the local and European elections in June 2004. Passed by the Commons, the Bill moved to the Lords for Second Reading on 8 January 2004. During the passage of the Bill, peers agreed to all-postal ballots in Yorkshire and Humberside, the East Midlands and North-East England, but refused to include North-West England as the Government wished, with the Conservatives claiming that Labour wanted postal votes in its heartlands for political advantage. The vote was originally on an amendment moved by Conservative Baroness Hanham at Report Stage on 23 February 2004 and passed by 169 votes to 110. A further defeat was inflicted on the Government at that stage when an amendment moved by Liberal Democrat peer Lord Rennard to insist that each postal ballot was accompanied by a declaration of identity was passed by 157 votes to 110. The Bill had to get through Parliament by the close of business on 1 April, when Parliament was due to rise for the Easter recess or it would have been too late to implement for the June elections. After a series of 'ping-pong' votes in March on this specific issue, MPs again endorsed the four-pilot plan on 29 March by 302 votes to 182, a Government majority of 120, and returned it to the Lords for a sixth time. Leader of the House Peter Hain announced that MPs would be given further time on the last day of sitting before the recess to resolve the issue if peers continued their opposition. He warned the situation was 'unprecedented', insisting, 'we have never been, according to the records we have been able to discover, in the situation where the House of Lords has disagreed this number of times.' The Lords did back down and the measure received Royal Assent on 1 April 2004.

On 22 October 2003 Northern Ireland Secretary Paul Murphy made a statement on political developments in Northern Ireland, with the breakdown of talks between the Ulster Unionists and Sinn Féin over the issue of decommissioning but concluding that elections should be held on 26 November 2003 as planned. 'I cannot hide my disappointment at the turn of events but I hope and believe that agreement can be reached so that the comprehensive

acts of completion for which the Prime Minister called last October can be achieved and we can move to a stable and devolved Government for Northern Ireland.'

His deputy Jane Kennedy returned to the House on 27 October to answer a Private Notice Question from his Conservative counterpart, Quentin Davies, on the exact detail of what General de Chastelain had actually given to the two Government's the previous week about the level of the IRA decommissioning exercise but she was adamant that 'the Prime Minister did not deceive the House.' On 28 October Transport Secretary Alistair Darling made a statement about changes to the way that railway maintenance is carried out, following the announcement by Network Rail that it would take maintenance back in-house 'to bear down on cost and ensure that money is properly and effectively spent, as well as to improve performance.' On 29 October Charles Clarke made a statement on funding of schools for the next two years, guaranteeing schools an increase of at least a 4 per cent 'to help restore confidence in the school funding system and to increase stability in school budgets.'

On 3 November 2003 Environment Minister Elliot Morley had to respond to an Urgent Notice Question from Conservative Environment spokesman David Lidington on the role of the Environment Agency in approving the decommissioning of American ships by Able UK of Hartlepool. On 6 November the House of Commons agreed the recommendations of the Committee on Modernisation to continue the experiments on programming of Bills (by 232 votes to 87) and deferred divisions into the next session of Parliament (by 242 votes to 80).

On 10 November an amendment to the Water Bill at remaining stages to prohibit the fluoridation of water supplies moved by Plaid Cymru MP Simon Thomas was defeated by 284 votes to 181, on what was 'for the most part, a free vote.' On 11 November Home Secretary David Blunkett published an explanatory paper on identity cards with the Government beginning the process of building a base for a national compulsory identity card scheme – 'this is about asserting our sense of identity and belonging; about our citizenship; about reinforcing the balance between rights and responsibilities . . . no-one has anything to fear from being correctly identified, but everything to fear from having their identity stolen or misused.' Conservative Home Affairs spokesman David Davies felt 'the Government have failed to advance any convincing arguments as to why these cards should be introduced' and Liberal Democrat Home Affairs spokesperson Mark Oaten reiterated 'we are fundamentally opposed to identity cards.'

On 11 November Labour MP Clive Soley raised a point of order with the Speaker of the House (Michael Martin) suggesting that News International had used the editor of the Sun Newspaper to threaten him whilst carrying out a legitimate inquiry into the group's employment practices. Mr Martin did not believe 'that the correspondence raises any issues on which I can intervene.'

On 19 November David Blunkett, in replying to an Urgent Notice Question from David Davies about a serious breach of security at Buckingham Palace reported in the *Daily Mirror*, announced a thorough review of security by the Security Commission. The Minister for Local Government Nick Raynsford then announced the details of the Local Government Finance Settlement 2004–5, with a 6.5 per cent increase in total support from Government and concluded that 'it is vital that councils

meet the expectations of their taxpayers and budget prudently to improve services at a reasonable cost.' For the Conservatives David Curry felt 'the settlement is quite simply bad news . . . the citizen has been stuffed.'

On 20 November Leader of the House Peter Hain moved a Sitings of the House motion, threatening to extend the Parliamentary session by two days if the Lords continued to block Government legislation. The motion was passed by 331 votes to 175 but in the event, the Lords backed down and the 2002–3 session of Parliament was concluded that night.

#### NEW SESSION

The 2003–4 Session of Parliament was opened by the Queen's Speech on 26 November, later than in previous years, and contained proposals for twenty three Bills for the session (plus two carried over from the previous session) and also mentioned seven Bills that would be introduced in draft.

On 9 December 2003 Tony Blair reported on the outcome of the Commonwealth Heads of Government meeting in Abuja, which had endorsed the decision that Zimbabwe should continue to be excluded from the Councils of the Commonwealth. On 10 December Gordon Brown presented his Pre-Budget Report in which he forecast economic growth of 2.1 per cent in 2003, with targets for 2004–5 at 3 to 3.5 per cent. His new borrowing forecast for 2003 was £37 bn, up £10 bn on the April Budget, with figures for 2004 of £31 bn, up from the £27 bn predicted in April. Debt in the UK this year and in future years would be well below 40 per cent, meeting one of Mr Brown's 'golden rules' and the UK was on course for meeting his 'golden rule' of balancing the current budget and he would even have a surplus of £14 bn over the economic cycle. He described the report as 'economic stability, enterprise and fairness and the strength to make the best long-term decisions for Britain.' Shadow Chancellor Oliver Letwin felt, 'there's very little sign that all this spending is delivering improvements on the scale that people want to see . . . all this report offers them is the prospect of paying now and paying more later.' Liberal Democrat Treasury spokesperson Vincent Cable accused the Chancellor of adding 'a long stream of complex new tax gimmicks to an already over-complicated tax system.'

On 16 December Alistair Darling published a White Paper on the future of air transport designed 'to support economic prosperity throughout the UK; to enable people to make flights at reasonable costs; and to control and mitigate the environmental impacts of aviation.' Conservative Transport spokesman Theresa May felt the announcement, 'is a fudge from an incompetent Government, which will deliver only blight and indefinite uncertainty to millions of people living around airports in the country.' Liberal Democrat Transport spokesperson John Thurso hoped the Government would accept 'that more could and should be done to manage demand as the essential tool for achieving sustainable growth for our aviation industry.' On 16 December Health Secretary John Reid made a statement about a blood transfusion incident involving new variant Creutzfeldt-Jakob Disease (vCJD), the first report anywhere in the world of the possible transmission of vCJD from person to person via blood. After this the Asylum and Immigration (Treatment of Claimants etc.) Bill was given a Second Reading in the Commons. A group of Labour MPs, led by Hilton Dawson (Lancaster and Wyre) tabled a wrecking amendment because 'the bill contains provision that

would make children destitute.' The amendment was defeated by 287 votes to 78 – a majority of 209. Second Reading was passed by 412 votes to 72. Unamended in Committee, the Bill returned for Remaining Stages on 1 March, when the rebels again tabled two amendments. The first, again trying to protect the children of asylum seekers, was supported by 28 Labour backbench MPs but was defeated by 444 votes to 82, a Government majority of 362. Labour MP Bob Marshall-Andrews (Medway) felt, 'in all the dreary and depressing history of this administration's assaults on fundamental civil liberties this is, by a streak, the worst.' The second amendment, on appeals against asylum decisions, was supported by 35 Labour MPs, but was also defeated by 303 votes to 97, a Government majority of 206. Third Reading was passed by 304 votes to 65. Speaking at Second Reading in the Lords on 15 March, the Lord Chancellor announced that the Government would drop the plans to deny asylum seekers the right of a court appeal if their claims are rejected. At Report Stage on 7 June, the Government was defeated twice: first when an amendment moved by Lord Goodhart (Liberal Democrat) to double the time allowed for appeal to the new Asylum and Immigration Tribunal from five days to ten was passed by 143 votes to 94 and second when an amendment moved by Lord Kingsland (Conservative) to allow lay people to assess appeals alongside the judge heading the tribunals was passed by 151 votes to 98. The Bill received Royal Assent on 22 July.

On 6 January 2004 Alistair Darling answered a Private Notice Question from Theresa May on the introduction of sky marshals on flights from the UK. David Blunkett then made a statement on the Correctional Services Review as the next phase of improving the effectiveness of the criminal justice system, setting up a new National Offender Management Service. 'Our key objective is reducing offending by better protecting our communities, by punishing offenders more transparently and by equipping them to avoid a return to criminality.'

On 15 January the Speaker altered the business of the House to allow a debate on Privilege to be held, following the publication of a report by the Constitutional Affairs Committee into the case of Ms Judy Weleminsky and CAF/CASS, who seemed to have been suspended from her job for giving evidence to the Committee. It was agreed to refer the matter to the Committee on Standards and Privileges.

On 19 January Alistair Darling made a statement on Britain's railways, promising to deliver 'the long-term commitment needed to rebuild the railways.' Theresa May thought this 'heralded the fifth change in the structure of the railways in seven years of this Labour government . . . and will do nothing in the next 18 months to make the lives of passengers any better.'

On 20 January the Solicitor General Harriet Harman replied to a Private Notice Question from Conservative Legal Affairs spokesman Dominic Grieve on the review of criminal cases resulting from the Court of Appeal decision in the case of Angela Cannings (Sudden Infant Death Syndrome). 258 convictions, covering ten years had been identified for review and the 54 where the convicted person was still in prison would be given priority for review.

On 26 January Secretary of State for Constitutional Affairs and Lord Chancellor, Lord Falconer, made a statement in the Upper House on judiciary-related functions of the office of Lord Chancellor. Following a consultation the previous summer, he confirmed that, as in

the Queen's Speech the Government would be introducing legislation to establish a new way of appointing judges and creating of a new Supreme Court. 'With the approval of Parliament, the reforms I have set out will guarantee that the independence of the judiciary is protected for future generations. The reforms will clarify the relationship between the executive and judicial arms of the state, improve each arm's accountability, and promote and strengthen partnership, so as to serve the public better.' He was to find, however, that getting the approval of Parliament was not straightforward. The Constitutional Reform Bill (Lords) was introduced in the House of Lords on 24 February but at Second Reading on 8 March Conservative and Crossbench peers voted by 216 to 183 for a reasoned amendment moved by crossbench peer and former law lord Lord Lloyd, to send the Bill to a special Lords Select Committee for extra scrutiny. He said a closer look was needed at the costs of a supreme court, adding: 'It's not too late to save the office of Lord Chancellor – that's what I hope we shall do.' Government Leader of the Lords Baroness Amos said: 'Make no mistake, tonight's events have nothing to do with constitutional principle – and everything to do with political opportunism.' After scrutiny in the Special Committee, the bill resumed its progress through the Lords in July, making the possibility of it reaching the Statute Book in the Parliamentary session remote.

On 28 January Environment Minister Ben Bradshaw responded to an Urgent Notice Question from Liberal Democrat spokesman Andrew George on the outbreak of avian influenza in Thailand stating, 'the risk of the disease being transmitted to the UK poultry flock is low.'

On 9 February 2004 Environment Minister Alun Michael replied to an Urgent Notice Question from local Labour MP Geraldine Smith on the measures the Government intended to introduce to regulate the activities and operations of gangmasters following the tragedy in Morecambe Bay on 6 February 2004, where 19 Chinese cockle pickers died. The Government would be supporting the Private Member's Bill on Gangmasters (Licensing) already due to be introduced by Labour MP Jim Sheridan (West Renfrewshire) later that month.

On 11 February Charles Clarke published the Government's long term strategy for special educational needs, 'reaffirming our commitment to working in partnership to unlock the potential of the many children who may have difficulty learning but whose life chances depend upon high quality education.' A motion to approve the extension of the amnesty period for arms decommissioning in Northern Ireland for another year was passed by 446 votes to 16.

On 12 February Environment Secretary Margaret Beckett made a statement on Common Agricultural Policy (CAP) Reform in England. The reforms (decoupling subsidy paid and level of production) would mean that 'farmers' activities will no longer be dictated by what the subsidy regime requires them to produce – with all the costs and bureaucracy entailed – and frees them to farm in accordance with what the market wants.' Theresa May feared, 'far from minimising bureaucracy, the Government have changed one complexity for another.' Andrew George agreed it was 'the most significant change in agricultural support in a generation' but regretted that the House would not be able to debate the changes.

On 8 March 2004 Home Office Minister Beverley Hughes answered an Urgent Notice Question from David

Davies on the Immigration Service's operation of the European Communities association agreement, following a report from the Sheffield Office that rules were being ignored to lessen the impact of accession on 1 May. 'There was no question of staff being instructed to grant leave to those whom they believed to be fraudulent . . . Ministers were not consulted and I have ordered a full investigation into how this came about.' She saw no reason to resign and had the support of the Home Secretary. Mr Davies felt, 'whether there has been collusion, cover up or simple incompetence, the responsibility for this disgrace rests firmly with her and the Home Secretary.' She continued to refuse to resign, having the full support of the Prime Minister and the Home Secretary but on 1 April she came to the House to make a personal statement following her resignation, 'I am confident that at all times I have acted properly and in the best interests of the people of this country . . . none the less, it has become clear to me that, however unwittingly, I may have given a misleading impression in interviews.' Following this Financial Secretary to the Treasury Ruth Kelly announced the publication of Lord Penrose's report into the events at Equitable Life. As for the Government, 'we cannot underwrite each and every company whose managements and boards make fundamental mistakes and questionable decisions. In dealing with the issues, we have a responsibility to the needs of the taxpayer now and in the future.' For the Conservatives Howard Flight hoped the report 'will be the beginning of a process of that leads to the restoration of a trust (in the financial system) that has been sorely and dangerously diminished in recent years.'

On 9 March 2004 Margaret Beckett made a statement on the Government's approach to the technology of genetic modification, including its use in crops. Ministers had agreed in principle to the growing of a single variety of GM maize in England – 'there is no scientific case for a blanket approval of all uses of GM . . . however, it is less than honest to pretend, especially against a background of climate change, that GM does not have the potential to contribute to some solutions.' Andrew George called it 'a watershed decision' and again regretted the lack of consultation with MPs before the decision was made.

On 16 March John Reid made a further statement about the action the Government were taking following the blood transfusion incident involving vCJD in December. Taking the precautionary approach, all those who have previously received transfusions of whole blood components since January 1980 would be excluded from donating blood but he added the plea that 'people who can do so should continue to donate blood. Blood donation is a safe procedure.'

On 17 March Gordon Brown presented his eighth budget statement. He allocated extra cash for schools and pensioners but announced plans to cut 40,000 civil service jobs (with plans to relocate a further 20,000 civil servants from London to the regions, saving an estimated £2 bn over 15 years). He froze a range of taxes and claimed the UK was enjoying its longest period of economic growth since the Industrial Revolution. Measures included a one-off £100 to help people over 70 cope with council tax rises, while primary schools would each get £55,000 for school improvements and secondary schools would get £180,000. Taxes on cigarettes would go up by 8p a packet, beer by 1p a pint and wine by 4p a bottle. He would introduce a system of tax stamps on the Scotch whisky industry. The annual rise in fuel duty would be delayed for nearly six months. He admitted that the Government would have to borrow £37 bn in the

year – £10 bn more than he predicted the previous year – and that borrowing would remain high for some years to come. He opened his speech claiming, 'the purpose of this Budget is to lock in for Great Britain the economic stability that can and will endure.' For the Liberal Democrats, Vincent Cable speaking in place of an ill Charles Kennedy said, 'the Budget simply avoids key decisions that must be made for the long-term future of the economy' and that Mr Brown had ducked tough choices on the economy, such as the Euro, until after the next election. The Labour Chairman of the Treasury Select Committee, John McFall, welcomed the Budget but raised a variety of concerns, notably about credit cards and debt. After four days' debate the Shadow Chancellor Oliver Letwin said, 'the Chancellor's plan is clear. Up to the election he proceeds entirely by stealth. There are, in fact, six extra stealth taxes in the Budget . . . that brings the number to 66. We have before us the clickety-click Chancellor'. The various Budget resolutions were approved in a two and a half hour session of voting, with the Opposition parties forcing separate votes on issues such as whisky tax stamps (approved by 309 votes to 205), petrol duties (approved by 311 votes to 205), VAT (approved by 358 votes to 146), corporation tax rates (approved by 290 votes to 191), construction industry scheme (approved by 341 votes to 127), income tax (property held by spouses) (approved by 334 votes to 130) and chargeable gains (gifts relief) (approved by 287 votes to 163). The Finance Bill, containing the Budget proposals was given a second reading in the Commons on 20 April and completed Committee consideration by 24 June (having had two extra sessions added to the timetable) with third reading on 7 July. The Lords Economic Affairs Sub-Committee on the Finance Bill produced their report on 25 June and the House of Lords considered the Bill in one day on 20 July. The Finance Act received Royal Assent on 22 July.

On 24 March 2004 Harriet Harman had to answer an Urgent Notice Question from Dominic Grieve on the Solicitor General's Department's wrongful disclosure of court papers to the Minister for Children, in a case involving a solicitor who happened to be her sister. Countering Mr Grieve's claim that, 'it is an extremely unfortunate state of affairs when the Law Officer's Department . . . does not know the rules governing contempt of court and the confidentiality of documents,' she maintained that she 'acted on legal advice.'

On 1 April 2004 Northern Ireland Secretary Paul Murphy made a statement on the outcome of the Cory Collusion Inquiry. 'Wrongdoers will be brought to justice. I firmly believe that the only way we can put the past behind us in Northern Ireland is by seeking to establish the truth.' For the Conservatives David Lidington thought 'it would be the greatest travesty of justice if we let the alleged actions of a few denigrate and besmirch the collective reputations of the RUC and the armed forces.' Ulster Unionist Party leader David Trimble found it 'most unfortunate that Justice Cory seems to have failed to understand the circumstances and background of the situation that he was dealing with.'

On 20 April Paul Murphy returned to the Commons to make a statement publishing the report he had received from the Independent Monitoring Commission concerning paramilitary activity in Northern Ireland which had found 'paramilitary activity is at a disturbingly high level on the part of both republican and loyalist groups' which had persuaded him 'that it would be right to block the financial assistance paid to Assembly parties

in respect of both Sinn Fein and the Progressive Unionists.’

On 29 April Local Government Minister Nick Raynsford outlined the Government’s proposals for dealing with those local authorities that have set excessive budgets for the current year, with the average council tax increase in England being 5.9 per cent. For the Conservatives Philip Hammond felt this was, ‘a culmination of a sorry story of fiddled figures and broken promises ... which will do nothing to address the underlying driver of soaring council taxes – fiddled local funding from Whitehall.’ Edward Davey stated, ‘the Government should not be capping council tax. They should be scrapping it all together.’

On 24 May 2004 Adam Ingram made a statement on the report of the Surrey police into four deaths at Deepcut Barracks and the actions taken by the Government in response to improve the initial training regime in the army. He had asked the Adult Learning Inspectorate to conduct independent inspection and oversight of the armed forces’ training establishments.

On 9 June International Development Secretary Hilary Benn made a statement on the humanitarian emergency in Darfur, on his return from a visit to the region. More than 1 million people had to flee their homes and a further 130,000 refugees had crossed into Chad. He announced a further £15 m worth of aid for the region (bringing the total to £34 m) and called for an urgent deployment of an African Union cease-fire monitoring team, to which the UK had contributed a further £2 m.

On 22 June 2004 David Blunkett made a statement on Sir Michael Richard’s inquiry into the Soham murders, which had uncovered serious failures in recording and managing information. He had accepted Sir Michael’s main recommendations and would act on them immediately. Due to the ‘grave concerns raised about the senior management of Humberside police’, he was also requiring Humberside Police Authority to suspend David Westwood as Chief Constable forthwith. The report was welcomed by all sides but both main Opposition parties expressed concern over the detail of Sir Michael’s recommendations for registering those working with children and the implications for charities and voluntary groups.

On 22 June John Reid outlined progress on the NHS Improvement Plan, ‘I can confirm one principle at the outset. We will not waver from the founding principle of the NHS. Under this Government, NHS care will continue to be provided according to need and not according to ability to pay. No one will suffer disadvantage through lack of means, and no one will gain unfair advantage in medical treatment because of their financial position. The comprehensiveness, and above all the fairness, of the NHS service are qualities that are already admired throughout the world and this Government will retain them.’ Conservative Health spokesman Andrew Lansley called it a reiteration of ‘Labour’s pigheaded belief that setting a target is the same as getting things done.’ Liberal Democrat Health spokesperson Paul Burstow welcomed the extra investment but felt, ‘that investment will be wasted if innovation is stifled by ministerial meddling.’

On 6 July 2004 Tony Blair made the second of his six monthly appearances before the Commons Liaison Committee, composed of all the Committee chairmen. On the same day Alistair Darling made a short statement concerning new measures to encourage better use of the roads and the M6 between Birmingham and Manchester. The Highways Agency would be carrying out a feasibility

study for trialling high occupancy vehicle or car pool lanes. He was also publishing a consultation on a proposal for a tolled expressway to run parallel with the M6 between Birmingham and Manchester, as an alternative to widening the existing road. Tim Yeo felt this was ‘another attempt to con the media and the public into believing that decisions have been taken ... all it contains is a commitment to start more consultations.’

On 8 July Charles Clarke made a statement on the Government’s five-year strategy for education and skills and for children’s services. The key points were to give more independence with collective responsibility, to encourage uniforms and house systems, to give all schools specialist or academy status, to allow popular schools to expand and to introduce three-year budgets. ‘We have made our decision: for excellence, for opportunity, for choice, but, importantly, for all.’ Conservative Education spokesman Tim Collins said, ‘imitation is the sincerest form of flattery, in which case Conservatives should feel really flattered today.’ Liberal Democrat Education spokesperson Phil Willis agreed, ‘it is Tory policy being delivered by a Labour Government and I find that absolutely scandalous.’

On 12 July Gordon Brown delivered his long-awaited third Comprehensive Spending Review announcing that overall departmental spending would rise by £61 bn to £340 bn in 2007–8. Gross cuts of 84,150 civil service posts would be made by 2008 to free up resources for ‘front line’ investment, with a further 20,000 posts to be cut in Scotland, Wales, Northern Ireland and English local government, which, with other efficiency measures, would save £21.5 bn a year. He set a new target of selling off £30 bn worth of government assets by 2010. The defence budget would rise by £3.7 bn to £33.4 bn by 2007–8 – a real terms increase of 1.4 per cent; the total International Development budget to rise from 3.8bn to 5.3bn by 2007–8 – an average real terms increase of 9.2 per cent. Health spending would rise by 7.1 per cent over the next three years. Spending on local government would rise by 2.7 per cent a year above inflation for the next three years and local councils would get three-year budgets to help them plan ahead. The Transport budget would rise from £10.4 bn this year to £12.8 bn in 2008. Education spending would increase from £63 bn to £77 bn. ‘All those investments are possible because I have rejected the proposals of those who would cut spending on important services: more investment, not less, now and into the next Parliament. We are rebuilding our communities; there is such a thing as society. Our prudence is for a purpose.’ Oliver Letwin felt the Chancellor’s plans were a recipe for ‘fat government’. ‘While ministers have been preaching about obesity, their departments have been getting fat on taxpayers’ money,’ he said. Vincent Cable felt somewhat differently, exclaiming, ‘we have the mock battle between the Conservatives’ slash and burn versus the Chancellor’s somewhat more cautious trim-and-singe approach to public spending. However, conceptually they are the same.’ On the following day (13 July) Deputy Prime Minister John Prescott detailed the ODPM elements of the Spending Review Settlement stating that, ‘providing affordable homes for those who need them most is a key element of our programme to create sustainable communities. By 2008 the Government will have more than doubled spending on new affordable housing since 1997: it will have reached £2.25 bn. We will provide an extra 10,000 homes a year for social rent.’ Both the major Opposition parties wanted to know if the spending

review meant that council tax would have to rise by 7 per cent or more in each of the next three years, as indicated in an ODPM release. On 15 July Alistair Darling returned to the House to publish a White Paper with the conclusions of the rail review he had announced earlier in the year. In particular, 'the Government will take charge of setting the overall strategy for the railways. It must be for Ministers, accountable to Parliament and to the electorate, to set the national strategy for the railways. It follows, therefore, that the Strategic Rail Authority will be wound up, and that the majority of its functions, including all its financial obligations, will be transferred to the Secretary of State. The Department for Transport will take responsibility for awarding train operating company franchises. The Department will be restructured to reflect its new responsibilities ... Network Rail will be responsible for operating the network and track.'

On 19 July David Blunkett published the five-year strategic plan for the Home Office, *Confident Communities in a Secure Britain*. 'We will put the law-abiding citizen first. We will invest in the modernisation of policing and we will develop new forms of community engagement appropriate for the 21st century. We seek a partnership with all those willing to join in this critical task.' For the Conservatives James Paice said, 'The people of this country are fed up with units, targets and initiatives. They want a Government who do not confuse good intent with achievement.' On 20 July Alistair Darling made a statement on the five-year strategy for transport. 'There are no quick fixes for Britain's transport challenges. The long-term solution requires investment and a willingness to face up to difficult decisions. That is why we are making sustained high levels of investment and planning ahead to meet the needs of generations to come.' Tim Yeo feared, 'Given the fact that almost every promise made in the document published four years ago has now been broken and that almost every target has been missed, there can be little confidence that a fresh set of promises in this new document will be kept. Instead of a vision for our transport system, we are offered a muddle. Instead of decisions, we are offered debates.'

On 21 July Environment Secretary Margaret Beckett presented the Government's Rural Strategy as 'an ambitious set of policies for rural communities and the countryside, coupled with radical reforms to the delivery

of our policies' with more funding for the Business Link network and the Rural Development Agencies. Tim Yeo felt the proposals lacked 'practical steps, without which her claims that the policy will protect the rural environment will ring very hollow indeed in many parts of the countryside.' Later Geoff Hoon detailed plans for Future Defence Capabilities outlined in a White Paper, setting out 'new plans to ensure that our armed forces can retain maximum effectiveness.' He concluded, 'For the third successive spending review, the Government have been able to announce real growth in the defence budget. Even with these additional funds, it is necessary to secure maximum benefit from efficiencies and make choices to ensure that our force structure matches the requirements of today's security environment. The plans that I have announced today show the Government's determination to make the choices necessary to ensure that the real growth in defence expenditure is targeted at what the armed forces require in the 21st century, rather than what they have inherited from the 20th. That will ensure that the armed forces are equipped and trained to continue to perform with success in the future the tasks that they have undertaken so admirably and successfully in recent years.' Nicholas Soames felt, 'however the Secretary of State tries to present it today, this announcement is essentially about cuts.' Paul Keetch said, 'There is more money but the Government are desperately trying to do more with less. I agree with the MOD that there is a need to look at the defence budget, but Labour seems to be looking in the wrong places.' On 22 July Nick Raynsford made a statement on Regional Assemblies, postponing two of the three referendums planned for 4 November 2004 (in the North-West and in Yorkshire and the Humber) despite the fact that the Commons had only approved the legislation for these referendums the day before. Conservative spokesman Bernard Jenkin said, 'the statement was quite incredible, completely unbelievable and utterly cynical. Only yesterday, he urged the House to support the principle of three referendums, but he has the gall and temerity to return within 24 hours to say that he has changed his mind. Only yesterday, he denied that he would do what I predicted'. Both Houses then rose for the summer recess, to return for a two week period in September before the conference season, returning again after that on 11 October 2004.

## PUBLIC ACTS OF PARLIAMENT

This list of selected Public Acts received the Royal Assent after 31 August 2003. The date stated after each Act is the date on which it came into effect.

*Fireworks Act 2003* c 22 (various dates, some to be appointed) Makes provision about fireworks and explosives.

*National Lottery (Funding of Endowments) Act 2003* c 23 (18 September 2003) Makes provision about the funding of endowments from distributions of money out of the National Lottery Distribution Fund; and for connected purposes.

*Human Fertilisation and Embryology (Deceased Fathers) Act 2003* c 24 (various dates) Makes provision about the circumstances in which a man is to be treated in law as the father of a child where the child has resulted from certain fertility treatment undertaken after the man's death; and for connected purposes.

*Northern Ireland (Monitoring Commission etc.) Act 2003* c 25 (various dates) Makes provision in connection with the establishment under international law for an independent commission with monitoring functions in relation to Northern Ireland; about exclusion from Ministerial office in Northern Ireland; about reduction of remuneration of members of the Northern Ireland Assembly; and for other matters connected with Northern Ireland.

*Local Government Act 2003* c 26 (various dates, some to be appointed) Makes provision in regard to the finance of local and certain other authorities; provides for changing the dates of local elections in 2004; amends the Audit Commission Act 1998; and for connected purposes.

*Dealing in Cultural Objects (Offences) Act 2003* c 27 (30 December 2003) Creates an offence of acquiring, disposing of, importing or exporting tainted cultural objects, or agreeing or arranging so to do, and for connected purposes.

*Legal Deposit Libraries Act 2003* c 28 (1 February 2004) Makes provision in place of s 15 of the Copyright Act 1911 relating to the deposit of printed and similar publications, including on- and off-line publications; and about the use and preservation of material deposited; and for connected purposes.

*Household Waste Recycling Act 2003* c 29 (30 December 2003) Makes further provision regarding the collection, composting and recycling of household waste; and for connected purposes.

*Sustainable Energy Act 2003* c 30 (various dates, some to be appointed) Makes provision about the development and promotion of sustainable energy policy; and amends the Utilities Act 2000; and for connected purposes.

*Female Genital Mutilation Act 2003* c 31 (3 March 2004) Restates and amends the law relating to female genital mutilation; and for connected purposes.

*Crime (International Co operation) Act 2003* c 32 (various dates, some to be appointed) Makes provision for furthering co-operation with other countries; extends jurisdiction to deal with terrorist acts or threats outside the UK; amends the Forgery and Counterfeiting Act

1981, s 5; and makes corresponding provision for Scotland; and for connected purposes.

*Waste and Emissions Trading Act 2003* c 33 (various dates, some to be appointed) Makes provision about waste and about penalties for non-compliance with regulatory schemes.

*Arms Control and Disarmament (Inspections) Act 2003* c 34 (day to be appointed) Makes provision relating to the Treaty on Conventional Armed Forces in Europe.

*European Union (Accessions) Act 2003* c 35 (13 November 2003) Makes provision concerning the accession of the Czech Republic, Estonia, Cyprus, Latvia, Lithuania, Hungary, Slovakia, Malta, Poland and Slovenia to the EU consequential to the treaty signed at Athens on 16 April 2003.

*Fire Services Act 2003* c 36 (13 November 2003) Confers power to set or modify the conditions of service of members of fire brigades and to give directions to fire authorities.

*Water Act 2003* c 37 (various dates, some to be appointed) Amends the Water Resources Act 1991 and the Water Industry Act 1991; makes provision with respect to compensation; provides for the establishment and functions of the Water Services Regulation Authority and the Consumer Council for Water; makes provision in connection with land and drainage and flood defence; repeals the Metropolis Act 1852, s 1.

*Anti-social Behaviour Act 2003* c 38 (various dates, some to be appointed) Makes provision in connection with anti-social behaviour.

*Courts Act 2003* c 39 (various dates, some to be appointed) Makes provision about the courts and their procedure and practice; about judges and magistrates; about fines and the enforcement processes of the courts; and about periodical payments of damages.

*Ragwort Control Act 2003* c 40 (20 February 2004) Amends the Weeds Act 1959 by providing a code of practice to be made to prevent the spread of ragwort.

*Extradition Act 2003* c 41 (1 January 2004) Makes provision about extradition.

*Sexual Offences Act 2003* c 42 (various dates) Makes new provision about sexual offences, their prevention and the protection of children from harm from sexual acts; extends the definition of rape.

*Health and Social Care (Community Health and Standards) Act 2003* c 43 (various dates, some to be appointed) Amends the law governing the NHS; makes provision about quality and standards in the provision of health and social care, including establishing the Commissions for Healthcare Audit and Inspection, and for Social Care Inspection; amends the law relating to the recovery of NHS costs from persons making compensation payments.

*Criminal Justice Act 2003* c 44 (various dates, some to be appointed) Makes provision about criminal justice (including the powers and duties of the police) and about dealing with offenders; amends the law relating to jury service; amends the Crime and Disorder Act 1998 and the

Police Act 1997; and makes provision for civil proceedings brought by offenders.

*Consolidated Fund (No 2) Act c 45* (17 December 2003)

Authorises the use of resources for the service of the years ending 31 March, 2004 and 2005 and applies certain sums out of the Consolidated Fund to the same years.

*Consolidated Fund Act 2004 c 1* (22 March 2004)

Authorises the use of resources for the service of the years ending 31 March, 2003 and 2004 and applies certain sums out of the Consolidated Fund to the service of those years.

*European Parliamentary and Local Election (Pilots) Act 2004 c 2* (1 April 2004)

Makes provision for piloting in certain regions different methods of voting at the European elections in 2004 and at certain local elections held at the same time; and enables consequential alterations to be made to voting procedures at local elections.

*National Insurance Contributions and Statutory Payments Act 2004 c 3* (day or days to be appointed)

Makes provision relating to the payment and administration of National Insurance Contributions and the provision of information in connection with the payment of statutory sick pay and statutory maternity pay.

*Justice (Northern Ireland) Act 2004 c 4* (day or days to be appointed)

Amends the 2002 Act; makes further provision concerning the public prosecution service; imposes a new duty on certain criminal justice organisations in NI in relation to human rights standards; enables barristers in NI to enter into contracts for the provision of their services.

*Planning and Compulsory Purchase Act 2004 c 5* (various dates, some to be appointed)

Makes provision relating to spatial development and town and country planning, and the compulsory acquisition of land.

*Child Trust Funds Act 2004 c 6* (various dates, some to be appointed)

Makes provision about child trust funds; and for connected purposes.

*Gender Recognition Act 2004 c 7* (various dates, some to be appointed)

Makes provision for, and in connection with, change of gender.

*Higher Education Act 2004 c 8* (various dates, some to be appointed)

Makes provision about research in the arts and humanities and about complaints by students against institutions providing higher education; makes provision about fees payable by students in higher education; provides for the appointment of a Director of Fair Access to Higher Education; makes provision about grants and loans to students in higher or further education; and for connected purposes.

*Appropriation Act 2004 c 9* (8 July 2004)

Authorises the use of resources for the service for the year ending 31 March 2005 and applies certain sums out of the Consolidated Fund to the service of the year ending 31 March 2005; appropriates the supply authorised in this Session of Parliament; and repeals certain Consolidated Fund and Appropriation Acts.

*Age-Related Payments Act 2004 c 10* (8 July 2004)

Makes provision for payments by the Secretary of State to

persons over the age of 70; and enables provision to be made for payments by the Secretary of State to persons over the age of 60.

*Gangmasters (Licensing) Act 2004 c 11* (day or days to be appointed)

Makes provision for the licensing of activities involving the supply or use of workers in connection with agricultural work, the gathering of wild creatures and wild plants, the harvesting of fish from fish farms, and certain processing and packaging; and for connected purposes.

*Finance Act 2004 c 12* (22 July 2004)

Grants certain duties, alters others, and amends the law relating to the National Debt and Public Revenue; and makes further provision in connection with finance. For example, it imposes new charges on benefits receivable under certain pension schemes and brings in further provisions in connection with the construction industry and subcontractors' registration.

*Scottish Parliament (Constituencies) Act 2004 c 13* (22 July 2004)

Replaces schedule 1 of the Scotland Act 1998 making new provision in relation to the constituencies for the Scottish Parliament.

*Carers (Equal Opportunities) Act 2004 c 15* (day or days to be appointed)

Places duties on local authorities and health bodies in respect of carers; and for connected purposes.

*Traffic Management Act 2004 c 18* (day or days to be appointed)

Makes provision for the designation of traffic officers and their duties; makes provision in relation to the management of road networks; makes new provision for regulating the carrying out of works and other activities in the street; amends Part 3 of the New Roads and Street Works Act 1991 and Parts 9 and 14 of the Highways Act 1980; makes new provision in relation to the civil enforcement of traffic contraventions; amends section 55 of the Road Traffic Regulation Act 1984; and for connected purposes.

*Asylum and Immigration (Treatment of Claimants, etc.) Act 2004 c 19* (various dates, some to be appointed)

Makes provision about asylum and immigration.

*Energy Act 2004 c 20* (day or days to be appointed)

Makes provision for the decommissioning and cleaning up of installations and sites used for, or contaminated by, nuclear activities; makes provision relating to the civil nuclear industry; makes provision about radioactive waste; makes provision for the development, regulation and encouragement of the use of renewable energy sources; makes further provision in connection with the regulation of the gas and electricity industries; makes provision for the imposition of charges in connection with the carrying out of the Secretary of State's functions relating to energy matters.

*Fire and Rescue Services Act 2004 c 21* (various dates, some to be appointed)

Makes provision about fire and rescue authorities and their functions; makes provision about employment by, and powers of employees of, fire and rescue authorities; makes provision about education and training and pension schemes; makes provision about the supply of water; makes provision about false alarms of fire; provides for the funding of advisory bodies; and for connected purposes.

## WHITE PAPERS, REPORTS ETC

This section provides an outline of a selection of White Papers and Reports that have been published in the last year. For further information visit [www.official-documents.co.uk](http://www.official-documents.co.uk) or [www.parliament.uk](http://www.parliament.uk). Alternatively, visit the websites of individual government departments – details of these can be found in the Government Departments section.

*Identity Cards, The Next Steps* was presented to Parliament in November 2003 by the Secretary of State for the Home Department. This paper details the process of introducing a national identity card scheme in order to ensure more reliable means of authenticating a person's identity. The paper proposes a two-stage process: the establishment of a National Identity Register and introduction of biometric passports and driving licences at the first stage; and the introduction of a compulsory identity card scheme at the second stage. The paper points out that the move towards a compulsory identity card scheme would require full debate and a vote in both Houses of Parliament.

The *Draft Disability Discrimination Bill* was presented to Parliament in December 2003 by the Secretary of State for Work and Pensions and sets out major reforms of the Disability Discrimination Act 1995 (DDA). It includes new measures that would enhance disabled people's civil rights and bring into the scope of the DDA areas in which disabled people currently have no, or limited, rights. The draft Bill proposes to strengthen existing DDA rights in such areas as the definition of disability, transport services, renting premises and discriminatory job advertisements. The Bill also introduces a new duty on public bodies to promote equality of opportunity for disabled people.

*Reforming the Coroner and Death Certification Service: A Position Paper* was presented to Parliament by the Secretary of State for the Home Department in March 2004. This paper constitutes the Government's response to the Fundamental Review of Death Certification and Coroner Services and the Shipman Inquiry, and contains outline proposals for reform. The paper details how the existing system could be reorganised to deliver greater benefits to both bereaved families and public health policy, to reduce avoidable deaths and to detect or prevent medical malpractice and crime. The paper also addresses how reorganisation of the existing system would be judicially independent, have direct links to public health initiatives, incorporate a greater degree of medical expertise in scrutiny, training and accountability, and have an advisory Coronial Council.

*Energy Efficiency: The Government's Plan for Action* was presented to Parliament in April 2004 by the Secretary of State for the Department of Environment, Food and Rural Affairs. This paper details the Government's plans

to make over 12 million tonnes of carbon savings through energy efficiency by 2010. The plan involves: the launch of the *EU Emissions Trading Scheme* in 2005; the introduction of tax allowances which ensure that energy intensive industries have strong incentives to reduce their emissions; working closely with local authorities, regional assemblies and regional development agencies to support the development of innovative approaches to energy efficiency; and the development of cost-effective products and technologies.

The *Draft Charities Bill* was presented to Parliament by the Secretary of State for the Home Department on 27 May 2004. This draft Bill aims to implement several changes to the regulation of charities and other not-for-profit organisations. *Inter alia*, the Bill aims to clarify the definition of a charity, address the regulation of charities and examine the funding of charities and their fundraising powers. The Bill also establishes the Charity Commission as the regulatory body for charities, gives recommendations for the creation of a tribunal to hear appeals against decisions made by the Charity Commission, and makes provision for the registration of charities.

*Report on Child Poverty: Reply by the Government to the Second Report of the Work and Pensions Select Committee, Session 2003–4* was presented to Parliament by the Secretary of State for Work and Pensions in June 2004 in response to the Child Poverty Report published on 8 April 2004 by the Work and Pensions Select Committee. The paper outlines the key elements of the Government's strategy to tackle child poverty which includes: enabling poorer families to increase their income through participation in the labour market, education and training; supplementing the incomes of low income families; introducing new tax credits; and ensuring that schools equip children from poor families with skills that enable them to benefit from continued learning.

The *Draft Animal Welfare Bill* was presented to Parliament by the Secretary of State for Environment, Food and Rural Affairs and the Chief Secretary to the Treasury in July 2004. This Bill seeks to consolidate and update existing legislation relating to the welfare of farmed, domestic and captive animals, and aims to establish an Animal Welfare Bill. This Bill would include a radical overhaul of the Protection of Animals Act 1911 and bring about a higher number of prosecutions than under existing legislation. It also looks at adapting animal welfare law so that it is more pro-active, and suffering is prevented before it occurs. Other proposals include greater licensing controls and regulation of circuses, pet fairs and animal sanctuaries, and raising the minimum age at which an unaccompanied child can buy a pet from 12 to 16 years.

# SCIENCE AND DISCOVERY

## PLUTO DEBATE REOPENED

In March 2004, a team of astronomers from Caltech, led by Mike Brown, announced its November 2003 discovery of the most distant Solar System body known to date. Officially designated 2003VB12, the object has been given the provisional name Sedna, after the Inuit goddess of the sea.

Sedna was found with the 1.2m Oschin Schmidt telescope at Palomar Observatory during a continuing search for Kuiper Belt objects, which populate a region from the orbit of Neptune at 30 astronomical units (AU) to 50 AU from the Sun. 1 AU is equivalent to the mean Sun-Earth distance of nearly 150,000,000 km. At discovery, Sedna was located 90 AU away – clearly too distant to be a Kuiper Belt member.

Calculations show the new object to have a highly-elliptical orbit with perihelion (closest approach to the Sun) at a distance of 76 AU, and aphelion (its most distant) at a distance of approximately 860 AU. Sedna takes 10,200 years to complete its orbit, and will reach perihelion in 2075. Its unusual orbit suggests that Sedna may be a body derived from the Oort Cloud (a remote halo of cometary bodies surrounding the Sun to a distance perhaps half-way to the nearest star) early in the Solar System's history.

Observations indicate a maximum size of 1,800 km for Sedna, rivalling that of Pluto (2,390 km) and reopening the debate as to whether the latter truly merits its status as a planet. Many astronomers contend that Pluto is simply the largest-known of a whole population of icy bodies at the edge of the Solar System, and discoveries of further objects like Sedna, or the 1,200 km diameter Quaoar found in 2002, may further strengthen the case for Pluto's 'downgrading'.

## CLOSE FLY-BY RECORD FALLS AGAIN

In the same week that the discovery of the Solar System's most distant body was announced, the Lincoln Near Earth Asteroid Research (LINEAR) facility in New Mexico discovered a fast-moving object which, on 18 March 2004, became the closest-known asteroid to fly by Earth. At a distance of 43,000 km the object, designated 2004FH, was approximately one-ninth of the Moon's distance from Earth at closest approach. The asteroid, which has a diameter of 30 metres, was not considered hazardous.

## RAT GENOME SEQUENCED

The Norwegian brown rat *Rattus norvegicus* has been used in pharmacological studies, and the investigation of diseases such as diabetes and arthritis, for about a century. Its physiological similarity to humans makes it better suited than the mouse to such studies. An international Rat Genome Sequencing Consortium announced the completion of its work in the 1 April 2004 issue of *Nature*, and the results of this effort are expected to allow more effective use of the rat – which becomes the third mammal after human and mouse to have its genome fully sequenced – as an experimental model in the future.

The genome – the entire genetic complement – of a rat totals an estimated 2.75 billion basepairs (2.75 Gb) of

DNA, compared with 2.9 Gb for a human and 2.6 Gb for a mouse. Of the roughly 30,000 genes encoded by the rat's genome, about 90 per cent are shared with humans. The 10 per cent of genes that are specific to the rat appear to be involved in immunological or reproductive function, or with, for example, olfaction. In common with the mouse, the rat has more detoxifying cytochrome P450 genes than the human – a finding which may have implications for pharmacological toxicity testing.

Comparative analysis shows the genomes of both the mouse and the rat to be more 'dynamic' than that of *Homo sapiens*. The rodents evolve about three times faster than humans and it is unclear whether this is a function of the rodents' shorter generation time, or whether there is an intrinsically higher mutation rate in mice and rats.

## SEQUENCING THE HONEY BEE

Commercially important both for its honey and as a pollinator of many crop plants, the honey bee *Apis mellifera* has had its entire genome, about 300 million basepairs of DNA, sequenced by a team led by Richard Gibbs at Baylor College of Medicine in Houston, Texas. The project was completed in less than a year, and is expected to benefit many areas, not least of all agriculture. Comparison with previously sequenced insect genomes – the fruit fly and the mosquito – may prove particularly informative, and researchers also plan to compare the honey bee genetically with 'Africanised' wild bees which have invaded the southern United States. Analysis of the bee genome, published in draft in January 2004, suggests a complement of about 9,000 genes.

## VOYAGER 1 NEARS INTERSTELLAR SPACE

Launched in 1977, the *Voyager 1* and *Voyager 2* spacecraft made ground-breaking discoveries as they passed the giant planets Jupiter and Saturn a few years later: *Voyager 2*'s trajectory was tailored to allow close fly-by of Uranus in 1986 and Neptune in 1989. Now heading out of the Solar System into interstellar space, the voyagers continue to provide valuable insights into the nature of the outermost parts of the heliosphere, the volume of space in which the Sun's magnetic field is a dominant influence. Data published in November 2003 offers strong suggestions that *Voyager 1* – by some way the more distant of the two spacecraft – is approaching the heliosphere's boundary (the heliopause), where the Sun's domain gives way to truly interstellar space.

Streaming radially outwards from the Sun is a supersonic solar wind which breezes past Earth at about 400 km/s. At a considerable distance from the Sun, theory predicts, the solar wind should be abruptly decelerated by interaction with the interstellar medium. A consequence of this deceleration is a shockwave, known as the termination shock, characterised by processes which accelerate energetic particles and ionise interstellar gas to produce so-called anomalous cosmic rays.

A team of scientists led by Stamatios Krimigis (Johns Hopkins University) believes measurements from *Voyager 1* indicate that the spacecraft encountered the termination shock in early August 2002, and experienced it for a further 200 days. Subsequently – perhaps in response to

enhanced solar activity – the termination shock moved outwards from *Voyager 1*'s position (by then 87 AU from the Sun), and the spacecraft was again in the supersonic solar wind. It is likely that the termination shock will be further encountered as a result of varying solar activity.

*Voyager 1* still has some way to go to reach the heliopause, thought to lie about 150 AU from the Sun. At its 3–4 AU per year velocity, the spacecraft will not reach that distance until about 2020, by which time the fuel in its thermonuclear generators will have run out.

Not all scientists accept that *Voyager 1* has reached the termination shock. An alternative interpretation from Frank McDonald (University of Maryland) and co-workers proposes that the observed increase in energetic particles is a precursor to an encounter which is still some years away.

#### HUGE SUNSPOTS AND GEOMAGNETIC STORMS

Closer to home, in October and November 2003, Earth was buffeted by strong solar activity, associated with the development of three remarkably large sunspot groups. The current sunspot cycle (number 23 in the modern series) reached its peak in 2000–1, and is on the decline towards minimum expected in 2006–7. However, the largest active regions (ARs) of the cycle erupted on the solar surface in October and AR 484, AR 486 and AR 488 each grew sufficiently vast to be visible with the suitably protected naked eye. At its greatest extent, on 30 October, AR 486 covered 0.26 per cent of the Sun's visible hemisphere, making it the largest sunspot group for 13 years.

Release of magnetic energy in the inner solar atmosphere above active regions produces solar flares and coronal mass ejections (CMEs) which hurl energetic particles into interplanetary space. Solar flares are detectable principally in the ultraviolet and x-ray parts of the spectrum, and are categorised on an ascending scale of intensity – A, B, C, M and X. M- and X-class flares have the potential to seriously affect the near-Earth space environment triggering geomagnetic storms. Energetic protons ejected during flares cause solar radiation storms that can damage spacecraft and are hazardous to space-walking astronauts. Over the two weeks during which these active regions were turned towards Earth, the orbital environment was particularly hostile. A total of 44 M-class, and 11 X-class flares was recorded between 19 October and 4 November, the total number of X-class events being greater than for the preceding 12 months. Most severe of these was a flare from AR 486 on 4 November as it rotated out of view over the Sun's western limb.

Earth-directed CMEs in late October triggered massive geomagnetic storms, with accompanying enhanced auroral activity visible at low latitudes on 29–30 and 30–31 October (these have become known as the 'halloween aurorae'). The giant spots returned, still active, in the third week of November, and a CME from AR 484 once again set off a major geomagnetic storm. Sky watchers as far south as Athens were treated, for the second time in four weeks, to displays of the northern lights (which typically occur once every decade at Mediterranean latitudes).

The giant sunspots gradually decayed as they crossed the visible solar hemisphere a second time, and the decline of cycle 23 towards minimum has resumed its steady progress (although July 2004 brought a further, brief revival in sunspot numbers and solar flare activity). Such late-cycle activity outbursts are not unusual, and the intensity of the late 2003 events is a reminder of how our

Sun can occasionally disrupt the near-Earth space environment. International efforts to monitor and more accurately forecast 'space weather' continue, and scientists will study data collected during these storms for a long time to come.

#### FIRST FLIGHT DATE CONTESTED

The old red sandstone at Rhynie, Aberdeenshire in north-east Scotland has been a rich source of early invertebrate fossil finds, including an ancestral springtail (*Rhyniella praecursor*), dating back to some 396 to 407 million years ago. Re-examination of another Rhynie fossil, stored since the 1920s at London's Natural History Museum, has provided new insight to the evolution of insects. *Rhyniognatha hirsti* was studied by Michael Engel (University of Kansas) and David Grimaldi (American Museum of Natural History, New York) using a compound microscope and their findings were reported in *Nature* in February 2004.

Although only parts of the insect's head have been preserved, the report's authors were able to conclude that the fossil represented the mandibles (mouth parts) of the earliest known insect. Furthermore, such dicondylic mandibles (with two points of articulation and movement limited to a single plane) are found only among flying insects. The short, triangular morphology of these mandibles is also typical of flying insects. Therefore, these findings place the development of insect flight some 80 million years earlier than had previously been estimated.

The previous oldest-known definite fossil insect, found in the US state of New York, dates back to 370 million years ago and was wingless.

Meanwhile, in Cowie Harbour near Stonehaven (also in Aberdeenshire), a centimetre-sized fossil millipede dating back 420 million years is believed to be the oldest-known air-breathing animal, predating the previous record-holder, a spider-like fossil, by 20 million years. The millipede has been given the name *Pseudodesmus*, and was reported in January 2004.

#### COMET ENCOUNTER

NASA's *Stardust* spacecraft, launched in 1999, made its long-awaited close fly-by of Comet 81P/Wild 2 on 2 January 2004. Passing within 236 km of the comet's 5 km diameter nucleus, *Stardust* became the third probe to undertake a close examination of such a body, following *Giotto* at 1P/Halley and *Deep Space 1* at 19P/Borrelly in 2001.

Comet Wild 2 is interesting because it has only recently become locked into its current short-period orbit. Passage close to Jupiter in 1974 shortened Wild 2's orbital period from 40 to 6 years, and scientists see this as a good opportunity to study a relatively pristine, unmodified comet nucleus starting to become active in terms of gas and dust emission. By contrast, the Halley and Borrelly nuclei have changed considerably due to repeated close passage to the Sun.

*Stardust*'s cameras revealed a cratered, roughly spherical nucleus, from which jets of gas emerged. Steep cliffs and other topographic features could also be seen. In common with the previously studied nuclei, that of Comet Wild 2 has a very dark surface. The spacecraft recorded swarms of dust particles consistent with the break up of small chunks close to the nucleus, and distinct narrow streams of ejected dust. Spectroscopic analysis of the dust suggested it to be rich in organic molecules but not amino acids.

An important target of the mission was to capture samples of the comet's dust using an aerogel trap. It is

estimated that this experiment succeeded in collecting over 3,000 particles in the size range greater than 15 microns. These will be brought to Earth for analysis, with the aerogel package being scheduled for retrieval over the Utah desert in January 2006.

Meanwhile, the European Space Agency's *Rosetta* mission was finally launched on 2 March 2004, after a year's delay. *Rosetta* will rendezvous with Comet 67P/Churyumov-Gerasimenko in 2014, and will monitor its changing activity as it moves towards the Sun during the following year. Ground-based observers had a couple of interesting comets to study in May 2004. Comet 2002 T7 LINEAR proved slightly less bright than expected, but Comet 2001 Q4 NEAT was, briefly, a faint naked eye object in the western evening sky.

#### HUBBLE'S DEEPEST VIEW

Between 24 September 2003 and 16 January 2004, instruments on the Hubble Space Telescope (HST) stared at a small patch of sky in the constellation Fornax to obtain the deepest ever view of the Universe. Penetrating even farther back than the Hubble Deep Fields of 1995 and 1998, the new set of images was obtained with the Advanced Camera for Surveys (ACS) and the Near Infrared Camera and Multi Object Spectrometer (NICMOS). Released on 9 March 2004, the Hubble Ultra Deep Field provides a view of the very early Universe, soon after the first stars began to shine following the 'Big Bang' moment of creation 13.7 billion years ago.

The ACS (optical) image shows around 10,000 galaxies to a 'look back time' of 800 million years after the Big Bang. The oldest galaxies in the infrared NICMOS image date back to 400 million years after the Big Bang. Preliminary analysis shows galaxies in the early Universe to be more chaotic than their relatively 'modern' counterparts, with mergers between spiral galaxies apparently common. Such mergers led to the formation of giant elliptical galaxies, and these findings favour a 'bottom up' model of galaxy evolution. Formation of the structures we see in the modern Universe came about from merging of smaller units, rather than a 'top down' fragmentation of larger ones.

Launched in 1990 with a projected 20-year operational lifetime, the HST faces a rather uncertain future. Following the accident involving *Columbia* in February 2003, the space shuttle servicing mission scheduled for 2006 has been cancelled, while NASA's future plans, announced by President George Bush in January 2004, call for a shift of emphasis towards lunar exploration in preparation for an eventual manned mission to Mars. To enable accuracy, the HST depends on having at least three of its six gyroscopes functioning or else the orbiting telescope's usefulness will be greatly impaired. Four gyroscopes are currently functioning but the HST's on-board batteries will soon require replacement.

Astronomers are lobbying hard for the reinstatement of the servicing mission, and alternatives, possibly involving robotic spacecraft to perform the necessary upgrades, are being actively investigated. Hubble is rated as having a 50 per cent chance of remaining operational until 2007, however, its eventual successor, the James Webb Space Telescope, is not scheduled for launch until at least 2011.

The Spitzer Telescope, a new orbital infrared facility, was successfully launched in August 2003. This has an 85 cm mirror and cryogenically-cooled detectors which allow the investigation of star-forming regions. Its detectors were used to measure thermal radiation from the newly-discovered Sedna in order to estimate its size in

November 2003. To minimise thermal interference from the planet, the Spitzer Telescope has a unique Earth-trailing heliocentric orbit, and it is expected to operate for up to five years.

#### CASSINI REACHES SATURN

After a seven-year voyage, the *Cassini* spacecraft was finally launched into orbit around Saturn on 1 July 2004. Weighing 5,724 kg, and with dimensions of  $6.7 \times 4$  m, *Cassini* is the largest planetary probe ever launched and is scheduled to conduct a four-year survey of the Saturn system, during which it will complete 76 orbits around the ringed planet and have 52 close encounters with seven of its 31 known satellites. Orbit was achieved by passage through a gap in the rings and an engine burn 20,000 km above Saturn's cloud-tops to slow *Cassini* down.

Early results from the mission have been spectacular. On its route to Saturn on 11 June 2004, *Cassini* passed within 2,068 km of Phoebe, revealing unprecedented detail on this outer satellite. The 220 km diameter moon was revealed to have a heavily cratered icy surface, covered to a depth of several hundred metres with dark material. Phoebe may be a gravitationally-captured comet nucleus.

Views of Saturn's rings have revealed density waves, and while most of the material in them appears to be icy in nature, the major gap (the Cassini Division – named, like the spacecraft, after the Italian-French astronomer who first observed it in 1675) is populated by 'dirt', perhaps similar to the material covering Phoebe.

*Cassini* will release the *Huygens* probe in late December for descent to Saturn's largest satellite, Titan, on 14 January 2005. Infrared imaging equipment on board *Cassini* has been able to penetrate Titan's smog to reveal some surface features, including probable craters, icy material and deposits of hydrocarbons.

The *Cassini* mission is a joint venture between NASA, ESA and the Italian Space Agency.

#### FAREWELL TO GALILEO

While *Cassini*'s main mission got underway, NASA's venerable *Galileo* spacecraft, in orbit around Jupiter since 1995, came to the end of its exploration. The probe was directed to crash into the giant planet's cloud-tops on 21 September 2003, avoiding the risk of contaminating Europa (one of Jupiter's large moons, which some scientists believe could have conditions suitable for the development of life) with terrestrial micro-organisms.

*Galileo* was enormously successful, despite problems with fully unfurling its main communications antenna. Over the course of its eight-year primary mission, it sent a probe into Jupiter's atmosphere, obtained high-resolution images of the planet's cloud features and main satellites, and measured the high-energy radiation environment around it. *Galileo* and *Cassini* operated in tandem during the 'Millennium Mission' as the latter passed close to Jupiter late in 2000 on its way to Saturn. En route to Jupiter, *Galileo* also became the first spacecraft to make a close fly-by of an asteroid, Gaspra, in 1989.

#### TUNGSTEN ISOTOPE STUDIES

Soon after its formation, Earth became differentiated in its internal structure, to have a dense, deep iron-nickel core, surrounded by the convective mantle, and thin outer continental crust. The extent to which material is exchanged between the core and the base of the mantle is a matter of continuing geophysical debate. Some studies, based on the relative abundance of osmium isotopes,

show that plumes of magma originate from deep within the Earth, giving rise to volcanic hotspots such as the Hawaiian islands. Examination of lava emerging at such sites should reveal whether it contains any components indicative of origin from the core.

A study of Hawaiian basalts and material from South Africa by Anders Scherster and co-workers at the University of Bristol has focused on tungsten (W) isotope ratios. The  $^{182}\text{W}$  isotope results from radioactive decay of  $^{182}\text{Hf}$  (hafnium) with a geologically short half-life of 9 million years. As a siderophile ('iron-loving') element, tungsten should be found preferentially in Earth's core. The rapid process of differentiation within early Earth, with the core forming in the first 30 million years, however, resulted in significant amounts of radioactive  $^{182}\text{Hf}$  remaining in the mantle. The subsequent decay of this has meant that the mantle is enriched in  $^{182}\text{W}$  relative to the chondritic (stony) meteorites that provide examples of the primitive material from which the planet was formed 4.6 billion years ago.

Convective mixing in the mantle has led to a remarkably homogeneous distribution of  $^{182}\text{W}$ , from which it can be predicted that where substantial mixing of mantle and core material might occur (as at a deep-seated magma plume, for example), this isotope should actually be relatively depleted. Studies of Hawaiian basalt show this not to be the case. Instead, the conclusion has to be that the core is isolated from the mantle, and there is no detectable mixing of material between the two.

These conclusions fit with data published in early 2003 that the observed osmium isotope ratios are consistent with plume material under the Azores containing recycled ancient mantle.

#### LOST ASTEROID RECOVERED

Discovered by Karl Reinmuth at Heidelberg on 28 October 1937, the asteroid *Hermes* caused a considerable stir when it passed only 800,000 km (slightly more than twice the Moon's distance) from Earth two days later. The first known 'Earth-crosser', *Hermes* was followed for only five nights before being lost.

*Hermes* remained lost until 15 October 2003 when it was detected by Brian Skiff of the Lowell Observatory Near Earth Object Search (LONEOS) programme. Skiff's detection was made with a 60 cm aperture Schmidt telescope at Anderson Mesa, near Flagstaff, Arizona. His measurements were relayed to the Minor Planet Center at Cambridge, Massachusetts, where Timothy B. Spahr was able to identify the suspect as the long-lost *Hermes*.

Back-tracking *Hermes'* movements is rendered difficult by its chaotic orbit, affected by frequent close passage to both Venus and Earth. Forward projections indicate that *Hermes* will not be a hazardous near-Earth asteroid in at least the next hundred years. At its closest pass on 4 November 2003, *Hermes* was a comfortable 7.2 million km away.

Radar observations with the 30.5 m dish at Arecibo in Puerto Rico have revealed *Hermes* to be a binary object, with two 400-metre bodies orbiting a common centre of gravity.

#### FOSSIL SKULLS CHALLENGE

It has long been assumed that North America's first human colonists came from north Asia, via the land bridge which connected Russia and Alaska during the ice age about 12,000 years ago. While fossil remains dating back to the end of the ice age 10,000 years ago are scarce, measurements of cranial and facial features of human

skulls from this time show sufficient similarity (broad and short shape) to those of modern north Asians to confirm the link.

The idea of a single colonisation from north Asia has been challenged by results from a study by Rolando Gonzalez-Jose (University of Barcelona) and colleagues, who examined cranio-facial features of 33 skulls found at a site on the tip of the Baja Peninsula in Mexico. Dating back 2,500 years, these have a comparatively long and narrow shape, more akin to native inhabitants of south Asia and the Pacific rim. The Baja skulls are thought to be the remains of a population which became geographically isolated from other colonising groups as a result of post-ice age climatic change.

These findings suggest that the view of a single colonising migration from north Asia may be oversimplistic, and perhaps there were several independent human arrivals in prehistoric North America. The situation is further complicated by fossil discoveries in South America dating back 12,500 years which may push back the arrival date of humans on continental America by several thousand years.

#### A 'NEW' NEBULA IN ORION

The region of sky in the direction of the constellation Orion contains many nebulae in which new stars are forming. Best-known of these is the bright Orion Nebula M42, a little to the south of the Hunter's belt, and the brightest part of a huge complex of gas and dust in the next spiral arm out from our own in the home Milky Way Galaxy.

To the north-east of Orion's belt lies a further nebula, illuminated by reflected light from a couple of stars cocooned within its depths and known as M78. In the course of testing a newly-acquired small telescope during January 2004, Jay McNeil – an amateur astronomer based in Kentucky, USA – took some images of M78 and its environs with a CCD camera. On examining the results, McNeil was surprised to find a small patch of nebulosity, absent from reference images of this part of the sky obtained during the Palomar Observatory Sky Survey. Later searches through archival images did, however, turn up images of the 'new' object, which quickly become known as 'McNeil's Nebula'.

It is now understood that the object is a variable nebula, detected at a bright phase in early 2004 (though not recorded on images taken three months earlier). Other examples of such nebulae, changing in brightness and apparent shape in response to variable light output from young stars which illuminate them and/or as a result of shadowing by moving dust and gas clouds within them, are known in this general area of sky – among them Hubble's Variable Nebula in Monoceros, and Hind's Variable Nebula in Taurus.

McNeil's Nebula is illuminated by a previously unseen star, identified as the infrared source IRAS 05436-0007 by the Infrared Astronomical Satellite in 1983. The star has an estimated age of 100,000 years, and continued study of this object should improve astronomers' understanding of the behaviour of young stars settling in to their main nuclear-burning lifespan.

#### 740,000 YEARS OF CLIMATE HISTORY

Snow falling on the Antarctic each year gradually becomes compacted into ice and the continental bedrock in some places has been covered by a gradually-thickening ice sheet for up to a billion years. Air bubbles trapped within the compacted ice provide a record of past

atmospheric gas composition, while dust deposits are an indicator of temperature and aridity.

By drilling deep into the ice and analysing the core samples obtained, scientists can obtain a picture of past climatic conditions. Ice cores are paralleled by cores obtained from deep ocean-floor sediments, where deposition of foraminifera shells has preserved a record of temperature conditions, indicated by oxygen-isotope ratios. Samples from ice have the advantage of providing additional information on the atmospheric content of greenhouse gases such as carbon dioxide and methane.

June 2004 saw the publication of results from the European Project for Ice Coring in Antarctica (EPICA), a ten-country collaboration in which researchers from the British Antarctic Survey plays a major part. EPICA scientists are seeking to obtain two deep cores in East Antarctica, from Dronning Maud Land and Dome C. The Dome C drilling has penetrated to a depth of 3,190 m below the surface and the 2004 report discussed analysis of the top 3,139 m of this material which dates back 740,000 years. This interval embraces eight glacial cycles (ice ages), including four already studied in data from the Vostok ice core (dating back 400,000 years) obtained at a site 560 km away – there is excellent correspondence between the two.

The Dome C results show a rough 100,000 year periodicity in the last four glacial cycles, thought to relate to changes in Earth's elliptical orbit around the Sun. Periods of glaciation are separated by warmer interglacials. Dome C data shows that before about 500,000 years ago, interglacials were longer-lasting but less warm. Interglacials in the last 400,000 years have been short and typically lasted 6,000 years.

The current interglacial began about 12,000 years ago. Comparison with the most similar interglacial in the ice core record, dating back 400,000 years, shows that levels of greenhouse gases are significantly higher. The EPICA scientists conclude that interglacial conditions should be stable for a very long period but disturbance of the situation by industrial-age CO<sub>2</sub> emissions makes a stable long-term climate unlikely.

The Dome C EPICA drilling, for which field work began in 1996, is now thought to be within about 120 m of the Antarctic bedrock. Extracting the last portion – potentially extending the record back 960,000 years – will be technically challenging, as the ice at this depth is under enormous pressure and close to its melting temperature.

#### MODERN HUMANS IDENTIFIED?

A team of researchers from the University of Pennsylvania in Philadelphia has published an intriguing analysis of the human MYH16 gene, offering possible insight into a key moment in our evolutionary history. MYH16 encodes the heavy chain of myosin, an essential protein in skeletal muscle – specifically, the gene is expressed in jaw muscle. Monkeys and apes, with well-developed jaws for crunching tough foodstuffs, express the gene strongly, but in humans a mutation has led to production of a truncated, non-functional form of the protein.

Loss of MYH16 function, accompanied by a change of diet towards, for example, soft meat may have coincided with the development of bigger brains in ancestral species of *Homo*. Powerful jaw muscles demand, anatomically, a strong point of attachment to the skull, provided in monkeys and apes by a ridge of bone, the sagittal crest, on top of the cranium. In humans, this crest has been replaced by sutures, allowing development of a larger

brain case. It is tempting to speculate that the loss-of-function mutation was a critical event in allowing human ancestors to develop larger brains and greater intelligence at the expense of a less powerful jaw.

The 'molecular clock' used to determine when the MYH16 mutation arose involved a comparison between the now-defunct human gene and its equivalents in the chimpanzee, orang-utan, macaque and dog. By assessing the number of 'silent' mutations (which do not alter the resulting protein sequence) relative to those which lead to insertion of a different amino acid at a given position in the protein, the researchers established that the loss-of-function mutation in human MYH16 occurred close to 2.4 million years ago. This is strikingly similar to the time at which the fossil record suggests development of the more human cranial form. The skulls of more direct human ancestors lack the bone structure to support powerful masticating muscles, although this is evident in the earlier *Australopithecus* and *Paranthropus* fossils.

#### CHIMPANZEE-HUMAN DATA COMPARED

Detailed comparisons between the chimpanzee (*Pan troglodytes*) genome and the human genome are expected to uncover further examples of the subtle mutations which distinguish our species from its close relatives. Patterns and regulation of gene expression, rather than the genes themselves, may prove to be the critical factors. An early draft version of the chimpanzee genome was published in December 2003 and a more complete sequence, removing gaps and ambiguities, was expected by the end of 2004.

An International Chimpanzee Chromosome 22 Consortium, with researchers based in Japan, Korea, China, Taiwan and Germany, obtained high quality sequence data for 33.3 Mb of DNA, for comparison with the equivalent human chromosome 21. The results indicate changes of nucleotide in 1.44 per cent of the sequence. Of 231 functional, protein-producing genes identified in the study as being common to chimpanzees and humans, 179 were found to be identical in the lengths of their amino acid chains, with 140 of these (73 per cent) showing one or more amino acid changes. Most of these changes probably have little or no effect on protein function. Of the remaining 52 genes, 47 (90 per cent) show more significant structural alterations.

About one-fifth of the genes in this study showed significant differences in expression levels between chimpanzees and humans in liver and brain tissue.

From the rough draft of the chimpanzee genome, an interesting finding is that the human genes for enzymes involved in amino acid breakdown (catabolism) have been under positive selection, perhaps lending weight to the idea that a diet including an increased proportion of meat (contrasting with chimpanzees' more herbivorous lifestyle) was linked to increasing brain size in humans' direct ancestors.

#### FORECASTING EL NINO

Under normal circumstances, climate and ocean circulation in the tropical Pacific are driven by westwards-blowing trade winds. These lead to accumulation of warm surface waters in the western Pacific, resulting in rainy conditions during the monsoon season. This normal pattern promotes the upwelling of cold, nutrient-rich water from deep waters on the eastern side of the Pacific Ocean, off the coast of South America.

During El Nino events, which occur at intervals of between three and seven years, the trade winds ease, bringing rainfall eastwards across the Pacific, and the

efficiency of coastal upwelling is reduced, with drastic consequences for fisheries in countries such as Peru. The effects of an El Niño event can be far-reaching, causing flooding in the eastern Pacific, drought in the western Pacific, and suppression of hurricane development in the south-west Atlantic. Particularly severe El Niño conditions in 1982–83 and 1997–98 were linked to drought and bushfires in Australia and the forecasting of El Niño events has been a long-standing goal of meteorologists and oceanographers.

Studies of fossil corals at Palmyra Island by a team led by Kim Cobb from the Scripps Institute of Oceanography in California have provided some useful insights into El Niño behaviour in pre-industrial times, and may help in development of predictive models. Rather as trees develop growth rings, corals at Palmyra show annual banded growth. By measuring oxygen isotope ratios in these bands, it is possible to gauge ocean surface temperatures, which are elevated during El Niño years.

Cobb *et al* recovered beached coral heads, washed up by storms, providing a fragmentary record of ocean temperature extending back to the 10th century. Direct comparison is possible between these and modern corals. From its study, the team was able to conclude that the intensity of El Niño events has been highly variable over time – those in the 17th century, for example, were stronger and more frequent than in the 20th century.

An important finding was that El Niño events in pre-industrial times appeared not to be influenced by external factors. For example, neither the Maunder Minimum ‘little ice age’ which produced cold conditions over Europe from the 17th to 19th centuries or the ‘Medieval Warm Period’ of the 11th to 14th centuries is reflected in the coral El Niño record.

The lack of influence by external factors such as volcanic eruptions or climate variation in the northern hemisphere is important to a forecasting model developed by Dake Chen and co-workers. Chen *et al* take a model of El Niño driven by its internal dynamics, and refine the respective atmosphere–ocean and ocean–atmosphere interactions to predict the occurrence of events. Applied retrospectively to data covering the period from 1857 to 2003, this is successful in predicting the occurrence of El Niño events with a lead time of up to two years.

#### MOUSE WITH TWO MOTHERS

A team of researchers led by Tomohiro Kono at Tokyo University succeeded in creating a viable mouse by fusing the nuclei of unfertilised eggs (oocytes) from two females. Described by Kono *et al* as parthenogenetic, the progeny of this experiment differ from clones, where the nucleus of a mature cell is inserted to an empty oocyte which is then chemically activated to become an embryo.

In normal mammalian embryonic development, fertilisation of an egg by a sperm is followed by sequential expression of genes, governed by *imprinting* – some 30 critical genes are expressed only from their maternal or paternal copies. This imprinting was seen as a barrier to the successful generation of viable embryos from same-sex nuclei. An activated oocyte containing only the female gene set can only show limited development, since female-specific imprinting prevents expression of some genes which have to be provided in active form by the male.

To overcome the imprinting barrier, Kono and his co-workers had to first genetically modify one of the donor partners. By disabling the H19 gene (of which only the maternal copy is normally active), they were able to make one of the donors more like a sperm cell in terms of

imprinting. The H19 gene product suppresses a second gene, *Igf2* (usually expressed only in the paternal copy), which is required for early embryonic development. Removing this suppression therefore allows development to proceed.

The H19-deficient oocytes were fused with immature oocytes in which imprinting had not yet been established and the fusion products were then chemically activated to simulate fertilisation. The implanting of 26 surrogate mothers resulted in 24 pregnancies. Foetuses were recovered by autopsy at 19.5 days’ gestation, with 18 dead and 10 live progenies (from a total of 371 implanted embryos).

Two apparently normal mouse pups were recovered. One was used for investigation of the pattern of gene expression, while the other – named Kaguya after a character in a Japanese fairytale – was successfully reared to adulthood and proved to be a reproductively-normal female, going on to have her own offspring.

The results of the experiment emphasise the importance of imprinting to successful foetal development in mammals. The success rate in producing viable embryos from same-sex parents is extremely low – even lower than for established cloning procedures – and the chances of such technology being applied to human reproduction, ethical objections notwithstanding, are essentially nil.

#### CLONED HORSE BORN IN ITALY

In August 2003, scientists led by Cesare Galli at the Laboratory of Reproductive Technology at Cremona, Italy announced success in cloning a horse. Nuclei of skin cells obtained from a mare were fused with anucleate (empty) equine egg cells to produce a total of 328 embryos, which were implanted in surrogate mothers. This resulted in four pregnancies, one of which was successful, producing the cloned foal called Prometea, born on 28 May 2003. The mother of the foal was, in fact, the mare whose skin cells were used in the experiment.

Some researchers believe that cloning technology will, in the future, allow propagation of successful racehorse lines, even from animals which have been gelded. There has, however, been some ethical opposition to this idea. The creation of Prometea means that the horse can be added to the growing list of cloned mammalian species, which includes sheep, goats, cattle, cats, mice, rabbits and pigs. Earlier in 2003, American scientists announced the successful delivery of Idaho Gem, the first cloned mule.

#### MAIZE MAPPED

Funded by the US National Science Foundation, the Maize Mapping Project completed its work in the autumn of 2003. A high-resolution genetic map of the genes in maize (*Zea mays*) showing the relative positions of its genes had been assembled a year earlier, and the final stage was to complete a physical map, relating the actual distances in the DNA between them. While there have been calls for maize to have its entire DNA sequence determined, the close similarity of its 2.5 Gb genomes – almost as large as the human genome – to that of rice suggests that such a project may not yield any particularly new information. There is also the problem that the maize genome abounds with repeated elements, which present major difficulties for sequencing. It is possible, however, that strategies which eliminate non-expressed DNA, concentrating on functional genes, may lead to a sequencing project in the future, driven by the commercial importance of maize as a food crop.

### VIOLIN QUALITY LINKED TO THE SUN?

A climatic story with an interesting twist relates to the revered violins made in Cremona, Italy, in the late 17th and early 18th centuries by artisans including Antonio Stradivari (1644–1737). It has long been a mystery as to why these instruments have such unique tonal qualities. Some have suggested that the Cremonese violin makers used special seasoning techniques or chemical treatments to prepare their wood but the known histories of the surviving examples (over 600 Stradivarius instruments remain extant) indicate no common factor in the manufacturing process that could account for their quality.

An interesting new proposal, by Lloyd Burckle (Columbia University, New York) and Henri Grissino-Mayer (University of Tennessee), is that the climate of the so-called Maunder Minimum of 1645 to 1715 was a critical factor, favouring production of wood with the required characteristics. The Maunder Minimum was a period of decreased solar activity, during which sunspots were scarce, and appears correlated with an interval of colder weather over Europe. Summers were short and relatively cool, leading to restricted tree growth, and dendrochronological studies show the annual growth rings from this time to be narrow and closely-spaced. The authors made a study of tree rings at 16 sites in the European Alps, from which the Cremonese violin makers obtained their wood, finding a strong Maunder Minimum signal in growth rings from 1625 to 1720 in larch, spruce and pine trees.

The most-prized Stradivarius instruments come from a 'golden period' between 1700 and 1720, and were made from wood grown during the Maunder Minimum. Burckle and Grissino-Mayer propose that slow growth (narrow annual rings) producing dense spruce wood used in violin sounding boards at this time was a key factor in determining their quality.

### TRANSIT OF VENUS

For the first time in nearly 122 years, Venus made a transit across the face of the Sun as seen from Earth on 6 June 2004. Appearing as a dark circular spot, the planet took 5h 30m to cross from the Sun's south-eastern limb to the south-western limb. Thousands of observers around the world were able to follow the event; only those in the western states of America, where the transit ended before sunrise, were denied a view. In the British Isles, good weather allowed many to follow the event from start (a couple of hours after sunrise) to finish (around noon BST). As for viewing eclipses, observers were required to take sensible precautions, avoiding direct viewing of the blinding solar disk through optical equipment. Many public viewing events were organised in the UK, and many members of the public saw the transit from the Old Royal Observatory at Greenwich.

Historically, transits of Venus were important in attempts to define the distance-scale of the Solar System. By determining the chord followed across the Sun's disk as seen from widely-separated geographical locations, astronomers in the 18th century hoped to obtain a parallax from which Earth-Sun distance could be found. These efforts were thwarted, however, by an optical illusion – the so-called black drop effect – whereby the limb of Venus appeared attached to that of the Sun, even when the planet was completely in silhouette on the solar disk. Part of this may have had its origins in earlier optical systems – most observations in 2004 did not show a pronounced black drop effect.

With the scale of the Solar System now established from radar measurements, observations of transits of Venus no longer have such great scientific significance but for many who witnessed the 2004 event there was the thrill of witnessing an astronomical phenomenon not previously seen by any living person. Transits of Venus occur in pairs, separated by eight years – the next is on 6 June 2012, but is rather unfavourable for viewing for much of the British Isles.

### SPECTACULAR SCIENCE AT MARS

In a year when planetary scientists achieved many breakthroughs, Mars has dominated the headlines. The red planet's August 2003 opposition, when it came fractionally closer to Earth than at any time in the past 60,000 years and was a bright object in midnight skies, was met by concerted observing campaigns. Even amateur astronomers equipped with modest telescopes enjoyed splendid views of Mars' south polar cap and dark markings. On this occasion, the extensive obscuring dust storms which often conceal the planet's features around the time of its close approach did not materialise.

Spacecraft launched to explore Mars *in situ* have, since early 2004, provided many exciting results. ESA's *Mars Express* arrived just before Christmas, and was successfully placed in a polar mapping orbit around the planet. Europe's first dedicated planetary mission, *Mars Express* has among its instruments the High Resolution Stereo Camera (HRSC), which has sent back detailed images of the Martian surface, including the vast canyon system of the Valles Marineris. The OMEGA instrument on board *Mars Express* confirmed the presence of substantial deposits of water ice under the frozen carbon dioxide of the planet's south polar cap.

Rather less successful, alas, was the UK's *Beagle 2* lander, carried by *Mars Express* and released just before arrival for a landing on Isidis Planitia on Christmas Day 2003. No signal was received from the surface, and the lander is presumed destroyed.

The two NASA Mars Exploration Rovers were successfully landed on the surface, their final decent cushioned by airbags. First to arrive was *Spirit*, which landed in the 150 km diameter Gusev crater on 4 January 2004. Scientists believe that Gusev once contained a lake, making it an attractive target for the exploration of possible water-based physical and chemical traces. Following initial problems with computer memory, *Spirit* has functioned extremely well, travelling 3 km across Gusev's floor to reach a feature called the Columbia Hills by June.

The sister rover *Opportunity* landed three weeks later at Meridiani Planitia, a site selected for its previously-established abundance of hematite – an iron mineral formed in the presence of water. *Opportunity* landed close to an outcrop of exposed Martian bedrock and scientists have been excited by the possibility that this has a sedimentary nature consistent with origin in an aquatic environment. By June 2004, *Opportunity* was beginning exploration of a crater named Endurance and has found hematite-rich marble-like stones ('blueberries') whose terrestrial equivalents form where water leaches through sandstone.

The results from the six-wheeled, 1.5-m high rovers certainly point to an important role for water in past Martian geology. Operating well past their projected 90-day lifetimes, *Spirit* and *Opportunity* are expected to continue providing valuable science from the Martian surface until early 2005, provided they survive the harsh local winter conditions.

# THEATRE

## NATIONAL SUCCESS

There can be no doubt about who was the theatrical hero of the year. Nicholas Hytner, artistic director of the National Theatre, could do no wrong. Having taken over from Trevor Nunn in April 2003, Hytner went on to present a string of dynamic, popular productions. Susannah Clapp in *The Observer* pronounced that 'Overnight, London theatre has turned on its axis.' The New York Times was equally enthusiastic, declaring that the National is 'an exciting place to be – you feel as if you could camp out there for a week.'

When Hytner arrived, he made it clear that he intended to concentrate on the work. He was not interested in what he described as 'the fashionable insistence on judging an artistic enterprise by its ability to pull in the right crowd.' Rather he wanted 'to provoke investigation of what makes us tick as a nation and as individuals. I wasn't interested in playing the target game.' In fact, intentionally or not, he has achieved both. The audience at the National has been made up of a wide cross-section of people, and he has produced a range of provocative productions. Remarkably, three major new plays have been staged in the space of a year: Michael Frayn's *Democracy* was seen in the Cottesloe and the Lyttelton before transferring to the West End; Martin McDonagh's *The Pillowman* played in the Cottesloe; and Alan Bennett's *The History Boys* was presented in the Lyttelton, a rare occasion on which a new play opened on one of the National's two large stages. There was much more to enjoy. Revivals included: Chekhov's *Three Sisters*; Euripides' *Iphigenia in Tauris* with Ben Daniels; Eugene O'Neill's *Mourning Becomes Electra* with Helen Mirren; Marivaux's *The False Servant* with Charlotte Rampling; and Shakespeare's *Measure for Measure* with Paul Rhys. Reflecting a new interest in children's theatre throughout the profession, Hytner directed Nicholas Wright's adaptation of Philip Pullman's *His Dark Materials*, and political theatre was represented by *The Permanent Way*. Improbable Theatre, a leading experimental company, staged *Lifegame*, a show that explores the very nature of theatre, and for sheer good fun, most people agreed that there was very little to beat Edward Hall's production of *A Funny Thing Happened on the Way to the Forum* with Desmond Barrit. At a time when the price of tickets has become a major issue, many of these productions could be seen at the Olivier for only £10, a scheme supported once again by Traveler which helped fill seats in the summer when audiences are traditionally sparse. Even the two most flawed productions – *Tales from the Vienna Woods* and *Cyrano de Bergerac* in which Stephen Rea sported the famous nose – attracted respectable houses, many people visiting the building for the very first time.

Hytner is more of a collegiate director than his predecessor, and a strong team surrounds him. Nick Starr is his very experienced and dedicated executive director, Howard Davies is his extremely talented associate director, and Tom Morris has been appointed from

Battersea Arts Centre, bringing with him his experience of non-script based theatre. There are also sixteen unsalaried 'associates' who include the director Katie Mitchell, playwrights Mark Ravenhill and Patrick Marber, and actor Alex Jennings.

Three major new plays in a period of less than twelve months is a terrific achievement for any theatre. Not even the Royal Court could compete, although in Conor McPherson's *Shining City*, it did produce one of the scariest new plays of the year with a ghostly twist. At the National, Michael Frayn's *Democracy* was an unlikely hit given that it is set in post-war Germany during the chancellorship of Willy Brandt – about which British people know very little – and that its subject matter is the complexity of decision-making. Frayn articulately depicts the relationship between the popular Brandt and Gunter Guillaume, the East German spy who managed to worm his way into Brandt's office and whose exposure led to Brandt's downfall in 1974. In Roger Allam's thoughtful performance, Brandt was revealed to be a complicated mix of integrity, intelligence, womanising and indecision. The play's energy and humour comes from the way that the smarmy Guillaume (Conleth Hill) avoids high-powered discussions at the Chancellery to report to his controller, Kretschmann, sitting at the side of the stage. At the end of Michael Blakemore's production, the set slowly collapsed, a reminder that Brandt's determination to achieve a rapprochement helped lead to the destruction of the Berlin Wall many years later.

In contrast with the subtlety and complexity of *Democracy*, Martin McDonagh's *The Pillowman* is more of a visceral thrill. McDonagh explores the survival of art and the responsibility of the artist as Katurian (David Tennant), a writer, is taken in for questioning by two blackly-comic and brutal interrogators (Jim Broadbent and Nigel Lindsay) representing an unspecified totalitarian state. Katurian's arrest is provoked by the murder of some local children whose grisly end resembles events in Katurian's own horrific fairy tales. In spite of his fear, he values his stories above his life and will do anything to see them survive. In John Crowley's exciting production, scenes from Katurian's unusual childhood were displayed in a series of Gothic tableaux using puppets and presented above the rest of the action. Comedy and violence proved a potent combination even if the meaning of McDonagh's play was not always clear.

*The History Boys* was Alan Bennett's first play for five years. The opening night did not bode well when a fire onstage meant that the performance had to be delayed for an hour but the quality of the drama proved more than capable of rising above such a setback. Bennett's play, overflowing with memorable and often hilarious epigrams, is an investigation of the purpose and nature of education set in the sixth form of a boys' grammar school in the 1980s. The boys are taught by three teachers: Mrs Lintott, who gives them a solid grounding in history; Irwin, who is brought in to sharpen them up for their

Oxbridge entrance; and Hector, for whom exams and education are very different beasts. They find themselves torn between Irwin who forces them to be controversial as a slick ploy to wake up tired examiners, and Hector, who passes on his passion for films, Shakespeare and Gracie Fields. The school sometimes seems more reminiscent of Bennett's own school days in the 1940s than the 1980s, but Hytner's magisterial production, which included filmed shots of life in a local school today, did its best to redress the balance.

In December 2003, Hytner directed Nicholas Wright's adaptation of Philip Pullman's epic fantasy *His Dark Materials* in a six-hour version divided into two shows. The challenge was both to compress the story and to find a theatrical way of presenting the many fantastical elements. The Olivier's drum worked overtime in order to present the numerous different locations, including the parallel universes through which the two main characters – Will and Lyra – pass at the stroke of a magic knife. The personal demons or spirits, possessed by all the inhabitants of Lyra's world, were represented by puppets manipulated by visible masked handlers in a similar fashion to *The Lion King*. It wasn't always the most spectacular effects that made the most impact, but rather the touching relationship between Anna Maxwell Martin's irrepressible Lyra and Dominic Cooper's more thoughtful Will. Also impressive was Howard Davies' revival of *Mourning Becomes Electra*, a once-in-a-lifetime opportunity to see Eugene O'Neill's intractable 1931 epic, which draws on both Greek tragedy and Freudian psychology. The relentless tale of retribution and guilt reveals the tragic consequences of Lavinia Mannon's determination to punish her mother's adultery and win her father's love. Davies' production managed to acknowledge the play's melodramatic qualities without detracting from the remorseless descent into tragedy. Paul Hilton as Orin, the anguished son, and Eve Best as the puritanical Lavinia, in particular, enhanced their already burgeoning reputations. Bob Crowley's magnificent set showed a porticoed verandah, its peeling ceiling painted with a representation of the Union flag, symbolising a world of privilege that was on the brink of extinction. Nicholas Hytner made it look easy to attract over 2,000 people nightly to the three stages at the National Theatre and the West End struggled to match the cornucopia on the South Bank.

#### WEST END FAILURES AND FORTUNES

The West End's theatres, admired in the past for the intimate relationship between audience and actors, seemed to be less and less appealing. Complaints have grown about lack of leg-room, inadequate loos, cramped bars, and bad sight lines as well as over-priced programmes, over-priced glasses of wine, and, as ever, the hated booking fee. In contrast with the National's Traveler season, seat prices in the West End were usually steep, although during the summer of 2004 tickets for almost all shows could be bought at the half-price ticket booth in Leicester Square. A report by the Theatre Trust suggested that West End theatres need £255 million of investment over the next 15 years to bring them up to scratch. Some theatre owners are optimistically hoping for help from the government, but Cameron Mackintosh has already embarked on an extensive programme of

refurbishment using his own money. In June 2004, the Prince of Wales was the first of his theatres to reopen. Huge bars, elegant art deco fittings, extraordinarily comfortable seats, and great sight lines from all parts of the house have transformed one of London's most claustrophobic theatres. *Mamma Mia!* has moved there from the Prince Edward and it looks as though the Abba show will be happily coining 'Money, Money, Money' for many years to come.

West End producers floundered as they tried to second-guess public taste in an attempt to recoup their ever-increasing costs. *Life is Rhythm*, an Edinburgh transfer, particularly provoked despair among the critics, prompting Charles Spencer to say in the *Daily Telegraph* that 'the place is engulfed with brain-dead rubbish, stand-up comedians, back-catalogue compilation musicals, one woman shows and any amount of tacky tat'. Ben Elton's tribute to Rod Stewart *Tonight's the Night* rather proved Spencer's point. Perhaps most embarrassing was the return of Michael Barrymore. After a disastrous first night in which the comedian died a slow and excruciating death, the show was taken off a few nights later. Some productions never seemed suitable for the West End including *Coyote on a Fence*, *Sweet Panic*, *Rattle of a Simple Man*, and Imogen Stubbs' *We Happy Few*. Some needed better productions such as *The Secret Rapture*, *The Shape of Things* and *Les Liaisons Dangereuses*. Michael Hastings' *Calico*, about Joyce's daughter Lucia (played by Romola Garai), clearly needed a script doctor.

As if searching for something bankable, producers turned to films. *Chitty Chitty Bang Bang* was joined – albeit briefly – by *Thoroughly Modern Millie* with Amanda Holden flying the flag for modernity. *When Harry met Sally* came to the Haymarket with Luke Perry and Alyson Hannigan who proved a draw with audiences despite the drawbacks of an adaptation that lacked both the charm of the original and the New York scenery. *The Producers*, *Mary Poppins* and *Billy Elliott* are still to come.

It wasn't all rubbish, however. Trevor Nunn directed a modern *Hamlet* at the Old Vic with an exceptionally young cast. Twenty-three-year-old Ben Whishaw was a snivelling, skinny Hamlet in a beanie hat and Imogen Stubbs played a youthful Gertrude, making this production one to which young audiences could easily relate. Simon Gray's *The Holy Terror* quickly vanished, but he returned more successfully with *The Old Masters* directed by Harold Pinter in which Edward Fox as Bernard Berenson, the Renaissance art expert, and Peter Bowles as his dealer, Joseph Duveen, fiercely argued the attribution of a painting. Julia Stiles appeared in a revival of David Mamet's *Oleanna* with Aaron Eckhart. Michael Gambon and Lee Evans made an improbable pair in a production of *Endgame* that exploited the old-fashioned theatricality of the Albery and R. C. Sherriff's old stalwart *Journey's End* proved as moving as ever with David Haig as the stoical schoolmaster and Geoffrey Streatfield as Stanhope. As always, there was an injection of shows from elsewhere, the most successful of which came – once again – from the National: *Democracy*, *Anything Goes* and *Jerry Springer – The Opera*. The Almeida launched *The Goat or Who is Sylvia?*, Edward Albee's play about tolerance in which an architect, played by Jonathan Pryce, falls in love with a goat, to his wife's understandable distress. The Almeida also presented one of the great

artistic achievements of the year, Rufus Norris's production of *Festen* adapted by David Eldridge from the film, which transferred in the autumn. Michael Grandage's production of *Suddenly Last Summer* transferred from the Sheffield Crucible with Diana Rigg and Victoria Hamilton. From the Watermill at Newbury came Edward Hall's highly enjoyable all-male production of *A Midsummer Night's Dream* and *Sweeney Todd*. The Tricycle, which had an excellent year, transferred *The Price* with Warren Mitchell and *Guantanamo: Honor Bound to Defend Freedom*. Shared Experience came into the Duke of York's with *After Mrs Rochester*, Polly Teale's fascinating exploration of the life of Jean Rhys.

#### ROYAL SHAKESPEARE COMPANY

The relationship between the National and the Royal Shakespeare Company (RSC) often resembles a seesaw – when one is up, the other is down. Artistic director Michael Boyd, who is widely admired, cut costs both off and on stage in order to whittle away at a massive deficit of £2.8 million. He has returned to the original idea of the RSC as an ensemble in which the actors work together over a long period of time. There is no longer talk of pulling the main house down in Stratford, but rather of radical refurbishment in order to improve sight lines and facilities backstage, both of which Boyd's predecessor insisted were impossible to achieve without totally demolishing the building. London remains the thorny problem. Actors involved in the 2003 season were shocked to discover that the RSC could not afford to bring any of the productions to London. The two hits of the season were Gregory Doran's production of *The Taming of the Shrew* and John Fletcher's little known riposte, *The Tamer Tamed*, written some twenty years later. In spite of having lost a reputed £1 million on the season of Jacobean and Elizabethan plays earlier in the year, West End producer Bill Kenwright was persuaded to step into the breach again and transfer *The Taming of the Shrew* and *The Tamer Tamed* to London. Alexandra Gilbreath played Kate and Jasper Britton played Petruchio while Rory Kinnear made his mark as an upwardly mobile Tranio. Later, Gregory Doran's admired production of *All's Well that Ends Well* transferred from the Swan in Stratford to the Gielgud. Returning to the company after many years, Judi Dench played the Countess, which guaranteed good audiences both in Stratford and London. As this production opened in the West End, Doran – one of the busiest directors of the year – was working on *Othello* in Stratford which eventually transferred to London's Trafalgar Studio. Antony Sher as Iago and Sello Maake ka-Ncube as Othello brought a South African flavour to the play.

These sporadic visits to the capital emphasised the RSC's need for a proper London home. The company runs the risk of losing a substantial part of its grant if it does not find one soon. While actors are always keen to be seen in London, audiences were beginning to get used to the company's absence from the capital. Tourists, in particular, are only too happy to go to Shakespeare's Globe instead. Boyd has announced that four tragedies seen in Stratford – *King Lear* with Corin Redgrave, *Hamlet* with Toby Stephens, *Macbeth* with Greg Hicks, and *Romeo and Juliet* – will play for a six month season at the Albery from autumn 2004 but this will again be a temporary home.

#### REALITY THEATRE

Political theatre proliferated in the year under review, undoubtedly influenced by 9/11 and the Iraq War, but also covering such topics as a siege in Hackney and the state of the railways. The Tricycle Theatre in Kilburn led the way in this field. Even before Lord Hutton had presented his report, Richard Norton-Taylor and Nicolas Kent presented their own edited, dramatised version of the tribunal, which was held to explore the events leading to the death of Dr David Kelly. Although much of the material was very detailed, the evening was notable for the audience's determination to sift through the evidence and understand its significance. Later in the year, the Tricycle returned to the fray with *Guantanamo: Honor Bound to Defend Freedom*, a play based on interviews with the family and solicitors of those held in Guantanamo Bay without trial. Both these productions were described as verbatim theatre, based on the actual words of those who were interviewed, or on the court transcriptions. This was taken to extremes in *Come Out Eli* at the Arcola Theatre which recounts, through pre-recorded witness accounts read by actors, how Eli Hall barricaded himself into a flat with a gun and a hostage in Hackney on Boxing Day 2002. The siege lasted sixteen days before the hostage escaped and Eli set fire to the flat and killed himself.

*The Permanent Way*, presented by Out of Joint, was also based on interviews, in this case with those involved in the privatisation of Britain's railways and the succession of disasters that followed at Southall, Ladbroke Grove and Potters Bar. The interviews were filtered through the imagination of playwright David Hare who built up a damning indictment of the separation of train and track management, a policy brought in during John Major's time as Prime Minister. Hare also criticised Tony Blair for attacking privatisation of the railways before the 1997 election and refusing to take them back into state ownership after the election. The production by Max Stafford-Clark attracted vast audiences round the country, especially in the railway town of York, and presented a devastating but also inspiring portrait of both the bereaved and the survivors, and of their determination to make sure that the Government learns from the disasters.

Elsewhere playwrights fought back with their imaginative responses to real-life events. Steve Waters' *World Music* at the Donmar Warehouse examined the West's response to the aftermath of war in Rwanda while David Edgar's hugely ambitious pair of plays, *Mothers Against* and *Daughters of the Revolution*, looked at a gubernatorial election in a US state from both sides of the political divide. In *Mothers Against*, the Republican candidate, a libertarian of the right, is coached for a forthcoming television debate and learns that he is expected to toe the moral line. *Daughters of the Revolution* concerns a left-wing activist who tries to discover who ruined his career many years ago. Edgar's depth of research and the intricacy of the links between the two plays were impressive, even if the play's detailed arguments were devoid of any real drama. There were more obvious political satires such as *The Madness of George Dubya* – an update of Dr Strangelove – by Justin Butcher at the Arts Theatre and Alastair Beaton's *Follow My Leader* at Birmingham Rep and Hampstead. Echoes of

the Iraq War were frequently felt in classical revivals, especially Luc Bondy's production of *Cruel and Tender* at the Young Vic, and Katie Mitchell's production of Euripides' *Iphigenia at Tauris* at the National Theatre. In Simon McBurney's powerful production of *Measure for Measure*, also at the National, the prisoners were dressed in orange boiler suits and George Bush's face was flashed up on a screen. The war seemed to be on everyone's minds but, predictably, few supporters of Bush's policy in Iraq could be found.

#### REGIONAL HIGHS

Regional theatre continued to flourish largely because of the vast injection of £25 million from the Arts Council. Michael Grandage announced his departure from the Sheffield Crucible after a hugely successful run, which he combined with the artistic directorship of the Donmar Warehouse. Gemma Bodinetz presented Dael Orlandersmith's remarkable play about colour and

prejudice at the Liverpool Playhouse. Jonathan Church massively increased the amount of work shown at Birmingham Rep. His production of *Of Mice and Men* with Matthew Kelly transferred to London. David Farr had a surprise hit with his adaptation of *Paradise Lost* at the Bristol Old Vic. Steven Pimlott directed a much admired adaptation of Bulgakov's *Master and Marguerita* at Chichester with Sam West and Michael Feast. Ian Brown created memorable collaborations with the touring companies Improbable and Kneehigh and, with the Newcastle Playhouse and Theatre Romea Barcelona, he presented an adaptation of George Orwell's *Homage to Catalonia* directed by controversial Catalan director Calixto Beito. The new confidence of these theatres showed in their artistic work but was also amply rewarded when figures revealed that Derby Playhouse contributed £3.9 million to the local economy and Sheffield Crucible an impressive £22 million.

## THEATRE AWARDS 2003

## CRITICS' CIRCLE

- Best New Play – *Democracy* by Michael Frayn  
 Best Musical – *Jerry Springer – The Opera* by Richard Thomas and Stewart Lee  
 Best Director – Howard Davies for *Mourning Becomes Electra*  
 Best Designer – Bob Crowley for *Mourning Becomes Electra*  
 Best Actor – Michael Sheen for *Caligula*  
 Best Actress – Eve Best for *Mourning Becomes Electra*  
 Most Promising Playwright – Lucy Prebble for *The Sugar Syndrome*  
 Most Promising Newcomer – Lisa Dillon for *Iphigenia and The Master Builder*  
 Best Shakespearean Performance – Greg Hicks for *Coriolanus*

## EVENING STANDARD

- Best Play – *Democracy* by Michael Frayn  
 Best Actor – Michael Sheen for *Caligula*  
 Best Actress – Sandy McDade for *Iron*  
 Best Musical – *Jerry Springer – The Opera* by Richard Thomas and Stewart Lee  
 Most Promising Playwright – Kwame Kwei-Armah for *Elmina's Kitchen*  
 Best Director – Polly Teale for *After Mrs Rochester*  
 Best Designer – Christopher Oram for *Caligula*  
 Outstanding Newcomer – Tom Hardy for *Blood/In Arabia We'd All Be Kings*  
 Special Award – Max Stafford-Clark

## LAURENCE OLIVIER

- Best New Play – *The Pillowman* by Martin McDonagh  
 Best New Musical – *Jerry Springer – The Opera* by Richard Thomas and Stewart Lee  
 Outstanding Musical – *Pacific Overtures* by Stephen Sondheim/John Weidman/Hugh Wheeler  
 Best Revival – *Mourning Becomes Electra* by Eugene O'Neill  
 Best Entertainment – *C'est Barbican!* presented by Duckie  
 Best Director – Michael Grandage for *Caligula*  
 Best Designer – William Dudley for *Hitchcock Blonde*  
 Best Lighting Designer – Hugh Vanstone for *Pacific Overtures*

- Best Sound Design – Mike Walker for *Jerry Springer – The Opera*  
 Best Choreography – Karen Bruce for *Pacific Overtures*  
 Best Costume Designer – Christopher Oram for *Power*  
 Best Actor – Matthew Kelly for *Of Mice and Men*  
 Best Actress – Eileen Atkins for *Honour*  
 Best Supporting Performance – Warren Mitchell for *The Price*  
 Best Actor in a Musical – David Bedella for *Jerry Springer – The Opera*  
 Best Actress in a Musical – Maria Friedman for *Ragtime*  
 Best Supporting Performance in a Musical – The Chorus in *Jerry Springer – The Opera*  
 Most Promising Newcomer – Debbie Tucker Green for *Born Bad*  
 Outstanding Achievement – The Young Vic  
 Special Award – Judi Dench

## TMA THEATRE AWARDS 2003

- Best Actor – Timothy West for *King Lear*, English Touring Theatre  
 Best Actress – Eileen McCallum for *If Only* at the Royal Lyceum, Edinburgh  
 Best Actress in a Supporting Role – Lyndsey Marshal for *A Midsummer Night's Dream* at the Bristol Old Vic  
 Best Actor in a Supporting Role – Andy Serkis for *Othello* at the Royal Exchange, Manchester  
 Best Director – David Farr for *A Midsummer Night's Dream* at the Bristol Old Vic  
 Best Designer – Julian Crouch, Phil Eddols, Colin Grenfell and Stephen Snell for *The Hanging Man* Improbable Theatre/West Yorkshire Playhouse  
 Best New Play – *The Breathing House* by Peter Arnott at the Royal Lyceum, Edinburgh  
 Best Touring Production – *A Midsummer Night's Dream* Propeller/Watermill Theatre, Newbury  
 Best Musical – *Sweet Charity* at the Crucible, Sheffield  
 Best Play for Children and Young People – *Tom's Midnight Garden* adapted by David Wood, Library, Manchester  
 Most Welcoming Theatre – Brunton, Musselburgh  
 Special Regional Theatre award – The Georgian Theatre Royal, Richmond, N. Yorks  
 Eclipse Award – New Wolsey Theatre, Ipswich

# WEATHER

## JULY 2003

From the 1st to the 3rd a depression in the North Sea brought a cool unsettled spell with rain and thundery showers in many places. From the 4th to the 11th the weather became mostly dry with rising temperatures and high pressure settled close by to the south. Atlantic fronts skirting northern districts on the 8th resulted in rain and drizzle. Most days saw long sunny periods and very warm or hot conditions were experienced in many parts during the 9th and 10th. A weak cold front passing later on the 10th introduced fresher air by the 11th. Wisley in Surrey reached 33.6°C on the 15th while Maidenhead had its hottest July day since 1976. The 16th to the 20th was more unsettled as Atlantic depressions encroached but it stayed mostly very warm or hot at first. There was widespread thundery rain, heavy at times during the 16th and 17th, as a low moved north-east across the region. St Athan in the Vale of Glamorgan had over 50mm of rain in 12hrs on the 17th. Western areas had more rain at times on the 18th, 19th and 20th, while eastern areas were relatively sunnier and drier. Residual hot air over the south-east and East Anglia on the 19th gave way that evening as thunderstorms broke out, some lasting to the early hours. The 21st to the 23rd saw a breezy spell with sunny periods and some scattered showers mostly in the west and north. From the 24th to the 26th Atlantic depressions to the north-west brought an unsettled spell, especially over south-west England, Wales and the Midlands. Cardinham in Cornwall received 58mm of rain in 12hrs. Thunder was reported from Lyneham in Wiltshire during the 26th. After some thunderstorms in the south-east and East Anglia early on 27th, further rain and showers and cooler temperatures affected many places. A small low moved eastwards over northern England during the 30th bringing heavy thundery showers to north-west England and eastern England down to East Anglia, with tornadoes reported from Sculthorpe in Norfolk.

## AUGUST 2003

This was the driest and sunniest August since 1995 and the warmest since 1997. On the 1st and 2nd low pressure to the north-west brought a breezy start to the month with occasional rain and drizzle, however it became sunny and warm by the 2nd. The 3rd to the 13th saw a notable and record breaking heatwave especially in the Midlands, Central Southern and south-east England and East Anglia. Temperatures exceeded 35°C in many places on the 6th, 9th and 10th. There was some patchy hill and coastal fog mainly around south-west and western areas. The 5th and 6th saw a little thunder in the north, while rain affected the north-west on the 9th. Valley in Anglesey reached 33°C on the 5th, with 35°C recorded at Rocquaine on Jersey, both new weather station records. The 9th and 10th saw extreme heat across much of the region, particularly in south-east England on the 10th where 38.1°C was claimed by Gravesend, a new UK record. In contrast there were thunderstorms in north, west and central areas of the region, with severe outbreaks over north-east England. Carlton in Cleveland collected 48mm of rain in 15 mins and 2cms of hail on the ground,

while Middlesbrough had 30mm in a downpour. There was more thunder in west, north-west and north-east areas on the 11th. It continued mostly hot with a little thunder in the south-west on the 13th as a cold front moved south-east. From the 14th to the 18th it was changeable with occasional rain or showers in places, mainly in western and southern areas. It was cooler though still warm at times. There were good sunny periods generally, especially inland and in eastern areas. Developing low pressure to the north brought fresher air from the north-west during the 18th. The 19th to the 26th was dry and mostly warm with sunny periods at first but more breezy in the north on the 21st as a low tracked eastwards passing by north Scotland. Slow moving fronts gave light rain and drizzle in many places during the 21st and 22nd and in the north-east on the 23rd. High pressure then reestablished itself over the UK but retreated to Iceland by the 25th allowing cloudier cooler conditions and a little rain and drizzle to spread in from the north-east. From the 27th to the 31st an anticyclone near Iceland and low pressure over Scandinavia fed markedly cooler air from the Arctic. The cold front stalled over southern districts on the 28th as a depression from Biscay moved east-north-east bringing much needed rain to these areas.

## SEPTEMBER 2003

This was the sunniest and the driest September since 1997. From the 1st to the 4th high pressure migrated slowly across the UK from the Atlantic to the low countries bringing dry weather with good sunny periods and some warm temperatures later. The 5th to the 11th was a rather unsettled period with rain at times as secondary depressions and their associated fronts crossed the region. After a very warm start on the 5th the first band of thundery showers affected many parts on the 6th, with more rain spreading in on the 7th as a low approached southern areas from Biscay. It was wet in many places on 8th and 9th as more depressions tracked close by. A low near the Thames Estuary on the 10th gave rain in the north and east. More Atlantic fronts brought rain and drizzle to many places on the 11th, while western and northern areas were affected by hill and coastal fog. From the 12th to the 17th an anticyclone which formed over the UK drifted east to the near continent retaining the region under its influence. Dry, sunny and very warm or hot weather prevailed, with 28.4°C being recorded at Gravesend in Kent on the 17th. Patchy mist and fog in the morning cleared quickly. From the 18th to the 22nd a cold front became stalled over north Wales and northern England for much of the period, bringing rain to these parts, often heavy and prolonged. The cold front advanced south during the 22nd providing some heavy and desperately needed rain to the region. In the south-east temperature drops of ten degrees in less than an hour were noted in many places. From the 23rd to the 25th high pressure established itself again then drifted east maintaining sunny dry conditions. A number of places had air frost on the 24th, with -2.8°C being recorded at Redhill Airport in Surrey. At Boscombe Down in Wiltshire it was the coldest September night

since 1931. The 26th to the 28th saw occasional showers and sunny periods as a cold front moved slowly down during the 26th. Most showers were in north-western areas, while the south-east and East Anglia had rain and showers as a small low hovered nearby. A depression near Iceland on the 29th transferred to the Bay of Biscay by the 30th bringing an unsettled spell especially to northern England and northern Wales. Valley on Anglesey reported 25mm of rain on the 29th.

#### OCTOBER 2003

This was the sunniest October on record and the coldest for ten years. From the 1st to the 2nd a depression over Biscay gave warm and changeable weather in the south, where some thundery rain broke out later. Saunton Sands in Devon reached 22.1°C on the 2nd. From the 3rd to the 10th the changeable theme continued as low-pressure systems tracked east-south-east from the Iceland area. There were outbreaks of rain and showers from time to time and the north-west in particular experienced regular soakings during the 4th, 5th and 6th. There were sunny spells between the showers however. Some thundery outbreaks affected south-eastern districts during the 4th and 5th. The 11th to the 19th was a mainly sunny dry period as high pressure exerted its influence. An anticyclone over Scandinavia migrated to Denmark by the 16th, then to the Greenland and Iceland areas by the 18th. Low pressure near Biscay drifted east bringing occasional rain or showers to the south-west from the 11th to 15th. Overnight mist and fog patches formed in places and later and it became chilly as easterly winds picked up. Temperatures dropped markedly everywhere by the end of the 19th as north-east winds transported air in from arctic regions. The 20th to the 25th was mostly unsettled and cold with outbreaks of thundery rain or showers in many places. A depression off southern Norway moved to Biscay by the 22nd and 23rd bringing freshening easterly winds. Snow lay early on the 20th over high parts of the north Pennines. Thundery rain fell over North Yorkshire and east coast counties during the 20th and 21st and later in east Kent overnight from the 20th to the 21st. Margate received 38mm of rain on the 21st. Southern areas bore the brunt of the thundery showers on the 22nd. Sleet and snow fell widely with Dartmoor having a covering above 1,000 feet. There was widespread frost on most nights and -6.9°C was registered at Shap in Cumbria on the 22nd. The 26th to the 27th was mainly dry and sunny, with overnight frost and some fog patches under transient high pressure. The 28th to the 31st was very unsettled and wet. After a frosty start on the 28th with some patchy mist and fog, bands of heavy rain and showers crossed the region. During the 30th a deep north Atlantic depression heading for Biscay brought very heavy rain to many places. The 31st saw outbreaks of rain, thundery near the south coast gradually die out.

#### NOVEMBER 2003

From the 1st to the 3rd depressions passing to the north brought frequent rain and showers, some of which were thundery. From the 4th to the 8th high pressure built up over the region and then transferred to Scandinavia. It was dry and mild or very mild with good sunny periods after early mist and fog patches cleared. Wisley in Surrey reached 19.2°C on the 6th. The 9th to the 12th was changeable as Atlantic fronts crossed the region. Temperatures were generally not far from normal but with rain at times. Central and eastern areas of England had

extensive areas of mist and fog early on the 11th. There was some heavy rain at times especially in western areas later on the 11th and early on the 12th, with thunder being heard in south Wales. From the 13th to the 15th a deep depression moved north-east from southern Ireland to the North Sea. Bands of heavy rain and showers were carried on the gale force south-westerly winds. Mumbles in South Wales had gusts of up to 73kts. The 15th was quieter with occasional showers in western areas and the best of the sunshine in the south-east. The 16th to the 20th was changeable and mainly mild in a west-south-westerly airstream between low pressure to the north and high pressure to the south. Some rain and showers, heavy at times, broke out on the 17th, 19th and 20th, mainly in the west. A cold front became slow moving over south-east England later on 20th. From the 21st to the 23rd a low over Biscay caused weather fronts to stall over south-east England, bringing copious rainfall to the Kent, Surrey and Sussex areas. Redesdale in Northumberland fell to -6.2°C on the 23rd. The 24th to the 30th was mostly unsettled and wet after a quiet frosty start on the 24th. Vigorous Atlantic depressions to the north brought heavy rain and showers to all areas during the 25th and 26th and some showers turned thundery in the south-west later. After the clearance of some thundery rain near the south coast, the 27th and 28th provided a mainly dry sunny interlude, with overnight frost and fog patches. More mild wet and windy weather spread in from the North Atlantic during the 29th and the rain was heavy at times and turned showery later. Eastern counties had a sunny start on the 30th.

#### DECEMBER 2003

The 1st to the 2nd saw low pressure in the Channel and it was a very wet start to the month. However the rain gradually died out during the 2nd. From the 3rd to the 9th an anticyclone built up to the north with a significant cold front moving south on the 6th. The east Midlands and East Anglia were foggy on the 3rd and the north-east of England was affected on the 4th. It was cloudy at first becoming mainly sunny later with overnight patchy fog and frost. After some freezing fog at first in places on 10th, depressions passing to the north brought bands of rain and showers, heavy at times, especially in northern and western areas. It was mild in southern areas on the 11th, 12th and 13th before cooler north-westerly winds arrived later. Teignmouth in Devon reached 14.9°C on 11th. The 15th to the 19th saw high pressure return to the region which moved to north France by the 16th, then to the Balkans by the 18th but maintaining its influence throughout. Mist and fog patches were reported on the 17th and 18th in places and in the south on the 19th. From the 20th to the 22nd a deep depression formed over the UK bringing widespread heavy rain to most areas. The low moved to Denmark during the 21st bringing cold northerly winds and heavy wintry showers in its rear. High ground in the north and north-west including Wales received snow cover as did East Coast counties down to Lincolnshire in the evening. Early on the 22nd more snow fell in eastern counties. From the 23rd to the 26th low pressure to the north heralded the return of mild damp westerly winds. Although mostly dry at first, rain became more widespread over Christmas and Boxing day especially in north-west England and Wales, where showers turned thundery later. Rain totalling 80mm was recorded in 18 hours at Shap Fell in Cumbria on the 26th. From the 27th to the 31st low pressure transferred to Scandinavia and a colder north draught

ensued. Southern counties were deluged from the 27th to the 29th as heavy rain, thundery at times affected the south coast. There was some sleet or snow later on adjacent high ground. Further north clearer skies allowed widespread frost, severe and persisting throughout the day in places on the 29th and 30th. Shap Fell in Cumbria registered  $-11.4^{\circ}\text{C}$  overnight from the 30th to 31st.

#### JANUARY 2004

This was the wettest January since 1999. The month commenced rather cold and changeable, with some rain and drizzle and snow over high ground in the north. Redhill fell to  $-6.7^{\circ}\text{C}$  early on the 3rd. The 4th to the 6th saw high pressure to the south gave mild conditions and some hill and coastal fog at first. Rain and drizzle on the 5th gave way to scattered showers later on the 6th. The 7th to the 13th was very unsettled and wet as vigorous depressions swept their associated fronts across the region, mostly mild or very mild at first. A low crossed the Borders on the 8th bringing gales to many places and a few thundery showers on the 9th. It reached  $13.6^{\circ}\text{C}$  at Teignmouth in Devon on the 10th. A deep depression brought gales, lowering temperatures and some thundery showers on the 11th with a waterspout observed in the Bristol channel. There was more rain and blustery showers on the 12th and 13th as another depression tracked close by. Snow fell in the Midlands and the north on the 14th, reaching up to 5cms deep in places, with as much as 15cms over high ground in Wales. Another deep depression crossed northern England during the 15th and 16th bringing widespread gales. Further snow fell over high ground in the north allowing 20cms to accumulate at Boltshope Park later on the 15th. From the 19th to the 25th it was mostly mild and changeable with rain at times as complex low pressure to the north of the UK pushed weak fronts across the region. It was mainly cloudy with some hill and coastal fog on the 21st and 23rd. The 22nd and 23rd were generally wet, however along the north coast of Wales at Colwyn Bay it reached  $13.6^{\circ}\text{C}$  on the 22nd. In contrast, the 24th and 25th brought long sunny periods, lower temperatures and a few showers. After a rather cold cloudy day on the 26th an arctic airstream brought snowfall to northern areas, affecting east coast counties and the south-east later on the 27th. During the 28th another snow band gathered strength over the Midlands as it migrated southwards. The passage of this front produced squalls, a sudden drop in temperature and a period of heavy snow which settled quickly, even in central London where 2 to 4cms fell. There were also many reports of lightning and thunder. north Wales, north-east England, the Wolds and parts of East Anglia had significant falls, with depths up to 15cms in places. Scampton in Lincolnshire recorded  $-8.0^{\circ}\text{C}$  on the 28th. After a sunny cold start on the 29th, heavy rain and gales swept across the region from the west, with wet weather continuing for the remainder of the month.

#### FEBRUARY 2004

From the 1st to the 6th vigorous low pressure to the north and north-west brought very mild wet and windy weather to the region. The rain was often heavy especially in North Wales and Cumbria where severe local flooding occurred. Capel Curig registered 260mm of rain in 48 hours during the 3rd and 4th. Gravesend in Kent achieved  $17.9^{\circ}\text{C}$  on the 4th while central London reached  $17.8^{\circ}\text{C}$ , a record high for so early in the year. The 7th to the 10th saw a deep low near Faroes moved south-east to Denmark. After overnight frost at first on the 9th and

10th very mild air returned. From the 11th to the 15th it stayed mild as high pressure sat over the UK. There was some heavy rain at times in the north-east during the 14th. The 16th to the 21st was continuing anticyclonic and generally dry and mild at first, becoming colder later. There was a little rain on the 17th and a few showers on North Sea coasts on the 18th. Southern England had some snow flurries on the 20th, and rain in the south-west on the 21st. From the 22nd to the 25th it became colder with northerly winds as high pressure receded westwards and a deep depression from Greenland migrated to south Scandinavia. The 26th to the 29th saw bands of snow affecting Wales, north England and east coast areas including East Anglia at first, giving significant falls in places. Later on the 26th an area of moderate snow moved across central southern England, with 10–12cm depth reported from Bournemouth early on the 27th. Sennybridge in Powys fell to  $-10.9^{\circ}\text{C}$  that same morning; overnight frost became widespread and severe in places. Persistent snow showers during the 27th and 28th gave further moderate accumulations over Wales, north England and north-east coastal areas. Some parts adjacent to the North Sea as far south as Kent also received a few centimetres and there were some odd reports of thunder too. Wintry showers also broke out over central southern England on the 28th. Boltshope Park in north England boasted 16cm of snow on the 29th, however rising pressure restricted snow showers to south-east England that day.

#### MARCH 2004

From the 1st to the 2nd high pressure brought good sunny periods and widespread overnight frost which was severe in places. A temperature of  $-11.7^{\circ}\text{C}$  was noted at Redesdale in north England on the 1st. The 3rd to the 7th saw a changeable spell as Atlantic fronts crossed the region bringing occasional rain and showers. From the 8th to the 10th there was a recurrence of high pressure. A deep depression swept fronts north-east across the region during the 11th and 12th preceded by sleet and snow in many parts especially over high ground. There were several centimetres in a number of places early on the 12th and some thunder reported from south-west England. It was milder on 13th and 14th but with rain and showers especially in the west and showers turning thundery in the south-east on the 13th. The 15th to the 17th saw high pressure over Europe. There was occasional light rain in western areas. It became exceptionally warm with Cleethorpes in north east Lincolnshire reaching  $18.7^{\circ}\text{C}$  on the 16th and there were good sunny periods especially in the east and south-east. The 18th to the 25th was more unsettled as deep complex low pressure to the north drifted to Scandinavia. Winds veered slowly from westerly to northerly with severe gales affecting many areas during the 19th to the 21st especially on the 20th when Aberdaron in north Wales gusted to 87kts. Eastern areas became very warm on the 20th. Showers were fairly widespread at times from the 21st, some becoming heavy with hail and thunder. Generally it was rather cold later with some overnight frost and a little sleet or snow in places on the 25th. The 26th to the 29th was mostly dull with patchy mist and fog as a weak front moved very slowly south-east across the region. Some outbreaks of rain and drizzle gave way during the 29th to brighter drier conditions and warmer temperatures. Northolt in London reached  $20.1^{\circ}\text{C}$  on the 31st.

## APRIL 2004

This was the warmest April since 1987. The 1st to the 7th saw low pressure to the west slowly moving east and north driving bands of rain and showers across the region. The 4th onwards saw showers often heavy and thundery with hail in many places. From the 8th to the 14th the Azores high extended a weak ridge across southern parts of the UK. It was chilly at first with some overnight frost and  $-4^{\circ}\text{C}$  was registered at Sennybridge in Wales on the 9th. After a few showers on the 8th, and a little light rain on the 9th and 10th, mainly dry warm weather with good sunny periods prevailed. Northern areas were cloudy at times and some light rain spread in later on the 14th to north-west parts. The 15th to the 21st saw active depressions residing close to or over the UK bringing a second spell of unsettled weather, however it was dry and warm at first particularly in the south-east. Fronts made erratic progress eastwards during the 17th and 18th bringing lower temps and copious amounts of rain to many places. Further bands of rain and showers affected most areas from the 19th to the 21st, with hail and thunder mixed in. Reigate in Surrey experienced a violent thunderstorm on the 19th with heavy hail, sleet and snow. There were scattered light showers on the 22nd and very warm sunny weather arrived with  $23.4^{\circ}\text{C}$  reached in central London on the 24th. There was patchy hill and coastal fog in places and thunder later in the north on the 25th. The 26th to the 30th saw low pressure developing off southern England causing bands of thundery rain to affect many areas with numerous reports of local flooding and lightning strikes. On the 26th one band stretched from north-east England to the Seven estuary. There was 33mm of rain in an hour during a storm at Sheffield which caused local flooding. Overnight from the 26 to the 27th Worcestershire was hit by storms with many homes or businesses struck by lightning and affected by local flooding. Near Worcester, 43mm of rain fell in two hours. The south-east and East Anglia were visited later on the 27th with outbreaks in south-east London causing much disruption to rail services during evening rush hour. The 28th saw more outbreaks over the south-east and East Anglia and a particularly violent storm broke out around the South Downs and Sussex area during the late afternoon. It was warm at first but became colder on the 28th as north-north-easterly winds picked up. The 29th saw more rain heavy at times and again early on the 30th in the south.

## MAY 2004

There were occasional thundery showers on the 1st becoming rather warm by the 2nd with scattered showers and sunny periods. Low pressure took up residence over the UK bringing heavy thundery showers to many places on the 3rd and 4th and in the north, Midlands and East Anglia during the 5th. It was rather cold or cold with sunny periods. From the 6th to the 10th the low centre drifted east allowing a northerly airstream to be established. Scattered thundery showers on the 6th became more widespread over the eastern half of England during the 7th. Temperatures were generally near normal; some thundery outbreaks affected the south-west, Wales and the Midlands on the 10th. From the 11th to the 18th a high from the Azores extended its influence after thundery outbreaks on the 11th died away. The exception was light showers in the Hampshire and Surrey areas during the evening of the 13th. There were long sunny

periods after early morning patchy mist and fog cleared and it became warm or very warm from the 15th onwards. From the 19th to the 21st the high pressure receded westwards allowing a cold front to move slowly down. It was very warm and sunny in the south at first,  $25.3^{\circ}\text{C}$  being recorded in central London on the 19th, however some sea fog plagued parts of the south-west. Prone areas had a touch of air frost, with Shap in Cumbria falling to  $-2.4^{\circ}\text{C}$  early on the 21st. High pressure was mostly dominant from the 22nd to the 27th and a dry sunny spell ensued. The 26th saw thundery outbreaks affecting a few places in south Wales and south England but these died out early the next day with most areas becoming very warm. The 28th to the 31st was changeable as low pressure to the west pushed Atlantic fronts erratically across the region bringing further outbreaks of rain and showers, some thundery, to some areas. The north-west received significant rain on the 28th. During the 29th scattered outbreaks of rain affected a number of locations. Central and north-eastern areas of England had thundery rain later on the 30th, while southern parts of the region reported scattered thundery showers.

## JUNE 2004

From the 1st to the 6th a weak ridge of high pressure built across Wales and south-west England keeping these areas mostly dry, but weak fronts pushed down the North Sea to give some light rain at times over eastern counties of England. By the 7th the high pressure had drifted into central Europe allowing warm air to spill in from the Continent, as well as allowing a few thunderstorms to develop. The hottest day occurred on the 8th when several places in southern and eastern England reported over  $30^{\circ}\text{C}$ , the highest being Cambridge with  $31.5^{\circ}\text{C}$ . During the evening scattered thunderstorm occurred, with Leconfield recording 12.6 mm of rain. The high pressure maintained its influence until the 16th keeping many places dry and warm but scattered showers did occur in places. Temperatures reached  $29^{\circ}\text{C}$  in Bournemouth on the 15th and  $27^{\circ}\text{C}$  in Leicester on the 16th. On the 17th a cold front crossed the area bringing a change to much fresher weather with blustery west to north-westerly winds. On the 18th Scarborough and Leeds saw maximum temperatures of only  $10^{\circ}\text{C}$ , and a frost was recorded at Shap Fell overnight as temperatures fell to  $-0.2^{\circ}\text{C}$ . The cool north to north-westerly airflow continued until the 21st. The main event of the month occurred on the 22nd and 23rd as a major depression swept across Wales and northern England. The central pressure at 6 a.m. on the 23rd was 982 hPa, making it one of the deepest depressions recorded in June over England and Wales. Many parts of Cornwall, Wales and Cumbria received over 25 mm of rain, Dunkseswell recording 34 mm of which 22.1 mm fell in just 2 hours. On the 23rd gale force winds along the English Channel coast gave gusts in excess of 50 kts, Dover reporting 58 knots. The low pushed out over the North Sea on the 24th but not before giving 47 mm of rain at Loftus and gusts of 40 to 50 knots over eastern England. The next depression on the 26th gave 22.8 mm of rain at Plymouth and as it cleared on the 27th, heavy showers and thunderstorms broke out in its wake. From the 28th to the 30th southern areas stayed mainly fine and dry but showers affected the north and west. Some heavy showers occurred over northern England on the 30th with totals of 7 mm in one hour at Manchester and Preston.

## WIND FORCE MEASURES

The *Beaufort Scale* of wind force has been accepted internationally and is used in communicating weather conditions. Devised originally by Admiral Sir Francis Beaufort in 1805, it now consists of the numbers 0–17, each representing a certain strength or velocity of wind at 10 m (33 ft) above ground in the open.

Scale no.	Wind Force	mph	knots
0	Calm	1	1
1	Light air	1–3	1–3
2	Slight breeze	4–7	4–6
3	Gentle breeze	8–12	7–10
4	Moderate breeze	13–18	11–16
5	Fresh breeze	19–24	17–21
6	Strong breeze	25–31	22–27
7	High wind	32–38	28–33
8	Gale	39–46	34–40
9	Strong gale	47–54	41–47
10	Whole gale	55–63	48–55
11	Storm	64–72	56–63
12	Hurricane	73–82	64–71
13	–	83–92	72–80
14	–	93–103	81–89
15	–	104–114	90–99
16	–	115–125	100–108
17	–	126–136	109–118

# SPORTS RESULTS

For 2005 sports fixtures, see pages 12–13

## ALPINE SKIING

### WORLD CUP 2003–4

#### MEN

*Downhill*: Stephan Eberharter (Austria), 831 points

*Slalom*: Rainer Schönfelder (Austria), 630 points

*Giant Slalom*: Bode Miller (USA), 410 points

*Super Giant Slalom*: Hermann Maier (Austria), 580 points

*Overall*: Hermann Maier (Austria), 1,265 points

#### WOMEN

*Downhill*: Renate Götschl (Austria), 680 points

*Slalom*: Anja Pärson (Sweden), 770 points

*Giant Slalom*: Anja Pärson (Sweden), 630 points

*Super Giant Slalom*: Renate Götschl (Austria), 467 points

*Overall*: Anja Pärson (Sweden), 1,561 points

## AMERICAN FOOTBALL

*AFC Championship 2003*: New England Patriots beat Indianapolis Colts 24–14

*NFC Championship 2003*: Carolina Panthers beat Philadelphia Eagles 14–3

*XXXVIII Superbowl 2004 (Houston, 1 February)*: New England Patriots beat Carolina Panthers 32–29

## ANGLING

### NATIONAL COARSE CHAMPIONSHIPS 2004

#### Division 1

*Individual winner*: S. Clark

*Team winners*: Barnsley & District

#### Division 2

*Individual winner*: M. Coleman

*Team winners*: Team Daiwa Trentmen

#### Division 3

*Individual winner*: G. West

*Team winners*: Thorne & District

#### Division 4

*Individual winner*: G. Callaghan

*Team winners*: Gerrards Cross

#### Ladies' Championship

*Individual winner*: Claire Dagnall

*Team winners*: Ashton A. S.

## ASSOCIATION FOOTBALL

### EUROPEAN CHAMPIONSHIP 2004

#### POOL A

	P	W	D	L	GF	GA	Pts
Portugal*	3	2	0	1	4	2	6
Greece*	3	1	1	1	4	4	4
Spain	3	1	1	1	2	2	4
Russia	3	1	0	2	2	4	3

Spain beat Russia 1–0; Greece beat Portugal 2–1; Greece drew with Spain 1–1; Portugal beat Russia 2–0; Portugal beat Spain 1–0; Russia beat Greece 2–1.

#### POOL B

	P	W	D	L	GF	GA	Pts
France*	3	2	1	0	7	4	7
England*	3	2	0	1	8	4	6
Croatia	3	0	2	1	4	6	2

## SPORTS RECORDS

## ATHLETICS WORLD RECORDS

AS AT SEPTEMBER 2004

All the world records given below have been accepted by the International Amateur Athletic Federation except those marked with an asterisk\* which are awaiting homologation. Fully automatic timing to 1/100th second is mandatory up to and including 400 metres. For distances up to and including 10,000 metres, records will be accepted to 1/100th second if timed automatically, and to 1/10th if hand timing is used.

# TIME AND SPACE

ASTRONOMY

TIME MEASUREMENT AND CALENDARS

TIDAL PREDICTIONS

# ASTRONOMY

The following pages give astronomical data for each month of the year 2005. There are four pages of data for each month. All data are given for 0h Greenwich Mean Time (GMT), i.e. at the midnight at the beginning of the day named. This applies also to data for the months when British Summer Time is in operation (for dates, see below).

The astronomical data are given in a form suitable for observation with the naked eye or with a small telescope. These data do not attempt to replace the *Astronomical Almanac* for professional astronomers.

A fuller explanation of how to use the astronomical data is given on pages 1273–7.

## CALENDAR FOR EACH MONTH

The calendar for each month comprises dates of general interest plus the dates of birth or death of well-known people. For key religious, civil and legal dates see page 9. For details of flag-flying days see page 23. For royal birthdays see pages 23 and 24–5. Public holidays are given in italics. See also pages 10 and 11.

Fuller explanations of the various calendars can be found under Time Measurement and Calendars (pages 1283–1298).

The zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is given under Astronomical Phenomena.

## JULIAN DATE

The Julian date on 2005 January 0.0 is 2453370.5. To find the Julian date for any other date in 2005 (at 0h GMT), add the day-of-the-year number on the extreme right of the calendar for each month to the Julian date for January 0.0.

## SEASONS

The seasons are defined astronomically as follows:

*Spring* from the vernal equinox to the summer solstice  
*Summer* from the summer solstice to the autumnal equinox  
*Autumn* from the autumnal equinox to the winter solstice  
*Winter* from the winter solstice to the vernal equinox

The seasons in 2005 are:

### Northern Hemisphere

<i>Vernal equinox</i>	March 20d 13h GMT
<i>Summer solstice</i>	June 21d 07h GMT
<i>Autumnal equinox</i>	September 22d 23h GMT
<i>Winter solstice</i>	December 21d 19h GMT

### Southern Hemisphere

<i>Autumnal equinox</i>	March 20d 13h GMT
<i>Winter solstice</i>	June 21d 07h GMT
<i>Vernal equinox</i>	September 22d 23h GMT
<i>Summer solstice</i>	December 21d 19h GMT

The longest day of the year, measured from sunrise to sunset, is at the summer solstice. The longest day in the United Kingdom will fall on 21 June in 2005.

The shortest day of the year is at the winter solstice. The shortest day in the United Kingdom will fall on 21 December in 2005.

The equinox is the point at which day and night are of equal length all over the world.

In popular parlance, the seasons in the northern hemisphere comprise the following months:

<i>Spring</i>	March, April, May
<i>Summer</i>	June, July, August
<i>Autumn</i>	September, October, November
<i>Winter</i>	December, January, February

## BRITISH SUMMER TIME

British Summer Time is the legal time for general purposes during the period in which it is in operation (see also page 1275). During this period, clocks are kept one hour ahead of Greenwich Mean Time. The hour of changeover is 01h Greenwich Mean Time. The duration of Summer Time in 2005 is from March 27 01h GMT to October 30 01h GMT.

# JANUARY 2005

FIRST MONTH, 31 DAYS. *Janus*, god of the portal, facing two ways, past and future

1	Saturday	John Le Carré b. 1931. King John of England d. 1216	1
2	Sunday	David Bailey b. 1938. Ovid d. AD17	2
3	Monday	J. R. R. Tolkien b. 1892. Pierre Larousse d. 1875	week 1 day 3
4	Tuesday	Augustus John b. 1878. T. S. Eliot d. 1965	4
5	Wednesday	Juan Carlos, King of Spain b. 1938. Catherine de Medici, Queen of France d. 1589	5
6	Thursday	Richard II b. 1367. Rudolf Nureyev d. 1993	6
7	Friday	Gerald Durrell b. 1925. Catherine of Aragon, d. 1536	7
8	Saturday	Wilkie Collins b. 1824. Paul Verlaine d. 1896	8
9	Sunday	The ocean liner <i>Queen Elizabeth</i> destroyed by fire 1972	9
10	Monday	Dame Barbara Hepworth b. 1903. Sinclair Lewis d. 1951	week 2 day 10
11	Tuesday	James Earl Jones b. 1931. Thomas Hardy d. 1928	11
12	Wednesday	John Singer Sargent b. 1856. Dame Agatha Christie d. 1976	12
13	Thursday	Jan van Goyen b. 1656. James Joyce d. 1941	13
14	Friday	Sir Cecil Beaton b. 1904. Lewis Carroll d. 1898	14
15	Saturday	The coronation of Queen Elizabeth I 1559	15
16	Sunday	Diane Fossey b. 1932. Léo Delibes d. 1891	16
17	Monday	Anne Brontë b. 1820. Ruskin Spear d. 1990	week 3 day 17
18	Tuesday	A. A. Milne b. 1882. Rudyard Kipling d. 1936	18
19	Wednesday	Paul Cézanne b. 1839. Patricia Highsmith, b. 1951	19
20	Thursday	Sir John Soane d. 1837. George V d. 1936	20
21	Friday	George Orwell d. 1950. Louis XVI, King of France d. 1793	21
22	Saturday	Lord Byron b. 1788. Queen Victoria d. 1901	22
23	Sunday	Édouard Manet b. 1832. Anna Pavlova d. 1931	23
24	Monday	Frederick the Great, King of Prussia b. 1712. Amadeo Modigliani d. 1920	week 4 day 24
25	Tuesday	Henry VIII and Anne Boleyn married in secret 1533	25
26	Wednesday	Mary Mapes Dodge b. 1831. Nelson Rockefeller d. 1979	26
27	Thursday	Wolfgang Amadeus Mozart b. 1756. Giuseppe Verdi d. 1901	27
28	Friday	Jackson Pollock b. 1912. Henry VIII d. 1547	28
29	Saturday	Germaine Greer b. 1939. George III d. 1820	29
30	Sunday	Anton Chekhov b. 1860. Charles I d. 1649	30
31	Monday	Franz Schubert b. 1797. A. A. Milne d. 1956	week 5 day 31

## ASTRONOMICAL PHENOMENA

<i>d</i>	<i>h</i>	
2 00		Earth at perihelion (147 million km.)
4 01		Jupiter in conjunction with Moon. Jupiter 0° 3' N.
7 19		Mars in conjunction with Moon. Mars 3° N.
9 02		Mercury in conjunction with Moon. Mercury 5° N.
9 03		Venus in conjunction with Moon. Venus 5° N.
13 23		Saturn at opposition
14 03		Venus in conjunction with Mercury. Venus 0° 4' N.
19 23		Sun's longitude 300° ♁
24 09		Saturn in conjunction with Moon. Saturn 5° S.
31 10		Jupiter in conjunction with Moon. Jupiter 0° 8' N.

## MINIMA OF ALGOL

<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>
1	07.6	12	18.8	24	06.1
4	04.4	15	15.7	27	02.9
7	01.2	18	12.5	29	23.8
9	22.0	21	09.3		

## CONSTELLATIONS

The following constellations are near the meridian at

	<i>d</i>	<i>h</i>		<i>d</i>	<i>h</i>
December	1	24	January	16	21
December	16	23	February	1	20
January	1	22	February	15	19

Draco (below the Pole), Ursa Minor (below the Pole), Camelopardus, Perseus, Auriga, Taurus, Orion, Eridanus and Lepus

## THE MOON

<i>Phases, Apsides and Node</i>	<i>d</i>	<i>h</i>	<i>m</i>
☾ Last Quarter	3	17	46
● New Moon	10	12	03
☽ First Quarter	17	06	57
○ Full Moon	25	10	32
Perigee (356,569 km)	10	10	00
Apogee (406,458 km)	23	18	38

Mean longitude of ascending node on January 1, 28°

THE NIGHT SKY

*Mercury*, magnitude -0.3, is visible as a morning object for the first week of the month. It is very close to *Venus* which should make the location of *Mercury* much easier. On the 1st *Mercury* will be 1.1 degrees above and 0.2 degrees to the right of *Venus*, while by the 7th these figures have changed gradually to 0.6 degrees above and 0.6 degrees to the right of *Venus*. If visibility is poor the glare from *Venus* may overpower the light from the much fainter innermost planet.

*Venus* is a brilliant object in the early morning sky, magnitude -3.9, and at the beginning of the month is visible very low in the east-south-eastern sky for nearly an hour before dawn.

*Mars*, magnitude +1.5, although technically a morning object, is continuing to move slowly southwards in declination, and this means that it will be a very difficult

object to detect even with very clear conditions. It will be barely 10 degrees above the horizon one hour before sunrise for observers in southern England. Measured in ecliptic longitude *Mars* is 15 degrees from *Venus* at the beginning of the month: this distance increases to 32 degrees by the end of January.

*Jupiter* is a brilliant object in the morning sky, magnitude -2.1. By the end of the month it is visible in the east-south-eastern sky before midnight. *Jupiter* is in the constellation of *Virgo*. On the night of the 3rd-4th the Moon, at Last Quarter, passes about 1 degree south of the planet.

*Saturn*, magnitude -0.4, reaches opposition on the 13th, and therefore is visible throughout the hours of darkness, crossing the meridian around midnight. *Saturn* is retrograding slowly in the constellation of *Gemini*, some 7 degrees south of *Pollux*. The Full Moon will be seen near the planet around the 23rd-25th.

THE NIGHT SKY

Mercury passes through superior conjunction on the 14th and is unsuitably placed for observation throughout the month.

Venus remains too close to the Sun for observation throughout the month.

Mars, magnitude +1.3, reaches its greatest southerly declination of -23.7 degrees during this month and despite its increasing elongation from the Sun observers in these latitudes will continue to have great difficulty in locating the planet. Observers in southern England may possibly be able to detect it as a difficult morning object low in the south-eastern sky, though only for a short while before the morning twilight inhibits observation, and only under exceptionally clear conditions.

Jupiter, magnitude -2.3, continues to be visible as a brilliant morning object, rising above the east-south-eastern horizon well before midnight. Jupiter reaches its first stationary point on the 2nd and then begins its slow retrograde motion, west of Spica, in the constellation of Virgo.

Saturn continues to be visible as a bright object in the southern sky in the evenings and in fact, for most of the night, magnitude -0.2. It is retrograding slowly in the constellation of Gemini, south of Castor and Pollux. On the 20th the waxing gibbous Moon passes 4 degrees north of the planet. The rings of Saturn present a beautiful spectacle to the observer with a small telescope. The rings were at their maximum opening in 2002. They will next appear edge-on in 2009. The diameter of the minor axis is now 18 arcseconds, almost exactly the same as the polar diameter of the planet itself.

Zodiacal Light. The evening cone may be observed stretching up from the western horizon, along the ecliptic, after the end of twilight, from the beginning of the month until the 10th and again after the 26th. This faint phenomenon is only visible under good conditions and in the absence of both moonlight and artificial lighting.

THE NIGHT SKY

*Mercury* is at greatest eastern elongation (18 degrees) on the 12th and thus is visible in the evenings low in the western sky around the end of evening civil twilight during the first half of the month. It is best seen (because it is brighter) near the beginning of the month: by the 18th its magnitude has faded to +1.1. On the evening of the 11th, the New Moon, barely 1.5 days old, passes 4 degrees south of the planet. This evening apparition is the most suitable one of the year for observers in northern temperate latitudes, and, in fact, the only evening apparition for observers in the latitudes of the British Isles.

*Venus* passes through superior conjunction on the last day of the month and therefore remains too close to the Sun for observation.

*Mars* continues to be visible as a very difficult morning object, low above the south-eastern horizon for a short while before twilight renders observation impossible. Its magnitude is +1.1.

*Jupiter*, magnitude -2.4, continues to be visible as a brilliant object in the night sky, and by the end of the month may be seen rising above the east-south-eastern horizon soon after sunset. The Moon, near Full, will be seen close to the planet between the 25th and 27th.

*Saturn* continues to be visible as an evening object, magnitude 0.0. It reaches its second stationary point on the 22nd, and then resumes its direct motion, in the constellation of Gemini. On the early evening of the 19th the waxing gibbous Moon passes 4 degrees north of the planet.

*Zodiacal Light*. The evening cone may be observed, stretching up from the western horizon, along the ecliptic, after the end of twilight, from the beginning of the month until the 11th, and again after the 27th.

## APRIL 2005

FOURTH MONTH, 30 DAYS. *Aperire*, to open, Earth opens to receive seed.

1	Friday	Eleanor of Aquitaine d. 1204. Max Ernst d. 1976	91
2	Saturday	Hans Christian Andersen b. 1805. C. S. Forester d. 1966	92
3	Sunday	Johannes Brahms d. 1897. Graham Greene d. 1991	93
<hr/>			
4	Monday	Maya Angelou b. 1928. Oliver Goldsmith d. 1774	week 14 day 94
5	Tuesday	Jean-Baptiste Rousseau b. 1671. Allen Ginsberg, poet d. 1997	95
6	Wednesday	Andre Previn b. 1929. Igor Stravinsky d. 1971	96
7	Thursday	William Wordsworth b. 1770. El Greco d. 1614	97
8	Friday	Vaslav Nijinsky d. 1950. Pablo Picasso d. 1973	98
9	Saturday	François-Rabelais d. 1553. Dante Gabriel Rosetti d. 1882	99
10	Sunday	Joseph Pulitzer b. 1847. Evelyn Waugh d. 1966	100
<hr/>			
11	Monday	John O'Hara d. 1970. Jaques Prévert d. 1977	week 15 day 101
12	Tuesday	Alan Ayckbourn b. 1939. William Kent d. 1748	102
13	Wednesday	Samuel Beckett b. 1906. Sir William Orchardson d. 1910	103
14	Thursday	George Frideric Handel d. 1759. Simone de Beauvoir d. 1986	104
15	Friday	Leonardo da Vinci b. 1452. Jean Paul Sartre d. 1980	105
16	Saturday	Sir Kingsley Amis b. 1922. Francisco de Goya d. 1828	106
17	Sunday	Nick Hornby b. 1957. Marquise de Sévigné d. 1696	107
<hr/>			
18	Monday	Leopold Stokowski b. 1882. Dame Elizabeth Frink d. 1993	week 16 day 108
19	Tuesday	Richard Hughes b. 1900. Dame Daphne du Maurier d. 1989	109
20	Wednesday	Canaletto d. 1768. Bram Stoker d. 1912	110
21	Thursday	Elizabeth II b. 1926. Mark Twain d. 1910	111
22	Friday	Henry Fielding b. 1707. Vladimir Nabokov b. 1899	112
23	Saturday	J. M. W. Turner b. 1775. William Shakespeare d. 1616	113
24	Sunday	Anthony Trollope b. 1815. Daniel Defoe d. 1731	114
<hr/>			
25	Monday	Walter de la Mare b. 1873. Anna Sewell d. 1878	week 17 day 115
26	Tuesday	Edward II b. 1284. Eugène Delacroix b. 1798	116
27	Wednesday	Cecil Day Lewis b. 1904. Mary Wollstonecraft Godwin b. 1759	117
28	Thursday	Edward IV b. 1442. Francis Bacon d. 1992	118
29	Friday	Jean-George Naverre b. 1727. Sir Thomas Beecham b. 1879	119
30	Saturday	Jaroslav Hašek b. 1883. Édouard Manet d. 1883	120

## ASTRONOMICAL PHENOMENA

<i>d</i>	<i>h</i>	
3	16	Jupiter at opposition
4	00	Mars in conjunction with Moon. Mars 4° N.
7	16	Mercury in conjunction with Moon. Mercury 3° N.
8	21	Annular-Total eclipse of Sun
9	01	Venus in conjunction with Moon. Venus 1° S.
12	08	Mercury at stationary point
16	03	Saturn in conjunction with Moon. Saturn 5° S.
20	00	Sun's longitude 30° ♈
22	17	Jupiter in conjunction with Moon. Jupiter 0°.5 N.
26	16	Mercury at greatest elongation W.27°

## MINIMA OF ALGOL

<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>

THE NIGHT SKY

*Mercury* is too close to the Sun for observation throughout the month, despite the facts that it (a) reaches greatest western elongation on the 26th, and (b) reaches aphelion only 5 days earlier.

*Venus* is not suitably placed for observation at first, but becomes visible during the last few days of the month as a brilliant object in the evening sky, magnitude -3.9. It may be seen low above the western horizon for a very short while just after sunset.

*Mars* is visible as a difficult morning object, low in the south-eastern sky for a short while before sunrise. Its magnitude brightens slowly during the month from +0.9 to +0.6. The slight reddish tinge in its colour is an aid to its identification.

*Jupiter*, magnitude -2.5, reaches opposition on the 3rd,

and is visible throughout the hours of darkness. *Jupiter* is retrograding slowly in the constellation of *Virgo*. The nearly Full Moon is near the planet on the 21st to the 23rd. The four Galilean satellites are readily observable with a small telescope or even a good pair of binoculars provided that they are held rigidly. Time of eclipses and shadow transits of these satellites are given on page 1272.

*Saturn*, magnitude +0.2, continues to be visible as an evening object in the constellation of *Gemini*. The Moon, at First Quarter, is in the vicinity of the planet on the evenings of the 15th and 16th. The rings of *Saturn* present a beautiful spectacle to the observer with a small telescope. The rings were at their maximum opening in 2002. They will next appear edge-on in 2009. The diameter of the minor axis is now the same as the polar diameter of the planet itself (17 arcseconds).

MAY 2005

FIFTH MONTH, 31 DAYS. *Maia*, goddess of growth and increase

1	Sunday	Queen Victoria opened the Great Exhibition in Hyde Park 1851	121
2	Monday	Catherine II of Russia (The Great) b. 1729. Leonardo da Vinci d. 1519	week 18 day 122
3	Tuesday	Dodie Smith b. 1896. Thomas Hood d. 1845	123
4	Wednesday	Audrey Hepburn b. 1929. Sir Osbert Sitwell d. 1969	124
5	Thursday	Karl Marx b. 1818. Edward Young d. 1765	125
6	Friday	Henry David Thoreau d. 1862. Edward VII d. 1910	126
7	Saturday	Johannes Brahms b. 1833. Pyotr Ilyich Tchaikovsky b. 1840	127
8	Sunday	Francis Quarles b. 1592. Henri Laurens d. 1954	128
9	Monday	Sir James M. Barrie b. 1860. Alan Bennett b. 1934	week 19 day 129
10	Tuesday	Fred Astaire b. 1899. Hokusai d. 1849	130
11	Wednesday	Salvador Dalí b. 1904. Douglas Adams d. 2001	131
12	Thursday	Dante Gabriel Rosetti b. 1828. John Dryden d. 1700	132
13	Friday	Dame Daphne du Maurier b. 1907. John Nash d. 1835	133
14	Saturday	Thomas Gainsborough b. 1727. Jean Rhys d. 1979	134
15	Sunday	Mikhail Bulgakov b. 1891. Joseph Whitaker d. 1895	135
16	Monday	John Sell Cotman b. 1782. Charles Perrault d. 1703	week 20 day 136
17	Tuesday	Dennis Potter b. 1935. Sandro Botticelli d. 1510	137
18	Wednesday	Nicholas II, Tzar of Russia b. 1868. George Meredith d. 1909	138
19	Thursday	Ogden Nash d. 1971. Sir John Betjeman d. 1984	139
20	Friday	Honoré de Balzac b. 1799. Dame Barbara Hepworth d. 1975	140
21	Saturday	King Philip II of Spain b. 1527. Mikhail Glinka b. 1804	141
22	Sunday	Sir Arthur Conan Doyle b. 1859. Victor Hugo d. 1885	142
23	Monday	Edmund Rubbra b. 1901. Henrik Ibsen d. 1906	week 21 day 143
24	Tuesday	William Byrd b. 1543. Queen Victoria b. 1819	144
25	Wednesday	Sir Ian McKellen b. 1939. Gustav Holst d. 1934	145
26	Thursday	Isadora Duncan b. 1877. Samuel Pepys d. 1706	146
27	Friday	Julia Ward Howe b. 1819. John Calvin d. 1564	147
28	Saturday	Ian Fleming b. 1908. Anne Brontë d. 1849	148
29	Sunday	Charles II b. 1630. Sir W. S. Gilbert d. 1911	149
30	Monday	Christopher Marlowe d. 1593. Voltaire d. 1778	week 22 day 150
31	Tuesday	Walt Whitman b. 1819. Joseph Haydn d. 1809	151

## ASTRONOMICAL PHENOMENA

*d h*

- 2 17 Mars in conjunction with Moon. Mars 2° N.  
 6 08 Mercury in conjunction with Moon. Mercury 3° S.  
 9 05 Venus in conjunction with Moon. Venus 3° S.  
 13 15 Saturn in conjunction with Moon. Saturn 5° S.  
 19 22 Jupiter in conjunction with Moon. Jupiter 0°.3 N.  
 20 00 Neptune at stationary point  
 20 23 Sun's longitude 60° ♀  
 31 10 Mars in conjunction with Moon. Mars 0°.5 N.

## MINIMA OF ALGOL

Algol is inconveniently situated for observation during May

## CONSTELLATIONS

The following constellations are near the meridian at

	<i>d</i>	<i>h</i>		<i>d</i>	<i>h</i>
April	1	24	May	16	21
April	15	23	June	1	20
May	1	22	June	15	19

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Minor, Ursa Major, Canes Venatici, Coma Berenices, Bootes, Leo, Virgo, Crater, Corvus and Hydra

## THE MOON

<i>Phases, Apsides and Node</i>	<i>d</i>	<i>h</i>	<i>m</i>
☾ Last Quarter	1	06	24

THE NIGHT SKY

Mercury is too close to the Sun to be visible in either the early evenings or early mornings during the month.

Venus, magnitude -3.9, is slowly beginning to move out of the long evening twilight, becoming a brilliant object. It may be seen low above the western horizon for a very short time after sunset.

Mars continues to brighten slowly during the month, its magnitude changing from +0.6 to +0.3. Mars is now moving northwards in declination and thereby slowly improving its visibility prospects, despite the lengthening twilight. By the end of the month it may be detected low above the east-south-eastern horizon by about 02h. Mars is in the constellation of Aquarius. On the last day of the

month the Moon, just after Last Quarter, passes 1 degree south of the planet.

Jupiter, magnitude -2.3, continues to be visible as a brilliant object in the evening skies, and even at the end of the month can be seen in the south-western sky until well after midnight. Jupiter is in the constellation of Virgo. The waxing gibbous Moon passes 1 degree south of the planet on the evening of the 19th.

Saturn is still visible in the western sky in the evenings, magnitude +0.3, though no longer visible after midnight. Saturn passes 7 degrees south of Pollux at the end of the month. On the 13th the waxing crescent Moon will be seen in the vicinity of the planet.

THE NIGHT SKY

Mercury remains too close to the Sun for observation throughout June as it passes through superior conjunction on the 3rd.

Venus, magnitude -3.9, is a brilliant object in the evening sky, though only visible low above the west-north-western horizon for about half an hour after sunset.

Mars continues to be visible as a morning object in the south-eastern sky, its magnitude brightening during the month from +0.3 to 0.0. Mars is moving northeastwards, starting the month in Aquarius and ending it in Pisces, having passed through the extreme northwestern portion of Cetus on the way. On the morning of the 29th the Moon, at Last Quarter, passes 1 degree north of the planet.

Jupiter, magnitude -2.1, continues to be visible as an evening object in the south-western quadrant of the sky, though by the end of the month it is lost to view over the western horizon before midnight. It reaches its second stationary point on the 5th and then resumes its direct eastward motion towards Spica. The Moon, around First Quarter, is near Jupiter on the evenings of the 15th and 16th.

Saturn, magnitude +0.3, is a difficult object to detect, low above the west-north-western horizon, in the evenings. By the middle of the month it is lost to view in the long twilight. On the evenings of the 9th and 10th the waxing crescent Moon is near the planet.

# JULY 2005

SEVENTH MONTH, 31 DAYS. *Julius Caesar*, formerly *Quintilis*, fifth month of Roman pre-Julian calendar

1	Friday	Harriet Beecher Stowe b. 1896. Erik Satie d. 1925	182
2	Saturday	Ernest Hemingway d. 1961. Vladimir Nabokov d. 1977	183
3	Sunday	Robert Adam b. 1728. Tom Stoppard b. 1937	184
<hr/>			
4	Monday	Samuel Richardson d. 1761. Georgette Heyer d. 1974	week 27 day 185
5	Tuesday	Jean Cocteau b. 1889. Max Klinger d. 1920	186
6	Wednesday	Henry II d. 1189. Kenneth Grahame d. 1932	187
7	Thursday	Edward I (Longshanks) d. 1307. Sir Arthur Conan Doyle d. 1930	188
8	Friday	Percy Grainger b. 1882. Percy Bysshe Shelley d. 1822	189
9	Saturday	Dame Barbara Cartland b. 1901. David Hockney b. 1937	190
10	Sunday	Marcel Proust b. 1871. George Stubbs d. 1806	191
<hr/>			
11	Monday	Robert I of Scotland (Bruce) b. 1274. George Gershwin d. 1937	week 28 day 192
12	Tuesday	Henry David Thoreau b. 1817. Amadeo Modigliani b. 1884	193
13	Wednesday	Sir George Gilbert Scott b. 1811. David Storey d. 1933	194
14	Thursday	Gustav Klimt b. 1862. Alphonse Mucha d. 1939	195
15	Friday	Inigo Jones b. 1573. Dame Iris Murdoch b. 1919	196
16	Saturday	Tsar Nicholas II d. 1918. Sir Stephen Spender d. 1995	197
17	Sunday	Erle Stanley Gardner b. 1889. James McNeill Whistler d. 1903	198
<hr/>			
18	Monday	William Makepeace Thackeray b. 1811. Jane Austen d. 1817	week 29 day 199
19	Tuesday	Edgar Degas b. 1834. A. J. Cronin b. 1896	200
20	Wednesday	Erik Karlfeldt b. 1864. Bruce Lee d. 1973	201
21	Thursday	Ernest Hemingway b. 1899. Robert Burns d. 1796	202
22	Friday	James Whale b. 1893. Carl Sandburg d. 1967	203
23	Saturday	Raymond Chandler b. 1888. Domenico Scarlatti d. 1757	204
24	Sunday	Alphonse Mucha b. 1860. John Sell Cotman d. 1842	205
<hr/>			
25	Monday	Eric Hoffer b. 1902. Samuel Taylor Coleridge d. 1834	week 30 day 206
26	Tuesday	George Bernard Shaw b. 1856. Aldous Huxley b. 1894	207
27	Wednesday	Alexandre Dumas fils b. 1824. Sir Anton Dolin b. 1904	208
28	Thursday	Beatrix Potter b. 1866. Johann Sebastian Bach d. 1750	209
29	Friday	Robert Schumann d. 1856. Vincent van Gogh d. 1890	210
30	Saturday	Emily Brontë b. 1818. Henry Moore b. 1898	211
31	Sunday	J. K. Rowling b. 1965. Franz Liszt d. 1886	212

## ASTRONOMICAL PHENOMENA

d	h	
5	05	Earth at aphelion (152 million km.)
7	17	Saturn in conjunction with Moon. Saturn 5° S.
8	21	Venus in conjunction with Moon. Venus 3° S.
8	22	Mercury in conjunction with Moon. Mercury 5° S.
9	03	Mercury at greatest elongation E.26°
9	10	Venus in conjunction with Mercury. Venus 2° N.
13	18	Jupiter in conjunction with Moon. Jupiter 0°.7 N.
22	18	Sun's longitude 120° Ω
23	03	Mercury at stationary point
23	17	Saturn in conjunction
27	17	Mars in conjunction with Moon. Mars 4° S.

## MINIMA OF ALGOL

d	h	d	h	d	h
3	19.9	15	07.2	26	18.4
6	16.7	18	04.0	29	15.2
9	13.6	21	00.8		
12	10.4	23	21.6		

## CONSTELLATIONS

The following constellations are near their meridian at

	d	h	d	h	
June	1	24	July	16	21
June	15	23	August	1	20
July	1	22	August	16	19

Ursa Minor, Draco, Corona, Hercules, Lyra, Serpens, Ophiuchus, Libra, Scorpius and Sagittarius

## THE MOON

Phases, Apisides and Node	d	h	m
● New Moon	6	12	02
☾ First Quarter	14	15	20
○ Full Moon	21	11	00
☾ Last Quarter	28	03	19

Apogee (406,379 km)	8	17	52
Perigee (357,154 km)	21	19	50

Mean longitude of ascending node on July 1, 19°

THE NIGHT SKY

Mercury reaches greatest eastern elongation on the 9th but the long duration of twilight means that it is unsuitably placed for observation throughout the month.

Venus, magnitude -3.9, is a brilliant object in the evening sky, but only visible low above the western horizon for about half an hour after sunset. Under good conditions the thin crescent Moon, just over 2 days old, may be glimpsed nearly 3 degrees above Venus on the evening of the 8th.

Mars continues to brighten during the month, its magnitude changing from -0.1 to -0.5. Although technically a morning object, by the end of July it is visible low in the eastern sky before midnight, and will be seen high in the southern sky before dawn. Mars is moving east-north-eastwards in the constellation of

Pisces. The Moon, at Last Quarter, passes 3 degrees north of the planet on the 27th.

Jupiter, magnitude -1.9, continues to be visible as a brilliant evening object in the south-western sky, in the constellation of Virgo. The Moon, near First Quarter, passes 1 degree south of Jupiter on the 13th.

Saturn passes through conjunction on the 23rd and therefore remains too close to the Sun for observation throughout the month.

Twilight. Reference to the section above shows that astronomical twilight lasts all night for a period around the summer solstice (i.e. in June and July), even in southern England. Under these conditions the sky never gets completely dark as the Sun is always less than 18 degrees below the horizon.

## AUGUST 2005

EIGHTH MONTH, 31 DAYS. *Augustus*, formerly *Sextilis*, sixth month of Roman pre-Julian calendar

1	Monday	Herman Melville b. 1819. Queen Anne d. 1714	week 31 day 213
2	Tuesday	Thomas Gainsborough d. 1788. Carlos Chavez d. 1978	214
3	Wednesday	Sir Joseph Paxton b. 1801. P. D. James b. 1920	215
4	Thursday	Percy Bysshe Shelley b. 1792. Hans Christian Andersen d. 1874	216
5	Friday	Guy de Maupassant b. 1850. Friedrich Engels d. 1895	217
6	Saturday	Alfred, Lord Tennyson b. 1809. Ben Jonson d. 1637	218
7	Sunday	Emil Nolde b. 1867. Rabindranath Tagore d. 1941	219
<hr/>			
8	Monday	Princess Beatrice of York b. 1888. James Tissot d. 1902	week 32 day 220
9	Tuesday	Ruggero Leoncavallo d. 1919. Dmitry Shostakovich d. 1975	221
10	Wednesday	Ferdinand VI d. 1759. Alan Ramsay d. 1784	222
11	Thursday	Enid Blyton b. 1897. Jackson Pollock d. 1956	223
12	Friday	William Blake d. 1827. Ian Fleming d. 1964	224
13	Saturday	H. G. Wells b. 1866. Sir John Everett Millais d. 1896	225
14	Sunday	John Galsworthy b. 1867. Bertolt Brecht d. 1956	226
<hr/>			
15	Monday	Sir Walter Scott b. 1771. The Princess Royal b. 1950	week 33 day 227
16	Tuesday	Ted Hughes b. 1930. Margaret Mitchell d. 1946	228
17	Wednesday	Frederick the Great d. 1786. Ludwig Mies van der Rohe d. 1969	229
18	Thursday	William Henry Hudson d. 1922. Honoré de Balzac d. 1850	230
19	Friday	John Dryden b. 1631. Sergey Diaghilev d. 1929	231
20	Saturday	H. P. Lovecraft b. 1890. Leon Trotsky, d. 1940	232
21	Sunday	William IV b. 1765. Aubrey Beardsley b. 1872	233
<hr/>			
22	Monday	Claude Debussy b. 1862. Richard III d. 1485	week 34 day 234
23	Tuesday	Louis XVI, King of France b. 1754. Willy Russell b. 1947	235
24	Wednesday	George Stubbs b. 1724. Jean Rhys b. 1890	236
25	Thursday	Leonard Bernstein b. 1918. Frederick Forsyth b. 1938	237
26	Friday	Albert, Prince Consort to Queen Victoria b. 1819	238
27	Saturday	C. S. Forester b. 1899. Le Corbusier d. 1965	239
28	Sunday	Johann Wolfgang von Goethe b. 1749. Leigh Hunt d. 1859	240
<hr/>			
29	Monday	Jean Ingres b. 1780. Joseph Wright d. 1797	week 35 day 241
30	Tuesday	Mary Shelley b. 1797. Cleopatra d. 30BC	242
31	Wednesday	Henry V d. 1422. Henry Moore d. 1986	243

## ASTRONOMICAL PHENOMENA

<i>d</i>	<i>h</i>
4 06	Saturn in conjunction with Moon. Saturn 5° S.
5 06	Mercury in conjunction with Moon. Mercury 9° S.
6 00	Mercury in inferior conjunction
8 05	Venus in conjunction with Moon. Venus 1° S.
8 16	Neptune at opposition
10 07	Jupiter in conjunction with Moon. Jupiter 1° N.
16 04	Mercury at stationary point
23 01	Sun's longitude 150° ♍
23 23	Mercury at greatest elongation W.18°
25 04	Mars in conjunction with Moon. Mars 5° S.
31 19	Saturn in conjunction with Moon. Saturn 4° S.

## THE NIGHT SKY

*Mercury* is unsuitably placed for observation at first, since it passes through inferior conjunction on the 5th. For the last ten days in the month it may be seen as a morning object, magnitude +0.5 to -0.9, low above the east-north-east horizon at the beginning of morning civil twilight.

*Venus*, magnitude -4.0, continues to be visible as a brilliant object in the evening skies, though only visible for about half an hour after sunset, low above the western horizon. Under good conditions the thin crescent Moon may be seen about 4 degrees to the right of Venus on the evening of the 7th and 8th. On the following evening the Moon will be seen about 6 degrees to the left of the planet.

*Mars* has now become a conspicuous object in the night sky, its magnitude brightening during the month from -0.5 to -1.0. By the end of August it is easily located in the eastern sky before 22h. Mars is in the constellation of Aries. During the night of the 24th-25th the gibbous Moon passes about 5 degrees north of the planet.

*Jupiter* is still a bright evening object, magnitude -1.8. It is moving towards the Sun and only visible for a short time in the south-western sky before it sets. By the end of the month it is a difficult object to detect in the gathering twilight. The waxing crescent Moon is in the vicinity of the planet on the evenings of the 9th and 10th.

*Saturn*, magnitude +0.3, slowly becomes visible during the second half of the month, low above the eastern horizon in the early mornings before it is lost in the pre-dawn twilight. The waning crescent Moon will be seen about 8 degrees above the planet on the morning of the 31st.

*Neptune* is at opposition on the 8th, in the constellation of Capricornus. It is not visible to the naked-eye since its magnitude is +7.8.

*Meteors.* The maximum of the famous Perseid meteor shower occurs on the 12th, and will be best seen from the late evening onwards.

# SEPTEMBER 2005

NINTH MONTH, 30 DAYS. *Septem* (seven), seventh month of Roman pre-Julian calendar

1	Thursday	Edgar Rice Burroughs b. 1875. Francois Mauriac d. 1970	244
2	Friday	Henri Rousseau d. 1910. J. R. R. Tolkien d. 1973	245
3	Saturday	Joseph Wright b. 1734. E. E. Cummings d. 1962	246
4	Sunday	Edvard Grieg d. 1907. Georges Simenon d. 1989	247
<hr/>			
5	Monday	Louis XIV b. 1638. Victorien Sardou b. 1831	week 36 day 248
6	Tuesday	James II d. 1701. John Clavell d. 1994	249
7	Wednesday	Elizabeth I b. 1533. Dame Edith Sitwell b. 1887	250
8	Thursday	Richard I (The Lionheart) b. 1157. Antonín Dvořák b. 1841	251
9	Friday	Leo Tolstoy b. 1828. William I (The Conqueror) d. 1087	252
10	Saturday	Sir John Soane b. 1753. Mary Wollstonecraft Godwin d. 1797	253
11	Sunday	D. H. Lawrence b. 1885. Jessica Tandy d. 1994	254
<hr/>			
12	Monday	Louis MacNeice b. 1907. Peter Mark Roget d. 1869	week 37 day 255
13	Tuesday	Dante Alighieri d. 1321. Leopold Stokowski d. 1977	256
14	Wednesday	Princess Grace of Monaco d. 1982. Isadora Duncan d. 1927	257
15	Thursday	Dame Agatha Christie b. 1890. Prince Henry of Wales b. 1984	258
16	Friday	Henry V b. 1387. Louis XVIII, King of France d. 1824	259
17	Saturday	Sir Frederick Ashton b. 1904. William Henry Fox Talbot d. 1871	260
18	Sunday	Dr Samuel Johnson b. 1709. William Hazlitt d. 1830	261
<hr/>			
19	Monday	Sir William Golding b. 1911. Jeremy Irons b. 1948	week 38 day 262
20	Tuesday	Stevie Smith b. 1902. Jean Sibelius d. 1957	263
21	Wednesday	H. G. Wells b. 1866. Sir Walter Scott d. 1832	264
22	Thursday	Fay Weldon b. 1931. Irving Berlin d. 1989	265
23	Friday	Ferdinand VI, King of Spain b. 1713. Pablo Neruda d. 1973	266
24	Saturday	Horace Walpole b. 1717. F. Scott Fitzgerald b. 1896	267
25	Sunday	Mark Rothko b. 1903. Dimitry Shostakovich b. 1906	268
<hr/>			
26	Monday	George Gershwin b. 1898. Béla Bartók d. 1945	week 39 day 269
27	Tuesday	Ariel Sharon b. 1928. Edgar Degas d. 1917	270
28	Wednesday	Herman Melville d. 1891. Sir Robert Helpman d. 1986	271
29	Thursday	W. H. Auden d. 1973. Roy Lichtenstein d. 1997	272
30	Friday	Truman Capote b. 1924. Patrick White d. 1990	273

## ASTRONOMICAL PHENOMENA

d	h	
1	03	Uranus at opposition
2	00	Jupiter in conjunction with Venus. Jupiter 1° N.
2	11	Pluto at stationary point
2	12	Mercury in conjunction with Moon. Mercury 3° S.
6	22	Jupiter in conjunction with Moon. Jupiter 2° N.
7	09	Venus in conjunction with Moon. Venus 0°.6 N.
18	03	Mercury in superior conjunction
22	04	Mars in conjunction with Moon. Mars 6° S.
22	22	Sun's longitude 180° ☾
28	08	Saturn in conjunction with Moon. Saturn 4° S.

## MINIMA OF ALGOL

d	h	d	h	d	h
2	00.9	13	12.2	24	23.4
4	21.8	16	09.0	27	20.2
7	18.6	19	05.8	30	17.0
10	15.4	22	02.6	17	

## CONSTELLATIONS

The following constellations are near their meridian at

	d	h	d	h	
August	1	24	September	15	21
August	16	23	October	1	20
September	1	22	October	16	19

Draco, Cepheus, Lyra, Cygnus, Vulpecula, Sagitta, Delphinus, Equuleus, Aquila, Aquarius and Capricornus

## THE MOON

Phases, Apsides and Node	d	h	m
● New Moon	3	18	45
☾ First Quarter	11	11	37
○ Full Moon	18	02	01
☾ Last Quarter	25	06	41
Apogee (406,192 km)	1	02	46
Perigee (360,418 km)	16	13	59
Apogee (405,275 km)	28	15	26

Mean longitude of ascending node on September 1, 15°

THE NIGHT SKY

Mercury continues to be visible in the mornings but only for the first 4 or 5 days of the month, magnitude -1.1, low above the east-north-eastern horizon, around the time of beginning of morning civil twilight. On the morning of the 2nd the old crescent Moon, barely 1.5 days before New, passes 2 degrees north of the planet.

Venus, magnitude -4.1, is a brilliant object in the early evening sky, but still only visible for about half an hour after sunset, low above the south-western horizon. Under good conditions the four-day old crescent Moon will be seen about 5 degrees to the left of Venus on the evening of the 7th.

Mars is a conspicuous object, its magnitude brightening from -1.0 to -1.7 during the month. By the end of September it becomes visible low in the eastern sky shortly after the end of evening astronomical twilight. During the month Mars moves from Aries into Taurus.

During the night of the 21st-22nd the waning gibbous Moon passes 5 degrees north of the planet.

Jupiter, although technically an evening object, is lost in the gathering twilight and will not be seen again until it reappears in the morning skies in November.

Saturn, magnitude +0.3, continues to be visible as a morning object in the south-eastern quadrant of the sky. Saturn is in the constellation of Gemini. On the morning of the 1st the thin, waning crescent Moon, less than 3 days before New, may be detected about 6 degrees to the left of, and 2 degrees lower than the planet.

Uranus is at opposition on the 1st, in the constellation of Aquarius. Uranus is barely visible to the naked eye as its magnitude is +5.7, but it is readily located with only small optical aid.

Zodiacal Light. The morning cone may be seen reaching up from the eastern horizon along the ecliptic, before the beginning of morning twilight, from the 3rd to the 16th.

## OCTOBER 2005

TENTH MONTH, 31 DAYS. *Octo* (eighth), eighth month of Roman pre-Julian calendar

1	Saturday	Henry III b. 1207. Sir Edwin Landseer d. 1873	274
2	Sunday	Richard III b. 1452. Graham Greene b. 1904	275
3	Monday	William Morris d. 1896. Jean Anouilh d. 1987	week 40 day 276
4	Tuesday	Jean Francois Millet b. 1814. Rembrandt d. 1669	277
5	Wednesday	Václav Havel b. 1936. Joachim Patinir d. 1524	278
6	Thursday	Le Corbusier b. 1887. Lord Tennyson d. 1862	279
7	Friday	James Whitcomb Riley b. 1849. Edgar Allen Poe d. 1849	280
8	Saturday	John Cowper Powys b. 1872. Henry Fielding d. 1754	281
9	Sunday	Giuseppe Verdi b. 1813. André Maurois d. 1967	282
10	Monday	James Clavell b. 1924. Harold Pinter b. 1930	week 41 day 283
11	Tuesday	Francois Mauriac b. 1885. Jean Cocteau d. 1963	284
12	Wednesday	Edward VI b. 1537. Ralph Vaughan Williams b. 1872	285
13	Thursday	Alan Ramsay b. 1713. Margaret Thatcher b. 1925	286
14	Friday	Harold II d. 1066. Leonard Bernstein d. 1990	287
15	Saturday	Sir P. G. Wodehouse b. 1881. James Tissot b. 1836	288
16	Sunday	Oscar Wilde b. 1854. Marie-Antoinette d. 1793	289
17	Monday	Georg Büchner b. 1813. Frédéric Chopin d. 1849	week 42 day 290
18	Tuesday	Canaletto b. 1697. Charles Babbage d. 1871	291
19	Wednesday	Leigh Hunt b. 1784. Jean-George Navarre d. 1810	292
20	Thursday	Sir Christopher Wren b. 1632. Thomas Hughes b. 1822	293
21	Friday	Samuel Taylor Coleridge b. 1772. Jack Kerouac d. 1969	294
22	Saturday	Franz Liszt b. 1811. Paul Cézanne d. 1906	295
23	Sunday	Robert Bridges b. 1844. Michael Crichton b. 1942	296
24	Monday	Luciano Berio b. 1925. Jane Seymour d. 1537	week 43 day 297
25	Tuesday	Pablo Picasso b. 1881. Geoffrey Chaucer d. 1400	298
26	Wednesday	Domenico Scarlatti b. 1685. William Hogarth d. 1764	299
27	Thursday	Dylan Thomas b. 1914. Sylvia Plath b. 1932	300
28	Friday	Francis Bacon b. 1909. Ted Hughes d. 1998	301
29	Saturday	Joseph Pulitzer d. 1911. Sir Kenneth Macmillan d. 1992	302
30	Sunday	Ezra Pound b. 1885. Robert Volkmann d. 1883	303
31	Monday	John Evelyn b. 1626. Augustus John d. 1961	week 44 day 304

## ASTRONOMICAL PHENOMENA

<i>d</i>	<i>h</i>				
1	22	Mars at stationary point			
3	10	Annular eclipse of Sun			
4	11	Mercury in conjunction with Moon.			
		Mercury 0°.8 N.			
4	15	Jupiter in conjunction with Moon. Jupiter 2° N.			
5	22	Jupiter in conjunction with Mercury. Jupiter 1° N.			
7	06	Venus in conjunction with Moon. Venus 1° N.			
17	12	Partial eclipse of Moon			
19	11	Mars in conjunction with Moon. Mars 5° S.			
22	13	Jupiter in conjunction			
23	08	Sun's longitude 210° ♍			
25	19	Saturn in conjunction with Moon. Saturn 4° S.			
26	23	Neptune at stationary point			

## MINIMA OF ALGOL

THE NIGHT SKY

Mercury remains too close to the Sun for observation throughout the month.

Venus, magnitude -4.3, continues to be a brilliant object in the early evenings, low above the south-western horizon for a short while after sunset. This interval increases slightly during October so that by the end of the month Venus is visible for almost an hour. Under good conditions the waxing crescent Moon will be seen about 6 degrees to the left of the planet on the evening of the 7th.

Mars reaches its first stationary point on the 1st, and then moves retrograde from Taurus back into Aries during the month. Its magnitude is still brightening (from -1.7 to -2.3) during October as it approaches opposition next month. Due to the eccentricity of its orbit the closest

approach of Mars to the Earth during this apparition (69 million kilometres) occurs on the last day of October, one week before opposition. Mars is already visible for most of the night and by the end of the month may be seen rising in the east about an hour after sunset. The Moon, just past Full, is near the planet around the 19th-20th.

Jupiter passes through conjunction on the 22nd and thus remains too close to the Sun for observation throughout the month.

Saturn, magnitude +0.3, continues to be visible in the eastern sky in the early mornings. It is noticeably brighter than the nearby bright stars in Gemini, Castor and Pollux, which are of magnitude +1.9 and +1.1 respectively. The Moon, around Last Quarter, is near the planet on the mornings of the 25th and 26th.

# NOVEMBER 2005

ELEVENTH MONTH, 30 DAYS. *Novem* (nine), ninth month of Roman pre-Julian calendar

1	Tuesday	Naomi Mitchison b. 1897. Ezra Pound d. 1972	305
2	Wednesday	Marie-Antoinette b. 1755. George Bernard Shaw d. 1950	306
3	Thursday	Karl Baedeker b. 1801. Henri Matisse d. 1954	307
4	Friday	Felix Mendelssohn d. 1847. Wilfred Owen d. 1918	308
5	Saturday	Sam Shepard b. 1943. Maurice Utrillo d. 1955	309
6	Sunday	Pyotr Ilyich Tchaikovsky d. 1893. Kate Greenaway d. 1901	310
<hr/>			
7	Monday	Albert Camus b. 1913. Steve McQueen d. 1980	week 45 day 311
8	Tuesday	Margaret Mitchell b. 1900. John Milton d. 1674	312
9	Wednesday	Edward VII b. 1841. Dylan Thomas d. 1953	313
10	Thursday	William Hogarth b. 1697. Oliver Goldsmith b. 1730	314
11	Friday	Fyodor Dostoevsky b. 1821. Sir Edward German d. 1936	315
12	Saturday	Auguste Rodin b. 1840. Cnut the Great d. 1035	316
13	Sunday	Robert Louis Stevenson b. 1850. Camille Pissarro d. 1903	317
<hr/>			
14	Monday	Dame Elizabeth Frink b. 1930. Prince of Wales b. 1948	week 46 day 318
15	Tuesday	Marianne Moore b. 1887. George Romney d. 1802	319
16	Wednesday	Clarke Gable d. 1960. Henry III d. 1272	320
17	Thursday	Catherine II (The Great) of Russia d. 1796. Auguste Rodin d. 1917	321
18	Friday	Sir David Wilkie b. 1785. Marcel Proust d. 1922	322
19	Saturday	Charles I b. 1600. Franz Schubert d. 1828	323
20	Sunday	Leo Tolstoy d. 1910. Queen Alexandra d. 1925	324
<hr/>			
21	Monday	Voltaire b. 1694. Henry Purcell d. 1695	week 47 day 325
22	Tuesday	Benjamin Britten b. 1913. C. S. Lewis d. 1963	326
23	Wednesday	James Thomson b. 1834. Roald Dahl d. 1990	327
24	Thursday	Laurence Sterne b. 1713. Henri de Toulouse-Lautrec b. 1864	328
25	Friday	Upton Sinclair d. 1968. Sir Anton Dolin d. 1983	329
26	Saturday	Tina Turner b. 1939. Isabella I d. 1504	330
27	Sunday	Alexander Dumas d. 1895. Eugene O'Neill d. 1953	331
<hr/>			
28	Monday	Nancy Mitford b. 1904. Enid Blyton d. 1968	week 48 day 332
29	Tuesday	Louisa May Alcott b. 1832. Giacomo Puccini d. 1924	333
30	Wednesday	Mark Twain b. 1835. Oscar Wilde d. 1900	334

## ASTRONOMICAL PHENOMENA

<i>d</i>	<i>h</i>	
1 10		Jupiter in conjunction with Moon. Jupiter 3° N.
3 16		Mercury at greatest elongation E.24°
3 19		Venus at greatest elongation E.47°
3 23		Mercury in conjunction with Moon. Mercury 1° N.
5 19		Venus in conjunction with Moon. Venus 1° N.
7 08		Mars at opposition
14 06		Mercury at stationary point
15 05		Mars in conjunction with Moon. Mars 3° S.
16 00		Uranus at stationary point
22 05		Saturn in conjunction with Moon. Saturn 4° S.
22 05		Sun's longitude 240° ↗
22 09		Saturn at stationary point
24 16		Mercury in inferior conjunction
29 06		Jupiter in conjunction with Moon. Jupiter 3° N.
30 15		Mercury in conjunction with Moon. Mercury 6° N.

## MINIMA OF ALGOL

<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>
1	06.0	12	17.2	24	04.5
4	02.8	15	14.1	27	01.3
6	23.6	18	10.9	29	22.1
9	20.4	21	07.7		

## CONSTELLATIONS

The following constellations are near their meridian at

	<i>d</i>	<i>h</i>	<i>d</i>	<i>h</i>	
October	1	24	November	15	21
October	16	23	December	1	20
November	1	22	December	16	19

Ursa Major (below the Pole), Cepheus, Cassiopeia, Andromeda, Pegasus, Pisces, Aquarius and Cetus

## THE MOON

Phases, Apsides and Node	<i>d</i>	<i>h</i>	<i>m</i>
● New Moon	2	01	25
☾ First Quarter	9	01	57
○ Full Moon	16	00	58
☾ Last Quarter	23	22	11
Perigee (370,046 km)	10	00	28
Apogee (404,331 km)	23	06	16

Mean longitude of ascending node on November 1, 12°

## THE NIGHT SKY

*Mercury*, although it reaches greatest eastern elongation on the 3rd and later passes through inferior conjunction on the 24th, is unsuitably placed for observation throughout the month.

*Venus*, magnitude  $-4.5$ , is still visible as a brilliant object in the early evenings, low above the south-western horizon after sunset. Under good conditions the four-day old crescent Moon will be seen nearly 3 degrees below the planet on the evening of the 5th. Venus is at greatest eastern elongation (47 degrees) on the 3rd and during the month is gradually becoming visible for a little longer each evening until by the end of the month it may be seen for almost two hours after sunset, from southern England, and for about an hour and a half from Scotland.

*Mars* reaches opposition on the 7th, and is visible throughout the hours of darkness. Its magnitude then is  $-2.3$ , and for a few weeks around opposition is actually brighter than Jupiter. Mars is in the constellation of Aries. The Full Moon is in the vicinity of the planet on the 15th and 16th.

*Jupiter*, magnitude  $-1.7$ , becomes visible as a bright morning object after the first week of the month, low above the south-eastern horizon for a short while before sunrise. Jupiter is moving slowly eastwards, a few degrees east of Spica, in Virgo. On the morning of the 29th, the thin waning crescent Moon, only 2 days before New, passes 4 degrees south of the planet.

*Saturn*, magnitude  $+0.2$ , is moving very slowly direct in the constellation of Cancer: it reaches its first stationary point on the 22nd, when it starts to retrograde. It is now rising in the east about three hours before midnight. The gibbous Moon, just before Last Quarter, is near the planet around the 21st to the 23rd.

*Meteors*. Although the Leonids do not usually produce a brilliant display there has been considerable activity during the last few years. The peak of any activity will occur around the 17th but is not likely to produce a spectacular display.

## DECEMBER 2005

TWELFTH MONTH, 31 DAYS. *Decem* (ten), tenth month of Roman pre-Julian calendar

1	Thursday	Queen Alexandra b. 1844. Henry 1 d. 1135	335
2	Friday	George Seurat b. 1859. Marquis de Sade d. 1814	336
3	Saturday	Robert Louis Stevenson d. 1894. Pierre Renoir d. 1919	337
4	Sunday	Wassily Kandinsky b. 1866. Benjamin Britten d. 1976	338
5	Monday	Wolfgang Amadeus Mozart d. 1791. Claude Monet d. 1926	week 49 day 339
6	Tuesday	Sir Osbert Sitwell b. 1892. Anthony Trollope d. 1882	340
7	Wednesday	Lord Darnley b. 1545. Robert Graves d. 1985	341
8	Thursday	Mary Queen of Scots b. 1542. Jean Sibelius b. 1865	342
9	Friday	John Milton b. 1608. Sir Anthony Van Dyck d. 1641	343
10	Saturday	Emily Dickinson b. 1830. Otis Redding d. 1967	344
11	Sunday	Hector Berlioz b. 1803. Sir Kenneth Macmillan d. 1992	345
12	Monday	Edvard Munch b. 1863. Robert Browning d. 1889	week 50 day 346
13	Tuesday	Dr Samuel Johnson b. 1784. Wassily Kandinsky d. 1944	347
14	Wednesday	George VI b. 1895. Albert, Prince Consort to Queen Victoria d. 1861	348
15	Thursday	George Romney b. 1734. Johannes Vermeer d. 1851	349
16	Friday	Sir Arthur C. Clarke b. 1917. Wilhelm Grimm d. 1859	350
17	Saturday	Ford Madox Ford b. 1873. Dorothy L. Sayers d. 1957	351
18	Sunday	Archduke Franz Ferdinand of Austria-Hungary b. 1863. Paul Klee b. 1879	352
19	Monday	Emily Brontë d. 1848. J. M. W. Turner d. 1851	week 51 day 353
20	Tuesday	James Hilton d. 1954. John Steinbeck d. 1968	354
21	Wednesday	Dame Rebecca West b. 1892. F. Scott Fitzgerald d. 1940	355
22	Thursday	Giacomo Puccini b. 1858. Samuel Becket d. 1989	356
23	Friday	Alexander I, Tsar of Russia b. 1777. Peggy Guggenheim d. 1979	357
24	Saturday	CHRISTMAS EVE. William Makepeace Thackeray d. 1863	358
25	Sunday	CHRISTMAS DAY. Maurice Utrillo b. 1883	359
26	Monday	BOXING DAY. Thomas Gray b. 1716	week 52 day 360
27	Tuesday	Marlene Dietrich b. 1901. Charles Lamb d. 1834	361
28	Wednesday	Mary II d. 1694. Maurice Ravel d. 1937	362
29	Thursday	Thomas Becket is killed by soldiers in Canterbury Cathedral 1170	363
30	Friday	Rudyard Kipling b. 1865. Richard Rogers, American composer d. 1979	364
31	Saturday	John Denver b. 1943. Henri Matisse b. 1869	365

THE NIGHT SKY

Mercury is at its greatest western elongation (21 degrees) on the 12th and thus is visible in the mornings for about 12 days either side of that date, magnitude +0.9 to -0.5. It may be seen low above the east-south-eastern horizon around the time of beginning of morning civil twilight. This morning apparition is the most suitable one of the year for observers in the latitudes of the British Isles.

Venus is still a magnificent object in the early evening sky, reaching its greatest brilliancy, magnitude -4.7, on the 9th. It is visible low above the south-western horizon for about two hours after sunset. On the evening of the 4th the three-day old crescent Moon will be seen about 4 degrees below the planet. Observers with telescopes can witness the decreasing crescent phase during the month (falling from 33 to 6 per cent illuminated) while the apparent diameter increases from 36 to 57 arcseconds.

Mars reaches its second stationary point on the 10th, when it resumes its direct motion, in the constellation of Aries. Its brightness decreases noticeably during the

month, from a magnitude of -1.6 to -0.6, though still noticeably brighter than Aldebaran, some 30 degrees to the east. The waxing gibbous Moon is near the planet on the 11th and 12th.

Jupiter, magnitude -1.8, is a brilliant morning object, in the south-eastern sky. By the end of the month it is crossing the meridian at about the same time as sunrise. On the morning of the 27th the waning crescent Moon, 4 days before New, passes 5 degrees south of the planet. Jupiter moves from Virgo into Libra early in the month.

Saturn, magnitude 0.0, is now well placed for observation as it becomes visible in the eastern sky from the latter part of the evening onwards. Saturn is in the constellation of Cancer. The waning gibbous Moon will be seen near the planet around the 18th to the 20th.

Meteors. The maximum of the well-known Geminid meteor shower occurs on the late evening of the 13th though observation will be seriously affected by bright moonlight.

TABLE 2. CORRECTION FOR REFRACTION AND SEMI-DIAMETER

	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>	<i>m</i>
0°	3	3	4	4	4	5	5	5	6	6	6	7	0°
10°	3	3	4	4	4	5	5	6	6	6	7	7	10°
20°	4	4	4	4	5	5	6	7	7	8	8	9	20°
25°	4	4	4	4	5	6	7	8	8	9	11	13	25°
30°	4	4	4	5	6	7	8	9	11	14	21	—	30°

NB: Regarding Table 1. If latitude and declination are of the same sign, take out the respondent directly. If they are of opposite signs, subtract the respondent from 12h.

Table 1 gives the complete range of declinations in case any user wishes to calculate semi-diurnal arcs for bodies other than the Sun and Moon.

Example:

Lat.	Dec.	Semi-diurnal arc
+52°	+20°	7h 51m
+52°	-20°	4h 09m

SUNRISE AND SUNSET

The local mean time of sunrise or sunset may be found by obtaining the hour angle from Table 1 and applying it to the time of transit. The hour angle is negative for sunrise and positive for sunset. A small correction to the hour angle, which always has the effect of increasing it numerically, is necessary to allow for the Sun's semi-diameter (16') and for refraction (34'); it is obtained from Table 2. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east.

*Example*—Required the New Zealand Mean Time (12h fast on GMT) of sunset on May 23 at Auckland, latitude 36° 50' S. (or minus), longitude 11h 39m E. Taking the declination as +20°.6 (page 1235), we find

	h	m
New Zealand Standard Time	+ 12	00
Longitude	- 11	39
<hr/>		
Longitudinal Correction	+ 0	21
Tabular entry for Lat. 30° and Dec. 20°, opposite signs	+ 5	11
Proportional part for 6° 50' of Lat.	-	15
Proportional part for 0°.6 of Dec.	-	2
Correction (Table 2)	+	4
<hr/>		
Hour angle	4	58
Sun transits (page 1235)	11	57
Longitudinal correction	+	21
<hr/>		
New Zealand Mean Time	17	16

MOONRISE AND MOONSET

It is possible to calculate the times of moonrise and moonset using Table 1, though the method is more complicated because the apparent motion of the Moon is much more rapid and also more variable than that of the Sun.

20	33	38	42	46	50	54	58
21	35	39	44	48	53	57	61
22	37	41	46	50	55	60	64
23	38	43	48	53	58	62	67
24	40	45	50	55	60	65	70

The parallax of the Moon, about 57', is near to the sum of the semi-diameter and refraction but has the opposite effect on these times. It is thus convenient to neglect all three quantities in the method outlined below.

Notation

- $\phi$  = latitude of observer
- $\lambda$  = longitude of observer (measured positively towards the west)
- $T_{-1}$  = time of transit of Moon on previous day
- $T_0$  = time of transit of Moon on day in question
- $T_1$  = time of transit of Moon on following day
- $\delta_0$  = approximate declination of Moon
- $\delta_R$  = declination of Moon at moonrise
- $\delta_S$  = declination of Moon at moonset
- $h_0$  = approximate hour angle of Moon
- $h_R$  = hour angle of Moon at moonrise
- $h_S$  = hour angle of Moon at moonset
- $t_R$  = time of moonrise
- $t_S$  = time of moonset

Method

1. With arguments  $\phi, \delta_0$  enter Table 1 on page 1266 to determine  $h_0$  where  $h_0$  is negative for moonrise and positive for moonset.
2. Form approximate times from
  - $t_R = T_0 + \lambda + h_0$
  - $t_S = T_0 + \lambda + h_0$
3. Determine  $\delta_R, \delta_S$  for times  $t_R, t_S$  respectively.
4. Re-enter Table 1 on page 1266 with
  - (a) arguments  $\phi, \delta_R$  to determine  $h_R$
  - (b) arguments  $\phi, \delta_S$  to determine  $h_S$
5. Form
  - $t_R = T_0 + \lambda + h_R + AX$
  - $t_S = T_0 + \lambda + h_S + AX$

where  $A = (\lambda + h)$

and  $X = (T_0 - T_{-1})$  if  $(\lambda + h)$  is negative  
 $X = (T_1 - T_0)$  if  $(\lambda + h)$  is positive

AX is the respondent in Table 3.

*Example*—To find the times of moonrise and moonset at Vancouver ( $\phi = +49^\circ, \lambda = +8h 12m$ ) on 2005 August 24. The starting data (page 1248) are

- $T_{-1} = 2h 55m$
  - $T_0 = 3h 43m$
  - $T_1 = 4h 32m$
  - $\delta_0 = +15^\circ$
1.  $h_0 = 7h 12m$
  2. Approximate values
    - $t_R = 24d 03h 43m + 8h 12m + (-7h 12m)$
    - $= 24d 04h 43m$
    - $t_S = 24d 03h 43m + 8h 12m + (+7h 12m)$
    - $= 24d 19h 07m$
  3.  $\delta_R = +13^\circ.4$   
 $\delta_S = +16^\circ.7$
  4.  $h_R = -7h 04m$   
 $h_S = +7h 20m$
  5.  $t_R = 24d 03h 43m + 8h 12m + (-7h 04m) + 2m$   
 $= 24d 04h 53m$   
 $t_S = 24d 03h 43m + 8h 12m + (+7h 20m) + 31m$   
 $= 24d 19h 46m$

To get the LMT of the phenomenon the longitude is subtracted from the GMT thus:

Moonrise = 8d 06h 40m - 8h 12m = 7d 22h 28m  
 Moonset = 8d 22h 29m - 8h 12m = 8d 14h 17m

## ECLIPSES AND OCCULTATIONS 2005

## ECLIPSES

During 2005 there will be three eclipses, two of the Sun and one of the Moon. (Penumbral eclipses are not mentioned in this section as they are so difficult to observe).

1. An annular-total eclipse of the Sun on April 8 is visible as a partial eclipse from North Island (New Zealand), the Pacific Ocean, southern North America, Central America, South America (except for eastern Brazil and south of about S.35), the Caribbean and Bermuda. The partial phase begins at 17h 51m and ends at 23h 20m. The path of the central line is annular at the beginning of the track, but is total over most of the Pacific Ocean. It again becomes annular before crossing Panama and Columbia. The annular eclipse ends in Venezuela. Annularity begins at 18h 53m and ends at 22h 18m. The maximum duration of totality (42 seconds) occurs in the middle of the Pacific Ocean.

2. An annular eclipse of the Sun on October 3 is visible as a partial eclipse from the Arctic Ocean, Greenland, Iceland, the eastern North Atlantic Ocean, Africa (except the southern tip), Europe (including the British Isles), west and south Asia, and the Indian Ocean, including Madagascar. The partial phase begins at 07h 35m and ends at 13h 28m. The path of annularity starts in the eastern North Atlantic Ocean, crosses northern Portugal, Spain, northern Algeria, Tunisia, Libya, north-east Chad, Sudan, south-west Ethiopia, north-east Kenya, and the extreme south of Somalia before ending in the Indian Ocean. Totality begins at 08h 41m and ends at 12h 23m. The maximum duration is 4m 31s. At Greenwich the partial phase begins at 7h 49m and ends at 10h 18m, with 66 per cent of the Sun obscured at maximum. From Edinburgh the corresponding times are 7h 53m and 10h 13m, with a maximum obscuration of the Sun of 58 per cent.

3. A partial eclipse of the Moon on the October 17 is visible from the Arctic Ocean, North and Central America, western South America, the Pacific Ocean, Asia, Australasia, the Indian Ocean and the Southern Ocean. The eclipse begins at 11h 34m and ends at 12h 32m. At maximum only 7 per cent of the moon is obscured.

## LUNAR OCCULTATIONS

Observations of the times of occultations are made by both amateur and professional astronomers. Such observations are later analysed to yield accurate positions of the Moon; this is one method of determining the difference between terrestrial time and universal time.

Many of the observations made by amateurs are obtained with the use of a stop-watch which is compared with a time-signal immediately after the observation. Thus an accuracy of about one-fifth of a second is obtainable, though the observer's personal equation may amount to one-third or one-half of a second.

The list on page 1269 includes most of the occultations visible under favourable conditions in the British Isles. No occultation is included unless the star is at least  $10^\circ$  above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or with a small telescope. The altitude limit is reduced from  $10^\circ$  to  $2^\circ$  for stars and planets brighter than magnitude 2.0 and such occultations are also predicted in daylight.

The column Phase shows (i) whether a disappearance (D) or reappearance (R) is to be observed; and (ii) whether it is at the dark limb (D) or bright limb (B). The column

headed 'El. of Moon' gives the elongation of the Moon from the Sun, in degrees. The elongation increases from  $0^\circ$  at New Moon to  $180^\circ$  at Full Moon and on to  $360^\circ$  (or  $0^\circ$ ) at New Moon again. Times and position angles ( $P$ ), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (lat.  $51^\circ 30'$ , long.  $0^\circ$ ) and Edinburgh (lat.  $56^\circ 00'$ , long.  $3^\circ 12'$  west).

The coefficients  $a$  and  $b$  are the variations in the GMT for each degree of longitude (positive to the west) and latitude (positive to the north) respectively; they enable approximate times (to within about 1m generally) to be found for any point in the British Isles. If the point of observation is  $\Delta\lambda$  degrees west and  $\Delta\phi$  degrees north, the approximate time is found by adding  $a\Delta\lambda + b\Delta\phi$  to the given GMT.

*Example:* the disappearance of ZC465 on March 14 at Coventry, found from both Greenwich and Edinburgh.

	Greenwich		Edinburgh	
	o		o	
Longitude	0.0		+3.2	
Long. of Coventry	+1.5		+1.5	
$\Delta\lambda$	+1.5		-1.7	
Latitude	+51.5		+56.0	
Lat. of Coventry	+52.4		+52.4	
$\Delta\phi$	+0.9		-3.6	
	<i>h</i>	<i>m</i>	<i>h</i>	<i>m</i>
GMT	21	32.4	21	22.3
$a\Delta\lambda$		+0.3		+0.2
$b\Delta\phi$		-2.3		+7.6
	21	30.4	21	30.1

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code:

N = star not occulted

A = star's altitude less than  $10^\circ$  ( $2^\circ$  for bright stars and planets)

S = Sun not sufficiently below the horizon

G = occultation is of very short duration

In some cases the coefficients  $a$  and  $b$  are not given; this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

MEAN AND SIDEREAL TIME

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular is drawn to the celestial equator, the length of this perpendicular is the star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3 seconds a year for equatorial stars, and larger or smaller changes in either direction for stars near the poles, depending on the right ascension of the star. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (lat. 51° 30') the meridian altitude of Sirius is found as follows:

	o	'
Altitude of equator	38	30
Declination south	16	43
Difference	21	47

The altitude of Capella (Dec. +46° 00') at lower transit is:

Altitude of pole	51	30
Polar distance of star	44	00
Difference	7	30

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars Sirius and Canopus, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are Polaris and the stars in the belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas*. The stars Sirius and Canopus and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars fainter than the twentieth magnitude may be photographed by long exposures with the largest telescopes.

Acceleration						Retardation

22	3	37				22	3	36			
23	3	47				23	3	46			
24	3	57				24	3	56			

The length of a sidereal day in mean time is 23h 56m 04s.09. Hence 1h MT = 1h+9:86 ST and 1h ST = 1h-9:83 MT.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as critical tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these two entries is the required acceleration or retardation. Thus the acceleration for 11m 26s (which lies between the entries 9m 07s and 15m 13s) is 2s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry, e.g. the retardation for 45m 46s is 7s.

*Example*— Convert 14h 27m 35s from ST to MT

	<i>h</i>	<i>m</i>	<i>s</i>
Given ST	14	27	35
Retardation for 14h		2	18
Retardation for 27m 35s			5
Corresponding MT	14	25	12

For further explanation, see pages 1275-1276.

Jupiter's satellites transit across the disk from east to west, and pass behind the disk from west to east. The shadows that they cast also transit across the disk. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb and reappears from eclipse to the east of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The times given refer to the centre of the satellite. As the satellite is of considerable size, the immersion and emersion phases are not instantaneous. Even when the satellite enters or leaves the shadow along a radius of the shadow, the phase can last for several minutes. With Satellite IV, grazing phenomena can occur so that the light from the satellite may fade and brighten again without a complete eclipse taking place.

The list of phenomena gives most of the eclipses and shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse  
Sh. = Shadow transit  
D = Disappearance

R = Reappearance  
I = Ingress  
E = Egress

## EXPLANATION OF ASTRONOMICAL DATA

Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

Definitions of the terms used cannot be given here. They must be sought in astronomical literature and textbooks.

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes  $52^\circ$  and  $56^\circ$ , are devoted to risings and settings, the range  $50^\circ$  to  $58^\circ$  can be covered by interpolation and extrapolation. The times given in these columns are Greenwich Mean Times for the meridian of Greenwich. An observer west of this meridian must add his/her longitude (in time) and vice versa.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

All data are, unless otherwise stated, for 0h Greenwich Mean Time (GMT), i.e. at the midnight at the beginning of the day named. Allowance must be made for British Summer Time during the period that this is in operation.

### PAGE ONE OF EACH MONTH

The calendar for each month is explained on page 1217.

Under the heading *Astronomical Phenomena* will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of other astronomical phenomena of special interest.

Times of Minima of Algol are approximate times of the middle of the period of diminished light.

The Constellations listed each month are those that are near the meridian at the beginning of the month at 22h local mean time. Allowance must be made for British Summer Time if necessary. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

The principal phases of the Moon are the GMTs when the difference between the longitude of the Moon and that of the Sun is  $0^\circ$ ,  $90^\circ$ ,  $180^\circ$  or  $270^\circ$ . The times of perigee and apogee are those when the Moon is nearest to, and farthest from, the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from  $5^\circ$ , the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

### PAGE TWO OF EACH MONTH

The Sun's semi-diameter, in arc, is given once a month.

The right ascension and declination (Dec.) is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12h to the Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. Apparent Solar Time is equal to the Mean Solar Time plus the Equation of Time. For example, at 12h GMT on August 8 the Equation of Time is  $-5m\ 36s$  and thus at 12h Mean Time on that day the Apparent Time is  $12h - 5m\ 36s = 11h\ 54m\ 24s$ .

The Greenwich Sidereal Time at 0h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0h) are used for converting mean time to sidereal time and vice versa.

The GMT of transit of the Sun at Greenwich may also be taken as the local mean time (LMT) of transit in any longitude. It is independent of latitude. The GMT of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

### LIGHTING-UP TIME

The legal importance of sunrise and sunset is that the Road Vehicles Lighting Regulations 1989 (SI 1989 No. 1796) make the use of front and rear position lamps on vehicles compulsory during the period between sunset and sunrise. Headlamps on vehicles are required to be used during the hours of darkness on unlit roads or whenever visibility is seriously reduced. The hours of darkness are defined in these regulations as the period between half an hour after sunset and half an hour before sunrise.

In all laws and regulations 'sunset' refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

### SUNRISE AND SUNSET

The times of sunrise and sunset are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be  $34'$ , and the Sun's semi-diameter to be  $16'$ , the time given is that when the true zenith distance of the Sun's centre is  $90^\circ + 34' + 16'$  or  $90^\circ\ 50'$ , or, in other words, when the depression of the Sun's centre below the true horizon is  $50'$ . The upper limb is then  $34'$  below the true horizon, but is brought there by refraction. An observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is  $90^\circ\ 50'$  is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes. (For further information, see footnote on page 1274.)

### TWILIGHT

Light reaches us before sunrise and continues to reach us for some time after sunset. The interval between darkness and sunrise or sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin or end when the Sun's centre is  $18^\circ$  below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the summer solstice the depression of  $18^\circ$  is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight is met by dividing the gathering darkness into four stages.

- (1) *Sunrise or Sunset*, defined as above
- (2) *Civil twilight*, which begins or ends when the Sun's centre is  $6^\circ$  below the horizon. This marks the time when operations requiring daylight may commence or

must cease. In England it varies from about 30 to 60 minutes after sunset and the same interval before sunrise

- (3) *Nautical twilight*, which begins or ends when the Sun's centre is  $12^\circ$  below the horizon. This marks the time when it is, to all intents and purposes, completely dark
- (4) *Astronomical twilight*, which begins or ends when the Sun's centre is  $18^\circ$  below the horizon. This marks theoretical perfect darkness. It is of little practical importance, especially if nautical twilight is tabulated

To assist observers the durations of civil, nautical and astronomical twilights are given at intervals of ten days. The beginning of a particular twilight is found by subtracting the duration from the time of sunrise, while the end is found by adding the duration to the time of sunset. Thus the beginning of astronomical twilight in latitude  $52^\circ$ , on the Greenwich meridian, on March 11 is found as  $06\text{h } 23\text{m} - 113\text{m} = 04\text{h } 30\text{m}$  and similarly the end of civil twilight as  $17\text{h } 58\text{m} + 34\text{m} = 18\text{h } 32\text{m}$ . The letters TAN (twilight all night) are printed when twilight lasts all night.

Under the heading The Night Sky will be found notes describing the position and visibility of the planets and other phenomena.

#### PAGE THREE OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension (RA) and declination (Dec.) are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax, which may reach  $1^\circ$ .

The lunar terminator is the line separating the bright from the dark part of the Moon's disk. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The selenographic longitude of the terminator is measured from the mean centre of the visible disk, which may differ from the visible centre by as much as  $8^\circ$ , because of libration.

Instead of the longitude of the terminator the Sun's selenographic co-longitude (Sun's co-long.) is tabulated. It is numerically equal to the selenographic longitude of the morning terminator, measured eastwards from the mean centre of the disk. Thus its value is approximately  $270^\circ$  at New Moon,  $360^\circ$  at First Quarter,  $90^\circ$  at Full Moon and  $180^\circ$  at Last Quarter.

The Position Angle (PA) of the Bright Limb is the position angle of the midpoint of the illuminated limb, measured eastwards from the north point on the disk. The Phase column shows the percentage of the area of the Moon's disk illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax (Hor. par.) is about  $9''$ , and is negligible when considering sunrise and sunset, but that of the Moon averages about  $57'$ . Hence the computed time represents the moment when the true zenith distance of the Moon is  $90^\circ 50'$  (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes (except in high latitudes). See also page 1267 and footnote below.

The GMT of transit of the Moon over the meridian of Greenwich is given; these times are independent of latitude but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For other places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude  $\lambda$  of the place. If the place is in west longitude,  $\lambda$  is the ordinary west longitude; if the place is in east longitude  $\lambda$  is the complement to 24h (or  $360^\circ$ ) of the longitude and will be greater than 12h (or  $180^\circ$ ). The correction then consists of two positive portions, namely  $\lambda$  and the fraction  $\lambda/24$  (or  $\lambda^\circ/360$ ) multiplied by the difference between consecutive transits. Thus for Christchurch, New Zealand, the longitude is 11h 31m east, so  $\lambda = 12\text{h } 29\text{m}$  and the fraction  $\lambda/24$  is 0.52. The transit on the local date 31 May 2005 is found as follows:

	May	d	h	m
GMT of transit at Greenwich	30	06	05	
$\lambda$			12	29
$0.52 \times (6\text{h } 53\text{m} - 6\text{h } 05\text{m})$				25

GMT of transit at Christchurch	30	18	59
Corr. to NZ Standard Time		12	00

Local standard time of transit	May	31	06	59
--------------------------------	-----	----	----	----

As is evident, for any given place the quantities  $\lambda$  and the correction to local standard time may be combined permanently, being here 24h 29m.

Positions of Mercury are given for every second day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The diameter (Diam.) is given in seconds of arc. The phase is the illuminated percentage of the disk. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of  $5^\circ$  has been tabulated. If the time of transit is between 00h and 12h the time refers to an altitude of  $5^\circ$  above the eastern horizon; if between 12h and 24h, to the western horizon. The phenomenon tabulated is the one that occurs between sunset and sunrise. The times given may be interpolated for latitude and corrected for longitude, as in the case of the Sun and Moon.

#### SUNRISE, SUNSET, MOONRISE AND MOONSET

The tables have been constructed for the meridian of Greenwich and for latitudes  $52^\circ$  and  $56^\circ$ . They give Greenwich Mean Time (GMT) throughout the year. To obtain the GMT of the phenomenon as seen from any other latitude and longitude in the British Isles, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found, the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of  $1^\circ = 4\text{m}$  and  $15' = 1\text{m}$ . A method of calculating rise and set time for other places in the world is given on pages 1266 and 1267.

The GMT at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way, as already described.

## PAGE FOUR OF EACH MONTH

The GMTs of sunrise and sunset for seven cities, whose adopted positions in longitude (W) and latitude (N.) are given immediately below the name, may be used not only for these phenomena, but also for lighting-up times (see page 1273 for a fuller explanation).

The particulars for the four outer planets resemble those for the planets on Page Three of each month, except that, under Uranus and Neptune, times when the planet is  $10^\circ$  high instead of  $5^\circ$  high are given; this is because of the inferior brightness of these planets. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were last open at their widest extent (and Saturn at its brightest) in 2002; this will occur again in 2017. The Earth passed through the ring plane in 1995–6 and will do so again in 2009.

## TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time-scale for the everyday activities of the human race. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time-scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time-scale, and this has led to the concept of Mean Solar Time in which all the days are exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time-scale so obtained is known as Apparent Sidereal Time.

## GREENWICH MEAN TIME

The daily rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from east to west. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich Mean Time (GMT). The mean solar day is divided into 24 hours and, for astronomical and other scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil

time is usually reckoned in two periods of 12 hours, designated a.m. (*ante meridiem*, i.e. before noon) and p.m. (*post meridiem*, i.e. after noon), although the 24 hour clock is increasingly being used.

## UNIVERSAL TIME

Before 1925 January 1, GMT was reckoned in 24 hours commencing at noon; since that date it has been reckoned from midnight. To avoid confusion in the use of the designation GMT before and after 1925, since 1928 astronomers have tended to use the term Universal Time (UT) or *Weltzeit* (WZ) to denote GMT measured from Greenwich Mean Midnight.

In precision work it is necessary to take account of small variations in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated UT0. Observed time corrected for the effects of the motion of the poles (giving rise to a 'wandering' in longitude) is designated UT1. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. UT1 corrected for this effect is designated UT2 and provides a time-scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

## APPARENT SOLAR TIME

As mentioned above, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun.

The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of  $23^\circ 26'$ . As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its maximum values in February (–14 minutes) and early November (+16 minutes). It has a zero value on four dates during the year, and it is only on these dates (approximately April 15, June 14, September 1 and December 25) that a sundial shows Mean Solar Time.

## SIDEREAL TIME

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or 'star') time is a little misleading since the time-scale so defined is not exactly the same as that which would be defined by successive transits of a selected star, as there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0.008 seconds. Superimposed on this steady precessional motion are small oscillations (nutations), giving rise to fluctuations in apparent sidereal time amounting to as much as 1.2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion of GMT to Greenwich sidereal

time (GST) may be performed by adding the value of the GST at 0h on the day in question (page two of each month) to the GMT converted to sidereal time using the table on page 1271.

*Example* – To find the GST at August 8d 02h 41m 11s GMT

	<i>h</i>	<i>m</i>	<i>s</i>
GST at 0h	21	06	24
GMT	2	41	11
Acceleration for 2h			20
Acceleration for 41m 11s			7
Sum = GST =	23	48	02

If the observer is not on the Greenwich meridian then his/her longitude, measured positively westwards from Greenwich, must be subtracted from the GST to obtain Local Sidereal Time (LST). Thus, in the above example, an observer 5h east of Greenwich, or 19h west, would find the LST as 4h 48m 59s.

### EPHEMERIS TIME

An analysis of observations of the positions of the Sun, Moon and planets taken over an extended period is used in preparing ephemerides. (An ephemeris is a table giving the apparent position of a heavenly body at regular intervals of time, e.g. one day or ten days, and may be used to compare current observations with tabulated positions.) Discrepancies between the positions of heavenly bodies observed over a 300-year period and their predicted positions arose because the time-scale to which the observations were related was based on the assumption that the rate of rotation of the Earth is uniform. It is now known that this rate of rotation is variable. A revised time-scale, Ephemeris Time (ET), was devised to bring the ephemerides into agreement with the observations.

The second of ET is defined in terms of the annual motion of the Earth in its orbit around the Sun (1/31556925.9747 of the tropical year for 1900 January 0d 12h ET). The precise determination of ET from astronomical observations is a lengthy process as the requisite standard of accuracy can only be achieved by averaging over a number of years.

In 1976 the International Astronomical Union adopted Terrestrial Dynamical Time (TDT), a new dynamical time-scale for general use whose scale unit is the SI second (*see* Atomic Time, below). TDT was renamed Terrestrial Time (TT) in 1991. ET is now of little more than historical interest.

### TERRESTRIAL TIME

The uniform time system used in computing the ephemerides of the solar system is Terrestrial Time (TT), which has replaced ET for this purpose. Except for the most rigorous astronomical calculations, it may be assumed to be the same as ET. During 2005 the estimated difference TT – UT is about 65 seconds.

### ATOMIC TIME

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and measurable. Progress has made it possible to use natural standards, such as atomic or molecular oscillations. Continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency

characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. The National Physical Laboratory (NPL) routinely uses clocks of high stability produced by locking a quartz oscillator to the frequencies defined by caesium or hydrogen atoms.

International Atomic Time (TAI), established through international collaboration, is formed by combining the readings of many caesium clocks and was set close to the astronomically-based Universal Time (UT) near the beginning of 1958. It was formally recognised in 1971 and since 1988 January 1 has been maintained by the International Bureau of Weights and Measures (BIPM). The second markers are generated according to the International System (SI) definition adopted in 1967 at the 13th General Conference of Weights and Measures: 'The second is the duration of 9,192,631,770 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the caesium-133 atom.'

Civil time in almost all countries is now based on Coordinated Universal Time (UTC), which was adopted for scientific purposes on 1972 January 1. UTC differs from TAI by an integer number of seconds (determined from studies of the rate of rotation of the Earth) and was designed to make both atomic time and UT accessible with accuracies appropriate for most users. The UTC time-scale is adjusted by the insertion (or, in principle, omission) of leap seconds in order to keep it within  $\pm 0.9$  s of UT. These leap seconds are introduced, when necessary, at the same instant throughout the world, either at the end of December or at the end of June. All leap seconds so far have been positive, with 61 seconds in the final minute of the UTC month. The time 23h 59m 60s UTC is followed one second later by 0h 0m 00s of the first day of the following month. Notices concerning the insertion of leap seconds are issued by the International Earth Rotation Service (IERS) at the Observatoire de Paris.

### RADIO TIME-SIGNALS

UTC is made generally available through time-signals and standard frequency broadcasts such as MSF in the UK, CHU in Canada and WWV and WWVH in the USA. These are based on national time-scales that are maintained in close agreement with UTC and provide traceability to the national time-scale and to UTC. The markers of seconds in the UTC scale coincide with those of TAI.

To disseminate the national time-scale in the UK, special signals are broadcast on behalf of the National Physical Laboratory from the BT radio station at Rugby (call-sign MSF). The signals are controlled from a caesium beam atomic frequency standard and consist of a precise frequency carrier of 60 kHz which is switched off, after being on for at least half a second, to mark every second. The first second of the minute begins with a period of 500 ms with the carrier switched off, to serve as a minute marker. In the other seconds the carrier is always off for at least one tenth of a second at the start and then it carries an on-off code giving the British clock time and date, together with information identifying the start of the next minute. Changes to and from summer time are made following government announcements. Leap seconds are inserted as announced by the IERS and information provided by them on the difference between UTC and UT is also signalled. Other broadcast signals in the UK include the BBC six pips signal, the BT Timeline ('speaking clock'), the NPL Truetime service for

computers, and a coded time-signal on the BBC 198 kHz transmitters which is used for timing in the electricity supply industry. From 1972 January 1 the six pips on the BBC have consisted of five short pips from second 55 to second 59 (six pips in the case of a leap second) followed by one lengthened pip, the start of which indicates the exact minute. From 1990 February 5 these signals have been controlled by the BBC with seconds markers referenced to the satellite-based US navigation system GPS (Global Positioning System) and time and day referenced to the MSF transmitter. Formerly they were generated by the Royal Greenwich Observatory. The BT Timeline is compared daily with the National Physical Laboratory caesium beam atomic frequency standard at the Rugby radio station. The NPL Truetime service is directly connected to the national time scale.

Accurate timing may also be obtained from the signals of international navigation systems such as the ground-based Omega, or the satellite-based American GPS or Russian GLONASS systems.

#### STANDARD TIME

Since 1880 the standard time in Britain has been Greenwich Mean Time (GMT); a statute that year enacted that the word 'time' when used in any legal document relating to Britain meant, unless otherwise specifically stated, the mean time of the Greenwich meridian. Greenwich was adopted as the universal meridian on 13 October 1884. A system of standard time by zones is used world-wide, standard time in each zone differing from that of the Greenwich meridian by an integral number of hours, either fast or slow. The large territories of the USA and Canada are divided into zones approximately  $7.5^\circ$  on either side of central meridians.

Variations from the standard time of some countries occur during part of the year; they are decided annually and are usually referred to as Summer Time or Daylight Saving Time.

At the 180th meridian the time can be either 12 hours fast on Greenwich Mean Time or 12 hours slow, and a change of date occurs. The internationally recognised date or calendar line is a modification of the 180th meridian, drawn so as to include islands of any one group on the same side of the line, or for political reasons. The line is indicated by joining up the following co-ordinates:

Lat.	Long.	Lat.	Long.
60° S.	180°	48° N.	180°
51° S.	180°	53° N.	170° E.
45° S.	172.5° W.	65.5° N.	169° W.
15° S.	172.5° W.	75° N.	180°
5° S.	180°		

Changes to the date line would require an international conference.

#### BRITISH SUMMER TIME

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The Summer Time Acts 1922 and 1925 defined the period during which Summer Time was to be in force, stabilising practice until the Second World War.

During World War 2 the duration of Summer Time was extended and in the years 1941 to 1945 and in 1947 Double Summer Time (two hours in advance of Greenwich Mean Time) was in force. After the war,

Summer Time was extended each year in 1948–52 and 1961–4 by Order in Council.

Between 1968 October 27 and 1971 October 31 clocks were kept one hour ahead of Greenwich Mean Time throughout the year. This was known as British Standard Time.

The most recent legislation is the Summer Time Act 1972, which enacted that 'the period of summer time for the purposes of this Act is the period beginning at two o'clock, Greenwich mean time, in the morning of the day after the third Saturday in March or, if that day is Easter Day, the day after the second Saturday in March, and ending at two o'clock, Greenwich mean time, in the morning of the day after the fourth Saturday in October.'

The duration of Summer Time can be varied by Order in Council and in recent years alterations have been made to bring the operation of Summer Time in Britain closer to similar provisions in other countries of the European Union; for instance, since 1981 the hour of changeover has been 01h Greenwich Mean Time.

The duration of Summer Time in 2005 is:

March 27 01h GMT to October 30 01h GMT

#### MEAN REFRACTION

Alt.	Ref.	Alt.	Ref.	Alt.	Ref.
°	'	°	'	°	'
1	20	3	12	7	54
1	30	3	34	9	27
1	41	4	00	11	39
1	52	4	30	15	00
2	05	5	06	20	42
2	19	5	50	32	20
2	35	6	44	62	17
2	52	7	54	90	00
3	12				

The refraction table is in the form of a critical table (see page 1271)

#### ASTRONOMICAL CONSTANTS

Solar parallax	8".794
Astronomical unit	149597870 km
Precession for the year 2005	50".291
Precession in right ascension	3.075
Precession in declination	20".043
Constant of nutation	9".202
Constant of aberration	20".496
Mean obliquity of ecliptic (2005)	23° 26' 20"
Moon's equatorial hor. parallax	57' 02".70
Velocity of light in vacuo per second	299792.5 km
Solar motion per second	20.0 km
Equatorial radius of the Earth	6378.140 km
Polar radius of the Earth	6356.755 km
North galactic pole (IAU standard)	RA 12h 49m (1950.0). Dec. +27°.4 N.
Solar apex	RA 18h 06m Dec. +30
Length of year (in mean solar days)	
Tropical	365.24219
Sidereal	365.25636
Anomalistic (perihelion to perihelion)	365.25964
Eclipse	346.62000
Length of month (mean values)	<i>d</i> <i>h</i> <i>m</i> <i>s</i>
New Moon to New	29 12 44 02.9
Sidereal	27 07 43 11.5
Anomalistic (perigee to perigee)	27 13 18 33.2

## ELEMENTS OF THE SOLAR SYSTEM

## THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 12,756 km, and that of the polar axis is 12,714 km. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of 23.4°. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is 30 km a second. It makes a complete rotation on its axis in about 23h 56m of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (*see* page 1275). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 20 metres in diameter.

## TERRESTRIAL MAGNETISM

The Earth's main magnetic field corresponds approximately to that of a very strong small bar magnet near the centre of the Earth, but with appreciable smooth spatial departures. The origin of the main field is generally ascribed to electric currents associated with fluid motions in the Earth's core. As a result not only does the main field vary in strength and direction from place to place, but also with time. Superimposed on the main field are local and regional anomalies whose magnitudes may in places approach that of the main field; these are due to the influence of mineral deposits in the Earth's crust. A small proportion of the field is of external origin, mostly associated with electric currents in the ionosphere. The configuration of the external field and the ionisation of the atmosphere depend on the incident particle and radiation flux from the Sun. There are, therefore, short-term and non-periodic as well as diurnal, 27-day, seasonal and 11-year periodic changes in the magnetic field, dependent upon the position of the Sun and the degree of solar activity.

A magnetic compass points along the horizontal component of a magnetic line of force. These lines of force converge on the 'magnetic dip-poles', the places where the Earth's magnetic field is vertical. These poles move with time, and their present approximate adopted mean positions are 83.3° N., 118.7° W. and 64.5° S., 137.8° E.

There is also a 'magnetic equator', at all points of which the vertical component of the Earth's magnetic field is zero and a magnetised needle remains horizontal. This line runs between 2° and 12° north of the geographical equator in Asia and Africa, turns sharply south off the west African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

Reference has already been made to secular changes in

the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Declination is the angle in the horizontal plane between the direction of true north and that in which a magnetic compass points. Similar, though much smaller, changes have occurred in 'dip' or magnetic inclination. Secular changes differ throughout the world. Although the London observations suggest a cycle with a period of several hundred years, an exact repetition is unlikely.

<i>London</i>		<i>Greenwich</i>	
1580	11° 15' E.	1900	16° 29' W.
1622	5° 56' E.	1925	13° 10' W.
1665	1° 22' W.	1950	9° 07' W.
1730	13° 00' W.	1975	6° 39' W.
1773	21° 09' W.	1998	3° 32' W.
1850	22° 24' W.		

In order that up-to-date information on declination may be available, many governments publish magnetic charts on which there are lines (isogonic lines) passing through all places at which specified values of declination will be found at the date of the chart.

In the British Isles, isogonic lines now run approximately north-east to south-west. Though there are considerable local deviations due to geological causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 2005 is 1° 45' west and allowing an increase of 14' for each degree of latitude northwards and one of 27' for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 1°45' + 42' + 135', i.e. 4° 42' west. The average annual change at the present time is about 11' decrease.

The number of magnetic observatories is about 180, irregularly distributed over the globe. There are three in Great Britain, run by the British Geological Survey: at Hartland, north Devon; at Eskdalemuir, Dumfries and Galloway; and at Lerwick, Shetland Islands. The following are some recent annual mean values of the magnetic elements for Hartland.

<i>Year</i>	<i>Declination West °</i>	<i>Dip or inclination °</i>	<i>Horizontal intensity nanoTesla (nT)</i>	<i>Vertical intensity nT</i>
1960	9 58.8	66 43.9	18707	43504
1965	9 30.1	66 34.0	18872	43540
1970	9 06.5	66 26.1	19033	43636
1975	8 32.3	66 17.0	19212	43733
1980	7 43.8	66 10.3	19330	43768
1985	6 56.1	66 07.9	19379	43796
1990	6 15.0	66 09.7	19539	43896
1995	5 33.2	66 07.3	19457	43951
2000	4 43.6	66 06.9	19508	44051
2003	4 14.4	66 06.8	19545	44134

As well as navigation at sea, in the air and on land by compass the oil industry depends on the Earth's magnetic field as a directional reference. They use magnetic survey tools when drilling well-bores and require accurate estimates of the local magnetic field, taking into account the crustal and external fields.

## MAGNETIC STORMS

Occasionally, sometimes with great suddenness, the Earth's magnetic field is subject for several hours to marked disturbance. During a severe storm in October 2003 the declination at Eskdalemuir changed by over 5° in six

minutes. In many instances such disturbances are accompanied by widespread displays of aurorae, marked changes in the incidence of cosmic rays, an increase in the reception of 'noise' from the Sun at radio frequencies, and rapid changes in the ionosphere and induced electric currents within the Earth which adversely affect satellite operations, telecommunications and electric power transmission systems. The disturbances are caused by changes in the stream of ionised particles which emanates from the Sun and through which the Earth is continuously passing. Some of these changes are associated with visible eruptions on the Sun, usually in the region of sun-spots. There is a marked tendency for disturbances to recur after intervals of about 27 days, the apparent period of rotation of the Sun on its axis, which is consistent with the sources being located on particular areas of the Sun.

## ARTIFICIAL SATELLITES

Since the beginning of the Space Age, *Whitaker's Almanack* has given details of every successful satellite launch. This edition gives details of all successful launches that have taken place since the last edition. To consider the orbit of an artificial satellite, it is best to imagine that one is looking at the Earth from a distant point in space. The Earth would then be seen to be rotating about its axis inside the orbit described by the rapidly revolving satellite. The inclination of a satellite orbit to the Earth's equator (which generally remains almost constant throughout the satellite's lifetime) gives at once the maximum range of latitudes over which the satellite passes. Thus a satellite whose orbit has an inclination of  $53^\circ$  will pass overhead all latitudes between  $53^\circ$  S. and  $53^\circ$  N., but would never be seen in the zenith of any place nearer the poles than these latitudes. If we consider a particular place on the earth, whose latitude is less than the inclination of the satellite's orbit, then the Earth's rotation carries this place first under the northbound part of the orbit and then under the southbound part of the orbit, these two occurrences being always less than 12 hours apart for satellites moving in direct orbits (i.e. to the east). (For satellites in retrograde orbits, the words 'northbound' and 'southbound' should be interchanged in the preceding statement.) As the value of the latitude of the observer increases and approaches the value of the inclination of the orbit, so this interval gets shorter until (when the latitude is equal to the inclination) only one overhead passage occurs each day.

## OBSERVATION OF SATELLITES

The regression of the orbit around the Earth causes alternate periods of visibility and invisibility, though this is of little concern to the radio or radar observer. To the visual observer the following cycle of events normally occurs (though the cycle may start in any position): invisibility, morning observations before dawn, invisibility, evening observations after dusk, invisibility, morning observations before dawn, and so on. With reasonably high satellites and for observers in high latitudes around the summer solstice, the evening observations follow the morning observations without interruption as sunlight passing over the polar regions can still illuminate satellites which are passing over temperate latitudes at local midnight. At the moment all satellites rely on sunlight to make them visible, though a satellite with a flashing light has been suggested for a future launching. The observer must be in darkness or twilight in order to make any useful observations. (For durations of twilight, and sunrise and sunset times, see page two of each month.)

Some of the satellites are visible to the naked eye and much interest has been aroused by the spectacle of a bright satellite disappearing into the Earth's shadow. The event is even more interesting telescopically as the disappearance occurs gradually as the satellite traverses the Earth's penumbral shadow, and during the last few seconds before the eclipse is complete the satellite may change colour (in suitable atmospheric conditions) from yellow to red. This is because the last rays of sunlight are refracted through the denser layers of our atmosphere before striking the satellite.

Some satellites rotate about one or more axes so that a periodic variation in brightness is observed. This was particularly noticeable in several of the Soviet satellites.

Satellite research has provided some interesting results, including a revised value of the Earth's oblateness (1/298.2), and the discovery of the Van Allen radiation belts.

## LAUNCHINGS

Apart from their names, e.g. Cosmos 6 Rocket, the satellites are also classified according to their date of launch. Thus 1961  $\alpha$  refers to the first satellite launching of 1961. A number following the Greek letter indicated the relative brightness of the satellites put in orbit. From the beginning of 1963 the Greek letters were replaced by numbers and the numbers by roman letters e.g. 1963-01A. For all satellites successfully injected into orbit the following table gives the designation and names of the main objects, the launch date and some initial orbital data. These are the inclination to the equator ( $i$ ), the nodal period of revolution ( $P$ ), and the apogee and perigee heights.

Although most of the satellites launched are injected into orbits less than 1,000 km high, there are an increasing number of satellites in geostationary orbits, i.e. where the orbital inclination is zero, the eccentricity close to zero, and the period of revolution is 1436.1 minutes. Thus the satellite is permanently situated over the equator at one selected longitude at a mean height of 35,786 km. This geostationary band is crowded. In one case there are six television satellites (Astra 2, 5, 6, 7, 1H and 2C) orbiting within a few tens of kilometres of each other. In the sky they appear to be separated by only a few arcminutes.

In 1997 a number of *Iridium* satellites were launched into high inclination orbits. These are owned by the mobile telephone company Cellnet. For visual observers, these satellites have the interesting characteristic that the large aerals they carry can, when in exactly the right orientation with respect to the Sun and the observer, give off a 'flare' in brightness which can on occasion attain a magnitude of  $-6$ , much brighter than Venus. The flare can be visible to the naked eye for nearly a minute.

The Russian Space Station, Mir, 1986-17A, which was launched in 1986 was successfully de-orbited on March 23 2001. The re-entry was carried out in several stages, the first small burn to lower the orbit occurring at 00h 33m. The main de-orbit burn began at 05h 07m, which lowered the perigee height to  $<80$ km. At 05h 50m observers in Fiji saw multiple bright re-entry bodies in the sky. The impact area was at about W.  $160^\circ$ , S.  $40^\circ$ . During its 15 years in orbit it had been visited by 111 spacecraft. The record for the longest spaceflight was set by Valeriy Polyakov in 1994-5 who spent 437 days in Mir.

The new International Space Station ISS, 1998-67A, is currently being assembled in an orbit of similar size and inclination to Mir. It will become even brighter as more parts are added to it. When passing over Britain it can appear to be almost as bright as Jupiter on favourable transits, though only visible for four or five minutes on each pass.

# TIME MEASUREMENT AND CALENDARS

## MEASUREMENTS OF TIME

Measurements of time are based on the time taken by the earth to rotate on its axis (day); by the moon to revolve round the earth (month); and by the earth to revolve round the sun (year). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use.

### THE DAY

The day begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 noon (when the sun crosses the meridian), and these hours are designated a.m. (*ante meridiem*); and again from noon up to 12 midnight, which hours are designated p.m. (*post meridiem*), except when the 24-hour reckoning is employed. The 24-hour reckoning ignores a.m. and p.m., numbering the hours 0 to 23 from midnight.

Colloquially the 24 hours are divided into day and night, day being the time while the sun is above the horizon (including the four stages of twilight defined in the Astronomy section). Day is subdivided into morning, the early part of daytime, ending at noon; afternoon, from noon to about 6 p.m.; and evening, which may be said to extend from 6 p.m. until midnight. Night begins at the close of astronomical twilight (see the Astronomy section) and extends beyond midnight to sunrise the next day.

The names of the days are derived from Old English translations or adaptations of the Roman titles.

<i>Sunday</i>	Sun	Sol
<i>Monday</i>	Moon	Luna
<i>Tuesday</i>	Tiw/Tyr (god of war)	Mars
<i>Wednesday</i>	Woden/Odin	Mercury
<i>Thursday</i>	Thor	Jupiter
<i>Friday</i>	Frigga/Freyja (goddess of love)	Venus
<i>Saturday</i>	Saeternes	Saturn

### THE MONTH

The month in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

### THE YEAR

The equinoctial or tropical year is the time that the earth takes to revolve round the sun from equinox to equinox, i.e. 365.24219 mean solar days, or 365 days 5 hours 48 minutes and 45 seconds.

The calendar year usually consists of 365 days but a year containing 366 days is called bissextile (see Roman calendar) or leap year, one day being added to the month of February so that a date 'leaps over' a day of the week. In the Roman calendar the day that was repeated was the sixth day before the beginning of March, the equivalent of 24 February.

A year is a leap year if the date of the year is divisible by four without remainder, unless it is the last year of the century. The last year of a century is a leap year only if its number is divisible by 400 without remainder, e.g. the years 1800 and 1900 had only 365 days but the year 2000 has 366 days.

### THE SOLSTICE

A solstice is the point in the tropical year at which the sun attains its greatest distance, north or south, from the Equator. In the northern hemisphere the furthest point north of the Equator marks the summer solstice and the furthest point south the winter solstice.

The date of the solstice varies according to locality. For example, if the summer solstice falls on 21 June late in the day by Greenwich time, that day will be the longest of the year at Greenwich though it may be by only a second, but it will fall on 22 June, local date, in Japan, and so 22 June will be the longest day there. The date of the solstice is also affected by the length of the tropical year, which is 365 days 6 hours less about 11 minutes 15 seconds. If a solstice happens late on 21 June in one year, it will be nearly six hours later in the next (unless the next year is a leap year), i.e. early on 22 June, and that will be the longest day.

This delay of the solstice does not continue because the extra day in leap year brings it back a day in the calendar. However, because of the 11 minutes 15 seconds mentioned above, the additional day in leap year brings the solstice back too far by 45 minutes, and the time of the solstice in the calendar is earlier, in a four-year pattern, as the century progresses. The last year of a century is in most cases not a leap year, and the omission of the extra day puts the date of the solstice later by about six hours too much. Compensation for this is made by the fourth centennial year being a leap year. The solstice has become earlier in date throughout the last century and, because the year 2000 was a leap year, the solstice will get earlier still throughout the 21st century.

The date of the winter solstice, the shortest day of the year, is affected by the same factors as the longest day.

At Greenwich the sun sets at its earliest by the clock about ten days before the shortest day. The daily change in the time of sunset is due in the first place to the sun's movement southwards at this time of the year, which diminishes the interval between the sun's transit and its setting. However, the daily decrease of the Equation of Time causes the time of apparent noon to be continuously later day by day, which to some extent counteracts the first effect. The rates of the change of these two quantities are not equal or uniform; their combination causes the date of earliest sunset to be 12 or 13 December at Greenwich. In more southerly latitudes the effect of the movement of the sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich, e.g. on the Equator it is about 1 November.

### THE EQUINOX

The equinox is the point at which the sun crosses the Equator and day and night are of equal length all over the world. This occurs in March and September.

### DOG DAYS

The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest period of the year in the northern hemisphere, are called the Dog Days. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from 3 July to 15 August.

## CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the birth of Christ, the period being denoted by the letters BC (Before Christ) or, more rarely, AC (*Ante Christum*), and AD (*Anno Domini* – In the Year of Our Lord). The correlative dates of the epoch are the fourth year of the 194th Olympiad, the 753rd year from the foundation of Rome, AM 3761 in Jewish chronology, and the 4714th year of the Julian period. The actual date of the birth of Christ is somewhat uncertain.

The system was introduced into Italy in the sixth century. Though first used in France in the seventh century, it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St Augustine (AD 596), but it was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea (AD 816).

### THE JULIAN CALENDAR

In the Julian calendar (adopted by the Roman Empire in 45 BC) all the centennial years were leap years, and for this reason towards the close of the 16th century there was a difference of ten days between the tropical and calendar years; the equinox fell on 11 March of the calendar, whereas at the time of the Council of Nicaea (AD 325), it had fallen on 21 March. In 1582 Pope Gregory ordained that 5 October should be called 15 October and that of the end-century years only the fourth should be a leap year.

### THE GREGORIAN CALENDAR

The Gregorian calendar was adopted by Italy, France, Spain and Portugal in 1582, by Prussia, the Roman Catholic German states, Switzerland, Holland and Flanders on 1 January 1583, by Poland in 1586, Hungary in 1587, the Protestant German and Netherland states and Denmark in 1700, and by Great Britain and Dominions (including the North American colonies) in 1752, by the omission of eleven days (3 September being reckoned as 14 September). Sweden omitted the leap day in 1700 but observed leap days in 1704 and 1708, and reverted to the Julian calendar by having two leap days in 1712; the Gregorian calendar was adopted in 1753 by the omission of eleven days (18 February being reckoned as 1 March). Japan adopted the calendar in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1918, Yugoslavia and Romania in 1919, and Greece in 1923.

In the same year that the change was made in England from the Julian to the Gregorian calendar, the beginning of the new year was also changed from 25 March to 1 January.

### THE ORTHODOX CHURCHES

Some Orthodox Churches still use the Julian reckoning but the majority of Greek Orthodox Churches and the Romanian Orthodox Church have adopted a modified 'New Calendar', observing the Gregorian calendar for fixed feasts and the Julian for movable feasts.

The Orthodox Church year begins on 1 September. There are four fast periods and, in addition to Pascha (Easter), twelve great feasts, as well as numerous commemorations of the saints of the Old and New Testaments throughout the year.

### THE DOMINICAL LETTER

The dominical letter is one of the letters A–G which are

used to denote the Sundays in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. A leap year requires two letters, the first for 1 January to 29 February, the second for 1 March to 31 December.

### EPIPHANY

The feast of the Epiphany, commemorating the manifestation of Christ, later became associated with the offering of gifts by the Magi. The day was of great importance from the time of the Council of Nicaea (AD 325), as the primate of Alexandria was charged at every Epiphany feast with the announcement in a letter to the churches of the date of the forthcoming Easter. The day was also of importance in Britain as it influenced dates, ecclesiastical and lay, e.g. Plough Monday, when work was resumed in the fields, fell on the Monday in the first full week after Epiphany.

### LENT

The Teutonic word *Lent*, which denotes the fast preceding Easter, originally meant no more than the spring season; but from Anglo-Saxon times at least it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the 'forty days' or, more literally, the fortieth day. Ash Wednesday is the first day of Lent, which ends at midnight before Easter Day.

### PALM SUNDAY

Palm Sunday, the Sunday before Easter and the beginning of Holy Week, commemorates the triumphal entry of Christ into Jerusalem and is celebrated in Britain (when palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

### MAUNDY THURSDAY

Maundy Thursday is the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

### EASTER DAY

Easter Day is the first Sunday after the full moon which happens on, or next after, the 21st day of March; if the full moon happens on a Sunday, Easter Day is the Sunday after.

This definition is contained in an Act of Parliament (24 Geo. II c. 23) and explanation is given in the preamble to the Act that the day of full moon depends on certain tables that have been prepared. These tables are summarised in the early pages of the Book of Common Prayer. The moon referred to is not the real moon of the heavens, but a hypothetical moon on whose 'full' the date of Easter depends, and the lunations of this 'calendar' moon consist of twenty-nine and thirty days alternately, with certain necessary modifications to make the date of its full agree as nearly as possible with that of the real moon, which is known as the Paschal Full Moon.

### A FIXED EASTER

In 1928 the House of Commons agreed to a motion for the third reading of a bill proposing that Easter Day shall, in the calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall on the second or third Sunday in April, i.e. between 9 and 15 April (inclusive). A clause in the Bill provided that before it shall come into operation, regard shall be had to

any opinion expressed officially by the various Christian churches. Efforts by the World Council of Churches to secure a unanimous choice of date for Easter by its member churches have so far been unsuccessful.

#### ROGATION DAYS

Rogation Days are the Monday, Tuesday and Wednesday preceding Ascension Day and from the fifth century were observed as public fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as 'beating the parish bounds'. Rogation Sunday is the Sunday before Ascension Day.

#### EMBER DAYS

The Ember Days at the four seasons are the Wednesday,

Friday and Saturday (*a*) before the third Sunday in Advent, (*b*) before the second Sunday in Lent, and (*c*) before the Sundays nearest to the festivals of St Peter and of St Michael and All Angels.

#### TRINITY SUNDAY

Trinity Sunday is eight weeks after Easter Day, on the Sunday following Pentecost (Whit Sunday). Subsequent Sundays are reckoned in the Book of Common Prayer calendar of the Church of England as 'after Trinity'.

Thomas Becket (1118–70) was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. This observance spread from Canterbury throughout the whole of Christendom.

### MOVABLE FEASTS TO THE YEAR 2035

Year	Ash Wednesday	Easter	Ascension	Pentecost (Whit Sunday)	Advent Sunday
2005	9 February	27 March	5 May	15 May	27 November
2006	1 March	16 April	25 May	4 June	3 December
2007	21 February	8 April	17 May	27 May	2 December
2008	6 February	23 March	1 May	11 May	30 November
2009	25 February	12 April	21 May	31 May	29 November
2010	17 February	4 April	13 May	23 May	28 November
2011	9 March	24 April	2 June	12 June	27 November
2012	22 February	8 April	17 May	27 May	2 December
2013	13 February	31 March	9 May	19 May	1 December
2014	5 March	20 April	29 May	8 June	30 November
2015	18 February	5 April	14 May	24 May	29 November
2016	10 February	27 March	5 May	15 May	27 November
2017	1 March	16 April	25 May	4 June	3 December
2018	14 February	1 April	10 May	20 May	2 December
2019	6 March	21 April	30 May	9 June	1 December
2020	26 February	12 April	21 May	31 May	29 November
2021	17 February	4 April	13 May	23 May	28 November
2022	2 March	17 April	26 May	5 June	27 November
2023	22 February	9 April	18 May	28 May	3 December
2024	14 February	31 March	9 May	19 May	1 December
2025	5 March	20 April	29 May	8 June	30 November
2026	18 February	5 April	14 May	24 May	29 November
2027	10 February	28 March	6 May	16 May	28 November
2028	1 March	16 April	25 May	4 June	3 December
2029	14 February	1 April	10 May	20 May	2 December
2030	6 March	21 April	30 May	9 June	1 December
2031	26 February	13 April	22 May	1 June	30 November
2032	11 February	28 March	6 May	16 May	28 November
2033	2 March	17 April	26 May	5 June	27 November
2034	22 February	9 April	18 May	28 May	3 December
2035	7 February	25 March	3 May	13 May	2 December

#### NOTES

*Ash Wednesday* (first day in Lent) can fall at earliest on 4 February and at latest on 10 March

*Mothering Sunday* (fourth Sunday in Lent) can fall at earliest on 1 March and at latest on 4 April

*Easter Day* can fall at earliest on 22 March and at latest on 25 April

*Ascension Day* is forty days after Easter Day and can fall at earliest on 30 April and at latest on 3 June

*Pentecost (Whit Sunday)* is seven weeks after Easter and can fall at earliest on 10 May and at latest on 13 June

*Trinity Sunday* is the Sunday after Whit Sunday

*Corpus Christi* falls on the Thursday after Trinity Sunday  
*Sundays after Pentecost* – there are not less than 18 and not more than 23

*Advent Sunday* is the Sunday nearest to 30 November

**EASTER DAYS AND DOMINICAL LETTERS 1500 TO 2035**

Dates up to and including 1752 are according to the Julian calendar. For dominical letters in leap years, *see* note below

	1500–1599	1600–1699	1700–1799	1800–1899	1900–1999	2000–2035

c	25 1546	1641	1736	1886	1943	

No dominical letter is placed against the intercalary day 29 February but since it is still counted as a weekday and given a name, the series of letters moves back one day every leap year after intercalation. Thus, a leap year beginning with the dominical letter C will change to a year with the dominical letter B on 1 March

**HINDU CALENDAR**

The Hindu calendar is a luni-solar calendar of twelve months, each containing 29 days, 12 hours. Each month is divided into a light fortnight (Shukla or Shuddha) and a dark fortnight (Krishna or Vadya) based on the waxing and waning of the moon. In most parts of India the month starts with the light fortnight, i.e. the day after the new moon, although in some regions it begins with the dark fortnight, i.e. the day after the full moon.

The new year begins in the month of Chaitra (March/April) and ends in the month of Phalgun (March). The twelve months, Chaitra, Vaishakh, Jyeshtha, Ashadh, Shravan, Bhadrapad, Ashvin, Kartik, Margashirsh, Paush, Magh and Phalgun, have Sanskrit names derived from twelve asterisms (constellations). There are regional variations to the names of the months but the Sanskrit names are understood throughout India.

Every lunar month must have a solar transit and is termed pure (shuddha). The lunar month without a solar transit is impure (mala) and called an intercalary month. An intercalary month occurs approximately every 32 lunar months, whenever the difference between the Hindu year of 360 lunar days (354 days 8 hours solar

time) and the 365 days 6 hours of the solar year reaches the length of one Hindu lunar month (29 days 12 hours).

The leap month may be added at any point in the Hindu year. The name given to the month varies according to when it occurs but is taken from the month immediately following it. There is no leap month in 2005.

The days of the week are called Raviwar (Sunday), Somawar (Monday), Mangalwar (Tuesday), Budhawar (Wednesday), Guruwar (Thursday), Shukrawar (Friday) and Shaniwar (Saturday). The names are derived from the Sanskrit names of the Sun, the Moon and five planets, Mars, Mercury, Jupiter, Venus and Saturn.

Most fasts and festivals are based on the lunar calendar but a few are determined by the apparent movement of the Sun, e.g. Sankranti and Pongal (in southern India), which are celebrated on 14/15 January to mark the start of the Sun's apparent journey northwards and a change of season.

Festivals celebrated throughout India are Chaitra (the New Year), Raksha-bandhan (the renewal of the kinship bond between brothers and sisters), Navaratri (a nine-night festival dedicated to the goddess Parvati), Dasara (the victory of Rama over the demon army), Diwali (a

festival of lights), Makara Sankranti, Shivaratri (dedicated to Shiva), and Holi (a spring festival).

Regional festivals are Durga-puja (dedicated to the goddess Durga (Parvati)), Sarasvati-puja (dedicated to the goddess Sarasvati), Ganesh Chaturthi (worship of Ganesh on the fourth day (Chaturthi) of the light half of Bhadrapad), Ramanavami (the birth festival of the god Rama) and Janmashtami (the birth festival of the god Krishna).

The main festivals celebrated in Britain are Navaratri, Dasara, Durga-puja, Diwali, Holi, Sarasvati-puja, Ganesh Chaturthi, Raksha-bandhan, Ramanavami and Janmashtami.

For dates of the main festivals in 2005, see page 9.

## JEWISH CALENDAR

The story of the Flood in the Book of Genesis indicates the use of a calendar of some kind and that the writers recognised thirty days as the length of a lunation. However, after the diaspora, Jewish communities were left in considerable doubt as to the times of fasts and festivals. This led to the formation of the Jewish calendar as used today. It is said that this was done in AD 358 by Rabbi Hillel II, though some assert that it did not happen until much later.

The calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (c.120 BC), which differ little from those adopted at the present day. The year AM 5765 (2004–2005) is the 8th year of the 304th Metonic (Minor or Lunar) cycle of 19 years and the 25th year of the 206th Solar (or Major) cycle of 28 years since the Era of the Creation. Jews hold that the Creation occurred at the time of the autumnal equinox in the year known in the Christian calendar as 3760 BC (954 of the Julian period). The epoch or starting point of Jewish chronology corresponds to 7 October 3761 BC. At the beginning of each solar cycle, the Tekufah of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 minims, and the month between one new moon and the next is reckoned as 29 days, 12 hours, 793 minims. The normal calendar year, called a Regular Common year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a 13th month is occasionally added after the fifth month of the civil year (which commences on the first day of the month Tishri), or as the penultimate month of the ecclesiastical year (which commences on the first day of the month Nisan). The years when this happens are called Embolismic or leap years.

Of the 19 years that form a Metonic cycle, seven are leap years; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17 and 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible.

A Jewish year is of one of the following six types:

Minimal Common	353 days
Regular Common	354 days
Full Common	355 days
Minimal Leap	383 days
Regular Leap	384 days
Full Leap	385 days

The Regular year has alternate months of 30 and 29 days. In a Full year, whether common or leap, Marcheshvan, the

second month of the civil year, has 30 days instead of 29; in Minimal years Kislev, the third month, has 29 instead of 30. The additional month in leap years is called Adar I and precedes the month called Adar in Common years. Adar II is called Adar Sheni in leap years, and the usual Adar festivals are kept in Adar Sheni. Adar I and Adar II always have 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months, which still follow the alternation of the normal twelve.

These are the main features of the Jewish calendar, which must be considered permanent because as a Jewish law it cannot be altered except by a great Sanhedrin.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is 2h 21m in advance of Greenwich Mean Time. Rules for the beginning of sabbaths and festivals were laid down for the latitude of London in the 18th century and hours for nightfall are now fixed annually by the Chief Rabbi.

### JEWISH CALENDAR 5765–6

AM 5765 (765) is a Minimal Leap year of 13 months, 55 sabbaths and 383 days.

Month (first day)	AM 5765	AM 5766

### JEWISH FASTS AND FESTIVALS

For dates of principal festivals in 2005, see page 9.

<i>Tishri</i> 1–2	Rosh Hashanah (New Year)
<i>Tishri</i> 3	*Fast of Gedaliah
<i>Tishri</i> 10	Yom Kippur (Day of Atonement)
<i>Tishri</i> 15–21	Succoth (Feast of Tabernacles)
<i>Tishri</i> 21	Hoshana Rabba
<i>Tishri</i> 22	Shemini Atseret (Solemn Assembly)
<i>Tishri</i> 23	Simchat Torah (Rejoicing of the Law)
<i>Kislev</i> 25	Chanukah (Dedication of the Temple) begins
<i>Tebet</i> 10	Fast of Tebet
† <i>Adar</i> 13	§Fast of Esther
† <i>Adar</i> 14	Purim
† <i>Adar</i> 15	Shushan Purim
<i>Nisan</i> 15–22	Pesach (Passover)
<i>Sivan</i> 6–7	Shavuot (Feast of Weeks)
<i>Tammuz</i> 17	*Fast of Tammuz
<i>Ab</i> 9	*Fast of Ab

\*If these dates fall on the sabbath the fast is kept on the following day

†Adar Sheni in leap years

§This fast is observed on Adar 11 (or Adar Sheni 11 in leap years) if Adar 13 falls on a Sabbath

## THE MUSLIM CALENDAR

The Muslim era is dated from the *Hijrah*, or flight of the Prophet Muhammad from Mecca to Medina, the

corresponding date of which in the Julian calendar is 16 July AD 622. The lunar *hijri* calendar is used principally in Iran, Egypt, Malaysia, Pakistan, Mauritania, various Arab states and certain parts of India. Iran uses the solar *hijri* calendar as well as the lunar *hijri* calendar. The dating system was adopted about AD 639, commencing with the first day of the month Muharram.

The lunar calendar consists of twelve months containing an alternate sequence of 30 and 29 days, with the intercalation of one day at the end of the twelfth month at stated intervals in each cycle of 30 years. The object of the intercalation is to reconcile the date of the first day of the month with the date of the actual new moon.

Some adherents still take the date of the evening of the first physical sighting of the crescent of the new moon as that of the first of the month. If cloud obscures the moon the present month may be extended to 30 days, after which the new month will begin automatically regardless of whether the moon has been seen. (Under religious law a month must have less than 31 days.) This means that the beginning of a new month and the date of religious festivals can vary from the published calendars.

In each cycle of 30 years, 19 years are common and contain 354 days, and 11 years are intercalary (leap years) of 355 days, the latter being called *kabisah*. The mean length of the Hijrah years is 354 days 8 hours 48 minutes and the period of mean lunation is 29 days 12 hours 44 minutes.

To ascertain if a year is common or *kabisah*, divide it by 30: the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle. If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29, the year is *kabisah* and consists of 355 days.

#### MUSLIM CALENDAR 1425–26

Hijrah 1425 AH (remainder 15) is a common year, 1426 AH (remainder 16) is a *kabisah* year. Calendar dates below are estimates based on calculations of moon phases.

Month Length	1426 (1425) AH
<i>Dhu'l-Qa'da</i> (30)	13 December
<i>Dhu'l-Hijjah</i> (29 or 30)	12 January
<i>Muharram</i> (30)	10 February
<i>Safar</i> (29)	12 March
<i>Rabi' I</i> (30)	10 April
<i>Rabi' II</i> (29)	10 May
<i>Jumada I</i> (30)	8 June
<i>Jumada II</i> (29)	8 July
<i>Rajab</i> (30)	6 August
<i>Sha'ban</i> (29)	5 September
<i>Ramadân</i> (30)	4 October
<i>Shawwâl</i> (29)	3 November

#### MUSLIM FESTIVALS

Ramadan is a month of fasting for all Muslims because it is the month in which the revelation of the *Qur'an* (Koran) began. During Ramadan Muslims abstain from food, drink and sexual pleasure from dawn until after sunset throughout the month.

The two major festivals are *Id al-Fitr* and *Id al-Adha*. *Id al-Fitr* marks the end of the Ramadan fast and is celebrated on the day after the sighting of the new moon of the following month. *Id al-Adha*, the festival of sacrifice (also known as the great festival), celebrates the submission of the Prophet Ibrahim (Abraham) to God. *Id al-Adha* falls on the tenth day of *Dhu'l-Hijjah*, coinciding with the day when those on *hajj* (pilgrimage to Mecca) sacrifice animals.

Other days accorded special recognition are:

<i>Muharram</i> 1	New Year's Day
<i>Muharram</i> 10	Ashura (the day Prophet Noah left the Ark and Prophet Moses was saved from Pharaoh (Sunni), the death of the Prophet's grandson Husain (Shi'ite))
<i>Rabi'u-l-Awwal</i> ( <i>Rabi' I</i> ) 12	Mawlid al-Nabi (birthday of the Prophet Muhammad)
<i>Rajab</i> 27	Laylat al-Isra' wa'l-Mi'raj (The Night of Journey and Ascension)
<i>Ramadân</i>	Laylat al-Qadr (Night of Power)
One of the odd-numbered nights in the last 10 of the month	
<i>Dhu'l-Hijjah</i> 10	<i>Id al-Adha</i> (Festival of Sacrifice)

#### THE SIKH CALENDAR

The Sikh calendar is a lunar calendar of 365 days divided into 12 months. The length of the months varies between 29 and 32 days.

There are no prescribed feast days and no fasting periods. The main celebrations are Baisakhi Mela (the new year and the anniversary of the founding of the Khalsa), Diwali Mela (festival of light), Hola Mohalla Mela (a spring festival held in the Punjab), and the Gurupurabs (anniversaries associated with the ten Gurus).

For dates of the major celebrations in 2005, see page 9.

#### THAI CALENDAR

Thailand adopted the Suriyakati calendar, a modified version of the Gregorian calendar (Suriyakati) during the reign of King Rama V in 1888, using 1 April as the first day of the year. In 1940, the date of the new year was changed to 1 January. The years are counted from the beginning of the Buddhist era (BE), which is calculated to have commenced upon the death of the Lord Buddha, which is taken to have occurred in BC 543, so AD 2005 is BE 2548. The Chinese system of associating years with one of twelve animals is also in use in Thailand. The Chantarakati lunar calendar is used to determine religious holidays; the new year begins on the first day of the waxing moon in November or, if there is a leap month, in December.

#### CIVIL AND LEGAL CALENDAR

##### THE HISTORICAL YEAR

Before 1752, two calendar systems were used in England. The civil or legal year began on 25 March and the historical year on 1 January. Thus the civil or legal date 24 March 1658 was the same day as the historical date 24 March 1659; a date in that portion of the year is written as 24 March 165 8/9, the lower figure showing the historical year.

##### THE NEW YEAR

In England in the seventh century, and as late as the 13th, the year was reckoned from Christmas Day, but in the 12th century the Church in England began the year with the feast of the Annunciation of the Blessed Virgin ('Lady Day') on 25 March and this practice was adopted generally in the 14th century. The civil or legal year in the British Dominions (exclusive of Scotland) began with Lady Day until 1751. But in and since 1752 the civil year

has begun with 1 January. New Year's Day in Scotland was changed from 25 March to 1 January in 1600.

Elsewhere in Europe, 1 January was adopted as the first day of the year by Venice in 1522, German states in 1544, Spain, Portugal and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France in 1564, Lorraine in 1579, the Protestant Netherlands in 1583, Russia in 1725, and Tuscany in 1751.

#### REGNAL YEARS

Regnal years are the years of a sovereign's reign and each begins on the anniversary of his or her accession, e.g. regnal year 54 of the present Queen begins on 6 February 2005.

The system was used for dating Acts of Parliament until 1962. The Summer Time Act 1925, for example, is quoted as 15 and 16 Geo. V c. 64, because it became law in the parliamentary session which extended over part of both of these regnal years. Acts of a parliamentary session during which a sovereign died were usually given two year numbers, the regnal year of the deceased sovereign and the regnal year of his or her successor, e.g. those passed in 1952 were dated 16 Geo. VI and 1 Elizabeth II. Since 1962 Acts of Parliament have been dated by the calendar year.

#### QUARTER AND TERM DAYS

Holy days and saints days were the usual means in early times for setting the dates of future and recurrent appointments. The quarter days in England and Wales are the feast of the Nativity (25 December), the feast of the Annunciation (25 March), the feast of St John the Baptist (24 June) and the feast of St Michael and All Angels (29 September).

The term days in Scotland are Candlemas (the feast of the Purification), Whitsunday, Lammas (Loaf Mass), and Martinmas (St Martin's Day). These fell on 2 February, 15 May, 1 August and 11 November respectively. However, by the Term and Quarter Days (Scotland) Act 1990, the dates of the term days were changed to 28 February (Candlemas), 28 May (Whitsunday), 28 August (Lammas) and 28 November (Martinmas).

#### RED-LETTER DAYS

Red-letter days were originally the holy days and saints days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were approved at the Council of Nicaea in AD 325.

These days still have a legal significance, as judges of the Queen's Bench Division wear scarlet robes on red-letter days falling during the law sittings. The days designated as red-letter days for this purpose are:

##### *Holy and saints days*

The Conversion of St Paul, the Purification, Ash Wednesday, the Annunciation, the Ascension, the feasts of St Mark, SS Philip and James, St Matthias, St Barnabas, St John the Baptist, St Peter, St Thomas, St James, St Luke, SS Simon and Jude, All Saints, St Andrew.

##### *Civil calendar* (for dates, see page 9)

The anniversaries of The Queen's accession, The Queen's birthday and The Queen's coronation, The Queen's official birthday, the birthday of the Duke of Edinburgh, the birthday of the Prince of Wales, St David's Day and Lord Mayor's Day.

#### PUBLIC HOLIDAYS

Public holidays are divided into two categories, common law and statutory. Common law holidays are holidays 'by habit and custom'; in England, Wales and Northern Ireland these are Good Friday and Christmas Day.

Statutory public holidays, known as bank holidays, were first established by the Bank Holidays Act 1871. They were, literally, days on which the banks (and other public institutions) were closed and financial obligations due on that day were payable the following day. The legislation currently governing public holidays in the UK, which is the Banking and Financial Dealings Act 1971, stipulates the days that are to be public holidays in England, Wales, Scotland and Northern Ireland.

Certain holidays (indicated by \* below) are granted annually by royal proclamation, either throughout the UK or in any place in the UK. The public holidays are:

##### *England and Wales*

\*New Year's Day  
Good Friday  
Easter Monday  
\*The first Monday in May  
The last Monday in May  
The last Monday in August  
26 December, if it is not a Sunday  
27 December when 25 or 26 December is a Sunday

##### *Scotland*

New Year's Day, or if it is a Sunday, 2 January  
2 January, or if it is a Sunday, 3 January  
Good Friday  
The first Monday in May  
\*The last Monday in May  
The first Monday in August  
Christmas Day, or if it is a Sunday, 26 December  
\*Boxing Day – if Christmas Day falls on a Sunday, 26 December is given in lieu and an alternative day is given for Boxing Day

##### *Northern Ireland*

\*New Year's Day  
17 March, or if it is a Sunday, 18 March  
Easter Monday  
\*The first Monday in May  
The last Monday in May  
\*12 July, or if it is a Sunday, 13 July  
The last Monday in August  
26 December, if it is not a Sunday  
27 December if 25 or 26 December is a Sunday

For dates of public holidays in 2005 and 2006, see pages 10–11.

## CHRONOLOGICAL CYCLES AND ERAS

### SOLAR (OR MAJOR) CYCLE

The solar cycle is a period of twenty-eight years in any corresponding year of which the days of the week recur on the same day of the month.

### METONIC (LUNAR, OR MINOR) CYCLE

In 432 BC, Meton, an Athenian astronomer, found that 235 lunations are very nearly, though not exactly, equal in duration to 19 solar years and so after 19 years the phases of the Moon recur on the same days of the month (nearly). The dates of full moon in a cycle of 19 years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of a year in the cycle is called the golden number of that year.

### JULIAN PERIOD

The Julian period was proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 BC. The figure of 7980 is

## 1290 Time Measurement and Calendars

the product of the number of years in the solar cycle, the Metonic cycle and the cycle of the Roman indiction ( $28 \times 19 \times 15$ ).

### ROMAN INDICTION

The Roman indiction is a period of fifteen years, instituted for fiscal purposes about AD 300.

### EPACT

The epact is the age of the calendar Moon, diminished by one day, on 1 January, in the ecclesiastical lunar calendar.

### CHINESE CALENDAR

A lunar calendar was the sole calendar in use in China until 1911, when the government adopted the new (Gregorian) calendar for official and most business activities. The Chinese tend to follow both calendars, the lunar calendar playing an important part in personal life, e.g. birth celebrations, festivals, marriages; and in rural villages the lunar calendar dictates the cycle of activities, denoting the change of weather and farming activities.

The lunar calendar is used in Hong Kong, Singapore, Malaysia, Tibet and elsewhere in south-east Asia. The calendar has a cycle of 60 years. The new year begins at the first new moon after the sun enters the sign of Aquarius, i.e. the new year falls between 21 January and 19 February in the Gregorian calendar.

Each year in the Chinese calendar is associated with one of 12 animals: the rat, the ox, the tiger, the rabbit, the dragon, the snake, the horse, the goat or sheep, the monkey, the chicken or rooster, the dog, and the pig.

The date of the Chinese new year and the astrological sign for the years 2005–2008 are:

2005	9 February	Chicken or Rooster
2006	29 January	Dog
2007	18 February	Pig
2008	7 February	Rat

### COPTIC CALENDAR

In the Coptic calendar, which is used in parts of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by five complementary days. Every fourth year is an intercalary or leap year and in these years there are six complementary days. The intercalary year of the Coptic calendar immediately precedes the leap year of the Julian calendar. The era is that of Diocletian or the Martyrs, the origin of which is fixed at 29 August AD 284 (Julian date).

### INDIAN ERAS

In addition to the Muslim reckoning, other eras are used in India. The Saka era of southern India, dating from 3 March AD 78, was declared the national calendar of the Republic of India with effect from 22 March 1957, to be used concurrently with the Gregorian calendar. As revised, the year of the new Saka era begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years, and six months of each length in leap years. The year AD 2005 is 1927 of the revised Saka era.

The year AD 2005 corresponds to the following years in other eras:

Year 2062 of the Vikram Samvat era  
Year 1412 of the Bengali San era  
Year 1181 of the Kollam era  
Vedanga Jyotisa year 1 of the five-yearly cycle (387th cycle of Paitamah Siddhanta)

Year 6006 of the Kaliyuga era  
Year 2547 of the Buddha Nirvana era

### JAPANESE CALENDAR

The Japanese calendar is essentially the same as the Gregorian calendar, the years, months and weeks being of the same length and beginning on the same days as those of the Gregorian calendar. The numeration of the years is different, based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence. The method is not unlike the British system of regnal years, except that each year of a period closes on 31 December. The Japanese chronology begins about AD 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:

#### *Epoch*

Taishō 1 August 1912 to 25 December 1926

Shōwa 26 December 1926 to 7 January 1989

Heisei 8 January 1989

The year Heisei 17 begins on 1 January 2005.

The months are known as First Month, Second Month, etc., First Month being equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiyōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

### THE MASONIC YEAR

Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini* 2005–*Anno Lucis* 6005. This *Anno Lucis* (year of light) is based on the Book of Genesis 1:3, the 4000-year difference being derived, in modified form, from *Ussher's Notation*, published in 1654, which places the Creation of the World in 4004 BC.

### OLYMPIADS

Ancient Greek chronology was reckoned in Olympiads, cycles of four years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once every four years. The intervening years were the first, second, etc., of the Olympiad, which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 BC.

### ZOROASTRIAN CALENDAR

Zoroastrians, followers of the Iranian prophet Zarathushtra (known to the Greeks as Zoroaster) are mostly to be found in Iran and in India, where they are known as Parsees.

The Zoroastrian era dates from the coronation of the last Zoroastrian Sasanian king in AD 631. The Zoroastrian calendar is divided into twelve months, each comprising 30 days, followed by five holy days of the Gathas at the end of each year to make the year consist of 365 days.

In order to synchronise the calendar with the solar year of 365 days, an extra month was intercalated once every 120 years. However, this intercalation ceased in the 12th century and the New Year, which had fallen in the spring, slipped back to August. Because intercalation ceased at different times in Iran and India, there was one month's difference between the calendar followed in Iran (Kadmi calendar) and that followed by the Parsees (Shenshai calendar). In 1906 a group of Zoroastrians decided to bring the calendar back in line with the seasons again and restore the New Year to 21 March each year (Fasli calendar).

The Shenshai calendar (New Year in August) is mainly used by Parsees. The Fasli calendar (New Year, 21 March) is mainly used by Zoroastrians living in Iran, in the Indian subcontinent, or away from Iran.

THE ROMAN CALENDAR

Roman historians adopted as an epoch the foundation of Rome, which is believed to have happened in the year 753 BC. The ordinal number of the years in Roman reckoning is followed by the letters AUC (*ab urbe condita*), so that the year 2005 is 2758 AUC (MMDCCLVIII). The calendar that we know has developed from one said to have been established by Romulus using a year of 304 days divided into ten months, beginning with March. To this Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after 23 February.

However, there is some doubt as to the origination and

the details of the intercalation in the Roman calendar. It is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 BC Julius Caesar found that the calendar had been allowed to fall into some confusion. He sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 BC) of the Julian calendar, and, by a slight alteration, to the Gregorian calendar now in use. The year 46 BC was made to consist of 445 days and is called the Year of Confusion.

In the Roman (Julian) calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were the Kalends, the Nones, and the Ides. Their positions in the months and the method of counting from them will be seen in the table below. The year containing 366 days was called *bisextillis annus*, as it had a doubled sixth day (*bissexthus dies*) before the March Kalends on 24 February – *ante diem sextum Kalendas Martias*, or a.d. VI Kal. Mart.

<i>Present days of the month</i>	<i>March, May, July, October have thirty-one days</i>	<i>January, August, December have thirty-one days</i>	<i>April, June, September, November have thirty days</i>	<i>February has twenty-eight days, and in leap year twenty-nine</i>

## GEOLOGICAL TIME

The earth is thought to have come into existence approximately 4,600 million years ago, but for nearly half this time, the Archean era, it was uninhabited. Life is generally believed to have emerged in the succeeding Proterozoic era. The Archean and the Proterozoic eras are often together referred to as the Precambrian.

Although primitive forms of life, e.g. algae and bacteria, existed during the Proterozoic era, it is not until the strata of Palaeozoic rocks is reached that abundant fossilised remains appear.

Since the Precambrian, there have been three great geological eras:

## PALAEOZOIC ('ancient life')

c. 550–c. 248 million years ago

*Cambrian* – Mainly sandstones, slate and shales; limestones in Scotland. Shelled fossils and invertebrates, e.g. trilobites and brachiopods appear, as do the earliest known vertebrates (jawless fish)

*Ordovician* – Mainly shales and mudstones, e.g. in north Wales; limestones in Scotland. First fishes

*Silurian* – Shales, mudstones and some limestones, found mostly in Wales and southern Scotland

*Devonian* – Old red sandstone, shale, limestone and slate, e.g. in south Wales and the West Country

*Carboniferous* – Coal-bearing rocks, millstone grit, limestone and shale. First traces of land-living life

*Permian* – Marls, sandstones and clays. First reptile fossils

There were two great phases of mountain building in the Palaeozoic era: the Caledonian, characterised in Britain by NE–SW lines of hills and valleys; and the later Hercynian, widespread in west Germany and adjacent areas, and in Britain exemplified in E.–W. lines of hills and valleys.

The end of the Palaeozoic era was marked by the extensive glaciations of the Permian period in the southern continents and the decline of amphibians. It was succeeded by an era of warm conditions.

## MESOZOIC ('middle forms of life')

c. 245–c. 65 million years ago

*Triassic* – Mostly sandstone, e.g. in the West Midlands; primitive mammals appear

*Jurassic* – Mainly limestones and clays, typically displayed in the Jura mountains, and in England in a NE–SW belt from Lincolnshire and the Wash to the Severn and the Dorset coast

*Cretaceous* – Mainly chalk, clay and sands, e.g. in Kent and Sussex

Giant reptiles were dominant during the Mesozoic era, but it was at this time that marsupial mammals first appeared, as well as *Archaeopteryx lithographica*, the earliest known species of bird. Coniferous trees and flowering plants also developed during the era and, with the birds and the mammals, were the main species to survive into the Cenozoic era. The giant reptiles became extinct.

## CENOZOIC ('recent life')

from c. 65 million years ago

*Palaeocene* } The emergence of new forms of life,  
*Eocene* } including existing species; primates appear

*Oligocene* – Fossils of a few still existing species

*Miocene* – Fossil remains show a balance of existing and extinct species

*Phocene* – Fossil remains show a majority of still existing species

*Pleistocene* – The majority of remains are those of still existing species

*Holocene* – The present, post-glacial period. Existing species only, except for a few exterminated by man.

In the last 25 million years, from the Miocene through the Pliocene periods, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax. During the Pleistocene period ice-sheets repeatedly locked up masses of water as land ice; its weight depressed the land, but the locking-up of the water lowered the sea-level by 100–200 metres. The glaciations and interglacials of the Ice Age are difficult to date and classify, but recent scientific opinion considers the Pleistocene period to have begun approximately 1.64 million years ago. The last glacial retreat, merging into the Holocene period, was 10,000 years ago.

## HUMAN DEVELOPMENT

Any consideration of the history of mankind must start with the fact that all members of the human race belong to one species of animal, i.e. *Homo sapiens*, the definition of a species being in biological terms that all its members can interbreed. As a species of mammal it is possible to group man with other similar types, known as the primates. Amongst these is found a sub-group, the apes, which includes, in addition to man, the chimpanzees, gorillas, orang-utans and gibbons. All lack a tail, have shoulder blades at the back, and a Y-shaped chewing pattern on the surface of their molars, as well as showing the more general primate characteristics of four incisors, a thumb which is able to touch the fingers of the same hand, and finger and toe nails instead of claws. The factors available to scientific study suggest that human beings have chimpanzees and gorillas as their nearest relatives in the animal world. However, there remains the possibility that there once lived creatures, now extinct, which were closer to modern man than the chimpanzees and gorillas, and which shared with modern man the characteristics of having flat faces (i.e. the absence of a pronounced muzzle), being bipedal, and possessing large brains.

There are two broad groups of extinct apes recognised by specialists. The ramapithecines, the remains of which, mainly jaw fragments, have been found in east Africa, Asia, and Turkey. They lived about 14 to 8 million years ago, and from the evidence of their teeth it seems they chewed more in the manner of modern man than the other presently living apes. The second group, the australopithecines, have left more numerous remains amongst which sub-groups may be detected, although the geographic spread is limited to south and east Africa. Living between 5 and 1.5 million years ago, they were closer relatives of modern man to the extent that they walked upright, did not have an extensive muzzle and had similar types of pre-molars. The first australopithecine remains were recognised at Taung in South Africa in 1924 and named *Australopithecus africanus*, dating to 2.8 to 2.3 million years ago. The most impressive discovery was made at Hadar, Ethiopia, in 1974 when about half a skeleton of *Australopithecus afarensis*, known as 'Lucy', was found. Some 3.2 million years ago, 'Lucy' certainly walked upright.

Also in east Africa, especially at Olduvai Gorge in Tanzania, between 1.9 and 1.8 million years ago, lived a hominid group which not only walked upright, had a flat face, and a large brain case, but also made simple pebble

and flake stone tools. On present evidence these habilines seem to have been the first people to make tools, however crude. This facility is related to the larger brain size and human beings are the only animals to make implements to be used in other processes. These early pebble tool users, because of their distinctive characteristics, have been grouped as a separate sub-species, now extinct, of the genus *Homo* and are known as *Homo habilis*.

The use of fire, again a human characteristic, is associated with another group of extinct hominids whose remains, about a million years old, are found in south and east Africa, China, Indonesia, north Africa and Europe. Mastery of the techniques of making fire probably helped the colonisation of the colder northern areas and in this respect the site of Vertesszöllos in Hungary is of particular importance. *Homo ergaster* in Africa and *Homo erectus* in Asia are the names given to this group of fossils and they relate to a number of famous individual discoveries, e.g. Solo Man, Heidelberg Man, and especially Peking Man who lived at the cave site at Choukoutien which has yielded evidence of fire and burnt bone.

The well-known group Neanderthal Man, or *Homo neanderthalensis*, is an extinct form of man who lived between about 230,000 and 28,000 years ago, thus spanning the last Ice Age. Indeed, its ability to adapt to the cold climate on the edge of the ice-sheets is one of its characteristic features, the remains being found only in Europe, Asia and the Middle East. Complete neanderthal skeletons were found during excavations at Tabun in Israel, together with evidence of tool-making and the use of fire. Distinguished by very large brains, it seems that neanderthal man was the first to develop recognisable social customs, especially deliberate burial rites. Why the neanderthals became extinct is not clear but it may be connected with the climatic changes at the end of the Ice Ages, which would have seriously affected their food supplies; possibly they became too specialised for their own good.

The shin bone of Boxgrove Man found in 1993 – *Homo heidelbergensis* – and the Swanscombe skull are the best known human fossil remains found in England. Some specialists see Swanscombe Man (or, more probably, woman) as best grouped together with the Steinheim skull from Germany, seeing both as a separate sub-species. There is too little evidence as yet on which to form a final judgement.

Modern Man, *Homo sapiens* had evolved to our present physical condition and had colonised much of the world by about 40,000 years ago. There are many previously distinguished individual specimens, e.g. Cromagnon Man, which may now be grouped together as *Homo sapiens*. It was modern man who spread to the American continent by crossing the landbridge between Siberia and Alaska and thence moved south through North America and into South America. Equally it is modern man who over the last 40,000 years has been responsible for the major developments in technology, art and civilisation generally.

One of the problems for those studying fossil man is the lack in many cases of sufficient quantities of fossil bone for analysis. It is important that theories should be tested against evidence, rather than the evidence being made to fit the theory. The Piltdown hoax of 1912 (and not fully exposed until the 1970s) is a well-known example of 'fossils' being forged to fit what was seen in some quarters as the correct theory of man's evolution.

The discovery of the structure of DNA in 1953 has come to have a profound effect upon the study of human evolution. For example, it was claimed in 1987 that a common ancestor of all human beings was a person who

lived in Africa some 200,000 years ago, thus encouraging the 'out of Africa' theory of hominid migration from east Africa to the Middle East and then throughout the world. There is no doubt that the studies based on DNA have vast potential to elucidate further the course of human evolution.

#### CULTURAL DEVELOPMENT

The Eurocentric bias of early archaeologists meant that the search for a starting point for the development and transmission of cultural ideas, especially by migration, trade and warfare, concentrated unduly on Europe and the Near East. The Three Age system, whereby pre-history was divided into a Stone Age, a Bronze Age and an Iron Age, was devised by Christian Thomsen, curator of the National Museum of Denmark in the early 19th century, to facilitate the classification of the museum's collections. The descriptive adjectives referred to the materials from which the implements and weapons were made and came to be regarded as the dominant features of the societies to which they related. The refinement of the Three Age system once dominated archaeological thought and remains a generally accepted concept in the popular mind. However, it is now seen by archaeologists as an inadequate model for human development.

Common sense suggests that there were no complete breaks between one so-called Age and another, any more than contemporaries would have regarded 1485 as a complete break between medieval and modern English history. Nor can the Three Age system be applied universally. In some areas it is necessary to insert a Copper Age, while in Africa south of the Sahara there would seem to be no Bronze Age at all; in Australia, Old Stone Age societies survived, while in South America, New Stone Age communities existed into modern times. The civilisations in other parts of the world clearly invalidate a Eurocentric theory of human development.

The concept of the 'Neolithic revolution', associated with the domestication of plants and animals, was a development of particular importance in the human cultural pattern. It reflected change from the primitive hunter/gatherer economies to a more settled agricultural way of life and therefore, so the argument goes, made possible the development of urban civilisation. However, it can no longer be argued that this 'revolution' took place only in one area from which all development stemmed. Though it appears that the cultivation of wheat and barley was first undertaken, together with the domestication of cattle and goats/sheep in the Fertile Crescent (the area bounded by the rivers Tigris and Euphrates), there is evidence that rice was first deliberately planted and pigs domesticated in south-east Asia, maize first cultivated in Central America and llamas first domesticated in South America. It has been recognised in recent years that cultural changes can take place independently of each other in different parts of the world at different rates and different times. There is no need for a general diffusionist theory.

Although scholars will continue to study the particular societies which interest them, it may be possible to obtain a reliable chronological framework, against which the cultural development of any particular area may be set. The development and refinement of radio-carbon dating and other scientific methods of producing absolute chronologies is enabling the cross-referencing of societies to be undertaken. As the techniques of dating become more rigorous in application and the number of scientifically obtained dates increases, the attainment of an absolute chronology for prehistoric societies throughout the world comes closer to being achieved.

## GEOLOGICAL TIME

# TIDAL PREDICTIONS

## CONSTANTS

The constant tidal difference may be used in conjunction with the time of high water at a standard port shown in the predictions data below to find the time of high water at any of the ports or places listed.

These tidal differences are very approximate and should be used only as a guide to the time of high water at the places below. More precise local data should be obtained for navigational and other nautical purposes.

All data allow high water time to be found in Greenwich Mean Time: this applies to data for the months when British Summer Time is in operation and the hour's time difference should be allowed for. Ports marked \* are in a different time zone and the standard time zone difference also needs to be added/subtracted to give local time.

### EXAMPLE

Required time of high water at Stranraer at 2 January 2005

Appropriate time of high water at Greenock

Afternoon tide 2 January 1633hrs

Tidal difference - 0020hrs

High water at Stranraer 1613hrs

The columns headed 'Springs' and 'Neaps' show the height, in metres, of the tide above datum for mean high water springs and mean high water neaps respectively.

## PREDICTIONS

The following data are daily predictions of the time and height of high water at London Bridge, Liverpool, Greenock and Leith. The time of the data is Greenwich Mean Time; this applies also to data for the months when British Summer Time is in operation and the hour's time difference should be allowed for. The datum of predictions for each port shows the difference of height, in metres from Ordnance data (Newlyn).

The tidal information for London Bridge, Greenock, Liverpool and Leith is reproduced by permission of the Controller of Her Majesty's Stationery Office and the UK Hydrographic Office ([www.ukho.gov.uk](http://www.ukho.gov.uk)) © Crown Copyright. All rights reserved.

## SI UNITS

The *Système International d'Unités* (SI) is an international and coherent system of units devised to meet all known needs for measurement in science and technology. The system was adopted by the eleventh *Conférence Générale des Poids et Mesures* (CGPM) in 1960. A comprehensive description of the system is given in *SI The International System of Units* (HMSO). The British Standards describing the essential features of the International System of Units are *Specifications for SI units and recommendations for the use of their multiples and certain other units* (BS 5555:1993) and *Conversion Factors and Tables* (BS 350, Part 1:1974).

The system consists of seven base units and the derived units formed as products or quotients of various powers of the base units. Together the base units and the derived units make up the coherent system of units. In the UK the SI base units, and almost all important derived units, are realised at the National Physical Laboratory and disseminated through the National Measurement System.

### BASE UNITS

metre (m) = unit of length  
 kilogram (kg) = unit of mass  
 second (s) = unit of time  
 ampere (A) = unit of electric current  
 kelvin (K) = unit of thermodynamic temperature  
 mole (mol) = unit of amount of substance  
 candela (cd) = unit of luminous intensity

### DERIVED UNITS

For some of the derived SI units, special names and symbols exist; those approved by the CGPM are as follows:

hertz (Hz) = unit of frequency  
 newton (N) = unit of force  
 pascal (Pa) = unit of pressure, stress  
 joule (J) = unit of energy, work, quantity of heat  
 watt (W) = unit of power, radiant flux  
 coulomb (C) = unit of electric charge, quantity of electricity  
 volt (V) = unit of electric potential, potential difference, electromotive force  
 farad (F) = unit of electric capacitance  
 ohm ( $\Omega$ ) = unit of electric resistance  
 siemens (S) = unit of electric conductance  
 weber (Wb) = unit of magnetic flux  
 tesla (T) = unit of magnetic flux density  
 henry (H) = unit of inductance  
 degree Celsius ( $^{\circ}\text{C}$ ) = unit of Celsius temperature  
 lumen (lm) = unit of luminous flux  
 lux (lx) = unit of illuminance  
 becquerel (Bq) = unit of activity (of a radionuclide)  
 gray (Gy) = unit of absorbed dose, specific energy imparted, kerma, absorbed dose index  
 sievert (Sv) = unit of dose equivalent, dose equivalent index  
 radian (rad) = unit of plane angle  
 steradian (sr) = unit of solid angle

Other derived units are expressed in terms of base units.

Some of the more commonly used derived units are the following:

Unit of area = square metre ( $\text{m}^2$ )  
 Unit of volume = cubic metre ( $\text{m}^3$ )  
 Unit of velocity = metre per second ( $\text{m s}^{-1}$ )  
 Unit of acceleration = metre per second squared ( $\text{m s}^{-2}$ )  
 Unit of density = kilogram per cubic metre ( $\text{kg m}^{-3}$ )  
 Unit of momentum = kilogram metre per second ( $\text{kg m s}^{-1}$ )  
 Unit of magnetic field strength = ampere per metre ( $\text{A m}^{-1}$ )  
 Unit of surface tension = newton per metre ( $\text{N m}^{-1}$ )  
 Unit of dynamic viscosity = pascal second ( $\text{Pa s}$ )  
 Unit of heat capacity = joule per kelvin ( $\text{J K}^{-1}$ )  
 Unit of specific heat capacity = joule per kilogram kelvin ( $\text{J kg}^{-1} \text{K}^{-1}$ )  
 Unit of heat flux density, irradiance = watt per square metre ( $\text{W m}^{-2}$ )  
 Unit of thermal conductivity = watt per metre kelvin ( $\text{W m}^{-1} \text{K}^{-1}$ )  
 Unit of electric field strength = volt per metre ( $\text{V m}^{-1}$ )  
 Unit of luminance = candela per square metre ( $\text{cd m}^{-2}$ )

### SI PREFIXES

Decimal multiples and submultiples of the SI units are indicated by SI prefixes. These are as follows:

<i>multiples</i>	<i>submultiples</i>
yotta (Y) $\times 10^{24}$	deci (d) $\times 10^{-1}$
zetta (Z) $\times 10^{21}$	centi (c) $\times 10^{-2}$
exa (E) $\times 10^{18}$	milli (m) $\times 10^{-3}$
peta (P) $\times 10^{15}$	micro ( $\mu$ ) $\times 10^{-6}$
tera (T) $\times 10^{12}$	nano (n) $\times 10^{-9}$
giga (G) $\times 10^9$	pico (p) $\times 10^{-12}$
mega (M) $\times 10^6$	femto (f) $\times 10^{-15}$
kilo (k) $\times 10^3$	atto (a) $\times 10^{-18}$
hecto (h) $\times 10^2$	zepto (z) $\times 10^{-21}$
deca (da) $\times 10$	yocto (y) $\times 10^{-24}$

### METRIC UNITS

The metric primary standards are the metre as the unit of measurement of length, and the kilogram as the unit of measurement of mass. Other units of measurement are defined by reference to the primary standards.

#### MEASUREMENT OF LENGTH

Kilometre (km) = 1000 metres  
 Metre (m) is the length of the path travelled by light in vacuum during a time interval of  $1/299\,792\,458$  of a second  
 Decimetre (dm) = 1/10 metre  
 Centimetre (cm) = 1/100 metre  
 Millimetre (mm) = 1/1000 metre

#### MEASUREMENT OF AREA

Hectare (ha) = 100 ares  
 Decare = 10 ares  
 Are (a) = 100 square metres  
 Square metre = a superficial area equal to that of a square each side of which measures one metre  
 Square decimetre = 1/100 square metre

## 1310 Weights and Measures

Square centimetre = 1/100 square decimetre  
Square millimetre = 1/100 square centimetre

### MEASUREMENT OF VOLUME

Cubic metre (m<sup>3</sup>) = a volume equal to that of a cube each edge of which measures one metre  
Cubic decimetre = 1/1000 cubic metre  
Cubic centimetre (cc) = 1/1000 cubic decimetre  
Hectolitre = 100 litres  
Litre = a cubic decimetre  
Decilitre = 1/10 litre  
Centilitre = 1/100 litre  
Millilitre = 1/1000 litre

### MEASUREMENT OF CAPACITY

Hectolitre (hl) = 100 litres  
Litre (l or L) = a cubic decimetre  
Decilitre (dl) = 1/10 litre  
Centilitre (cl) = 1/100 litre  
Millilitre (ml) = 1/1000 litre

### MEASUREMENT OF MASS OR WEIGHT

Tonne (t) = 1000 kilograms  
Kilogram (kg) is equal to the mass of the international prototype of the kilogram  
Hectogram (hg) = 1/10 kilogram  
Gram (g) = 1/1000 kilogram  
\*Carat (metric) = 1/5 gram  
Milligram (mg) = 1/1000 gram

\* Used only for transactions in precious stones or pearls

### METRICATION IN THE UK

The European Council Directive 80/181/EEC, as amended by Council Directive 89/617/EEC, relates to the use of units of measurement for economic, public health, public safety or administrative purposes in the member states of the European Union. The provisions of the directives were incorporated into British law by the Weights and Measures Act 1985 (Metrication) (Amendment) Order 1994 and the Units of Measurement Regulations 1994; these instruments amended the Weights and Measures Act 1985. Parallel statutory rules amending Northern Ireland weights and measures legislation were made in May 1995.

The general effect of the 1994 and 1995 legislation is to end the use of imperial units of measurement for trade, replacing them with metric units – see below for timetable for UK metrication. Imperial units can, however, be used in addition to metric units, as supplementary indications.

## IMPERIAL UNITS

The imperial primary standards are the yard as the unit of measurement of length and the pound as the unit of measurement of mass. Other units of measurement are defined by reference to the primary standards. Most of these units are no longer authorised for use in trade in the UK – see below.

### MEASUREMENT OF LENGTH

Mile = 1760 yards  
Furlong = 220 yards  
Chain = 22 yards  
Yard (yd) = 0.9144 metre  
Foot (ft) = 1/3 yard  
Inch (in) = 1/36 yard

### MEASUREMENT OF AREA

Square mile = 640 acres  
Acre = 4840 square yards  
Rood = 1210 square yards  
Square yard (sq. yd) = a superficial area equal to that of a square each side of which measures one yard  
Square foot (sq. ft) = 1/9 square yard  
Square inch (sq. in) = 1/144 square foot

### MEASUREMENT OF VOLUME

Cubic yard = a volume equal to that of a cube each edge of which measures one yard  
Cubic foot = 1/27 cubic yard  
Cubic inch = 1/1728 cubic foot

### MEASUREMENT OF CAPACITY

Bushel = 8 gallons  
Peck = 2 gallons  
Gallon (gal) = 4.54609 cubic decimetres  
Quart (qt) = 1/4 gallon  
\*Pint (pt) = 1/2 quart  
Gill = 1/4 pint  
\*Fluid ounce (fl oz) = 1/20 pint  
Fluid drachm = 1/8 fluid ounce  
Minim (min) = 1/60 fluid drachm

### MEASUREMENT OF MASS OR WEIGHT

Ton = 2240 pounds  
Hundredweight (cwt) = 112 pounds  
Cental = 100 pounds  
Quarter = 28 pounds  
Stone = 14 pounds  
\*Pound (lb) = 0.453 592 37 kilogram  
\*Ounce (oz) = 1/16 pound  
\*†Ounce troy (oz tr) = 12/175 pound  
Dram (dr) = 1/16 ounce  
Grain (gr) = 1/7000 pound  
Pennyweight (dwt) = 24 grains  
Ounce apothecaries' = 480 grains  
Drachm (℥1) = 1/8 ounce apothecaries'  
Scruple (ʒ1) = 1/3 drachm

\* Units of measurement still authorised for use for trade in the UK

† Used only for transactions in gold, silver or other precious metals, and articles made therefrom

### PHASING-OUT OF IMPERIAL UNITS IN THE UK

Since 1965 the United Kingdom has been adopting metric weights and measures in response to the adoption of metric units as the international system of measurement. Since 1 January 2000, goods sold loose by weight (mainly fresh foods) are required to be sold in grams and kilograms. Retailers can continue to display the price per imperial unit alongside the price per unit in metric unit. Consumers can continue to express in ounces and pounds the quantity they wish to buy. Retailers will weigh out the equivalent quantity in grams and kilograms. The Weights and Measures Units of Measurement Regulations 1995 (Statutory Instrument 1995 No. 1804) require that metric units should be used for all economic, public health, public safety and administrative purposes.

Units of measurement authorised for use in specialised fields are:

<i>Unit</i>	<i>Field of application</i>
Fathom	Marine navigation
Fluid ounce	Beer, cider, water, lemonade, fruit juice
Pint	
Ounce	Goods for sale loose from bulk
Pound	
Therm	Gas supply

Units of measurement authorised for use in specialised fields from 1 October 1995, without time limit

<i>Unit</i>	<i>Field of application</i>
Inch	Road traffic signs, distance and speed measurement
Foot	
Yard	
Mile	
Pint	Dispense of draught beer or cider in returnable containers
Acre	Land registration
Troy ounce	Transactions in precious metals

## MEASUREMENT OF ELECTRICITY

Units of measurement of electricity are defined by the Weights and Measures Act 1985 as follows:

ampere (A) = that constant current which, if maintained in two straight parallel conductors of infinite length, of negligible circular cross-section and placed 1 metre apart in vacuum, would produce between these conductors a force equal to  $2 \times 10^{-7}$  newton per metre of length

ohm ( $\Omega$ ) = the electric resistance between two points of a conductor when a constant potential difference of 1 volt, applied between the two points, produces in the conductor a current of 1 ampere, the conductor not being the seat of any electromotive force

volt (V) = the difference of electric potential between two points of a conducting wire carrying a constant current of 1 ampere when the power dissipated between these points is equal to 1 watt

watt (W) = the power which in one second gives rise to energy of 1 joule

kilowatt (kW) = 1000 watts

megawatt (MW) = one million watts

## WATER AND LIQUOR MEASURES

1 cubic foot = 62.32 lb

1 gallon = 10 lb

1 cubic cm = 1 gram

1000 cubic cm = 1 litre; 1 kilogram

1 cubic metre = 1000 litres; 1000 kg; 1 tonne

An inch of rain on the surface of an acre (43560 sq. ft) = 3630 cubic ft = 100.992 tons

*Cisterns:* A cistern  $4 \times 2\frac{1}{2}$  feet and 3 feet deep will hold brimful 186.963 gallons, weighing 1869.63 lb in addition to its own weight

### WATER FOR SHIPS

Kilderkin = 18 gallons

Barrel = 36 gallons

Puncheon = 72 gallons

Butt = 110 gallons

Tun = 210 gallons

## BOTTLES OF WINE

Traditional equivalents in standard champagne bottles:

Magnum = 2 bottles

Jeroboam = 4 bottles

Rehoboam = 6 bottles

Methuselah = 8 bottles

Salmanazar = 12 bottles

Balthazar = 16 bottles

Nebuchadnezzar = 20 bottles

A quarter of a bottle is known as a *nip*

An eighth of a bottle is known as a *baby*

## ANGULAR AND CIRCULAR MEASURES

60 seconds (") = 1 minute (')

60 minutes = 1 degree (°)

90 degrees = 1 right angle or quadrant

Diameter of circle  $\times 3.1416$  = circumference

Diameter squared  $\times 0.7854$  = area of circle

Diameter squared  $\times 3.1416$  = surface of sphere

Diameter cubed  $\times 0.523$  = solidity of sphere

One degree of circumference  $\times 57.3$  = radius\*

Diameter of cylinder  $\times 3.1416$ ; product by length or height, gives the surface

Diameter squared  $\times 0.7854$ ; product by length or height, gives solid content

\*Or, one radian (the angle subtended at the centre of a circle by an arc of the circumference equal in length to the radius) = 57.3 degrees

## MILLION, BILLION, ETC.

### *Value in the UK*

Million	thousand $\times$ thousand	$10^6$
*Billion	million $\times$ million	$10^{12}$
Trillion	million $\times$ billion	$10^{18}$
Quadrillion	million $\times$ trillion	$10^{24}$

### *Value in the USA*

Million	thousand $\times$ thousand	$10^6$
*Billion	thousand $\times$ million	$10^9$
Trillion	million $\times$ million	$10^{12}$
Quadrillion	million $\times$ billion US	$10^{15}$

\*The American usage of billion (i.e.  $10^9$ ) is increasingly common, and is now universally used by statisticians

## NAUTICAL MEASURES

### DISTANCE

Distance at sea is measured in nautical miles. The British standard nautical mile was 6080 feet but this measure has been obsolete since 1970 when the international nautical mile of 1852 metres was adopted by the Hydrographic Department of the Ministry of Defence. The cable (600 feet or 100 fathoms) was a measure approximately one-tenth of a nautical mile. Such distances are now expressed in decimal parts of a sea mile or in metres.

Soundings at sea were recorded in fathoms (6 feet). Depths are now expressed in metres on Admiralty charts.

**SPEED**

Speed is measured in nautical miles per hour, called knots. A ship moving at the rate of 30 nautical miles per hour is said to be doing 30 knots.

<i>Knots</i>	<i>m.p.h.</i>	<i>knots</i>	<i>m.p.h.</i>
1	1.1515	9	10.3636
2	2.3030	10	11.5151
3	3.4545	15	17.2727
4	4.6060	20	23.0303
5	5.7575	25	28.7878
6	6.9090	30	34.5454
7	8.0606	35	40.3030
8	9.2121	40	46.0606

**TONNAGE**

Under the Merchant Shipping Act 1854, the tonnage of UK-registered vessels was measured in tons of 100 cubic feet. The need for a universal method of measurement led to the adoption of the International Convention on Tonnage Measurements of Ships 1969, which measures, in cubic metres, all the internal spaces of a vessel for the gross tonnage and those of the cargo compartments for the net tonnage. The convention has applied since July 1982 to new ships, ships which needed to be remeasured because of substantial alterations, and ships whose owners requested remeasurement. On 18 July 1994 the convention became mandatory.

**DISTANCE OF THE HORIZON**

The limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of five feet from the same level is nearly three miles. At a height of 20 feet the range is increased to nearly six miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself. The result is the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point on the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the table.

<i>Height in feet</i>	<i>range in miles</i>
5	2.9
20	5.9
50	9.3
100	13.2
500	29.5
1,000	41.6
2,000	58.9
3,000	72.1
4,000	83.3
5,000	93.1
20,000	186.2

**TEMPERATURE SCALES**

The S1 (International System) unit of temperature is the kelvin, which is defined as the fraction 1/273.16 of the temperature of the triple point of water (i.e. where ice, water and water vapour are in equilibrium). The zero of the Kelvin scale is the absolute zero of temperature. The

freezing point of water is 273.15 K and the boiling point (as adopted in the International Temperature Scale of 1990) is 373.124 K.

The Celsius scale (formerly centigrade) is defined by subtracting 273.15 from the Kelvin temperature. The Fahrenheit scale is related to the Celsius scale by the relationships:

$$\begin{aligned} \text{temperature } ^\circ\text{F} &= (\text{temperature } ^\circ\text{C} \times 1.8) + 32 \\ \text{temperature } ^\circ\text{C} &= (\text{temperature } ^\circ\text{F} - 32) \div 1.8 \end{aligned}$$

It follows from these definitions that the freezing point of water is 0°C and 32°F. The boiling point is 99.974°C and 211.953°F.

The temperature of the human body varies from person to person and in the same person can be affected by a variety of factors. In most people body temperature varies between 36.5°C and 37.2°C (97.7–98.9°F).

*Conversion between scales*

$^\circ\text{C}$	$^\circ\text{F}$	$^\circ\text{C}$	$^\circ\text{F}$	$^\circ\text{C}$	$^\circ\text{F}$
100	212	60	140	20	68
99	210.2	59	138.2	19	66.2
98	208.4	58	136.4	18	64.4

62	143.6	22	71.6	-18	0.4
61	141.8	21	69.8	-19	-2.2

**PAPER MEASURES**

*Printing Paper*

516 sheets	= 1 ream
2 reams	= 1 bundle
5 bundles	= 1 bale

*Writing Paper*

480 sheets	= 1 ream
20 quires	= 1 ream
24 sheets	= 1 quire

## INTERNATIONAL PAPER SIZES

The basis of the international series of paper sizes is a rectangle having an area of one square metre, the sides of which are in the proportion of  $1:\sqrt{2}$ . The proportions  $1:\sqrt{2}$  have a geometrical relationship, the side and diagonal of any square being in this proportion. The effect of this arrangement is that if the area of the sheet of paper is doubled or halved, the shorter side and the longer side of the new sheet are still in the same proportion  $1:\sqrt{2}$ . This feature is useful where photographic enlargement or reduction is used, as the proportions remain the same.

Description of the A series is by capital A followed by a figure. The basic size has the description A0 and the higher the figure following the letter, the greater is the number of sub-divisions and therefore the smaller the sheet. Half A0 is A1 and half A1 is A2. Where larger dimensions are required the A is preceded by a figure. Thus 2A means twice the size A0; 4A is four times the size of A0.

## SUBSIDIARY SERIES

B sizes are sizes intermediate between any two adjacent sizes of the A series. There is a series of C sizes which is used much less. A is for magazines and books, B for posters, wall charts and other large items, C for envelopes particularly where it is necessary for an envelope (in C series) to fit into another envelope. The size recommended for business correspondence is A4.

Long sizes (DL) are obtainable by dividing any appropriate sizes from the two series above into three, four or eight equal parts parallel with the shorter side in

such a manner that the proportion of  $1:\sqrt{2}$  is not maintained, the ratio between the longer and the shorter sides being greater than  $\sqrt{2}:1$ . In practice long sizes should be produced from the A series only.

It is an essential feature of these series that the dimensions are of the trimmed or finished size.

## A SERIES

	<i>mm</i>		<i>mm</i>
A0	841 × 1189	A6	105 × 148
A1	594 × 841	A7	74 × 105
A2	420 × 594	A8	52 × 74
A3	297 × 420	A9	37 × 52
A4	210 × 297	A10	26 × 37
A5	148 × 210		

## B SERIES

	<i>mm</i>		<i>mm</i>
B0	1000 × 1414	B6	125 × 176
B1	707 × 1000	B7	88 × 125
B2	500 × 707	B8	62 × 88
B3	353 × 500	B9	44 × 62
B4	250 × 353	B10	31 × 44
B5	176 × 250		

## C SERIES

	<i>mm</i>		<i>mm</i>
C4	324 × 229	DL	110 × 220
C5	229 × 162		
C6	114 × 162		

## CONVERSION TABLES FOR WEIGHTS AND MEASURES

Bold figures equal units of either of the columns beside them; thus: 1 cm = 0.394 inches and 1 inch = 2.540 cm

LENGTH		AREA		VOLUME		WEIGHT (MASS)					
<i>Centimetres</i>	<i>Inches</i>	<i>Square cm</i>	<i>Square in</i>	<i>Cubic cm</i>	<i>Cubic in</i>	<i>Kilograms</i>	<i>Pounds</i>

# FACTS, FIGURES AND LISTS

This section contains a selection of listings that could come in handy for a variety of crosswords and quizzes.

## LANGUAGE, ALPHABETS AND CODES

### PHOBIAS

Acrophobia	fear of heights
Agoraphobia	fear of open spaces
Ailurophobia	fear of cats
Algophobia	fear of pain
Androphobia	fear of men
Anthophobia	fear of flowers
Anthropophobia	fear of people
Apiphobia	fear of bees
Arachnophobia	fear of spiders
Ataxiophobia	fear of untidiness
Bogyphobia	fear of goblins
Brontophobia	fear of thunder
Carcinophobia	fear of cancer
Catoptophobia	fear of mirrors
Chaetophobia	fear of hair
Cheimaphobia	fear of cold
Chorophobia	fear of dancing
Chronophobia	fear of time
Cibophobia	fear of food
Clinophobia	fear of going to bed
Cynophobia	fear of dogs
Demophobia	fear of crowds
Dentophobia	fear of dentists
Ergasiophobia	fear of work
Gamophobia	fear of marriage
Gerascophobia	fear of ageing
Gynaephobia	fear of women
Hemaphobia	fear of blood
Herpetophobia	fear of reptiles
Hormephobia	fear of shock
Hydrophobia	fear of water
Iatrophobia	fear of doctors
Kenophobia	fear of empty rooms
Lachanophobia	fear of vegetables
Methyphobia	fear of alcohol
Mysophobia	fear of dirt
Necrophobia	fear of death, corpses
Nosocomophobia	fear of hospitals
Oenophobia	fear of wine
Olfactophobia	fear of smells
Ommatophobia	fear of eyes
Ophidiophobia	fear of snakes
Peladophobia	fear of baldness
Pharmacophobia	fear of drugs
Philemaphobia	fear of kissing
Photophobia	fear of light
Pogonophobia	fear of beards
Pyrophobia	fear of fire
Rhytiphobia	fear of getting wrinkles
Sciophobia	fear of shadows
Scopophobia	fear of being looked at
Selenophobia	fear of the moon
Soceraphobia	fear of parents-in-law
Stasiphobia	fear of standing

Thaasophobia	fear of the sea
Tocophobia	fear of childbirth
Tomophobia	fear of surgery
Trypanophobia	fear of injections
Venustaphobia	fear of beautiful women
Xenophobia	fear of foreigners
Xerophobia	fear of dryness
Zelophobia	fear of jealousy

### MORSE CODE

The International Morse Code was formulated in 1852. The spoken code enables radio operators to send messages with their own voices, using the expressions 'dah' and 'di' or 'dit' instead of keying in dashes and dots on their transmitters.

A	. —	di-dah
B	— . . .	dah-di-di-dit
C	— . — .	dah-di-dah-dit
D	— . .	dah-di-dit
E	.	dit
F	. . — .	di-di-dah-dit
G	— — .	dah-dah-dit
H	. . . .	di-di-di-dit
I	. .	di-dit
J	. — — —	di-dah-dah-dah
K	— . —	dah-di-dah
L	. — . .	di-dah-di-dit
M	— —	dah-dah
N	— .	dah-dit
O	— — —	dah-dah-dah
P	. — — .	di-dah-dah-dit
Q	— — . —	dah-dah-di-dah
R	. — .	di-dah-dit
S	. . .	di-di-dit
T	—	dah
U	. . —	di-di-dah
V	. . . —	di-di-di-dah
W	. — —	di-dah-dah
X	. . . —	dah-di-di-dah
Y	— . — —	dah-di-dah-dah
Z	— — . .	dah-dah-di-dit

Dash = dah

Dot = di or dit

### BOOKS OF THE BIBLE

The following list gives the commonly used abbreviations for the books of the Bible.

#### *Old Testament*

Genesis	Gen.
Exodus	Exod.
Leviticus	Lev.
Numbers	Num.
Deuteronomy	Deut.
Joshua	Josh.
Judges	Judg.
Ruth	Ruth
1 Samuel	1 Sam.
2 Samuel	2 Sam.
1 Kings	1 Kgs.
2 Kings	2 Kgs.

1 Chronicles	1 Chr.
2 Chronicles	2 Chr.
Ezra	Ezra
Nehemiah	Neh.
Esther	Esther
Job	Job
Psalms	Ps.
Proverbs	Prov.
Ecclesiastes	Eccles.
Song of Solomon	S. of S.
Isaiah	Isa.
Jeremiah	Jer.
Lamentations	Lam.
Ezekiel	Ezek.
Daniel	Dan.
Hosea	Hos.
Joel	Joel
Amos	Amos
Obadiah	Obad.
Jonah	Jon.
Micah	Mic.
Nahum	Nah.
Habakkuk	Hab.
Zephaniah	Zeph.
Haggai	Hag.
Zechariah	Zech.
Malachi	Mal.

*Apocrypha*

1 Esdras	1 Esd.
2 Esdras	2 Esd.
Tobit	Tobit
Judith	Judith
Rest of Esther	Rest of Esth.
Wisdom of Solomon	Wisd.
Ecclesiasticus	Ecclus.
Baruch with the Epistle of Jeremy	Baruch and Ep. of Jer.
Song of the Three Holy Children	S. of III Ch.
History of Susanna	Sus.
Bel and the Dragon	Bel & Dr.
Prayer of Manasses	Pr. of Man.
1 Maccabees	1 Macc.
2 Maccabees	2 Macc.

*New Testament*

Matthew	Matt.
Mark	Mark
Luke	Luke
John	John
Acts	Acts
Romans	Rom.
1 Corinthians	1 Cor.
2 Corinthians	2 Cor.
Galatians	Gal.
Ephesians	Eph.
Philippians	Phil.
Colossians	Col.
1 Thessalonians	1 Thess.
2 Thessalonians	2 Thess.
1 Timothy	1 Tim.
2 Timothy	2 Tim.
Titus	Titus
Philemon	Philem.
Hebrews	Heb.
James	Jas.
1 Peter	1 Pet.
2 Peter	2 Pet.
1 John	1 John

2 John	2 John
3 John	3 John
Jude	Jude
Revelation	Rev.

## INTERNATIONAL RADIO ALPHABET

A	Alpha
B	Bravo
C	Charlie
D	Delta
E	Echo
F	Foxtrot
G	Golf
H	Hotel
I	India
J	Juliet
K	Kilo
L	Lima
M	Mike
N	November
O	Oscar
P	Papa
Q	Quebec
R	Romeo
S	Sierra
T	Tango
U	Uniform
V	Victor
W	Whiskey
X	X-Ray
Y	Yankee
Z	Zulu

## COMMON LATIN PHRASES

<i>a priori</i>	from what was before
<i>ad hoc</i>	for this special purpose
<i>ad infinitum</i>	without limit
<i>annus horribilis</i>	a bad year
<i>annus mirabilis</i>	a wonderful year
<i>ars gratia artis</i>	art for art's sake
<i>compos mentis</i>	sane
<i>de facto</i>	in fact
<i>de jure</i>	by right
<i>dramatis personae</i>	the list of characters in a play
<i>in absentia</i>	while absent

1981	Ronald Reagan (1911–2004), Republican		
1989	George Bush (1924–), Republican		
1993	William Clinton (1946–), Democrat		
2000	George W. Bush, (1946–), Republican		

\* Re-elected 5 November 1940, the first case of a third term; re-elected for a fourth term 7 November 1944

† Appointed under the provisions of the 25th Amendment

## NOBEL PRIZE WINNERS

For prize winners for the years 1901–2000, see earlier editions of *Whitaker's Almanack*.

The Nobel Prizes are awarded each year from the income of a trust fund established by the Swedish scientist Alfred Nobel, the inventor of dynamite, who died on 10 December 1896 leaving a fortune of £1,750,000. The prizes are awarded to those who have contributed most to the common good in the domain of:

*Physics* – awarded by the Royal Swedish Academy of Sciences

*Chemistry* – awarded by the Royal Swedish Academy of Sciences

*Physiology or Medicine* – awarded by the Karolinska Institute

*Literature* – awarded by the Swedish Academy of Arts  
*Peace* – awarded by a five-person committee elected by the Norwegian Storting

*Economic Sciences* (instituted 1969) – awarded by the Royal Swedish Academy of Sciences

The prizes are awarded every year on 10 December, the anniversary of Nobel's death. The first awards were made on 10 December 1901. The Trust is administered by the board of directors of the Nobel Foundation, Stockholm, consisting of five members and three deputy members.

The Swedish Government appoints a chairman and a deputy chairman, the remaining members being appointed by the awarding authorities.

The awards in the last three years have been distributed as follows:

	2001	2002	2003
Physics	Eric A. Cornell (USA), Wolfgang Ketterle (Germany), Carl E. Wieman (USA)	Raymond Davis Jr. (USA), Masatoshi Koshihira (Japan), Riccardo Giacconi (USA)	Alexei A. Abrikosov (USA and Russia), Vitaly L. Ginzburg (Russia), Anthony J. Leggett (UK and USA)
Chemistry	William S. Knowles (USA), Ryoji Noyori (Japan), K. Barry Sharpless (USA)	John B. Fenn (USA), Koichi Tanaka (Japan), Kurt Wüthrich (Switzerland)	Peter Agre (USA), Roderick MacKinnon (USA)
Physiology or Medicine	Leland H. Hartwell (USA), Tim Hunt (UK), Sir Paul Nurse (UK)	Sydney Brenner (UK), H. Robert Horvitz (USA), John E. Sulston (UK)	Paul C. Lauterbur (USA), Sir Peter Mansfield (UK)
Literature	V. S. Naipaul (UK)	Imre Kertész (Hungary)	J. M. Coetzee (South Africa)
Peace	United Nations, Kofi Annan (Ghana)	Jimmy Carter (USA)	Shirin Ebadi (Iran)
Economics	George A. Akerlof (USA), A. Michael Spence (USA), Joseph E. Stiglitz (USA)	Daniel Kahneman (USA and Israel), Vernon L. Smith (USA)	Robert F. Engle (USA), Clive W. J. Granger (UK)

## ARCHBISHOPS OF CANTERBURY

Year  
appointed

1533	Thomas Cranmer	1768	Frederick Cornwallis
1556	Reginald Pole	1783	John Moore
1559	Matthew Parker	1805	Charles Manners-Sutton
1576	Edmund Grindal	1828	William Howley
1583	John Whitgift	1848	John Bird Sumner
1604	Richard Bancroft	1862	Charles Longley
1611	George Abbot	1868	Archibald Campbell Tait
1633	William Laud	1883	Edward White Benson
1660	William Juxon	1896	Frederick Temple
1663	Gilbert Sheldon	1903	Randall Davidson
1678	William Sancroft	1928	Cosmo Lang
1691	John Tillotson	1942	William Temple
1695	Thomas Tenison	1945	Geoffrey Fisher
1716	William Wake	1961	Michael Ramsey
1737	John Potter	1974	Donald Coggan
1747	Thomas Herring	1980	Robert Runcie
1757	Matthew Hutton	1991	George Carey
1758	Thomas Secker	2002	Rowan Williams

## SPORT

## FA CUP WINNERS SINCE 1950

First held 1872

Year	Winner
1950	Arsenal
1951	Newcastle United
1952	Newcastle United
1953	Blackpool
1954	West Bromwich Albion
1955	Newcastle United
1956	Manchester City
1957	Aston Villa
1958	Bolton Wanderers
1959	Nottingham Forest
1960	Wolverhampton Wanderers
1961	Tottenham Hotspur
1962	Tottenham Hotspur
1963	Manchester United
1964	West Ham United
1965	Liverpool
1966	Everton
1967	Tottenham Hotspur
1968	West Bromwich Albion
1969	Manchester City
1970	Chelsea
1971	Arsenal
1972	Leeds United
1973	Sunderland
1974	Liverpool
1975	West Ham United
1976	Southampton
1977	Manchester United
1978	Ipswich Town
1979	Arsenal
1980	West Ham United
1981	Tottenham Hotspur
1982	Tottenham Hotspur
1983	Manchester United
1984	Everton
1985	Manchester United

1986	Liverpool
1987	Coventry
1988	Wimbledon
1989	Liverpool
1990	Manchester United
1991	Tottenham Hotspur
1992	Liverpool
1993	Arsenal
1994	Manchester United
1995	Everton
1996	Manchester United
1997	Chelsea
1998	Arsenal
1999	Manchester United
2000	Chelsea
2001	Liverpool
2002	Arsenal
2003	Arsenal
2004	Manchester United

## WORLD CUP WINNERS

First held 1930

Year	Venue	Winner
1930	Uruguay	Uruguay
1934	Italy	Italy
1938	France	Italy
1950	Brazil	Uruguay
1954	Switzerland	West Germany
1958	Sweden	Brazil
1962	Chile	Brazil
1966	England	England
1970	Mexico	Brazil
1974	West Germany	West Germany
1978	Argentina	Argentina
1982	Spain	Italy
1986	Mexico	Argentina
1990	Italy	West Germany
1994	USA	Brazil
1998	France	France
2002	Korea/Japan	Brazil

THE PERIODIC TABLE OF ELEMENTS

6 — atomic number  
 Carbon — name of element  
**C** — chemical number  
 12.01 — atomic mass

The Periodic Table arranges the elements into horizontal rows (periods) and vertical columns (groups) according to their atomic number. The elements in a group all have similar properties; across each period, atoms are electropositive (form positive ions) to the left and electronegative to the right. The earliest version of the periodic table was devised in 1869 by Dimitry Mendeleev, who predicted the existence of several elements from gaps in the table.

# ABBREVIATIONS AND ACRONYMS

Ψ = seaport					
<b>A</b>					
AA	Alcoholics Anonymous Automobile Association	ASA	Advertising Standards Authority Amateur Swimming Association	BOTB	British Overseas Trade Board
AAA	Amateur Athletic Association	asap	as soon as possible	Bp	Bishop
ABA	Amateur Boxing Association	ASEAN	Association of South East Asian Nations	BPHARM	Bachelor of Pharmacy
abbr(ev)	abbreviation	ASH	Action on Smoking and Health	BPHIL	Bachelor of Philosophy

**ProQuest**  
Information and Learning

**Know** UK

the ultimate library of UK information

## Discover why libraries find KnowUK an essential resource

KnowUK enables you to find information fast. Search over 100 well known reference books at once, including, exclusively online, **Whitaker's Almanack**.

KnowUK contains a wealth of information on the UK - people, places, organisations, statistics, professional services, government, events, courses and much more. Ask in your local library today for KnowUK to get started.

### What can KnowUK help me do?

- Search 100+ reference books for quick answers
- Find local information by postcode or place name
- Read reference books online
- Research my home work
- Find more information on key Life Events
- Find out what's going on in my area

[www.knowuk.co.uk](http://www.knowuk.co.uk)

# STOP-PRESS

## CHANGES SINCE PAGES WENT TO PRESS

### PARLIAMENT

A by-election for Hartlepool was held on 30 September 2004 following the resignation of Peter Mandelson. Labour candidate Iain Wright won with 12,752 votes, a majority of 2,033.

### PUBLIC OFFICES

#### HM REVENUE AND CUSTOMS

3 September 2004 – Steve Lamey was appointed as Chief Information Officer.

### REGIONAL GOVERNMENT

#### NORTHERN IRELAND

16–18 September, Leeds Castle – Talks between British Prime Minister Tony Blair and Irish Prime Minister Bertie Ahern on the re-wording of the Good Friday Agreement, to ensure full decommissioning of IRA weapons, ended without a deal being reached.

21–22 September, Stormont – Northern Ireland Secretary Paul Murphy and Irish Minister of State Tom Kitt met with representatives of Northern Ireland's political parties, however the talks broke down on 22 September.

### POLICE

5 July 2004 – Sir John Stevens confirmed he would retire as Commissioner of the Metropolitan Police on 31 January 2005.

## EVENTS OF THE YEAR – SEPTEMBER 2004

### BRITISH AFFAIRS

13. A *Fathers 4 Justice* protester trespassed the perimeter walls of Buckingham Palace and climbed up the front of the building. Metropolitan Police Commissioner, Sir John Stevens, demanded a full report into the security breach.

15. A pro-hunting demonstration in Parliament Square ended in violent clashes between protesters and police. Five protesters managed to enter the House of Commons during a debate of the Hunting Bill.

### ENVIRONMENT AND SCIENCE

8. A £153 million NASA mission to collect particles of the sun ended in disaster when the probe carrying the samples crashed into the Utah desert after two parachutes failed to open; scientists hoped that some of the sample could still be salvaged if the pod remained sealed.

### THE AMERICAS

12. Hurricane Ivan passed directly over the Cayman Islands, causing flash flooding and mudslides. Across the Caribbean sixty people had already been killed as a result of the storm. 19. Floodwaters tore through Haiti in the wake of tropical storm Jeanne, submerging the entire northern coastal city of Gonaives and killing at least 250 people.

### ASIA

9. A British couple was shot dead by an off-duty policeman in Thailand following an argument in a restaurant near the River Kwai. 12. It was reported that a large explosion causing a two-mile-wide mushroom cloud had occurred in North Korea near the Chinese border.

### EUROPE

1. Twenty Chechen terrorists took hundreds of adults and children hostage in a school in Beslan, southern Russia, as the children returned after the summer break. The terrorists threatened to blow-up the school if the Russian Government did not withdraw its troops from Chechnya and release prisoners captured after recent Chechen attacks on the neighbouring region of Ingushetia. 2. The siege of the school in Beslan continued; fifteen children and eleven women were released following negotiations.

3. The siege of the school in Beslan ended after two explosions, followed by gunfire from within the school, forced Russian special forces to storm the building. 4. Official figures were released stating that 323 people had died during the Beslan school siege. More than 600 people were injured.

### THE MIDDLE EAST

18. In Iraq, terrorists from the Tawhid wal Jihad group released video footage of three hostages (a British engineer and two Americans) stating that they would be beheaded unless demands for the release of Iraqi women prisoners were met within 48 hours. 20. Video footage was released by Tawhid wal Jihad showing that one of the American hostages had been beheaded. 21. The Tawhid wal Jihad group announced that the second American hostage had been killed. 22. Baghdad police retrieved the body of the second American hostage. A video of the final hostage, Briton Kenneth Bigley, was released in which he made a direct plea to Prime Minister Tony Blair to intervene and requested him to meet the demands of the hostage-takers and free the female prisoners held in Iraqi jails.
